

Mass and Count in Linguistics, Philosophy, and Cognitive Science

Edited by Friederike Moltmann and Lucia Tovena

To appear with John Benjamins

Table of Contents

Introduction: The Mass-Count Distinction: An Overview

Lucia Tovena (Paris 7) and Friederike Moltmann (CNRS-IHPST/NYU)

1. Re-examining the Mass-Count Distinction

Alan Bale (Concordia University) and Brendan Gillon (McGill University)

2. Furniture-type nouns: a morphological perspective

Dana Cohen (Paris 8)

3. A Comparison of Abstract and Concrete Mass Nouns in Terms of Their Interaction with Quantificational Determiners

Stefan Hinterwimmer (Osnabrueck)

4. Syntactic-Semantic Interaction of Mass and Count Nouns: A Neural Network Study

Ritwik Kulkarni (SISSA, Cognitive Neuroscience, Trieste), Susan Rothstein (Bar Ilan University), and Alessandro Treves (SISSA, Cognitive Neuroscience, Trieste)

5. The Count-Mass Distinction in Yudja: Quantity Judgment Studies

Suzi Lima (Harvard University)

6. Countability and Grammatical Number: An Aristotelian View and its Challenges

Almerindo E. Ojeda (University of California at Davis)

7. Comparatives in Brazilian Portuguese: Counting and measuring

Susan Rothstein (Bar-Ilan University) and Roberta Pires de Oliveira (Universidade Federal de Santa Catarina)

8. Lexical, syntactic, and Pragmatic Sources of Countability: An Experimental Exploration of the Mass-Count Distinction

Mahesh Srinivasan (University of California, Berkeley) and David Barner (University of California, San Diego)

9. Countability Shifts and Abstract Nouns

Roberto Zamparelli (University of Trento)
