

# MILITARY INTERVENTION IN INTERSTATE ARMED CONFLICTS

Cécile Fabre★

On February 24 2022, Russia launched a military invasion of Ukraine. As I am writing this sentence, in June 2022, the first interstate war on European soil since 1945 is raging. World leaders assert that the conflict threatens international peace and security; however, while they have imposed a range of economic, financial and cultural sanctions on Russia and are supplying weapons to Ukraine, they are determined to ensure that their armed forces should not intentionally and directly confront Russian forces, be it on land, in air, or at sea, unless their own country or one of their formal allies (within NATO) are under threat.

This paper is about the ethics of military intervention in interstate conflicts which threaten international peace and security (for short, intervention). It asks whether intervention in such cases is morally justified.

In international public law, the answer to that question is “yes”: threats to international peace and security provide one of two exceptions to the legal and moral prohibition (as set out in article 2(4) of the UN Charter) on using force as a means for resolving interstate disputes. The 1990-1991 Gulf War is the most recent

illustration of this point, which is a cornerstone of our current collective security system.<sup>1</sup>

Just war theorists are not as verdictive. Compared to the ethics of humanitarian intervention and the ethics of national self-defense, the ethics of third-party military involvement in interstate conflicts remains strikingly under-developed in contemporary just war theory. Michael Walzer's discussion of the moral foundations of the law of neutrality in Ch. 15 of *Just and Unjust Wars* and the handful of philosophical analyses of the 1990-1991 Gulf War are the exceptions to the rule.<sup>2</sup>

This is a regrettable oversight. True, most post-1945 military conflicts have taken place within the internationally recognized borders of sovereign states; and some scholars have recently argued that, over time, the incidence and destructiveness of war are waning. Nevertheless, even if the "decline of war thesis" as articulated by Stephen Pinker is correct (and there are reasons to doubt it), the world is witnessing persistent and rising military tensions. I do not mean only the ongoing war between Russia and Ukraine, but also tensions between Israel and the United States on the one hand, and Iran on the other hand; between China on the one hand, and, on the other hand, Indonesia, Taiwan, Vietnam, Brunei, Malaysia and the Philippines, over the South China Sea; between North Korea and South Korea.<sup>3</sup>

One may wonder why this issue warrants philosophical investigation. After all (it might be thought), wars of self-defense against an unjust aggression are widely regarded as the paradigmatic example of a in-principle just war. Moreover (it might also be thought), an unjust aggression is in itself a threat to international peace and

security. Interveners are not merely helping the victim of the aggression: they are intervening on behalf of all of us so as to forestall what, for all intents and purposes, is or has the potential to turn into a global crisis. Once one has provided a justification for wars of self-defense against territorial and political aggression, one has *ipso facto* provided a justification for intervention for the sake of international peace and security, and thus gone a long way towards vindicating the normative foundations of our collective security system.

Matters are not so simple. I argue that to defend intervention requires defending preventive military force, deterrent military force, and the resort to force for the sake of rights the defense of which is not standardly regarded as just causes for military action (Section I). In the remainder of the paper, I focus on the deterrence argument. I show that deterrence is morally justified in relatively few cases (Section II).<sup>4</sup> I then examine two sets of problems with the argument: the problems raised by deterrence failures, and the problems raised by the level of uncertainty under which leaders who use deterrent force operate (Section III). With respect to deterrence failures, I claim that there still is scope for limited deterrence. With respect to uncertainty, I claim that there is scope for mitigating its impact, by building on Allen Buchanan's and Robert Keohane's proposals for reforming the current collective security system. Section V concludes. Notwithstanding its endorsement of intervention *in principle* and of relevant institutional reforms, the upshot of the paper is that, in the world as we know it, the most serious military threats to international peace and security call for *not* intervening by military means.

Some preliminary remarks. First, I set aside cases in which a state has bound itself to provide military assistance to another by means of a treaty – a case of which article 5 of NATO’s founding treaty is a paradigmatic example. Whether and when international treaties in general, and defensive treaties in particular, are morally binding is a separate question which I lack the space to address here.

Second, I focus on conflicts which are characterized by the reciprocal resort to kinetic, lethal military force, in which interveners actively participate. I set aside cyberattacks and interventions by proxy (such as funding or providing arms to belligerents), as well as alternatives to military force such as economic sanctions, conditional aid, and diplomatic negotiations. Sometimes those alternatives stand a better chance of protecting international peace and security. But the claim that military intervention would fail the necessity and effectiveness requirements in such cases is compatible with the view, which I seek to explore here, that it has a just cause. It is also worth exploring whether military force is justified when those measures fail.<sup>5</sup>

Third, I focus on cases in which international peace and security are thought to be under threat as a result of a conflict between states. Whether my arguments apply to other kinds of conflicts (for example, to conflicts within state borders and involving secessionist or revolutionary movements) is not a question I pursue here.

Fourth, this paper is about the set of norms which govern the resort to military force – or *jus ad bellum*. At the bar of *jus ad bellum*, states, coalitions thereof and, on some views, non-state actors, may justifiably resort to military force only if they have a just cause, if force is a proportionate and necessary response, and if it is likely to

succeed. My main aim is to explore the view that the deterrence of threats to international peace and security is a just cause for military intervention in interstate conflicts. Throughout, when I say that intervention is justified in such and such case, I mean that it satisfies the requirements of the *jus ad bellum*.<sup>6</sup>

Fifth, I assume for the sake of argument that the citizenries of defending and intervening states consent to military action. Some readers might take the view that if those citizenries, or even a minority within them, withhold consent, intervention is morally unjustified. Others might say, on the contrary, that when *international peace and security* are under threat, consent is not necessary. I want to show, however, that even on the more standard view that consent is a necessary condition for permissible military action, and even if consent is forthcoming, intervention in interstate conflicts for the sake of international peace and security is much harder to justify than is usually thought.<sup>7</sup>

Finally, I refer to the state which initiates the conflict as Aggressor, to the defending state as Defender and to the intervening party, be it another state or a coalition thereof, as Intervener. I use those labels as convenient shortcuts for the citizens and officials of those states; when I speak of (e.g.) Intervener being justified in resorting to force, I mean that its citizens and officials acting on their behalf, are justified in so doing. I also take for granted that all human beings wherever they reside in the world have rights to the freedoms and resources they need in order to lead a flourishing life; those rights impose *pro tanto* duties on all others, wherever they are in

the world, to support the institutions – be they domestic or global – needed to secure those freedoms and to provide those resources.

## I. INTERSTATE CONFLICTS AND GLOBAL CRISES

Suppose – and take as fixed throughout the paper – that state A attacks state D without warrant. State D (I assume) has a justification for defending itself by means of military force.

A military conflict of this kind occasions severe direct and indirect harms to a number of people, such as loss of life, bereavement, life-changing injuries, and loss of homes and livelihood. By definition, it is a crisis. However, it does not necessarily threaten international peace and security, thereby triggering a *global* crisis.

In his discussion of the international legal order and its moral foundations, Walzer moots (though does not endorse) one possible defense of intervention which assumes, on the contrary, that an interstate conflict is by definition a threat to international peace and security. When Aggressor attacks Defender, it breaches the morally justified legal prohibition on aggression – a prohibition which states endorse by dint of their membership in the United Nations and their commitment to its Charter. In so doing, it threatens international peace and security and thus wrongs all other states.<sup>8</sup>

On another view, as articulated by Yoram Dinstein, “an armed attack is like an infectious disease in the body politic of the family of nations. Every State has a

demonstrable self-interest in the protection of international peace, for once the disease starts to spread, there is no telling if and where it will stop.”<sup>9</sup> Aggressor’s wrong is not just that it breaches the legal prohibition on aggression: it is also that it puts us all at risk of exactly this kind of harm either at its hands or at the hands of some other state which, should Aggressor be successful, would think itself licensed to resort to war to press its unjust ends.

The first view suffers from two fatal weaknesses.<sup>10</sup> For a start, to justify the resort to military force is almost always to justify the resort to *lethal* force. However, the defense of a norm *qua* norm, as distinct from the interests which it protects, cannot on its own be a just cause for acts of killing. Moreover, Defender’s interests are not threatened in the same way as Intervener’s interests or indeed our own, on whose behalf Intervener is acting. *Its* territory is wrongfully attacked, *its* ability to govern itself is wrongfully under threat, the lives and limbs of *its* citizens and soldiers are at stake. We thus need to know what wrong exactly is incurred by Intervener and the rest of us, and whether *this* wrong is severe enough to provide it with a justification for resorting to lethal force against Attacker.

The second view plugs the gap, for it points to wrongful *harms* which justify the resort to force in individual self-defense. Yet, it too falls short of supporting intervention. After all, the “disease” does not always threaten to spread to the world at large. Likewise, a virus outbreak does not always turn into an epidemic; and an epidemic does not always turn into a pandemic, even without interventions from outsiders. Suppose that Aggressor can quickly overpower Defender and that their

dispute is of no strategic or economic importance to much larger powers outside the region. It is not clear at all that this conflict is a threat to international peace and security in any meaningful sense of those terms and is thus a global crisis – even if it is a regional crisis. The invasion of the UK-ruled Falklands Islands and the South Georgia and Sandwich Islands by Argentina in 1982 comes to mind here – as do the Congo Wars of the 1990s. There was no suggestion at the time that Argentina would conduct further military aggressions on the United Kingdom or, indeed, on any of its allies, and that other countries would regard Britain's failure to respond as encouragement to act on their own aggressive intentions. Devastating as the Congo Wars were for the region, it is not clear how destabilizing they have been to the world at large.

Contrast with the COVID-19 pandemic. It clearly is (still?) a global crisis. The virus is lethal, has spread quickly throughout the world, and has had a severe direct and indirect impact on the world's population: death and long COVID symptoms; millions of people throughout the world losing their job as a result of lockdown measures or of the economic recession consequent on the pandemic; millions of people having their non-COVID related life-saving treatments delayed; a legacy of ill health, long-term structural deficits, and irretrievably lost economic and social opportunities.

Suppose, then, that at time  $t1$ , Aggressor attacks Defender. The ensuing conflict is, or threatens to morph into, a global crisis if (for example) it is of such nature as to kill hundreds of thousands of people and/or lead to mass cross-border population

displacements (as would happen in the case of a nuclear attack); if the conflict, past the initial attack, leads to growing cross-regional instability, large-scale disruption of supply chains, a dramatic decline in standards of living for millions of individuals, and *a fortiori* if it goes nuclear; and so on.<sup>11</sup>

This can happen in different ways: Aggressor's invasion of Defender itself occasions those harms; Aggressor's initial attack against Defender, if successful, would be a prelude to its attacking other states with similarly devastating consequences globally; in the event that Aggressor should be successful, other states might be emboldened into resorting to force to pursue their ends, again with similarly devastating consequences globally; Defender's response needlessly escalates the conflicts; third parties' reaction to an initially localized conflict between Aggressor and Defender leads to an escalation of violence, with the same consequences. These are the kinds of scenarios which, in the light of the Second World War, the international community sought to forestall by setting up the United Nations and its collective security system.

To justify intervention, one must show not merely that the proposed military action would not itself turn a localized and contained conflict into a global crisis; one must also show, in the first instance, that preventing the commission of further armed attacks, deterring such attacks, or thwarting grievous global harms concomitant on such attacks, are just causes for the resort to military force.<sup>12</sup>

This is not a trivial task. On what one may call the orthodox view of the morality of war, the resort to military force in self- or other-defense is morally permitted so

long as it is a response to ongoing or imminent unjust force. Unless Aggressor's or other states' subsequent attacks on other states would be imminent in the event of Aggressor's victory over Defender, the orthodox view endorses intervention only as a means to help Defender here and now: it prohibits both preventive and deterrent interventions. Moreover, on the orthodox view, an unwarranted armed attack is the only just cause for military intervention in an interstate conflict. Preventing population displacements, protecting a minimum standard of living, protecting supply chains and forestalling outbreaks of violence in neighbouring countries, are not.<sup>13</sup>

## II. THE DETERRENCE ARGUMENT

Much work has been done in the last thirty years on the ethics of preventive war and the ethics of waging war against threats which do not take the form of an armed attack. I do not tread these relatively familiar debates here. Instead, I assume that the fact that a wrongful harm has not yet materialised does not render it impermissible to thwart it by force; I also assume that the protection of fundamental rights other than rights to territorial integrity and political independence is a just cause for resorting to military force. In the remainder of the paper, I focus on the deterrence argument for intervention.<sup>14</sup>

Deterrence is explored in the literature on nuclear deterrence, and in the literature on punishment. There is comparatively little philosophical work on conventional (as

opposed to nuclear) military deterrence. This is surprising. After all, the post-1945 collective security system as set out in the UN Charter, in particular Chapter VII, is set up not merely as a means to stop attacks on international peace and security as they arise, but in large part as deterrence mechanism. Indeed, in the two cases to-date in which the Security Council authorized the use of military force in an interstate conflict (the 1950-1953 Korean War and the 1990-1991 Gulf War), deterrence seemed an important rationale for intervention.<sup>15</sup>

Under Chapter VII so construed, the international community, via the UN Security Council, threatens at time  $t_0$  to resort to military force against aggressors at  $t_2$  if the latter carry out military attacks at  $t_1$ . It is empowered to make good on its threat by resorting to military force at  $t_2$ . Its use of force is not meant merely to stop Aggressor. It is also meant to signal, *ex post*, that its threat at  $t_0$  was credible and thus to give credibility *ex ante* to its further threat of resorting to (typically) greater force at  $t_4$  in response to Aggressor's further breaches at  $t_3$ . Furthermore, the use of deterrent force at  $t_2$  is meant to deter both Aggressor and other states - Aggressor<sup>+</sup> - from resorting to military force at  $t_3$ . When Intervener seeks to deter Aggressor, it engages in what philosophers of punishment call *special* deterrence. When it seeks to deter Aggressor<sup>+</sup>, it engages in so-called *general* deterrence.

Thus framed, the question of conventional deterrence differs from the question of nuclear deterrence as the latter is standardly examined in the relevant literature. With nuclear deterrence, the main question is whether the mere threat of nuclear force is permitted as a deterrent. The question here is whether the use of military

force is justified as a means to render credible a threat of typically greater force. In that respect, the question of whether the use of military force is morally justified as a deterrent is analogous to the question, at the heart of the literature on punishment, of whether the imposition of hard treatment is morally justified as a means to deter the commission of criminal wrongdoings. In both cases, the question arises because the mere threat of harm, at  $t_0$ , has failed to deter, and the credibility of the institution (respectively, state punishment and collective security) is now at stake.<sup>16</sup>

#### *A. Special deterrence*

Suppose that Aggressor has long sought to retake a large part of Defender's territory over which it does not have a rightful claim. At  $t_1$ , it mounts repeated raids in Defender's airspace and territorial waters and masses thousands of infantry troops alongside their shared border. Defender, which is considerably weaker in military terms, has not resorted to defensive force so far. Unless Intervener comes to its help militarily at  $t_2$ , Aggressor will mount a full-scale invasion at  $t_3$  which, if successful, would destabilize the entire region with severely harmful consequences for other parts of the world.

Aggressor's breach provides a just cause for resorting to military force as a means of neutralizing it and thereby forestalling the more serious threat which it poses to international peace and security. It also provides a just cause for resorting to force at  $t_2$  as a means to deter it from mounting a renewed attempt at  $t_3$ . At the bar of the

just cause requirement, there is no morally salient difference between blocking Aggressor from pursuing its bellicose policy and changing its incentive structures by making the policy prohibitively costly. Subject to considerations of proportionality, necessity and likelihood of success, deterrent intervention is all things considered justified.

That said, three remarks are in order. First, to claim that one may use force against another agent as a means to deter it from committing further wrongdoings is to imply that it is amenable to being deterred. By implication, the use of *lethal* force against a wrongdoer cannot be justified as a means to deter *that* wrongdoer from committing further wrongs. In the present context, legitimate targets for special-deterrent military force are those individuals who are liable to being harmed by dint of their participation in Aggressor's unjust attack. Deterrence cannot justify killing them all – even if neutralization does. Suppose that both deterrence and neutralisation would succeed. For deterrence to be (conceptually) possible there have to be some agents left to be deterred. Deterrence thus results in lesser loss of life than neutralisation, which counts in its favor.<sup>17</sup>

Second, difficulties arise if the degree of force,  $F$ , which Intervener employs, fails to deter Aggressor, either because Aggressor does not believe that Intervener will employ greater force at  $t_4$ , or because the degree of threatened force is not high enough to deter it from pursuing its unjust ends. Intervener is justified in resorting to  $F$ , then, only if it is effective not just in the sense that Aggressor believes that

Intervener will use further force at  $t4$  but also in the sense that Aggressor must be dissuaded from further attacks at  $t3$ .<sup>18</sup>

Suppose that  $F$  is neither credible nor dissuasive, but that greater force  $F^*$  – say, drone strikes on military targets combined with the bombing of a dual facility – would be. Suppose however that  $F^*$  would be a disproportionate response to Aggressor’s breach at  $t1$ . Even so, if  $F^*$  is a proportionate response to its putative breach at  $t3$ , Intervener might be justified in resorting to it as a way to render credible its threat of resorting to greater force  $F^{**}$  – say, a full scale invasion – at  $t4$  should Aggressor pursue its bellicose policy at  $t3$ .

The point holds even if  $F^{**}$  would be a disproportionate response to Aggressor’s wrongdoing at  $t3$ . In this kind of case, Intervener’s resort to  $F^*$  at  $t2$  is not itself a disproportionate response to Aggressor’s future wrongs; but it does serve as a means to render credible a threat of *ex hypothesi* disproportionate force  $F^{**}$  at  $t4$ . The question is whether Intervener may nevertheless so act.

Some opponents of nuclear deterrence would aver that Intervener may not so act, on the following grounds. Intervener’s threat at  $t2$  is not credible unless Intervener actually intends to resort to  $F^{**}$  at  $t4$ . But if resorting to  $F^{**}$  at  $t4$  is morally wrong, then so is intending at  $t2$  to do so. Given that intending to do so is wrong, threatening to do so is wrong too. Although those opponents of nuclear deterrence target mere threats to use nuclear weapons, they would by implication condemn the resort to conventional force as a means to render a wrongful threat credible.<sup>19</sup>

The objection invites two responses. The first response concedes that intending to resort to  $F^{**}$  at  $t4$  is impermissible but denies that Intervener must necessarily form such conditional intention at  $t2$ : all that it needs is for Aggressor to be uncertain as to whether Intervener will so act. If Intervener has strong reasons to believe that Aggressor is uncertain and will be deterred from pursuing its policy when faced with threats of  $F^{**}$ , it is hard to see why it may not so threaten at  $t2$ , even though it does not intend to resort to  $F^{**}$  at  $t4$ .

The response assumes that bluffing is morally permissible and that it is possible for a regime to bluff or, at the very least, to engineer doubts as to its intentions. Those who reject either assumption might be tempted by the second response to the objection. This response accepts that Intervener must form at  $t2$  the conditional intention to resort to  $F^{**}$  at  $t4$  but denies that the fact that  $F^{**}$  is impermissible entails that threatening to resort to it is impermissible. Threats, the response holds, have effects – here, the beneficial effect of forestalling future wrongful harms – which must be taken into account when ascertaining whether it is permissible to issue them. Sometimes, those effects render permissible a threat to do the impermissible. Either way, if Intervener may threaten Aggressor, then it may act in such a way as to make its threat credible – in this case, by resorting to  $F^*$  at  $t2$ .<sup>20</sup>

The third remark is this. Suppose that Intervener impermissibly issues a threat to Aggressor at  $t2$ . Given that the threat itself is impermissible, so is the resort to force as a means to render it credible. However, now that the threat has been issued, Intervener's credibility is on the line. Suppose that Aggressor rides roughshod over

Intervener and attacks Defender at  $t3$  – wrongfully so. If Aggressor would have attacked Defender anyway, Intervener’s use of countervailing force at  $t4$  is not morally troubling. But if Intervener’s *ex hypothesi* wrongful threat triggers Aggressor’s move, then we may wonder whether Intervener is morally permitted to respond. To say that it is raises a moral hazard, since Intervener could deliberately issue a threat which it knows is impermissible, so as to create a situation in which it then morally permitted to intervene. More broadly, it also raises the interesting question, already familiar in the literatures on nuclear deterrence and war endings, of whether political actors must desist here and now from pursuing a course of action which they started unjustly.

Neither point undermines my limited case for intervention on grounds of special deterrence. The response to the concern about moral hazard is that, even if Intervener is justified in using force against Aggressor at  $t4$ , the fact remains that it did act unjustly at  $t2$  – a fact which will have to be taken into account in any justified post-conflict settlement. The response to the question of extrication is that the grounds which rendered the initiation of a course of action impermissible may shift, such that persisting is morally permissible.<sup>21</sup>

### *B. General deterrence*

So far, I have assumed that the resort to force is meant to deter Aggressor from continuing with its policy. In general deterrence, by contrast, it is meant to deter other states from threatening international peace and security. Suppose that

Aggressor's success would embolden Aggressor<sup>+</sup> into resorting to force to pursue its ends against Defender<sup>+</sup>, with devastating consequences globally. Does this make a difference to the moral permissibility of intervention?

Assume for the sake of argument that resorting to *F* is a necessary, likely effective and proportionate means to deter Aggressor. We need to distinguish between two cases. In the first case, resorting to *F* against Aggressor is also a necessary and likely means to deter Aggressor<sup>+</sup> as well as a proportionate response to its future breach. If so, the fact that *F* deters Aggressor<sup>+</sup> provides Intervener with a further reason so to act.

In the second case, *F* suffices against Aggressor, but not against Aggressor<sup>+</sup>: Aggressor<sup>+</sup> will renounce going to war at *t3* only if Intervener subjects Aggressor to *F*<sup>\*</sup>. Let us quantify the difference between *F* and *F*<sup>\*</sup> as *f*. To say that Intervener may resort to *F*<sup>\*</sup> against Aggressor is to say that it is justified in subjecting Aggressor to *f* *in addition to F*, for the sake of deterring Aggressor<sup>+</sup>. For example, it is to say that it may launch drone strikes (*F*) *and* bomb a range of dual facilities (*f*) albeit at the cost of more lives, limbs and livelihood than if it had only done the former.

Here is a familiar objection to intervention in such cases, which appeals to the Kantian prohibition on using persons as mere means to an end.<sup>22</sup> Aggressor is innocent of Aggressor<sup>+</sup>'s future wrongdoings, and is in the same position *vis-à-vis* Defender<sup>+</sup> as the international community. To say that Intervener is justified in subjecting it to *f* is to say that it may be used as a mere means to protect Aggressor<sup>+</sup>'s future victims. However, we ought not generally to use, let alone harm, the innocent as mere means

to our or someone else's ends, however valuable those ends. Subjecting an innocent person to a high risk of losing her livelihood, sustaining life-changing injuries, indeed being killed, for the sake of protecting another person is to use her as a mere means to the latter's ends. By implication, then, general deterrence is not a morally justified response to attacks on international peace and security.

The objection fails if there is a morally salient connection between Aggressor's use of force against Defender at  $t1$  and Aggressor+'s use of force against Defender+ at  $t3$  - such that Aggressor is not in fact innocent of Aggressor+'s wrongdoings. Suppose that even though Aggressor is not attacking Defender+, it cannot but foresee that its attack on Defender would, if successful, embolden Aggressor+. Aggressor's wrongdoing is not just the wrongdoing of attacking Defender: it is the wrongdoing of attacking Defender foreseeing that this will embolden Aggressor+ to attack Defender+. Or suppose, more strongly still, that Aggressor attacks Defender with the intention to embolden Aggressor+ into attacking Defender+: it commits both the wrong of an unjust aggression and the wrong of incitement. In both cases, Aggressor's additional wrongdoing provides Intervener with a just cause for resorting to  $f$  as a means to deter Aggressor+; subject to the requirements of necessity and proportionality, and combined with the wrongdoing of attacking Defender, it provides it with a justification for resorting to  $F^*$ .<sup>23</sup>

In this case, Aggressor's attack on Defender is causally related to Aggressor+'s attack on Defender+ and thereby contributes to undermining international peace and security. It is plausible that most cases of military aggression will be of that kind: there

are so few such conflicts that the emboldening impact of a failure to intervene is likely to reverberate beyond Aggressor's borders.<sup>24</sup> Nevertheless, suppose that it is not related: Aggressor<sup>+</sup> had plans to attack Defender<sup>+</sup> anyway, irrespective of Aggressor's attack on Defender. The deterrence argument says that Intervener is justified in resorting to military force against Aggressor as a means to deter Aggressor<sup>+</sup> even though it is *ex hypothesi* innocent of the latter's wrongdoings. Intervener's resort to *F\** against Aggressor does seem vulnerable to the Kantian objection.

A classic reply to this objection, developed by Victor Tadros in defense of criminal punishment, says that wrongdoers have lost their claim not to be used as a mere means for the sake of others. Moreover, not only are they under remedial duties to their own victims to protect them from further wrongful harms: they are also under protective duties to the victims of other wrongdoers. Harming them at *t2* to deter those wrongdoers at *t3* is one way to enforce their protective duty.<sup>25</sup> In the context at hand, then, Aggressor owes it to Aggressor<sup>+</sup>'s victims to protect them from Aggressor<sup>+</sup>'s attacks and its concomitant grievous wrongful harms. By resorting to military force against it as a means to deter Aggressor<sup>+</sup>, Intervener is simply enforcing Aggressor's duty.

The reply does not work. We all are under duties to victims of wrongdoing, whether or not we have contributed to those wrongdoings. Those duties flow from a general obligation of assistance to those in need, and are subject to a no-undue costs proviso: consistent with the prohibition on using the innocent as mere means to other person's ends, there are limits to the harms that we are under a duty to incur and that

it is permissible deliberately to inflict on us for the sake of those in need. (A point which Tadros endorses.) The claim that Aggressor is under a duty of assistance to Aggressor<sup>+</sup>'s future victims and thus to shoulder the burdens (within limits) of thwarting the commission of future wrongs is incompatible with the Kantian prohibition. For it comes at the considerable moral cost of relaxing the prohibition on *acts of military aggression* against states – their citizens and leaders – who have not forfeited their rights to political independence and territorial integrity. Even if one accepts, with the Duty View, that the innocent are under duties to incur some harms for the sake of victims of wrongdoings, it is doubtful that the harms attendant on acts of aggression (which must be severe enough, remember, in order effectively to deter Aggressor<sup>+</sup>) are compatible with the no-undue costs proviso and, by implication, with the injunction against using the innocent as mere means.

If proponents of the Duty View wish to hold on to the prohibition on military aggression against the innocent while endorsing Intervener's resort to deterrent force *f* (in addition to *F*) against Aggressor, they need to show that the latter is under a more stringent duty to deter Aggressor<sup>+</sup> than other parties such as states which were not part of the initial conflict – precisely by dint of its wrongdoing at *t1*. I cannot rehearse all the possible moves a proponent of the Duty View might deploy. Here is one, however, drawn from Tadros' own work. In the context of punishment, wrongdoers are under an impersonal duty to redeem themselves. They can do so by showing that they are committed to the moral values which they impaired by acting as they did. One way to do that is to incur the costs of protecting future victims of other

wrongdoers. Punishment enforces that duty. In the geopolitical context at hand, then, Aggressor is under an impersonal duty to redeem itself for having violated Defender's rights to territorial integrity and political independence and, in so doing, subjecting its population and the world at large to a range of harms. It can discharge that duty by incurring the costs of being subjected to  $F^*$  rather than  $F$  as a means to deter Aggressor<sup>+</sup>. Intervener enforces that duty.

Let us assume that wrongdoers are under an obligation to redeem themselves. While this argument does draw a bright moral line between wrongdoers and the innocent - between Aggressor and others - it runs against an insuperable difficulty. Redemption is inherently expressive. As Tadros himself implies, to redeem oneself in the eyes of the victim of one's wrongdoing and of third parties is not merely to act in such a way as to further the moral norms one has violated; it is also to acknowledge that one has committed a wrong. Whereas one can be coerced into conducting oneself in the required way, one cannot be coerced into forming and manifesting the requisite sincere belief. A wrongdoer in general, and Aggressor in particular, thus cannot redeem itself by doing  $x$  if it has to be coerced into doing so and not because it believes that it has done wrong and that doing  $x$  is the right way to redress the wrong. To say that Intervener is justified in resorting to military force as a means to enforce Aggressor's duty to redeem itself is self-defeating.<sup>26</sup>

### III. TWO PROBLEMS

To recapitulate, subject to meeting the requirements of necessity and effectiveness, Intervener is justified in resorting to military force  $F^*$  against Aggressor at  $t_2$  to deter it from carrying further attacks at  $t_3$  and thereby threatening international peace and security, so long as  $F^*$  is a proportionate response to Aggressor's future wrongs and even if the degree of force which Intervener thus threatens to use at  $t_4$  should Aggressor persist is a disproportionate response. Subject to the aforementioned requirements, it is justified in resorting to  $F^*$  against Aggressor at  $t_2$  as a means to deter Aggressor<sup>+</sup> from attacking Defender<sup>+</sup> threatening international peace and security at  $t_3$  in the following two case: (a) Aggressor's wrongful attack on Defender in itself warrants  $F^*$ ; (b) Aggressor's wrongful attack only warrants  $F$ , but it is connected to Aggressor<sup>+</sup>'s wrongdoing or to the state of affairs resulting from that wrongdoing in such a way as to warrant subjecting it to additional force  $f$ . Pending further defense of the Duty View or other arguments in favour general deterrence, it is not justified in other cases.

In this section, I address two further and serious concerns about deterrent intervention in interstate conflicts: deterrence failures, and the problem of uncertainty.

#### *A. Deterrence failures*

The claim that Intervener is justified in resorting to military force in the aforementioned cases is subject to its intervention meeting the effectiveness condition.

Aggressor and Aggressor<sup>+</sup> must form the belief at *t3* that there is a risk that Intervener will make good on its threat of further harm at *t4* if they carry out further attacks. Furthermore, they must desist from so doing precisely on those grounds: otherwise, deterrence *qua* deterrence will have failed.

*Ex hypothesi*, however, deterrence has already failed, since Aggressor attacked Defender at *t1* notwithstanding Intervener's threat at *t0*. In order to deter Aggressor (and quite possibly Aggressor<sup>+</sup> as well) from resorting to wrongful force at *t3*, Intervener must at *t2* overcome the credibility deficit it suffered at *t1*, in the knowledge that it may well fail again. Intervener's decision of which quantum of force to use must rest on an assessment of the probability that it will succeed factored by the magnitude of the harms that would ensue should it fail – relative to the harms that would accrue if it does nothing at all. Intervener, thus, faces a dilemma: either it resorts to, say, *F\** at *t2* as a means credibly to signal that it will resort to *F\*\** at *t4* if need be, in which case it risks locking itself into an escalating conflict and rendering the crisis worse than it is; or it desists here and now, in which case it risks allowing the crisis to become worse than it is. Other things equal, contributing to causing harm is worse than allowing harm to happen. Other things equal, then, Intervener should refrain from using deterrent force at *t2* – *a fortiori* so if escalation occasions greater harms and risks thereof than non-intervention. The difficulty for deterrence as a strategy, however, is that these are precisely the cases in which deterrence is most needed. Put differently, the greater an aggressor's capacity and willingness to make light of interveners' threats, the greater the need for intervention and yet, at the same

time, the greater the case *against* it. Deterrent force is the most effective against states which, by dint of their comparatively low capacity for threatening international peace and security, are the least likely to warrant it; it is the least effective against those which, by dint of their immense capacity for harm, are the most likely to warrant it.

The difficulty is particularly acute in cases in which Aggressor (or indeed Aggressor<sup>+</sup>) and Intervener both have nuclear capacities to the point of being able to destroy one another. Nuclear deterrence is usually meant to deter not just the resort to nuclear force, but also the resort to conventional force on the understanding that the latter might be met with a nuclear response and on the assumption that neither party will risk annihilation by escalating a nascent conflict. *Ex hypothesi*, nuclear deterrence so construed has failed in the scenarios at issue here. Russia's ongoing war of aggression against Ukraine is a depressingly perfect illustration of the point. Here is another, not so hypothetical example. In the autumn of 2021 and the Spring of 2022, China launched waves of fighter jets and bombers into Taiwan's airspace, following a long-standing policy of naval build up in the South China sea. It is thought that China will have the wherewithal to mount a full scale invasion of the island within a few years. If the United States' possession of nuclear weapons is meant in part to deter China from threatening Taiwan as it has done so far, deterrence clearly has failed. The question then is whether, the next time China conducts such an exercise, the United States (and its regional allies such as Australia) may justifiably resort to conventional force as a means to deter China from invading the island. Their resort to force at *t*<sub>2</sub>, recall, is meant to signal that should China nevertheless press

ahead at  $t3$ , they will employ (presumably greater) force again at  $t4$ . If the force which they threaten at  $t2$  to use at  $t4$  is nuclear, they have to instil in China's leaders the belief that there is a likelihood that they will so act despite the fact that China could retaliate in kind, with catastrophic consequences for the world at large, including the US. Given those consequences, it is unlikely that the US could credibly threaten such response merely by using conventional force. Conventional deterrence, then, would fail. (The most likely way to render it credible would be to resort to nuclear force at  $t2$ . But given that this would in all likelihood invite a similar response from China, deterrence would have failed in this case too.<sup>27</sup>)

Suppose, contrastingly, that the United States threaten to use conventional force at  $t4$  should China invade at  $t3$ . Its use of force at  $t2$  will help render its threat credible. Should China then desist on that basis, conventional deterrence will have succeeded (thus rendering nuclear deterrence, and its concomitant risks, unnecessary in this case). However, the United States must gamble on China forming the belief that they have taken the nuclear option off the table and nevertheless deciding not to respond with conventional force. It is a hugely risky gamble. Moreover, even if one can uncouple the resort to non-nuclear force from the threat of nuclear force (by no means a foregone conclusion), the fact remains that countries with nuclear capacities also have large non-nuclear capacities and can inflict serious damage on one another. The difficulty highlighted two paragraphs ago thus remains.

Is conventional deterrence a moral non-starter, then? Not necessarily. Even if using force against Russia and China would not succeed at deterring them, it might

succeed at deterring other putative aggressors from pursuing their ends by force. And even if using deterrent force against Russia and China would be all things considered impermissible (whether it is effective or not), using deterrent force against a lesser foe might be all things considered permissible, subject to considerations of proportionality, necessity and likelihood of success. The claim that the more necessary deterrence is, the less effective against the initial wrongdoer, and *vice versa*, while plausible, does not show that deterrence is never morally justified.<sup>28</sup>

### *B. Uncertainty*

At *t1*, Aggressor subjects Defender to military force. Intervener's leaders believe and argue that the ensuing conflict if unchecked will threaten international peace and security, on the basis of which they employ deterrent force against Aggressor. For all they know, however, the conflict would remain localized. In that spirit, Michael Walzer, who is the only just war theorist properly to engage with the issue of intervention in interstate conflicts, offers an uncompromising defense of states' right, indeed duty, *not* to intervene, even in cases in which an aggression is or is likely to morph into a global crisis.<sup>29</sup>

Although Walzer's argument targets a decision to wage war, his argument has purchase against decisions to resort to force short of war which is likely to escalate into a full-blown military intervention. Crucially, and precisely because it puts pressure on the judgement that an interstate conflict is or promises to turn into a

global crisis, it applies not just to deterrent force but to preventive force as well as against force to neutralise ongoing threats whenever those who wish to resort to force rely on that judgement. It must be taken seriously. Global crises call for extraordinary measures. The risk is that unscrupulous governments will claim that we are in the grip of a global crisis as a means to justify taking such measures when, in fact, their proposed course of action is a morally unwarranted response to the crisis, is deeply unpopular (even if morally warranted *per se*), or both. However, the converse is also true: precisely because global crises in general and threats to international peace and security in particular are thought to require extraordinary, costly and often unpopular measures, governments which are unwilling so to act might avoid labelling a set of event as such. The problem is particularly acute for conventional deterrence: in order to deter putative aggressors, intervening states have to be credible; in order to be credible, they have to be willing to expose their own armed forces and populations to retaliatory harms on the part of aggressors.<sup>30</sup> Opportunistic mislabelling goes both ways: not just in the direction of predatory military intervention under the ill-fitting cloak of self-defense, but also in the direction of blind refusal to see where dangers lie. Either way, it is particularly likely to occur the more uncertain actors are about the facts of the case.

States are thus caught between the risk of intervening when international peace and security are not in fact under threat, thereby wrongfully causing people to incur grievous harms, and the risk of not intervening even though international peace and security are in fact under threat, thereby wrongfully allowing some people to incur

grievous harms. Other things roughly equal, under conditions of uncertainty, it is better to err on the side of not harming than on the side of allowing harm to happen. However, the problem of uncertainty and the concomitant risk of wrongful military action are not reasons for rejecting intervention out of hand. As Allen Buchanan argues, ascertaining whether a wrongdoing is objectively, in itself, a just cause for war is only one of the tasks (albeit a crucially important one) which just war theory should set itself. Another task consists (a) in ascertaining whether a wrongdoing provides a justification for military force given the institutional framework within which we operate and, if not, (b) in reflecting on and building institutional frameworks which would mitigate the aforementioned epistemic and motivational risks and in so doing enhance our chances of doing the morally right thing, objectively speaking.<sup>31</sup>

Our current institutional framework for addressing threats to international peace and security is not equal to the task of thwarting such threats as they arise from interstate military conflicts. Chapter VI of the UN Charter mandates member states to seek peaceful resolutions to their disputes. Chapter VII states that the Security Council “shall determine the existence of any threats to the peace, breach of the peace, or act of aggression and shall make recommendations, or decide what measures shall be taken in accordance with articles 41 and 42, to protect international peace and security” (art. 39). It may authorize measures short of war as well as the deployment of armed forces should it deem it necessary, and can delegate enforcement to states and/or regional organizations (art. 43, 51-52). The five permanent members of the Council (China, France, Russia, UK, USA) each have a right to veto any

substantive course of action put to the Council, though they must abstain from voting on matters pertaining to disputes to which they are a party (art. 27). Once the UNSC has determined that international peace and security are under threat and decides to take enforcement action, member states are under a duty to provide the required assistance (arts 48-49).<sup>32</sup>

Due to the right to veto, and to the fact that the UN are unwilling to enforce art. 27, the Security Council is not able to pass a resolution describing military actions on the part of any of the five permanent members as a threat to international peace and security: indeed, a draft resolution condemning Russia's invasion was rejected on February 25 2022, Russia having used its veto power. Granted, the General Assembly is able to do so. In 1950, largely to remedy paralysis at the Security Council, it passed the "Uniting for Peace" Resolution. Under the terms of the resolution, if the Council "fails to exercise its primary responsibility for the protection of international peace and security" when there appears to be a threat to it, the General Assembly "shall consider the matter immediately with a view to making appropriate recommendations to Members for collective measures, including in the case of a breach of the peace or act of aggression the use of armed force when necessary, to protect international peace and security."<sup>33</sup> On March 2 2022, the Assembly voted in favour of a resolution condemning the war in Ukraine. That success aside, however, in matters pertaining to international peace and security, the General Assembly's resolutions are not binding. Furthermore, due to the high number of authoritarian states, the Assembly is not adequately representative of the latter's citizenries. In any event, even if it were

representative, the Security Council alone is legally empowered to take or delegate enforcement action for the sake of international peace and security. While it has authorised the use of force in intrastate conflicts, particularly since the end of the Cold War, it is toothless in the face of interstate conflicts in which one of its permanent members is directly involved or has a stake, and/or has an ally in another veto-yielding permanent member.<sup>34</sup>

If this relatively uncontroversial diagnosis is correct, this leaves us with the following options, all of which seek to minimise the occurrence of wrongful harms under conditions of uncertainty: (1) reform the current system; (2) bypass it altogether; (3) do nothing. If there are realistic prospects for options (1) and (2) such as to mitigate both the risks of unwarranted intervention or unwarranted failures to intervene, then doing nothing is not a morally acceptable option. Which of the two remaining options we should advocate does not depend merely on whether, in the world as we know it, it stands a realistic chance of being adopted. It also depends on whether the resulting institutional set up would meet basic conditions for legitimacy such as representativeness and impartiality, the establishment of adequate procedures for resolving disagreements between states, and the existence of a fit between the institution's goals (to wit, the protection of international peace and security) and its processes and performance.<sup>35</sup>

Bypassing the current system altogether would take the form of endorsing unilateral intervention, or of acceding to states' refusal to act, for self-interested reasons and even though action is called for. Alternatively, it may take the form of

building a new and competing set of institutions from scratch. None of this is attractive. Imperfect as the United Nations (by which I mean both UN institutions and its member states) are, notably when it comes to keeping major powers in check, the decisions they make are less unrepresentative, and less likely to be partial, than decisions made unilaterally by a subset of their members. They also have a history of relative success in some cases, albeit mostly involving humanitarian interventions against weak states, and thus relevant experience which institutions set up wholly *de novo* would not have.

This leaves us with reforming the UN. Obviously, I cannot offer a detailed blueprint for reform here. I only have a tentative two-pronged proposal which draws on Allen Buchanan and Robert Keohane's works.<sup>36</sup> Return to our recurrent case: Aggressor launches an attack on Defender. The international community must take the following three steps. First, it must determine whether the conflict is or would if unchecked morph into a global crisis, such as to warrant military intervention. Second, it must decide whether to intervene. Third, it must hold itself, or a subset of its members, accountable *ex post* for a wrongful intervention or, as the case may be, a wrongful failure to intervene.

Consider the first step. To declare that an interstate conflict threatens international peace and security is to put states and their citizenries on notice and to direct them to take the steps necessary to contain it. Contrariwise, to declare that the world is not facing a global crisis exempts states and their citizenries from having to act. It stands to reason that such declaration ought to be made by a multilateral, impartial and

representative body. Furthermore, the determination that military force is a necessary, proportionate and effective response – or, on the contrary, that non-violent alternatives are warranted – carries serious material and moral risks, either way, for the world at large. It also stands to reason that such determination should be made by a multilateral, impartial and representative body. Whether the General Assembly and *a fortiori* the Security Council could be such a body is doubtful, for reasons set out above. Hence the first prong of the proposal: establish a separate body with the sole function of evaluating calls for the use of force. Such a body would comprise state delegations, failing which states would not support its establishment or recognize its decisions as authoritative. But partly to help compensate for authoritarian states' failures of representativeness *vis-à-vis* their citizenries, it would include officials of the UN's major agencies and of non-governmental human rights organizations such as Amnesty International and Human Rights Watch and (more controversially) major charities such as the Red Cross or MSF. While these organizations and charities are not representative of citizenries in the sense in which we tend to think of representation, they routinely deal with the humanitarian costs of military conflicts, have the expertise to determine whether the use of force or, on the contrary, a decision not to intervene, would trigger or worsen a global crisis and can and do speak on behalf of some of the most vulnerable individuals in the world. It is partly for that reason, in fact, that they are referred to as the 'Third UN', alongside UN institutions based in Geneva and New York and UN member states. This suggestion does not radically reshape the international order. As we saw, neither the General Assembly

nor the Security Council has monopoly over the mere (as distinct from binding) determination of what counts as a threat to international peace and security. Moreover, the UN has long included civil society organizations in many of its operations.<sup>37</sup>

Second, consider the decision to intervene by force and, if so, the question of to whom the intervention will be entrusted. Calls for permanent members to renounce their veto right over the use of force itself are wholly unrealistic. It is also unrealistic to suppose that the international community can do anything other than rely on a coalition of the willing, ranging from *ad hoc* coalitions to regional organizations such as NATO or the African Union. At the same time, it is worth noting that a decision *to* use force must be reached by a majority of the Council's permanent and non-permanent members. If the institution I described above determines that international peace and security are not under threat, or that they are but that intervention would worsen the crisis, Security Council's members who take its judgement seriously have the means to withhold authorization. Of course, this does not guarantee that a wrongful intervention will not take place, as shown by the example of the US-led coalition's unauthorized invasion of Iraq in 2003. But in the cases at hand, UNSC authorization, with warts and all, is (I fear) the best that we can hope for.

That said, third, as Allen Buchanan and Robert Keohane persuasively argue, states which seek authorization to resort to deterrent force ought to be willing to subject themselves to an *ex post* evaluation of their decisions by an impartial and representative body, and to accept that body's determination as to what they owe to the victims of

their wrongful decisions. By the same token, I submit that states *which withhold authorization* should also be willing to go through the same process. Again, there is no guarantee that states which have been found derelict, be it for triggering or worsening a global crisis by dint of their use of force or by allowing such a crisis to unfold by dint of refusing to use force, will “pay up.” Nevertheless, a system which affords opportunities for scrutiny and allocation of remedial responsibilities is better than none at all.

Is it realistic that states - not least the most powerful of all - would agree to this, here and now? Writing in the mid 2000s to late 2010s, Buchanan and Keohane seemed optimistic that they would, on the grounds that acceding to scrutiny would help states wanting to resort to force and seeking allies overcome suspicions that they are acting in a purely self-interested way. Writing in the early 2020s at a time of growing international military tensions - indeed, outright war - and during a pandemic in which the most powerful states have honored multilateralism in the breach more than the observance (to put it mildly), I am pessimistic. If such pessimism is warranted, we must reconcile ourselves to the fact that conventional deterrence - that pillar of the collective security system - will remain powerless in precisely the kind of conflicts which are most likely to trigger a global crisis. In the event that there *are* hopes for reform, they lie in reforming the system from within rather than without.

#### IV. CONCLUSION

I began by noting that just war theorists have paid scant attention to the ethics of intervention in interstate conflicts. For that matter, they have paid similarly scant attention to the ethics of conventional deterrence, notwithstanding the fact that the latter is a pillar of the international collective security system. In this paper, I argued that the resort to deterrent military force as a means to forestall a global crisis is morally justified, but only in very few cases. While some moves to reform the international collective security system might help state actors deal with the problem of uncertainty, they will only take us so far.

I thus end on a somewhat deflationary note. Deterrent military force is morally justified objectively speaking in some of the cases in which international peace and security are at stake. In the world as we know it, however, I doubt that it is – at least, not against nuclear powers. This does not mean that nothing can be done. We should strive towards reform – without illusions. But it does mean that, for now at least, and paradoxically, we should take seriously the possibility that non-intervention, construed as the rejection of the direct use of military force, is the morally correct response to the most serious threats to international peace and security.

\* Versions of this paper were presented at the Surrey Centre for Law and Philosophy, the Oxford Centre for the Study of Social Justice, a Philosophy Colloquium held at the University of Vienna, and a workshop organized by *Social Philosophy & Policy*. I thank all organisers and participants for stimulating discussions, and Linda Eggert, Gideon Elford, Thomas Sinclair, and Elad Uzan for incisive written comments. An anonymous reviewer for *Social Philosophy & Policy* provided a number of helpful

suggestions, particularly on Section II. Finally, I am deeply grateful to Allen Buchanan and David Schmidtz for inviting me to take part in this symposium and for their helpful feedback on an earlier draft.

<sup>1</sup> The other exception is the “inherent right of individual and collective self-defence” against an unlawful armed attack, as affirmed in article 51. International public law draws a distinction between interventions for the sake of collective self-defense and interventions for the sake of collective security. In the former case, a third-party state comes to the defense of the victim of an armed attack; in the latter case, a third party – a state or group thereof – intervenes in a interstate conflict in order to preserve or restore international peace and security. As the 1990–1991 intervention in the Iraq–Kuwait conflict shows, the two can overlap. But they do raise distinct ethical and legal questions. See, e.g., Yoram Dinstein, *War, Aggression and Self-Defence*, 3rd ed. (Cambridge: Cambridge University Press, 2001), chs 9–10; Christine Gray, *International Law and the Use of Force*, 4th ed. (Oxford: Oxford University Press, 2018), 176–198; Bruno Simma et al., *The Charter of the United Nations: A Commentary*, 3rd ed. ---

<sup>4</sup> A technical point: throughout the paper, when I say that some agent is justified in embarking on a given course of action, I mean that the facts are such as to warrant that course and that she has evidence to believe that so are the facts.

<sup>5</sup> On alternatives to military force, see, e.g., Cécile Fabre, *Economic Statecraft - Human Rights, Sanctions and Conditionality* (Cambridge, Mass.: Harvard University Press, 2018); James Pattison, *The Alternatives to War - From Sanctions to Nonviolence* (Oxford: Oxford University Press, 2018).

<sup>6</sup> I do not address the question of whether intervention is morally mandatory. For the view that any war that is permissible is also mandatory, see Kieran Oberman, "The Myth of the Optional War: Why States Are Required to Wage the Wars They Are Permitted to Wage." *Philosophy & Public Affairs* 43, no. 4 (2015 2015): 255-86.

<sup>7</sup> On the relevance of consent for justified defensive action, see Jonathan Parry, "Defensive Harm, Consent, and Intervention." *Philosophy & Public Affairs* 45, no. 4 (2017): 356-96.

<sup>8</sup> Walzer, *Just and Unjust Wars*, 59. See also Rodin, *War and Self-Defense*. Put differently, on this moralised account of global crises, a conflict is a global crisis by dint of the fact that it results from the breach of a norm we all endorse. I adopt a non-moralised account, whereby a conflict is a global crisis by dint of the harms it causes. Thanks to Allen Buchanan for the suggestion. (Incidentally, even on a non-moralised account, it does not follow from the claim that a breach of the universal norm against aggression is a global crisis that resorting to military action in defense of that norm is

---

morally justified.)

<sup>9</sup> Dinstein, *War, Aggression and Self-Defence*, 225.

<sup>10</sup> See also Cécile Fabre, “Cosmopolitanism and Wars of Self-Defence”, in Fabre and Lazar, eds., *The Morality of Defensive War*.

<sup>11</sup> As Allen Buchanan pointed to me, whether a crisis is construed as a global crisis is partly contingent on our awareness of it and our sensibilities. If we do not know that atrocities are taking place on a large scale somewhere, though we feel their effects through (e.g.) population displacements, we will not regard those atrocities as a global (or regional) crisis.

<sup>12</sup> For lack of space, I focus on cases in which the threat originates with Aggressor. Note that by preventing an attack, I mean eliminating it before it materialises (for example, by destroying the enemy’s airforce). It is not the same as deterring it.

<sup>13</sup> See, e.g., Ripstein, *Rules for Wrongdoers*; Benbaji and Statman, *War by Agreement*, ch. 3. By “the orthodox view”, I mean the view of war which has been dominant since the end of the 19th century. In medieval, early modern and modern accounts, the prevention of attacks, the punishment of wrongdoers and the recovery of wrongfully taken property or territory were deemed just causes for war. See Stephen C. Neff, *War and the Law of Nations: A General History* (Cambridge: Cambridge University Press, 2005).

<sup>14</sup> For the view that, under certain conditions, rights to the basic necessities of life may justifiably be defended by force, see Hugo Grotius, *The Rights of War and Peace*, ed. Richard Tuck (Indianapolis: Liberty Fund, 2005 [1625]), Bk II, ch. II; David Luban,

(Oxford: Oxford University Press, 2009), 268; James Cockayne and David M. Malone, “The Council and the US-led Wars in Iraq”, in *The United Nations Security Council and War*, ed. Vaughan Lowe et al. (Oxford: Oxford University Press, 2009), 386.

<sup>16</sup> See Gregory S. Kavka, *Moral Paradoxes of Nuclear Deterrence* (Cambridge: Cambridge University Press, 1987); Henry Shue, ed., *Nuclear Deterrence and Moral restraint: Critical Choices for American Strategy* (Cambridge: Cambridge University Press, 1989); Jeff McMahan, “Deterrence and Deontology”, *Ethics* 95, no. 3 (1985): 517–536; Robert E. Goodin, “Nuclear Disarmament as a Moral Certainty”, *Ethics* 95, no. 3 (1985): 641–658; Richard Wasserstrom, “War, Nuclear War, and Nuclear Deterrence: Some Conceptual and Moral Issues”, *Ethics* 95, no. 3 (1985): 424–444; Gerald Dworkin, “Nuclear Intentions”, *Ethics* 95, no. 3 (1985): 445–460; Steven Lee, *Morality, Prudence, and Nuclear Weapons* (Cambridge: Cambridge University Press, 1993). For a brief

---

reference to deterrence as a justification for punitive war, see David Luban, “War as Punishment”, *Philosophy & Public Affairs* 39, no. 4 (2011): 299–330. Luban’s critical discussion of punitive wars takes a retributivist as opposed to a deterrence-based conception of punishment.

<sup>17</sup> For a similar argument in the context of nuclear deterrence, see Wasserstrom, “War, Nuclear War, and Nuclear Deterrence”, 437–438. Suppose that Intervener kills all liable individuals within Aggressor. It is possible of course that there would remain non-liable members of Aggressor left alive, who could be deterred from pursuing Aggressor’s unjust policy at *t*<sub>3</sub>. As Allen Buchanan pointed out to me, we can construe the Allies’ destructive policy towards Germany during WWII as attempting to deter successive generations of German citizens and leaders from ever waging a war of aggression. In this case, however, Intervener’s use of force would be a case of general, not special deterrence. I address the issue below. I lack the space however to address the permissibility of “in perpetuity” multigenerational deterrence.

<sup>18</sup> Thanks to G. Elford for suggesting the point. To be clear: I mean that Intervener is justified in resorting to *F*, under those conditions, as a deterrent. Even if *F* does not deter Aggressor, it might eliminate it, and might be justified on those grounds.

<sup>19</sup> See, e.g., Anthony Kenny, *The Logic of Deterrence* (Chicago: University of Chicago Press, 1985).

<sup>20</sup> McMahan, “Deterrence and Deontology”; Kavka, *Moral Paradoxes of Nuclear Deterrence*, esp. chs 1–2. Sometimes, of course, the effects of a threat are such as to render the threat impermissible. For example, we can imagine cases in which the

---

issuing of a threat poses an unacceptably high risk of an accidental military confrontation between Aggressor and Intervener, with far worse, and disproportionately harmful, consequences for international peace and security. I am grateful to Elad Uzan for the point.

<sup>21</sup> On the morality of extrication, see Cecil Anthony John Coady, “Escaping from the bomb: immoral deterrence and the problem of extrication”, in *Nuclear Deterrence and Moral Restraint*, ed. Henry Shue (Cambridge: Cambridge University Press, 1989).

Thanks to Gideon Elford for raising the problem of moral hazard.

<sup>22</sup> See also David C. Hendrickson, “The Ethics of Collective Security”, *Ethics & International Affairs* 7, no. 1 (1993): 1–15.

<sup>23</sup> See also Jeff McMahan, "Just Cause for War." *Ethics & International Affairs* 19, no. 3 (2005): 1-21, 16.

<sup>24</sup> By contrast, a regime’s failure to punish one single instance of murder within its borders is unlikely to provide incentives to future murderers. Thanks to the anonymous reviewer for the journal for the point.

<sup>25</sup> Victor Tadros, *The Ends of Harm: The Moral Foundations of Criminal Law* (Oxford: Oxford University Press, 2011.)

<sup>26</sup> Victor Tadros, *Wrongs and Crimes* (Oxford: Oxford University Press, 2016), 65–66. I am reconstructing a “Tadrosean” argument for intervention. I do not know whether Tadros would endorse it. I myself once endorsed the redemption obligation argument for deterrence, in the context of economic sanctions. (Fabre, *Economic Statecraft*, 52–54.) I now think that this was a mistake. For a sophisticated study of the

---

problems raised by Tadros' treatment of the innocent in general, see, e.g., Patrick Tomlin, "Innocence Lost: A Problem for Punishment as Duty", *Law and Philosophy* 36, no. 3 (2017): 225–254.

<sup>27</sup> On the interplay between conventional and nuclear deterrence, see Lee, *Morality, Prudence, and Nuclear Weapons*, chs. 4 and 6.

<sup>28</sup> It does not show, either, that other justifications for intervention, such as simply thwarting Aggressor's attack, are inapt: deterrence is not the only justification for resorting to war. That said, the concerns which deterrence raises – such as the cataclysmic consequences of a military confrontation between great powers – are likely to apply to any such confrontation, however it is justified.

<sup>29</sup> Walzer, *Just and Unjust Wars*, ch. 15.

<sup>30</sup> Thanks to Paul Tucker for pressing me on this point.

<sup>31</sup> Buchanan, *Institutionalising the Just War*, esp. chs. 1, 2 and 7.

<sup>32</sup> See, e.g., Dan Sarooshi, *The United Nations and the Development of Collective Security* (Oxford: Clarendon Press, 1999); Vaughan Lowe et al., eds., *The United Nations Security Council and War* (Oxford University Press, 2009); Alexander Orakhelashvili, *Collective security* (Oxford: Oxford University Press, 2011); Marc Weller, ed., *The Oxford Handbook of the Use of Force in International Law* (Oxford: Oxford University Press, 2015).

<sup>33</sup> GA Res. 377 (V) (1950), para A. See Dominik Zaum, "The Security Council, the General Assembly, and War: The Uniting for Peace Resolution", in *The United Nations Security Council and War*, ed. Vaughan Lowe et al. (Oxford: Oxford University Press,

---

2009).

<sup>34</sup> On UNSC paralysis during the Cold War, see, e.g., Andrew Hurrell, “Collective Security and International Order Revisited”, *International Relations* 11, no. 1 (1992): 37–55; Gray, *International Law and the Use of Force*, ch. 6; Ian Johnstone, “When the Security Council is Divided: Imprecise Authorizations, Implied Mandates, and the ‘Unreasonable Veto’”, in *The Oxford Handbook of the Use of Force in International Law*, ed. Marc Weller (Oxford: Oxford University Press, 2015). On the difficulties which beset attempts at reforming the UNSC, see Edward C. Luck, “Principal Organs”, in *The Oxford Handbook on the United Nations*, ed. Thomas G. Weiss and Sam Daws (Oxford: Oxford University Press, 2007).

<sup>35</sup> See Buchanan, *Institutionalising the Just War*, esp. ch. 3.

<sup>36</sup> *ibid.*, ch. 1, ch. 7; Allen Buchanan and Robert O Keohane, “The Preventive Use of Force: A Cosmopolitan Institutional Proposal”, *Ethics & International Affairs* 18, no. 1 (2004): 1–22. There is a comprehensive set of institutional proposals for the use of preventive force and for humanitarian intervention to overthrow tyrannical regimes. Some of their proposals, notably the suggestion that democratic states should commit themselves to agree to outside intervention if they descend into authoritarian strife, are not relevant to this paper. For lack of space, I set aside the difficult question of how such reforms might be brought about – whether, for example, they might be brought about by illegal acts. (See Allen Buchanan, “From Nuremberg to Kosovo: The Morality of Illegal International Legal Reform”, *Ethics* 111, no. 4 (2001): 673–705.) The main differences between what I borrow from them and my proposal are the

---

following: I hold on to the UNSC monopoly on the resort to force; I vest the determination of whether force is warranted or not to a separate body; I propose subjecting failures to intervene to *ex post* scrutiny.

<sup>37</sup> For a start of the art review of the “Third UN”, see Paul Wapner, “Civil Society”, in *The Oxford handbook on the United Nations*, ed. Thomas G. Weiss and Sam Daws (Oxford: Oxford University Press, 2007).) Buchanan advocates including human rights organisations into whichever body decides to use force - as distinct from, in my proposal, whichever body declares that force is warranted. (See Buchanan, *Institutionalising the Just War*, p. 42.)
