Hiddenness, holiness, and impurity

Abstract: John Schellenberg has advanced the hiddenness argument against God's existence, based on the idea that an all-loving God would seek personal relationships. This paper develops a reply to Schellenberg's argument by examining the notion of moral impurity, as understood by Paul the Apostle. Paul conceptualized moral impurity as a causal state that transfers from person to person, like a contagious disease. He also believed that moral impurity precludes divine-human relationship. The goal of this paper is to develop these ideas into a problem for one Schellenberg's key premises.

Introduction

John Schellenberg has advanced the hiddenness argument against God's existence, based on the idea that an all-loving God would seek personal relationships. After explaining Schellenberg's argument, this paper develops a response by examining the notion of moral impurity, as understood by Paul the Apostle. Paul conceptualized moral impurity as a causal state that transfers from person to person, like a contagious disease. He also believed that moral impurity precludes divine-human relationship. In order to explain why impurity would preclude divine-human relationship, this paper assumes that God is essentially holy, which entails that impurity cannot transfer to God via any relations. This means that impure people cannot bear certain relations to God, and consequently, that some impure people are potential counterexamples to one of Schellenberg's premises. Despite how preposterous impurity may sound, it is argued that there's no reason to think impurity is impossible. It's also argued that there's no reason to think impurity is incompatible with an all-loving God.

This paper engages with Biblical texts but does not assume these texts have any special evidential status lacked by non-Biblical texts. Rather, these texts are only used to provide an interpretation of Paul's letters, one that is largely supported by recent Biblical scholarship. Of course, Biblical interpretations are sometimes controversial. But it should be noted that the only interpretive goal of this paper is to extract a

view from Paul's letters that is *Pauline in spirit*, even if the *historic Paul* did not accept it in every detail. Paul's letters leave open certain gaps that must be filled before his ideas can be used to challenge Schellenberg's argument. This paper takes some liberties by filling these gaps with claims that are consistent with Paul's letters, if not required by them.

Lastly, this paper does not argue that the Pauline view is *true*. It only argues that there's no reason to reject it as false. This modest approach is enough to render one of Schellenberg's premises unjustified (as is shown in the final section).

Schellenberg's argument

Schellenberg has formulated his hiddenness argument in different ways, but this paper focuses on his earliest formulation appearing in the 1993 book *Divine Hiddenness and Human Reason*. This early formulation will be our sole focus because the targeted premise within that formulation is logically weaker than its analogues in later formulations. So, Schellenberg's 1993 version of the targeted premise is harder to reject, and any problems for it are also problems for the stronger versions that appeared later.[2]

Schellenberg's 1993 argument against the existence of God depends on

> *The Incompatibility Thesis:* The existence of a perfectly loving God is incompatible with the existence of inculpable nonbelief.

On Schellenberg's view, a person has inculpable nonbelief if and only if she either disbelieves or suspends judgement on God's existence, without doing so because of an act or omission for which she is culpable (Schellenberg (1993), 3). Culpability includes blameworthiness for wrong, harmful, or sinful action, as well as blameworthiness for failing to investigate God's existence (e.g. by ignoring evidence). Next, Schellenberg argues that there are instances of inculpable nonbelief. For example, some people suspend judgement on whether God exists without culpably resisting God or ignoring evidence for God's existence.

Therefore, if the Incompatibility Thesis is true, and if perfect love is necessarily a divine attribute, it follows that God does not exist.

But why should we accept the Incompatibility Thesis? Schellenberg supports it by first claiming that a perfectly loving God would seek personal relationships. For Schellenberg, a personal relationship is (at least) an explicit, reciprocal, intimate, meaningful, and conscious relationship (Schellenberg (1993), 18; (2007), 201). This is the sort of relationship that seems required by perfect love. And, in this paper, the phrase 'personal relationship' will be used to encompass all such features.

Why should we think an all-loving God would seek personal relationships? According to Schellenberg, this is because such relationships would have instrumental value—contributing "ethically" and "experientially" to human well-being—as well as intrinsic value—being worthy of pursuit in their own right (Schellenberg (1993), 18-23). Thus, according to Schellenberg, not only would God seek personal relationships, but he would seek them *at all times* with everyone capable of such relationships (Schellenberg (1993), 25). Of course, Schellenberg allows an exception for those who are culpable, which is built into his first premise:

> P1: If God exists and is perfectly loving, then for any human S, if S is capable of relating personally to God, S is in a position to do so, unless S is culpably in a contrary position (1993, 28).[3]

Being "capable of relating personally to God" is a matter of having "the requisite cognitive and affective machinery." And being "in a position" to relate personally to God requires that one can do so just by choosing (Schellenberg (1993), 28 fn22).

Schellenberg adds a second premise. According to him, personal relationship with God is "*logically impossible* for one who does not believe that God exists" (Schellenberg (1993), 30). Furthermore, Schellenberg assumes that belief is involuntary—one cannot believe that God exists just by choosing (Schellenberg (1993), 9). Thus, "while in a state of nonbelief I am not in a position to relate personally to God" because I cannot simply choose to believe in God (Schellenberg (1993), 30-1). More precisely,

P2: For any human S, if S is in a position to relate personally to God, then S believes that God exists.

From P1 and P2, it follows that

C: If God exists and is perfectly loving, then for any human S, if S is capable of relating personally to God, then S believes that God exists, unless S is culpably in a contrary position.

This conclusion entails the Incompatibility Thesis, and P1 and P2 constitute Schellenberg's reasons for the Incompatibility Thesis.

This paper solely targets P1. In the next section, we will see that a Pauline approach to divine hiddenness supports a counterexample to P1. It's then argued that there's no reason to reject the Pauline approach as false. This modest conclusion is enough to establish that P1 is unjustified.

The Pauline approach

Impurity

Schellenberg's P1 can be challenged by considering a certain notion of impurity, one that is rooted in the Old Testament but refined in Paul's letters. Jonathan Klawans argues that Biblical texts refer to two distinct types of impurity—ritual and moral (Klawans (2000), 36-8). He also argues that ancient Jews and Israelites saw both types of impurity as defiling in a *literal sense*; references to the defiling force of impurity are not merely metaphorical (Klawans (2000), 32-6).

According to Klawans, ritual and moral impurity are distinct kinds of impurity that function analogously (Klawans (2000), 38). They differ in that ritual impurity originates from contact with certain natural sources (e.g. scale disease), whereas moral impurity originates from a person's sinful action. They also differ in that moral impurity is directly associated with sin, whereas ritual impurity is not. However, the two kinds of impurity are analogous in that they both lead to the defilement of other entities beyond the person from whom they originate. Ritual impurity can defile other things that are physically contacted by the ritually impure person (e.g. holy foods). And moral impurity can defile "the land of Israel" and "the

sanctuary of God" (Klawans (2000), 23-6). This paper focuses strictly on moral impurity, leaving ritual impurity aside. The key point is that moral impurity can transfer to other entities beyond the sinner. Henceforth, all mention of impurity refers strictly to *moral* impurity, unless otherwise noted.

What other entities can impurity defile? Can other *people* be defiled by the sinner's impurity? According to Christine Hayes, "[m]oral impurity is not communicable to others" anywhere in the Old Testament (Hayes (2003), 23). But, as Hayes points out, the letters of Paul give us a first glimpse of the view that impurity can transfer from person to person:

> Paul's new "carnal impurity" conflates the characteristic features of moral and ritual impurity: It is a moral impurity, and yet it resides in the flesh and may be communicated to others by (carnal) contact (Hayes (2002), 14).[4]

The person-to-person transfer of impurity is crucial for this paper, so let's pause on it.

As noted, Old Testament authors believe impurity defiles the sanctuary or temple. This is problematic because the temple is seen as the special dwelling place of God. But, according to Michael Newton, Paul transforms these ideas by identifying the temple with the community of believers. For example, writing to the Corinthians, Paul says that "God's temple is holy, and you are that temple" (I Cor. 3:16-7). Here, Paul is identifying the temple with the people among whom God's spirit would dwell if they remain pure (Newton (1985), 54-8). Paul is greatly concerned to maintain the purity of this community-based temple (e.g. 1 Thess. 4:7). But how exactly does impurity affect the community?

Hayes interprets Paul as holding that impurity spreads from person to person via carnal (i.e. fleshly) relations. She supports this by focusing on Paul's conception of impurity within marriage. In I Corinthians 7:10, Paul explicitly prohibits divorce. Moreover, according to Hayes, Paul prohibits marriage between believers and impure unbelievers.[5] But these two prohibitions raise a question: Should a new convert who is *already* married to an unbeliever now seek divorce? Paul answers 'no':

> [I]f any believer has a wife who is an unbeliever, and she consents to live with him, he should not divorce her. And if any woman has a husband who is an unbeliever, and he consents to live with her, she should not divorce him. For the unbelieving husband is made holy through his

wife, and the unbelieving wife is made holy through her husband. Otherwise, your children would be unclean, but as it is, they are holy (I Cor. 7:12-14).

Paul's rationale for advising against divorce in this situation is that the new convert makes the unbeliever holy. This is important, because holiness is conceptually incompatible with impurity (Hayes (1999), 5). That is,

Exclusion Principle (EP): Necessarily, for any x, if x is holy then x is not impure.

EP has the status of a conceptual truth, and it will be assumed throughout this paper. Given EP, one can infer from I Corinthians 7:12-14 that the unbeliever, who was previously impure, is made pure through his or her relationship with the believing spouse. In other words, Paul thinks there's a transfer of purity from the new convert to the unbelieving spouse via their spousal relation (Hayes (2002), 94-6).

In other passages Paul suggests that *impurity* can also transfer from person to person. For example, Paul frequently advises pure believers to separate from impure believers:

… [N]ow I am writing to you not to associate with anyone who bears the name of brother or sister who is sexually immoral or greedy, or is an idolater, reviler, drunkard, or robber. Do not even eat with such a one. For what have I to do with judging those outside? Is it not those who are inside that you are to judge? God will judge those outside. "Drive out the wicked person from among you" (I Cor. 5:11-13).

Immediately prior to this call to shun impure believers, Paul uses an analogy to convey the defiling effects of impurity within the community of believers:

Do you not know that a little yeast leavens the whole batch of dough? Clean out the old yeast so that you may be a new batch, as you really are unleavened…. [L]et us celebrate the festival, not with the old yeast, the yeast of malice and evil, but with the unleavened bread of sincerity and truth (I. Cor. 5:6-8).

The spread of yeast throughout dough is seen as a metaphor for the spread of impurity throughout a community (Hayes (2002), 93; Liu (2013), 132). Paul is here exhorting the community to "clean out" the impurity so that it doesn't infect the whole community.

The above passages reveal that Paul is cautious about various kinds of relationships with impure people. He recommends the avoidance of sexual and spousal relations with impure people (I Cor. 6:15-

20). He advises church members not to eat with, or associate with, impure believers (I Cor. 5:11). And he claims that the children of two married unbelievers "would be unclean" (I Cor. 7:14), suggesting a concern for parental relations with children. Thus, Paul is cautious about at least five different relations—sexual relations, spousal relations, table fellowship, "associating" or socializing, and parental relations. What unifies these?

The above Biblical scholars do not answer this question. But here's a plausible suggestion: the above relations are personal relationships, in Schellenberg's sense—they are explicit, reciprocal, intimate, conscious, and meaningful relationships. Indeed, Schellenberg himself illustrates personal relationship by using similar examples—e.g. spousal, parental, sibling, and friendship relations (Schellenberg (2007), 203).[6] And it's plausible to interpret Paul as warning against the same sort of relations with impure people because he thinks personal relations facilitate a transfer of impurity between persons.

At this point, readers might be baffled: What exactly is impurity? And how does it transfer between persons? As will be argued later, impurity partly consists in having *passions* that make one prone to sin; and one avenue that facilitates its transfer is the *moral influence* within personal relationships. These claims are substantiated below. For now, let's take stock on Paul's view.

Like his predecessors, Paul believes impurity can defile the temple. But, unlike his predecessors, he identifies the temple with the community of believers. And he thinks impurity can spread like yeast throughout the community by way of personal relations. These ideas can be summed up with a principle:

> Pauline Principle (PP): Necessarily, for any x and any y, if x is impure and x is in a personal relationship with y then it's possible that y becomes impure as a result of relating personally to x.[7]

Paul's acceptance of PP explains why he advises believers to avoid specific forms of personal relationship with impure people. If true, PP would be a conceptual truth—a partial definition of Paul's concept of moral impurity. For Paul's predecessors, it was a conceptual truth that both ritual and moral impurity are defiling—they transfer via certain relations (e.g. contact) to certain relata (e.g. holy foods, the sanctuary).

And Paul assimilates his predecessors' concept of moral impurity by keeping its basic structure but specifying a new transfer relation (i.e. personal relationship) and new relata (i.e. persons).

As stated, PP universally quantifies over any y, *including God*. Should God be excluded from the domain over which PP quantifies? Not in Paul's thinking. If God were excluded from that domain then we would lose an explanation of an important fact about Paul's view. Yulin Liu ((2013), 234), Hayes ((2002), 97), and Newton each interpret Paul as holding that purity is *required* for God's presence within a community. Quoting Newton,

> All those who find themselves in this community must then conduct themselves in such a manner as to *enable* God's presence to remain with them. It is with a concern that such a standard of purity will be maintained in the Churches and thus *enable* them to continue to enjoy God's presence that Paul directs his attention to the personal conduct of the individual members (Newton (1985), 59-60; italics mine).

But why does Paul believe an impure community cannot enjoy God's presence? If we allow that PP quantifies over a domain that includes God, then we have our explanation: Paul believes that an impure community cannot enjoy God's presence, because he accepts PP even when 'God' is substituted for 'y' and he believes that it's impossible for God to become impure—i.e. the consequent of PP is false whenever 'God' is substituted for 'y'. These claims require him to believe that an impure community cannot be personally related to God. But this explanation is unavailable unless PP quantifies over a domain that includes God.

To be sure, we *could* restrict PP so that it doesn't quantify over God. But then we would lose the above explanation of Paul's belief. And the only reason to place this restriction on PP is if we have reason to think PP is false when left unrestricted. But we shall see that there is no such reason, once objections are addressed below.

Holiness

The above explanation of Paul's belief leaves open a question: Why would it be impossible for God to become impure? It's not entirely clear how Paul answers this, but we can fill the gap with a traditional view that is consistent with Paul's ideas—the view that God is essentially holy.

Many theologians take holiness to be an essential attribute of God. A.W. Tozer holds that God is "absolutely holy with an infinite, incomprehensible fullness of purity that is incapable of being other than it is" (Tozer (1961/1992), 165). David Wells repeatedly claims that God is holy "in his essential being and character" (Wells (1994), 139). And Diogenes Allen holds that "holiness is the essential quality of the Deity" (Allen (2010), 20). Thus, on this conception of God, holiness is an essential divine attribute. More precisely,

Essential Holiness Principle (EHP): Necessarily, if God exists then God is holy.

Now recall that holiness is incompatible with impurity, as stated in EP. Thus, EP and EHP entail that it's impossible for God to become impure. So, we can explain why this is impossible by appealing to God's essential holiness.

For present purposes, EHP can be assumed as true. Arguments against God's existence typically assume that God would have certain essential attributes—Schellenberg himself assumes that perfect love is an essential attribute (Schellenberg (1993), 11). And replies to atheistic arguments are entitled to make reasonable assumptions about other essential attributes in attempts to undermine such arguments. Of course, EHP merits more discussion than can be given here. But, given the limits of this paper, it will be assumed as true so we can concentrate on deeper sources of scepticism.

Finally, notice that our three principles—EP, PP, and EHP—jointly entail an important conclusion:

Conclusion 1: Necessarily, for any x, if x is impure then x is not in a personal relationship with God.[8]

This line of thought—from EP, PP, and EHP to Conclusion 1—is a plausible explanation for why Paul believed that God cannot abide within an impure community. At the very least, the reasoning is Pauline in spirit.

Conclusion 1 tells us that it's impossible for impure people to be personally related to God while they are impure. It follows that impure people cannot simply choose to be personally related to God, because they must undergo purification for this to be possible. And if impure people cannot simply choose this, then (according to Schellenberg's definition of 'in a position') it follows that such people are not in a position to be personally related to God. That is,

Conclusion 2: Necessarily, for any x, if x is impure then x is not in a position to be personally related to God.

As we shall now see, Conclusion 2 can be used to support a counterexample to P1.

Inculpable impurity

Take any human who is capable of personal relationship with God—i.e. someone who has the cognitive and affective capacities required for such relationship. It is initially plausible that this person could acquire impurity without being culpable. After all, on Paul's view, it's possible for her to become impure without performing any sinful actions. She could instead contract impurity from another person via personal relations. And Paul does not think it's sinful for people to be in personal relations with impure people; otherwise he wouldn't advise new converts to stay married to impure unbelievers (I Cor. 7:12).

Thus, it appears that Paul's concept of impurity allows for the possibility of inculpable impurity, given that impurity can be contracted from another person rather than arising from sinful action. This provides our final principle:

Inculpable Impurity Principle (IIP): It is possible that there exists a human S such that S is capable of relating personally to God, S is impure, and S is not culpable for being impure.

Let's now reflect on person S, as described in IIP. Conclusion 2 entails that S is not in a position to relate personally to God while she is impure. And let's assume that S *would* be in such a position, if she was not impure.[9] Under this assumption, we can assert that S's impurity *accounts for* her being in this contrary position. Thus, since S is not culpable for being impure (as stated in IIP), she's also not culpable for what accounts for her being in this contrary position. Putting all this together, it follows that

> Conclusion 3: It is possible that there exists a human S such that S is capable of relating personally to God, S is not in a position to relate personally to God, and S is not culpable for what accounts for her being in this contrary position—namely her impurity.

If Conclusion 3 is true and compatible with an all-loving God, it would be a counterexample to Schellenberg's P1. However, this paper does not aim to show that Conclusion 3 is true and compatible with an all-loving God. Rather, this paper has a modest goal—that of showing there's no reason to think Conclusion 3 is false or incompatible with an all-loving God. Even if we ought to suspend judgement on these claims, it will be enough to render Schellenberg's P1 unjustified (as is explained in the final section).

Before considering objections, we should notice a limitation behind the Pauline argument—from EP, PP, EHP, and IIP to Conclusion 3. In general, arguments are aimed at justifying conclusions. And, no doubt, the Pauline argument would justify a person in accepting Conclusion 3, if she had sufficient reason to accept each premise. The trouble is that *we* do not have reason to accept each premise. We've not seen any arguments for the truth of EP, PP, EHP, or IIP. And our intuitions cannot justify us in accepting all these premises, because we're not fully competent with a crucial concept—Paul's concept of impurity. To be sure, we are competent with several concepts of impurity (e.g. the concept of un-chastity, or contaminated matter). But none of these concepts entail the possibility of a person-to-person transfer. So the concepts of impurity with which we're competent must be distinct from Paul's concept. Can we take PP as a partial definition of Paul's concept and thereby gain competence with it? Perhaps, but PP doesn't guarantee that Paul's concept of impurity is even possibly instantiated; so this strategy won't give us any reason to accept IIP. Thus, given that we're not fully competent with Paul's concept of impurity, we cannot rely on *our*

intuitions about impurity to support (or reject) claims that express this concept. The intuitions of Biblical authors might justify *them* in accepting these premises. But we are in a different epistemic position.

This is not a problem, however, since the modest goal of this paper is to show that we have no reason to *reject* Conclusion 3, not that we have reason to *accept* it.

Why then do we need the premises of the Pauline argument?—because they explain the concepts expressed by Conclusion 3, some of which are foreign to us. EP and PP partly explain Paul's concept of impurity expressed in Conclusion 3; and EHP partly explains the concept of God expressed within Conclusion 3. But, for our purposes, these premises do not justify Conclusion 3; they only explain its meaning.

Of course, the modest aim of this paper does not make these premises unassailable. But it does make objections to them irrelevant unless they also provide reasons to reject Conclusion 3. So, in what follows, we shall only entertain objections to the premises that also provide reasons to reject Conclusion 3. The best way to show that Conclusion 3 is false is by arguing that either impurity is impossible, or that inculpable impurity is impossible, or that impurity cannot account for someone being in a contrary position. Various arguments for these claims are rejected in the next three subsections. Then, we examine the question of whether Conclusion 3 is compatible with an all-loving God.

Objections

Is impurity impossible?

Let's now consider two types of objections against the possibility of impurity—an evaluative objection and some metaphysical objections.

We begin with the evaluative objection. It is plausible that Paul's concept of impurity is an evaluative concept. After all, this concept is closely related to other evaluative concepts (e.g. sin), and those competent with the concept took impurity as a *reason* to separate from others. Under this

assumption, one might argue against the existence of impurity by arguing that it entails a false evaluative claim. By analogy, consider the concept of sexual perversion, which is also evaluative. This concept may entail that the unnaturalness of a sexual behavior is sufficient to make it bad. But this evaluative claim might be false, which would mean that sexual perversion doesn't exist (Priest (1997), 371). Similarly, it could be argued that impurity entails a false evaluative claim. Perhaps it entails that impure people have a feature F such that anyone who has F is therefore bad. And, once we find out what F is, we'll see that this evaluative claim is false.

What could F be? An initial suggestion is that F is a historical property regarding how the impurity came about. For example, F might be the disjunctive property of having sinned or having been personally related to a sinner. Admittedly, it's implausible that this property would be sufficient for badness. However, this is not the property that makes an impure person bad. After all, this disjunctive property cannot be removed once one has it, and this means that the badness associated with impurity cannot be removed through purification. But the possibility of purification is essential to the concept of impurity (Klawans (2000), 27).

Purification provides a clue as to what property F is. The way purification is depicted in the Bible suggests that it involves a change to the heart. For example, in Ezekiel 36 we find that the nation of Israel has become impure, and God voices his intention to purify them as follows:

> I will sprinkle clean water upon you, and you shall be clean from all your uncleanness, and from all your idols I will cleanse you. A new heart I will give you, and a new spirit I will put within you; and I will remove from your body the heart of stone and give you a heart of flesh (Ezek. 36: 25-26).

Here, God removes the impurity by changing the heart.[10] Plausibly, then, F is some property of the heart. But what is the heart? And how can changing the heart remove impurity?

In Romans 6, Paul clarifies what the heart is by using a slavery metaphor to describe the control that sin exercises over a person:

> But thanks be to God that you, having once been slaves of sin, have become obedient from the heart to the form of teaching to which you were entrusted, and that you, having been set free from sin, have become slaves of righteousness […]. For just as you once presented your members as slaves to impurity and to greater and greater iniquity, so now present your members as slaves to righteousness for sanctification (Rom. 6:17-19).

Here Paul contrasts being "slaves to impurity" with being "obedient from the heart" in avoiding sin. And prior to this passage Paul explains the slavery metaphor as "sin [exercising] dominion in your mortal bodies, to make you obey their passions" (Rom. 6:12). For Paul, then, the heart consists in the passions that control a person's actions. Obedience from the heart entails that one is controlled by passions that make one prone to righteousness. And slavery to impurity entails that one is controlled by passions that make one prone to sin. From this, we can infer that impurity itself entails that one has passions that make one prone to sin, whether or not one is controlled by them. Let's call this the passion account of impurity.

For clarity, we can construe passions as affective states, including desires and emotions. According to the passion account, a person is impure only if she is in an affective state that inclines her towards sinful action.[11] Henceforth, the phrase 'sinful affective states' will be used to refer to affective states that incline the agent towards sinful action.

The passion account of impurity plausibly gives us the relevant feature F, and allows us to address the original objection. In particular, we can now see that there's no reason to think impurity entails a false evaluative claim. It's not implausible that being in a sinful affective state is sufficient to make a person bad. To use an analogy, desires to do something morally wrong are widely seen as bad-making features of an individual. There's no reason to think differently of sinful affective states. Moreover, contrary to Klawans' label 'moral impurity', we cannot assume that the sort of badness entailed by impurity is *moral badness*; it may just be that the impure person is *bad in some particular way*, without being morally bad.

Of course, impurity may require the possibility of sin, and sin might be seen as problematic if it entails the existence of God (e.g. if sin requires alienation from God). But, in the present context, this objection would only justify us in *suspending judgement* on whether impurity exists; it would not justify us in

believing that impurity is impossible. And the present response to Schellenberg's argument can succeed even if we ought to suspend judgement on whether impurity exists.

Let's now turn to some metaphysical objections. Conclusion 3 might be rejected by claiming that Paul's concept of impurity (expressed by Conclusion 3) entails an impossible causal relation. Paul's concept is partly explicated by PP. And according to PP, one person's impurity can cause another person to become impure. If this causal transfer is impossible then Conclusion 3 is false.

This objection comes in different forms. First, one might hold that it's impossible for impurity to be causally efficacious *at all*. For an initial reply, recall the passion account: a person is impure only if she is in a sinful affective state. This account is neutral on whether impurity is identical to the property of being in a sinful affective state. But let's temporarily assume they are identical.[12] In this case, impurity is causally efficacious if and only if the property of being in a sinful affective state is causally efficacious. And surely sinful affective states are causally efficacious—e.g. a desire to commit adultery can cause a person to commit adultery.

However, scepticism may persist. On the present assumption, impurity is not identical to any *particular* sinful affective state. It's rather identical to an existentially quantified property: the property of being in *some* sinful affective state *or other*. And if impurity is causally efficacious in addition to the sinful affective states it quantifies over, then there is causal over-determination, which is unacceptable. So, according to this objection, we should reject the causal efficacy of the higher-order property—impurity.

For our purposes, this problem can be met with a concessive response, one that allows higher-order properties to be causally *relevant* even if not efficacious. Frank Jackson and Philip Pettit (1990) have developed the notion of a "program explanation" in response to the problem of higher-order causation. According to Jackson and Pettit, a program explanation (i) refers to a higher-order property that ensures the presence of a lower-order, causally-efficacious property, and (ii) provides modal information about how the causal history might have gone, information that's not available on the lower level. For example,

15

suppose a container is filled with water, and that the container cracks just as the water reaches boiling point. It's plausible that the momentum of water molecules is causally *efficacious* in cracking the container, and this may imply that the water's temperature is not efficacious (Jackson and Pettit (1990), 110). But surely the temperature property is not causally *irrelevant*. So, Jackson and Pettit provide a program explanation that refers to the temperature property, thereby giving it causal relevance. The temperature property satisfies (i) and (ii). First, this property ensures the presence of some causally-efficacious momentum property—for the water to have its temperature there must be certain molecules moving with such and such momentum. And second, the explanation referring to the temperature property provides additional modal information not provided by the lower-order momentum explanation. The higher-order explanation tells us that the container would crack in relevantly similar circumstances (e.g. if the molecules were slightly different). Someone who knows the lower-order causal explanation could lack this additional information supplied by the program explanation. Thus, according to Jackson and Pettit, it's plausible that the temperature property is causally relevant even if not efficacious.

Jackson and Pettit point out that this approach "is clearly going to work with any explanations which are higher-order in virtue of using existential quantification" (Jackson and Pettit (1990), 115). So, if impurity is identical to the existentially quantified property of being in a sinful affective state, then impurity is guaranteed to be causally relevant to some effect. Moreover, they point out that if the higher-order property programs for a property that is relevant but not efficacious then "the story will go a level or more deeper until we find an efficacious property for which the original higher-order property programs indirectly, via the programing of intermediate features" (Jackson and Pettit (1990), 115). Thus, it turns out that we need not—and should not—assume that impurity is identical to the property of being in a sinful affective state. Impurity can gain its causal relevance by programing for an intermediate-level property that eventually programs for a lower-order efficacious one. And it's more plausible to treat the property of being in a sinful affective state as an intermediate-level property. After all, impurity ensures the presence of

this intermediate-level property; and explanations that cite impurity provide modal information that's unavailable on the intermediate level—they inform us of the *possibility* of a person-to-person transfer, and this modal information is lacking from explanations that merely cite the property of being in a sinful affective state.

In short, the initial objection can be accommodated. The consequent of PP holds that an instance of impurity can occur "as a result of" another instance. We have assumed that 'as a result of' picks out a causal relation, but this relation could be one of mere causal relevance, not efficacy.

However, even if impurity is causally relevant to certain effects, an objector might claim that it's impossible for impurity to be causally relevant to *the impurity of another person*. This objection is also implausible. According to PP, personal relationship is one nexus that facilitates the causal transfer of impurity from one person to another. And personal relationship often involves *moral influence*—a causal relation where one person's instantiation of a moral property is causally relevant to another person's instantiation of a moral property.[13] Moral influence occurs, for instance, when a teenager becomes prone to misbehaving as a result of his personal relationship with a troublemaker. The transfer of impurity described in PP can be understood similarly. Perhaps x's impurity is causally relevant to y's impurity, because of the moral influence involved in their personal relationship. The present attempt at arguing against PP claims that this is impossible, but it's clearly not.[14]

At this point, one might grant that it's possible for impurity to cause another *human* to become impure, but object that it's impossible for impurity to cause *God* to become impure. However, Conclusion 3 doesn't entail that this is possible. Indeed, two premises in the Pauline argument—EHP and EP—entail that it's impossible for God to become impure. So what exactly is the objection?

The impossibility of God's impurity could be used to reject PP, as follows: (1) it's impossible for God to become impure, but (2) it is possible for impure people to be in personal relationships with God; therefore, PP is false. The first thing to note is that this argument obviously doesn't show that impurity is

impossible, since premise (2) presupposes that impurity *is* possible. Moreover, it's unclear how the falsity

of PP would show that Conclusion 3 is false, since the falsity of an argument's premise doesn't guarantee

the falsity of its conclusion. However, as explained in the next section, premise (2) can be used in an

argument that directly targets Conclusion 3. And we shall see that there's no reason to accept (2). So the

claims in the next section also amount to a defence of PP from the present argument.

Can impurity put someone in a contrary position?

Conclusion 3 states that S's impurity explains why she's not in a position to relate personally to

God. But one might argue against this explanation as follows: (1*) S's impurity can explain why she's not

in a position to relate personally to God only if it's impossible for impure people to be in such relations to

God (for, if such relations were possible, we'd expect an all-loving God to bring them about). But (2) it is

possible for impure people to be in personal relationships with God. Therefore, S's impurity cannot

explain why S is in a contrary position.

As noted, (2) can be used to reject PP. But, more importantly, (2) and (1*) entail that Conclusion

3 is false. In response, it will be argued that there's no reason to accept (2). If so, then we cannot use it to

reject PP or Conclusion 3.

The first thing to note is that we're not justified in accepting (2) merely on the basis of intuition or

personal experience (e.g. the experience of being impure while in divine-human relationship). After all,

for an intuition or experience to support (2), it would need to employ Paul's concept of impurity. But

since we are not fully competent with Paul's concept, this intuitive or experiential support would be

dubious. Nevertheless, we may have a competent grasp of the concept of a sinful affective state, and

perhaps we might find the following intuitive: (2') it's possible for people with sinful affective states to be in

personal relationships with God. The trouble is that there's no reason to think (2') entails (2). As noted

earlier, we should not assume that the property of being in a sinful affective state is identical to impurity.

18

We've also seen no reason to think it's sufficient for impurity (but only necessary). So, we have no reason to think (2') supports (2).

Does omnipotence entail that it's possible for God to be in personal relationships with impure people? No. Omnipotence is, roughly, the power to bring about all *possible* states of affairs, not impossible ones (Flint and Freddoso (1983)). And the question we are trying to answer is whether God's personally relating to impure people is a possible state of affairs. If it's impossible then God would still be omnipotent even though God cannot bring it about.

Do Biblical texts suggest that impure people can be in personal relationships with God?—not clearly. Recall that personal relationships are to be understood as explicit, reciprocal, intimate, meaningful, and conscious. But there is no Biblical text that clearly suggests that such relationships occur between impure people and God. Moses may be the only Biblical figure recorded as having this kind of relationship with God—"the Lord used to speak to Moses face to face, as one speaks to a friend" (Ex. 33:11). But Moses had the purity required for such relationship (Ex. 19:19-25). And the Bible describes this kind of relationship as extremely rare—"Never since has there arisen a prophet in Israel like Moses, whom the Lord knew face to face" (Duet. 34:10). More importantly, there is no straightforward mention of an impure person enjoying this kind of relationship. Indeed, impure people were barred from highly *impersonal* relations to God—they could not even "touch the edge" of the mountain on which God's presence was said to dwell (Ex. 19; Ps. 24:3-4). Thus, it's unclear that any Biblical text supports (2). But even if we find a passage that can be interpreted as supporting (2), the above considerations would justify us in doubting that this interpretation is an adequate basis for accepting (2)—after all, (2) seems to conflict with the clearest Biblical depictions of divine-human relations. Biblical support for (2) is doubtful if not altogether absent.

Of course, Biblical texts do suggest that God can be personally related to those who have sinned (e.g. Moses). But sinful action is distinct from the state of impurity. A person's sinful action may be

sufficient to make her impure *for a time*. But past sinful action does not entail that the agent is impure in the present, since she may have been purified in the meantime (e.g. Isaiah 6:1-8). So, the fact that God is personally related to those who *have* sinned, and to those who *have been* impure, does not entail (2).

Initially, one might think that purification entails (2), because God's purifying a person seems to require that God be personally related to her *while she is impure*. However, we've seen that purification can take place through a change to the heart. And clearly it's possible for God to change a person's heart without having an explicit, reciprocal, intimate, conscious, and meaningful relationship with her while she is impure. Thus, purification does not entail (2).

One might seek to support (2) by claiming that Christ was personally related to impure people (according to Biblical accounts); and since God and Christ are one, it follows that God was also personally related to impure people. However, this argument assumes that God and Christ are one, but exploits a key problem for this assumption. In particular, there are many predicates that seem to apply to Christ but not to God (e.g. 'was born', 'died', 'was buried', etc.). Initially, this makes it difficult to hold that Christ and God are one. But the Christian theological tradition provides at least two strategies for circumventing this problem. And these strategies can be employed to undermine the argument for (2).

One strategy emphasizes that Christ and God-the-Father are distinct persons (albeit one in substance), and then provides enough "logical space" between them so that the problematic predicates can apply to the former without applying to the latter. The other strategy claims that these problematic predicates are not literally true of Christ, but only of the human body that Christ used for his earthly mission.[15] Either strategy can be used to undermine the argument for (2). It can be claimed that 'is personally related to impure people' is among the problematic predicates, and is therefore not true of God-the-Father (on the first strategy) or not true of Christ (on the second strategy). The present argument for (2) must provide reason to exclude this predicate from the problematic ones. But it's unclear what reason this would be.

widely accepted that subjects can be excused for harmful actions that they've performed while non-culpably ignorant of the harmful effects (Ginet (2000)). And it's possible that S enters into the relationship while non-culpably ignorant of the fact that she could contract impurity from the other person. Or, S could be non-culpably ignorant of the fact that the other person is impure. Thus, even if it's harmful for S to enter into, or continue, the relationship that makes her impure, S need not be culpable for this act.

Regarding (ii): Must S be culpable for an act that occurs within her relationship with the impure person? The only reason for thinking so would involve the sinful affective states required by S's impurity. So, let's suppose that S's personal relationship with the impure person causes her to form a desire to commit adultery, and that this desire is the relevant sinful affective state. Even so, it's possible that S is not culpable for any act that leads to her forming this desire; again, she could be non-culpably ignorant of the fact that she would form the desire. Moreover, S could altogether resist the temptation to commit adultery and never act culpably as a result of the desire.[18] So, the sinful affective state, which partly constitutes S's impurity, need not be the cause or effect of any culpable acts. And there's no reason to think S's impurity must involve something *else* that would be the cause or effect of a culpable act. So, we have no reason to accept (ii).

Neither (i) nor (ii) seems to follow from the fact that S contracts impurity via personal relations. There appears to be no reason to think a person *must* be culpable for becoming impure.

Is Conclusion 3 incompatible with perfect love?

If impurity precludes divine-human relationship, we might expect an all-loving God, who seeks personal relationship, to create a world of universal purity (i.e. containing no impurity). But it will now be argued that there's a reason an all-loving God could have for allowing some impurity.

First, consider that personal relationships vary in quality—some instances of personal relationship are better than others. Schellenberg agrees. According to him, personal relationship with God

[…] would admit of change, growth, progression, regression. It might be shallow or deep, depending on the response of the human term of the relation (Schellenberg (1993), 28).

Second, consider that an all-loving God would have more reason to pursue better personal relations than to pursue lesser ones, other things being equal. This is true because better relations would have *more* of the value that Schellenberg attributes to personal relations. They would have more intrinsic value (being more worthy of pursuit in their own right), and more instrumental value (contributing more to human well-being). And third, consider that there are possible persons who are capable of better relations with God only if they are purified rather than prevented from ever becoming impure. God could not attain higher-quality relations with these people in a world of universal purity. This means that God would have reason to create a world containing these people along with their impurity. And, given the second point above, this reason could override any reasons that God has to create a world of universal purity.

Why should we think there are possible persons who can attain better relations with God only if they are purified? First, notice that there are factive mental states (e.g. knowing that P, being glad that P) that help to improve personal relationships, provided they have the right content. For instance, if a wife knows that her husband has been faithful then this can improve their relationship much more than if she doesn't know this.[19] Moreover, knowledge is factive: S knows that P only if P.

Now imagine a level of relationship that one party cannot attain without a certain factive mental state. For example, a wife might be incapable of emotional intimacy with her husband *unless* she knows that he has been faithful. Now consider a divine-human case:

(1) There is a possible person S, degree of value D, and factive mental state M such that S surpasses D in relationship with God only if S has M regarding the proposition that God has purified S.

There is no reason to reject (1), especially if we imagine that D is a very high degree of value. Moreover, given that M is factive and purification requires past impurity, (1) entails

(2) There is a possible person S and degree of value D such that S surpasses D in relationship with God only if S is impure at some time.

Now, if (2) is true then God would have reason to create a world containing S along with some impurity—the reason being that God desires S to surpass D. And this reason could be overriding since, all else being equal, an all-loving God would have more reason to pursue a relationship that surpasses D than to pursue one that falls short (e.g. in a world of universal purity). Therefore, if we have no reason to reject (1), then we have no reason to expect an all-loving God to create a world of universal purity.

One might resist (1) by claiming that, for every possible person S and every degree of value D, there is no factive mental state that is required for S to surpass D in relationship with God. But this claim is inconsistent with Schellenberg's argument. Recall that a central premise in his argument is that divine-human relationship is "*logically impossible* for one who does not believe that God exists" (Schellenberg (1993), 30). So, every degree of value of divine-human relationship requires one to believe that God exists. Moreover, every degree of value of divine-human relationship requires this belief to be *true*, since one cannot be personally related to God unless God exists. Therefore, every degree of value of divine-human relationship requires a factive mental state—the state of true belief that God exists. The objection, then, is incompatible with Schellenberg's argument.

In short, there's no reason to think an all-loving God is incompatible with the existence of impurity. Furthermore, there's no reason to think an all-loving God is incompatible with *inculpable* impurity. If God allows S to be impure so that S can attain a higher level of divine-human relationship, it's implausible that God should require that S be culpable for her impurity. Clearly, S's impurity could be contracted inculpably (as outlined earlier). Thus, there's no reason to reject the compatibility of Conclusion 3 with an all-loving God.

Final analysis

Is Schellenberg's argument defeated?

If Conclusion 3 is true and compatible with an all-loving God then Schellenberg's P1 is false. However, the modest approach in this paper is not sufficient to establish that Conclusion 3 is true and compatible with an all-loving God. It has only been argued that there's no reason to *disbelieve* these claims, but there still may be no reason to *believe* them. The rational response might be to suspend judgement. Nevertheless, even if we should suspend judgement, Schellenberg's argument still fails, because this means we should (at most) suspend judgement on P1, which means P1 cannot justify Schellenberg's atheistic conclusion.

Of course, we may recall that Schellenberg provides positive reasons in favour of P1. Do these reasons justify P1 above the level of suspension of judgement? No. Schellenberg's reasons for P1 leave open the putative counterexample that's been leveled against it. Schellenberg bases P1 on the idea that an all-loving God would seek the intrinsic and instrumental values associated with divine-human relationship. But it was already argued that there's no reason to think inculpable impurity is incompatible with an all-loving God who seeks these values. In particular, it was assumed (in the preceding section) that an all-loving God would seek these intrinsic and instrumental values; though it was pointed out that God would have more reason to seek the greater levels of such value associated with higher-quality relations. Moreover, we saw that higher-quality personal relations might be attainable only if the subject is impure for a time; and clearly this impurity need not arise culpably. So, Schellenberg's reasons for P1 do not exclude inculpable impurity and therefore do not exclude the putative counterexample leveled against P1. Even if divine-human relations have the values that Schellenberg attributes to them, there still might be inculpably impure people who would not be in a position to relate personally to God.

In short, Schellenberg's reasons don't support P1 over and above the counterexample leveled against it. At most, we should suspend judgement on P1, which means that P1 provides no support for his atheistic conclusion.

Conclusion.

It has been argued that a central premise in Schellenberg's argument is unjustified. This challenge to Schellenberg's argument has integrally involved Paul's notion of impurity. On the Pauline view, impurity entails the possibility of it transferring from person to person via personal relations. But the property of essential holiness forbids God from being a possible recipient of impurity. It follows that, if a person is impure, she is at that time precluded from personal relationship with an essentially holy God, even if she is inculpable. [20]

Notes

[1] The viewpoints expressed in this paper do not reflect the official positions of the U.S. Air Force Academy or any other government agency.

[2] For two slightly different versions of the argument, see Schellenberg (2005), 202, and (2007), 204. See note 3 for an explanation of the logical relations between his 1993 and 2007 formulations.

[3] In his 2007 book, Schellenberg formulates this step of the argument without mention of culpability. He instead restricts the premise to those who are "not resisting God" rather than to those who are inculpable (Schellenberg (2007), 204). This new formulation is stronger than P1, since inculpable nonbelief entails nonresistant nonbelief ((2007), 205, fn11), but not vice-versa (e.g. a nonbeliever might be nonresistant yet culpable for failing to investigate God's existence).

[4] For a similar interpretation of Paul, see Liu (2013), 140 and 160.

[5] Hayes bases this on Paul's earlier denunciation of sexual relations between believers and sexually immoral persons in I Corinthians 6:15-20 (Hayes (2002), 93).

[6] To be sure, Schellenberg is concerned with *positive* personal relations *motivated by love*, whereas Paul may warn against *any kind* of personal relations with impure people. Still, it is sufficient for our purposes that Paul warns against a class of relations that includes the sort of relationship Schellenberg is concerned with.

[7] Most likely, y needs to be someone who is not already impure. But this makes no substantive difference to the proof in note 8, since God's essential holiness guarantees that God is not already impure.

[8] Here is a proof of Conclusion 1 from EP, PP, and EHP:

1. *a* is morally impure [assumption]

2. *a* is in a personal relationship with God [assume *for reductio*]

3. If *a* is impure and *a* is in a personal relationship with God then it's possible that God becomes impure as a result of personally relating to *a* [from PP]

4. It is possible that God becomes impure as a result of personally relating to *a* [from 1, 2, and 3]

5. It is possible that God is not holy [from 4 and EP]

6. ⊥ [contradiction intro, from 5 and EHP]

7. *a* is not in a personal relationship with God [negation intro, from 2-6]

8. For any x, if x is impure then x is not in a personal relationship with God [universal intro, 1-7]

Furthermore, 8 would be necessarily true, since 8 is a logical consequence of three premises that are necessary.

[9] This assumption is permissible, given Schellenberg's view that an all-loving God would seek personal relationships with those who are inculpable, such as S.

[10] For further support, see Psalm 51:7-10.

[11] These states can be occurrent or dispositional. And they often have representational contents. These representational contents need not be about the *sinfulness* of the action, which means the impure person need not even possess the concept of sin for her to be in that state.

[12] I am not assuming that the *concept* of impurity is identical to the *concept* of being in a sinful affective state. I am only assuming (temporarily) that these two concepts pick out the same *property*. I later explain why it's more plausible to think the properties are distinct.

[13] In arguing for P1, Schellenberg himself assumes that personal relationships facilitate moral influence: "It seems clear that explicit [personal] relationship with a perfectly loving God would have a certain moral influence and make available certain resources for dealing with the moral weakness endemic to humanity [...] (Schellenberg (1993), 19).

[14] These claims do not assume that x is in a personal relationship with y only if it's possible for x to have a moral influence upon y. Rather, these claims only serve to defang a simple objection—the objection that it's impossible for one person's impurity to be causally relevant to that of another. The kind of moral influence found in personal relationship is *one* possible way in which this causal transfer can occur, but perhaps there are other ways for impurity to transfer whenever moral influence is impossible.

[15] The first strategy can come from certain views of the trinity, such as social trinitarianism or the relative identity view. The second strategy appeals to a form of high Christology, which holds that Christ has two natures, human and divine.

[16] A similar objection could be raised against PP, if Christ is essentially holy and personally related to impure people. But the above two strategies can be used similarly against this objection. For this response, we should also note the opposite problem for the oneness of God and Christ—certain predicates that apply to God do not seem to apply to Christ (e.g. 'is incorporeal', 'is impassible', etc.). For all we know, these predicates include 'is essentially holy'.

[17] This claim is important for Schellenberg's argument, since otherwise his opponents could claim that atheists and agnostics are directly culpable for *disbelieving* or *suspending judgement* regarding the existence of God, without being culpable for an action that leads to these belief states. In this case, it might be claimed that there's no inculpable non-belief.

[18] Sinful affective states only *incline* us towards sinful action, but do not guarantee it, since an opposing desire could make us resist.

[19] Can the improved relationship be explained by an *internal state* that accompanies knowledge without the factive state? Not always. See Williamson (2000), 61, regarding the failure of explanations that cite only the internal state of belief without the factive state of knowledge.
