

From Nothing to Everything

By M. C. Cole

Journal of Mind, Volume 132, October 2022.

...Any scientific discourse is carried out in three levels: hypothesis, theory, and law. A hypothesis, is a testable logical conjecture to explain the phenomena we observe in the universe... A theory however, is a logical statement about a phenomenon that is derived from rational thinking and is often associated with processes such as observation, study or research and provides standards in such a way that scientific tests can confirm - or reject... Scientific laws are descriptive summaries of a large set of facts that are tested by scientific evidences and after fact-checking based on their potential ability for measuring future experiences. So it can be said that every theory was first a hypothesis and has the potential to become a law to come....

*All'n'None is a **theory** that has ascended from the hypothesis level, but not all its dimensions have been determined yet, though it has a chance to move to a higher level,...*

...It is not clear whether this theory will have a place in the future or not, but what is important at present, is to make sure to perceive its intended meaning properly in order to give it the place it deserves,...

...All'n'None theory is that it's been able to provide new ideas by means of old documents and challenges the foundations of religions without violating any of their doctrines. This would be high-principled if religious custodians and philosophers step forward and play their part in this challenge,...
