

Applications and developments of BMF analytics/MT over time

AISDL Team

Last updated: January 20, 2024

“– Great Master, what is its use if the hook cannot catch fish?”

Kingfisher the Wise replies solemnly: – Straight hook was once used to catch... an emperor.”

In “The Weirdest Fishhook”; *The Kingfisher Story Collection* [1]

When pursuing a career in academia, scholars face challenges of academic competition and evaluation based on publication and citation metrics. The well-known saying “publish or perish” captures the publishing pressure which academics must bear to advance their careers. Researchers in low-resource nations and those in their early careers (ECRs) seem to feel the most pressure since they lack access to mentorship, resources, experience, and knowledge. Consequently, they usually encounter multiple setbacks, such as mental health issues and career dropouts. Thus, the SM3D community coaching portal is built to support social sciences and humanities researchers in conducting and publishing their studies on a global scale, especially Early Career Researchers (ECRs) and those in low-resource settings [2].

The SM3D portal was planned during its co-founders’ retreat in Pu Luong, Thanh Hoa, Vietnam, in late May and officially launched on June 21, 2022, with its first article [3]. Mindsponge thinking and Bayesian Mindsponge Framework (BMF) analytics are the coaching program’s backbone theory and analytical tools [4,5]. At that time, we had some predictions about the community’s future direction but not its growth pace. Thus, it is worth recalling the development of the portal in the last year and how the BMF analytics/Mindsponge Theory (MT) have supported academics in constructing, performing, and finalizing their studies.

The report aims to list all BMF analytics/ MT users since their early development [4-6]. Not all people citing the BMF analytics/ MT are considered users. Only those who used BMF analytics/ MT substantively as a method in their studies are considered users (i.e., employed BMF analytics/ MT as the theoretical foundation, methodology, or reasoning framework for their findings). The records include authors that have employed the **bayesvl** R package [7], a fundamental component of BMF analytics, and the mindsponge mechanism (MM), the foundational conceptual framework for Mindsponge Theory [8,9]. Through the list, the AISDL team also hopes to help researchers interested in BMF analytics/MT reduce the time and effort for information seeking [10], enhance proactiveness [11], and facilitate knowledge exchange and community dialogue through transparency [12,13].

As of January 20, 2024, we recorded 168 documents (including articles, books, proceedings, and lectures) that have used Bayesian Mindsponge Framework (BMF) analytics/Mindsponge Theory (MT) substantively. This number has increased by 31.25% since the previous record on July 9, 2023. The documents have been authored or co-authored by 330 researchers from 215 institutions in 38 countries, of which 67% come from developing/emerging countries. Among 330 users, 32 are registered members of the SM3D Portal.

No matter how rapidly the community is expanding, we have firmly adhered to our original philosophical principles set out in [10,13]. This helps walk us through the post-COVID-19 tumultuous period and the stagnation thereof.

As we enter the third year of operation, let’s look forward to making better and more meaningful achievements together, hoping new members will join our happy home.

Researchers with substantive BMF analytics/ MT applications in their studies
