

"All and Nought " is the 2nd Edition of a series of books that study the nature of Reality and Being.

The first edition of the book, "The Metaphysics of All and None", was published by Edwin Mellen Press in January 2022; since then the book has been under severe investigations and reviews by many scholars and pundits worldwide. The 2nd edition of the book contains the original text plus a foreword by Professor Richard Howells from King's College London and some reports by Physicists, Biologists, and others. Journal of Mind, one of the most important journals in Philosophy, paid attention to the book and its critical review article Autumn 2022 Volume IIV/V Page 98-103, encourages all scientists, philosophers, and pundits to pay enough attention to the theory and study the book critically.

The book's core concept is a Scientific/Mathematical, a-priori/synthetic theory that is called All'n'None Theory. It studies the Symmetry and Asymmetry in Reality and points to a state that indicates the deep Symmetry between "All Beings" and "Nothingness". It deeply studies the relationships

between being and non-being from the perspective of symmetry and symmetry failure and offers a measurement tool and a new method of studying phenomena.

It seems All`n`None Theory is a scientific breakthrough and discovery. The book methodologically applies Physics, Conceptual philosophy, Mathematics, and jurisprudence analysis both inductively and deductively to prove its theory. It is the first and the only Theory for Explaining the nature of Existence (being) and provides a technique to measure the amount of existence in each being.

Through understanding Existence, the book explains Creation, Cosmos, Consciousness, Mind, Spirit, and Soul scientifically. It is deep enough to initially encompass and then merge all modern Sciences (Physics, Philosophy, Complexity, System Theory, Information Theory, Psychology, Biology, Humanities, Economy, and Management) with Buddhism, Hinduism, Judaism, Christianity, and Islam (Theology) and makes the image of Reality clearer for readers.

The book proves chaos management in the depth of creation and shows how people can use the only law of creation for their own success and salvation. Therefore the book is an inspirational one too. Readers by reading the book and understanding it not only gain scientific knowledge but also find profound wisdom that heals them. They feel they are enlightened and motivated to construct their own meaning of life. Readers can recognize their self/ego structure of being and enjoy the passion to improve.

The book tries to explain the mechanism of Thinking with respect to Symmetry and the failure of Symmetry as the foundation of Categorization, Mentalization, and Cognition. By understanding the mechanism of cognition we can study Epistemology and explain the Believing Mechanism and the nature of Beliefs as a kind of being. The theory claims no matter the beliefs originated from Science or Religion the mechanisms that govern both of them are the same. Based on the theory, "Knower or Observer", "Known or Observed", and "knowing or observation" are rooted in Symmetry and its failure.

The tone, language, and structure of the book are unique to itself. It is not an entertainment or commercial book. The book is written for readers who plan to spend enough time thinking about its content.
