## Music of Australia

**Indigenous Australian** English, Irish and Scottish

Pub Other immigrants

## Timeline and samples

**Genres** Classical - [Hip hop](#) - [Jazz](#) - [Country](#)- [Rock](#) ([Indie](#) · [Hardcore punk](#))

**Organisations** ARIA

**Awards** Australian Music Centre · ARIA Music Awards · The Deadlys

**Charts** ARIA Charts, JJJ Hottest 100

**Festivals** **List:** Big Day Out · Livid · Homebake · Falls · Stompem Ground  
Tamworth (Country) · Womadelaide

**Media** CAAMA, Countdown, Rage, Triple J, ABC

**National anthem** "Advance Australia Fair"

**Indigenous Australian music** includes the music of Australian Aborigines and Torres Strait Islanders, who are collectively called Indigenous Australians, it incorporates a wide variety of distinctive traditional [music](#) styles practised by Indigenous Australian peoples, as well as a range of contemporary musical styles both derivative of and fusion with European traditions as interpreted and performed by indigenous Australian artists. Music has formed an integral part of the social, cultural and ceremonial observances of Australian Aboriginal and Torres Strait Islander peoples, down through the millennia of their individual and collective histories to the present day. The traditional forms include many aspects of performance and [musical instrumentation](#) which are unique to particular regions or Indigenous Australian groups; there are equally elements of musical tradition which are common or widespread through much of the Australian continent, and even beyond. The culture of the Torres Strait Islanders is related to that of adjacent parts of New Guinea and so their music is also related.

In addition to these indigenous traditions and musical heritage, ever since the 18th century European colonisation of Australia began indigenous Australian musicians and performers have adopted and interpreted many of the imported Western musical styles, often informed by and in combination with traditional instruments and sensibilities. Similarly, non-indigenous artists and performers have adapted, used and sampled indigenous Australian styles and instruments in their works. Contemporary musical styles such as [rock and roll](#), [country](#), [hip hop](#) and [reggae](#) have all featured a variety of notable indigenous Australian performers.

## **Traditional forms and instruments**

### **Bunggul**

Bunggul is a style of music that arose around the Mann River and is known for its intense lyrics, which are often stories of epic journeys and continue, or repeat, unaccompanied after the music has stopped.

### **Clan songs**

A particular clan in Aboriginal culture may share songs, known as *emeba* (*Groote Eylandt*), *fjatpangarri* (*Yirrkala*), *manikay* (*Arnhem Land*) or other native terms. Songs are about clan or family history and are frequently updated to take into account popular films and music, controversies and social relationships.

### **Death Wail**

A mourning lament recorded in a number of locations in central and northern Australia and among the Torres Strait Islanders.

### **Karma**

Karma is a type of oral literature that tells a religious or historical story.

## **Didgeridoo**

A didgeridoo is a type of [musical instrument](#), a [woodwind](#) [aerophone](#), traditionally made out of eucalyptus or bamboo. Aborigines used the didgeridoo to communicate over long distances, as well as to accompany songs, and the instrument is commonly considered the national instrument of Australian Aborigines. Famous players include Mark Atkins and Joe Geia, as well as white virtuoso Charlie McMahon.

## **Krill Krill**

The Krill Krill song cycle is a modern musical innovation from east Kimberley. A man named Rover Thomas claims to have discovered the ceremony in 1974 (see 1974 in music) after a woman to whom he was spiritually related was killed after a car accident near Warmun. Thomas claimed to have been visited by her spirit and received the ceremony from her. In addition to the music, Thomas and others, including Hector Jandany and Queenie McKenzie, developed a critically acclaimed style of painting in sync with the development of the ceremony.

## **Kun-borrk**

Kun-borrk arose around the Adelaide, Mann and Rose Rivers, distinguished by a didgeridoo introduction followed by the percussion and vocals, which often conclude words (in contrast to many other syllabic styles of Aboriginal singing).

## **Wangga**

Wanga arose near the South Alligator River and is distinguished by an extremely high note to commence the song, accompanied by rhythmic percussion and followed by a sudden shift to a low tone.

## **Contemporary trends**

A number of Indigenous Australians have achieved mainstream prominence, such as Jimmy Little (popular), Yothu Yindi (rock), Troy Cassar-Daley (country) and NoKTuRNL (rap metal), the Warumpi Band (alternative or world music). Aboriginal music has also had broad exposure through the world music movement and in particular WOMADelaide.

Torres Strait Islander musicians include Christine Anu (popular) and Seaman Dan.

Contemporary Australian Aboriginal music continues the earlier traditions and also represents a fusion with contemporary mainstream styles of music, such as rock and [country](#) music. The Deadlys provide an illustration of this with rock, country, [pop](#) being found among the styles played. Common traditional instrumentation used are the didjeridu and clap-sticks being used to give a different feel to the music.

The movie *Wrong Side of the Road* and [soundtrack](#) (1981) gave broad exposure to the bands Us Mob and No Fixed Address and highlighted Indigenous disadvantage in urban Australia.

## Indoor percussion ensemble

An **indoor percussion ensemble** or **indoor drumline** consists of the [marching percussion](#) and front ensemble (or *pit*) sections of a [marching band](#) or [drum corps](#). It marries elements of music performance, marching, and theater; thus, the activity is often referred to as *percussion theater*. Although most indoor percussion ensembles are affiliated with high schools, there are also many independent groups that draw participants from a large area. Independent groups typically start rehearsing in October and groups associated with high schools start after marching band season ends in November or December, and the season culminates with national championships in April.

Notable groups include Music City Mystique, Rhythm X, Blue Knights, RCC, Northcoast Academy, Aimachi, Pulse Percussion, Matrix, Eastside Fury, and Surround Sound.

## History

Over the past 20 years, marching percussion has advanced and moved into auditoriums and gymnasiums as percussion ensembles looked for ways to maintain their skills during the winter months when performing outdoors on football fields was not practical. Following in the footsteps of indoor guard ensembles, indoor percussion ensembles arrange music and motion appropriate for a more intimate setting. The activity is enjoyed throughout the United States and Japan, as Winter Guard International (WGI) provides many regional and national opportunities to compete. Percussion ensembles first appeared in WGI shows in 1992, and the theatrics, sets, and music selection has advanced throughout the activity's history. There are many organizations unaffiliated with WGI that hold smaller regional shows.

Competitive groups are held to specific times and judged on criteria that change every season as technology and creativity blossom. These ensembles

compete, but traditionally, the musical sport is treated as a place to grow together as a community, learn new techniques, and enjoy the work done by peers from across the country.

## **Music**

Music is arranged based on original works, as well as recreations of movie themes, [popular music](#), [classical music](#), and more. Instrumentation is anything that would or could be used under the percussion category of any musical group, including: snare drums, tenor drums, bass drums, [cymbals](#), [xylophones](#), marimbas, [vibraphones](#), [tambourines](#), [chimes](#), [timpani](#), [drum kits](#), and other similar instruments. [Electronic instruments](#) such as [guitars](#) and [synthesizers](#) are also allowed - however, no prerecorded music may be played. Unconventional instruments such as trash cans, barrels, pipes, brooms, and other things that make percussive sounds are sometimes used.

## **Marching**

A notable difference used in indoor percussion is all toe-down marching. Marching within indoor percussion is much more fluid in contrast with corps style marching and is much more group dependent due to the lack of yard lines. Some indoor ensembles even incorporate basic dance moves into their shows for a more dramatic effect.

## **Set designs**

Depending on the financial situation and the creative design team, sets can be created to help the audience engage the performance to a greater depth. Painted floor coverings and backdrops are used to portray a story as the group performs the music in and around the props. Most upper level groups have large nylon-vinyl tarps that cover an entire gym floor.

Sets must also be designed to function within the space provided. If a performance is in a gym, the materials must be able to enter the gym. If the performance is in a stadium type gym, then doors and openings are easier to access. Height is also an issue if the roof of the performance room is low.

There are strict rules on the area sets can be placed on and the time a group is allowed to set them up. Violations of these rules result in score deductions.

## **Costumes**

At first, indoor percussion ensembles wore traditional marching band uniforms. As shows and concepts increased in detail, uniforms were left behind, and theatrical costumes took their place. Costumes could be as simple as jeans and t-shirts for a rendition of West Side Story or as complicated as special jumpsuits with chains and feathers to portray a show like Cirque Du Soleil, though many groups use more modern uniforms.

## **Influence on drum corps**

Some drum corps, most notably The Cadets, have attempted to make their outdoor field shows more intimate and theatrical like indoor percussion shows. The Cadets have taken ideas pioneered indoors to the field, such as the "Gods of Quads" tenor feature and "drum speak" feature, originally developed by the

Ponderosa High School and Mission Viejo High School indoor percussion ensembles respectively.

## Industrial fashion

**Industrial fashion** is a form of fashion most closely associated with the [industrial music](#) scene and is based on styles including [punk](#) and military combat uniform aesthetics. Typical items of clothing include combat boots, camo trousers, t-shirts, and sometimes gas masks, goggles, flight jackets, or trenchcoats, the color black being most predominant. Partially or completely buzzed, shaved or undercut hair is common.

People in the industrial music scene are often called "industrialites" or "rivetheads." Although close to the [goth](#) subculture, industrial fashion and music are much less well-known. This can be attributed to the relative obscurity of industrial music, as compared to mainstream rock or even [gothic rock](#).

## Industrial metal

### Industrial metal

**Stylistic origins:** [Industrial music](#), [heavy metal music](#)

**Cultural origins:** Late 1980s, United States, United Kingdom, Canada

**Typical** [Electric guitar](#) - [Synthesizer](#) - [Drum machine](#) - [Drums](#) -

**instruments:**     [Sequencer](#) - [Keyboard](#) - [Sampler](#))

**Mainstream**             Moderate

**popularity:**

**Subgenres**

Coldwave

**Fusion genres**

[Industrial rock](#)

**Other topics**

[List of subgenres](#)

**Industrial metal** is a [musical genre](#) which draws elements from [industrial music](#) and [heavy metal music](#). Industrial metal music is usually centered around metal [guitar](#) riffs and industrial [synthesizer/sequencer](#) lines, as well as heavily-distorted vocals. This term is used quite loosely, describing everything from industrial bands sampling metal riffs to heavy metal groups augmented with sequencers. Industrial metal encompasses industrial subgenres such as aggro-industrial and coldwave (see [list of industrial music subgenres](#)) and often overlaps some elements of [nu-metal](#) and [post-punk](#).

It is difficult to distinguish many industrial metal artists and [industrial rock](#) because both genres leave much room for ingenuity and creativity. By convention, all industrial metal artists may be more vaguely described as industrial rock as well, but not all industrial rock artists are properly described as industrial metal. This is ironic considering industrial metal emerged before industrial rock.

## History

### Early innovators

Though guitars had been used by industrial groups like Throbbing Gristle and Skinny Puppy since the early days of the genre, it wasn't until the late-1980s that industrial and metal began to fuse into a common genre. Al Jourgensen was at the forefront of the fusion on Ministry's *The Land of Rape and Honey* (1988). Previously a guitarless band, Ministry's inclusion of metal guitars on "Stigmata", "The Missing", and "Deity" proved to be a watershed event. Subsequent albums, *The Mind is a Terrible Thing to Taste* and *Š•!›—ž* (commonly referred to as simply "Psalm 69"), would establish Ministry as a premier industrial metal act. At the same time, KMFDM was bringing metal influences to its guitars in singles like 1989's *Virus* and 1990s *Godlike* (the latter copying a riff from Slayer's "Angel of Death"). Approaching from the opposite end of the spectrum, former Napalm Death guitarist Justin Broadrick founded the industrial metal band Godflesh in

1988. Influenced by metal, industrial, [no wave](#), and [post-punk](#), Godflesh featured live metal guitar, [bass](#) and vocals on top of mechanical [drum machine](#) beats. Canadian band Malhavoc had been cutting demos as early as 1985 featuring drum machines, keyboards, metal guitars and distorted vocals. In 1991 they put out their first official release, entitled "The Release".

## Later developments

Industrial metal blossomed in the early 1990s, particularly in North America where it outstripped pure industrial in popularity. The original strain of industrial metal became known as aggro-industrial, while a new form featuring punk- and hardcore-influenced guitars and more pronounced synthesizer accompaniment became known as coldwave. Prominent coldwave bands included Chemlab, 16 Volt, and Acumen (later Acumen Nation). In Europe, some groups such as Young Gods and Swamp Terrorists would create industrial metal without live guitars, relying wholly on samplers. Many established industrial groups adopted industrial-metal techniques around this period, either temporarily or permanently, including Skinny Puppy (on the Jourgensen-produced Rabies), Front Line Assembly, and Die Krupps. More recently, groups like Rammstein and Oomph! have taken inspiration from [electronic music](#) as well as industrial and [hard rock](#) to create what Rammstein describe as "Tanz-Metall" or "dance metal".

The influence of industrial metal has permeated throughout the heavy metal genre, with a number of bands accenting their live instrumentation with industrial programming and sampling. Fear Factory is one of the most notable, incorporating electronic elements from a very early stage and often being produced by Rhys Fulber of Front Line Assembly. Devin Townsend's death metal band, Strapping Young Lad, also features pronounced industrial-metal aspects. Many contemporary metal/nu-metal groups, drawing influences from industrial, [hip hop](#), and [electronica](#), have incorporated samplers and sequencers. As a result, acts like Rob Zombie, Static-X, *dope*, and Mushroomhead are often, though inconsistently, included in industrial metal.

[List of subgenres](#)

**Industrial music** is a loose term for a number of different styles of electronic and experimental music. First used in the mid-1970s to describe the then-unique sound of Industrial Records artists, a wide variety of artists and labels have since come to be called "Industrial". This definition may include avant-garde performance artists such as Throbbing Gristle, Einstürzende Neubauten and Laibach; noise projects like Merzbow or Whitehouse; [electronic body music/elektro](#) acts such as Skinny Puppy, Front 242 and Nitzer Ebb; electronic rock acts like KMFDM, Nine Inch Nails or Ministry; or writers J.G. Ballard and William S. Burroughs.

The term was meant by its creators to evoke the idea of music created for a new generation of people, previous music being more "agricultural." Specifically, it referred to the streamlined process by which the music was being made, although many people later interpreted the word as a poetic reference to an "industrial" aesthetic, recalling factories and inhuman machinery. On this topic, Peter Christopherson of Industrial Records once remarked, "the original idea of Industrial Records was to reject what the growing [industry](#) was telling you at the time what music was supposed to be."

## History

### Early influences

Luigi Russolo's 1913 work *The Art of Noises* is often cited as the first example of the industrial philosophy in modern music. After Russolo's *musica futurista* came Pierre Schaeffer and [musique concrète](#), and this gave rise to early industrial music, which was made by manipulating cut sections of recording tape, and adding very early sound output from analog electronics devices.

Also important in the development of the genre was the Dada art movement, and later the Fluxus art movement. Such an antecedent, maybe only by name, was Erik Satie terming his second set of [Furniture music](#) *Sons industriels* ("Industrial sounds", 1920).

Edgard Varèse was also a major pioneer in electronic music. His composition *Poème électronique*, for example, debuted at the 1958 Brussels World's Fair in and around the Atomium.

## Industrial Records

*Industrial Music for Industrial People* was originally coined by Monte Cazazza as the strapline for the record label Industrial Records (founded by British art-provocateurs Throbbing Gristle, the musical offshoot of performance art group COUM Transmissions).

Early industrial performances would often involve taboo-breaking, provocative elements, such as mutilation, sado-masochistic elements and totalitarian imagery or symbolism.

The first wave of this music appeared in 1977 with Throbbing Gristle and NON, and often featured tape editing, stark percussion, and loops distorted to the point where they had degraded to harsh noise. Vocals were sporadic, and were as likely to be [bubblegum pop](#) as they were to be abrasive polemics.

Bands like Cabaret Voltaire, Clock DVA, Factrix, DAF, Autopsia, Nocturnal Emissions, Esplendor Geometrico and SPK soon followed. Blending electronic [synthesizers](#), guitars and early samplers, these bands created an aggressive and abrasive music fusing elements of rock with experimental electronic music. Like their punk cousins, they enjoyed the use of shock-tactics including explicit lyrical content, graphic art and Fascist imagery. Industrial Records experienced a fair amount of controversy after it was revealed that it had been using an image of an Auschwitz crematorium as its logo for a number of years.

In the rest of Europe, particularly in Italy, the roots were planted by the non-musician/artist Maurizio Bianchi/M.B./Sacher-Pelz at the end of 1979/beginning of 1980, with some electronic/radiographic extreme works edited in a very limited edition ("Cainus", "Venus", "Cease To Exist", "Velours", "Mectpyo Blut" cassette-tapes, and "Symphony For A Genocide", "Menses", "Neuro Habitat" LP's).

Across the Atlantic, similar experiments were taking place. In San Francisco, shock/performance artist Monte Cazazza (often collaborating with Factrix and Survival Research Labs/SRL) began working with harsh atonal noise. Boyd Rice (aka NON) released several more albums of [noise music](#), with guitar drones and tape loops creating a cacophony of repetitive sounds. In Germany, Einstürzende Neubauten were performing daring acts, mixing metal percussion, guitars and unconventional "instruments" (such as jackhammers) in elaborate stage performances that often damaged the venues they were playing.

## Subgenres and related styles

*Main article:* [List of industrial music subgenres](#)

It should be mentioned that there is much disagreement within the industrial scene as to the current state of industrial, to the extent that some are of the belief that there is no "current state of industrial", saying that industrial music ended with the demise of Throbbing Gristle and Industrial Records and that the idea of genre is antithetical to industrial music, while others use 'industrial' to refer to music having the industrial aesthetic such as [noise/power electronics/death industrial](#), [power noise](#) and [ambient industrial](#) or as an umbrella term for genres that combine elements of the original wave of industrial music with other genres, such as [electronic body music/elektro](#), [industrial metal](#), [industrial rock](#) and industrial techno. The terms post-industrial and alternative electronic have also been used to describe genres spawned or influenced by the original industrial music movement.

## Industrial musical

An **industrial musical** is a [musical](#) performed for the employees of a business, intended to create a feeling of being part of a team, and/or to educate and motivate the management and salespeople to improve sales and profit. It is a form of public relations and advertising that can be used internally within a business.

Other terms for industrial musicals include the **corporate musical** or **industrial show**, but the latter can also refer to trade shows, which are publicity events organized by one or more businesses to promote their products to potential buyers.

Industrial musicals are not restricted to corporations or to businesses involved in industry. They should not be confused with [industrial music](#), or with musicals produced by companies to be seen by the general public, for example, Disney's stage production of The Lion King.

## History

Industrial musicals originated from company songs and [anthems](#) for promoting enthusiasm among workers. The songs were brought in by the management, as opposed to worker-created work songs. Also, during the 1920s, some companies formed internal musical groups to encourage company loyalty, keep employees happy, and to help advertise the company to the public. For example, the Larkin soap company organized community singing, had a women's drum corps, an orchestra, a ukulele club, and daily recitals on a pipe organ.

At some point, a collection of company songs was extended into a full [musical theater](#) format, and the industrial musical was born. Many industrial musicals were made in North America during the economic boom that followed World War II, and this practice continued into the 1980s.

The earliest known industrial musicals were produced by retail and automotive companies such as Ford, General Motors, and the Marshall Field's chain of department stores. By the end of the 1950s and throughout the 1960s, other types of businesses also began to put on shows.

Companies could spend a lot of money to produce shows, hiring talented Broadway composers and lyricists. The pay was very good, the task was challenging, and from the theatre's point of view, the production costs were much higher than a regular Broadway musical. Shows could have as many 30 people in the cast and a 60-piece [orchestra](#). Composer Hank Beebe estimates that the 1957 Chevrolet musical was budgeted at over 3 million dollars (U.S.), because it cost six times the amount it took to bring My Fair Lady to the stage that same year.

The [song](#) performances were rarely heard outside of the companies they were written for, but sometimes the employees would be given a souvenir record album. It is largely through these albums that we know these shows existed. Some shows lasted for a limited number of nights, while others traveled from city to city for regional sales meetings.

By the 1980s, industrial musicals were made less and less often. Jonathan Ward, a writer and [DJ](#) who collects industrial musical albums, theorizes that the reason for the decline was partially due to rising production costs for stage shows, and the availability of low-cost video and multimedia technology.

Ward thinks another reason for the decline was a change in work attitudes. In the 1950s and 1960s, an employee might have expected to spend the majority

of their working career with one company. By the 1980s, employees and the management may have been less inclined to think this way. The feelings of company loyalty and community promoted in the song lyrics would have been met with more cynicism.

Despite the trends that affected industrial musicals, businesses continue to make company songs. For example, KPMG produced a corporate anthem in 2001 called "Our Vision of Global Strategy."

## **Titles of industrial musicals**

The Shape of Tomorrow — Westinghouse (1958)  
Take It From Here — Xerox (1963)  
Diesel Dazzle — General Motors (1966)  
The Bathrooms Are Coming — American Standard (1969)  
Got To Investigate Silicones — General Electric (1973) (about Silicones)

## **Composers and lyricists**

**Industrial rock** is a [musical genre](#) which is a fusion of [industrial music](#) and [rock music](#). Industrial rock augments the [guitar](#)-based music and songwriting structure of rock with the [electronic instruments](#) and noisy production techniques of industrial. Though superficially abrasive and often aggressive, industrial rock is generally more listener-friendly than traditional industrial.

Industrial rock is similar to [industrial metal](#). By convention, all industrial metal artists may be more vaguely described as industrial rock, but not all industrial rock artists are properly described as industrial metal.

Typical instrumentation for industrial rock bands centers on heavily-distorted or otherwise-effected guitars and [synthesizers](#). [Bass guitars](#) and [drums](#) may be played live, or they may be replaced by [sequencers](#) and [drum machines](#). Many groups also make extensive use of [samplers](#).

The archetypal industrial rock band is Nine Inch Nails (NIN). Melding the influences of rock stars like David Bowie, Queen, and Kiss; industrial groups like Skinny Puppy and Coil; and industrial metal acts like Ministry; NIN produced "industrial-flavored" music that enjoyed wide mainstream success. Indeed, industrial rock's general popularity came largely in the wake of Nine Inch Nails' multi-platinum *The Downward Spiral* (1994), as record companies promoted

bands with similar aesthetics. These included NIN-protégé Marilyn Manson, Filter, Stabbing Westward, and Gravity Kills. David Bowie even flirted with the genre, releasing the industrial-tinged *Outside* and touring with NIN in 1995.

The term "industrial rock" most likely had its genesis in the mid-1990s as a reaction to such [crossover](#) bands being referred to as simply "industrial." The industrial rock designation called attention to the fundamental similarities with rock, as opposed to industrial. However, casual listeners still often use "industrial" to refer to the more accessible industrial rock style.

As the 1990s drew to a close, industrial rock's mainstream popularity waned. The genre still remains alive, however, with groups like Pigface and Sister Machine Gun maintaining considerable grassroots followings. The influence of industrial rock has been acknowledged in the popularization of nu-metal.

## **Infest**

**Infest** is an annual three day [music festival](#) held at University of Bradford in the United Kingdom, featuring alternative electronic music acts from genres including [industrial](#), [EBM](#), [futurepop](#), [synthpop](#) and [power noise](#).

## **History**

Infest was born in early 1998 through the efforts of three students of the University of Bradford and the Student's Union Entertainments Manager. The concept of the show was a one day event for local [goth](#) bands in West Yorkshire. Even before the first event however, it spiraled into an altogether bigger beast when the Students Union agreed that funds could be found to book some much bigger acts; most notably [gothic/deathrock](#) band Alien Sex Fiend. The student organisers were already fans of the Whitby Gothic Weekend and took the idea for Infest to the Whitby festival-goers and traders to gauge how popular the show might be. The response was positive and the first Infest festival was confirmed as 14th and 15 August 1998.

The following year (1999) the festival paid more attention towards the electronic side of the goth and industrial scene by booking Apoptygma Berzerk for their first UK show.

By 2000, Bradford University's Students' Union felt that they couldn't carry the costs of the festival any longer. In addition, the original students who had promoted the show had all but moved on. Fortunately, an independent

goth/industrial promoter and [DJ](#), who had been advising throughout the show's early years, stepped in to fill the void. As a result of the heavy involvement with Terminal Productions, another twist to the show's music style took place, defining Infest in its current form with its theme moving from goth/industrial [crossover](#) to alternative electronic, with a greater emphasis on power noise, futurepop, synthpop and electronic body music, with occasional bookings of more [darkwave](#)-style goth bands.

Since 2000, Infest has gained an international reputation, with festival-goers travelling from as far as Canada, and acts flying from as far as Australia to play the UK. The show continues to provide a market for traders, which helps to bring the music and the lifestyle of the show's fans together. There is also a full festival program where [nightclubs](#), [DJs](#), [bands](#) and businesses can make their voices heard. Infest is supported by a number of electronic [record labels](#), notably Ant-Zen and Hands Productions and has been sponsored by the online music store Music Non Stop, the drink Jaegermeister and the software publisher Ableton.

The festival was originally known as "InFest" when it was started in 1998, however in 2003 it's name was altered to "Infest" on all material produced by the organisers.

## Instrument amplifier

An **instrument amplifier** is an electronic amplifier designed for use with an electric or electronic [musical instrument](#), such as an [electric guitar](#).

### Most common forms

Instrument amplifiers come in two main forms. The combination (or *combo*) amplifier contains both the amplifier and loudspeakers in a single unit. In the other form, the amplifier is separate from the loudspeakers, and joined to them by cables. The separate amplifier is called an *amplifier head* and is commonly placed on top of one or more loudspeaker enclosures, the amplifier head and loudspeaker enclosures together forming an *amplifier stack*.

In the case of electric guitars, an amplifier stack consisting of a head and one cabinet is commonly called a *half stack*, while a head and two cabinets is referred to as a *full stack*. A head and two cabinets may also be called a *double stack* or just a *stack*, depending on what is most common in the particular musical style; A retro heavy metal guitarist would likely just use the term *stack*, the two cabinets being understood, while a jazz guitarist might use the term *double stack*, the two cabinets being the exception in this genre. By a *double stack*, the heavy metal guitarist might well mean two stacks, with a second amplifier head serving as a slave to the first and four cabinets in all. Another name for the "Head & Cab" that comes from the 60's and 70's is "Piggyback". Vox amp stacks could be put on a tiltable frame with casters. Fender heads could be attached to the cab and had "Tilt-Back" legs like some larger Fender combos had.

While most amplifiers that are used with electric guitars are solid state, some purists prefer the sound of vacuum tubes. Some modern amps use a mixture of both technologies, with 1960s vintage vacuum tubes next to integrated circuits. With the advent of microprocessors, there have been new "modelling" amps that don't use vacuum tubes and can simulate a variety of vintage amps. As of 2005, these modelling amps still account for a small minority of amp sales.

## History

The first instrument amplifiers were guitar amplifiers designed for use with electric guitars. Traditional guitar amplifiers provided a great deal of treble boost but had poor high treble and bass response. Some better models also provided effects such as spring reverb and/or an electronic tremolo unit (for information about a debate over nomenclature, see also vibrato unit, electric guitar, tremolo).

In the 1960s guitarists experimented with distortion produced by deliberately overloading (or overdriving) their amplifiers. The Kinks guitarist Dave Davies produced early distortion effects by connecting the output of one amplifier into the input of another, an abuse which the designers could never have imagined (but see Maton). Later, many guitar amplifiers were provided with distortion controls, and fuzz boxes and other effects pedals were engineered to safely and reliably produce these sounds. Today distortion is an accepted part of nearly all styles of electric guitar playing.

Guitar amplifiers were at first used with limited success with bass guitars and electronic keyboards, but it was quickly recognized that other instruments had different requirements than the electric guitar. Much more amplifier power is required to clearly reproduce low-frequency pitches produced by bass guitars and electronic keyboards, especially at high volumes. Reproducing low-frequency pitches also requires a woofer or subwoofer speaker capable of handling low frequencies and a speaker cabinet that is designed for low-frequency output. Speaker cabinets for low-frequency sound reproduction need to be larger and more sturdily built than speaker cabinets for mid-range or high-frequency sounds.

## Present day

A wide range of instrument amplifiers is now available, some general purpose and some designed for specific instruments and even for particular sounds. These include:

- "Traditional" guitar amplifiers, with a clean, warm sound, a sharp treble roll-off at 5 kHz or less and bass roll off at 60–100 Hz, and often built-in reverb and "vibrato" units. These amplifiers, such as the Fender "Tweed"-style amps, are often used by traditional rock, blues, and country musicians.
- Hard rock-style guitar amplifiers, which often include a preamplification controls, tone filters, and distortion effects that provide the amplifier's characteristic tone. Users of these amplifiers use the amplifier's tone to add "drive", intensity, and "edge" to their guitar sound. Amplifiers of this type,

such as Marshall amplifiers, are used in a range of genres, including hard rock, metal, and punk.

- Bass amplifiers, with extended bass response and tone controls optimised for bass guitars (or more rarely, for upright bass). Higher-end bass amplifiers sometimes include compressor or limiter features, which help to keep the amplifier from distorting at high volume levels, and an XLR DI output for patching the bass signal directly into a mixing board. Bass amplifiers are often provided with external metal heat sinks or fans to help keep the amplifier cool.
- Keyboard amplifiers, with very low distortion and extended, flat frequency response in both directions. Keyboard amplifiers often have a simple onboard mixer, so that keyboardists can control the tone and level of several keyboards.
- *Acoustic* amplifiers, similar in many ways to keyboard amplifiers but designed specifically to produce a "clean," transparent, "acoustic" sound when used with acoustic instruments with built-in transducer pickups and/or microphones. (Note that there was once also a brand of guitar and bass amplifier called Acoustic, still seen second-hand.)

Some amplifiers are designed to fill more than one of these roles, and may have multiple inputs. In addition, for electric guitar amps, there is often a distinction between "practice" amps, which tend to have ratings of 20 watts or less, and "performance" amps, which are generally 50 watts or higher. For bass instruments, higher-wattage amplifiers are needed to reproduce low-frequency sounds. While an electric guitarist would be able to play at a small club with a 50 watt amplifier, a bass player performing in the same venue would probably need an amplifier with 200 or more watts.

Some also have a microphone input, which is easily identified because it will use a three-pin XLR connector. Phantom power is not often provided on general-use amps, restricting the choice of microphones for use with these inputs. However, for high-end acoustic amplifiers, phantom power is often provided, so that musicians can use condenser microphones.

## Technology

Though instrument amplifiers share with Hi-Fi (high fidelity) stereo amplifiers the commonality of amplifying music audio signals, they differ in design; Hi-Fi amplifiers ultimately aim at reproducing the source sound signals at very high fidelity, whereas instrument amplifiers aim at creating sound. Because of this, distortions or dissimilarities between the input and output signals are not only acceptable but also preferred as long as the final output sound is favorable to

the player. In fact, many instrument amplifiers today deliberately add distortions by aggressively processing the input signal.

Until 1960s or so, high output power amplifiers were preferred especially for large concerts, but, as large scale music public address equipment that even amplifies instrument amplifier output becomes common, high power is no longer a must for high-end instrument amplifiers today. Modern instrument amplifiers concentrate more on sound creation than public address. This separation also helps concert stage management especially with various attractions and omnibus players.

## **Vacuum tube amplifiers**

Vacuum tubes were by far the dominant active electronic components in most amplifier applications until 1960s when semiconductor transistors started taking over for performance and economical reasons. High-end vacuum tube instrument amplifiers have survived as one of few exceptions for many players like their warm sounds.

A typical tube amplifier circuit is quite simple. Two triodes work in the preamplifier section for gaining the enough signal level to drive the power output section as well as implementing tone controls. Another two triodes drive pentode power tube in a push-pull connection in the output stage. Some high power models use parallel output tubes (4 or more in total). Except for the light NFB from the secondary end of the output transformer to the driver stage, all amplifying stages work in "raw" mode. Since most tubes show "soft clipping" gain non-linearity, applying overdriving input signal tends to produce favorably natural distortion. Today, most vacuum tube amplifiers are based on the ECC83/12AX7 (dual triode) tubes for the preamplifier and driver sections and the EL84/6L6 (pentode) tube for the power output section. Some use the KT88 power tubes. These tubes are mainly manufactured in Russia, China and Eastern European countries.

Tube instrument amplifiers are often equipped with lower grade-looking transformers and simpler power regulation circuits than those of Hi-Fi amplifiers. They are usually not only for cost-saving reasons, but also are considered for sound creation. For example, a simple power regulation circuit's output tends to sag when there is a heavy load (i.e. high output power) and vacuum tubes usually lose gain factors with lower power voltages; this results in somewhat compressed sound volume and it could be criticised as a "poor dynamic range" in case of Hi-Fi amplifiers, but it can be favorably accepted as "good compression" or "long sustain" of sounds on a guitar amplifier. Some tube guitar amplifiers use a rectifier tube possibly for this reason.

Some models have a "spring reverb" unit that simulates the reverberation of an echoic ambient. A reverb unit usually consists of one or more coil springs

driven by the preamplifier section using a similar driver for a loudspeaker at one end and an electro-magnetic pickup and a preamplifier stage at the other end that picks up the long sustaining spring vibrato that is mixed with the original signal.

A few amplifiers have a tremolo control. An internal oscillator generates a low frequency continuous signal that modulates the input signal's amplitude simulating tremolo performing technique.

Tube amplifiers have many disadvantages that made good excuses for the replacement by the semiconductor technology.

- Bulky and heavy (power and output transformers)
- Generates much heat
- Components wear faster (because of heat and high voltage). High voltage also attracts dust that may cause electric leakage or even a fire.
- Tubes wear (like light bulbs)
- Prone to pick up mechanical noises (microphonic noise) (but some say the acoustic feedback path from the loudspeaker to the tubes in a combo amplifier also contributes to sound creation)

## **Solid state amplifiers**

The vast majority of instrument amplifiers produced these days are based on semiconductor (solid state) circuits. They vary in output power, functionality, size, price, and sound quality in a wide range from practice amplifiers to professional models. Many budget-oriented entry level models have a simple volume level control and simple tone control knobs, but some models have a "gain" control knob for adding distortion.

## **Modeling amplifiers**

Many medium range guitar amplifiers sold today have a mode control switch for selecting sound of multiple famous vintage amplifiers to simulate. Most modeling amplifiers digitize the input signal and use a DSP, a dedicated microprocessor, to process the signal with digital computation.

## **Less common forms**

Typically, an instrument amplifier's preamplifier section provides sufficient gain so that an instrument can be connected directly to its input, and sufficient

power to connect loudspeakers directly to its output, both without requiring extra amplification. But other forms are possible.

Another arrangement, often used for public address amplifier systems, is to provide two stages of amplification in separate units. First a preamplifier or mixer is used to boost the instrument output, normally to line level, and perhaps to mix signals from several instruments. The output from this preamplifier is then connected to the input of a power amplifier, which powers the loudspeakers.

Performing musicians that use the "two-stage" approach (as opposed to an amplifier with an integrated preamplifier and power amplifier) often want to custom-design a combination of equipment that best suits their musical or technical needs, and gives them more tonal and technical options. Some musicians require preamplifiers that include specific features. Acoustic performers sometimes require preamplifiers with "notch" filters (to prevent feedback), reverb, an XLR DI output, or parametric equalization. Hard rock, metal, or punk performers may desire a preamplifier with a range of distortion effects. As well, some musicians have specific power amplifier requirements, such as low-noise design, very high wattage, the inclusion of limiter features to prevent distortion and speaker damage, or biamp-capable operation.

With the "two-stage" approach, the preamplifier and power amplifier are often mounted together in a rack case. This case may be either free-standing or placed on top of a loudspeaker cabinet. If many rack-mounted effects are used, the rack may be a large unit on wheels. Some touring players need several racks of effects units to reproduce on stage the sounds they have produced in the studio.

On the other extreme, if a small rack case containing both preamplifier and power amplifier is placed on top of a loudspeaker, the distinction between this arrangement and a traditional amplifier head begins to blur. Another variation is to combine the power amplifier with the loudspeakers cabinet, which is then called a *powered speaker*, and to use these with a separate preamplifier, sometimes combined into a pedal board.

Preamplifiers are also used to connect very low-output or high-impedance instruments to instrument amplifiers. When piezoelectric transducers are used on upright bass or other acoustic instruments, the signal coming directly from the transducer is often too weak and it does not have the correct impedance for direct connection to an instrument amplifier. Fishman brand preamplifiers are often used with acoustic instruments to resolve these problems.

## Instrumental

An **instrumental** is, in contrast to a [song](#), a [musical composition](#) or piece without [lyrics](#) or any other sort of vocal music; all of the [music](#) is produced by [musical instruments](#). These instruments include anything in the range of [strings](#), [woodwinds](#), [brass](#), and [percussion](#). Specifically, this term is used when referring to [popular music](#); some [musical genres](#) make little use of the [human voice](#), such as [jazz](#), [electronic music](#), [classical](#), and large amounts of Western classical music (although in electronic music, the voice can be sampled just like anything else). In commercial music, some tracks or songs on a compact disc include instrumental tracks. These tracks are exact copies of the corresponding song, but do not have vocals.

## Instrumental hip hop

**Instrumental hip hop** is [hip hop music](#) without vocals. Hip-hop as a general rule consists of two elements: an instrumental track (the "beat") and a vocal track (the "rap"). The artist who crafts the beat is the [DJ](#) or the producer, and the one who crafts the rap is the MC. In this format, the [rap](#) is almost always the primary focus of the song, providing most of the complexity and variation over a more or less repetitive beat.

Instrumental hip hop includes, but is not limited to, the work of DJs and producers who create music without emcee accompaniment. This format affords

them the flexibility to create more complex, richly detailed and varied instrumentals, with less emphasis on vocals. Songs of this genre may wander off in different musical directions without the vocal constraints of mainstream hip hop, in particular [electronica](#).

## History

This style of music was popularized especially in the mid- to late-nineties with the release of DJ Shadow's debut album *Endtroducing...*. Relying on a combination of sampled [funk](#), hip hop and [film score](#), DJ Shadow chose to describe his music as "cinematic hip hop."

Instrumental hip hop has yet to be fully recognized as a genre unto itself, and is often lumped in with [trip hop](#), [electronica](#), or [industrial music](#).

## Instrumental rock

**Instrumental rock** is a type of [rock and roll](#) music which emphasises [musical instruments](#), and which features little or no [singing](#).

Examples of instrumental rock music can be found in practically every subgenre of rock, often from musicians who specialise in the style, like Dick Dale, The Ventures, Joe Satriani and Steve Vai.

While many rock bands perform occasional instrumental pieces, those whose music predominantly features vocals are not typically classified as instrumental rock.

## Early History

Instrumental rock was most popular during rock and roll's first decade (mid-1950's to mid-1960s), before the British Invasion.

One notable early instrumental was "Honky Tonk" by the Bill Doggett Combo, with its slinky beat and sinuous [saxophone-organ](#) lead. And [bluesman](#) Jimmy Reed charted with "Boogie in the Dark" and "Roll and Rhumba".

[Jazz](#) saxophonist Earl Bostic revived his career with instrumentals like "Harlem Nocturne" and "Earl's Rhumboogie". (Other jazz musicians who scored pop hits include Tab Smith and Arnett Cobb). Several [rhythm and blues](#) sax players had hit instrumental songs, including Big Jay MacNeeley, Red Prysock, and Lee Allen, whose "Walking with Mr. Lee" was quite popular.

There were several notable [blues](#) instrumental songs during the 1950s; Little Walter's rollicking "Juke" was a major hit.

Instrumental hit songs could emphasize electric organ (The Tornados' "Telstar", Dave "Baby" Cortez's "The Happy Organ") or the [saxophone](#) (The Champs' "Tequila"), but the guitar was most prominent. Duane Eddy scored

several hits (his best known probably being "Rebel 'Rouser") and Link Wray's ominous "Rumble" might be only instrumental rock hit ever banned from some radio stations.

The Ventures' precise guitar work was a major influence on many later rock guitarists; they also helped shape [surf music](#), which at this stage consisted almost entirely of heavily reverbed guitar instrumentals.

[Surf rock](#) was quite popular in the late 1950s, and was generally rather simple and melodic--one exception being Dick Dale, who gained fame for his quick playing, often influenced by the music of the middle east, and frequently using exotic [scales](#).

Following the British Invasion, rock changed appreciably, and instrumental hits came mostly from the [R&B](#) world. Notable artists include Booker T. & the MG's and saxophonist Junior Walker.

Steve Cropper of the MG's asserts:

"We had trouble getting airplay because disc jockeys did not like playing songs without vocals on them. It got worse and worse and worse until they finally pushed every instrumental band in the country out of business."

## 1970s

[Funk](#) and [disco](#) produced several instrumental hit singles during the 1970s.

The [jazz fusion](#) of the 1970s often had considerable stylistic cross-over with rock, and groups like Return to Forever, Mahavishnu Orchestra and Weather Report had sizeable followings among rock fans. Guitarist Jeff Beck released several popular instrumental albums which straddled rock and fusion.

[Progressive rock](#) and [art rock](#) performers of the 1960s and 1970s deserve some mention. Many of these musicians featured virtuostic instrumental performances (and occasional instrumental songs), but many of their compositions also featured vocals.

## 1980s

During the 1980s, the instrumental rock genre was dominated by several guitar soloists.

Swedish virtuoso Yngwie Malmsteen made a name for himself in 1984 by playing in the popular band Alcatrazz, and then by releasing his debut solo album *Rising Force* later that year, which made it to #60 on the Billboard Charts. Joe Satriani's 1987 album *Surfing With The Alien* was a surprise hit, containing

the ever-popular instrumental ballad "Always With Me, Always With You"—a staple for guitarists learning their craft.

After Malmsteen left Alcatraz, he was replaced by the extravagant Steve Vai, who had previously been playing with the Frank Zappa band. Continuing the tradition (and following a brief stint in David Lee Roth's band from 1986 to 1988), Vai went on to release a number of highly acclaimed solo albums. Arguably the best-known of these was his 1990 release, *Passion And Warfare*, which at the time really began to push the boundaries of what could be done in instrumental rock.

Jason Becker was also considered by many to be a fantastic player, who released two albums with Cacophony. Cacophony were a primarily instrumental group featuring Becker and Marty Friedman (the latter of whom went on to play with the legendary thrash metal band Megadeth). After the release of Cacophony's second album *Go Off!* in 1988, Becker released two solo albums before being diagnosed with amyotrophic lateral sclerosis. Sadly, he is now confined to a wheelchair and is completely unable to play.

Recommended 1980s instrumental rock albums;

- Yngwie Malmsteen — *Rising Force* (1984)
- Tony MacAlpine — *Edge Of Insanity* (1986)
- Vinnie Moore — *Mind's Eye* (1986)
- Joe Satriani — *Surfing With The Alien* (1987)
- Cacophony (Jason Becker and Marty Friedman) — *Speed Metal Symphony* (1987)
- Steve Morse — *High Tension Wires* (1989)

## 1990s

During the 1990s, instrumental music flourished among [indie-rock](#) groups and with the popularity of so-called "[post rock](#)" groups like Tortoise and Cul de Sac.

Don Caballero gained notice for their music as did neo-surf-rockers The Mermen and Man... or Astro-Man?.

Quentin Tarantino's smash hit film Pulp Fiction made heavy use of rock instrumentals on its soundtrack, spurring some interest in classic instrumentals, and revitalizing Dick Dale's career.

With the rise of [grunge music](#), guitar-orientated instrumental rock of the type popular in the 1980s became less popular, and there were few artists who continued to thrive in that style. The instrumental stars from the 1980s -- Satriani, Vai and Malmsteen, to name but a few -- were often lumped in with fading [glam metal](#) movement, whether fairly or not, and their popularity waned.

## 2000s

Over the past few years there have been many new releases of instrumental rock albums. The majority of the popular guitar heroes from the 1980s have made rejuvenated and generally well-received comebacks, thanks largely to the revitalized sound apparent on their recent releases. Artists such as Steve Morse, Marty Friedman, Ron Jarzombek and Malmsteen have continued releasing instrumental rock music with great success. However, it is still extremely rare to hear an instrumental rock tune on the radio, or see one on the music charts.

It should be noted that children's television programs often feature instrumental rock theme songs. The Mighty Morphin Power Rangers theme, entitled "Go Go Power Rangers", and performed by Aaron Waters, has its devotees, as does the theme for Dragon Ball Z.

## Intelligent dance music

**Intelligent dance music** (or **intellectual dance music**, commonly referenced as **IDM**, is an electronic music genre based on novelty and complicated sequencer programming. The genre name was invented by fans of Aphex Twin and Warp Records, but has grown to include the music of other artists:

*The IDM list was originally created in August of 1993 for the discussion of music relating to Aphex Twin and Warp's early "Artificial Intelligence" compilations. Since that time, both the list and the range of music that is*

*discussed on it have grown considerably. As there is no set definition of the boundaries of "Intelligent Dance Music", the official stance is that all opinions are to be respected. That being said, when you declare that "Rozalla is intelligent dance music", you should be willing and able to back it up - not just "because it obviously is."*

The term IDM originated from the creation of an electronic mailing list called the IDM list in August 1993, originally intended for discussion of Rephlex Records. Thus the actual musical definition of the genre evolved as the artists it originally described evolved. The term subsequently gained a life of its own, and became popular around the world as a means of referring to the then-novel mainstream success of certain kinds of experimental electronic dance music. The use of the term is somewhat contentious, owing to the inherent assumption that all non "IDM" electronic music is then "unintelligent". Rephlex poked fun at this pigeonholing of their music by coining the word "braindance" as a parody. Alternatives terms that have been used include electronic listening music, armchair techno, intelligent techno, intelli-tech, listening techno, art techno, and experimental techno.

## Overview

IDM differs from other forms of electronic music by the sequencing and audio processing techniques used in its production. As a genre, it encompasses music derived from many other styles including [drum and bass](#), ambient, [house](#), [techno](#), [hip hop](#), UK garage and even [jazz](#). The music of B12, Kirk Degiorgio, Squarepusher, for example, has a strong [jazz](#) influences. Other influences include [musique concrète](#) and avant-garde [classical composers](#) such as Karlheinz Stockhausen and Iannis Xenakis, and early hip hop musicians like Mantronix.

The initials *IDM* appeared in music magazines in 1992 – 1993, but the term caught on with the formation of the IDM electronic mailing list in August 1993. Initially, the discussion list focused on the music of Richard D. James (Aphex Twin) and the Rephlex Records label, as well as various forms of electronic [dub](#) by artists such as The Orb, Richard H. Kirk, and Future Sound of London. In fact, any form of new, percussive electronic music that was not easy to categorize as pure house, [trance](#), [electro](#) or techno was fair game for discussion; it was not unusual for artists such as System 7, William Orbit, Sabres of Paradise, Orbital, Plastikman and Björk to take equal footing as IDM alongside Autechre, Atom Heart, and LFO.

In 1994 Warp's second Artificial Intelligence compilation was released, which featured various postings from the mailing list incorporated into the typographic artwork in the sleeve notes. IDM became increasingly identified with the quirky, experimental brands of electronic music produced by Warp Records artists such

as Polygon Window (an alias of Richard D. James), Autechre, LFO, B12, Seefeel and Black Dog Productions. Lesser-known artists on the Likemind label and Kirk Degiorgio's A.R.T. and Op-Art labels, including Degiorgio himself under various names (As One, Future/Past, Esoterik), Steve Pickton (Stasis), and Nurmad Jusat (Nuron) also took the label of IDM. The music of other artists, however, such as Björk and Future Sound of London, continued to be upheld as IDM as well. The majority of IDM's pioneers during this era were based in Britain, but a few artists, such as Sun Electric from Berlin, hailed from other countries.

## Spread of IDM

In the late 1990s and early 2000s artists and labels from around the globe were pushing electronic 'listening music' in new directions. Notable influences at the beginning of this period include the music of Boards of Canada, the Skam Records label, and artists using software synthesis, a technology that had recently become possible to use on ordinary personal computers.

In particular, during this period, IDM production greatly increased in the United States. One of the more notable hubs of activity was Miami, Florida, with labels like Schematic, Merck Records, Nophi Recordings and The Beta Bodega Coalition sprouting up and releasing material by artists such as Phoenecia, Dino Felipe, Machinedrum, and Proem. Another burgeoning scene was the Chicago/Milwaukee area, with labels such as Addict, Chocolate Industries, Hefty, and Zod supporting artists like Doormouse and Emotional Joystick.

Developed out of the IDM community was a filesharing program called Soulseek, which underground artists used to share their music and make contacts. The artist's Khonnor and Venetian Snares went on from Soulseek to earn public acclaim.

IDM has also infiltrated the artists in the [rock](#) and [post-rock](#) scenes. In particular, Radiohead has cited Aphex Twin and Warp Records as influences.

The influence of Warp Records grew in about 1999, mostly centered around internet forums dedicated to the genre. The widespread popularity of Warp artists resulted in IDM which is highly derivative of artists such as Aphex Twin, The Black Dog, Boards of Canada, Plaid, and Autechre. Copycats were quick to release mp3 albums which sounded like their heroes and uploaded them to filesharing programs as the real thing. When Aphex Twin's *drukqs* was released, many reviewers harshly criticised it by declaring that they couldn't tell the difference between his songs and Aphex Twin fans' imitations and fake mp3 releases.

## Sound production in IDM

Early IDM was produced in much the same way as other forms of electronic music at the time, using hardware drum machines and rackmounted equipment. The advent of the MIDI musical instrument protocol in the mid-1980s gave IDM musicians the power to easily control their hardware. Since the late 1990s, however, IDM production has become increasingly reliant on personal computer software, including advanced sequencing and synthesis software such as Cubase, Reaktor, Renoise, Logic Pro and Max/MSP. The limited number of music production software suites popular among modern IDM musicians has led to the widespread use of certain trademark audio effects. One such example is digital distortion (also called "bit reduction"), a technique in which the artist manipulates the sampling rate and bit depth of the playback.

Live IDM performances are commonly played entirely on laptop computers with MIDI controllers, using software like Ableton Live or programming languages like Max. "Groove boxes" such as the Roland MC-909 are used as well. The amount of pre-sequenced and pre-recorded material versus real-time production generally varies from one performance to the next. In many cases, live performance is a combination of the two.

Amateur IDM production is often done with free tracker software such as Jeskola Buzz, or semi-professional software such as Fruityloops. Akai samplers, often purchased secondhand or by through online auctions, are popular tools for amateur IDM production. Some professionals also take advantage of this inexpensive technology — Breakcore artist Venetian Snares uses Med Sound Studio, a free tracking software package. Proem uses Fruityloops in his studio setup.

## **Criticisms of the name 'IDM'**

The term "intelligent dance music" is often criticized for grouping other music genres while not being a specific description of the music genre itself. Whether or not intelligence or dancing are involved, or whether everybody else's music is not intelligent is irrelevant as the name is now in common usage. IDM as a genre name is criticized because it wasn't created by the artists whose work it named, and those artists may not particularly want their work associated with their genre name peers.

The IDM genre name is a third party creation by the high volume IDM mailing list and some British music magazines printed around 1991, and the genre name was apparently more memorable than other competing phrases. The term "intelligent" is believed to have derived from the often cerebral qualities that the music holds.

Detractors of the phrase have occasionally used the term "dolphin music" as a disparaging alternative to "intelligent".

In a September, 1997 interview, Aphex Twin commented on the 'Intelligent Dance Music' label: "I just think it's really funny to have terms like that. It's basically saying 'this is intelligent and everything else is stupid.' It's really nasty to everyone else's music. (laughs) It makes me laugh, things like that. I don't use names. I just say that I like something or I don't."

## Criticisms of IDM

The famous electrical recording engineer Steve Albini says of IDM "As the idiom developed, the music became more and more about the novelty of certain sounds and treatments, ridiculously trivial aspects like tempo and choice of samples, and the public personae of the makers. It became a race to novelty. I find that kind of evolution beneath triviality. It is a decorative, not substantive, evolution."

## Intelligent drum and bass

**Intelligent drum and bass** (*IDB*) (a derivation of **Intelligent Jungle**) is the widespread term for the subgenre of [drum and bass](#) emphasising influences

from [lounge jazz](#) and [ambient music](#). The music typically has a very atmospheric or ambient quality, with washes of synthesised pads, and deep sub-bass. The Rhodes piano is heavily featured, along with samples of other jazz fusion instruments like [guitar](#), [flute](#) and vocals. Although the mellow and tranquil atmospheres contrast with the darkness and aggression found in much dancefloor drum and bass, the intelligent style is still generally produced with the [DJ](#) and dancefloor in mind, and not simply "chill-out" material.

Also known as *atmospheric drum and bass*, or "the Good Looking sound" (after the [record label](#) synonymous with the style), intelligent is nevertheless the most widespread term. LTJ Bukem, boss of Good Looking and arguably the single most influential figure behind the style, is especially noted for disliking the term, owing to the implication that other forms of drum and bass are not intelligent.

# Interactive music

**Interactive music** also known as **nonlinear music** or **adaptive music**, is synonymous with [soundtracks](#) to interactive media and in particular computer games.

Recently there has become an increasing trend away from detached linear scores similar to those found in the linear narratives of film, in favor of advanced, carefully designed audio, more tightly integrated with the gameplay in today's interactive entertainment titles. We are now at the stage where a musical score is able to adapt in real-time to what is happening in a game.

The music in a game is able to adapt to a users movements through a storyline using two techniques. Horizontal re-sequencing is the method by which pre-composed segments of music can be re-shuffled according to a players' choice of where they go in the storyline or environment. Vertical re-orchestration is the technique of changing the mix of separate parts of an on-going loop, relative to a players movement within the narrative of a game. Recent games such as Bungie Studios' Halo 2 (2005) employ a mixture of these techniques to create their tightly integrated soundtracks.

In the context of performance, interactive music indicates performer/composer to computer interaction, while in the past it most often specified performer to audience interaction. According to composer Todd Winkler (2001), interactive music is "a [music composition](#) or [improvisation](#) where software interprets a live performance to affect music generated or modified by computers," however, as he also points out, all music is "interactive" to a certain extent. At one end of a spectrum he puts a conductor led large ensemble such as in Romantic era [classical music](#), and on the other [free jazz](#), he suggests examining examples of [musician](#) to musician interaction as potential models for computer to musician interaction.

Don Buchla designs many electronic and virtual instruments which are used in interactive music.

Interactive music as a self-contained work of art, made viable with the advent of multi-channel, multimedia PCs and delivered on CD-ROM, was pioneered by UK artists, Modified. The release of frEQuency in 1996 and Chillax in 1997, both authored with Macromedia's Director, gave users realtime facilities to mix hundreds of samples within an 8-track virtual studio space. Besides offering non-linear musical compositions, these titles also featured generative algorithms acting as seeding elements to produce never-ending mixes of the onboard audio samples. Despite wide critical acclaim, Modified ceased creative output in 2000 and although rumours abound of a new interactive DVD release, no new titles have been forthcoming.

Nintendo release Electroplankton in 2005 for the Nintendo DS. In it the player is able to generate unique compositions using plankton like creatures, each being a type of "[instrument](#)".

## Intermedio

The **intermedio**, in Italian [Renaissance music](#), is a kind of music which was performed between acts of a play. It was one of the important predecessors to [opera](#) (two of the others were monody and madrigal comedy).

Intermedi were written and performed from the late 15th century through the 17th century, although the peak of development of the genre was in the late 16th century. After 1600 the form merged with opera, for the most part, though intermedi continued to be used in non-musical plays in certain settings (for example in academies), and also continued to be performed between the acts of operas.

Very little actual music for intermedi survives, although a lot of music which was written for other occasions, for example [madrigals](#) and instrumental pieces, was used in intermedi. Often the subject matter of the intermedio was a mythological or pastoral story, which could be told in mime, by costumed singers or actors, or by [dance](#). Aristocratic weddings and state occasions were frequent places where intermedi might be performed, in cities such as Florence and Ferrara; some of the best documentation of intermedi comes from weddings in the Medici family. Numerous drawings and engravings of the stage sets survive, as well as descriptions of the music and action. The actual music, instrumentation, presence of singers, dancers, mime, or elaborate staging were highly variable throughout the period, and sometimes all of these features were present.

As the intermedio developed in the 16th century, it became more and more elaborate, often becoming a "play within a play"; for example during a five-act

play, an intermedio would consist of four parts, which might be presented as a four-part metaphor of time passing in the play (as in *Il commodo*, from a performance in Florence in 1539, where the four parts were morning, noon, afternoon, and night, represented with an elaborate mechanical artificial sun, with singing and dancing appropriate to each time). Some critics of the time noted that the intermedii had become so elaborate that the play had begun to serve as intermedio to the intermedio. Eventually the form acquired a tradition and cohesiveness that allowed it to stand on its own, and it was thus a logical development to combine the existing features with sung, acted parts, and be absorbed into opera.

The similar form which developed in France at the same time was called the intermède; it was more reliant on dance than the Italian version. The masque in England also had many similarities to the intermedio, although its origin was as an outgrowth of independent social entertainment, unlike the intermedio.

## Intermezzo

In [music](#), an **intermezzo** (pl. intermezzi), in the most general sense, is a composition which fits between other musical or dramatic entities, such as acts of a play or movements of a larger musical work. In music history the term has had several different usages, which fit into two general categories: the [opera](#) intermezzo and the instrumental intermezzo.

## Opera intermezzo

The **intermezzo**, in the 18th century, was a comic operatic interlude inserted between acts or scenes of an [opera seria](#). These intermezzi could be substantial and complete works themselves, though they were shorter than the

*opera seria* which enclosed them; typically they provided comic relief and dramatic contrast to the tone of the bigger opera around them, and often they used one or more of the stock characters from the opera or from the *commedia dell'arte*. Often they were of a burlesque nature, and characterized by slapstick comedy, disguises, dialect, and ribaldry. The most famous of all intermezzi from the period is Pergolesi's *La serva padrona*, which was an [opera buffa](#) that after the death of Pergolesi kicked off the *Querelle des buffons*.

In some cases the intermezzo repertory spread more quickly than did the *opera seria* itself; the singers were often renowned, the comic effects were popular, and intermezzi were relatively easy to produce and stage. In the 1730s the style spread around Europe, and some cities--for example Moscow--recorded visits and performances by troupes performing intermezzi years before any actual *opera seria* were done.

The intermezzo was the single most important outside operatic influence in Paris in the mid-18th century, and helped create an entire new repertory of opera in France (see *opera comique*).

## Instrumental intermezzo

In the 19th century the intermezzo acquired another meaning: an instrumental piece which was either a movement between two others in a larger work, or a character piece which could stand on its own. These intermezzi show a wide variation in the style and function: in Mendelssohn's [incidental music](#) to *Midsummer Night's Dream* the intermezzo serves as musical connecting material for action in Shakespeare's play; in chamber music by Mendelssohn and Brahms, the intermezzi are names for interior movements which would otherwise be called *scherzi*; and the piano intermezzi by Brahms, some of his last compositions, are sets of independent character pieces not intended to connect anything else together. Stylistically, intermezzi of the 19th century are usually lyrical and melodic, especially compared to the movements on either side, when they occur in larger works. The Brahms piano intermezzi in particular have an extremely wide emotional range, and are often considered to be some of the finest [character pieces](#) written in the 19th century.

Opera composers sometimes wrote instrumental intermezzi as connecting pieces between acts of operas. In this sense an intermezzo is similar to the *entr'acte*. The most famous of this type of intermezzo is probably the intermezzo from *Cavalleria Rusticana*, by Pietro Mascagni. Puccini also wrote one in *Manon Lescaut*, and examples exist by Wolf-Ferrari, Delius and others.

Also [incidental music](#) for plays usually contained several intermezzi: Schubert's *Rosamunde* music as well as Grieg's *Peer Gynt* contained several intermezzi for the respective plays.

In the 20th century the term was used occasionally. Shostakovich named one movement of his dark String Quartet No. 15 "intermezzo"; Bartók used the term for the fourth movement (of five) of his Concerto for Orchestra.

## International Bluegrass Music Hall of Honor

Induction to the **International Bluegrass Music Hall of Honor** is managed by the International Bluegrass Music Association, and the Hall itself is maintained at the International Bluegrass Music Museum in Owensboro, Kentucky.

### Selection method

Each year a nominating committee creates a slate of 10-15 candidates. From these names, electors cast ballots to narrow the nominees to five finalists. There are over 200 electors who, themselves, must have participated actively in bluegrass for at least 10 years, and must merit respect and recognition for their accomplishments and/or knowledge in one or more aspects of the field.

After the five finalists have been selected, the electors again vote to select the inductee(s) for that year. The name(s) of the newest Hall of Honor inductee(s) are made public immediately following the final stage of balloting and the formal induction takes place each year during the International Bluegrass Music Awards Show.

## **International Computer Music Conference**

The **International Computer Music Conference** (ICMC) is a yearly international conference for computer music researchers and composers. It is the annual conference of the International Computer Music Association (ICMA).

Areas include:

- Algorithmic composition
- Alternate Loudspeaker Construction and Design
- Architectural acoustics
- Artificial intelligence and Music
- Aesthetics, Philosophy, Analysis, Appreciation, Criticism
- Acoustics of Musical instruments and the Voice
- Audio analysis/resynthesis
- Audio coding and Audio compression
- Audio hardware
- Audio programming languages and software tools
- Audio signal processing
- Composition systems and techniques
- Computational Neuroscience of Music
- Computer music and Digital Art
- Computer Music Performance Practice
- Digital Audio Coding
- Digital audio signal processing
- Education on Music and Technology
- Evolutionary Computer Music
- Gestural and haptic interfaces for music
- Granular synthesis
- History of Electro-acoustic and Computer Music
- Interactive performance systems
- Loudspeaker and Microphone arrays
- Machine recognition of Audio
- Machine Recognition of Music

MIDI Applications  
Music analysis

## **International Standard Musical Work Code**

**International Standard Musical Work Code (ISWC)** is a unique identifier for musical works, similar to ISBN. It is adopted as international standard **ISO 15707**.

Format:

1. letter T
2. 9 digits
3. 1 check digit

The first ISWC was assigned in 1995, for the Album Dancing Queen by ABBA, the code is T-000000001-0.

To register an ISWC, the following minimal metadata must be supplied:

- title
- names of all composers, arrangers and authors, with their role in the piece (identified by role code) and their CAE/IPI number
- work classification code (CIS)

- identification of other works it is a derivative of

Note an ISWC identifies works, not recordings. ISRC can be used to identify recordings. Nor does it identify individual publications (e.g. issues of a recording on physical media, sheet music, broadcast at a particular frequency/modulation/time/location...)

Its primary purpose is in collecting society administration, and to clearly identify works in legal contracts. It would also be useful in library cataloguing.

## Interval

In [music theory](#), an **interval** is the relationship between two [notes](#) or [pitches](#), the lower and higher members of the interval. It often refers to those two notes themselves (otherwise known as a dyad). Larger intervals are described as wide and smaller ones as narrow (for example, a sixth is wider than a third), but these are only relative terms.

Intervals may occur two ways:

- vertical (or [harmonic](#)) if the two notes sound simultaneously
- linear (or [melodic](#)), if the notes sound successively.

An *interval class* is an interval measured by the shortest distance possible between its two pitch classes.

## Frequency ratios

In just intonation intervals are commonly labelled according to the ratio of frequencies of the two pitches. Important intervals are those using the lowest integers, such as  $1/1$ ,  $2/1$ ,  $3/2$ , etc. This system is frequently used to describe intervals in non-Western music. This method is also often used in theoretical explanations of equal-tempered intervals used in European tonal music which explain their use through their approximation of just intervals.

## Interval number and quality

In [diatonic](#) or tonal theory intervals are labelled according to their [diatonic function](#) and according to the number of members or degrees they span in a diatonic scale.

The *interval number* of a note from a given tonic note is the number of staff positions enclosed within the interval, as shown at right. Intervals larger than an octave are called compound intervals; for example, a tenth is known as a

compound third. Intervals larger than a thirteenth are rarely spoken of, since going above this by stacking thirds would result in a double octave (but see 8va for use of *15ma*).

The name of any interval is further qualified using the terms perfect, major, minor, augmented, and diminished. This is called its *interval quality*.

- **Unison, fourth, fifth, octave.** These intervals may be *perfect*, *augmented*, or *diminished*. A perfect fourth is five semitones, a perfect fifth is seven semitones, a perfect octave is twelve semitones. A perfect unison occurs between notes of the same pitch, so it is zero semitones. In each case, an augmented interval contains one more semitone, a diminished interval one fewer.
- **Second, third, sixth, seventh.** These intervals may be *major*, *minor*, *augmented*, or *diminished*.
  - Major seconds are two semitones, also called a whole step, minor seconds are one semitone, also called a half step.
  - Major thirds are four semitones, minor thirds are three semitones.
  - Major sixths are nine semitones, minor sixths are eight semitones.
  - Major sevenths are eleven semitones, minor sevenths are ten semitones.
  - In each case, the augmented interval contains one semitone more than the major interval, and the diminished interval one semitone fewer than the minor interval.

It is possible to have doubly-diminished and doubly-augmented intervals, but these are quite rare.

## Shorthand notation

Intervals are often abbreviated with a **P** for perfect, **m** for minor, **M** for major, **d** for diminished, **A** for augmented, followed by the diatonic interval number. The indication M and P are often omitted. The octave is P8, and a unison is usually referred to simply as "a unison" but can be labeled P1. The tritone, an augmented fourth or diminished fifth is often **À** or **TT**. Examples:

- m2: minor second
- M3: major third
- P5: perfect fifth
- m9: minor ninth

For use in describing chords, the sign **+** is used for augmented and for diminished. Furthermore the 3 for the third is often omitted, and for the seventh,

the plain form stands for the minor interval, while the major is indicated by **maj**. So for example:

- m: minor third
- 7: minor seventh
- maj7: major seventh
- +5: augmented fifth
- 5: diminished fifth

## Enharmonic intervals

Two intervals are considered to be enharmonic if they both contain the same [pitches](#) spelled in different ways; that is, if the notes in the two intervals are enharmonic with one another. Enharmonic intervals contain the same number of semitones. For example C#-D#, a major second, and C#-Eb, a diminished third, are enharmonic.

## Steps and skips

Linear (melodic) intervals may be described as *steps* or *skips* in a diatonic context. Steps are linear intervals between consecutive scale degrees while skips are not, although if one of the notes is chromatically altered so that the resulting interval is three semitones or more (e.g. C to D sharp), that may also be considered a skip. However, the reverse is not true: a diminished third, an interval comprising two semitones, is still considered a skip.

The words *conjunct* and *disjunct* refer to melodies composed of steps and skips, respectively.

## Pitch class intervals

Post-tonal or atonal theory, originally developed for equal tempered European classical music written using the [twelve tone technique](#) or [serialism](#), integer notation is often used, most prominently in [musical set theory](#). In this system intervals are named according to the number of half steps, from 0 to 11, the largest interval class being 6.

## Ordered and unordered pitch and pitch class intervals

In atonal or [musical set theory](#) there are numerous types of intervals, the first being ordered pitch interval, the distance between two pitches upward or downward. For instance, the interval from C to G upward is 7, but the interval from G to C downward is 7. One can also measure the distance between two pitches without taking into account direction with the unordered pitch interval, somewhat similar to the interval of tonal theory.

The interval between pitch classes may be measured with ordered and unordered pitch class intervals. The ordered one, also called directed interval, may be considered the measure upwards, which, since we are dealing with pitch classes, depends on whichever pitch is chosen as 0. For unordered pitch class interval see interval class.

## Generic and specific intervals

In [diatonic set theory](#), specific and generic intervals are distinguished. Specific intervals are the interval class or number of semitones between scale degrees or collection members, and generic intervals are the number of scale steps between notes of a collection or scale.

## Cents

The standard system for comparing intervals of different sizes is with cents. This is a logarithmic scale in which the octave is divided into 1200 equal parts. In equal temperament, each semitone is exactly 100 cents. The value in cents for the interval  $f_1$  to  $f_2$  is  $1200 \times \log_2(f_2/f_1)$ .

## Comparison of different interval naming systems

| # semitones | Interval class | Generic interval | Common diatonic name | Comparable just interval | Comparison of interval cents |                 |       |
|-------------|----------------|------------------|----------------------|--------------------------|------------------------------|-----------------|-------|
|             |                |                  |                      |                          | equal temperament            | just intonation | cents |
| 0           | 0              | 0                | perfect unison       | 1:1                      | 0                            | 0               | 0     |
| 1           | 1              | 1                | minor second         | 16:15                    | 100                          | 112             | 1     |
| 2           | 2              | 1                | major                | 9:8                      | 200                          | 204             | 1     |

|    |   |   |                        |      |      |   |
|----|---|---|------------------------|------|------|---|
|    |   |   | second                 |      |      |   |
| 3  | 3 | 2 | minor third 6:5        | 300  | 316  | 3 |
| 4  | 4 | 2 | major third 5:4        | 400  | 386  | 3 |
| 5  | 5 | 3 | perfect fourth 4:3     | 500  | 498  | 5 |
| 6  | 6 | 3 | augmented fourth 45:32 | 600  | 590  | 5 |
|    |   | 4 | diminished fifth 64:45 |      | 610  | 6 |
| 7  | 5 | 4 | perfect fifth 3:2      | 700  | 702  | 6 |
| 8  | 4 | 5 | minor sixth 8:5        | 800  | 814  | 8 |
| 9  | 3 | 5 | major sixth 5:3        | 900  | 884  | 8 |
| 10 | 2 | 6 | minor seventh 16:9     | 1000 | 996  | 1 |
| 11 | 1 | 6 | major seventh 15:8     | 1100 | 1088 | 1 |
| 12 | 0 | 0 | perfect octave 2:1     | 1200 | 1200 | 1 |

It is possible to construct just intervals which are closer to the equal-temperaments, but most of the ones listed above have been used historically in various contexts. In particular the tritone (augmented fourth or diminished fifth), could have been used in various ratios; 17:12 (603 cents) is fairly common. The 7:4 interval (the harmonic seventh) has been a contentious issue throughout the history of music theory; it is 31 cents flatter than an equal-tempered minor seventh. Some assert the 7:4 is one of the blue notes in [jazz](#).

The diatonic intervals, as well, have other enharmonic equivalents, such as a major second for minor third.

## Consonant and dissonant intervals

Consonance and dissonance are relative terms referring to the stability, or state of repose, of particular musical effects. Dissonant intervals would be those which cause tension and desire to be *resolved* to consonant intervals.

These terms are relative to the usage of different compositional styles.

- In atonal music all intervals (or interval classes) are considered equally consonant melodically and harmonically.

- In the [middle ages](#), only the octave and perfect fifth were considered consonant harmonically.
- In [16th-century](#) usage, perfect fifths and octaves, and major and minor thirds and sixths were considered harmonically consonant, and all other intervals dissonant. In the [common practice period](#), it makes more sense to speak of consonant and dissonant chords, and certain intervals previously thought to be dissonant (such as minor sevenths) became acceptable in certain contexts. However, 16th-century practice continued to be taught to beginning musicians throughout this period.
- Hermann von Helmholtz (1821-1894) defined a harmonically consonant interval as one in which the two pitches have an overtone in common (specifically excluding the seventh harmonic). This essentially defines all seconds and sevenths as dissonant, and perfect fourths and fifth, and major and minor thirds and sixths, as consonant.
- Pythagoras defined a hierarchy of consonance based on how small the numbers were which express the ratio. 20th-century composer and theorist Paul Hindemith's system has a hierarchy with the same results as Pythagoras's, but defined by fiat rather than by interval ratios, to better accommodate equal temperament, all of whose intervals (except the octave) would be dissonant using acoustical methods.
- David Cope (1997, p.40-41) suggests the concept of **interval strength**, in which an interval's strength, consonance, or stability is determined by its approximation to a lower and stronger, or higher and weaker, position in the harmonic series.

All of the above analyses refer to vertical (simultaneous) intervals.

## Inversion

An interval may be *inverted*, by raising the lower pitch an octave, or lowering the upper pitch an octave (though it is less usual to speak of inverting unisons or octaves). For example, the fourth between a lower C and a higher F may be inverted to make a fifth, with a lower F and a higher C. Here are the ways to identify interval inversions:

- For **diatonically-named** intervals, here are two rules, applying to all simple (i.e., non-compound) intervals:
  1. The *number* of any interval and the number of its inversion always add up to nine (four + five = nine, in the example just given).
  2. The inversion of a major interval is a minor interval (and vice versa); the inversion of a perfect interval is also perfect; the inversion of an augmented interval is a diminished interval (and vice versa); and the

inversion of a double augmented interval is a double diminished interval (and vice versa).

A full example: E flat below and C natural above make a *major sixth*. By the two rules just given, C natural below and E flat above must make a *minor third*.

- For intervals identified by **ratio**, the inversion is determined by reversing the ratio and multiplying by 2. For example, the inversion of a 5:4 ratio is an 8:5 ratio.
- Intervals identified by **integer** can be simply subtracted from 12. However, since an **interval class** is the lower of the interval integer or its inversion, interval classes cannot be inverted.

## Interval roots

Although intervals are usually designated in relation to their lower note, David Cope and Hindemith both suggest the concept of **interval root**. To determine an interval's root, one locates its nearest approximation in the harmonic series. The root of a perfect fourth, then, is its *top* note because it is an octave of the fundamental in the hypothetical harmonic series. The bottom note of every odd diatonically numbered intervals are the roots, as are the tops of all even numbered intervals. The root of a collection of intervals or a chord is thus determined by the interval root of its strongest interval.

As to its usefulness, Cope provides the example of the final tonic chord of some popular music being traditionally analyzable as a "submediant six-five chord" (added sixth chords by popular terminology), or a first inversion seventh chord (possibly the dominant of the mediant V/iii). According the interval root of the strongest interval of the chord (in first inversion, CEGA), the perfect fifth (C-G), is the bottom C, the tonic.

## Interval cycles

Interval cycles, "unfold a single recurrent interval in a series that closes with a return to the initial pitch class", and are notated by George Perle using the letter "C", for cycle, with an interval class integer to distinguish the interval. Thus the diminished seventh chord would be C3 and the augmented triad would be C4. A superscript may be added to distinguish between transpositions, using 0-11 to indicate the lowest pitch class in the cycle. (Perle 1990, p.21)

## Other intervals

There are also a number of intervals not found in the chromatic scale or labeled with a diatonic function which have names of their own. Many of these intervals describe small discrepancies between notes tuned according to the tuning systems used. Most of the following intervals may be described as microtones.

- A *Pythagorean comma* is the difference between twelve justly tuned perfect fifths and seven octaves. It is expressed by the frequency ratio  $531441:524288$ , and is equal to 23.46 cents.
- A *syntonic comma* is the difference between four justly tuned perfect fifths and two octaves plus a major third. It is expressed by the ratio  $81:80$ , and is equal to 21.51 cents.
- A *Septimal comma* is  $64/63$ , and is the difference between the Pythagorean or 3-limit "7th" and the "harmonic 7th".
- *Diesis* is generally used to mean the difference between three justly tuned major thirds and one octave. It is expressed by the ratio  $128:125$ , and is equal to 41.06 cents. However, it has been used to mean other small intervals: see diesis for details.
- A *schisma* (also skhisma) is the difference between five octaves and eight justly tuned fifths plus one justly tuned major third. It is expressed by the ratio  $32805:32768$ , and is equal to 1.95 cents. It is also the difference between the Pythagorean and syntonic commas.
  - A schismic major third is a schisma different from a just major third, eight fifths down and five octaves up, Fm in C.
- A *quarter tone* is half the width of a semitone, which is half the width of a whole tone.
- A *kleisma* is six major thirds up, five fifths down and one octave up, or, more commonly,  $225:224$ .
- A *limma* is the ratio  $256:243$ , which is the semitone in Pythagorean tuning.
- A *ditone* is the pythagorean ratio  $81:64$ , two 9:8 tones.
- Additionally, some cultures around the world have their own names for intervals found in their music.

## Inuit music

The Inuit live across the northern sections of Canada, especially in Nunavut, Nunavik, Nunatsiavut and Northwest Territories, as well as in Alaska and Greenland. Traditional **Inuit music** has been based around [drums](#) used in dance music as far back as can be known, and a vocal style called katajjaq has become of interest in Canada and abroad.

Traditionally Inuktitut did not have a word for what a European-influenced listener or ethnomusicologist's understanding of *music*, "and ethnographic investigation seems to suggest that the *concept* of music as such is also absent from their culture." The closest word, *nipi* <sup>[ 1 ]</sup>, includes music, the sound of speech, and noise. (Nattiez 1990:56)

[Music of the United States](#) - **Music of Canada**

Until the advent of commercial recording technology, Inuit music was usually used in spiritual ceremonies to ask the spirits (see Inuit mythology) for good luck in hunting or gambling, as well as simple lullabies. Inuit music has long been noted for a stoic lack of work or love songs. These musical beginnings were modified with the arrival of European sailors, especially from Scotland and Ireland. Instruments like the accordion were popularized, and dances like the jig or reel became common. Scotch-Irish derived American country music has been especially popular among Inuit in the 20th century.

Nettl (1956, p.107) list the following characteristics of Inuit music: recitative-like singing, complex rhythmic organization, relatively small melodic range averging about a sixth, prominence of major thirds and minor seconds melodically, with undulating melodic movement.

The Canadian Broadcasting Corporation has been broadcasting music in Inuit communities since 1961, when a station was opened in Iqaluit, Northwest Territories. Charlie Panigoniak was the best-known of the early Inuit recording stars, and he remains a popular guitarist. The most famous Inuit performers, however, are Susan Aglukark and Tanya Tagaq Gillis. In Greenland, there is an Inuit hip hop crew called Nuuk Posse, which formed in 1985 and raps in the Kalaallisut language.

# Katajjaq

Katajjaq (also pirkusirtuk and nipaquhiit) is a type of traditional competitive song, considered a game, usually held between two women. It is one of the world's few examples of throat-singing, a unique method of producing sounds that is otherwise best-known in Tuvan throat-singing. When competing, two women stand face-to-face and sing using a complex method of following each other, thus that one voice hits a strong accent while the other hits a weak, melding the two voices into a nearly indistinguishable single sound. They repeat brief motifs at staggered intervals, often imitating the sounds of geese, caribou or other wildlife, until one runs out of breath, trips over her own tongue, or begins laughing, and the contest is then over. "The old woman who teaches the children corrects sloppy intonation of contours, poorly meshed phase displacements, and vague rhythms exactly like a Western vocal coach." (Nattiez 1990:57)

[Music of the United States](#) - [Music of Canada](#)

The Iroquois are a Native American tribe.

Traditional social gatherings among the Iroquois feature music and dance as central components. These gatherings are led by an individual who finds lead dancers and singers and introduces them to the audience, also providing dancing instructions. Dances are always counter-clockwise. Instruments used include rattles, [drums](#) and other percussive instruments. Their music is always religious music.

Socials within all Iroquois communities are meant to be enjoyed by all in attendance, especially when everyone dances. Social songs vary in length, verses and tempo depending on the song selection of the singers. All dances are done in a counter clockwise direction. A social is run by a "house keeper" or "pusher". The job of the "house keepers" is to find lead singers and to know which songs that each lead singer knows. Their job also includes finding lead dancers for the upcoming dance. He then goes to the announcer with the information. All dances are introduced in the Iroquois language of the speaker. In some instances, instructions are provided to ensure that dances are carried out properly. The instruments used in the social dances in various combinations are the water drum, the horn rattle, hard sticks and the beating of the feet on the floor. The social dances can be categorized into three types of step styles: "stomp," "fish" and "side-step shuffle". Stomp is a shuffling type of dance, the right foot leads and the left foot is brought up to meet the right. The feet "hit" the floor with just enough impact to maintain the beat of the song. Fish is a dance where each foot hits in two or more consecutive beats. Side-step shuffle is done by the women, the right foot and the left foot shuffle oppositely.

# Italo disco

**Italo disco** is a musical marketing term introduced in 1983 by Bernhard Mikulski, the founder of ZYX Music. The term applied to Italian [electronic dance music](#) of the 1980s and to music from other parts of Europe and from North America that imitated the sound thereof. A typical Italo-disco song had contrasting verse-chorus form, had [synthesizer](#) based accompaniment and was usually sung in English by European artists.

## History

### Origins, 1978-1985

Electronic dance music started to develop in the late 1970s when traditional sounding [disco](#) bands began to experiment with [synthesizers](#) and other electronic effects. This early form of electronic dance music is unofficially called "space disco" due to its odd sounds and sci-fi stylings. One of the main influences during this period was the producer Giorgio Moroder, as well as the cynical styles of such [electropop](#) acts as Telex, Devo, and Gary Numan, and the early [Hi-NRG](#) albums released by San Francisco producer Patrick Cowley with such singers as Sylvester and Paul Parker.

By 1982, Italo appeared as a fully developed form in Italy and other parts of Europe, with artists releasing completely electronic songs using [drum machines](#) and other equipment. [Synthpop](#), [New Wave](#) and the New Romantic genres were the foundations for Italo taking off, as these became very popular around the world at this same time during the early 1980s. Typical songs were simple, with catchy melodies, and were often sung using [vocoders](#) and overdubs. Much of the genre featured love-song lyrics sung in English with heavy Italian accents. English was more often than not the artists' second language, creating lyrics that were often considered to be almost nonsensical. Along with love, italo disco themes deal with robots and space, sometimes combining all three in songs including "Robot is Systematic" (1982) by 'Lectric Workers and "Spacer Woman"(1983) by Charlie.

1982 and 1983 saw the releases of the irony-laden "Dirty Talk," "Wonderful," and "The M.B.O. Theme," three track cited as influential in the development of [house](#), by Klein & M.B.O., a side-project developed by Davide Piatto of the Italo disco duo N.O.I.A., with vocals by Piatto and Rosanna Casale.

Many see 1983 as the height of Italo, with frequent hit singles and many labels starting up around this time. Such labels included American Disco, Crash, Merak, Sensation, and X-Energy. The popular label Disco Magic released more

than thirty singles within the year. It was also the year that the term italo disco was reputedly coined by Bernhard Mikulski, the founder of ZYX Music (Germany), when ZYX released their first volume of "The Best of Italo Disco" series.

## **Derivative styles, 1982-1989**

During the late 1980s Italo began fading away and some groups moved into the [Hi-NRG](#) genre, which combined high-paced Italo and [house](#). This style is evident in the productions of such artists as Divine, Roni Griffith, Tony Caso, and the Flirts, all of whom were produced by Bobby Orlando, as well as many Stock-Aiken-Waterman, notably those of Sinitta, Stacey Q, Samantha Fox, and Dead or Alive.

Canada, particularly Quebec, produced several remarkable Italo disco acts, including Trans X (Living on Video), Lime (Angel Eyes), Pluton & the Humanoids (World Invaders), Rational Youth (City of Night), and Purple Flash Orchestra (*We Can Make It*).

In Germany, a style of Italo disco known as Discofox developed. It was characterized by an emphasis on melody, exaggerated overproduction, and a more earnest approach to the themes of love; examples may be found in the works of Modern Talking, Fancy, Bad Boys Blue, and Lian Ross.

Also during the mid-1980s [spacesynth](#) developed as a sub-genre of italo. This style of Italo was mostly instrumental and focused more on space sounds than the earlier pop-oriented songs, as exemplified by the sounds of Koto, Proxyon, Rofo, Cyber People, Hipnosis, and Laserdance.

## **Revival, 1993- (Electro)**

Italo disco developed a cult following in the early 1990s, and electro releases in 1993 by I-F, in 1998 by Legowelt and Tobias Bernstrup, and in 2000 by Jeans Team, Bangkok Impact, and Hong Kong Counterfeit were among those that fuelled renewed interest. I-F's 2001 Italo-cum-electro mix *Mixed Up in the Hague* was equally important to the reintroduction of the genre.

As of 2005 several online radio stations stream the genre and underground clubs are playing the records widely again. Its renewed popularity is inspiring re-releases and new mixes on many of the record labels that released the genre initially. ZYX records has released many new CD mixes since 2000. Labels like Panama Records and Radius Records have gone through great lengths to find the original artists of obscure italo tracks for re-release on vinyl.

The German group I-Robots has released several mixes incorporating obscure Italo disco tracks, and in 2006 released a German-language cover of Charlie's "Spacer Woman" called "Spacer Frau."

## **Italo disco artists**

Some popular artists and their hit songs include:

Albert One - Turbo Diesel  
Alexander Robotnick - Problemes D'Amour  
Atrium - Weekend  
Azoto - Exalt Exalt, San Salvador  
Baltimora - Tarzan Boy  
Blocksystem - Don't Leave Me  
Bruce & Bongo - Geil  
Carrara - Shine On Dance  
Cyber People - Void Vision, Polaris  
Den Harrow - Dont Break My Heart, Bad Boy, Future Brain  
Denise & Baby's Gang - Disco Maniac  
Dharma - Plastic Doll  
Doctor's Cat - Feel the Drive, Gee Whiz  
Edyta - ABC Letters of Love, Be slave of my heart, Come back,  
Loosing my religion  
Tony Esposito - Papa Chico, Kalimba De Luna  
Finzy Kontini - Cha Cha Cha  
Fun Fun - Happy station, Colour My Love  
Gazebo - I Like Chopin  
Hipnosis - Pulstar  
Italian Boys - Midnight Girl  
Ivàn - Fotonovela  
Joe Yellow - Take My Heart, Lover to Lover  
Kano - Another Life  
Klein & M.B.O. - Dirty Talk  
Koto - Visitors, Jabdah, Chinese Revenge  
Ken Laszlo - Hey Hey Guy, Tonight, Mary Ann, Don't Cry  
Laserdance - Laserdance, Shotgun (In the Night)  
Lime - Angel Eyes  
'Lectric Workers - Robot is Systematic, The Garden  
Malcolm & the Bad Girls - Shoot Me  
Martinelli - Cinderella  
Michael Bedford - More than a kiss, Tonight  
Miko Mission - How Old Are You?,  
Mr. Flagio - Take a Chance

My Mine - Hypnotic Tango  
N.O.I.A. - Stranger in a Strangeland, Looking for Love  
Sandy Marton - People from Ibiza  
One System - Life is Very Short  
P. Lion - Happy Children, Dream  
Phaeax - Talk About  
Silver Pozzoli - Around My Dream  
Linda Jo Rizzo - You're My First, You're My Last  
Primadonna - Angel You  
Radiorama - Desire, Aliens, Fire  
Righeira - Vamos a la playa, No tengo dinero  
Ryan Paris - La Dolce Vita  
Sabrina - Boys, Sexy Girl, My Chico  
Savage - Don't Cry Tonight, Only You, A Love Again  
Scotch - Disco Band, Take Me Up, Mirage, Man to Man, Penguin's  
Invasion, Plus Plus  
Taffy - I Love My Radio  
Topo & Roby - Under The Ice  
Trans X - Living on Video  
Valerie Dore - The Night, Get Closer, Lancelot  
Wish Key - Orient Express, Last Summer

## Jam session

A **jam session** is a [musical](#) act where [musicians](#) gather and play (or "jam") without extensive preparation or predefined arrangements.

The origin of the term **jam** in this context can be traced back to the 1920s. According to the Online Dictionary of Etymology, the term originally appeared ca. 1929, referring to a "short, free improvised passage performed by the whole band". The derivation of this usage is obscure, but like other novel terms that came into English through [jazz](#) music -- such as the terms "hip", "hep" and "hepcat"—it is possible that it ultimately derives from the West African Wolof language.

The word 'jam' can be more loosely used to refer to any particularly inspired or improvisational part of a musical performance, especially in [rock](#) and [jazz](#) music. *Jam sessions*, however, are generally for the benefit of the performers and not part of a public performance.

Jam sessions are often used to develop new material, find suitable arrangements, or simply as a social gathering and communal practice session. Jam sessions may be based upon existing songs or forms, may be loosely based on an agreed [chord progression](#) or chart suggested by one participant, or may be wholly [improvisational](#). Jam sessions can range from very loose gatherings of amateurs to sophisticated improvised recording sessions intended to be edited and released to the public.

The New York [jazz](#) scene during and after World War II was famous for its after-hours jam sessions. One of the most famous was the regular after-hours jam at Minton's Playhouse in New York City that ran in the 1940s and early 1950s. The Minton's jams were a fertile meeting place and proving ground for both established soloists like Ben Webster and Lester Young, and the younger jazz musicians who would soon become leading exponents of the [bebop](#) movement, including Thelonious Monk (Minton's house pianist), Charlie Parker, and Dizzy Gillespie. The Minton's jams were legendary for their highly competitive "cutting contests", in which soloists would try to keep up with the house band and outdo each other in improvisation skill.

As the instrumental proficiency of pop and rock musicians improved in the Sixties and early Seventies, jamming also became a regular feature of rock music; bands such as Cream, The Jimi Hendrix Experience, The Grateful Dead and the Allman Brothers Band would feature live pieces easily over fifteen minutes in length. A notable recorded example of this can be found on the 25th anniversary edition of the album *Layla and Other Assorted Love Songs* by Eric Clapton's early 70s band, Derek & The Dominos. The bonus CD that accompanies the 25th anniversary edition includes a number of long improvised jams between the members of the group and other musicians. This includes an historic studio jam session recording between the Dominos and members of The Allman Brothers Band following the first meeting between the two groups earlier that day. As a result of this jam, guitarist Duane Allman was invited to join

the Dominos after only three songs had been recorded, and he made a major contribution to the resulting LP which significantly enhanced the final product.

Another notable recorded jam in the rock idiom is the extended track "Apple Jam", which appears on All Things Must Pass, the 1970 solo album by George Harrison, and which features most of the session musicians who contributed to the LP.

## Jangle pop

**Jangle pop** was an American musical genre that arose in the middle of the 1960s, combining angular, chiming guitars and power pop structures. Jangle pop wasn't mainstream music — the bands' lyrics were often deliberately cryptic and their sound was raw and amateurish, bearing all the signs of do-it-yourself productions. The first and most famous jangle pop band was The Byrds, who eventually became one of the biggest bands in the world. Their twelve-string guitar style was the basis for jangle pop's diversification later in the 20th century. Jangle pop was closely related to the power pop genre, including bands like The Raspberries and Big Star, who blur the line between the two styles.

Jangle pop became an important force in the development of [alternative rock](#) in the early 1980s, as exemplified by the early albums of R.E.M. It was primarily a southern and midwestern US phenomenon, though a group of bands called the Paisley Underground led a more psychedelic movement on the West Coast. There were also vibrant scenes in the UK (Brilliant Corners, Jazz Butcher, Monochrome Set, Poptguns, Loft, Family Cat, Felt, James), Australia (The Go-Betweens, Hummingbirds) and New Zealand (Clean, Mad Scene, Jean Paul Sartre Experience, The Bats, Chills).

## Japanoise

**Japanoise** is the label applied to the prolific and influential [noise music](#) scene in Japan, primarily in the 1980s and 1990s. As such it is a portmanteau of the words "*Japanese*" & "*noise*". The Japanoise scene was defined by a near-absolute sense of musical freedom, and consequently was extremely diverse, covering everything from the crazed [noise rock](#) of Boredoms to the totally unstructured and chaotic noise of Merzbow and Incapacitants, although in recent years the term has been applied mainly to the latter type of music. Japanoise has been extremely influential in underground music scenes worldwide, but especially in the United States, where it has spawned the closely related (and overlapping) [harsh noise](#) genre.

[Jazz standard](#) – [Jazz royalty](#)

**Jazz** is an original American [musical](#) art form originating around the early 1920s in New Orleans, rooted in Western music technique and theory, and is marked by the profound cultural contributions of African Americans. It is characterized by blue notes, syncopation, [swing](#), call and response, polyrhythms, and [improvisation](#). Jazz has been described as "America's Classical Music", and started in saloons throughout the nation. Jazz is not dead.

## History

Jazz has roots in the combination of Western and African music traditions, including [spirituals](#), [blues](#) and [ragtime](#), stemming ultimately from West Africa, western Sahel, and New England's religious [hymns](#) and hillbilly music, as well as in European military band music. After originating in African American communities near the beginning of the 20th century, jazz gained international popularity by the 1920s. Since then, jazz has had a pervasive influence on other musical styles worldwide. Even today, various jazz styles continue to evolve.

The word *jazz* itself is rooted in American slang, probably of sexual origin, although various alternative derivations have been suggested. According to University of Southern California film professor Todd Boyd, the term was originally slang for sexual intercourse as its earliest musicians found employment in New Orleans brothel parlors, with the word deriving from the term 'jass'. The term "jass" was rude sexual slang, related either to the term "jism" or to the jasmine perfume popular among urban prostitutes. Lacking an attentive audience, the musicians began to play for each other and their

performances achieved esthetic complexity not evident in [ragtime](#). At the root of jazz is the blues, the folk music of former enslaved Africans in the U.S. South and their descendants, heavily influenced by West African cultural and musical traditions, that evolved as black musicians migrated to the cities. According to Pulitzer Prize-winning African American composer and [classical](#) and jazz trumpet virtuoso Wynton Marsalis:

*Jazz is something Negroes invented, and it said the most profound things -- not only about us and the way we look at things, but about what modern democratic life is really about. It is the nobility of the race put into sound ... jazz has all the elements, from the spare and penetrating to the complex and enveloping. It is the hardest music to play that I know of, and it is the highest rendition of individual emotion in the history of Western music.* [citation needed]

Needless to say, the view of jazz as simply and solely "black music" is controversial. Numerous non-black musicians (Bix Beiderbecke, Benny Goodman, Harry James, Zoot Sims, Gerry Mulligan, Bill Evans, Stan Getz, Dave Brubeck, and Charlie Haden among others) have made important contributions to jazz. In addition, it could be argued that jazz would not exist without both instruments invented or developed by Europeans (the trumpet, saxophone, trombone, double bass, etc.) and the previous work of Europeans in [music theory](#), which was explored in different ways by jazz musicians, such as increased use of the seventh chord and extended chords. The origins of jazz are multicultural, not entirely "pure," and perhaps reflect the hybrid nature of American culture more than any other art form.

Early jazz influences found their first mainstream expression in the marching band and dance band music of the day, which was the standard form of popular concert music at the turn of century. The instruments of these groups became the basic instruments of jazz: brass, reeds, and drums, and are voiced in the Western 12-tone scale.

Black musicians frequently used the melody, structure, and beat of marches as points of departure; but says "North by South, from Charleston to Harlem," a project of the National Endowment for the Humanities: "...a black musical spirit (involving rhythm and melody) was bursting out of the confines of European musical tradition, even though the performers were using European styled instruments. This African-American feel for rephrasing melodies and reshaping rhythm created the embryo from which many great black jazz musicians were to emerge." Many black musicians also made a living playing in small bands hired to lead funeral processions in the New Orleans African-American tradition. These Africanized bands played a seminal role in the articulation and dissemination of early jazz. Traveling throughout black communities in the Deep South and to northern big cities, these musician-pioneers were the Hand helping to fashion the music's howling, raucous, then free-wheeling, "raggedy," ragtime spirit, quickening it to a more eloquent, sophisticated, swing incarnation.

For all its genius, early jazz, with its humble, folk roots, was the product of primarily self-taught musicians. But an impressive postbellum network of black-established and -operated institutions, schools, and civic societies in both the North and the South, plus widening mainstream opportunities for education, produced ever-increasing numbers of young, formally trained African-American musicians, some of them schooled in classical European musical forms. Lorenzo Tio and Scott Joplin were among this new wave of musically literate jazz artists. Joplin, the son of a former slave and a free-born woman of color, was largely self-taught until age 11, when he received lessons in the fundamentals of music theory from a classically trained German immigrant in Texarkana, Texas.

Also contributing to this trend was a tightening of Jim Crow laws in Louisiana in the 1890s, which caused the expulsion from integrated bands of numbers of talented, formally trained African-American musicians. The ability of these musically literate, black jazzmen to transpose and then read what was in great part an improvisational art form became an invaluable element in the preservation and dissemination of musical innovations that took on added importance in the approaching [big-band](#) era.

## **The United States music scene at the start of the 20th century**

By the turn of the century, American society had begun to shed the heavy-handed, straitlaced formality that had characterized the Victorian era.

Strong influence of African American music traditions had already been a part of mainstream popular music in the United States for generations, going back to the 19th century minstrel show tunes and the melodies of Stephen Foster.

Public dance halls, clubs, and tea rooms opened in the cities. Curiously named black dances inspired by African dance moves, like the shimmy, turkey trot, buzzard lope, chicken scratch, monkey glide, and the bunny hug eventually were adopted by a white public. The cake walk, developed by slaves as a send-up of their masters' formal dress balls, became the rage. White audiences saw these dances first in vaudeville shows, then performed by exhibition dancers in the clubs.

The popular dance music of the time was not jazz, but there were precursor forms along the blues-ragtime continuum of musical experimentation and innovation that soon would blossom into jazz. Popular Tin Pan Alley composers like Irving Berlin incorporated ragtime influence into their compositions, though they seldom used the specific musical devices that were second nature to jazz players—the rhythms, the blue notes. Few things did more to popularize the idea of hot music than Berlin's hit song of 1911, "Alexander's Ragtime Band," which became a craze as far from home as Vienna. Although the song wasn't

written in rag time, the lyrics describe a jazz band, right up to jazzing up popular songs, as in the line, "If you want to hear the Swanee River played in ragtime....."

## **The early New Orleans "jass" style**

A number of regional styles contributed to the early development of jazz. Arguably the single most important was that of the New Orleans, Louisiana area, which was the first to be commonly given the name "jazz" (early on often spelled "jass").

The city of New Orleans and the surrounding area had long been a regional music center. People from many different nations of Africa, Europe, and Latin America contributed to New Orleans' rich musical heritage. In the French and Spanish colonial era, slaves had more freedom of cultural expression than in the English colonies of what would become the United States. In the Protestant colonies African music was looked on as inherently "pagan" and was commonly suppressed, while in Louisiana it was allowed. African musical celebrations held at least as late as the 1830s in New Orleans' "Congo Square" were attended by interested whites as well, and some of their melodies and rhythms found their way into the compositions of white Creole composer Louis Moreau Gottschalk. In addition to the slave population, New Orleans also had North America's largest community of free people of color, some of whom prided themselves on their education and used European instruments to play both European music and their own folk tunes.

According to many New Orleans musicians who remembered the era, the key figures in the development of the new style were flamboyant trumpeter Buddy Bolden and the members of his band. Bolden is remembered as the first to take the blues — hitherto a folk music sung and self-accompanied on string instruments or blues harp (harmonica) — and arrange it for brass instruments. Bolden's band played blues and other tunes, constantly "varying the melody" (improvising) for both dance and brass band settings, creating a sensation in the city and quickly being imitated by many other musicians.

By the early years of the 20th century, travelers visiting New Orleans remarked on the local bands' ability to play ragtime with a "pep" not heard elsewhere.

Characteristics which set the early New Orleans style apart from the ragtime music played elsewhere included freer rhythmic improvisation. Ragtime musicians elsewhere would "rag" a tune by giving a syncopated rhythm and playing a note twice (at half the time value), while the New Orleans style used more intricate rhythmic improvisation often placing notes far from the implied beat (compare, for example, the piano rolls of Jelly Roll Morton with those of Scott Joplin). The New Orleans style players also adopted much of the

vocabulary of the blues, including bent and blue notes and instrumental "growls" and smears otherwise not used on European instruments.

Key figures in the early development of the new style were Freddie Keppard, a dark Creole of color who mastered Bolden's style; Joe Oliver, whose style was even more deeply soaked in the blues than Bolden's; and Kid Ory, a trombonist who helped crystallize the style with his band hiring many of the city's best musicians. The new style also spoke to young whites as well, especially the working-class children of immigrants, who took up the style with enthusiasm. Papa Jack Laine led a multi-ethnic band through which passed almost all of two generations of early New Orleans white jazz musicians (and a number of non-whites as well).

### **Other regional styles**

Meanwhile, other regional styles were developing which would influence the development of jazz.

- African-American minister Rev. Daniel J. Jenkins of Charleston, South Carolina, was an unlikely figure of far-reaching importance in the early development of jazz. In 1891, Jenkins established the Jenkins Orphanage for boys and four years later instituted a rigorous music program in which the orphanage's young charges were taught the religious and secular music of the day, including overtures and marches. Precocious orphans and defiant runaways, some of whom had played ragtime in bars and brothels, were delivered to the orphanage for "salvation" and rehabilitation and made their musical contributions, as well. In the fashion of the Fisk Jubilee Singers and Fisk University, the Jenkins Orphanage Bands traveled widely, earning money to keep the orphanage afloat. It was an expensive enterprise. Jenkins typically took in approximately 125 – 150 "black lambs" yearly, and many of them received formal musical training. Less than 30 years later, five bands operated nationally, with one traveling to England — again in the Fisk tradition. It would be hard to overstate the influence of the Jenkins Orphanage Bands on early jazz, scores of whose members went on to play with jazz legends like Duke Ellington, Lionel Hampton and Count Basie. Among them were the likes of trumpet virtuosos William "Cat" Anderson, Gus Aitken, and Jabbo Smith.
- In the northeastern United States, a "hot" style of playing ragtime developed. While centered in New York City, it could be found in African-American communities from Baltimore to Boston. Some later commentators have categorized it after the fact as an early form of jazz, while others disagree. It was characterized by rollicking rhythms, but lacked the distinctly bluesy influence of the southern styles. The solo piano version of the northeast

style was typified by such players as noted composer Eubie Blake, the son of slaves, whose musical career spanned an impressive eight decades. James P. Johnson took the northeast style and around 1919 developed a style of playing that came to be known as "stride." In stride piano, the right hand plays the melody, while the active left hand "walks" or "strides" from upbeat to downbeat, maintaining the rhythm. Johnson influenced later pianists like Fats Waller and Willie Smith.

The top orchestral leader of the style was James Reese Europe, and his 1913 and 1914 recordings preserve a rare glimpse of this style at its peak. It was during this time that Europe's music profoundly influenced a young George Gershwin, who would go on to compose the jazz-inspired classic "Rhapsody in Blue." By the time Europe recorded again in 1919, he was in the process of incorporating the influence of the New Orleans style into his playing. The recordings of Tim Brymn give later generations another look at the northeastern hot style with little of the New Orleans influence yet evident.

- In Chicago at the start of the 1910s, a popular type of dance band consisted of a saxophone vigorously ragging a melody over a 4-square rhythm section. The city soon fell heavily under the influence of waves of New Orleans musicians, and the older style blended with the New Orleans style to form what would be called "Chicago Jazz" starting in the late 1910s.
- Along the banks of the Mississippi around Memphis, Tennessee to St. Louis, Missouri, another band style developed incorporating the blues. The most famous composer and bandleader of the style was the "Father of the Blues," W.C. Handy. While in some ways similar to the New Orleans style (Bolden's influence may have spread upriver), it lacked the freewheeling improvisation found further south. Handy, indeed, for many years denounced jazz as needlessly chaotic, and, in his style, improvisation was limited to short fills between phrases and was considered inappropriate for the main melody.

## **Jazz in the 1920s**

Two disparate, but important, inventions of the second half of the nineteenth century quietly had set the stage for jazz to capture the spotlight in American popular music by the 1920s. George Pullman's invention of the sleeping car in 1864 brought a new level of luxury and comfort to the nation's railways; and Thomas Edison's invention, in 1877, of the phonograph record made quality music accessible to virtually everyone.

Pullman's ingenious, rolling sleeping quarters provided employment to legions of African-American men, who criss-crossed the nation as sleeping car porters; and by the second decade of the twentieth century, the Pullman

Company employed more African-Americans than any single business concern in the United States. But Pullman porters were more than solicitous, smiling faces in smart, navy blue uniforms. The most dapper and sophisticated of them were culture bearers, spreading the card game of bid whist, the latest dance crazes, regional news, and a heightened sense of black pride to cities and towns wherever the railways reached. Many porters also shared, traded and even sold "race records" to augment their income, speeding artistic innovations to musicians eager to hear the latest; spreading among the general public an awareness of and appreciation for this rapidly evolving musical form; and, in the process, putting jazz on the fast track to first U.S., then worldwide, acclaim.

With Prohibition, the constitutional amendment that forbade the sale of alcoholic beverages, the legal saloons and cabarets were closed; but in their place hundreds of speakeasies appeared, where patrons drank and musicians entertained. The presence of dance venues and the subsequent increased demand for accomplished musicians meant more artists were able to support themselves by playing professionally. As a result, the numbers of professional musicians increased, and jazz—like all the popular music of the 1920s—adopted the 4/4 beat of dance music.

Another nineteenth-century invention, radio, came into its own in the 1920s, after the first commercial radio station in the U.S. began broadcasting in Pittsburgh in 1922. Radio stations proliferated at a remarkable rate, and with them, the popularity of jazz. Jazz became associated with things modern, sophisticated, and decadent. The third decade of the new century, a time of technological marvels, flappers, flashy automobiles, organized crime, bootleg whiskey, and bathtub gin, would come to be known as the Jazz Age.

### **Key figures of the decade**

King Oliver was "jazz king" of Chicago in the early 1920s, when Chicago was the national hub of jazz. His band was the epitome of the New Orleans hot ensemble jazz style. Unfortunately, his band's recordings were little heard outside of Chicago and New Orleans, but the ensemble was a powerful influence on younger musicians, both black and white.

Sidney Bechet was the first master jazz musician to take up what previously often had been dismissed as a novelty instrument, the [saxophone](#). Bechet helped propel jazz in more individualistic personality- and solo-driven directions.

In this last point, Bechet was joined by a young protege of King Oliver, Louis Armstrong, who was to become one of the major forces in the development of jazz. Armstrong was an extraordinary improviser, capable of creating endless variations on a single melody. Armstrong also popularized scat singing, an improvisational vocal technique in which nonsensical syllables or words are sung or otherwise vocalized, often as part of a call-and-response interaction

with other musicians onstage. His unique, gravely voice and innate sense of swing made scat an instant hit.

Arguably, Bix Beiderbecke was both the first white and the first non-New Orleanian to make major original contributions to the development of jazz with his legato phrasing, bringing the influence of classical romanticism to jazz.

Paul Whiteman was the most commercially successful bandleader of the 1920s, billing himself as "The King of Jazz." Sacrificing spontaneous improvisation for the sake of elaborate written arrangements, Whiteman claimed to be "making a lady out of jazz." Despite his hiring Bix and many of the other best white jazz musicians of the era, later generations of jazz lovers have often judged Whiteman's music to have little to do with real jazz. Nonetheless, his notion of combining jazz with elaborate orchestrations has been returned to repeatedly by composers and arrangers of later decades. It was Whiteman who commissioned Gershwin's "Rhapsody in Blue," which was debuted by Whiteman's Orchestra.

Fletcher Henderson led the top African American band in New York City. At first he wished to follow the lead of Paul Whiteman, but after hiring Louis Armstrong to play in his band, Henderson realized the importance of the improvising soloist in developing jazz bands. Henderson's arrangements would play a significant role in the development of the Big Band era in the following decade.

Young pianist and bandleader Duke Ellington first came to national attention in the late 1920s with his tight band making many recordings and radio broadcasts. Ellington's importance would grow in the coming decades. Today he is widely regarded as one of the most important composers in jazz history.

## **1930s to 1950s**

While the solo became more important in jazz, popular bands became larger in size. The [Big band](#) became the popular provider of music for the era. Big bands varied in their jazz content; some (such as Benny Goodman's Orchestra) were highly jazz oriented, while others (such as Glenn Miller's) left little space for improvisation. Most were somewhere in between, having some musicians adept at jazz solos playing with section men who kept the rhythm and arrangements going. However even bands without jazz soloists adopted a sound owing much to the jazz vocabulary, for example sax sections playing what sounded like an improvised variation on a melody (and may have originated as a transcription of one).

Key figures in developing the big jazz band were arrangers and bandleaders Fletcher Henderson, Don Redman and the man sometimes deemed the most prolific composer in U.S. history, Duke Ellington.

In the early 1920s, popular music was still a mixture of things—current dance numbers, novelty songs, show tunes. "Businessman's bounce music," as one horn player put it. But musicians with steady jobs, playing with the same companions, were able to go far beyond that. The Ellington band at the Cotton Club and the various Kansas City groups that became the Count Basie band date from this period.

Over time, social strictures regarding racial segregation began to relax in entertainment. White bandleaders, who tended to mold the music more to orthodox rhythms and harmony, began to recruit black musicians. In the mid-1930s, Benny Goodman hired pianist Teddy Wilson, vibraharpist Lionel Hampton, and guitarist Charlie Christian to join small groups. During this period, the popularity of [swing\\_\(genre\)](#) and [big\\_band\\_music](#) was at its height, making stars of such men as Glenn Miller and Duke Ellington. Swing, the popular music of its time, covered a broad spectrum from "sweet" to "hot" bands, with the jazz content varying across the range.

The influence of Louis Armstrong also continued to grow. Musicians and bandleaders like Cab Calloway — and, later, trumpeter Dizzy Gillespie and Pop vocalists like Bing Crosby embraced Armstrong's style of improvising on the melody, and U.S. pop singers seldom since have rendered a tune "straight," in the pre-jazz style. In Crosby's mould, artists famed for their vocals rather than instrumental skills also began to emerge as great 'jazz singers' in the form of vocalists like Ella Fitzgerald, Billie Holliday and later, Frank Sinatra and Sarah Vaughan, all of whom jumped on the scat bandwagon that galvanised the genre till the 1950s.

A development of swing in the early 1940s known as "jumping the blues" or [jump\\_music](#) anticipated rhythm and blues and rock and roll in some respects. It involved the use of small combos instead of [big\\_bands](#) and a concentration on up-tempo music using the familiar blues chord progressions. Drawing largely upon the evolution of boogie-woogie in the 1930s, it used a doubled rhythm—that is, the rhythm section played "eight to the bar," eight beats per measure instead of four. Big Joe Turner, a Kansas City singer who worked in the 1930s with Swing bands like Count Basie's, became a boogie-woogie star in the 1940s and then in the 1950s was one of the first innovators of [rock\\_and\\_roll](#), notably with his song "Shake, Rattle and Roll". Another jazz founder of rock and roll was saxophonist Louis Jordan.

## **Development of bebop**

The next major stylistic turn came in the 1940s with [bebop](#), led by such distinctive stylists as the saxophonist Charlie Parker (known as "Yardbird" or "Bird"), Bud Powell and Dizzy Gillespie. This marked a major shift of jazz from [pop\\_music](#) for dancing to a high-art, less-accessible, cerebral "musician's

music." Thelonious Monk, while too individual to be strictly a bebop musician, was also associated with this movement. Bop musicians valued complex improvisations based on [chord progressions](#) rather than [melody](#). [Hard bop](#) moved away from [cool jazz](#), incorporating influences from soul music, gospel music, and the blues. Hard bop was at the peak of its popularity in the 1950s and 1960s, and was associated with such figures as Sonny Rollins, John Coltrane, Miles Davis, Art Blakey and Charles Mingus. Later, bebop and hard bop musicians, such as trumpeter Miles Davis, made more stylistic advances with [modal jazz](#), where the harmonic structure of pieces was much more free than previously, and was frequently only implied -- by skeletal piano chords and bass parts. The instrumentalists then would improvise around a given mode of the scale.

## Latin jazz

*Main article:* [Latin jazz](#)

Latin jazz has two varieties: Afro-Cuban and Brazilian. [Afro-Cuban jazz](#) was played in the U.S. directly after the bebop period, while Brazilian jazz became more popular in the 1960s and 1970s.

Afro-Cuban jazz began as a movement after the death of Charlie Parker. Notable bebop musicians such as Dizzy Gillespie and Billy Taylor started Afro-Cuban bands at that time. Gillespie's work was mostly with big bands of this genre. While the music was influenced by such Cuban and Puerto Rican musicians as Tito Puente and, much later, Arturo Sandoval, there were many Americans who were drawing upon Cuban rhythms for their work.

Brazilian jazz is, in North America at least, nearly synonymous with bossa nova, a Brazilian popular style which is derived from samba with influences from jazz as well as other 20th-century classical and popular music. Bossa is generally slow, played around 80 beats per minute or so. The music uses straight eighths, rather than swing eighths, and also uses difficult polyrhythms. The best-known bossa nova compositions are considered to be jazz standards in their own right.

The related term jazz-samba essentially describes an adaptation of bossa nova compositions to the jazz idiom by American performers such as Stan Getz and Charlie Byrd, and usually played at 120 beats per minute or faster. Samba itself is actually not jazz but, being derived from older Afro-Brazilian music, it shares some common characteristics.

## Free jazz

*Main article:* [Free jazz](#)

Free jazz, or avant-garde jazz, is a subgenre that, while rooted in [bebop](#), typically uses less compositional material and allows performers more latitude in what they choose to play. Free jazz's greatest departure from other styles is in the use of [harmony](#) and a regular, swinging tempo: Both are often implied, utilized loosely, or abandoned altogether. These approaches were rather controversial when first advanced, but have generally found acceptance — though sometimes grudgingly — and have been utilized in part by other jazz performers.

There were earlier precedents, but free jazz crystalized in the late 1950s, especially via Ornette Coleman and Cecil Taylor, and probably found its greatest exposure in the late 1960s with John Coltrane, Archie Shepp, Albert Ayler, Sun Ra, Pharoah Sanders, Sam Rivers, Leroy Jenkins, Don Pullen and others.

While perhaps less popular than other styles, free jazz has exerted an influence to the present. Peter Brötzmann, Ken Vandermark, William Parker, Derek Bailey and Evan Parker are leading contemporary free jazz musicians, and musicians such as Coleman, Taylor and Sanders continue to play in this style. Keith Jarrett has been prominent in defending free jazz from criticism by traditionalists in recent years.

## **Jazz and rock music: jazz fusion**

*Main article:* [Jazz fusion](#)

With the growth of [rock and roll](#) in the 1960s, came the hybrid form jazz-rock fusion, again involving Miles Davis, who recorded the fusion albums *In a Silent Way* and *Bitches Brew* in 1968 and 1969 respectively. Jazz was by this time no longer center stage in popular music, but was still breaking new ground and combining and recombining in different forms. Notable artists of the 1960s and 1970s jazz and fusion scene include: Chick Corea, Herbie Hancock and his *Headhunters* band, John McLaughlin and the *Mahavishnu Orchestra*, Al Di Meola, Jean-Luc Ponty, Sun Ra, *Soft Machine*, Narada Michael Walden (who would later enjoy huge success as a music producer), Wayne Shorter, *Jaco Pastorius*, the *Pat Metheny Group* and *Weather Report*. Some of these have continued to develop the genre into the 2000s.

## **Recent developments**

The stylistic diversity of jazz has shown no sign of diminishing, absorbing influences from such disparate sources as [world music](#) and [avant garde classical music](#), including African rhythm and traditional structure, [serialism](#), and the extensive use of chromatic scale, by such musicians as Ornette Coleman and John Zorn.

Beginning in the 1970s with such artists as Keith Jarrett, Paul Bley, Billy Childs, the Pat Metheny Group, Jan Garbarek, Ralph Towner, and Eberhard Weber, the ECM record label established a new chamber-music aesthetic, featuring mainly acoustic instruments, and incorporating elements of [world music](#) and [folk music](#). This is sometimes referred to as "European" or "Nordic" jazz, despite some of the leading players being American.

However, the jazz community has shrunk dramatically and split, with a mainly older audience retaining an interest in traditional and "straight-ahead" jazz styles, a small core of practitioners and fans interested in highly experimental modern jazz, and a constantly changing group of musicians fusing jazz idioms with contemporary popular music genres. The latter have formed such styles as [acid jazz](#) which contains elements of 1970s [disco](#), acid swing which combines 1940s style big-band sounds with faster, more aggressive rock-influenced drums and electric guitar, and [nu jazz](#) which combines elements of jazz and modern forms of [electronic dance music](#).

Exponents of the "[acid jazz](#)" style which was initially UK-based included the Brand New Heavies, James Taylor Quartet, Young Disciples, and Corduroy. In the United States, acid jazz groups included the Groove Collective, Soulive, and Solsonics. In a more pop or [smooth jazz](#) context, jazz enjoyed a resurgence in the 1980s with such bands as Pigbag and Curiosity Killed the Cat achieving chart hits in Britain. Sade Adu became the definitive voice of smooth jazz.

There have been other developments in the 1980s and 1990s that were less commercially oriented. Many of these artists, notably Wynton Marsalis, called what they were doing jazz and in fact strove to define what the term actually meant. They sought to create within what they felt was the tradition, creating extensions of small and large forms initially pioneered by such artists as Louis Armstrong and Duke Ellington. In the case of Marsalis these efforts met with critical acclaim.

Others musicians in this time period - although clearly within the tradition of the great spontaneous composers such as Charlie Parker, John Coltrane, Fats Navarro and many others - choose to distance themselves from the term jazz and simply define what they were doing as music (this in fact was suggested by the great composer Duke Ellington when the term **jazz** first began to be popular). Alternatively they created their own names for what they were doing (such as [M-Base](#)). Many of these artists agree with the creative guitarist Jean-Paul Bourelly who feels that "You shouldn't categorize according to styles of music, you should categorize in terms of creative levels". These musicians feel that [rhythm](#) is the key for further progress in the music. Bourelly, similar to [M-Base](#), believes that the rhythmic innovations of James Brown and other [Funk](#) pioneers can provide an effective rhythmic base for spontaneous composition. However, the ideas of these musicians go far beyond simply playing over a [funk](#) groove, extending the rhythmic ideas in a way analogous to what had been done with [harmony](#) in previous times. Some of the musicians involved in the

approach called [M-Base](#) even view this as Rhythmic Harmony. Others, like Wynton Marsalis, disagree with this point of view, preferring instead to retain the rhythmic base of [swing](#) for creating their music. However, all of these artists participate in spontaneous composition and only differ in creative focus and what could be called groove emphasis.

With the rise in popularity of various forms of [electronic music](#) during the late 1980s and 1990s, some jazz artists have attempted a fusion of jazz with more of the experimental leanings of [electronica](#) (particularly [IDM](#) and [Drum and bass](#)) with various degrees of success. This has been variously dubbed "future jazz", "jazz-house" or "[nu jazz](#)". The more experimental and improvisational end of the spectrum includes Scandinavia-based artists such as pianist Bugge Wesseltoft, trumpeter Nils Petter Molv er (who both began their careers on the ECM record label), and the trio Wibutee, all of whom have gained their chops as instrumentalists in their own right in more traditional jazz circles. The Cinematic Orchestra from the UK or Julien Lourau from France have also gained praise in this area. Toward the more pop or pure dance music end of the spectrum of nu jazz are such proponents as St Germain and Jazzanova, who incorporate some live jazz playing with more metronomic [house beats](#).

In the 2000s, "jazz" hit the pop charts and blended with contemporary Urban music through the work of artists like Norah Jones, Jill Scott, Jamie Cullum, Erykah Badu, Amy Winehouse and Diana Krall and the jazz advocacy of performers who are also music educators (such as Jools Holland, Courtney Pine and Peter Cincotti). Some of these new styles may be light on improvisation, a key characteristic of jazz. However, their instrumentation and rhythms are similar to other jazz music, and the label has stuck.

## Improvisation

Jazz is often difficult to define, but [improvisation](#) is unquestionably a key element of the form. Improvisation has been since early times an essential element in African and African-American music and is closely related to the pervasiveness of call and response in West African and African-American cultural expression. The exact form of improvisation has changed over time. Early folk blues music often was based around a call and response pattern, and improvisation would factor into the lyrics, the melody, or both. Part of the Dixieland style involves musicians taking turns playing the melody while the others make up counter lines to go with it. By the Swing era, big bands played carefully arranged sheet music, but the music often would call for one member of the band to stand up and play a short, improvised solo. In bebop, however, the focus shifted from the cleverness of arrangement to the cleverness of improvisation over the form; musicians gave comparably little attention to the

composed melody, or "head," which was played at the beginning and the end of the performance.

As previously noted, later styles of jazz, such as modal jazz, abandoned the strict notion of a chord progression, allowing the individual musicians to improvise more freely within the context of a given scale or mode. The best-known example of this is the classic Miles Davis album *Kind of Blue*. When a pianist or guitarist improvises an accompaniment while a soloist is playing, it is called *comping* or *vamping*.

## Jazz band

A **jazz band** is a [musical ensemble](#) that plays [jazz music](#). Jazz bands usually consist of a [rhythm section](#) and a [horn section](#).

The [rhythm section](#) of a jazz band consists of the [drums](#), bass, and usually at least one instrument capable of playing [chords](#), such as a [piano](#) or [guitar](#). The rhythm section is the foundation for the band; it sets the feel for the piece.

The [horn section](#) consists of [wind](#) and [brass instruments](#), which play the [melody](#) and main [accompaniment](#). Typical horns found in a big jazz band include 4-5 [trumpets](#), [saxophones](#) (2 altos, 2 tenors, and a baritone), and 3-4

[trombones](#) and a bass trombone. The saxophones may also double on [flute](#) and [clarinet](#) and the trumpets on flugelhorn.

## Jazz blues

**Jazz blues** is a [musical](#) style that combines [jazz](#) and [blues](#).

The term also refers to any tune that follows the standard 12-bar blues chord progression, whilst being played in the [jazz style](#), rather than the traditional [blues](#) style. Blues music was a major influence in the development of jazz, and such tunes -- "jazz blueses" -- are extremely common in the jazz repertoire. (In addition to the chord progression, jazz players borrowed many other stylistic devices from the blues, such as blue notes, blues-like phrasing of melodies, and blues riffs.) A jazz blues will usually feature a more sophisticated -- or at any rate a different -- treatment of the [harmony](#) than a traditional, "blues" blues would, but the underlying features of the standard 12-bar progression remain discernable. One of the main ways the jazz musician accomplishes this is through the use of chord substitutions: a chord in the original progression is replaced by one or more chords which have the same general "sense", or function, but which add a different color, or add some secondary, shorter-term, harmonic movement within the span of the existing overall harmonic movement. An important example of this occurs in the 9th and 10th bars, where the usual blues progression, V --> IV, is almost always replaced by the typical jazz cycle-of-fifths progression ii minor --> V. The 12-bar blues form, in Bb, often becomes Bb7 / Eb7 / Bb7 / Bb7 / Eb7 / Edim7 / Bb7 / Dm7-G7 / Cm7 / F7 / Dm7-G7 / Cm7-F7, where each slash represents a new measure, in the jazz blues. The significant changes include the Edim7, which creates movement, and the iii-VI-ii-V turnaround, a jazz staple.

## Jazz funeral

**Jazz funeral** is a common name for a funeral tradition with [music](#) which developed in New Orleans, Louisiana.

The term "jazz funeral" was long in use by observers from elsewhere, but was generally disdained as inappropriate by most New Orleans musicians and practitioners of the tradition. The preferred description was "funeral with music"; while [jazz](#) was part of the music played, it was not the primary focus of the

ceremony. This reluctance to use the term faded significantly in the final 15 years or so of the 20th century among the younger generation of New Orleans brass band musicians more familiar with the post-Dirty Dozen Brass Band funk influenced style than the older traditional jazz New Orleans style.

The tradition arises from African spiritual practices, French and Spanish martial musical traditions, and uniquely African-American cultural influences. The tradition was widespread among New Orleanians across ethnic boundaries at the start of the 20th century. As the common brass band music became wilder in the years before World War I, some "white" New Orleanians considered the hot music disrespectful, and such musical funerals became rare among the city's caucasians. For much of the mid 20th century, the Catholic Church officially frowned on secular music at funerals, so for generations the tradition was largely confined to African American Protestant New Orleanians. After the 1960s it gradually started being practiced across ethnic and religious boundaries. Most commonly such musical funerals are done for individuals who are musicians themselves, connected to the music industry, or members of various social aid & pleasure clubs or Carnival krewes who make a point of arranging for such funerals for members.

The organizers of the funeral arrange for hiring the band as part of the services. When a respected fellow musician or prominent member of the community dies, some additional musicians may also play in the procession as a sign of their esteem for the deceased.

A typical jazz funeral begins with a march by the family, friends, and a [brass band](#) from the home, funeral home or church to the cemetery. Throughout the march, the band plays somber dirges, hymns. A change in the tenor of the ceremony takes place, after the deceased is either buried, or the hearse leaves the procession and members of the procession say their final good bye and they "cut the body loose". After this the music becomes more upbeat, often starting with a hymn or spiritual number played in a swinging fashion, then going into popular hot tunes. There is raucous music and cathartic dancing where onlookers join in to celebrate the life of the deceased.

Some younger [funk](#) and [hip hop](#) oriented brass bands often dispense with the dirges and hymns all together, or perform only one (usually "Just a Closer Walk With Thee," the only such tune still in the repertory of some such bands).

## Jazz fusion

**Jazz fusion** (sometimes referred to simply as **fusion**) is a [musical genre](#) that loosely encompasses the merging of [jazz](#) with other styles, particularly [rock](#), [funk](#), [R&B](#), and [world music](#). It basically involved jazz musicians mixing the forms and techniques of jazz with the electric instruments of rock, and rhythmic structure from African-American popular music, both "[soul](#)" and "[rhythm and blues](#)". The 1970s were the most important decade for fusion, but the style has been well represented also during later decades. Fusion albums — often even those that are made by the same artist — include a variety of musical styles. It can be argued that rather than being a coherent musical style, fusion is a musical tradition and approach.

### The roots of fusion

Fusion has its roots in the late 1960s work of Miles Davis and the The Tony Williams Lifetime. There had been earlier efforts in 1960s to fuse jazz and pop (most notably by Julian "Cannonball" Adderley, who worked with Joe Zawinul; as well as The Free Spirits, a group featuring Jim Pepper and Larry Coryell), but Davis and Williams were the most influential artists in this movement. Fusion bands used instruments such as electric guitar, bass guitar, and electric piano. Soon, others (most notably Herbie Hancock, Joe Zawinul, Jan Hammer and Chick Corea) began incorporating [synthesizers](#) such as the minimoog, sometimes joining forces with more avant garde players who had also begun incorporating electronic sound in the wake of the "classical" avant garde.

Jazz artists, in the wake of developments in pop music, also began using the recording studio with its improved editing, multitrack recording, and electronic effects capability—as an adjunct to composition and improvisation. Trumpeter Miles Davis's *In a Silent Way* (1969) and *Bitches Brew* (1970), for instance, feature extended—more than 20 minutes each—compositions which were never actually played straight through by the musicians in the studio; instead, musical motifs of various lengths were selected from recorded extended improvisations, and edited together into a musical whole which only exists in the recorded version. These are considered cornerstone recordings of the genre.

Many rock musicians had begun to independently approach jazz forms during the second half of 1960s. Among the first of these were The Byrds, who recorded in December 1965 the first version of their eventual hit, "Eight Miles High", which tried to emulate John Coltrane's style. Shortly thereafter, Paul

Butterfield and Mike Bloomfield recorded a long improvisational piece, "East-West", in 1966. Soon, other artists, notably Jimi Hendrix, the Grateful Dead, Chicago, Blood, Sweat & Tears, and The Allman Brothers Band in the US and King Crimson, Soft Machine, Yes (who covered the Byrds' "I See You" in the 'fusion' style) and Cream in the UK, also performed, and eventually recorded, rock songs featuring extended improvisations and jazz-style instrumental interplay as well as longer, multipart compositions. Also Frank Zappa released his first jazz-rock album, *Hot Rats*, already in 1969. He continued recording fusion music occasionally during his career becoming one of the most important representators in the genre.

## Fusion during the 1970s

Much of fusion grew from a core of musicians who had worked with Miles Davis on *In a Silent Way* and *Bitches Brew*. In addition to Davis, the most important figures in early fusion were Tony Williams, Herbie Hancock, Chick Corea (with his band Return to Forever), John McLaughlin (with his band Mahavishnu Orchestra) and Joe Zawinul and Wayne Shorter with their band Weather Report.

Herbie Hancock first continued the path of Miles Davis with his experimental fusion albums (such as *Crossings*, 1972), but soon after that he became perhaps the most important developer of "jazz-funk" with his albums *Headhunters* (1973) and *Thrust* (1974). Later in the 1970s and early 1980s Hancock took a yet more commercial approach eventually recording straight disco and pop-albums (though he also recorded some acoustic jazz occasionally). Hancock was one of the first jazz-musicians to use synthesizers (though at very first, he left playing for his sidemen).

Also, Joe Zawinul's and Wayne Shorter's Weather Report was more experimental at the beginning, but introduced a more commercial sound later. Their albums were often quite varied and influenced by different styles of ethnic music, mainly latin and African music. Zawinul practically became the leader of the band, and he was endlessly making experiments by fusing different styles. Jaco Pastorius, one of the most celebrated electric bass players, joined the group in 1976 on the album, *Black Market*.

Chick Corea formed his band Return to Forever in 1972. The band started with latin-influenced music (Flora Purim as a vocalist) but the band was transformed in 1973 to become a jazz-rock group that took influences from both [psychedelic](#) and [progressive rock](#). The drummer of the band since year 1973 was Lenny White who had also played with Miles Davis. Return to Forever's songs were distinctively melodic due to the composing style of Corea's and group's bassist Stanley Clarke. Along with Weather Report's Jaco Pastorius, Clarke became possibly the most influential bass guitarist of 1970s. Clarke is

known of his extensive use of slap bass technique while Pastorius popularized a fretless bass guitar. Guitarist Al Di Meola also started his career with Return to Forever (in 1974). He soon became one of the most important fusion guitarists and started to release influential solo albums. In the 1980s Corea formed a new fusion band called the Chick Corea Elektric Band which featured new young musicians such as Dave Weckl and John Patitucci.

John McLaughlin formed a jazz-rock band the Mahavishnu Orchestra and their first album was released in 1972. The band included important musicians such as drummer Billy Cobham and keyboardist Jan Hammer. Hammer used his moog synthesizer with distortion effects making it sound more like an electric guitar. The sound of Mahavishnu Orchestra was influenced by psychedelic rock. The band's first line up broke-up after two studio albums, but McLaughlin formed another group under same name which included Jean-Luc Ponty, a jazz violinist, who made many important fusion recordings also under his own name.

Many rock acts continued to borrow ideas and influences from fusion; while most of these remained rooted in the traditional vocal-based rock song structure. Rock guitarist Jeff Beck had mainstream success with the instrumental rock-fusion album Blow by Blow in 1975. His album, Wired, released in 1976, is considered by many to be one of the definitive recordings in the history of Fusion Jazz.

Other important musicians that emerged from the fusion movement during the 1970s include guitarist Larry Coryell with his band 11th House, and Pat Metheny, whose band Pat Metheny Group (formed in 1978) and became one of the most important and long-lived groups in modern jazz.

## **Of controversies and musical directions**

While jazz fusion is criticized in some quarters for being a watering down of more conventional swing-based jazz for pop audiences, and further criticized by others for being pretentious or too concerned with musical virtuosity, it has helped to break down boundaries between different genres and led to developments such as [acid jazz](#).

For the most part the genre has been subsumed into other branches of jazz and rock, but some traces of the form remain. The merging of jazz and pop/rock music took a more commercial direction in the late 1970s and early 1980s, in the form of more melodic compositions with softer sound palette that could fit comfortably in a [soft rock](#) radio playlist. Artists like Lee Ritenour, Al Jarreau, Gino Vannelli, Bob James and David Sanborn among others were leading purveyors of this pop-oriented fusion (aka. "west coast" or "AOR fusion"). This genre has been often called "[smooth jazz](#)" and is controversial among the listeners of both traditional jazz and jazz fusion.

Other acts have retained some of the more challenging aspects of fusion; In the 1980s bands like Chick Corea Elektric band and Steps Ahead performed a type of fusion inspired by the more technological approach to popmusic during this decade (recent synthesizers, samplers, sequencers, drum machines) while still maintaining their jazz roots. Current artists like John Scofield, Tom Coster, Michael Brecker / Steps Ahead, Mike Stern, and the Yellowjackets continue to integrate aspects of rock and funk music into jazz forms. The influences of avant-garde jazz, progressive and psychedelic rock that were strongly present in the fusion groups of 1970s have long been absent and replaced by lighter jazz-rock sound that often incorporates elements from funk.

## **Some of the most essential fusion artists and albums**

Stanley Clarke - Journey to Love (1975), School Days (1976)  
Billy Cobham - Spectrum (1973)  
Chick Corea - My Spanish Heart (1976), Elektric Band (1986)  
Return to Forever - Return to Forever (1972), Light as a Feather (1973), Hymn of the Seventh Galaxy (1973), Where Have I Known You Before (1974), No Mystery (1975), Romantic Warrior (1976)  
Larry Coryell - Spaces (1970), Barefoot Boy (1971), Introducing The Eleventh House (1974)  
Miles Davis - In a Silent Way (1969), Bitches Brew (1969), A Tribute to Jack Johnson (1970), Live-Evil (rec. Dec. 1970, released 1971), On the Corner (1972), Agharta (1975), Pangaea (1975), We Want Miles (1982), Star People (1983)  
Al Di Meola - Elegant Gypsy (1978), Splendido Hotel (1980)  
Herbie Hancock - Fat Albert Rotunda (1969), Crossings (1972), Sextant (1973), Head Hunters (1973), Thrust (1974), Mr. Hands (1980)  
John McLaughlin - My Goals Beyond (1971)  
Mahavishnu Orchestra - The Inner Mounting Flame (1971), Birds of Fire (1972)  
Shakti - Shakti (1976)  
Pat Metheny - Bright Size Life (1976), Pat Metheny Group (1978), American Garage (1979)  
Jaco Pastorius - Jaco Pastorius (1976)  
Jean-Luc Ponty - Upon The Wings Of Music (1975), Enigmatic Ocean (1977)  
Weather Report - Weather Report (1971), I Sing the Body Electric (1972), Sweetnighter (1973) Mysterious Traveller (1974), Tale Spinnin (1975), Black Market (1976), Heavy Weather (1978), 8:30 (1979)

Tony Williams Lifetime - Emergency! (1969), Turn It Over (1970)  
Frank Zappa - Hot Rats (1970), Grand Wazoo (1973), Jazz From Hell (1986)  
Joe Zawinul - Zawinul (1970), Dialects (1986)

# Jazz guitar

**Jazz guitar** is the use of [guitar](#) in [jazz music](#).

The [guitar](#) has a long and honorable history in [jazz](#). Historically, the guitar played the same role in jazz as in [country music](#), [blues](#) and other forms of [folk music](#), as an instrument easy to acquire financially and easy (enough) to play for an individual performer.

As an [instrument](#) in an ensemble, however, the guitar had first to supplant the [banjo](#) as the standard "string tenor" rhythm instrument. Even as late as the early 30s such sophisticated orchestras as Duke Ellington's still used a banjo. In the late 30s, however, there were five important developments, or, more accurately, five important individuals:

- Lonnie Johnson, a New Orleans born guitarist, who was the first to play single-string guitar solos. Although best known as a [bluesman](#), Johnson played all forms of music. He had developed his single-string playing while working as a strolling musician in restaurants, accompanying himself as he sang. Although he never achieved great fame, he was a strong influence on the next three guitarists discussed here.
- Eddie Lang, who hid his virtuoso guitar playing behind a good-time persona in his collaborations with jazz [violinist](#) Joe Venuti, the "Mound City Blue Blowers" and appearances with virtually every important white jazz organization in the 1920s, from Red Nichols and Bix Beiderbecke, to Paul Whiteman. He also collaborated with Lonnie Johnson.
- Charlie Christian -- Also out of the southwest, from Texas, Christian showed up in the Benny Goodman Orchestra unexpected by anyone with a full-blown style of [electric guitar](#) soloing. In addition to his appearances with Goodman, Christian was a regular after-hours [bebop](#) player. The astonished critics of the time called it "single-string" playing because no big-band guitarist before Christian did it (although blues players played single-string obligattos). Now virtually all guitarists do it. Christian's career only lasted a few years and he died young, but his innovation changed the guitar forever.
- Django Reinhardt, one-of-a-kind jazz guitarist, a Belgian Gypsy with the use of only two fingers on his left (fretting) hand due to a fire in a gypsy caravan. Reinhardt recorded rarely with a standard jazz group, and recorded most often with either solo or with the peculiar "Quintette du Hot Club de France" with [violinist](#) Stéphane Grappelli. Influential for technique, taste, harmonies, and melodies, with many followers and not a single successor.
- Freddie Green -- In the Count Basie Orchestra out of Kansas City, Missouri, Green was a peerless rhythm guitarist, whose reliable pulse propelled the hardest swinging band in jazz. Green's ascendancy pretty much ended the

[banjo](#) era. Green rarely soloed, even in the modern era, but he remains the apotheosis of the rhythm guitar and the master of chorded [accompaniment](#).

## Other notable jazz guitarists

John Abercrombie

Howard Alden

George Barnes, claims to be earliest electric guitarist.

George Benson, although better known as a singer, his early work with Brother Jack MacDuff and other jazz artists set a new standard of technical achievement on the instrument in the late 1960s.

Kenny Burrell

Herb Ellis

John Etheridge

Tal Farlow

Bill Frisell, who has introduced strong elements of folk and bluegrass music into jazz. His distinctive style of playing is notable for his use of intervals rather than single lines.

Steve Giordano

Mick Goodrick, a respected guitarist whose former students include Pat Metheny, Mike Stern, John Scofield, Benjamin Rodefer and Wolfgang Muthspiel.

Grant Green

Jim Hall

Allan Holdsworth

Stanley Jordan

Barney Kessel 1923-2004

Russell Malone

Pat Martino

Benjamin Rodefer Younger guitarist who has played with many of the new vanguard of jazz musicians.

John McLaughlin

Pat Metheny, latest in the long line of jazz musicians from Missouri, fearless collaborator, leader of his own highly successful band, the Pat Metheny Group with Lyle Mays on piano.

Wes Montgomery, master of the tasteful modern style. Wes was self-taught and used his right thumb rather than a plectrum (pick) to produce his unique sound.

Joe Pass, master of the solo guitar (that is, without any kind of backing band)

John Scofield

Floyd "Wonderful" Smith, a contemporary of Django Reinhardt, enjoyed wide recognition in the 1930s and continued to perform and into the 1960s. Smith inspired Charlie Christian, and was a major influence George Benson, among many others. His 1943 hit recording "Floyd's Guitar Blues", with the Andy Kirk band, had a great impact on the popular perception of the guitar as a solo instrument.

Johnny Smith

Pete Smyser

Mike Stern

Andy Summers

Martin Taylor an early protege of Stéphane Grappelli who has taken the solo guitar art form of Joe Pass to new heights.

George Van Eps, who invented the 7-string guitar and coined the term "lap piano."

## Jazz piano

**Jazz piano** refers to various styles of [piano](#) playing used by jazz pianists. Like [jazz](#) itself, jazz piano is part of the [music history of the U.S.](#), dating back to the [Smooth jazz](#), [Cool jazz](#), and [Free jazz](#), played by numerous jazz pianists including Chick Corea, Bill Evans, Red Garland, Herbie Hancock, and Wynton Kelly, Thelonious Monk, and McCoy Tyner. More recent jazz pianists include Miles Black, Bill Charlap, Cyrus Chestnut, Marcus Roberts and Mark Birnbaum.

### Role in Ensembles

When accompanying other instruments (called 'comping'), the piano fulfills both a rhythmic and harmonic function. But the piano can also be a primary melodic instrument, for example in a trio with piano, bass, and drums, or in larger ensembles when soloing. The role that the piano plays varies greatly among groups, songs, or even sections in a song. Many jazz musicians disagree about what role the piano should play, especially while comping; such heated debates are common among both amateur musicians and famous jazz pianists.

### How Jazz Piano is Played

Jazz piano requires different skills from classical piano. Since jazz is not written out in detail the way classical music is, the individual pianist needs an extensive knowledge of musical vocabulary: chords, melodic material, and "jazz theory" (which does not necessarily refer to book knowledge).

Jazz theory identifies many different combinations of notes as being the same "chord". The details of which notes to play, and in which range to play them, are left up to the pianist. The decisions are made based on the range of the other instruments playing, the style of music, and the particular sound or feeling desired on a given chord. Jazz pianists (and guitar players as well) refer to voicings, different ways of playing a given chord.

Generally in soloing, the theory is that the piano can be broken up into three sections. The lower being the bass, or representing an acoustic bass player, the middle is the piano, more for chords and the melody, and the high end of the piano is the horn section. The combination of the three sections is the most basic form of theory for the jazz piano.

## Jazz poetry

"Jazz poetry" can be defined as poetry that "demonstrates [jazz](#)-like rhythm or the feel of improvisation," from an article by Pittsburg State University faculty. During the 1920s, several poets began to eschew the conventions of rhythm and style; among these were Ezra Pound, T.S. Eliot, and ee cummings. The significance of the simultaneous evolution of poetry and jazz during the 1920s was apparent to many poets of the era, resulting in the merging of the two art forms into jazz poetry. Jazz poetry has long been something of an "outsider" art form that exists somewhere outside the mainstream, having been conceived in the 1920s by African-Americans, maintained in the 1950s by counterculture poets like those of the Beat Generation, and adapted in modern times into [hip-hop music](#) and live poetry events known as poetry slams.

## The Harlem Renaissance

Early jazz poetry did not mimic the sounds and improvisational spirit of jazz. Instead, it heavily referenced the musical form with allusions made to

musicians, instruments, and locations key to the burgeoning jazz scene. Poets like Vachel Lindsay (who actually abhorred the "primitive" sound of jazz music) and Mina Loy wrote poetry in this vein. It was with the advent of the Harlem Renaissance that jazz poetry developed into what it is today. Poets like Langston Hughes and Carl Dunbar incorporated the syncopated rhythms and repetitive phrases of blues and jazz music into their writing. Hughes and Dunbar, like many Harlem Renaissance writers, were deeply concerned with racial pride and with the creation of purely African-American poetry. Since jazz music was an important part of African-American culture at the time, Hughes and others like him adapted the musical genre to create their own, singularly African-American voices that could easily be distinguished from the work of white poets. Many of Hughes' poems, such as "Weary Man Blues," sound almost exactly like popular jazz and blues songs of the period, and vice versa. His work is also highly evocative of [spirituals](#).

## **Bebop and the Beat Generation**

As members of the (largely white) Beat Generation began to embrace aspects of African-American culture during the 1950s, the art of jazz poetry shifted its focus from racial pride and individuality to spontaneity and freedom. In this case, both jazz poetry and jazz music were seen as powerful statements against the status quo. Jack Kerouac would often accompany his readings of poetry with music, playing the piano or bongos while he read. His colleague, musician and composer David Amram would often scat along as Kerouac read. Amram later wrote of their work together, "We never once rehearsed. We did listen intently to one another. Jazz is all about listening and sharing. I never drowned out one word of whatever Jack (Kerouac) was reading or making up on the spot . Lawrence Ferlinghetti had a similar collaboration with saxophone player Stan Getz. Beat poet Bob Kaufman was said by some to be the greatest jazz poet ever to have lived, with the exception of Langston Hughes. Kaufman paid homage to jazz in poems like "O Jazz O" and "Morning Joy." His work is notable for its syncopated rhythms, surreal imagery, and a quality of alienation stemming from Kaufman's own role in life as a drifter and a jailbird.

In the 1960s and '70s, the Beat poet formerly known as LeRoi Jones renamed himself Amiri Baraka and revived the idea of jazz poetry as a source of black pride. Baraka was a cultural nationalist who believed that ""Black People are a race, a culture, a Nation. " Elements of jazz show up often in Baraka's work, such as syncopation and repetition of phrases.

## **Modern Jazz Poetry**

The tradition of jazz poetry has been carried on by hip-hop and rap artists, who often set poetic lyrics to syncopated beats. Another parallel that can be drawn is that of the freestyle rap, which features lyrics improvised to a beat, thus capturing the spontaneous, improvised nature of the jazz poem. Spoken word, a genre made up of experimental text-based performance artists and poets, also emphasizes the relationship between poetry and performance, and can sometimes involve musical accompaniment and/or improvisation. Like jazz poetry, spoken word poetry de-emphasizes poetry's roots in academia and instead focuses on popular culture and issues of current social significance. One of spoken word's best-known forms, slam poetry, although it is usually memorized and not normally performed with music, often uses styles that owe a debt to jazz poetry.

## Jazz rap

**Jazz rap** is a fusion of [alternative hip hop music](#) and [jazz](#), developed in the very late 1980s and early 1990s. Known for intellectual, often socio-political or Afrocentric lyrics and jazz beats (sometimes performed by a live band, instead of sampled), jazz rap has not become a huge mainstream success; it instead sells primarily to a small specialized fan base.

Though some claim the proto-hip hop, jazzy poet Gil Scott-Heron the beginning of jazz rap, the genre arose in 1988 with the release of the debut singles by Gang Starr ("Words I Manifest", which samples Charlie Parker) and Stetsasonic ("Talkin' All That Jazz", which samples Lonnie Liston-Smith). One year later, Gang Starr's debut LP, No More Mr. Nice Guy and their work on the soundtrack to Mo' Better Blues, and De La Soul's debut 3 Feet High and Rising have proven remarkably influential in the genre's development. De La Soul's cohorts in the Native Tongues Posse also released important jazzy albums, including the Jungle Brothers' debut Straight Out the Jungle and A Tribe Called Quest's debut, People's Instinctive Travels and the Paths of Rhythm.

A Tribe Called Quest's follow-up, The Low End Theory (1991), included only a small amount of jazz, but the album was a critical success and is regarded as one of the most influential hip hop albums of the decade (it also included a stamp of approval from renowned jazz bassist Ron Carter, who played upright on one track). Though jazz rap had achieved little mainstream success, jazz legend Miles Davis' final album (released in 1992 posthumously), Doo Bop, was based around hip hop beats and collaborations with MC Easy Mo Bee. Davis' renowned ex-bandmate Herbie Hancock also returned to hip hop in the mid-nineties (after helping to kickstart the genre in the early 80s with his single Rokit), releasing the album Dis Is Da Drum. Another jazzman to dabble in hip hop beats was Branford Marsalis, who collaborated with Gang Starr's DJ Premier on his Buckshot LeFonque project. Concurrently, Digable Planets' Reachin' (A New Refutation of Time and Space) was released to critical

acclaim; it is often considered the first cohesive album of jazz rap. The work of Freestyle Fellowship and Aceyalone is a particularly notable development in fusing jazz with hip hop, building on the existing jazz-rap style by including jazz elements such as unusual time signatures and scat-influenced vocals.

Later in the decade and into the next millennium, Guru's first Jazzmatazz project, featuring live jazz musicians in the studio, is perhaps the most critically acclaimed jazz rap album yet: through its three volumes it assembled jazz greats like Freddie Hubbard, Donald Byrd, Courtney Pine, Herbie Hancock, Kenny Garrett and Lonnie Liston Smith together with hip hop greats like Kool Keith, MC Solaar and Guru's Gangstarr colleague DJ Premier. The Roots, a live band that includes MC Black Thought, also achieved significant commercial success (though their jazz influence became less prominent as their career progressed), while English alto saxophone player and MC Soweto Kinch achieved notable critical success and moderate commercial success with his debut album *Conversations With The Unseen* in 2003.

## Notable artists and albums

Aceyalone: *All Balls Don't Bounce*  
Bop City: *Hip Strut*  
Buckshot LeFonque: *Music: Evolution*, *Buckshot LeFonque*  
Common: *Resurrection*

### **Other topics**

[Jazz standard](#) - [Jazz royalty](#)

Categories: [Jazz genres](#) | [Hip hop genres](#)

## **Jazz royalty**

**Jazz royalty** is a term that reflects the many great [jazz](#) musicians who have some sort of royal title in their names or nicknames.

## **Earliest jazz "monarchs" in New Orleans**

The practice goes back to New Orleans at the start of the 20th century, back before the music was commonly known as "jazz". Buddy Bolden was known as "King Bolden", as the top hot music and hot [trumpeter](#) of the city.

The realization that such titles might have commercial or public relations values also dates to this era. [Violinist](#) and bandleader Alex Watzke, observing Bolden's popularity, started billing himself as "King Watzke", and paid children coins to publicly point at him as he walked down the street and say "There goes King Watzke". While he succeeded in appending that nickname to himself, some fellow musicians used it more with amusement than with the respect accorded to Bolden.

After Bolden was institutionalized in 1907, his crown was taken by Freddie Keppard. "King Keppard" ruled until 1914 when Joe Oliver bested him in musical battle.

Joe Oliver left New Orleans in 1919. Some later writers have assumed that the trumpet crown at that time went to Oliver's protégé Louis Armstrong, but Armstrong and his contemporaries made no such claim. Armstrong had a powerful rival in Buddie Petit, whom many ranked higher than young Armstrong in the period of 1919-1922. Neither billed himself as "king".

## National jazz kings

Oliver was known as "King Oliver" in Chicago, and still regarded as the jazz king as late as 1925, when Louis Armstrong returned to Chicago from New York City. Armstrong's great respect and affection for Oliver was probably a factor in never claiming Oliver's kingship, although at the urging of his wife Lil Hardin Armstrong Louis Armstrong was billed as the "world's greatest jazz trumpeter", rendering Oliver's title more ceremonial than a claim of supremacy.

Meanwhile in New York City, Paul Whiteman billed himself as the "King of Jazz". His nationally popular band with many hit records arguably played more jazz-influenced popular music than jazz per se, but to the dismay of many later jazz fans Whiteman was widely known as "King of Jazz" in the 1920s and early 1930s and a motion picture *The King of Jazz* starring Whiteman and his band appeared in 1930.

Jelly Roll Morton was one of many annoyed by Whiteman's claim and had enough bravado to challenge it. In 1924 he billed his band as "the Kings of Jazz", but the title never caught on.

The New Orleans Rhythm Kings were popular in Chicago.

## Swing era

Benny Goodman was regularly called the "King of Swing". His rival, Artie Shaw, was often called "King of the Clarinet". Goodman's song "King Porter Stomp" was written by Jelly Roll Morton after a piano player he knew named Porter King. Later a little-known bandleader took the name "King Porter".

Nat King Cole's nickname is partly inspired by the nursery rhyme "Old King Cole" and partly inspired by his impressive [piano](#) technique.

There was a popular, if somewhat tongue-in-cheek "sweet" [big band](#), led by Blue Barron, a stage name. Blue Barron once billed himself as competing for the title of "King of the Mickey Mouse Bands".

## Later Jazz Monarchs & Aristocrats

Sharkey Bonano billed his band as "Sharkey & His Kings of Dixieland". What started out as the Assunto Family band acknowledged Sharkey's supremacy but claimed a lesser title for themselves, becoming the Dukes of Dixieland.

Charles Mingus dubbed himself "Baron Mingus" for a brief period early in his career.

Many of Al Hirt's records credited him as Al "He's The King" Hirt.

## Best known jazz royalty titles

The King: Joe Oliver

The Duke: Duke Ellington

The Count: Count Basie

The Earl: Earl Hines, more commonly called "Fatha"

The First Lady: Ella Fitzgerald (aka the First Lady of Song)

Prez (short for "President"): Lester Young

Vice Prez: Paul Quinichette, whose style resembled Young's

Lady Day: Billie Holiday

The Prince of Darkness: Miles Davis

The Professor: Benny Goodman

Sir Roland Hanna, knighted by the president of Liberia, William Tubman, in 1970.

Sir Charles Thompson was 'knighted' by Lester Young.

High Priest of Bop: Thelonious Monk

## Blues Monarchs

Mamie Smith was billed as the "Queen of the Blues"; Bessie Smith outdid her with the billing "Empress of the Blues". In a later era, Dinah Washington was also billed as the "Queen of the Blues".

B.B. King always called himself the "Blues Boy" or "Beale Street Blues Boy" and fellow bluesmen Albert King and Freddie King were content to share a last name with him.

## Other nicknames

Many other jazz greats had nicknames that were not royalty-related, but some consider them to be part of the royalty anyway -- purely because their skill as musicians merits a place on the list with the best:

Pops: Louis Armstrong. The nickname "Satchmo" was popular with concert promoters, but other jazz musicians and friends called him "Pops"

Dizzy, or The Diz: Dizzy Gillespie

Bird, or Yardbird: Charlie Parker

The Boss of the Blues: Big Joe Turner found no objectors or rival claimants to this title

Trane: John Coltrane

Chairman of the Board: Frank Sinatra

The Guvnor: Ken Colyer

Category: [Jazz](#)

## Jazz standard

A **jazz standard** is a tune that is widely known, performed, and recorded among [jazz](#) musicians. Stricter definitions of the term may be used; therefore no 'definitive' list of standards exists.

As [jazz](#) is actually a range of musical styles, musicians and bands can vary in their standards according to what type of jazz they play. Most professional bands will have repertoires with many more tunes than the standards, but they will usually be sure to include some standards in an evening's performance, and have them ready to play in case of request.

The categories of jazz are not exclusive as to their standards, and any of the songs may be played by bands that specialize in another style. For example, some avant-garde groups may delight in playing an old tune in their modern style, or a Dixieland band may pride themselves on playing a modern tune in a style that gives it a traditional sound.

Many standards were originally written decades ago, and may be from old popular tunes, Broadway or musical selections, or old recordings of famous

bands. However, jazz musicians might also include a wide range of more recent tunes in their concept of standards.

It is common for jazz musicians invited to take part in a standards gig to ask the person who's booking the gig or the other musicians involved for particular tunes they have in mind. However, time spent working through a respectable fake book will help in such situations.

## **Dixieland**

[Dixieland](#) and traditional jazz standards include:

- "(At the) Darktown Strutters Ball"
- "Bill Bailey (Won't You Please Come Home)"
- "Blues My Naughty Sweetie Gives To Me"
- "High Society"
- "(Home Again in) Indiana"
- "Milenburg Joys"
- "Panama" (Original title "Panama, a Characterist Novelty" from 1912)
- "That's A Plenty"
- "Tiger Rag"
- "When The Saints Go Marching In" (Originally a gospel song. Nicknamed "The Monster" by some musicians, as it seems to be the only tune many people knew to request when seeing a Dixieland band, and some musicians dread being asked to play it several times a night. At Preservation Hall, a sign on the bandstand reads "Requests—\$1, 'Saints' \$10.")

## **Swing**

[Swing](#) band standards include:

- "Caravan"
- "In the Mood"
- "It Don't Mean a Thing if It Ain't Got That Swing"
- "King Porter Stomp"
- "One O'Clock Jump"
- "Sing, Sing, Sing"
- "Stardust"
- "Take the A Train"
- "Woodchopper's Ball"

## **Bebop**

Bebop standards include:

"Bags' Groove"  
"Blue Monk"  
"Cherokee"  
"Con Alma"  
"Donna Lee"  
"Giant Steps"  
"Milestones"  
"A Night in Tunisia"  
"Now's The Time"  
"Oleo"  
"Ornithology"  
"Round Midnight"  
"Salt Peanuts"  
"Scraple From The Apple"  
"Hot House"

## **Mainstream**

"Mainstream" jazz standards include:

"All of Me"  
"All The Things You Are"  
"Alone Together"  
"Autumn Leaves"  
"Blue Bossa"  
"Body And Soul"  
"But Beautiful"  
"The Days of Wine and Roses"  
"A Foggy Day"  
"Four Brothers"  
"Have You Met Miss Jones"  
"I Got Rhythm"  
"I Remember Clifford"  
"Just Friends"  
"Love For Sale"  
"Misty"  
"Misty Blue"  
"My Favourite Things"

## Jazz-funk

**Jazz-funk** was the British name for a musical genre used to denote a style of mostly American disco-ish jazz music, popular on the club-circuit of England in the mid 1970s. The American name for this genre was [soul jazz](#), although jazz-funk and soul jazz do not entirely overlap.

Examples of jazz-funk artists are Roy Ayers, Eddie Henderson, Charles Earland, and Mass Production. The music featured a funk bassline and injections of jazz riffs, but always contained an overall soulful feel<sup>1</sup>.

Other artists that made music in the 1970s considered jazz-funk by these criteria were Donald Byrd, Gil Scott Heron, Lonnie Liston Smith, Funkanova, Miroslav Vitous, Herbie Hancock, Deodato, Azymuth, Ronnie Laws, Ned Doherty, and Francine McGee.

## Jazz-funk in the UK

Several British Jazz-funk artists and bands emerged in the late 1970s and early 1980s who broke away from the disco and commercial scene, encouraged by club DJs like Chris Hill, Norman Jay, Robbie Vincent (then on BBC Radio London), and Greg Edwards who had a Saturday evening show commercial radio station Capital Radio.

Chris Hill and Robbie Vincent were instrumental in starting the Caister Weekender on the east coast of England. This event started after a break in 1992 at a holiday camp on the south coast, and returned to Great Yarmouth on the east coast, to the Vauxhall Holiday park in 1996 - the weekender continues to pull thousands of soul, jazz, and jazz-funk fans to the camp, three times a year in May, October and on New Year's Eve.

Chris Hill signed many artists to his Ensign record label. Some of the best known UK jazz-funk acts include Beggar and Co who reformed twice, first as Light of the World and then Incognito. The prime mover in the bands was J-P Bluey Maunick. Although Light of the World continue to perform in its own right without Bluey.

Other British jazz-funk bands include: Central Line, Level 42, Freeze, Heatwave, Hi Tension, Real Thing, Atmosfear, Imagination, FBI, and Gonzalez.

Many of the above had tracks compiled on to the 2003 album British Hustle: the Sound of British Jazz Funk 1974 to 1982. Label: Soul Jazz, ASIN: B0000C84NU, Catalogue Number: SJRCD82.

The album has extensive sleeve notes charting the history of Jazz-funk in the UK, and provides a good sample of British Jazz-funk. In 2006, it was still available on CD and 12" vinyl.

Many national and regional DJs including Gilles Peterson, Norman Jay and Tony Blackburn have and continue to play Jazz-funk tracks on their shows and at club nights.

The music has over the years featured heavily in the magazine Blues & Soul.

## Jingle

A **jingle** is a memorable slogan, set to an engaging [melody](#), mainly broadcast on radio and sometimes on television commercials. Jingles are memes constructed to stay in one's memory (colloquially, "ringing a bell"). People often nostalgically remember jingles decades later, even after the advertised brand has ceased to exist. Nowadays the most common form of a jingle is a radio station's on air musical or spoken identity. The most famous musical identities both past and present include jingles heard on WABC/WPLJ, WLS/KIIS-FM, Z100 New York, KOST, and KHJ.

Jingles were used on radio from the beginning, and the art of jingle-writing was well-honed by the time television became widely available. The golden age of jingles was during the US 1950s economic boom. Jingles were used in the advertising of branded products such as breakfast cereals, candy and snacks (including soda pop) and other processed foods, tobacco and alcoholic beverages, as well as various franchises and products that might reflect

personal image such as automobiles, personal hygiene products (including deodorants, mouthwash, and toothpaste) and household cleaning products, especially detergent.

With the soaring costs of preexisting music licensing, jingles are making a comeback. Today, a growing number of businesses are turning to the more affordable option of custom made jingles for their advertising needs.

## Jug band

A **jug band** is a [band](#) employing a jug player and a mix of traditional and home-made instruments. These home-made instruments are ordinary objects adapted to or modified for the making of sound, like the washtub bass, washboard, spoons, stovepipe and comb & tissue paper (kazoo). Though a true jug band must have a jug player, some people casually use the term jug band when referring to skiffle bands, spasm bands and juke (or jook) bands (see juke joint), which are other kinds of ensembles that incorporate a random mix of traditional and home-made instruments.

Instruments are often improvised, and in the early days of jug band music, guitar and mandolins were sometimes made from the necks of discarded guitars fastened to large gourds. The gourds were flattened on one side, with a sound-hole cut into the flat side, before drying. Banjos were sometimes made from a discarded guitar neck and a metal pie plate.

The eponymous jug is just that: a jug (usually made of glass or stoneware) played by buzzing the lips into the mouth of the jug, from about an inch away. As with brass instruments, changes in pitch are controlled by altering lip tension, and an accomplished jug player could have a two octave range. The stovepipe (usually a section of tin pipe, 3" or 4" in diameter) is played in much the same manner, with the pipe rather than the jug being the resonating chamber. There is some similarity to the didgeridoo, but there is no contact between the stovepipe and the player's lips.

Early jug bands were typically made up of African American vaudeville and medicine show musicians. Beginning in the urban south, they played a mixture of [Memphis blues](#) (even before it was formally called the blues), [ragtime](#), and Appalachian music.

It has been said that "The history of jug bands is the story of the birth of the blues". W.C. Handy said that he learned blues style from street musicians, playing improvised instruments. The informal and energetic music of the jug bands also contributed to the development of [rock and roll](#).

### Original Jug Bands

The first jug bands to record were the Louisville and Birmingham jug bands. These bands played popular dance band jazz, using the jug as a novelty element. Vaudeville-blues singer Sara Martin and America's blue yodeler Jimmie Rodgers both employed these groups on their recordings.

The Memphis area jug bands were more firmly rooted in country blues and earlier African-American traditions. Gus Cannon's Jug Stompers and Will Shade's Memphis Jug Band, recorded the great songs that became the basis for the later jug band revival: Stealin', Jug Band Music, Whoa, Mule, Minglewood Blues, Walk Right In and many others. Other notable Memphis area bands were Jack Kelly and His South Memphis Jug Band, Jed Davenport's Beale Street Jug Band, and Noah Lewis's Jug Band. "Ma" Rainey's tub-jug band featured the first recordings of slide guitar genius Tampa Red, who later formed his own Hokum Jug Band. Big Bill Broonzy and Memphis Minnie cut a few sides each backed up by their own jug bands; Memphis Minnie also sang and played with the Memphis Jug Band.

The hard times of the 30's depression and the devastating effect of radio on record sales reduced the output of jug band music to a trickle; the last sides by Cannon and the Memphis Jug Band were from 1930 and 1934 respectively, although Cannon and Will Shade were recorded again in 1956 by Sam Charters on a field trip for Folkways Records. The sound of the washboard and tub bass, however, lasted well into the 40's as an integral part of the "Bluebird beat" in Chicago. 'Bukka' White's "Fixin' to Die", recorded in Chicago in 1940, is driven by a powerfully syncopated washboard backup.

### **The Jug Band Revival**

One of the first recordings of the 'folk era' jug band revival was by The Orange Blossom Jug Five, made in 1958 for the poorly-distributed Lyricord label, "Skiffle in Stereo". It was also the first recording by New York folksinger Dave Van Ronk, and featured Sam Charters, author of 'The Country Blues', and his wife Ann as well as Lee Kunstadt, co-owner of the Spivey record label. Another excellent, but hard-to-find early recording group was Jolly Joe's Jug Band, led by record collector extraordinaire Joe Bussard, and released on his own Fonotone label-as 78 rpm records! Eventually these were collected on LP by the Piedmont label.

The most successful revival band was The Jim Kweskin Jug Band of Boston, who recorded for the Vanguard label. The band featured the magnificent washtub bass and jug player, Fritz Richmond. The New York based Even Dozen Jug Band was the Elektra label's answer to the Kweskin band and featured (among others) Maria D'Amato (Maria Muldaur), Joshua Rifkin, David Grisman, Stefan Grossman, and John Sebastian. Unfortunately they recorded only one LP. D'Amato then moved to the Jim Kweskin Jug Band, and married guitarist Geoff Muldaur. Sebastian eventually founded the pop music group The Lovin' Spoonful,

Pop-rock tributes to jug band music include "Willie and the Poor Boys" by Creedence Clearwater Revival and "Jug Band Music" by The Lovin' Spoonful. The 'Spoonful also mined the old songs: for instance, A Younger Girl uses the melody of Gus Cannon's Prison Wall Blues. Country Joe and the Fish came from The Instant Action Jug Band. Mungo Jerry, who had evolved from an

earlier blues group Good Earth, were in effect a jug band on their first live performances and recordings, thanks to their use of jug (played by the group's banjo player Paul King, who left in 1972), and washboard, contributed by regular 'extra member' Joe Rush. Fritz Richmond played jug on Warren Zevon's "I'll Sleep When I'm Dead".

The well-known children's Christmas special, Emmet Otter's Jug-Band Christmas, based on a book written by Lillian Hoban and Russell Hoban, features a jug band comprised of woodland-creature Muppets and a soundtrack composed by Paul Williams. The show first aired in 1977 and is still a seasonal favorite.

Jug bands have continued to exist and evolve to the present day. John Sebastian still leads the J-Band, which included not only musicians from the modern folk revival such as the late Fritz Richmond from the Kweskin band, but also Yank Rachell, [mandolin](#) player and jug band leader from the original era. Some bands remain faithful to the original roots, while others continually expand the jug band repertoire to include other [folk music](#), [popular music](#), and [classical music](#) forms. A popular young string band in Austin, Texas calls itself 'The South Austin Jug Band' though it has never had a jug player in its lineup. It is not related to the earlier Austin Jug Band which featured virtuoso jug player Jack Otis Moore.

There has been an Annual Battle of the Jug Bands in Minneapolis, Minnesota held since 1980. Over 20 jugbands compete for the "Coveted Holliwood Waffle Iron" trophy, including the Jook Savages, a jugband that predates Kweskin's band and is still together. The competition is held the Sunday after the SuperBowl.

An annual **JugFest** gathering of jug bands is held each October in Sutter Creek, California, and a Jug Band Jubilee is planned for Louisville, Kentucky, the probable birthplace of jug band music, in October 2006.

## Jump blues

The **jump blues** is a type of [blues](#) music, influenced by [big band](#). It is characterized by a [jazzy](#), [saxophone](#) (or [brass instruments](#)) sound, driving rhythms and shouted vocals. Unlike most other types of blues, the jump blues relegates the [guitar](#) to the rhythm section.

The jump blues first appeared in the early 1940s, becoming popular in the latter part of the decade. Jump blues was an early manifestation of what became [rock and roll](#). Jump Blues continues today with bands like MoPac and The Blue Suburbans, and Mitch Woods and His Rocket 88s.

## Jump-Up

**Jump-Up** is a [subgenre](#) of [jungle](#) and [drum and bass](#) that was popular with fans of drum and bass in the late 1990s. It is characterized by deep [synthesizer](#) basslines and highly energetic and uptempo drum loops. It is generally more funky and less dark than other drum and bass. Classic examples include DJ Zinc's *Super Sharp Shooter* or Zinc's remix of the Fugees' *Ready Or Not*, which also samples Redman on the original version of his first collaboration with Method Man, *How High*; extensive use of [hiphop](#) samples is common in jumpup. It was designed to be played in [nightclubs](#) to get a crowd to "jump up" and dance. Around 2003/4, jumpup came back into vogue.

**Jump Up** is also the name of a record company that released hard drum and bass records from 1997-1998.

## Junglist

**Junglist** is a slang term referring to a dedicated listener of [jungle \(music\)](#), otherwise referred to as [drum & bass](#).

Drum & bass tracks often contain shout outs to "real junglists" and "junglist krus".

## Word origin

The Japanese word stems from the words *kara* (空), meaning "empty" (as in karate, "empty hand") and *oke* which is short for *Mkesutora*, meaning "orchestra". The words together make a contraction literally meaning "empty orchestra".

This terminology used to be a slang term in media where a live performance is substituted by a pre-recorded music and thus it is written in katakana. The term karaoke can be interpreted as "virtual orchestra" because one can specify a key to the music and start singing along without the presence of a live band or orchestra. In the United States, the word is often pronounced as /kɪˈrɔɪki/. The Japanese pronunciation is /ka}aoke/. (These pronunciations are in IPA.)

It is a popular urban legend that Karaoke is Japanese for "tone-deaf". This is not true, albeit amusing.

## History

It has been common to provide musical entertainment at a dinner or a party in Japan, as in the rest of the world, for a long time. This tradition appeared in the earliest Japanese mythology. For a long time, singing and dancing remained one of the few adult entertainments in rural areas. Noh was initially played at a tea party and guests were welcomed to join in for a cheer or a shout of praise. Dancing and singing was also a part of a samurai's education. It was expected that every samurai have a dance or a song they could perform. During the Taisho period, *Utage Kissa*, (literally song coffee shop), became popular and customers sung to a live performance of a music band.

The karaoke industry started in Japan in the early 1970s when singer Daisuke Inoue (Inoue Daisuke) was asked by frequent guests in the Utage Kissa where he performed to provide a recording of his performance so that they could sing along on a company-sponsored vacation. Realizing the potential for the market, Inoue made a tape recorder that played a song for a 100-yen coin. This was the first karaoke machine. Instead of selling karaoke machines, he leased them out, so that stores did not have to buy new songs on their own. Originally it was considered a fad which was lacking the "live atmosphere" of a real performance. It was also regarded as somewhat expensive since 100 yen in the 1970s was the price of two typical lunches. However, it caught on as a popular entertainment. Karaoke machines were initially placed in restaurants or hotel rooms; soon, new businesses called Karaoke Box with compartmented rooms became popular. (See below "Public

Places for Karaoke" and "Terms of Karaoke" for a description of karaoke boxes.) In 2004, Daisuke Inoue was awarded the tongue-in-cheek Ig Nobel Peace Prize for inventing karaoke, "thereby providing an entirely new way for people to learn to tolerate each other."

Early karaoke machines used cassette tapes but technological advances replaced this with CDs, VCDs, laserdiscs and, currently, DVDs. In 1992, Taito introduced the X2000 that fetched music via a dial-up telephone network. Its repertoire of music and graphics was limited, but the advantage of continuous updates and the smaller machine size saw it gradually replace traditional machines. Karaoke machines connected via fiber-optic links to provide instant high-quality music and video are becoming increasingly popular.

Karaoke soon spread to the rest of Asia and then to the United States in the 1990s. Facilities such as karaoke bars or "KTV boxes" provided the venue, equipment and software for amateur singers to entertain (or "torture") each other.

Its popularity has spread rapidly to the United States, Canada and other Western countries. Some people still regard it as "hokey" and simply a method for the intoxicated to embarrass themselves, but as the novelty has worn off and the available selection of music has exploded, more and more people within the industry see it as a very profitable form of lounge and nightclub entertainment. It is not uncommon for some bars to have karaoke performances seven nights a week, commonly with much more high-end sound equipment than the small, standalone machines noted above. Dance floors and lighting effects are also becoming common sights in karaoke bars. Lyrics are often displayed on multiple TV sets around the bar, including big screens.

It is also growing in popularity in the United Kingdom, with Martha Lane Fox, the founder of lastminute.com, helping finance what is being touted as a chain of upmarket Karaoke venues, called Lucky Voice.

## Technology

A basic karaoke machine consists of audio input, a means of altering the pitch of the music (not the singer) and an audio output. Some low-end machines attempt to provide vocal suppression so that one can feed regular songs into the machine and suppress the voice of the original singer, however this is not very effective (see below). Most common machines are audio mixers with microphone input built-in with CD+G, Video CD, Laser Disc, or DVD players. CD+G players use a special track called subcode to encode the lyrics and pictures displayed on the screen, while the other formats natively display both audio and video. In some countries, karaoke with video lyrics display capabilities is called KTV.

Most karaoke machines have technology that electronically changes the [pitch](#) of [music](#) so that amateur [singers](#) can [sing](#) along to any music source by choosing a key that is appropriate for their vocal range, while maintaining the original tempo of the song. (There were some very old systems that used cassettes, and these changed the pitch by altering playback speed, but none are still on the market, and their commercial use is virtually nonexistent.)

A popular game using karaoke is to randomly type in a number and call up a song, which participants take a turn to try to sing as much as they can. In some machines, this game is pre-programmed and may be limited to a genre so that they cannot call up an obscure national anthem that none of them can sing. This game has come to be called "Kamikaze Karaoke" in some parts of the United States and Canada.

Many low-end entertainment systems (boom boxes etc) have a *karaoke mode* that attempts to remove the vocal track from general (non-karaoke) audio CDs. This is done by *center removal* which exploits the fact that in most music the vocals are in the center. This means that the voice, as part of the music, has equal volume on both stereo channels and no phase difference. To get the quasi-karaoke (mono) track the left channel of the original audio is subtracted from the right channel. The crudeness of that approach is reflected in the often poor performance of voice removal. Common effects are hearing the echo of the voice track (due to stereo echo being put on the vocals), and also other instruments that happen to be mixed into the center get removed (snare/bass drum, solo instruments), degrading this approach to hardly more than a gimmick in those devices.

## **MIDI applications and \*.kar files**

Some computer programs that serve a similar purpose to the standard karaoke machine have been developed that use MIDI instrumentation to generate the accompaniment rather than a recorded track. This has the advantage of making transposition technically trivial and also shrinks the information needed to provide the accompaniment to the point where it is easy to transfer them across the Internet, even over slow connections. The standard file format used is **\*.KAR**, which is an extension of the standard **.MID** MIDI disk format, and can be played unaltered by MIDI player software.

## **Video game**

A karaoke game was initially released for the Nintendo Famicom but its limited computing ability made for a short catalog of songs, and therefore reduced replay value. As a result, karaoke games were considered little more

than collector's items until games saw release in the higher-capacity DVD format. Karaoke Revolution, created for the PlayStation 2 by Konami and released in North America in 2003, is a console game in which a single player sings along with on-screen guidance, and receives a score based on his or her pitch, timing, and rhythm. The game soon spawned three more versions, Karaoke Revolution Vol. 2, Karaoke Revolution Vol. 3, and Karaoke Revolution Party Edition. While the original Karaoke Revolution was also eventually released for the Microsoft Xbox console in late 2004, the new online-enabled version included the ability to download additional song packs through the console's exclusive Xbox Live service.

A similar game, SingStar, published by Sony Computer Entertainment Europe, is particularly popular in the European and Australasian markets. Other similar titles in the rhythm-based game genre include Bemani's Dance Dance Revolution, Guitar Freaks, and Drum Mania.

### **Karaoke VCD**

The takeoff of Video CDs in East and Southeast Asia is partly due to the cheap but tolerable quality, and partly due to the popularity of karaoke. Many VCD players in Southeast Asia have built-in Karaoke function. If users disable the singer's voice and leave the music alone, they can play karaoke. In the past, there were only pop-song karaoke VCDs. Nowadays, different types of karaoke VCDs are available. Cantonese opera karaoke VCD is now a big hit among the elderly in Hong Kong.

### **Karaoke on mobile phones**

In 2003, several companies started offering a karaoke service on mobile phones, using a Java midlet which runs with a text file containing the words and a midi file with the music. This is still a budding service and it is unclear whether it will become popular; however, some Mobile Karaoke providers, such as Karaokini, have begun to achieve commercial success.

### **Karaoke on computers and internet**

Starting in 2003, much software has been released for hosting karaoke shows, and playing karaoke songs on a personal computer. Instead of having to carry around hundreds of CD-G's or LaserDiscs, a KJ can 'rip' their entire library onto a hard drive, and play the songs and lyrics from that.

Additionally, new software permits singers to sing and listen to one another over the Internet with collaborators/audience from all around the world.

## **Karaoke in automobiles**

Chinese automobile maker, Geely Automobile, received much press in 2003 for being the first to equip a car, their "Beauty Leopard", with a karaoke machine as standard equipment. Karaoke is often also found as a feature in aftermarket in-car DVD players.

## **Alternative playback devices**

The CD+G format of karaoke disc, which contains the lyrics on a specially encoded subcode track, has heretofore required special—and expensive—equipment to play it. Commercial players have come down in price, though, and some unexpected devices (including the Sega Saturn videogame console) can decode the graphics; in fact, karaoke machines, including video and sometimes recording capability, are often popular electronics items for sale in toy stores and electronics stores.

Additionally, there is software for Windows, Pocket PC, Linux, and Macintosh PC's that can decode and display karaoke song tracks, though usually these must be ripped off of the CD first, and possibly compressed. Recently, Karaoke software was also made available for mobile telephones, mainly in Asian countries.

In addition to CD+G and Software-based Karaoke, microphone-based Karaoke players enjoy popularity mainly in North America and some Asian countries such as the Philippines. Microphone-based Karaoke Players only need to be connected to a TV - and in some cases to a power outlet, in other cases they run on batteries. These devices often sport advanced features, such as pitch correction and special sound effects. Some companies offer Karaoke content for paid download to extend the song library in microphone-based Karaoke systems.

CD+G and Microphone-based Karaoke systems are typically also used at home. Recently, DVD Karaoke disks became the most popular medium for home-Karaoke in North America. This is due to the large amount of DVD Players in US Households which enables consumers to simply play a DVD rather than have to hook up new equipment.

## **Public places for karaoke**

In Asia, a **Karaoke box** (also called **KTV** or **Noraebang**) is the most popular type of karaoke venue. A karaoke box is a small or medium-sized room containing karaoke equipment for a group of friends to rent by timed

increments, providing for a more intimate and less public atmosphere. Generally, entire businesses provide karaoke as their primary function, although karaoke machines are sometimes included in hotel or other business facilities. "Going to karaoke" is considered a first step in *nanpa*.

A **karaoke bar / karaoke restaurant / karaoke club / karaoke lounge** is simply a bar or restaurant with karaoke equipment, so that people can sing publicly. This is the most common arrangement in North America and Europe. Many establishments offer karaoke on a weekly schedule, while some have shows every night. Such establishments commonly invest more in both equipment and song discs, and are often extremely popular, with an hour or more wait between a singer's opportunities to take the stage (called the 'rotation'). East Asian, North American and other Western karaoke arrangements are usually add-ons to an existing bar or social lounge. Most of these establishments allow patrons to sing for free, with the expectation that sufficient revenue will be made selling food and drink to the singers. Less commonly, the patron wishing to sing must pay a small fee for each song they sing.

In some traditional Chinese restaurants, there are so-called "mahjong-karaoke rooms" where the elderly can play mahjong and teenagers can enjoy karaoke. The result is fewer complaints about boredom but more noise.

Television's American Idol is essentially a national Karaoke contest

## Terms of karaoke

### Gian

A character ("Jaian" in romaji, ジャイアン) from Doraemon, known for his highly questionable singing ability. Thus someone who loves karaoke but can only sing completely out of tune, is referred as a *Gian*, pronounced like giant, but without the t sound on the end.

### Ohako (18th)

Some karaoke singers have one song which they are especially good at, and which they use to show off their singing abilities. It is called *Ohako* (Akj), meaning "18th", which refers to the 18 most popular kabuki plays. It is also used to mean being good at any entertainment such as dancing or playing an instrument. "Number 18" is slang in Korean and mildly obscene because going to karaoke was one of the few occasions where a male and a female could get

together in Korea. The term took hold in Korea during the Japanese colonial period when varieties of entertainment were introduced.

In Hong Kong, such a song is called a "banquet song" (òL).

### **KTV, Karaoke box, Noraebang**

A KTV, Karaoke box, or Noraebang (Korean for "song room") is a venue where small, private rooms can be rented for singing.

### **Sing K**

There is a new term originating from Hong Kong which refers to "going to a karaoke box"; karaoke is abbreviated as "K". This buzzword is now particularly prevalent in Chinese-speaking countries or regions like Hong Kong, Macau, Mainland China, Taiwan, and Singapore. In fact, there are other similar new terms, of which karaoke is identically shorted as a single "K", e.g.:

- The K King / The King of K: a man who is sophisticated in karaoke singing.
- The K Queen / The Queen of K: a woman who is sophisticated in karaoke singing.
- a K song: (1)similar to "Ohako" (see above); (2) a song which is designated for karaoke, particularly due to its easy-to-remember melody and smooth lyrics, which have a negative meaning.
- KTV: Karaoke Music Video.
- K lunch / K buffet: meals (buffet) served in karaoke boxes; people can sing songs while enjoying their food.
- K hours: going to a karaoke box in happy hours, usually with special discounts.
- K fun: karaoke discount coupons, or the act of going for karaoke

### **Bandoke**

Karaoke for musicians. All band's members may perform their part along the pre-recorded backing. There are at least 16 tracks of each song on a DVD, the full performance and tracks with variations of missing instruments or lead vocals. The first Bandoke DVD is Hits Of Iron Maiden, produced in Finland by KSF. For decades, Pocket Songs has made similar recordings with one missing instrument - the series is called "Music Minus One".

## Karaoke in fiction

Karaoke appears in a variety of fictional settings in Asia, often as a place young people gather for fun. The small size of a karaoke room makes for an intimate and simple setting.

## Karaoke in film

Karaoke has been depicted in movies and television shows. Examples include the 1996 comedy film *The Cable Guy*, and the 1997 Korean movie *No. 3*, a gangster comedy film, in which some of the characters are depicted drunk and singing off-key. A more recent example is *Lost in Translation*. *Rush Hour 2* includes a karaoke performance by Chris Tucker, where he upstages one of the tone-deaf locals, by singing Michael Jackson's *Don't Stop 'Til You Get Enough*. Karaoke is central to the 2000 movie *Duets*, which was reasonably well researched, and presents the topic in a fairly positive light. Karaoke is the central theme of *The Karaoke King*, an independent film scheduled for release in 2006.

Categories: [Singing](#)

## Kaval

The **kaval** [kaˈvɑl] is a chromatic [end-blown flute](#) traditionally played throughout Azerbaijan, Turkey, Bulgaria, Republic of Macedonia, Kosova / Albania (Kavall), northern Greece (Kavali or Dzhamara), southern Romania (Caval), Armenia (Blur) and Kurdish (Blul). The kaval is primarily associated with mountain shepherds throughout the Balkans and Anatolia and in the book "*KAVAl: Traditional Folk Melodies for Balkan & Anatolian Folk Flute*", author Pat MacSwyney suggests that the kaval was spread throughout these regions by Yoruk nomads who inhabited the Pindus, Shar, Pirin, Rhodope mountains of the southern European Balkan peninsula and the Taurus mountains of southern Turkey.

Unlike the transverse flute, the kaval is fully open at both ends, and is played by blowing on the sharpened edge of one end. The kaval has 8 playing holes (7 in front and 1 in the back for thumb) and usually 4 "devil's holes" down near the bottom of the kaval. The devil's holes are supposed to improve tone and intonation. There is a Bulgarian folk tale in which the devil tries to out-play a shepherd in a musical duel. While the shepherd is sleeping, the devil drilled holes in the shepherd's kaval but instead of ruining the kaval, this only served to enhance the shepherd's kaval playing thus thwarting the devil. While typically

made of wood, kavals are also made from *Arundo Donax* (Persian Reed), metal and plastic.

Categories: [End-blown flutes](#)

## Key

In [music theory](#), the **key** identifies the tonic triad, the [chord](#), major or minor, which represents the final point of rest for a piece, or the focal point of a section. Although the key of a piece may be named in the title (e.g. Symphony in C), or inferred from the key signature, the establishment of key is brought about via functional harmony, a sequence of chords leading to one or more cadences. A key may be major or minor; music in the Dorian, Phrygian, and so on are usually considered to be in a mode rather than a key. When a particular key is not being described in the English language, different key naming systems may be used.

Although many musicians confuse key with [scale](#), a *scale* is an ordered set of notes typically used in a key, while *key* is the center of gravity, established by particular [chord progressions](#).

The chords used within a key are generally drawn from the major or minor scale associated with the tonic triad, but may also include borrowed chords, altered chords, secondary dominants, and the like. All of these chords, however, are used in conventional patterns which serve to establish the primacy of the tonic triad.

Cadences are particularly important in the establishment of key. Even cadences which do not include the tonic triad, such as *half cadences* and *deceptive cadences*, serve to establish key because those chord sequences imply a unique [diatonic context](#).

Short pieces may stay in a single key throughout. A typical pattern for a simple [song](#) might be as follows: a phrase ends with a cadence on the tonic, a second phrase ends with a half cadence, then a final, longer, phrase ends with an authentic cadence on the tonic.

More elaborate pieces may establish the main key, then modulate to another key, or a series of keys, then back to the original key. In the Baroque it was common to repeat an entire phrase of music, called a *ritornello*, in each key once it was established. In Classical [sonata form](#), the second key was typically marked with a contrasting theme. Another key may be treated as a temporary tonic, called tonicization.

In [common practice period](#) compositions, and most of the Western popular music of the 20th century, pieces always begin and end in the same key, even if (as in some [Romantic-era](#) music) the key is deliberately left ambiguous at first. Some arrangements of popular songs, however, will shift up a half-step sometime during the song (often in a repeat of the final [chorus](#)) and thus will end in a different key.

## Instruments in a key

Certain [musical instruments](#) are sometimes said to play in a certain key, or have their music written in a certain key. Instruments which do not play in the key of C are known as [transposing instruments](#). The most common kind of [clarinet](#), for example, is said to play in the key of B flat. This means that a scale written in C major in [sheet music](#) will actually sound as a B flat major scale when played; that is, notes sound a whole tone lower than written. Likewise, the [horn](#), normally in the key of F, sounds notes a [perfect fifth](#) lower than written.

Similarly, some instruments may be said to be *built* in a certain key. For example, a [brass instrument](#) built in B flat will play a fundamental note of B flat, and will be able to play notes in the harmonic series starting on B flat without using valves, fingerholes, slides or otherwise altering the length of the vibrating column of air. An instrument built in a certain key will often, but not always, have its music written in the same key (see [trombone](#) for an exception). However, some instruments, such as the diatonic [harmonica](#), are in fact designed to play only one key at a time.

## The concept of Keys in composition and the effects thereof

In Western musical composition, the key of a song has important ramifications for its composition:

- As noted earlier, certain instruments are said to be designed for a certain key, as playing in that key can be physically easier or harder. Thus the choice of key can be an important one when composing for an orchestra, as one must take these elements into consideration.
- In the world of the professional clarinetist, for example, it is common to carry two instruments tuned a semitone apart (B-flat and A) to cope with the needs of composers. Even so, it is not unheard of for a piece published in B-flat to include notes a semitone (or more) below the range of the common B-flat clarinet. The piece must then be played on a more exotic instrument, or transposed by hand (or at sight) for the slightly larger 'A' clarinet. As a last resort, it is also not unheard of for a player to roll up a page of the score and insert it into the end of the instrument in order to lengthen it.

- Besides this though, the [timbre](#) of almost any instrument is not exactly the same for all notes played on that instrument. For this reason a song that might be in the key of C might sound or "feel" somewhat different (besides being in a different pitch) to an observer if it is transposed to the key of A. This effect is more pronounced on instruments like the piano where certain notes have more strings associated with them or a thicker string. However, it is observed that some musicians overstate this element, and in fact this is a joke in the movie *This Is Spinal Tap* where the guitarist, in response to a question about a particular piece, says that it is "in D minor which is the saddest of all keys, I find. People weep instantly when they hear it, and I don't know why."
- In addition, since many composers often utilized the piano while composing, the key chosen can possibly have an effect over the composing. This is because the physical fingering is different for each key, which may lend itself to choosing to play and thus eventually write certain notes or chord progressions compared to others, or this may be done on purpose to make the fingering more efficient if the final piece is intended for piano.

Categories: [Musical terminology](#).

## Keyboard instrument

A **keyboard instrument** is any musical instrument played using a musical keyboard. The most common of these is the [piano](#), which is used in nearly all forms of western music. Other widely used keyboard instruments include various types of [organs](#) as well as other mechanical, electromechanical and [electronic instruments](#). In common language, it is mostly used to refer to keyboard-style [synthesizers](#).

## History

Among the earliest keyboard instruments are the organ, the clavichord, and the harpsichord. The organ is doubtless the oldest of these, appearing in the 3rd century BC, although this early instrument--called hydraulis--did not use a keyboard in the modern sense. From its invention until the 14th century, the organ remained the only keyboard instrument. Often, the organ didn't feature a keyboard at all, rather buttons or large levers which were operated by a whole hand. Almost every keyboard until the 15th century had 7 naturals to each octave.

The clavichord and the harpsichord appeared during the 14th century, the clavichord probably being the earliest. During their development, a B-flat key was added to the keyboard in order to remedy the tritone between F and B, and

the other semitones were added later. The harpsichord and the clavichord were both very common until the widespread adoption of the [piano](#) in the 18th century, after which their popularity decreased. The piano was revolutionary because a pianist could vary the volume (or dynamics) of the sound by varying the vigor with which each key was struck. The piano's full name is "gravicembalo con piano e forte" meaning "harpsichord with soft and loud" but can be shortened to "piano-forte", which means "soft-loud" in Italian.

Keyboard instruments were further developed in the 20th century. Early electromechanical instruments, such as the Ondes Martenot appeared in the early in the century.

The earliest fully electronic keyboard instruments were [electronic organs](#) that used oscillators and frequency dividers, together with a network of filters, to produce waveforms.

Much effort went into finding an instrument which sounded like the piano but lacked its size and weight. The electric piano and electronic piano were early efforts that, while being useful instruments in their own right, were not successful in convincingly reproducing the [timbre](#) of the piano. Electric and electronic organs were developed during the same period.

Significant development of the [synthesizer](#) occurred in the 1960s and has continued ever since. The most notable early synthesizer is the [Moog synthesizer](#), which used analog circuitry. In time, digital synthesis became common.

Tape replay keyboards were invented in the 1940s and saw popularity in the late 1960s and 1970s. The most well known example is the Mellotron. These instruments became obsolete with the invention of [samplers](#), which replay digital samples at any pitch.

## List of keyboard instruments

### [Chordophones](#)

- Clavichord
- Electric piano
  - Clavinet
  - Pianet
  - Rhodes piano
  - Wurlitzer electric piano
- Harpsichord
- [Piano](#)
- Tangent piano

- Viola organista

## **Aerophones**

- [Accordion](#)
- [Concertina](#)
- [Harmonium](#)
- Melodeon
- [Organ](#)
  - [Pipe organ](#)
  - Reed organ

## **Idiophones**

- Carillon
- Celesta
- Glasschord
- Pianet
- Toy piano

## **Electrophones**

- Chamberlin
- Digital piano
- Electronic piano
- [Electronic organ](#)
  - Hammond organ
  - Farfisa
- [Music workstation](#)
- Ondes Martenot
- [Synthesizer](#)
  - [Moog synthesizer](#)
- [Sampler \(musical instrument\)](#)

Category: [Musical instruments](#)

**Khene**

The **khene** (also spelled "khaen", "kaen" and "khen"; Thai: A) is a mouth-organ whose pipes are connected with a small, hollowed-out wooden reservoir into which air is blown. It is a polyphonic instrument and hence is important to the history of music. Today associated with the Lao of Laos and Northeast Thailand, similar instruments date back to the bronze age of Southeast Asia. The Chinese adopted mouth organs at an early point, and the now-obsolete *yu* may have been similar in construction to the modern *khaen*. The Chinese today call their most widely used mouth organ *sheng*.

The most interesting characteristic of the khene is its [free reed](#), which is made of brass. It is related to Western free-reed instruments such as the [harmonium](#), [concertina](#), [accordion](#), [harmonica](#), and bandoneon, which were developed beginning in the 18th century from the Chinese *sheng*, a related instrument, a specimen of which had been carried to St. Petersburg, Russia.

The khene uses a pentatonic scale in one of two modes (*thang sun* and *thang yao*), each mode having three possible keys. It is played as a solo instrument, as part of an ensemble, or as an accompaniment to [mor lam](#).

In Thailand, one of the top virtuoso *khaen* soloists is the blind musician Sombat Simla. The khene has also attracted a few non-Asian performers, most notable of whom is the U.S. performer Christopher Adler (a professor at the University of San Diego), who also composes for the instrument.

## Tuning

It has seven tones per octave, with intervals similar to that of the Western diatonic scale: A-B-c-d-e-f-g.

[Music of the United States](#) - Music of Canada

The Kiowa are a Native American tribe. Their traditional [music](#) is strongly focused on [dancing](#), such as the Sun Dance (k'aw-tow), when the people gather to build a lodge out of cottonwood trees; courtship is a traditional part of k'aw-tow celebrations, and this facet is often reflected in the music. A dance called the Brush Dance commemorates these gatherings. Both of the Dances were very important to the Kiowas.

Kiowa music, one of the most heavily recorded American Indian musics, is part of the larger Southern Plains Indian music that is heavily influenced by the Omaha, often through the Ponca via the Omaha. The Kiowa adapted their flag song from the Arapaho, their memorial song and the dance bustle in the O-Ho-Mah Lodge warrior society from the Cheyenne. The Smithsonian Institute made recordings during the 1930s, '40s, and '50s that are close to 19th century music, while Indian House Records and Canyon Records began commercial recording in the '60s and '70s and Soundchief began recording in the '40s. (Carney and Foley 2003, p.287)

Much of Kiowa music is related to the warrior societies of the 20th century. The Kiowas significant contributions to world music include the maintenance of traditions such as the Black Leggings Society, the Oh-Ho-Mah Lodge, the Kiowa Gourd Clan, [Peyote songs](#), and sacred Kiowa hymns. (ibid, p.286)

Cornel Pewewardy (flautist and full blood Comanche/Kiowa) is a leading performer of Kiowa/Southern Plains music, including Kiowa Christian [hymns](#) which include prominent glissandos. (Broughton and Ellingham 2000, p.586)

## Korean music

**Korean music** includes both [folk](#) and [classical](#) styles from the countries of North and South Korea

### Folk Music

Korean [folk music](#) is varied and complex, but all forms maintain a set of rhythms and a loosely defined set of melodic modes.

### Pansori

Pansori is long vocal and percussive music played by one singer and one drummer. The lyrics tell one of five different stories, but is individualized by each performer, often with updated jokes and audience participation. One of the most famous p'ansori singers is Pak Tongjin.

### Nongak

Nongak is a rural form of [percussion](#) music, typically played by twenty to thirty performers. A smaller band version of nongak became very popular in Korea in the late 1970s, and some bands, like Samul Nori, even found some international success.

### Sanjo

Sanjo is entirely instrumental that shifts rhythms and melodic modes during the song. Instruments include the changgo drum set against a melodic instrument, such as the gayageum or ajaeng. Famous practitioners include Kim Chukp'a, Yi Saenggang and Hwang Byungki.

### Classical music

The fine range of Korean symphonic orchestras have been bolstered by notable performers, and soloists, as well as highly skilled orchestra directors.

Internationally known Korean composers of classical music include such notables as: Lee Soo-in, who specializes in music for children, and his famous ""Song of My Homeland".

Korean classical music can be divided into at least four types: courtly, aristocratic, scholarly, and religious.

## **Court music**

Modern orchestral Korean court music began its development with the beginning of the Choson Dynasty in 1392. It is now rare, except for government sponsored organizations like the National Center for the Korean Traditional Performing Arts.

There are three types of court music.

One is called aak, and is an imported form of Chinese ritual music, and another is a pure Korean form called hyangak; the last is a combination of Chinese and Korean influences, and is called tangak.

### **Aak**

Aak was brought to Korea in 1116, and very popular for a time before dying out. It was revived in 1430, based on a reconstruction of older melodies. The music is now highly specialized, and uses just two different surviving melodies, and is played only at certain very rare concerts, such as the Sacrifice to Confucius in Seoul.

### **Tangak**

Modern tangak, like aak, is rarely practiced. Only two short pieces are known; they are Springtime in Luoyang and Pacing the Void.

### **Hyangak**

By far the most extant form of Korean court music today, hyangak includes a sort of [oboe](#) called a piri and various kinds of [stringed instruments](#).

## **Aristocratic chamber music**

Originally designed for upper-class rulers, to be enjoyed informally, chongak is often entirely instrumental, usually an ensemble playing one of nine suites that are collectively called Yongsan hoesang. Vocals are mainly sung in a style called kagok, which is for mixed male and female singers and is accompanied by a variety of instruments.

## **Traditional music of Korea**

Korean music is based on Buddhist and native shamanistic beliefs. Buddhist and shamanistic dancing, and shamanistic drum music, are extant, as is a [melodic, jazzy dance music](#) called sinawi. Traditional Korean instruments can be broadly divided into three groups: string, wind and percussion instruments. The 12-string zither (gayageum) and geomungo (six-string plucked zither) are part of the string fold instruments. The haegum (two-string vertical fiddle) and the seven-string zither is part of the string T'ang. String court include seven-string zither and the 25-string zither. The daegum (large transverse flute), small flute, piri (cylindrical oboe) and grass flute are all called wind folk. Wind T'ang includes the Chinese oboe, vertical flute and hojok or taepyongso (conical oboe). The saenghwang (mouth organ), panpipes, hun (globular flute), flute with mouthpiece, danso (small-notch vertical flute), and flute are wind court instruments. Percussion folk instruments include large gong, small gong, folk drum, sound drum and folk hourglass drum. The clapper and the janggu (hourglass drum) are the percussion T'ang instruments. Percussion court includes the bronze bells, *pyeongyeong* (stone chimes), square wooden box with mallet and tiger-shaped wooden instrument.

## **Western Christian imported music**

With the importation of Christianity, the evangelical use of music for prosletizing has led to many choirs, both within and without churches, and the importation of many traditional American styles of Christian folksongs sung in Korean.

## **Modern world music**

Korean traditional instruments have been integrated into western percussion, and are beginning a new wave of Korean [world music](#) since 1998. Traditional instruments are amplified, and sampled, with traditional songs rescored for [new age](#) audiences.

## Krautrock

**Krautrock** is a generic name for the experimental bands who appeared in Germany in the early 1970s. It was originally a derogatory term coined by the British music press from the slang term "Kraut" (in use mostly during WWII), meaning "a German person" and taken from the traditional German dish of pickled cabbage, Sauerkraut. However, because much of the music produced by these bands has since come to be very highly regarded, the term "krautrock" can now generally be seen as an accolade rather than an insult. It must be noted that the term has not been in use for more than 30 years, indeed during the 1970s, the 1980s and the 1990s Kosmische musik, Elektronische musik, German electronic music and German prog rock were commonly used instead of krautrock.

Bands that typified the sound in the early 1970s included Tangerine Dream, Faust, Can and others associated with the celebrated Cologne-based producers and engineers Dieter Dierks and Conny Plank, such as Neu!, Kraftwerk and Cluster. Bands such as these were reacting against the post-WWII cultural vacuum in Germany and tending to reject Anglo-American popular culture in favour of creating their own more radical and experimental new German culture.

Mostly instrumental, the signature sound of krautrock mixed [rock music](#) and "rock band" instrumentation ([guitar](#), [bass](#), [drums](#)) with [electronic](#) instrumentation and textures, often with what would now be described as an [ambient music](#) sensibility. It also featured a pulsing rhythm section so steady that its practitioners dubbed it "*motorik*" -- a mongrel word meaning, roughly, "mechanical music."

By the end of the 1960s, the American and British counterculture and hippie movement had moved rock towards [psychedelia](#), [heavy metal](#), [progressive rock](#) and other styles, incorporating, for the first time in popular music, socially and politically incisive lyrics. The 1968 German student movement, French protests and Italian student movement had created a class of young, intellectual continental listeners, while nuclear weapons, pollution and war

inspired protests and activism. Music had taken a turn towards [electronic](#) avant-garde in the mid-1950s.

These factors all laid the scene for the explosion in what came to be termed *krautrock*, which arose at the first major German rock festival in 1968 in Essen. Like their American and British counterparts, German rock musicians played a kind of psychedelia. In contrast, however, there was no attempt to reproduce the effects of drugs, but rather an innovative fusion of psychedelia and the electronic avant-garde. That same year, 1968, saw the foundation of the Zodiak Free Arts Lab in Berlin by Hans-Joachim Roedelius, Klaus Schulze and Conrad Schnitzler, which further popularized the psychedelic-rock sound in the German mainstream.

Originally krautrock was a form of Free art, which meant that krautrock bands gave their records away for free at Free Art Fairs.

The next few years saw a wave of pioneering groups. In 1968, Can formed, adding [jazz](#) to the mix, while the following year saw Kluster (later Cluster) begin recording [keyboard](#)-based instrumental music with an emphasis on static drones. In 1971, the bands Tangerine Dream and Faust began using electronic synthesizers and advanced production techniques to make what they called kosmische musik. The band Ash Ra Tempel and the related Cosmic Jokers project also began experimenting with these new sounds.

In 1972, two albums incorporated European rock and electronic psychedelia with Asian sounds: Popol Vuh's *In Den Gaerten Pharaos* and Deuter's *Aum*. Meanwhile, kosmische musik saw the release of two double albums, Klaus Schulze's *Cyborg* and Tangerine Dream's *Zeit* (produced by Dieter Dierks), while a band called Neu! began to play highly rhythmic music. By the middle of the decade, one of the most well-known German bands, Kraftwerk, had released albums like *Autobahn* and *Radio-Activity*, which laid the foundation for [electro](#), [techno](#) and other styles later in the century.

The release of Tangerine Dream's *Phaedra* in 1974 marked a divergence of that group from krautrock to a more melodic sequencer-driven sound that was later termed Berlin School. In that same year Klaus Schulze delivered one more LP of pure krautrock (*Blackdance*) before pursuing a similar musical trajectory to Tangerine Dream.

By the late 1990s and early 2000s, with the resurgence of electronic music and a new generation rediscovering much of the early work of German music in that period, krautrock came to be considered a style in and of itself. Contemporary [post-rock](#) and [electronica](#) artists such as Stereolab, Laika, Boredoms, Mouse on Mars, Radiohead and Tortoise have often cited bands in the krautrock canon as being among their more significant influences; some of these bands have also performed covers of seminal krautrock works, such as Radiohead's cover of Can's *The Thief*.

Krautrock has also undoubtedly influenced other genres of rock - the band Wilco, for instance, shows a growing krautrock influence in their music,

specifically on Yankee Hotel Foxtrot and several songs on A Ghost is Born (especially Spiders (Kidsmoke)). In interviews Jeff Tweedy (the band's lead singer/songwriter/guitarist) has often mentioned his admiration for bands such as Can and Neu!

Julian Cope, the *Arch-Drude* has always cited a massive krautrock influence, even going as far as to write a book on the subject.

## Kwaito

**Kwaito** is a [music genre](#) that emerged in Johannesburg, South Africa in the early 1990s. It is based on [house music](#) beats, but typically at a slower tempo

and containing melodic and percussive African samples which are looped, deep basslines and often vocals, generally male, shouted or chanted rather than sung or rapped. The name Kwaito is derived from the Afrikaans slang word *Kwaai*, meaning "cool" or "mean".

Kwaito's lyrics are usually in indigenous South African languages or in English, although several languages can be found in the same song. More recently, Kwaito artists like Zola have [rapped](#) their lyrics in a [hip-hop](#) style, while others such as BOP and Oskido have sped up their beats and toned down the male chants to create a softer form of Kwaito or African house. Other prominent kwaito artists include Arthur, Zola, Mandoza and Mzekezeke.

## History

House music arrived in Cape Town in the early 1990s at raves like the World Peace Party and in clubs like Eden, Uforia and DV8. This spread northward where, in the mid 1990s, Chicago house was becoming a popular genre in Johannesburg clubs, and local artists fused its sound with that of South African music. Arthur Mafokate, Makhjendlasi (Arthur's brother), Oskido and Mdu Masilela were the first artists to produce a huge Kwaito hit and popularise it in and outside the black townships with his track Kaffir. However, it is only after 2001 that Kwaito artists and music have found their way to Europe and the United States.

As Kwaito became increasingly mainstream in South Africa, collaborations, such as that between South African [R&B](#) artists Danny K and Mandoza, have become more common. Kwaito hits often attract a bit of media attention, as Arthur's August 2005 release "Sika Lekhekhe" (a Zulu phrase literally meaning "Cut the cake" and figuratively "Have sex with me") did. The song was banned by a SABC radio station and Arthur had to reshoot the video after several complaints from viewers offended by its sexually suggestive content. Similarly, kwaito band Boom Shaka was widely criticised by the political establishment for its rendition of the national anthem to a kwaito beat.

The kwaito industry is growing fast and there is more competition between the kwaito stars, old and new. Popular artists include Zola, Mandoza, Mzekezeke, Brown Dash, Mahoota, Spikir, Mzambiya, Chippa, Msawawa, Mshoza, Thembi Seite, Thandiswa Mazwayi, Unathi and the late African [pop](#) and kwaito star Branda Fassie.

TS, Ghetto Ruff, Kalawa Jazz Me and Bulldogs are the main recording companies that have discovered kwaito musicians. Jam Alley is a South African talent show that has been a venue for many young kwaito artists like Mandoza, Mzambiya, Zola as well as other pop stars. Some kwaito artists have even

transcended a musical career. Zola, for instance, now hosts a talk show called "Zola 7" on SABC1.

For now, kwaito's appeal remains largely a South African phenomenon and it has not yet generated the kind of interest that other South African musicians have created for the country's music in the rest of the world.

[Music of the United States](#) - **Music of Canada**

The Kwakiutl are an Aboriginal people in Canada. Their [folk music](#) is primarily religious and ritual, and is based around percussive instrumentation, especially rattles and whistles. The four-day Klasila festival was an important cultural display of song and dance; it occurs just before the advent of the tsetseka, or winter.

Categories: [American Indian music](#)

## Lai

A **Lai** was a song form composed in northern Europe, mainly France and Germany, from the 13th to the late 14th century.

The poetic form of the lai usually has several stanzas, none of which have the same form. As a result, the accompanying [music](#) consists of sections which do not repeat. This distinguishes the lai from other common types of musically important verse of the period (for example, the rondeau and the [ballade](#)). Towards the end of its development in the 14th century, some lais repeat stanzas, but usually only in the longer examples. There is one very late

example of a lai, written to mourn the defeat of the French at the Battle of Agincourt (1415), (*Lay de la guerre*, by Pierre de Nesson) but no music for it survives.

There are four lais in the *Roman de Fauvel*, all of them anonymous. The lai reached its highest level of development as a musical and poetic form in the work of Guillaume de Machaut; 19 separate lais by this 14th-century [ars nova](#) composer survive, and they are among his most sophisticated and highly-developed secular compositions.

Other terms for the lai, or for forms which were very similar to the lai, include the *descort* (Provençal) and the *leich* (German).

## Composers of lais

Aimeric de Peguilhan  
Guilhem Augier Novella  
Charles d'Anjou  
Tannhäuser  
Gautier de Coinci  
Gautier de Dargies  
Guillaume li Vinier  
Adam de Givenchi  
Thomas Herier  
Guillaume de Machaut  
Philippe de Vitry (uncertain; works attributed to him may be anonymous)  
Marie de France

## Lamellaphone

**Lamellaphone** describes any of a family of [musical instruments](#). The name comes from the Latin root "lamella" for "plate", and the Greek root "phone" for "sound". The name derives from the way the sound is produced: the instrument has a series of thin plates, or "tongues", each of which is fixed at one end and

has the other end free. When the musician depresses the free end of a plate with a finger, and then allows the finger to slip off, the released plate vibrates. A tongue may be plucked either from the top or from the bottom.

Lamellaphones are a category of plucked [idiophones](#); included in this category are the African "thumb-pianos" described below, as well as the various forms of Jew's Harp and the European mechanical music box.

A large number of lamellaphones originate in Africa, where they are known under the names sanza, kisanji, likembe, mbira, mbila, and kalimba. They were reported as early as in the 16th century, but there is no doubt they have a much longer history. The Caribbean marimbula is also of this family.

The tongues may be arranged in the manner of a [piano](#) and may be made small enough to play with individual fingers, hence the colloquial name "thumb piano".

Some conjecture that African lamellaphones were derived from [xylophones](#) and marimbas. However, similar instruments have been found elsewhere; for example, the indigenous peoples of Siberia know primitive wooden and metallic lamellaphones with a single tongue.

Lamellaphones may be made with or without resonators.

Categories: [Musical instruments](#)

## Lament

A **lament** or **dirge** is a [song](#) or poem expressing grief or regret. Many of the oldest and most lasting poems in human history have been laments. Laments are present in both the Iliad and the Odyssey, in the Hindu Vedas, and in ancient Near Eastern religious texts, including the Mesopotamian city laments such as the Lament for Ur and the Jewish Tanakh (or Old Testament).

In the traditional music of Scotland, a lament is also a genre of musical composition for the bagpipes. In Scots Gaelic, these pieces are often called piobaireachd or pibroch (an Anglicised spelling representing the pronunciation). In form, these slow pieces are a theme and variations, beginning with a slow air (called the urlar) which is played with variations and embellishments; the simple melody returns to finish the piece. These pieces are usually named after a person; traditionally, the person for whom they were composed was a warrior slain in battle.

## Language of the birds

A **language of the birds**, a mystical, perfect or divine language, or a mythical or magical language used by birds to communicate with the initiated, is postulated in mythology, medieval literature and occultism.

## History

Birds played an important role in Indo-European religion, used for divination by augurs, and according to a suggestion by Walter Burkert, these customs may have their roots in the Paleolithic when during the Ice Age, early humans used to look for carrion by observing birds.

From the [Renaissance](#), it was the inspiration for some magical a priori languages, in particular musical languages. Whistled languages based or constructed on or articulated natural languages used in some cultures are sometimes also referred to, and compared with, the language of the birds.

## Mythology

According to Apollonius Rhodius, the figurehead of Jason's ship, the Argo, was built of oak from the sacred grove at Dodona and could speak the language of birds. The language of birds in Greek mythology may be attained by magical means. Democritus, Anaximander, Apollonius of Tyana, Tiresias, Melampus and Aesopus were all said to have understood the birds.

In Celtic mythology, birds usually represent prophetic knowledge or bloodshed (especially crows). Morrigan adopted the shape of a bird to warn the Brown Bull. Echoing stories of the Edda and the Mabinogion, Richard Wagner's Siegfried understands the birds after he tasted Fafner's blood.

## Folklore

The concept is also known from many folk tales (including Welsh, Russian, German, Estonian, Greek), where usually the protagonist is granted the gift of understanding the language of the birds either by some magical transformation, or as a reward for some good deed by the king of birds. The birds then inform or warn the hero about some danger or hidden treasure.

## Religion

In Sufism, the language of birds is a mystical language of angels. The Conference of the Birds (mantiq at-tair) is a mystical poem of 4647 verses by the 12th century Persian poet Farid ud-Din Attar .

Francis of Assisi is said to have preached to the birds.

In the Talmud (Louis Ginzberg, Legends of the Bible, 1909), Solomon's proverbial wisdom was due to his being granted understanding of the language of birds by God.

## Alchemy

In Kabbalah, Renaissance magic, and alchemy, the language of the birds was considered a secret and perfect language and the key to perfect knowledge, sometimes also called the *langue verte*, or green language (Jean Julien Fulcanelli, Heinrich Cornelius Agrippa *de occulta philosophia*).

## Culture

In medieval France, the language of the birds (*la langue des oiseaux*) was a secret language of the Troubadours, connected with the Tarot, allegedly based on puns and symbolism drawn from homophony, e. g. an inn called *au lion d'or* "the Golden Lion" is allegedly "code" for *au lit on dort* "in the bed one sleeps" [2] (note that this particular pun cannot be medieval, since final t was pronounced until Middle French, c.f. e.g. the 14th century loanword *bonnet*).

Compare also the rather comical and satirical *Birds of Aristophanes* and *Parliament of Fowls* by Chaucer.

"The language of the birds" (*Die Sprache der Vögel*) is a 1991 German movie. Jean Sibelius composed a wedding march titled "The language of the birds" in 1911.

## Science

Recent research into bird song has revealed a certain amount of combinatorial phonology, an aspect shared with human languages.

## Latin house

**Latin house** is an electronic dance music subgenre that mixes together [house](#) and [Latin American music](#), such as that of Brazilian, Cuban and Colombian origin.

## Origins

In the second half of the eighties, some the pioneers of house music of Latin-American descent gave birth to this genre by releasing house records in Spanish. Early examples include "Amor puertorriqueño" by Raz on DJ International and "Break 4 Love" by Raze is another excellent record (not be mistaken with the former in spite of the similar name). However, the undisputed queen without a crown back then was the American-Puerto Rican singer Liz Torres, who released Spanish versions of her songs "Can't Get Enough", "Mama's Boy" and "Payback Is A Bitch".

In the late eighties and early nineties other records are released. Some examples? DFC's "Sueño latino" by Sueño Latino (produced by Andrea Gemolotto) and "Hazme soñar" by Morenas. Mr. Marvin remixes "Love Me Or Leave Me" by Armante. Besides, other productions like Johanna's "El Freak" and Sandee's "Notice Me" become international hits.

## 1990s

In the nineties a new generation of producers and labels breaks into the market. Nervous Records releases "Quiero Saber" by the Latin Kings, produced by the Masters at Work. Other interesting records on this label are "Utopia" by Shades of Sound, "Everything's All Right" by Arts of Rhythm and "Philly The Blunt" by Trinidad. Strictly Rhythm employs producer Armand van Helden, who releases a great EP "Pirates of The Caribbean Vol. III". Also, on

the same label DJ Dero's "Sube", The Tribe's "Go-san-do", R.A.W.'s "Asuca" produced by Erick Morillo, Rare Arts' "Boricua Posse", Escandalo's "Mas Buena" and Fiasco's "Las Mujeres" produced by Norty Cotto, Latin Kaos' "El Bandolero" and last but not least "Muevete Mama" and "Sugar Cane" by Afro-Cube.

During the same period (1991 -1992) Chicago-native Pizarro produces great tunes like "The Five Tones", "New Perspective EP", "Plastica", "Caliente" and "Perdoname". Other producers like Ralphie Rosario and the Masters at Work do not forget their roots and now and then create unforgettable Latin house classics, for instance Ralphie's production "Da-Me-Lo" and his remix of Albita's "No se parece a nada" as well as "Sul Chu Cha" by Rosabel, while Louie Vega and Kenny Gonzales remix "Sume Sigh Say" by House of Gypsies.

In the meantime hybrid experiments are put on the market by the likes of New York's Proyecto Uno, who combine house and merengue in their LPs "Todo el mundo" and "In Da House". Their female counterpart is Lisa M from Puerto Rico, a hot tempered woman who can be heard on the "No lo derrumbes" and "Flavor of the Latin" albums. Besides, another merengue-house record worth of mention is "Así mamacita" by Henry Rivera on Los Angeles Aqua Boogie. Duo Sandy & Papo releases two great LPs "Sandy & Papo" and "Otra Vez".

During the mid-nineties Cutting breaks into the Latin house scene and becomes the most representative label of this genre and Cutting's DJ Norty Cotto becomes the most representative producer of Latin house. Among the various hits are 2 In A Room's "Las Mujeres", "Carnival" and "Dar la vuelta", Fun City's "Padentro" and "Baila", Sancocho's "Tumba la Casa", "Alcen las manos" and "Que siga el party" (LP) and Los Compadres' "La Rumba". The Wepaman is often featured on these productions and his unforgettable voice invites you to party. Norty Cotto's mixed compilations become classics. Last but not least, we must not forget Fulanito and their LP "El hombre mas famoso de la tierra", a good combination of house and Latin-American rhythms.

## **Latin house DJ's and producers**

- Cae Davis | Addys D'Mercedes ( Spain | Germany | Cuba )

## Latin jazz

**Latin jazz** is the general term given to music that combines rhythms from African and Latin American countries with jazz harmonies from the United States.

The two main categories of Latin Jazz are Brazilian and Afro-Cuban.

- Brazilian Latin Jazz includes bossa nova and samba.
- Afro-Cuban Latin Jazz includes salsa, merengue, songo, son, [mambo](#), bolero, charanga and cha cha cha.

Latin Jazz originated in the late 1940s when Dizzy Gillespie and Stan Kenton began to combine the rhythm section and structure of Afro-Cuban music, exemplified by Machito and his Afro-Cubans, with jazz instruments and solo improvisational ideas. Stan Kenton released an arrangement of the Afro-Cuban tune The Peanut Vendor, which is considered by many to be the first authentic Latin Jazz recording.

In 1947, Dizzy Gillespie collaborated with Machito conga player Chano Pozo to perform the "Afro-Cuban Drums Suite" at Carnegie Hall. This concert brought Latin-Jazz into mainstream awareness, and Pozo remained in Gillespie's band to produce "Cubana Be, Cubana Bop".

In comparison to American Jazz, Latin Jazz employs straight rhythm, rather than swung rhythm. Latin Jazz rarely employs a backbeat, using a form of the clave instead. The [conga](#), timbale, güiro, and claves are percussion instruments which often contribute to a Latin sound.

Samba originates from nineteenth century Afro-Brazilian music such as the Lundu. It employs a modified form of the clave. Bossa Nova is a hybrid music based on Samba's rhythm but influenced by European and American music from Debussy to US jazz. Bossa Nova originated in the 1960s, largely from the efforts of Brazillians Antonio Carlos Jobim, João Gilberto, and American Stan Getz. Its most famous song is arguably The Girl from Ipanema sung by Gilberto and his wife, Astrud Gilberto.

Latin jazz music, like most types of jazz music, can be played in small or large groups. Small groups, or combos, often use the [Be-bop](#) format made popular in the 1950s in America, where the musicians play a standard melody, many of the musicians play an improvised solo, and then everyone plays the melody again. In Latin jazz bands, percussion often takes a center stage during a solo, and a [conga](#) or timbale can add a melodic line to any performance.

## Latin music in the United States

**Latin music** has long influenced American popular music, [jazz](#), [rhythm and blues](#), [rock](#) and even [country music](#). For an early example (1914), the bridge to "Saint Louis Blues"--"Saint Louie woman, with her diamond rings"--has a habanera beat, prompting Jelly Roll Morton to comment, "You've got to have that Spanish tinge." Many an American band has added a [conga](#) player, maracas, or other Latin [percussion](#) for just that reason.

The Argentine tango was a worldwide success in the 1930s. Tango dancers and records could be found from Los Angeles to Beijing.

In more recent times, artists such as Carmen Miranda, Desi Arnaz, Xavier Cugat, and Pérez Prado ("The Mambo King") were popular with audiences of all cultures. Judy Garland's first hit, as a member of the "Gumm Sisters", was "La Cucaracha", right down to the line about marijuana.

It was common in dance halls in the 30s and 40s for a Latin orchestra, such as that of Vincent Lopez, to alternate with a [big band](#) because dancers insisted on it. Latin music was extremely popular with dancers, not only the samba, paso doble, rumba, and [mambo](#), but even the [conga](#). In the 50s, Perez Prado made the Cha-cha-cha famous, and the Afro-Cuban jazz of Dizzy Gillespie opened many ears to the harmonic, melodic, and rhythmic possibilities of Latin music and is still influential in salsa.

The "Spanish tinge" was also a common feature of [rhythm and blues](#) in the 50s. The monster hit "Little Darling" was driven by the clave beat and Chuck Berry's "Havana Moon" was a great success. Richie Valens, born Ricardo Valenzuela, blew the roof off the hit parade with "La Bamba", originally a Mexican wedding song.

Likewise, Tex-Mex and Tejano style featured the conjunto sound, resulting in such important music as "Tequila" by The Champs, "96 Tears" by Question Mark and the Mysterians, Sam the Sham & the Pharaohs, Thee Midniters, and the many combinations led by Doug Sahm, including the Sir Douglas Quintet and the Texas Tornados. The Texas Tornados featured Freddy Fender, who brought Latin soul to country music. And the Tornados' Flaco Jiménez is a genuine conjunto hero, a third-generation accordionist whose grandfather learned the instrument from German settlers in Texas. Johnny Rodriguez is another Latin country star.

In the modern [rock and roll](#) era, Carlos Santana featured a full-blown Latin approach. Joe King Carrasco y las Coronas play [punk rock](#) Tex-Mex style. See also rock en español.

During the second part of the decade of the 1990s, Latin music exploded into the mainstream thanks to popular artists like Ricky Martin, Christina Aguilera and Jennifer Lopez. While Latin music has been popular for many years, its current popularity in the mainstream may have come only after the untimely death of the popular Tex Mex singer Selena. Many attribute Jennifer Lopez's discovery as a talented actress and artist as a result of her title role as Selena in the biographical movie of the same name. Selena was murdered by her fan-club president.

## **Present day Latin music**

Nowadays, Latin music encompasses a broad spectrum of sounds, artists, genres, and tastes--from Rock en español (with groups like Mana and artists like Shakira) to new Latin hip-hop artists like J Lo (otherwise known as Jennifer Lopez) and Big Pun, to banda music played in Los Angeles, to salsa and merengue crossover artists such as Marc Anthony. Another important Latin American singer is Pilar Montenegro. Major record companies have branches specialized in the Spanish American market.

## Latin percussion

The term **Latin percussion** refers to any number of a large family of musical percussion instruments used in Latin music, which in turn is a very loosely related group of musical styles, mainly from the Latin American region, and ultimately having roots or influences in African tribal music.

That definition is good enough for many people, and is true so far as it goes, but before getting into details, it should be pointed out that Latin music can be, and indeed, is, played on any number of instruments, percussion and otherwise. This is an extremely percussive style of music, and many [percussion instruments](#) used in the styles roughly known as Latin music cross into different categories.

### Particular instruments

Again, though many different instruments can be used in Latin American music (and, in fact, often whole percussion sections are occasionally supplemented or even replaced by a [Drum Kit](#), for the purposes of getting a more [rock](#), [pop](#), or [jazz](#) sound, or for financial or other constraints), there are a number of instruments that are typically and particularly meant for Latin music.

A "typical" percussion section would be hard, if not impossible, to define, but a more or less full sound can be obtained with [congas](#), bongos, timbales, maracas, guiros, gourds, shakers, and cowbells. In large ensembles, it is not unusual to find a different percussionist responsible for each individual instrument. More often in modern times, though, two, three or four musicians will split the duties of all instruments, with, perhaps, a designated congalerero, bongocerero, and/or timbalero.

## Latin rap

**Latin rap** is not a homogeneous musical style but rather a term that covers all [hip hop music](#) recorded by Latinos, as in Chicano Rap, Hip Hop Latino, and Hip Hop en español.

### Spanglish Rap

The first bilingual ("Spanglish") rappers were a group from Bronx, New York by the name of Mean Machine. They put out the very first bilingual rap song in 1981 on Sugarhill Records. The record was called "Disco Dream". The emcees

were Mr. Schick, DJ Julio, Mr. Nice, and Jimmy Mac. Nuyorican DJ and producer Tony Touch also mentions (in an interview on blackmagazine.it) the track "Spanglish" by Spanish Fly & The Terrible 2, which came out in the same year on Enjoy Records. Other early Puerto Rican rap pioneers from NY include Rubie Dee and Prince Whipper Whip of the Fantastic Five, DJ Charlie Chase of the Cold Crush Brothers, Master OC and Devastating Tito of the Fearless Four.

## **Latin Rap on the West Coast**

In the late 1980's and early 1990's, most Latin Rap came from the West Coast of the United States. Cuban-American artist Mellow Man Ace was the first Latino artist to have a major bilingual single attached to his 1989 debut. Mellow Man, referred to as the "Godfather of Latin Rap" and a Hip Hop Hall of Fame inductee, brought mainstream attention to Spanglish rhyming with his platinum single "Mentiroso". A year later, fellow West Coast artist Kid Frost further brought Latinos to the rap forefront with his single "La Raza." Cypress Hill, of which Mellow Man Ace was a member before going solo, would become the first Latino rap group to reach platinum status one year after Kid Frost's debut. The group has since continued to release other gold and platinum albums. Ecuadorian born rapper Gerardo received heavy rotation on video and radio for his single "Rico, Suave", while commercially watered-down, the album enjoyed a status of being one of the first mainstream Spanglish CDs on the market.

## **East Coast Latin Rap**

On the East Coast, Latin artists such as the The Beatnuts emerged in the early 90's, with New Jersey native Chino XL earning recognition for his lyricism and equal controversy for his subject matter. In the late 90's, Puerto Rican rapper Big Pun became the first Latino solo artist to reach platinum sales for an LP with his debut album Capital Punishment. Other Latin artists on the East Coast would follow and receive a great deal of support from Latino consumers including rappers such as Cuban Link and Immortal Technique.

## **Southwest and Chicano Rap**

Latin Rap (as well as its subgenre of Chicano Rap) has thrived along the West Coast, Southwest and Midwestern states with little promotion due to the large Latino populations of those regions. Texas artists such as Chingo Bling,

Baby Bash, South Park Mexican and Juan Gotti have enjoyed steady sales and have headlined a number of successful Southwest tours. San Diego artist Lil Rob opened doors for Chicano Rap by receiving mainstream attention for his single "Summer Nights", and artists Sinful of the Mexicanz and Kemo the Blaxican have continued to improve the popularity of Spanglish Rap on the West Coast.

## Urban Regional

In recent years the term "Urban Regional" was coined to refer to Spanish rap performed over beats infused with the sounds and melodies from popular Latin music styles such as Banda, Norteno and Cumbia. Rappers such as Akwid, Flakiss, Crooked Stilo and David Rolas are among the most popular urban regional Latin rap artists today.

## Reggaeton Movement

In Panama and Puerto Rico a new style was created, inspired by hip hop: Reggaeton. While Puerto Rican rappers from the US like Big Pun made their mark in the American industry of hip hop, hip hop was merged with Caribbean music, electronic styles and raggamuffin into a new style in many Latin American countries. Popular reggaeton rappers include Tego Calderon, Daddy Yankee, Voltio, and Don Omar.

## Rap Overseas

Latin Rap has been a hit specially in countries with a large number of migrators to the United States. In Puerto Rico, for example, where many of its residents have moved to New York, Miami and Chicago, Illinois over the years, Latin rap was jumpstarted by a wave of singers that included Ruben DJ and Vico C. Ruben DJ's hit, *La Escuela*, (*The School*) and Vico C's hit, *La Recta Final*, (*The way to the End*) received considerable radio time during the late 1980s.

It should also be noted that a number of [East Coast rappers](#) usually identified as African American have Latin ancestry as well, usually from the Dominican Republic or Puerto Rico. This list includes Noreaga (N.O.R.E.), Lloyd Banks, Kane & Abel, Joe Budden, AZ, Juelz Santana, and Fabolous.

## Laude

**Laude** (singular: *lauda*, or *lauda spirituale*) is the most important form of vernacular sacred [song](#) in Italy in the late [medieval](#) era and [Renaissance](#). It remained popular into the nineteenth century.

Originally, the *lauda* was a [monophonic](#) (single-voice) form, but a polyphonic type developed in the early fifteenth century. The early *lauda* was probably influenced by the music of the [troubadors](#), since it shows similarities in rhythm, melodic style, and especially notation. Many troubadors had fled their original homelands, such as Provence, during the Albigensian Crusade in the early 13th century, and settled in northern Italy where their music was influential in the development of the Italian secular style.

A monophonic form of the *lauda* spread widely throughout Europe during the 13th and 14th centuries as the music of the flagellants; this form was known as the Geisslerlieder, and picked up the vernacular language in each country it affected, including Germany, Poland, England and Scandinavia.

After 1480 the singing of *laude* was extremely popular in Florence, since the monk Savonarola (and others) had prohibited the dissemination of any other style of sacred vernacular music. Many of Josquin's [motets](#) and [masses](#) are based on melodies he heard in *laude* during his sojourns in Italy around this time.

*Laude* had a resurgence of popularity again at the time of the Counter-Reformation, since one of the musical goals of the Council of Trent was to increase the intelligibility of text, and the simple, easily understood *laude* provided an ideal example.

The *lauda* declined in importance with the development of the [oratorio](#).

## Learning music by ear

**Learning music by ear** is done by repeatedly listening to other [musicians](#) and then attempting to recreate what one hears. This is how people learn [music](#) in any musical tradition in which there is no complete [musical notation](#). Many people in cultures which do have notation still learn by ear, and [ear training](#) is common practice among those who use notation extensively.

In the West learning by ear is associated with traditional and [folk music](#), but many [classical](#) music forms throughout the world lack notation, and have therefore been passed from generation to generation by ear.

The Suzuki method of teaching music focuses on playing by ear from a very young age. In his book "Teaching from the Balance Point," Edward Kreitman, a US based Suzuki Teacher, clearly distinguishes "learning by ear" as a separate, completely different process from "learning by rote".

## Leitmotif

A **leitmotif** (also spelled **leitmotiv**) is a recurring [musical theme](#), associated within a particular piece of music with a particular person, place or idea. The

word has also been used—by extension—to mean any sort of recurring theme, whether in music, literature, or the life of a fictional character or a real person.

Although usually a short [melody](#), it can also be a [chord progression](#) or even a simple [rhythm](#). Leitmotifs can help to bind a work together into a coherent whole, and also enable the composer to relate a story without the use of words, or to add an extra level to an already present story.

The word is usually used when talking about dramatic works, especially [operas](#), although leitmotifs are also used in other musical genres, such as instrumental pieces, cinema or video game music.

The word itself has a mixed etymology as the German word Motiv is borrowed from the French motif, meaning motive or theme. Prefixing it with Leit- (coming from German leiten, to lead), produces Leitmotiv (German plural Leitmotive), meaning "**leading motif**".

## Usage in classical music

Carl Maria von Weber was probably the first composer to make extensive use of leitmotifs. Indeed, the first use of the word "leitmotiv" in print was by the critic F. W. Jähns whilst describing Weber's work, although this was not until 1871.

Beethoven made inventive use of a harmonic leitmotif in his late string quartets. The motif—which consists of a melody descending in pitch by a semitone, a minor third and another semitone—can be most easily heard in the final movement of his String Quartet in C-sharp minor, but also inverted in the Große Fuge and the opening of the String Quartet in A minor. Curiously, Beethoven's first usage of this motif appears as the opening statement in one of his pre-Quartet experiments, the String Trio in C minor. Beethoven also employed **motto themes**. For example, in his Fifth Symphony, a particular melody is said to be representative of "fate", after a critic famously described the recurring musical phrase as "The sound of fate knocking on the door".

The idea of the **idée fixe** was coined by Hector Berlioz in reference to his Symphonie Fantastique, a purely instrumental work that has a recurring melody representing the love of the central characters.

It is Richard Wagner, however, who is the composer most often associated with leitmotifs, and his operas make liberal use of them. His cycle of four operas, Der Ring des Nibelungen, uses dozens of leitmotifs, representing characters, things, or situations; while some of these leitmotifs occur in only one of the operas, many occur throughout the entire cycle. Wagner used the word "Grundthema" (basic idea) when speaking about his leitmotifs, although the first use of the term with reference to Wagner's music was in 1887 by H.

von Wolzogen, the editor of the *Bayreuther Blätter*, in discussing *Götterdämmerung*.

Since Wagner, the use of leitmotifs has been taken up by many other [composers](#). Richard Strauss used the device in many of his operas and several of his [symphonic poems](#). The Russian composer Sergei Prokofiev made heavy use of leitmotifs in his work Peter and the Wolf, a musical story with narration; in it, each character is represented by a specific instrument in the orchestra, as well as an associated melodic theme.

## Movie scores

Leitmotifs are very common in movie scores; a well known example is the Star Wars Imperial March associated with Darth Vader and his previous self, Anakin Skywalker, in the Star Wars series of films composed by John Williams. Themes for the characters Luke Skywalker, Leia Organa, Emperor Palpatine, and Yoda also recur throughout the movies. John Williams also composed music for the Indiana Jones films that uses a very memorable Leitmotif.

The work of Howard Shore in his Lord of the Rings scores includes extensive use of leitmotifs which occur throughout the length of the three films. The themes represent different characters, cultures, and places. Some film critics have made connections (if only by name) between Shore's work on Lord of the Rings and Wagner's monumental *Ring* operas.

In the James Bond films, the James Bond Theme music is heard during action sequences. Among Westerns, perhaps the most famous film to make use of leitmotifs is Sergio Leone's Once Upon a Time in the West. The television soap opera Dynasty also used musical themes for each character, as did the action cartoon Batman: The Animated Series. Angelo Badalamenti wrote possibly the most famous television example, Laura Palmer's Theme on Twin Peaks.

## Popular music

Perhaps the first extensive use of leitmotifs in rock music is found in Tommy, the "rock opera" performed by The Who and written, for the most part, by the band's principal songwriter Pete Townshend in 1969. Townshend intentionally used four leitmotifs in The Who's 1973 rock opera Quadrophenia to represent the four personalities of the album's fictional protagonist, Jimmy Cooper, a British youth with a multiple personality disorder. The four leitmotifs are also meant to represent the four members of The Who.

Trent Reznor of Nine Inch Nails uses a leitmotif on the album *The Downward Spiral*. The motif is a downward chromatic scale followed by Eb x2, D, F, F (down one octave from previous F). The motif is used at the end of *Closer*, the high point of the album, and foreshadows the death of the protagonist by the album's end, "Hurt." The motif makes a brief appearance in *Every Day is Exactly the Same* off of *With Teeth*.

The Japanese composer Nobuo Uematsu used leitmotifs in many of his *Final Fantasy* RPG series soundtracks, where many characters in the games had their own recognisable musical "theme".

The American progressive metal band *Symphony X* used leitmotifs extensively in their concept album, *V: The New Mythology Suite*.

The [progressive rock](#) band *dredg* named their first album *Leitmotif*, and, as the title suggest, leitmotifs are used extensively throughout the album.

## Les Six

**Les Six** is a name, inspired by *The Five*, given in 1920 by critic Henri Collet to a group of six composers working in Montparnasse whose music is often seen as a reaction against Wagnerism and [Impressionism](#).

## Members

Formally the *Groupe des Six* members were:

Georges Auric (1899–1983)

Louis Durey (1888–1979)

Arthur Honegger (1892–1955)

Darius Milhaud (1892–1974)

Francis Poulenc (1899–1963)

Germaine Tailleferre (1892–1983)

Many more were involved, notably Erik Satie, Jean Cocteau and Jean Wiéner.

## Prelude: *Les Nouveaux Jeunes*

In 1917, when many theatres and concert halls were closed because of the war, Blaise Cendrars and the painter Moise Kisling decided to put on a concert at 6 Rue Huyghens, the studio of the painter Emile Lejeune. For this event, the walls of the studio were decorated with canvases by Picasso, Matisse, Leger, Modigliani and others. Music by Satie, Honegger, Auric and Durey was played. It was this concert that gave Erik Satie the idea of assembling a group of

composers around himself to be known as *Les Nouveaux Jeunes*, forerunners of Les Six.

## Les Six

According to Milhaud:

*"[Collet] chose six names absolutely arbitrarily, those of Auric, Durey, Honegger, Poulenc, Tailleferre and me simply because we knew each other and we were pals and appeared on the same musical programmes, no matter if our temperaments and personalities weren't at all the same! Auric and Poulenc followed ideas of Cocteau, Honegger followed German Romanticism, and myself, Mediterranean lyricism! (Ivry 1996)"*

But that is only one reading of how the Groupe des Six originated: other authors, like Ornella Volta, would stress the manoeuvrings of Jean Cocteau to become the leader of an avant-garde group devoted to music, like the cubist and surrealist groups had srang in visual arts and literature shortly before, with Picasso, Apollinaire and Breton as their key representatives. The fact that Satie had abandoned the Nouveaux Jeunes less than a year after starting the group, was the "gift from heaven" that made it all come true for Cocteau: his 1918 publication *Le Coq et l'Arlequin* is said to have ticked it off.

After World War I, Jean Cocteau and Les Six began to frequent *Le Boeuf sur le Toit* (The Ox on the Roof), which inspired the famous ballet by Milhaud. On the bar's opening night, pianist Jean Wiéner played tunes by George Gershwin and Vincent Youmans while Cocteau and Milhaud played percussion. Among those in attendance were Russian impresario Serge Diaghilev, Pablo Picasso, filmmaker René Clair, singer Jane Bathori, and Maurice Chevalier.

The Group was officially launched in January 1920 by a series of two articles by the French music critic and composer Henri Collet in the French journal "Commedia". While it seems apparent that Cocteau was behind these articles, the actual name of the Group was selected by Collet who decided to compare the Six with the Five Russians.

The group published an album of piano pieces together (the famous "Album des Six"). Five of the members also collaborated together on the music for Cocteau's work "Les Mariés de La Tour Eiffel" which was produced by the Ballets Suédois, the rival to the Ballets Russes. Cocteau had originally proposed the project to Auric, but as Auric did not finish rapidly enough to fit into the rehearsal schedule, he then divided the work up among the other members of the Les Six. Durey, who was not in Paris at the time, did not participate. The première was the occasion of a public scandal which rivaled that of "Le Sacré du Printemps" only years before. In spite of this, "Les Mariés

de la Tour Eiffel" was in the repertoire of the Ballets Suédois throughout the 1920s.

It is not correct to say that *Les Mariés de la Tour Eiffel* marked "the end of the Group des Six", as Durey was present for every concert and other manifestation that marked the anniversaries of the founding of the Group. Les Six did not ever cease to exist, they simply took their own individual paths that they had announced from the beginning.

The legacy of Les Six is present even today in their surviving children, spouses and associates.

## Music by Erik Satie and Les Six

- *Parade* – Satie, and some noise-making instruments added by Cocteau (no direct relation with Les Six: composed and premiered before the first ideas about the *Nouveaux Jeunes* emerged, by people that would never formally be members of the Groupe des Six: Satie, Cocteau, Picasso, Ballets Russes)
- (presented as a *Nouveaux Jeunes* production:) Second set of [furniture music](#): *Chez un 'bistrot'* and *Un Salon* (1920) – Satie (premiered with Milhaud)
- *Les Mariés de la Tour Eiffel* (1921) – collaboration project by Milhaud - Auric - Tailleferre - Honegger - Poulenc, on a scenario by Cocteau.
- *Mercury* – Satie, and *Salade* – Milhaud, premiered 1924 in a production of Count Etienne de Beaumont (for these productions there was however more involvement of Ballets Russes performers, than of the Groupe des Six).
- *La Nouvelle Cythère* – Tailleferre, written in 1929 for the Ballets Russes and unproduced because of Diaghilev's sudden death
- *Romance sans paroles* – Durey
- *Cinq Bagatelles* – Auric
- *Sonate pour violoncelle et piano* – Poulenc
- *Scaramouche* – Milhaud
- *Le Boeuf sur le Toit* – Milhaud
- *Sonate pour violon seul* – Honegger
- *Suite Burlesque* – Germaine Tailleferre (composed in 1980, when only Tailleferre and Auric remained alive)

## Libretto

A **libretto** is the complete body of words used in an extended musical work such as an [opera](#), [operetta](#), masque, sacred or secular [oratorio](#) and [cantata](#), [musical](#), and [ballet](#). The term "libretto" is also sometimes used to refer to the text of major liturgical works, such as [mass](#) and requiem.

The libretto includes the stage directions, the lyrics to the musical numbers, and any spoken passages or pantomime, as applicable. The word *libretto* is an Italian word which translates literally as "little book." It is distinct from a synopsis or scenario of the plot.

The relationship of the librettist (i.e., the writer of a libretto) to the composer in the creation of a musical work has varied over the centuries, as have the sources and the writing techniques employed.

## Sources of plots

Operatic libretti have been adapted from myths and legends, historical events, biographies, plays, poems, short stories, novels, and sometimes even non-literary sources (as with *Goyescas*, by Enrique Granados, inspired by paintings of Francisco Goya). The librettist Francesco Maria Piave adapted works by Victor Hugo, the Duke of Rivas, and others. Many other libretti do not derive from a pre-existing work, as with the libretti Hugo von Hofmannsthal wrote for Richard Strauss.

The works of William Shakespeare have inspired many composers, including Purcell, Gounod, Verdi and Britten. Goethe's *Faust* also spawned a

large number of opera adaptations. Pushkin's works have provided the source for many Russian operas.

Perhaps more rare is to have an existing work of musical drama inspire other hands to write another one. Such is the case with Bizet's opera *Carmen*, which was refashioned as an African-American musical (with dialogue) *Carmen Jones* by Oscar Hammerstein II. Goethe himself wrote a libretto for a projected sequel to Mozart's opera *Die Zauberflöte*.

Naturally it is easier to work with a source for a new libretto if the source is in the public domain, but even with the new work, of course, both the music and the text can be copyrighted.

## **Relationship of composer and librettist**

Libretti for operas, oratorios, and cantatas in the 17th and 18th centuries generally were written by someone other than the composer, often a well-known poet. Metastasio (1698–1782) (real name Pietro Trapassi) was one of the most highly regarded librettists in Europe. His libretti were set many times by many different composers. Another noted 18th century librettist was Lorenzo da Ponte, who wrote the libretto for three of Mozart's greatest operas. Eugène Scribe was one of the most prolific librettists of the 19th century, providing the words for works by Meyerbeer (with whom he had a lasting collaboration), Auber, Bellini, Donizetti, Rossini and Verdi. The French writers' duo Henri Meilhac and Ludovic Halévy wrote a large number of opera and operetta libretti for the likes of Jacques Offenbach, Jules Massenet and Georges Bizet. Arrigo Boito, who wrote libretti for, among others, Giuseppe Verdi and Amilcare Ponchielli, composed two operas of his own.

The libretto is not always written before the music. Some composers, such as Mikhail Glinka, Alexander Serov, Rimsky-Korsakov, Puccini, and Mascagni wrote passages of music without text and subsequently had the librettist add words to the vocal melody lines. (This has often been the case with American popular song and musicals in the 20th century, as with Richard Rodgers and Lorenz Hart's collaboration, although with the later team of Rodgers and Hammerstein the lyrics were generally written first.)

Some composers wrote their own libretti. Richard Wagner is perhaps most famous in this regard, with his transformations of Germanic legends and events into epic subjects for his operas and music dramas. Alban Berg adapted Georg Büchner's play *Woyzeck* for the libretto of *Wozzeck*.

Sometimes the libretto is written in close collaboration with the composer; this can involve adaptation, as was the case with Rimsky-Korsakov and his librettist Bel'sky, or an entirely original work. In the case of musicals, the music, the lyrics, and the "book" (i.e., the spoken dialogue and the stage directions)

may each have their own author. Thus, a musical such as *Fiddler on the Roof* has a composer (Jerry Bock), a lyricist (Sheldon Harnick), and the writer of the "book" (Joseph Stein)

Other matters in the process of developing a libretto parallel those of spoken dramas for stage or screen. There are the preliminary steps of selecting or suggesting a subject and developing a sketch of the action in the form of a scenario, as well as revisions that might come about when the work is in production, as with out-of-town tryouts for Broadway musicals, or changes made for a specific local audience. A famous case of the latter is Wagner's 1861 revision of the original 1845 Dresden version of his opera *Tannhäuser* for Paris.

## **Literary characteristics**

The opera libretto from its inception (ca. 1600) was written in verse, and this continued well into the 19th century, although genres of musical theater with spoken dialogue have typically alternated verse in the musical numbers with spoken prose. Since the late 19th century some opera composers have written music to prose or free verse libretti.

## **Musical requirements**

As different musical traditions developed over time in different places, libretti were sometimes subjected to changes because of local requirements of performance practice. For example, an 18th-century Italian comic opera like Pergolesi's *La Serva Padrona* was to be sung all the way through in Italy, but in France the recitatives had to be converted into spoken dialogue.

## **Language and translation**

As the originating language of opera, Italian dominated that genre in Europe (except in France) well through the 18th century, and even into the next century in Russia, for example, when the Italian opera troupe in Saint Petersburg was challenged by the emerging native Russian repertory. Significant exceptions before 1800 can be found in Purcell's works, German opera of Hamburg during the Baroque, ballad opera and Singspiel of the 18th century, etc.

Just as with literature and song, the libretto has its share of problems and challenges with translation. In the past (and even today), foreign musical stage works with spoken dialogue, especially comedies, were sometimes performed

with the sung portions in the original language and the spoken dialogue in the vernacular. Availability of printed or projected translations today makes singing in the original language more practical, although one cannot discount the desire to hear a sung drama in one's own language.

## **Status of librettists and the libretto**

Many writers of libretti have been sadly overlooked today in the receipt of credit for their work. Certainly some still are recognized as part of famous collaborations, as with Gilbert and Sullivan. Often in the 17th and 18th centuries the librettist was considered equal to or more important than the composer; this state of affairs was emphasized by the fact that libretti were more easily printed then, and the music was left in manuscript or even lost. However, today the composer (past or present) of the musical score to an opera or operetta is usually given top billing for the completed work, and the writer of the lyrics relegated to second place or a mere footnote. In some cases, the operatic adaptation has become more famous than the literary text on which it was based, as with Claude Debussy's *Pelléas et Mélisande* after a play by Maurice Maeterlinck.

On the other hand, the affiliation of a poor libretto to great music has sometimes given the libretto's author a kind of accidental immortality. Certainly it is common for works of [classical music](#) to be admired in spite of, rather than because of, their libretti.

The question of which is more important in opera -- the music or the words - has been debated over time, and forms the basis of -- of all things -- an opera, specifically Strauss's last, *Capriccio*.

## **Publication of libretti**

Libretti have been made available in several formats, some more nearly complete than others. The text -- i.e., the spoken dialogue, sung lyrics, and stage directions, as applicable -- is commonly published separately from the music (such a booklet is usually included with sound recordings of most operas). Sometimes (particularly for [operas](#) in the public domain) this format is supplemented with melodic excerpts of [musical notation](#) for important numbers. Printed [scores](#) for [operas](#) naturally contain the entire libretto, although there can exist significant differences between the score and the separately printed text. Because the modern musical tends to be published in two separate but intersecting formats (i.e., the book, with all the words, and the piano-vocal

score, with all the musical material, including some spoken cues), both of these are needed in order to make a thorough reading of an entire show.

## Lied

**Lied** (plural **Lieder**) is a German word, literally meaning "[song](#)"; among English speakers, however, it is used primarily as a term for European [classical music songs](#), also known as art songs. Typically, *Lieder* are arranged for a single singer and [piano](#). Sometimes *Lieder* are gathered in a *Liederkreis* or "song cycle" – a series of songs tied by a single narrative or theme. The composers Franz Schubert and Robert Schumann are most closely associated with this genre of classical music. Since the German word *Lied* simply means "song," Germans use the more specific term **Kunstlied** to refer to this.

## History

Amongst German speakers, the term Lied has a much older and longer history, ranging from 12th century troubadour songs (Minnesang) via folk songs (Volkslieder) and church hymns (Kirchenlieder) to 20th-century satirical or [protest songs](#) (*Kabarettlieder*, *Protestlieder*).

In Germany, the great age of song came in the 19th century. German and Austrian composers had written music for voice with accompaniment before then, but it was with the flowering of German literature in the Classical and Romantic eras that composers found high inspiration in poetry that created the genre known as the Lied. The beginnings of this tradition are seen in the songs of Mozart and Beethoven, but it is with Schubert that a new balance is found between words and music, a new absorption into the music of the sense of the words. Schubert wrote over 600 songs, some of them in sequences or song cycles that relate a story – adventure of the soul rather than the body. The tradition was continued by Schumann, Brahms, and Hugo Wolf, and on into the 20th century by Strauss and Mahler. The body of song created in the Lied tradition, like that of the Italian [madrigal](#) three centuries before, represents one of the richest products of human sensibility.

## Other national traditions

The *Lied* tradition is closely linked with the actual sound of the German language. But there are parallels elsewhere noticeably in France, with the melodies of such composers as Fauré, Debussy and Francis Poulenc, and in Russia, with the songs of Mussorgsky in particular. England too had a flowering of song in the 20th century represented by Vaughan Williams and Benjamin Britten.

## Lindy Hop

**Lindy Hop** is an African American vernacular dance which evolved in Harlem, New York, United States in the late 1920s and early 1930s. It is frequently described as either a jazz dance (in reference to its close relationship with the development of [jazz music](#), particularly [Swing](#) - Lindy Hop was developed to Jazz Music, and in it's turn helped evolve Jazz music in response to the dance) or as a street dance, a term which means much the same as vernacular dance. It is a member of the [swing dance](#) family.

Originally an Afro-American dance, Lindy Hop combines the movements and improvisation of African dances with the formal 8-count structure of European dances. Lindy hop combines elements of solo dancing with partner dancing in its foundational step the swingout, where the European partner dancing format was adapted to allow men and women to dance together in closed position (a practice usually forbidden in African dances), and yet also to improvise 'alone' in open position without disturbing the structure and flow of the dance.

Lindy Hop is an organic fusion of many of the dances which preceded it and were popular during its development, but is predominantly based on jazz, tap, Breakaway and the Charleston.

## Lindy Hop History

Born in African American communities in Harlem, New York in the United States in the 1920s as the breakaway, the development of breakaway into lindy hop is popularly associated with dancers such as "Shorty" George Snowden, though perhaps the most famous surviving lindy hopper today is Frankie Manning. Al Minns and Leon James, as well as surviving dancer Norma Miller also feature prominently in contemporary histories of lindy hop.

Lindy hop entered mainstream American culture in the 1930s, popularised by touring dance troupes (including the Whitey's Lindy Hoppers, which was also known as the Harlem Congaroos), dance sequences in films (such as Hellzapoppin' and A Day at the Races (film) and other features with white dancer Dean Collins) and dance studios (such as those of Arthur Murray and Irene and Vernon Castle).

Lindy Hop moved off-shore in the 1930s and 40s, again in films and news reels, but also with American troops stationed overseas, particularly in the United Kingdom, Australia, New Zealand and other allied nations. Despite their banned status in countries such as Germany, lindy hop and jazz were also popular in other European countries during this period.

Lindy hop disappeared from popular culture in the 1950s as [rock and roll](#) music and dancing replaced jazz, and jazz itself cooled and moved towards [bebop](#). Though it was still danced in isolated pockets throughout the world, in the 2000s there are very few dancers still alive who were dancing lindy in the 1930s or 40s.

In the 1980s American and European dancers (such as Sylvia Sykes and the The Rhythm Hot Shots respectively) went about 'reviving' lindy hop using archival films such as Hellzapoppin' and A Day at the Races and by contacting surviving dancers such as Frankie Manning, Al Minns, Norma Miller, Jewel McGowan and Dean Collins. The popularity of neo swing music stimulated

mainstream interest in the dance, and led to the founding of local lindy hop communities in many cities. Lindy hop is now popular in many countries around the world.

## **Lindy Hop Today (2000 to Present)**

### **Lindy Hop Scenes around the world**

While the United States is home to the largest number of lindy hoppers in the world, there are thriving communities throughout Europe (Including Russia, the Ukraine, Hungary and other Eastern European countries, England, Ireland, Spain, France, Netherlands, Denmark, Finland, Sweden, Switzerland, Germany and Lithuania), in Australia, Canada, New Zealand, Japan, Korea, Singapore and Buenos Aires, Argentina. The small village of Herräng in Sweden (north of Stockholm) has unofficially become the international Mecca of Lindy Hop due to the annual Herräng Dance Camp. Los Angeles also features prominently, with scores of clubs like The Brown Derby and Sugar Foot Stomp, lots of exchanges, and the annual Camp Hollywood.

Lindy Hop tends to be concentrated in small local scenes in different cities in each of these countries, although regional, national, and international dance events bring dancers from many of these scenes together. It is worth noting that the local swing dance communities in each city and country (for whom lindy hop is almost always the most important dance) feature different local cultures, though they do share common general traditions and practices.

Many Internet forums have emerged in these dance scenes. These message boards serve to provide information to dancers about Lindy Hop and dance events in the geographic area. Yehoodi has become the largest of these and now caters to an international audience, although many smaller local forums (such as Swingmonkey) also exist. Local swing dance related internet forums often reflect the local variations in scenes' cultures and dancing. Because swing dancers travel to dance quite regularly, internet forums are an important medium for communication between local scenes, and for dancers visiting a particular city or country.

### **Lindy Hop dancing today**

Lindy Hop today is a living art form and difficult to describe with a single sweeping definition. In general, however, it is possible to say that Lindy Hop continues to develop through the study of historic Jazz dance and the elegance and fluidity of motion as well as relentless energy demonstrated by the original

Lindy Hop dancers. It is also the product of contemporary dance and musical influences.

Lindy Hop as it is danced today varies not only between local scenes through the influence of local cultures and teachers, but as individual dancers model their movements on the styles of influential dancers of both contemporary and past eras. These historical influences may include the African American lindy hoppers of the Savoy Ballroom (including Frankie Manning and the Whitey's Lindy Hoppers), white dancers from the west coast (including Dean Collins and Jewell McGowan), or dancers from even more specific periods in history. The 'style wars' of the 1990s and early 2000s (where lindy hoppers debated the relative merits of different eras and dancers) resulted in terms such as Savoy-Style Lindy Hop (generally associated with original New York City African American dancers) and Hollywood-Style Lindy Hop (based on the Lindy Hop of white dancers in Hollywood films). The current international lindy hopping community recognises a far greater diversity not only in lindy hop styles than is accounted for by these two terms, but also in swing dances more generally.

Lindy hop today is not only influenced by historic dance forms, but also by popular contemporary dances and music such as Soul, Groove, Funk, hip hop (styling and music), West Coast Swing and Salsa while others explore Jazz, Tap, Blues and other Traditional Jazz and Afro-American dances as resources to expand and enrich Lindy Hop.

## **Social, performance and competition dancing**

Many dancers with an interest in lindy hop as a historical dance insist that social dancing is essential to developing the skills of an accomplished dancer. These dancers frequently cite Frankie Manning's insistence that his dance troupes social dance every night as well as train for performances, in order to maintain their dancing at its highest level. Lindy hop today, however, is danced as a social dance, as a competitive dance, as a performance dance and in classes and workshops.

In each, partners may dance alone or together, with [improvisation](#) a central part of social dancing and many performance and competition pieces. Solo sequences in Lindy Hop are sometimes executed as part of a partner dance when one or both of the partner initiates a "breakaway" causing the partners to separate their connection and dance solo with each other using (if at all) visual lead and follow cues. These sequences may include Charleston moves, traditional Jazz moves (such as boogie steps, shorty george (dance move), Suzie Q (dance move), etc.) and contemporary jazz and modern dance movements.

Choreographed routines are frequently danced on the social floor as well as in competitions, performances and classes, including:

- the Shim Sham
- Jitterbug Stroll
- Lindy Chorus
- Madison (dance)
- Big Apple
- Tranky Doo
- California Routine
- First Stops

## **Social dancing**

### **Social dancing etiquette and traditions**

Social lindy hop dancing varies in each city and country, with each local scene having its own unique dance etiquette and social conventions. Generally, lindy hop is danced by a lead and follow (dance) partnership, with the lead most frequently being a man, and the follow being a woman. This gendering is not essential - men are as capable of dancing the follow role as women, and vice versa. In many local scenes women often feel more comfortable dancing with other women, though there are frequently wider social and cultural conventions which discourage men from dancing together.

Dance floor etiquette varies in each scene, where, for example, one scene may encourage men to ask women to dance, another encourage advanced dancers to ask beginners and in a third only friends ask each other to dance. In some scenes it is considered rude to leave a partner without having a second dance, and in many scenes there are unspoken conventions about teachers dancing with students, more experienced dancers dancing with beginners and so on. There are no consistent rules between local scenes, though there are often national or international patterns.

Social lindy hop not only involves partners dancing unchoreographed dances, but also a range of other traditions and activities. Jam circles, are a tradition dating back to the 1930s and earlier in African American vernacular dance culture, and have much in common with musical cutting contests in jazz. Malcolm X describes 'jam circles' in his autobiography as a loose circle forming around a couple or individual whose dancing was so impressive it captured the attention of dancers around them, who would stop and watch, cheering and clapping. This tradition continues in most lindy hop communities today, with other couples interrupting, joining, or replacing the original couple in the cleared 'circle'. Dancers usually leave or enter at the end of a musical phrase. Many lindy hoppers insist that these jams be unchoreographed, with dancers entering

or leaving the circle independently, though many jams are choreographed, whether as part of a performance, or simply because a local scene does not practice unchoreographed jams. The jam format is often used to celebrate a special event (a birthday, engagement, wedding, etc), to welcome a visitor or to farewell a local. These jams are often announced by the DJ, the focus dancer or couple begin in a cleared circle, with other dancers gathering to clap and cheer. These watching dancers will 'cut in' or 'steal' one of the partners in a couple, or the 'special' dancer to dance with them in the circle until they are in turn replaced.

### **Social dancing events**

Social dancing events run by dancers are diverse and vary in duration, theme and venues between local communities. Dancers usually distinguish between regular events or 'after-class' practice sessions, dancing to live bands at 'public' events not run by dancers and special 'dances' or the more formal ball (dance). Social dancing events may be held as part of a lindy exchange or camp, or be regular parts of the scene's calendar. Live bands frequently provide the opportunities for social dancing in many new or small scenes, and attract groups of dancers attending gigs at local bars or clubs to dance socially.

Social, dancer-run lindy hop dances are held in a range of spaces, from private parties to church and town halls, bars, gymnasiums, university halls, night clubs and pub function rooms. Individual events may attract anywhere from ten to a thousand dancers, and may run from as little as half an hour to all night. Music may be provided by [DJs](#), by live bands, or by music left to play unattended on a sound system, depending on the local scene's conventions and the nature of that particular event. DJs and bands may play a range of music from the 1920s to today, tending to concentrate on [big band](#) music from the 1930s and 1940s. Bands can play a wide variety of music from big band standards to [blues](#) to original compositions. There are ongoing debates about the types of music most appropriate for lindy hop and other swing dances, with the discussions focussing on whether the music should be historically accurate (ie matching a dance style with the popular music of the day) or include other musical styles and forms.

Social dances attract dancers from a range of ages and backgrounds, and dress may range from rigorously 'vintage' or historically accurate to a particular 'swing era' (1920s, 30s, 40s, 50s, etc) to casual sports or street wear, again depending on local culture and the event itself.

### **Performance dancing**

Lindy Hop is a dynamic and exciting dance to watch. Lindy performances may combine choreographed routines, improvised sequences, solo and partner dancing and frequently feature the aerial (dance move) steps for which it is perhaps most famous. Contemporary lindy hoppers often recreate or perform historical choreographed routines found in films or taught by 'swing era' dancers such as Frankie Manning. The most well known of these include the Lindy chorus, the 'Hellzapoppin routine from the film Hellzapoppin' and the Big Apple from the film Keep Punchin'. Performances are often held at social dancing events as part of a brief floor show, often to showcase a visiting teacher, a local troupe or to display a particular dance style. Solo performances and performances by couples are as important as troupes, and performances by all types are often integrated into a social dancing event rather than held as separate events. There are exceptions to this, with the Rhythm Hot Shots touring internationally and holding [swing dance](#) shows as part of teaching tour. Lindy hop dance schools and clubs frequently include a performance troupe, with membership in these troupes determined by a range of factors, from general auditions, by invitation, as a prerequisite for a teaching position with a school or to display a rare dancing skill or style.

Performance groups that had an impact on the development of Lindy Hop include the following:

Whitey's Lindy Hoppers (aka Harlem Congaroos, Hot Chocolates, the Big Apple Dancers), New York City, founded in 1935

The Rhythm Hot Shots, from Sweden, founded in 1985, now called the Harlem Hot Shots. The Hot Shots have been a major driving force in the worldwide revival of Lindy Hop from the 1980s onward.

Minnie's Moochers, Ithaca, New York

Loose Change, San Francisco, California. Blends Lindy Hop with hip hop and African-modern dance.

Silver Shadows - American/Swedish troupe comprised of young dancers performing historical African American lindy hop.

Lindy hop performance troupes are often quite different to a professional modern dance or ballet company. They are usually amateur groups, their members may vary in experience and ability, and they often serve as promotional vehicles for lindy hop schools and clubs. Lindy hop's nature as a predominantly social dance with its roots as a self-learned vernacular dance, combined with the comparative lack of experts, resources, and public demand in many local communities also contribute to its differences. As does the fact that most lindy hoppers come to the dance in the twenties or late teens.

Reasons to form or be in such a troupe vary, but usually belong to one or more of the following categories:

- Artistic reasons (pursuing the art of dancing, and the continuous artistic expression through jazz dance and Lindy Hop),
- Commercial reasons (to perform at paid "gigs" - essentially continuing the tradition of Vaudeville and supplying entertainment for those who pay for it),
- Competition (to compete with a selected team, set choreographies and test one's skills versus other dance teams)
- Practice (to enhance the dancers of the participating dancers, work on new materials or engage in dance movement that is not possible on the social dance floor - such as aerials or other moves that require pre-arranged agreement between the dancers/partners)
- Pleasure (in performing or dancing)
- Promotion for a particular lindy hop school or club, or to encourage people to take up the dance

## Competition dancing

Competitions have a long history in lindy hop, from the informal dance rivalries carried out in jam circles and on the social dance floor, to more formal competitions such as the Harvest Moon Ball competitions of the 1920s and 30s, where Shorty George Snowden is popularly attributed with naming the dance. Today, lindy hop competitions vary in form and intent, from lindy hop categories in [ballroom dancing](#) and Dancesport competition, to 'national' events run by particular schools or dancing associations, to competitions held as part of a camp or exchange weekend, to small and informal competitions in local communities. There are ongoing discussions and debates about the relevance of competitions in lindy hop culture, from criticisms that formal, showcase type events encourage a movement away from the improvised spontaneity and energy of lindy hop as a vernacular dance, to arguments that competitions hone dancing and performance skills. Whichever position a dancer takes on the issue, it is suffice to say that different competition forms and specific events develop different dancing skills and serve different social, political and economic purposes.

There are a range of competition types, and competition nights frequently feature categories in each of the following styles. There are some exceptions, such as the Hellzapoppin' competition, which only features the 'no-rules' competition format.

Almost all of these competitions are couple dances, though some involve elements of solo dancing. Many lindy hop competitions distinguish between professional and amateur dancers, include invitation-only categories, offer cash prizes and are judged by well respected lindy hop dancers. Most are not regulated by any national or international body.

## **Jack and Jill**

Jack and Jill (dance) competitions imitate social dancing. Dancers enter as individuals, as either a 'jack' (leader) or 'jill' (follower). Most competitions do not dictate jills be female or jacks male. There are, however, 'jack and jack' and 'jill and jill' competitions where men and women are paired seperately. Entrants are paired with partners randomly and then dance to music (whose duration varies). They are then allocated with another random partner. Jack and Jill competitions vary in strict format, with some ending at this point, and judges awarding points for performances to that stage. Many Jack and Jills often continue, with dancers paired with a third partner (or remaining with their second) for the remaining rounds of the competition. Partners dance to different tempo and style songs, either in 'all skates' where all dancers are on the floor, or 'shines' where couples take to the floor alone, usually at phrase-long intervals.

Entrants are judged on their ability to 'lead' and 'follow', though criteria and judging style and importance vary between competitions and scenes.

## **Showcase**

Entrants in showcase competitions perform choreographed performance routines. Showcases can be for pairs or groups (though usually not in the same competition), can involve pairings of 'amateur' and 'professional' dancers (pro-am), and can be judged by any combination of criteria.

## **No-rules**

The 2000s have seen the increasing popularity of lindy hop competitions 'without rules'. The Hellzapoppin' competition, named for the film Hellzapoppin', was held for the first time in 2002 and coordinated by the American Institute of Vernacular Jazz Dance. It was originally designed as an alternative to the strictly regulated and ruled 'showcase' type competitions which dominated the lindy hop competition culture at that time. These were frequently run by competitive or performance dance organisations such as Dancesport or by dancing academies who did not emphasise or promote social lindy hop dancing. The no-rules style competition was presented as an alternative to these formal competitions, and were designed to emphasise social dancing skills and some references to the vernacular dance tradition of lindy hop. The 'no-rules' approach was just that - any dance move or style was allowed - again a reaction to the heavily codified showcase style competitions. Despite this 'no-rules' mandate, couples are frequently disadvantaged if they use extensive

choreography in their performance. No-rule competitions often involve some degree of audience approval judging.

These competitions usually involve the turn-taking and shine/all-skate formats described in the Jack and Jill section, though in a range of combinations. While they may also be invitation-only, they are frequently open to all competitors, from all experience levels.

Despite the emphasis on partner dancing in these sorts of competitions, there is often much interaction between competitors and between the audience and competitors, frequently in the employment of comic devices (such as "silly walks" or impersonations) or showy and physically impressive "stunt" moves such as aerial (dance move)s. This type of interaction is typical of the call and response of West African and African American music and dance. In this call and response, audiences and fellow competitors encourage dancers with cheers, shouts, applause, physical gestures and other feedback.

### **Lindy hop competitions**

Some of the major Lindy Hop competitions include the following:

- Hellzapoppin' Lindy Competition (a no-rules competition, held annually in the USA, though with local rounds in countries such as Australia)

- Ultimate Lindy Hop Show Down (an American competition weekend including categories from all competitions styles)

- American Lindy Hop Championship (an American competition with an emphasis on showcase categories)

- Canadian Swing Championships

- Harvest Moon Ball

- National Jitterbug Championship

- World Jitterbug Championship

## **Dance movement, moves and patterns**

### **Partnering technique**

Partnering technique is the element of Lindy Hop which controls the communication of the dancers engaged in the dance - the [dance partners](#). Partnering technique allows both dancers to lead and follow dance movement, move together, and/or communicate dance ideas to each other either in an open conversation or a call and response structure.

Dancers at social events usually have a wide range of skill levels, so cooperating with one's partner matters as much as dancing skill. Dancing with a

new partner is a study in flexibility and calibration. What can the new partner do? What are his or her limitations? What does he or she like to do? Dancing with a regular partner is an opportunity to play and practice difficult moves, such as aerials (which are dangerous without regular practice).

More important than moves is connection (in simple form, any point of body contact between partners is connection), which allows both partners to communicate. Social dancers are generally concerned about connection, whether their partner "feels good," rather than whether their partner is capable of doing a number of moves in succession. This connection also allows both partners to style with each other and the music, resulting in a totally improvised, musical dance.

## **Musicality**

Musicality is the skill allowing the dancer to create and execute [choreography](#) (either prepared in advance or improvised on the spot on the dance floor) to match - and, more significantly, represent the [music](#) - including the [melody](#) and the [rhythm](#).

Dancers with a good sense of musicality respond to all elements of the music to which they are dancing. They may choose to accentuate certain elements to make an artistic statement about the music through movement. When watching dancers with good musicality, viewers should be able to "see" the song in the dancers' movements, so that even without music, the song would still be recognizable through the dance itself. In [jazz](#) music, there are many elements in a song to which a dancer could respond. These elements could be the melody, the counter-melody, the phrases and [breaks](#) in the melody, the beat, the back beat, the [drums](#), the bass, the keys of the [piano](#) and any other musical or rhythmic components..

The musicality develops slowly over time. New dancers frequently focus on moves independent of the music, whereas more advanced dancers will match their movements to what they hear in the music. In order to dance with musicality a dancer must have a strong sense of rhythm and a good ear for music, as well as a solid base of knowledge about the techniques and basic moves for his or her style of dance.

## **Music to dance to**

Lindy Hop, as a [Jazz](#) dance, is most suited to the [music](#) from which it originated - Jazz with a swinging rhythm - including [swing\\_jazz](#), [Dixieland](#), traditional jazz, Hot Jazz and most rhythmic forms of jazz from the jazz era (1920s to 1940s). After the end of the jazz era, Lindy Hop continued to be

danced to the various musical forms that evolved, as long as they had a clear swinging rhythm. Such forms include [blues](#), [rhythm and blues](#), [jump blues](#), jazz, groove, and [soul](#).

Today Lindy Hop is danced to a variety of music, and most times, the choice of musical style depends on the venue and dance scene. While some clubs prefer dancing to swing jazz music, some clubs play other types of music, or modern music.

The topic of which music is Lindy Hop's music is hotly debated in the swing community, and it is the cause of much artistic discussion as to the definition of the dance.

In an interview at a Northern California Lindy Society workshop, Frankie Manning has said the following: "Lindy is most interesting when danced to live bands. Traditionally, Lindy Hop is danced to swing jazz, but dancers also enjoy [ragtime](#) jazz, [bebop](#), blues, rhythm and blues, [rockabilly](#), and [rock and roll](#), and [rap](#), that has a moderate speed. With live bands, dancers cannot predict the songs so easily, so they must pay closer attention which helps them improvise. Originally, musicians would imitate the dancers." (*Reference: Frankie Manning, Northern California Lindy Society workshop interview, 2002*)

## **Musical styling**

The artistic Development of the dance is well connected and shaped to the type of [music](#) used for the pursuit of dancing. While there is no definite "black and white" division between various schools of Lindy Hop and their music, we can define three main groups of Lindy Hop music and musical styling:

- Schools of Lindy Hop which pursue [swing jazz](#) and authentic jazz music generally display a style of dancing borrowing and expanding the original Lindy Hop of the 1930s, complete with high energy, bouncy steps, aerial steps, Charleston steps, tap steps, complex rhythmic patterns, and jazz movement.
- Schools of Lindy Hop which pursue more [bluesy](#) or modern jazz music display a style which is slower, smoother, "groovier", borrows movement from hip hop or [Blues](#), fluid and relaxed body movements and isolations, and usage of simpler rhythmic patterns.
- Lindy Hop styles based on other types of music such as [rock and roll](#), [rockabilly](#) or [jump blues](#) are generally a minority niche and less of an influence on the development of the dance form.

## Lindy Hop moves

[Lindy Hop](#) is a fusion of many American dances from 1900 to 2000. It originally emphasized basics, sugar pushes, side passes, swing outs, and Charlestons. However, Lindy Hop also uses aerials, jazz, hip hop, and other dance moves:

Basic moves (also Freezes). Also lists basic positions in Lindy

- Hop
- Sugar push
- Side pass
- Swing out
- Circle
- Groucho
- Skip up
- Aerial (also Slides and Tricks)
- Silly
- Dip
- Jazz
- Charleston
- Big apple
- Hip hop
- Blues

Dances that use these moves include

- Lindy Hop
- West Coast Swing
- East Coast Swing
- Charleston
- Jazz
- Modern Jive
- Shag
- Balboa
- Big apple
- Swing rueda
- Blues

## Line dance

A **line dance** is a formation [dance](#) in which a [group](#) of people dance in a line formation or in lines, and they all execute the same dance moves individually.

The term is applied to two slightly different types of dances.

## Folk dances

In a number of cultures there are line dances that may be considered a variation of [circle dances](#), where people are joined by hands in chain, e.g., the Dabke dance of Middle East. In fact, with small numbers of dancers most circle dances, such as hora, may be danced in a line formation, rather than in a circle.

# Modern social line dancing

## Description

In a small group there may be only one line, but usually there are several parallel lines, one behind the other. A dance teacher, or more experienced dancer, will usually perform on a stage or in the center of the first line. Inexperienced dancers are encouraged to take positions in the middle of the group to allow watching other dancers' feet in front of them. Experienced dancers are encouraged to take positions on the outside edges of the group to help others.

In this parallel line formation, the dancers dance in a synchronized manner, but independently of each other. There are usually no moves that require any interaction between the dancers, other than they execute the maneuvers at the same time. Each dance has a different sequence of movements that must be learned.

There are several variations to this parallel lines set-up. There may, for example, be two sets of lines where the dancers face in directly towards each other. In larger groups these will become several sets of in-facing parallel lines. In these "contra" line dances, the dancers will dance with the others in the facing lines. The dancers often weave in and out, exchanging places, or dance up to each other, and make momentary contact, such as a hand clap, or a swing, or take hold in Promenade position for a few counts, and then move on. This has its roots in Square or Round Dancing.

These contact maneuvers are more likely in the variation where line dancing takes place in two concentric rings which are facing each other, such as a Barn Dance or Indian Outlaw.

## Music

Line dancing has had a cowboy image, and it was danced predominantly to [country-western music](#). This has been changing since the late 1990s, as more young people became involved. Today, country music may make up the minority of a DJ's play list, with the balance spread through a variety of many different musical styles both new and old. Genres including Celtic, Swing, Pop, Rock, Big Band, Folk, and almost anything else that has a regular beat.

## History

Line dance is sometimes thought of as originating in the Wild West. In fact, it has a much more diverse background. Many [folk dances](#) are danced in unison in lines, usually single lines, and often with a connection between dancers. Such unison movements done by separate individuals in line might be traced back to old styles of group exercise. There have been line dances during the heyday of many modern popular music styles, including [swing](#), [rock and roll](#), and [disco](#).

Line dancing's current popularity grew out of the disco period, when the country-western dance and music communities continued to explore and develop this form of dancing.

Billy Ray Cyrus' 1992 hit Achy Breaky Heart, helped catapult western line dancing back into the musical mainstream's public consciousness, and in 1998, the band Steps created further interest with the [techno](#) dance song "5,6,7,8". Line dancing is a popular recreation activity and is practiced and learned in country-western dance bars, social clubs, dance clubs and ballrooms worldwide. It avoids the problem of imbalance of male/female partners that plagues ballroom/swing/salsa dancing clubs. It is sometimes combined on dance programs with other forms of country-western dance, such as two-step, shuffle, and western promenade dances, as well as western-style variants of the [waltz](#), [polka](#) and [swing](#).

Two popular dances that technically classify as line dances are the Nutbush (performed to *Nutbush City Limits* by Tina Turner) and the Macarena.

Line dancing in the late 90's, and so far through the 2000's, has changed in some line dance clubs with the main bulk of the dancing done to [pop music](#). This has brought with it a renewed interest in the dance form for people of all ages.

Line dancing is now seen not just as a form of dance but also as good exercise and as a good social scene.

## **Terms**

## **Count**

A dance will have a number of *counts*, for example a 64-count dance. This is the number of beats of music it would take to complete one sequence of the dance. This is not necessarily the same number of steps in the dance as steps can be performed on an *and* count between two beats, or sometimes a step holds over more than one beat.

## **Step**

A dance is made up of a number of movements called *steps*. Each step is given a name so teachers can tell dancers to perform this step when teaching a dance. The most well-known is the *grapevine* (or *vine* for short), a four-count movement to the side.

## Tag

A *tag* (or *bridge*) is an extra set of steps not part of the main dance that are inserted into one or more sequences to ensure the dance fits with the music.

## Basic

A *Basic* is one repetition of the main dance from the first count to the last not including any Tags or Bridges.

## Wall

Each dance can be described to consist of a number of *walls*. A wall is the direction in which the dancers face at any given time, which would be the front, the back or one of the sides.

- A *one-wall dance* would mean that at the end of the routine, the dancers would be facing in the same direction as they had started and so each sequence would repeat exactly the same.
- A *two-wall dance* would mean the start of each routine alternates between two walls (almost always the front and back walls)
- A *four wall line dance* is one in which at the end the whole routine of dance moves, the dancers turn 90 degrees, so that they would face all four walls in turn during four repetitions of the routine.

## Liquid funk

**Liquid Funk** is a style of [drum and bass](#). While it uses the same basslines and bar layouts, it contains less bar-oriented samples and more progressive synths, harmonies, and ambience, producing a calmer atmosphere directed at a home listener rather than [nightclub](#) audiences. Examples of liquid funk can be found on the Good Looking Records music label founded by LTJ Bukem (a.k.a. Danny Williamson), although this label is strongly cross-genred with *atmospheric drum and bass*.

In 2000, Fabio began championing a new form of drum n' bass he called "Liquid Funk", with a compilation release of the same name on his Creative Source label. This was characterised by influences from [disco](#) and [house](#), and widespread use of vocals. Although slow to catch on at first, the style grew massively in popularity around 2003-2004, and by 2005 it was established as one of the biggest-selling subgenres in drum n' bass, with labels like Hospital Records, and artists including High Contrast, Calibre, Nu:Tone, London Elektricity and Logistics among its main proponents. Other labels popular in the scene include: Liquid V and Rubik Records.

It could be argued that atmospheric and liquid funk are essentially the same, but liquid funk has subtle differences, perhaps more soca, latin, and [jazz](#) influences, while atmospheric has a "colder" sound to its calm nature, omitting these "real instrument" samples and replacing them with smooth synth and sampler lines. Other artists related to liquid funk are DJ Marky, Drumagick, Patife, Bailey, Mad Zoo, John B, A-Sides, XRS, Makoto, Commix, D Kay & Epsilon, Cyantific, Syncopix, Kubiks, BCee, Lomax, Electrosoul System, Young AX, 4 Hero, Influx Datum, Ramilson Maia, Koloral, DJ Andy and arguably, Lemon D, Drumsound & Bassline Smith, EZ Rollers, Greg Packer, Future Prophecies, Shy FX, DJ Suv.

## List of album covers containing nudity

The following is an alphabetical **list of album covers containing nudity**. Note that in some cases, the [album's](#) international cover may contain nudity, but not its U.S. release. Also included in this list are album covers containing nudity in the part that folds out, not necessarily on the very front cover.

- As Nasty As They Wanna Be - 2 Live Crew (1989)
- A Beautiful World – Thicke (2003)
- Angel – Ohio Players (1977)
- A Nice Pair – Pink Floyd (1973)
- A Promise – Xiu Xiu (2003)
- Abraxas – Santana (1970)
- Anarchy – Chumbawamba (1998)
- Appetite for Destruction – Guns N' Roses (1987)
- Babyteeth – Therapy? (1991)
- The Best Little Secrets Are Kept – Louis XIV (2005)
- Blind Faith – Blind Faith (1969)
- Blood Guts & Pussy – Dwarves (1990)
- Buckcherry – Buckcherry (1999)
- Choronzon – Akercocke (2003)
- Climax – Ohio Players (1974)
- Cloaca Maxima - CMX (1997)
- Cloaca Maxima II - CMX (2004)

Come Clean – Dwarves (2000)  
Come Clean – Puddle of Mudd (2001)  
Congregation – The Afghan Whigs (1990)  
Contradiction – Ohio Players (1976)  
Country Life - Roxy Music (1974)  
Cut – The Slits (1979)  
Electric Ladyland – Jimi Hendrix Experience (1968)  
Ecstasy – Ohio Players (1973)  
The Fantastic Plastic Machine - Fantastic Plastic Machine (1997)  
Felona e Sorona – Le Orme (1973)  
Fire – Ohio Players (1974)  
Free Your Mind... And Your Ass Will Follow – Funkadelic (1971)  
Gallery of Suicide by Cannibal Corpse (1998)  
Grave Dancer's Union – Soul Asylum (1992)  
Hefty Fine - The Bloodhound Gang (2005)  
Homo Sapiens - YUP (1994)  
Honey – Ohio Players (1975)  
Hooked – Great White (1991)  
Houses of the Holy – Led Zeppelin (1973)  
Indelibly Stamped – Supertramp (1971)  
In the Flat Field - Bauhaus (1980)  
Is This It (international cover) – The Strokes (2001)  
Jass-Ay-Lay-Dee – Ohio Players (1978)  
Lego My Ego – Mercury Rev (1992)  
Lemonade and Brownies - Sugar Ray (1995)  
Lovedrive – Scorpions (1979)  
Lovesexy - Prince (1988)  
Misery is a Butterfly – Blonde Redhead (2004)  
Nevermind – Nirvana (1991)  
Nice – Rollins Band (2001)  
Nothing's Shocking – Jane's Addiction (1988)  
Pain – Ohio Players (1971)  
Pleasure – Ohio Players (1972)  
Permission to Land – The Darkness (2003)  
Pressure Drop – Robert Palmer (1975)  
The Pros and Cons of Hitch Hiking – Roger Waters (1984)  
Pure – The Golden Palominos (1994)  
Rattlesnake – Ohio Players (1975)  
Remedy – Basement Jaxx (1999)  
Ritual de lo Habitual - Jane's Addiction (1990)  
Please Yourself - Thee Shams  
Seduction of Madness – Garden Wall (1995)  
Skin Tight – Ohio Players (1974)

Slave to the Thrill – Hurricane (1990)  
 Surfer Rosa – The Pixies (1988)  
 Tenderness – Ohio Players (1981)  
 Tomb of the Mutilated by Cannibal Corpse (1992)  
 Tom Waits – Small Change ( 1976)  
 Trollhammaren by Finntroll (2004)  
 Unfinished Music No.1: Two Virgins – John Lennon and Yoko Ono (1968)  
 Virgin Killer – The Scorpions (1976)  
 Waterloo to Anywhere - Dirty Pretty Things  
 The Wretched Spawn – Cannibal Corpse (2004)

## List of Asian folk music traditions

| <a href="#">Lists of folk music traditions</a>                                    |
|---|
| <a href="#">Americas</a> : North, Central, Latin, South America and the Caribbean |
| <b>Asia</b> : East, Central, North, South, Southeast                              |
| <a href="#">Europe</a> : Northern, Eastern, Southeastern, Southern, Western       |
| <a href="#">Middle East and North Africa</a> : Southwest Asia                     |
| <a href="#">Oceania and Australia</a> : Melanesia, Micronesia, Polynesia          |
| <a href="#">Sub-Saharan Africa</a> : Central, East, Southern and West             |

This is a **list of folk music traditions**, with styles, dances, instruments and other related topics. The term *folk music* can not be easily defined in a precise manner; it is used with widely-varying definitions depending on the author, intended audience and context within a work. Similarly, the term *traditions* in this context does not connote any strictly-defined criteria. Music scholars, journalists, audiences, record industry individuals, politicians, nationalists and demagogues may often have occasion to address which fields of folk music are

distinct traditions based along racial, geographic, linguistic, religious, tribal or ethnic lines, and all such peoples will likely use different criteria to decide what constitutes a "folk music tradition". This list uses the same general categories used by mainstream, primarily English-language, scholarly sources, as determined by relevant statements of fact and the internal structure of works.

These traditions may coincide entirely, partially or not at all with geographic, political, linguistic or cultural boundaries. Very few, if any, music scholars would claim that there are any folk music traditions that can be considered specific to a distinct group of people and with characteristics undiluted by contact with the music of other peoples; thus, the folk music traditions described herein overlap in varying degrees with each other.

## List of best-selling albums worldwide

The **world's best-selling album** cannot be listed officially, since there is no international body to count global record sales. Historical data before the 1980s and from developing countries are also incomplete. Information is also lacking for non-English language albums.

Albums are listed in alphabetical order, rather than albums sold. Groupings are based on different sales benchmarks. Entries marked with an asterisk (\*) are [double albums](#), but they are counted once for each sale. Multiple entries from the same artist are listed in chronological order:

### Albums claimed to have sold 40 million or more units

| Artist  | Album                                     | Year of release | Genre                     |
|---------|---|-----------------|---------------------------|
| AC/DC   | <i>Back in Black</i>                      | 1980            | <a href="#">Hard Rock</a> |
| The Bee | <i>Saturday Night Fever (soundtrack)*</i> | 1977            | <a href="#">Disco</a>     |

|                 |   |      |                                  |
|-----------------|---|------|----------------------------------|
| Gees            |   |      |                                  |
| The Eagles      | <i>Their Greatest Hits (1971-1975)</i>  | 1976 | <a href="#">Rock</a>             |
| Pink Floyd      | <i>Dark Side of the Moon</i>  | 1973 | <a href="#">Rock</a>             |
| Michael Jackson | <i>Thriller</i> (This is the official greatest selling album of all time, according to guiness book of world records) | 1982 | <a href="#">Pop/R&amp;B/Rock</a> |

### Albums claimed to have sold 30 million or more units

## List of European folk music traditions

|  |
|--|
| <a href="#"><u>Lists of folk music traditions</u></a>                                    |
| <a href="#"><u>Americas</u></a> : North, Central, Latin, South America and the Caribbean |
| <a href="#"><u>Asia</u></a> : East, Central, North, South, Southeast                     |
| <b>Europe</b> : Northern, Eastern, Southeastern, Southern, Western                       |
| <a href="#"><u>Middle East and North Africa</u></a> : Southwest Asia                     |
| <a href="#"><u>Oceania and Australia</u></a> : Melanesia, Micronesia, Polynesia          |
| <a href="#"><u>Sub-Saharan Africa</u></a> : Central, East, Southern and West             |

This is a **list of folk music traditions**, with styles, dances, instruments and other related topics. The term *folk music* can not be easily defined in a precise manner; it is used with widely-varying definitions depending on the author, intended audience and context within a work. Similarly, the term *traditions* in this context does not connote any strictly-defined criteria. Music scholars, journalists, audiences, record industry individuals, politicians, nationalists and demagogues may often have occasion to address which fields of folk music are distinct traditions based along racial, geographic, linguistic, religious, tribal or ethnic lines, and all such peoples will likely use different criteria to decide what constitutes a "folk music tradition". This list uses the same general categories used by mainstream, primarily English-language, scholarly sources, as determined by relevant statements of fact and the internal structure of works.

These traditions may coincide entirely, partially or not at all with geographic, political, linguistic or cultural boundaries. Very few, if any, music scholars would claim that there are any folk music traditions that can be considered specific to a distinct group of people and with characteristics undiluted by contact with the music of other peoples; thus, the folk music traditions described herein overlap in varying degrees with each other.

## Europe

| Country         | Elements                       | Dance                        | Instrumentation                        | Other topics  |

## List of famous operas

This page lists **famous** [operas](#) arranged by composer.

### Standard operatic repertory

This list comprises the standard operatic repertory, arranged alphabetically by composer followed by city and date of first staged performance. All the operas in this list are discussed in standard guidebooks, such as *The Penguin Guide to Opera*, ed. Amanda Holden, 1994. Many splendid and under-appreciated masterpieces, aside from operatic curiosities, can be found in entries under the names of their individual composers.

In many opera houses this international repertory is supplemented by local standards. An American list, for example, might include George Gershwin's *Porgy and Bess*, Carlisle Floyd's *Susannah*, Douglas Moore's *Ballad of Baby Doe*, or Samuel Barber's *Vanessa*. Debate over the accepted canon tends to be most intense around the periphery.

*Details of plot, anecdotes and history of composition and production, etc. are found in the operas' individual entries (linked). These lists are not complete: complete lists of composers' operas are to be found in the composers' individual entries (linked).*

Béla Bartók

Bluebeard's Castle (Budapest 1918)

Ludwig van Beethoven

Fidelio (Vienna 1805)

Vincenzo Bellini

La sonnambula (Milan 1831)

I puritani (Paris 1835)

Norma (Milan 1831)

## Q

- Quan ho - Vietnamese vocal music which originated in the Red River Delta
- Qasidah - Epic religious poetry accompanied by percussion and chanting
- Qasidah modern - Qasidah updated for mainstream audiences
- Qawwali - Sufi religious music since updated for mainstream audiences, originally developed in Pakistan
- Quadrille
- [Queercore](#)
- Quiet Storm

## R

- Rada
  - Raga rock - Swiss soul, rock and Indian music fusion
  - Ragas
  - Raggamuffin (Ragga)
  - Ragga-chutney
  - Ragga-soca
  - Ragga-zouk - a fusion of reggae, dub music and zouk
- [Ragtime](#)
- Rai - Algerian folk music now developed into a popular style
- Rake-and-scrape - Bahamanian instrumental music
- Rambutan
- Ramkbach
- Ramvong
- Ranchera - pop mariachi from 1950s film soundtracks
- Random dance
- Rap ([hip hop](#))
- Rap dogba
- Rap metal
- [Rapcore](#)
- Rapso
  - Rara
  - Rare groove
  - Rasiya
  - Rateliai
- [Rave](#)
- Rebetiko
  - Rebita
  - reel
- [Reggae](#)
- Reggae highlife
  - Reggaeton
  - Reinlender
  - Rekilaulu - Finnish rhyming sleigh songs
  - Rembetiko
- [Renaissance music](#)
- Rhapsody
  - Rhyming spiritual - Bahamanian hymns
- [Rhythm and blues](#) (R&B)
- Rhythmic noise (or [power noise](#))
- Ricercar
  - Rímur - Icelandic heroic epic songs
  - Ring Bang - the Barbadian sound of soca

- Riot grrl
  - Rob Schneider
  - [Rock](#)
  - Rock opera
  - [Rock and roll](#)
  - Rock en espanol
  - [Rockabilly](#)
  - Rocksteady
  - Rococo
  - Rodeo music
  - Rokon fada
  - Romantic period in music
  - Romeras
  - Rondeaux
  - Ronggeng - a folk music from Malacca, Malaysia
  - [Roots reggae](#)
  - [Roots rock](#)
  - Roots rock reggae
  - Ruem trosh - Cambodian traditional music
  - [Rumba](#)
  - Rumba gitana - French Gypsy music
  - Runddan
  - Runolaulu - Finnish folk songs
  - Runo-song - Estonian folk music

## S

- Sabar - drumming style found in Senegal
- Sacred Harp
- Sadcore
- Saetas

Saibara

Saiyidi - folk music of the upper Nile Delta

Sakyapa chanting - form of Tibetan Buddhist chanting

Salegy

Salsa - fusion of multiple Cuban- and Puerto Rican-derived pop genres from immigrants in New York City

Salsa erotica - lyrically explicit form of salsa romantica

Salsa gorda

Salsa romantica - a soft, romantic form of salsa music

Saltarello

Salve

Samba - form of Brazilian popular music

Samba-reggae - a genre of samba with a choppy, reggae-like rhythm.  
samba and reggae fusion

Samba de breque - traditional samba with social humorous comentaries and characterized by a silence break (hence, "breque") of 2 compass or more, while the singer keeps the lyrics\*

Samba-canção - traditional samba in slow tempo and with romantic lyrics.  
influenced by bolero

Samba de enredo(or Samba-enredo) - Samba played during Carnival celebrations in fast tempo

Samba de pagode - popular dance-oriented samba. (pagode is an informal gathering of neighbors and relatives in spare time for dance and meal).

Sambai

Sangeo - Afro-Venezuelan form of percussion music

Sanjo - Korean instrumental folk music

Sanjuanitos

Sarandunga

Sardinian polyphonic chanting

Sato kagura

Sawahili - folk music from the Mediterranean coast of Egypt

Sawt - urban music from Kuwait and Bahrain

Sax jive

Sayas - Bolivian dance music which was popularized as lambada in the 1980s

Sazdohol

Scandinavian metal (Viking metal)

Schottisch

Schranz

Scrumpy and Western - folk music from West Country of England

Sea shanty

Sean nós

Second Viennese School

- Sega music
- Seggae
- Seis

Women's music or womyn's music, wimmin's music--1970s lesbian/feminist  
Wong shadow - 1960s Thai pop music  
Work song  
Worldbeat
- [World music](#)

## X

- Xi'an drum music - popular around Xi'an, China, ensembles of percussion and wind instruments
- Xoomii (khoomii, hoomii) - a type of Tuvan throat singing

## Y

- Yang - form of Tibetan Buddhist chanting
- Yanvalou
- Yé-yé
- Yo-pop
- Yodeling
- Young Brigade
- Yukar

## Z

- Zairean sound
- Zajal
- Zapin - derived from ancient Arabic music, zapin is popular throughout Malaysia
- Zarzuela - a form of Spanish operetta
- Zbójnicki
- Zen (music)
- Zendani
- Ziglibithy
- Zikir Barat - Sufi vocal music from Malaysia
- Zinge - Latvian vocal music
- Zoblazo
- Zolo - characterized by hyper jerky rhythms and cacophonous/ harmonious bleeps and boings
- Zouglou
- Zouk - Antillean dance music
- Zouk chou
- Zouk funk - a fusion of zouk and funk
- Zouklove

Zout  
Zulu a cappella  
Zydeco - popular Louisianan Creole music

Category: [Music genres](#)

## List of genres of reggae

The term "[Reggae](#)" is, in a proper sense, only supposed to cover the period in Jamaican music from 1969 to 1979 or 1985 (depending on how you look at it). However, in today's vernacular the term has come to refer to all Jamaican music from the development of [Ska](#) in the early sixties up until today. Rather than create a more confusing "List of Genres of Jamaican music but not Jamaican R&B or Mento" article it is therefore pertinent to keep everything under the Reggae name whether it warrants it or not.

The genres are listed in roughly chronological order.

- **Ska** is the first major local Jamaican genre, flourishing from 1961 or 62 to around 1966. It is characterised by a fast, syncopated rhythm guitar stroke, driving horns and boogie-style stand-up bass. Many people associate the term mainly with 1980s British [Two Tone](#) ska revival, which was a mixture of ska and [punk](#) attitude. Major ska artists include Laurel Aitken (The Godfather Of Ska), Derrick Morgan, Prince Buster and The Skatalites. [Ska](#) gave birth to [Reggae](#) in 1968.
- **Rocksteady** is a slower musical style, in time between ska and early reggae (ie. between 1966 and 68). Besides the low pace its main feature is the electric bass, which takes on the position of lead instrument with intricate melodies and a high position in the mix. Rocksteady is also known for its Impressions-styled vocal harmonies. Major artists include Alton Ellis, The Paragons and Desmond Dekker.
- **Early reggae** or **Skinhead Reggae** is generally considered to be the period before the Rastafari movement entered mainstream Jamaican music from 1968 to 1970. It can be distinguished from rocksteady by the slightly faster beat marked out by the drummer using the hi-hat, heavy organ lines, lower mixing of the bass and electronically doubled rhythm guitar stroke. It met great success in the UK especially with the skinhead youth movement. Major artists include John Holt and Toots and the Maytals, The Pioneers.

- **Nyabingi** is a roots subgenre related to the Rastafarian grouping of the same name. It's characterised by hand-drumming derived from religious ceremonies. Well known artists are Count Ossie or Ras Michael & the Sons of Negus.
- **Dub** is an instrumental genre built around the application of electronic equipment on existing recorded tracks. Its sound (built around individual instrumental tracks changing volume, appearing, disappearing, all while various effects and filters are applied to them) has proven very influential on modern dance music. Major artists include King Tubby, Lee "Scratch" Perry and Scientist.
- **DJ** is the Jamaican precursor to [hip hop](#), based on Deejays (Jamaica's emcees) toasting (talking) over instrumental tracks or [riddims](#). Famous deejays from before the dancehall era include U-Roy, Big Youth and King Stitt.
- **Roots reggae** is perhaps the best-known form of reggae today, with its Rastafarian message. Early reggae production is further developed with electronics and influences from contemporary western music. Although largely supplanted in the popular imagination by Dancehall in 1979, the style continues even today as a minority underground genre. Bob Marley is the internationally most famous exponent of the style, but Horace Andy, Black Uhuru and The Abyssinians are also well known.
- **Dancehall**, starting in 1979, is characterised by stripped-down, spacious productions, prominent basslines and the inclusion of dub-style effects, often coupled with bawdy 'slackness' lyrics. The genre spawned a new generation of Jamaican stars, including Barrington Levy, Yellowman and Eek-a-Mouse.
- **Ragga**, or **raggamuffin**, is electronic dancehall music. Beginning under producer Prince Jammy in 1985, the genre originally was produced on simple casio keyboards but eventually other synthesisers have been added. Super Cat, Shabba Ranks and Charlie Chaplin are some of the well-known artists of the eighties and early nineties.

- **Modern dancehall** is today's ragga music, with advanced synthesisers and hip-hop influences. Major artists include Beenie Man, Bounty Killer and Sizzla.
- **Rumble** is a mixture of roots reggae, garage, soul and ska first created and popularised by Mandeville the house band of the popular reggae group Me & You.

## List of genres of the blues

[Blues](#) can be categorized into a number of [genres](#). There are also genres of music that are not blues but which can be described as *blues-like* or *bluesy*. What may also be called blues is the actual chord structure of a piece, which goes through a standard chord progression, called the blues chord progression, containing the 3 basic chords: I, IV and V, which means the first, the fourth and the fifth degree.

## Genres of blues

- African blues
- [Blues-rock](#)
- Blues shouter
- [British blues](#)
- [Chicago blues](#)
- [Country blues](#)
- [Delta blues](#)
- [Detroit blues](#)
- Gospel blues

- [Louisiana blues](#)

- [Memphis blues](#)
- Piano blues
- [Piedmont blues](#)
- [Soul blues](#)
- [St. Louis blues](#)
- [Swamp blues](#)
- [Texas blues](#)
- [West Coast blues](#)

## Blues-like genres

There are several genres unrelated to the blues in any factual sense but are described as *blues-like* or *bluesy*. These are typically urban in origin, simple in instrumentation and featuring plaintive, melancholy vocals that emphasize the singer's poor luck and, often, violent or criminal behavior. Anthropologist Joaquim Reis de Brito describes the phenomenon this way:

*Thus, if we take together the Fado of Lisbon, the Tango of Buenos-Aires and the Rembetika of Athens, we will note firstly that all of them emerged a little before or after the middle of the 19th century in poor districts of the big port cities of the nascent industry, attracting people from the country or from abroad, and who were confined to a marginal existence. And if we look for other parallels in the development of these urban popular cultures, we will find them again: first, their obscure and repressed beginnings, then their discovery and appropriation by elements of the higher social classes, later their acceptance and admission by the establishment (often after their success outside of the native land) before ending as a subject of tourist explorations.*

Note that not all of the characteristics above are common to all the genres compared to blues, and not all are true of the blues itself.

- Bikutsi - Cameroonian music
- Bolel - Ethiopian music
- Bomba - Puerto Rican music
- Bozlak - Turkish music
- Calypso - Trinidadian music
- Country - American music
- Cumbia - Colombian music

## List of heavy metal genres

A number of overlapping **heavy metal genres** have developed since the emergence of [heavy metal](#) in the late 1960s. Even though metal genres at times are difficult to segregate, they usually show different characteristics in overall structures, instrumental and vocal styles, and tempo. Sometimes a trait of a genre is common in several more genres however, and metal genres are normally grouped by their combination of these traits.

## Heavy metal subgenres

### Black metal

*Main article:* [Black Metal](#)

Evolving from thrash metal, black metal has a dark, cold atmosphere replacing the head-on brutality of thrash metal. Though not as brutal as death it is still considered to be on the more extreme wing of the metal scales. The bass is usually played in tremolo, vocals are usually shrieked, screamed, rasped or grunted, with the lyrical themes being very often (though not always) satanist, occult, or anti-Christian in nature. The production quality of the music is often very poor, most likely an established tradition of opposing the commercial record and music industry back in the subgenre's hayday, from the late 1980s to the early 1990s.

Black metal's origins have been put to a few bands (the name black metal, is usually accredited to Venom, who coined the term, with their album called *Black Metal*), though the style itself is thought to have come out of Norway and many of the members of the scene were known to have been involved with the church burnings that took place in Norway in the 1990s. Black metal is now found throughout the world, with each region seemingly attributing their culture differently to the Black metal sound.

## **Death metal**

*Main article: [Death metal](#)*

Death metal is a subsidiary of thrash metal pushed to more brutal extremes, with strange chord progressions, exotic scales and erratic time changes. Double bass drums are universally implemented, as well as rapid snare drums, blast beats, and chaotic cymbal crashes. Vocals are usually growled, but also can be shrieked, yelled, or screamed. Current death metal bands often dabble in neo-classicism, Jazz-fusion, medieval music, or folk and symphonic endeavors. The lyrical content usually deals with the darker side of human imagination, dealing with blood, death, gore, and satan. However, Death Metal is not limited to just blood, death, and gore. It can also range out to philosophy and even politics.

## **Doom metal**

*Main article: [Doom metal](#)*

While most other metal genres emphasize fast tempos and technical proficiency, doom metal stresses emotion – usually melancholy, depression, and tragic irony. Doom Metal plays slower/mid tempos, with down tuned riffs and dark, somber, melodic harmonies. Most Doom Metal makes use of Death and Black Metal vocals, but clean ones are also often used to enhance the

sullen atmosphere and dark mood of the music. Classical instruments are often used as well, like the piano or violin.

## **Folk metal**

*Main article: [Folk metal](#)*

Folk metal embraces metal bands that are influenced by folklore from varying cultures and origins. Originally started as a mixture of [folk rock](#), [power metal](#) and [black metal](#), the term has progressed to encompass many folk-themed metal bands, that use folk based lyrical themes and composition, including instrumentation.

## **Glam metal**

*Main article: [Glam metal](#)*

Glam metal was one of the most popular styles of metal during the 1980s, often referred to by detractors as "Hair metal". The sound; as the name suggests lies somewhere between the Heavy Metal sound of Black Sabbath, Deep Purple and the Glam rock sound of the Sweet and the New York Dolls. The bands were infamous for their use of guitar solos, energetic frontmen and drummers that did not only have technical ability, but the ability to put on an entertaining show; as per Tommy Lee. Many of the bands donned make-up to achieve an androgynous look, similar to that of 1970s Glam rock bands such as Alice Cooper.

## **Gothic metal**

*Main article: [Gothic metal](#)*

Gothic Metal is a genre that synthesis the guitaring styles of [doom metal](#), [black metal](#) and [death metal](#) with its own unique use of heavy keyboard atmospherics, romantic and story like lyrics and dual vocalists.

## **Grindcore**

*Main article: [Grindcore](#)*

Grindcore is influenced by [thrash metal](#), and also [hardcore](#) and [punk](#), taking its name from the "grinding" sound made by the atonal riffs 'grinding' into

one another. The style is characterised by a vocal style similar to [death metal](#), rapid fire "blast beats" from double-kick drums and short songs. There are grindcore bands that are more hardcore than metal, but most bands today are heavily influenced by death metal.

## **Industrial metal**

*Main article: [Industrial metal](#)*

Industrial metal (also called noise metal, cyber metal, and aggro ) fuses elements of [industrial music](#) and other [electronic genres](#) such as [Synthesizers](#) and [drum machines](#) with the guitaring and lyrical styles of [heavy metal](#).

## **Metalcore**

*Main article: [Metalcore](#)*

Metalcore is defined usually by bands whose music combines both the raw vocals and beat of American [hardcore](#) (generally within the Northeast US) with the guitars more often used in European thrash metal and melodic death metal.

## **Neo-classical metal**

*Main article: [Neo-classical metal](#)*

Neo-classical metal incorporates elements from [classical music](#), into the normal heavy metal sound, including tempos, instrument usage, and even melodies. Yngwie J. Malmsteen is a known proponent of this branch of metal.

## **Nu metal**

*Main article: [Nu metal](#)*

Nu metal is a style that combines elements of heavy metal, [hip hop](#) and [alternative rock](#) music, with a downtuned guitar technique often different from other metal subgenres. There is some contention between metal fans, particularly those of extreme metal genres, that given nu metal's alternative rock ties calling it a metal genre is a misnomer. Korn is often seen as one of the core founders of this genre.

## **Power metal**

*Main article: [Power metal](#)*

Power metal is a more upbeat genre than most metal genres, taking heavy influence from thrash metal and heavy metal, with more progression replacing the electro-blues style, more virtuosity in the guitar leads and solos, and stressing, jaunty tempos. Power Metal often emphasizes on clean, melodic, high-pitched vocals, fast pacing that is mostly driven by double kick drumming and melodic lead guitar. The rhythm guitar is defined by straight power chord progressions. Power metal leans towards the positive, happy side of life seeking to empower the listener and inspire joy and courage. Power metal usually has fantasy or science fiction themes though this is not always the case. Most power metal bands are continental European, though this is not always the case with bands like Jag Panzer, Iced Earth and a few others coming from the U.S.

## **Progressive metal**

*Main article: [Progressive metal](#)*

Progressive metal focuses on sophistication and complexity through constant time and tempo changes, and solos with heavy emphasis on extended instrumental segments. Vocals are generally melodic, with lyrics often touching on philosophical, spiritual, and/or political themes, and instrument virtuosity is a must. Progressive Metal is normally seen to be closely related to [progressive rock](#), commonly through earlier works of Queensrÿche and Rush.

## **Symphonic metal**

*Main article: [Symphonic metal](#)*

Symphonic metal varies in form. It is known most commonly to be said to refer to any bands that use orchestral elements in their music. These include full orchestras, opera themes, vocals or keyboarding akin to that of opera or symphony music, and a more upbeat and soft nature than other metal genres.

## **Thrash metal**

*Main article: [Thrash metal](#)*

Thrash metal originated, and remains, heavy metal with tempos influenced more predominantly by [hardcore punk](#). Thrash metal also caused the tritonal chord to be heavily associated with metal and intensity a key ingredient throughout most metal genres. Thrash metal songs are usually fairly complex, and frequently contain constant time and tempo changes. Thrash metal replaces melody with brutality and speed, with the use of ample distortion. Thrash also started the use of double bass drums in metal. Vocals are usually yelled, screamed, or snarled, though, at the same time, melodic.

As is true for many of the terms in this list, the moniker "thrash metal" was not always embraced by its supposed representatives; early on, Metallica referred to themselves as "power metal" (conflicting with the above definition of this term). Conversely, many bands, like Kreator, came up with equally obscure classifications for themselves, such as hate metal.

## **Cross-genre references**

Many terms are used to group bands from across genres that share a common trait. These terms are used loosely when used, and in some places may or not be used at all. They normally group bands of several genres together into a group due to a shared trait that is not normally a feature of any of the genres of metal the individual bands are part of.

### **Alternative metal**

[Alternative metal](#) is a cross-genre term used to describe metal bands and metal influenced bands, which some fans consider to be unique or experimental, as well as bands of the nu metal genre that lack hip hop influence.

### **Avant garde metal**

[Avant garde metal](#) (sometimes called experimental metal), is a cross-genre grouping which contains bands from multiple genres of metal that exhibit experimentation through non-standard sounds, instruments, and song structures akin to the genre of metal they are rooted in.

### **Celtic metal**

Celtic metal is a cross-genre grouping which contains bands from multiple genres of metal that contain strong connections to Celtic music and imagery.

### **Christian metal**

[Christian metal](#) is another cross-genre grouping which contains metal bands that introduce christian themes into their lyrics. Often the Christian themes are melded with the subjects of the genre the band is rooted in, often giving a supposedly Christian take on the subject matter.

### **Classic metal**

[Classic metal](#) is a cross-genre term that refers to the first batch of bands in the heavy metal, thrash metal and glam metal genres. Characterised by thumping fast bass lines, fast, but less heavy and more melodic riffs, extended lead guitar solos, high pitched vocals and anthemic choruses, this era of metal bands boomed in the early to mid 1980s.

### **Dark metal**

Dark metal concerns bands across genres that use what is considered to be a darker atmosphere than is normal for the genre they are in. Bands of this type are normally [symphonic metal](#), [gothic metal](#), [doom metal](#) and [black metal](#) bands.

## **Epic metal**

Epic metal is a cross-genre name given to bands that use keyboarding that is considered to be intense. Bands of this grouping often belong to [gothic metal](#), [power metal](#) and [symphonic metal](#) genres.

## **Extreme metal**

Extreme metal is a cross-genre reference to some heavier and aggressive styles of metal including [black metal](#), [death metal](#), [grindcore](#) and [thrash metal](#).

## **NWOBHM**

The 'New Wave of British Heavy Metal' (often abbreviated as **NWOBHM**) is a term used to describe British heavy metal artists that emerged in the late 1970s/early 1980s in the wake of the 'original wave' of British traditional metal artists, and as a reaction against pop and punk. NWOBHM was hugely popular and has been influential to most metal genres since.

## **Rapcore**

[Rapcore](#) (sometimes called **Rap metal**) is a cross-genre reference to metal bands that institute the vocal and lyrical form of rap. It is normally used in association with the term 'alternative metal' to differentiate between nu metal bands that contain hip-hop influence, and those that do not. It is also used occasionally to refer to bands that have worked alongside hip-hop artists on tracks before.

## **Speed metal**

[Speed metal](#) is a cross-genre reference to metal bands from the power metal and thrash metal genres. It is used mainly to focus on bands who use speeds that are faster than the common average for either genre.

## **Stoner metal**

Stoner metal refers to bands who use low, bassy riffs and elements of heavy metal, doom metal and psychedelica. The Black Sabbath song "Sweet Leaf" is often regarded as the template for stoner metal. While not all fans are marijuana users, the tag "stoner" has stuck.

## **Technical death metal**

[Technical death metal](#), or tech death, is sub-genre of [death metal](#) that refers to bands who perform a regular show of skill using a variety of, sometimes [jazz](#)-like, time signatures and drumming patterns. These bands also use odd sounding [chord progressions](#) or [scales](#) and sometimes play dissonant or atonal guitar riffs. Bands of this type are also labeled technical death metal if their music is more technical than is normal for the genre and use some death metal elements.

## **Viking metal**

[Viking metal](#) is a cross-genre reference to metal bands with Norse-themed lyrics, usually about Viking tradition, culture, beliefs and other Viking related topics. As well, many people believe that there must be Scandinavian influences in the music itself to be classified as Viking metal.

## **Related genres**

The genres listed hered are sometimes mistaken as metal genres, or have association with metal genres through influencing, or being influenced by them.

### **Blues rock**

[Blues rock](#) is a genre which many early heavy metal performers were rooted solidly in.

### **Hard rock**

[Hard rock](#) is a progression from [blues rock](#) and early psychedelia, and a precursor to heavy metal. It was pioneered in the mid to late 1960s. It is hard to distinguish hard rock from early heavy metal due to some artists such as Deep Purple, Thin Lizzy, and AC/DC fitting into the description of both genres.

## **Music genres**

Genres of music : **A-F** · **G-M** · **N-R** · **S-Z** · **Classical** · **Popular**  
**Blues** · **Country** · **Electronic** · **Folk** · **Hip hop** · **Heavy metal** · **Industrial** · **Jazz** ·

## **List of industrial music subgenres**

It should be mentioned that there is much disagreement within the industrial scene as to the current state of industrial, to the extent that some (including artists mentioned on this page) are of the belief that there is no "current state of industrial", and that **industrial music** ended with the demise of Throbbing Gristle and the Industrial Records label. Thus, the subgenre outlines that follow are by no means definitive, and indeed are often a point of contention between fans of the music.

### **First wave (70s to 80s)**

Industrial began as an intellectual movement to challenge the idea of what music can be. The first wave of industrial musicians began performing in the mid-seventies. There are still a number of artists who create music in a fashion very similar to the original philosophies of Industrial Records. These genres all stem directly from industrial.

### **Avant-garde / experimental**

*Main article: **Industrial music***

Popularized by Industrial Records, this sound first defined the term "industrial", but bears very little resemblance to what most people consider to be industrial music. By modern standards, most of this would better be described as "experimental noise". Featuring tape loops, cut-ups, vocal and instrumental experimentation, this first incarnation of industrial music would be considered very difficult listening for many of those familiar with modern industrial, but was widely considered to be the defining sound of industrial in the 70s.

Artists: Throbbing Gristle, Cabaret Voltaire, Factrix, Organisation/Kraftwerk, Laibach, Nocturnal Emissions, NON, Nurse With Wound, SPK  
Labels: Industrial Records, Mute Records, Sterile Records.

## Noise / shock

*Main article:* [Noise music](#)

This branch of Industrial focused more on brutal, ear shattering noise—much of it for shock value. It was and continues to be a huge influence on modern interpretations of [Noise music](#), as well as **Industrial music** in general.

Artists: Boyd Rice, Monte Cazazza

## Power electronics

*Main article:* [Noise music](#)

**Power electronics** was originally related to the early industrial records scene but later became more identified with the [noise music](#) scene. It largely consists of screeching waves of feedback, analogue synthesizers making sub-bass pulses or high frequency squealing sounds, and screamed, distorted, often hateful and offensive lyrics. Deeply atonal, there are no "notes" or conventional rhythms in power electronics.

Artists: Whitehouse, The New Blockaders, Sutcliffe Jugend  
Labels: Come Organisation (UK), Broken Seal (Germany), Alien8 Recordings (Canada)

## Electronic / dance

A form of Industrial that was more accessible, and easier to dance to, that came about in the early 1980s. It evolved alongside [EBM](#). Many of the artists involved were originally practitioners of the classic industrial sound.

Artists: Cabaret Voltaire, Severed Heads

## Second wave (80s to 90s)

### Electronic body music / industrial dance

*Main article:* [Electronic body music](#)

**EBM** (short for *electronic body music*; also known as **industrial dance**): The term "EBM" was coined by Belgian act Front 242 in the eighties; it denotes a certain type of danceable electronic music. EBM beats are typically 4/4, often with some minor syncopation to suggest a "rock" rhythm. Heavy synths are usually prominent, and the vocals are often militaristic. This style was widely considered to be the defining sound of industrial in the 80s. In recent years, however, there has been somewhat of a schism within the EBM scene, and it is now not uncommon to hear electro-industrial and [futurepop](#) artists referred to as EBM. For this reason, many EBM fans have begun to refer to this earlier style as "old-school EBM".

Artists: Front 242, Bigod 20, Nitzer Ebb

Labels: Off Beat (Germany), Zoth Ommog (Belgium), Pendragon (USA), Wax Trax (USA)

## Electro-industrial / elektro

*Main article:* [Electronic body music](#)

**Electro-industrial** (Now often called **elektro**, and not to be confused with the hip-hop subgenre [electro](#)) is largely a catch-all category that fills the space between power noise, EBM, old-style industrial, and [gothic](#) music. Whereas EBM was generally straightforward in structure and production, elektro became known for its deep, layered sound. Whereas EBM was generally straightforward in structure and production, elektro became known for its deep, layered sound. Typically this is a darker form of EBM, however this can often refer to acts that combine EBM with another subgenre (for example Feindflug, who combine EBM with power noise). Within North America, this style was widely considered to be the defining sound of industrial in the mid to late 1990s.

Artists: Numb, Wumpscut, Front Line Assembly, Haujobb, Out Out

Labels: Off Beat (Germany), Zoth Ommog Records (Germany), 21st Circuitry (USA), Pendragon (USA), Metropolis Records (USA).

## Aggro-industrial

*Main article:* [Industrial metal](#). *See also:* [Industrial rock](#).

With its roots in American rock music, **aggro-industrial** (Often simply called **aggro**) fused punk-rock sensibilities with techno-industrial brutality. Known for their live performances, studio releases by these acts often employed rotating and shared lineups due to the frequency of improv and jam

sessions. Much of this style's musical output was very aggressive, with confrontational lyrics and samples. This aesthetic was furthered by the larger-than-life stage presence of many acts, which often involved costumes, pyrotechnics, elaborate sets, and horror-inspired makeup. This style was widely considered to be the defining sound of industrial in the early 1990s.

Artists: Ministry, Rammstein, Pigface, Cubanate, KMFDM, The Genitorturers, Skinny Puppy  
Labels: Wax Trax! (USA), Invisible Records (USA).

## **Coldwave**

*Main article: [Industrial metal](#)*

**Coldwave** has its roots in industrial metal acts like the Young Gods and Ministry, and exploded on the American scene in the mid-1990s. Albums like Chemlab's *Burn Out at the Hydrogen Bar* exemplified the typical coldwave sound: rock-like guitars with prominent synthesizer accompaniment, and live or sampled drums. Lyrical content varies, but is typically cyberpunk-oriented in some fashion, often with pop sensibilities. Coldwave record labels had a notoriously short lifespan. Coldwave is also known as **synthcore** and includes groups who do not use guitars such as Babyland.

Artists: Chemlab, 16 Volt, Hate Dept., Out Out,  
Labels: Re-Constriction Records (USA), Fifth Colvmn Records (USA). If It Moves (USA).

## **Death industrial**

**Death industrial** can be described as having much of the same source sounds as power electronics, but used to create a deep atmospheric sound with some thematic similarity to [doom metal](#) or [death metal](#). It often featured a more flowing rhythm and deeper, less abrasive sound than power electronics. The Grey Wolves are credited for pioneering the style, but many the concepts of death industrial were first seen in NON.

Artists: The Grey Wolves, Brighter Death Now, Atrax Morgue  
Labels: Cold Meat Industry (Sweden), Slaughter Productions (Italy)

## **Dark industrial**

**Dark industrial** is the marriage of [dark ambient](#) and industrial. Much like dark ambient, the style is a minimalist soundscape. What separates dark ambient from dark industrial is the harshness. The droning and distorted samples of dark ambient are replaced by waves of static and eerie melodies.

Artists: Gruntsplatter, Innana (artist), Keimverbreitung  
Labels: Malignant Records (USA), Cold Meat Industry (Sweden), Cold Spring (UK)

## Third wave (90s to 00s)

Perhaps as a reaction to the band and rock-oriented feel of the mid-nineties, industrial music made a radical shift towards computer-generated, one-person acts. Eschewing the explosive stage shows that were commonplace, many performances now consist of a single artist on stage, surrounded by computers and electronic music equipment. The structure itself is opening itself up to even further experimentation, with modern equipment making a number of previously unattainable effects and techniques fair game for anyone with enough computer savvy and patience.

## Aggrotech

*Main article: [Aggrotech](#)*

**Aggrotech** is an evolution of electro-industrial that first surfaced in the mid-1990s but has been revitalised in recent years. More recently referred to as **Terror EBM** or "**Hellektro**", its sound is typified by somewhat harsh song structures, aggressive beats and lyrics of a militant, pessimistic or explicit nature. Typically, the vocals are distorted to sound hoarse, harsh and without tone. Artists also frequently use atonal melodic structures.

Artists: Aghast View, Suicide Commando, Wumpscut, Psyclon Nine, Hocico, Virtual Embrace, Tactical Sekt, Grendel, Tamtrum  
Labels: NoiTekk (Germany), Mao Music

## Industrial techno

**Industrial techno** is a cross between power noise, traditional industrial, and [techno](#). It often resembles [house music](#) in structure, while keeping the harsh sounds, noises, and fast pacing of industrial music. Although sampled

and processed guitars are not uncommon, lyrics and a verse-chorus-verse structure are very rare.

Artists: Pow[d]er Pussy, Punch Inc., Mimetic, Tarmvred, Ultraviolence  
Labels: Ant-Zen (Germany), M-Tronic (France), Ad Noiseam

## Power noise

*Main article: [Power noise](#)*

**Power noise** (also known as **rhythmic noise**) takes its inspiration from some of the more structured and distorted early industrial acts, such as Esplendor Geométrico. There are also certain techno and technoid influences. The term "power noise" was originally coined by Raoul Roucka, who records as Noisex. Typically, power noise is based upon a distorted kick drum from a drum machine such as a Roland TR-909, uses militaristic 4/4 beats, and is usually instrumental. Sometimes a melodic component is added, but this is almost always secondary to the rhythm. Power noise tracks are typically structured and danceable, but are known to be occasionally abstract. This genre is showcased at the annual Maschinenfest festival in Aachen, Germany, as well as at Infest in Bradford, UK.

Artists: Winterkälte, Imminent Starvation, Axiome, Converter, 5f 55. Haus Arafna  
Labels: Ant-Zen (Germany), Hands Productions (Germany)

## Technoid

*Main article: [Technoid](#)*

**Technoid** acts take inspiration from [IDM](#), experimental techno and noise music. The end result is usually diverse IDM-influenced rhythms with varying levels of noise and industrial influence. Artists will often use non-conventional sounds within their music, such as field recordings of natural phenomena, dated 8-bit electronic equipment, or samples from artists of a wildly different genre. It is not uncommon for two albums by the same artist to have drastically different sounds and structures, resulting in a number of acts that have evolved a great distance from where they were only years ago. German label Hymen Records is largely responsible for the term and the style.

Artists: Gridlock, Black Lung, Somatic Responses, Xingu Hill  
Labels: Hymen (Germany), Mirex (Germany), <UNIT> (USA)

## Drum 'n' noise

**Drum 'n' noise** Combines elements of [breakcore](#), [IDM](#), Industrial, [hardcore techno](#) and power noise, often with a fairly free structure similar to more chaotic IDM and breakcore artists. The term was coined by the act Winterkälte when it was used as the name for one of their albums.

Artists: Enduser, Hecate, Tuareg Geeks, Aphex Twin

## List of Middle Eastern and North African folk music traditions

|   |
|---|
| <a href="#">Lists of folk music traditions</a>                                    |
| <a href="#">Americas</a> : North, Central, Latin, South America and the Caribbean |
| <a href="#">Asia</a> : East, Central, North, South, Southeast                     |
| <a href="#">Europe</a> : Northern, Eastern, Southeastern, Southern, Western       |
| <b>Middle East and North Africa</b> : Southwest Asia                              |
| <a href="#">Oceania and Australia</a> : Melanesia, Micronesia, Polynesia          |
| <a href="#">Sub-Saharan Africa</a> : Central, East, Southern and West             |

This is a **list of folk music traditions**, with styles, dances, instruments and other related topics. The term [folk music](#) can not be easily defined in a precise manner; it is used with widely-varying definitions depending on the author, intended audience and context within a work. Similarly, the term *traditions* in this context does not connote any strictly-defined criteria. Music scholars, journalists, audiences, record industry individuals, politicians, nationalists and demagogues may often have occasion to address which fields of folk music are distinct traditions based along racial, geographic, linguistic, religious, tribal or ethnic lines, and all such peoples will likely use different criteria to decide what constitutes a "folk music tradition". This list uses the same general categories used by mainstream, primarily English-language, scholarly sources, as determined by relevant statements of fact and the internal structure of works.

These traditions may coincide entirely, partially or not at all with geographic, political, linguistic or cultural boundaries. Very few, if any, music scholars would claim that there are any folk music traditions that can be considered specific to

a distinct group of people and with characteristics undiluted by contact with the music of other peoples; thus, the folk music traditions described herein overlap in varying degrees with each other.

## List of music genres

**Music** can be divided into **genres** in many different ways. These classifications are often arbitrary and controversial, and closely related styles often overlap. Many do not believe that generic classification of musical styles is possible in any logically consistent way, and also argue that doing so sets limitations and boundaries that hinder the development of music. While no one doubts that it is possible to note similarities between musical pieces, there are often exceptions and caveats associated. Many genres can be subdivided into narrower, more specific subgenres.

### **Music genres**

**Genres of music** : [A-F](#) · [G-M](#) · [N-R](#) · [S-Z](#) · [Classical](#) · [Popular Blues](#) · [Country](#) · [Electronic](#) · [Folk](#) · [Hip hop](#) · [Heavy metal](#) · [Industrial](#) · [Jazz](#) · [Punk](#) · [Reggae](#) · [Pop](#) · [Rock](#)

Category: [Music genres](#)

## **List of music genres suffixed -core**

This is a **list of music genres suffixed -core**, most of which are probably derived from the term *hardcore*, which denotes a style more extreme than the mainstream.

### **Hardcore**

- [Hardcore punk](#) - an intensified version of [punk rock](#) usually characterized by short, loud, and often angry songs with exceptionally fast tempos and chord changes.
- [Hardcore techno](#) - a form of techno music closely related to [gabber music](#)
- [Breakbeat hardcore](#) - an offshot of [acid house](#) that uses [breakbeats](#) for its rhythm lines
- [Happy hardcore](#) - an evolution of breakbeat hardcore that uses twee sounding instrumentation and lyrics
- [Hardcore trance](#) a fusion of breakbeat/happy hardcore and [trance music](#)
- UK hardcore - a form of [dance music](#) that evolved after [breakbeat hardcore](#) and it's subgenres declined in popularity

### **-core**

- Acidcore - an alternative name for freeform hardcore.
- Asscore - fusion of [hardcore hip hop](#) and [heavy metal](#)
- [Breakcore](#) - fusion of hardcore, [jungle](#) and [techno](#)
- Christcore - Christian hardcore or punk rock.
- Cuddlcore - punk-influenced [twee pop](#)
- Dancecore - fusion of eighties-esque dance music with hardcore (ex. Bloodbrothers)
- [Darkcore](#) - style of [hardcore techno](#)
- Discore - alternate term for *D-Beat* punk.
- Drillcore - a cross between breakcore and [drill 'n bass](#)
- [Emocore](#) - later and better known as *emo*
- Emo-Metalcore - fusion of [metalcore](#) and [emo](#)
- Funcore - a term used by Dutch based Babyboom Records label to describe [bouncy techno](#)
- Folkcore - fusion of hardcore punk and [folk music](#)
- [Funkcore](#) - fusion of hardcore punk and [funk](#)
- Glamcore - fusion of riot grrl, thrash and [glam rock](#)
- Gorecore - similar to goregrind but stripped of its grindcore nature blast beats & having more emphasis on sloppy or abject punk style
- Gothcore - fusion of hardcore punk and [Gothic music](#)
- [Grindcore](#) - hardcore with emphasis on absolute extremity to the exclusion of any other punk aesthetic, actually bearing more similarity to [heavy metal](#) and [death metal](#) than traditional hardcore.
- Happycore - variety of swift, hard [trance music](#)
- Hatecore - style of hardcore punk with white supremacy-themed lyrics
- Hopcore - fusion of hardcore punk and [hip hop music](#)
- Hobocore - Various forms of -core metal but with the implications of living a homeless lifestyle
- Homocore - alternate term for *queercore*
- Japcore - Japanese hardcore
- Jazzcore - fusion of [grindcore](#) and [jazz](#)
- [Mathcore](#) - a fusion of hardcore punk and [math rock](#)
- [Metalcore](#) - fusion of hardcore punk and [heavy metal](#)
- [Nerdcore](#) - style of [hip hop](#) with nerd-themed lyrics
- Noisecore - a largely anti-technical, anti-clean sounding form of grindcore, sometimes an alternate term for [noise music](#)
- Norsecore - style of [black metal](#)
- Polkacore - fusion of hardcore punk and [polka](#)
- Popcore - fusion of [hardcore](#) and street punk
- Punkcore - anarchistic hardcore mixed with [punk rock](#) samples
- [Queercore](#) - style of hardcore punk with gay and lesbian-themed lyrics
- [Raggacore](#) - fusion of breakcore and [ragga](#)
- [Rapcore](#) - fusion of hardcore, heavy metal and hip hop

- [Sadcore](#) - style of late 80s [indie rock](#) with sadness and loneliness-themed lyrics
- Skacore - fusion of hardcore and [ska punk](#)
- Skatecore - alternate term for *skate punk*
- Slowcore - alternate term for *sadcore*
- Spazzcore - term for over-the-top spastic & volatile punk.
- Synthcore - alternative name for [electroclash](#) that never found popularity
- Stenchcore - early term for the [crust punk](#) style
- [Terrorcore](#) - a subgenre of [hardcore techno](#) with "scary" or horror themed samples
- [Thrashcore](#) - fusion of hardcore punk and thrash music
- [Twangcore](#) - alternate term for *alternative country*
- Yardcore - an alternative name for raggacore

## Record labels

- There are [record labels](#) called Bubblecore, Housecore Records, and Punkcore Records, and bands called Bloodcore and Redcore.

## Misc

The terms *gaycore* and *fagcore* are used as an insult for any of the above listed genres, especially emo and similar styles. *Snoozecore*, [fashioncore](#), *haircore* and *mallcore* are similarly used. *Norsecore* was formerly pejorative but is now not necessarily so.

The terms *angstcore*, *brocore*, *progcore*, *whorecore*, *gospelcore*, *fightcore*, *cowcore*, *soulcore*, *skincore*, *wavecore*, *discocore*, *Celticore*, *discore*, *junglecore*, *bluecore*, *groovecore*, *countrycore*, *downcore*, *spacecore*, *altcore*, *indiecore*, *latincore*, *surfcare*, *christcore*, *glamcore*, *zydecare*, *bonecore*, *cuntcore*, *ragecore*, *bubblecore*, *electrocore*, *technocore*, *dubcore* and *psychocore* may be in use, but without a clear meaning.

## List of musical forms

A list of [musical forms](#).

## Medieval

- Estampie
- [Gregorian Chant](#)
- [Motet](#)
- Organum
- Saltarello

## Renaissance

- [Ballade](#)
- [Carol](#)
- [Chanson](#)
- Galliard
- [Madrigal](#)
- [Motet](#)
- [Mass](#)
- [Opera](#)
- Pavane

## Baroque

- Allemande
- [Cantata](#)
- [Concerto](#)
  - [Concerto grosso](#)
- Fugue
- Gavotte
- Gigue
- [Mass](#)
- Minuet
- [Opera](#)

- [Opera buffa](#)
- [Opera seria](#)
- [Oratorio](#)
- Prelude
- Sarabande
- [Sinfonia](#)
- [Suite](#)

## **Classical and Romantique**

- [Bagatelle](#)
- [Ballet](#)
- [Carol](#)
- [Concerto](#)
  - [Clarinet concerto](#)
  - [Concerto grosso](#)
  - [Piano concerto](#)
  - [Violin concerto](#)
- Étude
- Impromptu
- [Intermezzo](#)
- [Lied](#)
- [Mass](#)
- [Mazurka](#)
- Nocturne
- [Opera](#)
  - Ballad opera
  - [Opera buffa](#)
  - Opera comique
  - [Opera seria](#)
  - [Operetta](#)
  - [Overture](#)
  - [Singspiel](#)
  - Zarzuela
- [Oratorio](#)
- Polonaise
- Prelude
- [Quartet](#)
  - [Piano quartet](#)

- [String quartet](#)
- [Quintet](#)
  - [Piano quintet](#)
  - [String quintet](#)
- Requiem
- Rondo
- Scherzo
- Serenade
- [Sonata](#)
  - [Bassoon sonata](#)
  - [Cello sonata](#)
  - [Clarinet sonata](#)
  - [Piano sonata](#)
  - [Violin sonata](#)
- [Symphony](#).

## List of musical instruments

The following is a list of [musical instruments](#), [categorized](#) by section. Please add to [List of musical instruments by Hornbostel-Sachs number](#) also.

### Wind instruments

#### Flutes

- Atenteben (Ghana)
- Bansuri (India)
- Danso (Korea)
- Dizi (China)
- Flageolet
- [Flute](#)
  - [Piccolo](#)
  - Alto flute
  - Bass flute
  - Contra-alto flute
  - Contrabass flute
  - Subcontrabass flute
  - Double contrabass flute

- Hocchiku (Japan)
- Hun (Korea)
- Khloy (Cambodia)
- Khloi (Thailand)
- Koudi (China)
- Nose flute
- Ocarina
- Paixiao (China)
- [Pan pipes](#)
- Recorder
- Ryuteki (Japan)
- Shakuhachi (Japan)
- Shinobue (Japan)
- Slide whistle
- Tin whistle
- Tonette
- Vertical flute
- Washint (Ethiopia)
- Willow flute
- Xiao (China)
- Xun (China)

## Single reed instruments

- Alboka
- Arghul
- [Clarinets](#)
  - Piccolo clarinet (A-flat clarinet)
  - Sopranino clarinet (E-flat clarinet, D clarinet)
  - Soprano clarinet (C clarinet, B-flat clarinet, A clarinet, G clarinet)
  - Basset-horn
  - Alto clarinet
  - Bass clarinet
  - Contra-alto clarinet
  - Contrabass clarinet
  - Octocontra-alto clarinet
  - Octocontrabass clarinet
- Launeddas (Sardinia)
- Mijwiz
- Octavin
- [Saxophone](#)

- Soprillo
  - Sopranino saxophone
  - Soprano saxophone
  - Conn-o-sax
  - Mezzo-soprano saxophone
  - Alto saxophone
  - Tenor saxophone
  - C melody saxophone
  - Baritone saxophone
  - Bass saxophone
  - Contrabass saxophone
  - Subcontrabass saxophone
  - Tubax
  - Aulochrome
- Tarogato (modern single-reed)
  - Folgerphone

## Double reed instruments

- [Bassoon](#)
  - Contrabassoon
  - Tenoroon
- Bombarde (France)
  - Cromorne
  - Crumhorn
  - Dulzaina (Spain)
  - Dulcian
  - Guan (instrument) (China)
  - Heckelphone
    - Piccolo heckelphone
    - Terz heckelphone
- Nadaswaram (India)
- [Oboe](#)
  - Piccolo oboe
  - Oboe d'amore
  - Cor anglais/English horn
  - Oboe da caccia
  - Bass/Baritone oboe
  - Contrabass oboe
- Rackett
  - Contrabass á anche

- Sarrusophone
  - Sopranino Sarrusophone
  - Soprano Sarrusophone
  - Alto Sarrusophone
  - Tenor Sarrusophone
  - Baritone Sarrusophone
  - Bass Sarrusophone
  - Contrabass Sarrusophone
- Shawm
  - Sralai (Cambodia)
  - Suona (China)
  - Surnay
  - Tarogato (original two-reed variety)
  - Trompeta china (Cuba)
  - Tromboon

### **Bagpipes (single and double reed)**

- [Bagpipe](#)
- (see main article "[Types of bagpipes](#)" for varieties)

### **Brass instruments**

(not necessarily made from brass)

- Alphorn
- Baritone horn
- Bazooka
- Bugle (instrument)
- Cimbasso
- Conch
- [Cornet](#)
- [Cornett/Cornetto](#)
- Didgeridoo
- Euphonium
- Flugelhorn
- Horagai
- [Horn](#)
- Jug
- Mellophone

- Ophicleide
- Roman tuba
- Sackbutt
- Saxhorn
- Serpent
- Shofar
- Sousaphone
- Tenor Horn/Alto Horn
- [Trombone](#)
- [Trumpet](#)
- [Tuba](#)
- Wagner tuba

### **Free reed instruments**

- [Accordion](#)
- Bandoneón
- Bawu
- Bayan
- [Concertina](#)
- [Harmonica](#)
- [Harmonium](#)
- Khene
- Lusheng
- Mangtong
- Melodica
- Melodeon
- [Pipe organ](#) (some pipes; others are woodwind)
- Saenghwang
- Sheng
- Yu

### **[Voice](#)**

- [Soprano](#)
- [Mezzo-soprano](#)
- [Alto/Contralto](#)
- Countertenor
- [Tenor](#)
- [Baritone](#)

- [Basso/Bass](#)
- Castrato
- Kazoo

### Free [aerophones](#)

- Bullroarer
- Lasso d'amore
- Whip
- [Siren](#)

### [String instruments](#)

- Aeolian harp
- Appalachian dulcimer (United States)
- Archlute
- Balalaika (Russia)
- Bandura
- [Banjo](#)
- Baryton
- Berimbau (Brazil)
- Biwa (Japan)
- Bordonua
- [Bouzouki](#) (Greece)
- [Cello](#) (Violoncello)
- Cittern
- Clavichord
- Crwth
- Cuatro
- Dahu (China)
- àn ḅṣu (Vietnam)
- àn gáo (Vietnam)
- àn nguỵÇt (Vietnam)
- àn tranh (Vietnam)
- àn tó bà (Vietnam)
- Dihu (China)
- Double Bass
- Dutar (Central Asia)

- Duxianqin (China)
- Ektara (India)
- Erhu (China)
- Erxian (China)
- [Fiddle](#)
- Gayageum (Korea)
- Gehu (China)
- Geomungo (Korea)
- Gottuvadhyam (India)
- [Guitars:](#)
  - Acoustic bass guitar
  - [Acoustic guitar](#)
  - [Bass guitar](#)
  - [Classical guitar](#)
  - [Electric Guitar](#)
  - Slide guitar
  - Steel guitar
  - Cigar box guitar
- Guitarrón (Mexico)
- Guqin (China)
- Guzheng (China)
- Hammered dulcimer
- Hardanger fiddle (Norway)
- [Harp](#)
- Harpsichord
- Huluhu (China)
- Huqin (China)
- Hurdy gurdy
- Irish bouzouki
- Jew's harp
- Jiaohu (China)
- Kantele (Finland)
- Khim (Thailand/Cambodia)
- Kokyu (Japan)
- Komungo (Korea)
- Kora
- Koto
- Langeleik (Norway)
- Laruan (China)
- Leiqin (China)
- Lirone
- [Lute](#)
- [Lyre](#)

- Maguhu (China)
  - Mando-bass
  - Mandocello
  - Mandola
- [Mandolin](#)
- Mohan veena (India)
  - Morin khuur (Mongolia)
  - Musical bow
  - Nyckelharpa (Sweden)
  - Octave mandolin (Octave mandola)
- [Piano](#)
- Piccolo violin
  - Piccolo 'cello/violoncello piccolo
  - Pipa (China)
  - Psaltery
  - Rahab (Rabob)
  - Rebec
  - Ruan (China)
  - Rudra vina (India)
  - Sanxian (China)
  - Saung (Burma)
  - Saw sam sai (Thailand)
  - Se (China)
  - Shamisen (Japan)
  - Setar (lute) (Persia)
- [Sitar](#)
- Sopranino mandolin
  - Tar (lute)
  - Tea chest bass
  - Tenor viola
  - Theorbo
  - Tres
  - Tro (Cambodia)
  - Trumpet marine/tromba marina
  - Tuhu (China)
- [Ukulele](#)
- Valiha (Madagascar)
  - Vertical viola (and other members of the violin octet family)
  - Vichitra vina (India}
  - Vielle
  - Vihuela (Spain)
  - V+G (India)
  - Viol/Viola da gamba

- [Viola](#)
- Viola d'amore
- [Violin](#)
- Violotta
- Washtub bass
- Xalam/Khalam
- Zhonghu (China)
- Zhuihu (China)
- [Zither](#)

## Percussion instruments

### Drums

- Abia drum
- African drum
- Bass drum
- Bodhrán (Ireland)
- Bongo drum
- Chenda (India)
- [Conga](#) (Caribbean)
- Cuíca (Brazil)
- Darbuka (Greek name)/Dumbek (Turkish name)
- Dhol(Persia)
- Dholak
- Djembe
- Janggu (Korea)
- Khol
- Lambeg (Ireland)
- Mridangam (India)
- Naqara
- Octaban
- Octapad
- Riq
- Sabar (Senegal)
- Sampho (Cambodia)
- Slit Drum
- Snare
- Steel drum

- Surdo (Brazil)
- Tabla
- Taiko (Japan)
- O Daiko (Japan)
- Tambourine
- Tan-tan
- Taphon (Thailand)
- Thavil (India)
- [Timpani](#) (kettledrums)
- Tom-Tom
- Whip

### Other percussion instruments

- Ahoko
- [Bell](#)
- Bianqing (China)
- Bianzhong (China)
- Carillon
- [Castanets](#)
- Caxixi (Brazil)
- Chimes
- Ching
- Cowbell
- Crotales
- [Cymbals](#):
  - Crash cymbal
  - Hi-hat cymbal
  - Ride cymbal
  - Splash cymbal
  - Zil (Finger cymbal)
- Fangxiang (China)
- Gamelan (Indonesia)
  - American gamelan
  - Gangsa
  - Gendér
  - Ugal
- Ganza
- Ghatam
- Glass marimba
- [Gong](#)

- Guiro
  - Glockenspiel
  - hands
    - clapping
- Handbells
- Hang
- Hosho (instrument) (Zimbabwe)
- Ipu (Hawaii)
- Maracas
- Marimba
- Marimbaphone
- Mbira
- Metallophone
- Rainstick
- Ranat ek lek (Thailand)
- Ranat thum lek (Thailand)
- Shekere
- Spoons
- Steelpan
- [Triangle](#)
- [Timpani](#)
- Udu
- [Vibraphone](#)
- Washboard
- [Xylophone](#)
- Xylorimba

## Electronic instruments

- Denis d'or
  - Dubreq Stylophone
- [Drum machine](#)
- Fingerboard synthesizer
  - Hammond organ
  - Mellotron
  - Ondes Martenot
  - Rhodes piano
- [Sampler](#)
- Synclavier

- [Synthesizer](#)
- Teleharmonium  
Theremin
- [Turntables](#)

## Keyboard instruments

- [Accordion](#)
- Bandoneón
- Calliope
- Carillon
- Celesta
- Clavichord
- Glasschord
- Harpsichord
- Viola organista
- [Organ](#)
  - Hammond Organ
  - [Pipe organ](#)
- [Piano](#)
  - Janko piano
  - Toy piano

## Other

- Glass harmonica
- Hardart
- Musical Saw
- Singing bowl
- Suikinkutsu (Japanese water zither)

Category: [Musical instruments](#)

## List of musical instruments by Hornbostel-Sachs number

The following is a list of [musical instruments](#), [categorized](#) according to the [Hornbostel-Sachs](#) system by how they make sound.

# 1. Idiophones

[Idiophones](#) are instruments which make sound primarily by way of the instrument itself vibrating without the use of membranes or strings.

## 11. Struck idiophones

Idiophones set in motion by a percussion action, including 111. directly struck instruments, 112. indirectly struck. With 112.1 shaken and 112.2 scraped.

- 111. directly struck
  - [Bell](#)
  - [Cymbals](#):
    - Crash cymbal
    - Hi-hat cymbal
    - Ride cymbal
    - Splash cymbal
  - Glockenspiel
  - [Gong](#)
  - [Tambourine](#)
  - [Triangle](#)
  - [Xylophone](#)
- 112. indirectly struck
  - 112.1 shaken
    - [Castanets](#)
  - 112.2 scraped
- [Chimes](#)
- Fangxiang
- Guiro
- Hang
- Hosho
- Maracas
- Marimba
- Marimbaphone
- Metallophone
- Ranat ek lek
- Ranat thum lek
- Steelpan (steel drum)

- Toy piano
- Ugal
- [Vibraphone](#)
- Washboard
- Xylorimba

## 12. Plucked idiophones

Instruments set into vibration by plucking.

- Jew's harp
- Marímbula
- Mbira
- [Musical box](#) or music box

## 13. Friction idiophones

Instruments set into vibration by rubbing.

- Glass harmonica
- Daxophone
- Styrophone
- Musical Saw
- Nail violin

## 14. Blown idiophones

Instruments set into vibration by blowing or moving air.

- Aeolsklavier

## 2. Membranophones

[Membranophones](#) are instruments which make sound primarily by way of a vibrating membrane. This includes all [drums](#).

## 21. Struck drums

- Bass drum  
Bodhrán  
Bongo drum
- [Conga](#)
- Kettle drum  
O Daiko  
Octoban  
Snare drum  
Tabla  
Taiko
- [Tambourine](#) (the jingles also make this an idiophone)
- [Timpani](#)
- Tom-Tom

## 22. Plucked drums

Some commentators believe that instruments in this class ought instead to be regarded as chordophones (see below).

## 23. Friction drums

- Cuíca  
Rommelpot

## 24. Singing membranes

Instruments in which a membrane modifies some other sound (typically the human voice) in some way (mirlitons).

- Kazoos

## 3. Chordophones

[Chordophones](#) are instruments that produce sound primarily by the vibration of a string or strings.

- Gayageum  
Geomungo

### 31. Simple chordophones

Instruments consisting of a simple string bearer and strings - there may be an additional resonator, but removing it should not destroy the instrument (so the resonator should not be supporting the strings).

- Clavichord  
Harpsichord  
Musical bow
- [Piano](#)
- [Zither](#)

### 32. Composite chordophones

Instruments in which the resonator cannot be removed without destruction of the instrument.

- Aeolian harp  
Balalaika
- [Banjo](#)
- [Cello](#)
- àn nguyÇt  
àn tó bà  
Double Bass
- [Fiddle](#)
- [Guitars](#):
  - [Acoustic guitar](#)
  - [Bass guitar](#)
  - [Classical guitar](#)
  - [Electric guitar](#)
  - Slide guitar  
Steel guitar
- Hammered dulcimer  
Hardanger fiddle

- [Harp](#)
- Hurdy gurdy
- Khim
- Komungo
- Kora
- Koto
- [Lute](#)
- [Lyre](#)
- [Mandolin](#)
- Nyckelharpa
- [Sitar](#)
- Ukulele
- Vertical viola (and other members of the violin octet family)
- Vieille
- Viol
- [Viola](#)
- Viola d'amore
- [Violin](#)
- Washtub bass
- Xalam (or khalam)

## 4. Aerophones

[Aerophones](#) are instruments in which the vibrating air itself is the primary cause of sound. This can include a column of air being set in vibration (as in wind instruments) or an air-flow being interrupted by an edge (as in free-reeds).

### 41. Free aerophones

The vibrating air is not contained within the instrument.

- old car horn
- Bullroarer
- [Siren](#)
- Whip
- Lasso d'amore

#### 412.13. Free-reed instruments

Free-reed instruments feature a reed which vibrates within a closely fitting slot (there may be an attached pipe, but it should only vibrate in sympathy with the reed, and not have an effect on the pitch - instruments of this class can be distinguished from 422.3 by the lack of finger-holes).

- [Accordion](#)
- Bandoneon
- [Concertina](#)
- [Harmonica](#)
- [Harmonium](#)
- Melodica
- Reed organ
- Sheng

### **413. Plosive aerophones**

The sound is caused by a single compression and release of air.

- Udu "drum" or kimkim
- Boomwhacker

### **42. Non-free aerophones (wind instruments proper)**

The vibrating air is contained within the instrument.

#### **421. Edge-blown instruments or flutes**

The player makes a ribbon-shaped flow of air with his lips, or his breath is directed against an edge.

- Conch shell
- [Flute](#)
- Hocchiku
- Huaca
- Jug
- Khloy
- Khlui
- Ocarina
- [Pan pipes](#)
- [Piccolo](#)

- Recorder
  - Slide whistle
  - Shakuhachi
  - Tin whistle
- [Whistle](#)
- Willow flute

## 422. Reed instruments

The player's breath is directed against a lamella or pair of lamellae which periodically interrupt the airflow and cause the air to be set in motion.

### 422.1 Double reed instruments

There are two lamellae which beat against one another.

#### 422.111 With cylindrical bore

- Cornamuse
  - Crumhorn
  - Hirtenschalmei
  - Shawm

#### 422.112 With conical bore

- [Oboe](#)
  - Musette (modern small oboe in e-flat)
    - Oboe d'amore
    - Cor anglais / English horn (same instrument)
    - Bass Oboe / Baritone Oboe (same instrument)
    - Heckelphone
- [Bassoon](#)
  - Tenoroon
    - Contrabassoon
- Bombarde
  - Cromorne
- Sarrusophone
  - Sopranino Sarrusophone
  - Soprano Sarrusophone
  - Alto Sarrusophone

- Tenor Sarrusophone
- Baritone Sarrusophone
- Bass Sarrusophone
- Contrabass Sarrusophone
- Tarogato (traditional))
- [Bagpipes](#):
  - Great Highland Bagpipe
  - Uilleann pipes
  - Northumbrian Smallpipes
  - Musette de cour
  - Biniou
  - Gaita
  - Dudelsack

#### 422.2 Single reed instruments (clarinets)

There is one lamella which beats against a solid surface.

##### 422.211.2 Single clarinets, cylindrical bore, with fingerholes

- [Clarinets](#)
  - Piccolo clarinet (A-flat clarinet)
  - Sopranino clarinet (E-flat clarinet, D clarinet)
  - Soprano clarinet (C clarinet, B-flat clarinet, A clarinet, G clarinet)
  - Basset clarinet
  - Basset horn
  - Alto clarinet
  - Bass clarinet
  - Contra-alto clarinet
  - Contrabass clarinet
  - Octocontra-alto clarinet
  - Octocontrabass clarinet
- [Bagpipes](#):
  - Duda
  - Swedish bagpipes
  - Zampogna
  - (see also main article "[Types of bagpipes](#)" for many others)
- Experimental:
  - Folgerphone

##### 422.212 Conical bore

- Octavin
- [Saxophone](#)
  - Soprillo
    - Sopranino saxophone
    - Soprano saxophone
    - Conn-o-sax
    - F mezzo-soprano saxophone
    - Alto saxophone
    - Tenor saxophone
    - C melody saxophone
    - Baritone saxophone
    - Bass saxophone
    - Contrabass saxophone
    - Subcontrabass saxophone
    - Tubax
- Tarogato (modern)

#### 422.22 Sets of clarinets

- Zummara (Double Clarinet)

#### 422.3

Similar to the free-reeds with a pipe attached - distinguished from them by the presence of finger-holes in the pipe.

### 423. Trumpets

The player's vibrating lips set the air in motion.

#### 423.1 Natural trumpets

There are no means of changing the pitch apart from the player's lips.

- Bugle
- Didgeridoo
- Shofar
- Alphorn
- Lur

Natural trumpet  
Natural horn

#### 423.2 Chromatic trumpets

The pitch can be changed by means of keys (423.21) a slide (423.22) or valves (423.23).

- Bazooka  
Sackbut
- [Trombone](#)
- Baritone horn
- [Cornett](#) (or *Cornetto*)
- Serpent  
Tenor Horn / Alto Horn (same instrument)
- [Cornet](#)
- Euphonium  
Flugelhorn
- [Horn](#)
- Mellophone  
Sousaphone
- [Trumpet](#)
- [Tuba](#)
- Wagner tuba

## 5. Electrophones

Electrophones are instruments in which sound is generated by electrical means. While it is not officially in any published form of the Hornbostel-Sachs system, and hence, lacking proper numerical subdivisions, it is often considered a fifth main category.

- Denis d'or
- [Drum machine](#)
- Hammond organ  
Mellotron
- [Moog synthesizers](#)
- Octapad  
Ondes Martenot

- Rhodes piano
- Synclavier
- [Synthesizer](#)
- Tannerin (a.k.a. Electro-Theremin)
- Teleharmonium
- Theremin

## Musical movements

This is a list of **musical movements**. These terms, helpful for curricula or anthologies, evolved over time to group musicians who are often loosely related. Some of these movements were defined by the members themselves, while other terms emerged decades or centuries after the periods in question. Ordering is approximate, as there is considerable overlap.

### List of musical movements:

- [Baroque music](#)
- [Galante music](#)
- [Impressionist music](#)
- [Minimalist music](#)
- [Modernism \(music\)](#)
- [Neoclassicism \(music\)](#)
- [Neoromanticism \(music\)](#)
- [New Weird America](#)
- [Post-minimalism](#)
- [Postmodern music](#)
- Groupe des six

- [Minimalism](#)
- [Neoclassicism \(music\)](#)
- [Second Viennese school](#)
- Zero artistic movement

## List of North, Central and South American folk music traditions

---

## [Lists of folk music traditions](#)

**Americas:** North, Central, Latin, South America and the Caribbean

[Asia](#): East, Central, North, South, Southeast

[Europe](#): Northern, Eastern, Southeastern, Southern, Western

[Middle East and North Africa](#): Southwest Asia

[Oceania and Australia](#): Melanesia, Micronesia, Polynesia

[Sub-Saharan Africa](#): Central, East, Southern and West

This is a **list of folk music traditions**, with styles, dances, instruments and other related topics. The term *folk music* can not be easily defined in a precise manner; it is used with widely-varying definitions depending on the author, intended audience and context within a work. Similarly, the term *traditions* in this context does not connote any strictly-defined criteria. Music scholars, journalists, audiences, record industry individuals, politicians, nationalists and demagogues may often have occasion to address which fields of folk music are distinct traditions based along racial, geographic, linguistic, religious, tribal or ethnic lines, and all such peoples will likely use different criteria to decide what constitutes a "folk music tradition". This list uses the same general categories used by mainstream, primarily English-language, scholarly sources, as determined by relevant statements of fact and the internal structure of works.

These traditions may coincide entirely, partially or not at all with geographic, political, linguistic or cultural boundaries. Very few, if any, music scholars would claim that there are any folk music traditions that can be considered specific to a distinct group of people and with characteristics undiluted by contact with the music of other peoples; thus, the folk music traditions described herein overlap in varying degrees with each other.

## List of Oceanic and Australian folk music traditions

|   |
|---|
| <a href="#">Lists of folk music traditions</a>                                    |
| <a href="#">Americas</a> : North, Central, Latin, South America and the Caribbean |
| <a href="#">Asia</a> : East, Central, North, South, Southeast                     |
| <a href="#">Europe</a> : Northern, Eastern, Southeastern, Southern, Western       |
| <a href="#">Middle East and North Africa</a> : Southwest Asia                     |
| <b>Oceania and Australia</b> : Melanesia, Micronesia, Polynesia                   |
| <a href="#">Sub-Saharan Africa</a> : Central, East, Southern and West             |

This is a **list of folk music traditions**, with styles, dances, instruments and other related topics. The term *folk music* can not be easily defined in a precise manner; it is used with widely-varying definitions depending on the author, intended audience and context within a work. Similarly, the term *traditions* in this context does not connote any strictly-defined criteria. Music scholars, journalists, audiences, record industry individuals, politicians, nationalists and demagogues may often have occasion to address which fields of folk music are distinct traditions based along racial, geographic, linguistic, religious, tribal or ethnic lines, and all such peoples will likely use different criteria to decide what constitutes a "folk music tradition". This list uses the same general categories used by mainstream, primarily English-language, scholarly sources, as determined by relevant statements of fact and the internal structure of works.

These traditions may coincide entirely, partially or not at all with geographic, political, linguistic or cultural boundaries. Very few, if any, music scholars would claim that there are any folk music traditions that can be considered specific to a distinct group of people and with characteristics undiluted by contact with the music of other peoples; thus, the folk music traditions described herein overlap in varying degrees with each other.

### Oceania and Australia

Children at a singsing in Papua New Guinea

An indigenous Australian instrument, the didgeridoo

| Country | Elements      | Dance | Instrumentation    | Other topics |

## **List of string instruments**

[String instruments](#) are usually divided by the techniques used to produce sound. Below is a list of string instruments, categorized in this manner.

### **String instruments usually bowed**

- Banhu (China)
- Baryton
- Bowed psaltery
- [Cello](#)
  - Electric cello
- Cizhonghu (China)
- Crwth
- Dahu (China)
- àn gáo (Vietnam)
- Diyingehu (China)
- Double bass
- Erhu (China)

- Erxian (China)
- Esraj (India)
- [Fiddle](#) (colloquial term for violin)
- Gadulka (Bulgaria)
- Gaohu (China)
- Gehu (China)
- Ghaychak (Iran)
- Goje (Ghana)
- Gudok (Russia)
- Gusle
- Haegeum (Korea)
- Hardanger fiddle (Norway)
- Huluhu (China)
- Huqin (China)
- Jinghu (China)
- Kemenche (Turkey)
- Kokyu (Japan)
- Laruan (China)
- Leiqin (China)
- Lirone
- Maguhu (China)
- Morin khuur (Mongolia)
- Nyckelharpa (Sweden)
- Octobass
- Psalmodikon
- Rebec
- Sarangi (India)
- Sarinda (India)
- Saw sam sai (Thailand)
- Sihu (China)
- Tro (Cambodia)
- Trumpet marine or tromba marina
- Vielle
- Viol (viola da gamba)
  - Violone
- [Viola](#)
- Viola d'amore
- Viola pomposa
- [Violin](#)
  - Electric violin
  - Kit violin (Dancing master violin)
  - Stroh violin
  - Violin octet instruments

- Vertical viola
- Violotta
  - Yehu (China)
  - Zhonghu (China)
  - Zhuihu (China)

## String instruments usually plucked

- Appalachian dulcimer (United States)
  - Autoharp
  - Balama
  - Bajo sexto (Mexico)
  - Balalaika (Russia)
  - Bandura (Ukraine)
  - Bandurria
- [Banjo](#) (American)
- Barbat
  - Begena (Ethiopia)
  - Bordonua
- [Bouzouki](#) (Greece)
- Bugarija (Croatia)
  - Cavaquinho (Portugal and Brazil)
  - Çeng (Turkey)
  - Charango (South America)
  - Chitarrone (Mexico)
  - Cittern
  - Cuatro
  - Cümbü\_ (Turkey)
  - àn b\$u (Vietnam)
  - àn nguyÇt (Vietnam)
  - àn tranh (Vietnam)
  - àn tó bà (Vietnam)
  - Daruan (China)
  - Diddle bow (United States)
  - Dombra (East Europe and Middle Asia)
  - Domra (Russia)
  - Doshpuluur (Tuva)
  - Dutar

- Duxianqin (China)
- Ektara (India)
- [Electric bass](#)
  - Electric upright bass
- Gayageum (Korea)
- Gottuvadhyam (India)
- [Guitar](#)
  - [Bass guitar](#)
  - Acoustic bass guitar
  - Cigar box guitar
  - [Electric guitar](#)
  - Harp guitar
  - Resonator guitar (a.k.a. dobro)
- Guitarrón (Mexico)
- Gusli (Russia)
- Guqin (China)
- Guzheng (China)
- [Harp](#)
  - Electric harp
- Harpsichord (Europe, [keyboard instrument](#))
- Irish bouzouki
- Kacapi
- Kantele (Finland)
- Kanun (Middle East, Persia)
- Kobza (Ukraine)
- Komungo (Korea)
- Konghou (China)
- Kontigi (Nigeria)
- Kora (West Africa)
- Koto (Japan)
- Krar (Ethiopia)
- Langeleik (Norway)
- Laud
- Liuqin (China)
- [Lute](#) (Europe)
  - Archlute
  - Theorbo
- [Lyre](#)
- [Mandolin](#)
  - Mandocello
  - Mandola
  - Mando-banjo

- Mohan veena
- Monochord
- Musical bow
- Nyatiti (Kenya)
- Oud (Middle East, Greece)
- Pandura
- Pipa (China)
- Portuguese guitar
- Psaltery
- Qanún/kanun (Middle East, Persia)
- Qinqin (China)
- Requinto
- Rote
- Rubab
- Rudra veena (India)
- Sanxian (China)
- Saraswati veena (India)
- Sarod (India)
- Saung (Burma)
- Saz (Turkey}
- Shamisen (Japan)
- [Sitar](#) (India)
- Tambura
- Tamburitza (Pannonian plain)
- Tanbur
- Tar (lute)
- Tea chest bass
- Tiple
- Torban
- Tres (Cuba)
- [Ukulele](#) (Hawaii)
- Valiha (Madagascar)
- Veena (India)
- Vichitra veena (India)
- Vihuela (Spain)
- Paul Panhuysen's string installations
- Yueqin (China)
- Zhongruan (China)
- Zhu (China)
- [Zither](#)

## Instruments where the strings are usually struck

- Berimbau (Brazil)  
Cimbalom (Hungary)  
Chapman stick  
Clavichord (keyboard instrument)  
Hammered dulcimer  
Khim (Thailand and Cambodia)
- [Piano](#) (keyboard instrument)
- Santur (Persia)  
Warr guitar  
Yangqin (China)

## String instruments played in some other way

Aeolian harp (air movement)  
Hurdy gurdy (rotating wheel, similar in effect to a bow)  
Ellen Fullman's Long String Instrument, rubbed, the strings vibrate in the longitudinal mode

## Traditional string instruments by country

- North America:
  - Appalachian dulcimer  
Autoharp
  - [Banjo](#)
- Benelux:
  - Hommel  
Vlier  
Épinette  
Hakkebord
- Bulgaria:
  - Gadulka  
Tambura
- Burundi: Inanga (zither) (also Burundian zither)
- China:

- Guqin (7-string zither)
- Guzheng (21-string zither)
- Huqin (family of bowed lutes)
- Erhu (2-string bowed lute)
- Gaohu (2-string bowed lute, high pitched)
- Pipa (4-string pear-shaped lute)
- Sanxian (3-string fretless lute)
- Yángqín (hammered dulcimer)
- Zhu
- Croatia: Tamburitza
- Estonia, Finland: Kannel
- Finland: Kantele
- France: Épinette
- Germany:
  - Scheitholt
  - Hackbrett
  - Hammered dulcimer
- Greece:
  - [Bouzouki](#)
  - [Lyra](#)

## List of Sub-Saharan African folk music traditions

|   |
|---|
| <a href="#">Lists of folk music traditions</a>                                    |
| <a href="#">Americas</a> : North, Central, Latin, South America and the Caribbean |
| <a href="#">Asia</a> : East, Central, North, South, Southeast                     |
| <a href="#">Europe</a> : Northern, Eastern, Southeastern, Southern, Western       |
| <a href="#">Middle East and North Africa</a> : Southwest Asia                     |
| <a href="#">Oceania and Australia</a> : Melanesia, Micronesia, Polynesia          |
| <b>Sub-Saharan Africa</b> : Central, East, Southern and West                      |

This is a **list of folk music traditions**, with styles, dances, instruments and other related topics. The term *folk music* can not be easily defined in a precise manner; it is used with widely-varying definitions depending on the author, intended audience and context within a work. Similarly, the term *traditions* in this context does not connote any strictly-defined criteria. Music scholars, journalists, audiences, record industry individuals, politicians, nationalists and demagogues may often have occasion to address which fields of folk music are distinct traditions based along racial, geographic, linguistic, religious, tribal or ethnic lines, and all such peoples will likely use different criteria to decide what constitutes a "folk music tradition". This list uses the same general categories used by mainstream, primarily English-language, scholarly sources, as determined by relevant statements of fact and the internal structure of works.

These traditions may coincide entirely, partially or not at all with geographic, political, linguistic or cultural boundaries. Very few, if any, music scholars would claim that there are any folk music traditions that can be considered specific to a distinct group of people and with characteristics undiluted by contact with the music of other peoples; thus, the folk music traditions described herein overlap in varying degrees with each other.

### Central Africa

## Live album

A **live album** is a musical recording containing recorded concert performances. Live albums have existed since the early 1960s when the album began to be seen as an artistic entity unto itself and not simply a collection of songs.

Most successful recording artists release at least one live album at some point during their career. Most live albums are seen as expendable parts of an artists' catalogue, often failing to sell as well as studio albums. However, a few artists are known for live albums that are considered better than their studio albums, including KISS, James Brown, Allman Brothers Band, and The Grateful Dead.

Some live albums include:

- AC/DC - If You Want Blood You've Got It (1978)
- The Allman Brothers Band At Fillmore East (1971)
- Bad Religion Tested (1997)
- BB King Live at the Regal (1964)
- BB King - Live at the Cook County Jail (1971)
- Black Oak Arkansas - Raunch 'N' Roll (1973)
- Black Sabbath Past Lives (2002)
- Blue Öyster Cult - A Long Day's Night (2002)
- Blue Öyster Cult - Extraterrestrial Live (1982)
- Blue Öyster Cult - On Your Feet Or On Your Knees (1975)
- Blue Öyster Cult - Some Enchanted Evening (1978)
- The Blues Project - Live At The Cafe Au Go Go
- Bob Marley & the Wailers Live! (1975)

James Brown Live at the Apollo (1963)  
James Brown Sex Machine (1970)  
Jackson Browne Running on Empty (1978)  
Canned Heat - Live In Europe (1971)  
Johnny Cash At Folsom Prison (1968)  
Johnny Cash At San Quentin (1969)  
Cheap Trick At Budokan (1978)  
Chicago - IV (Live at Carnegie Hall) (1972)  
The Chipmunks and The Nutty Squirrels - Shirley, Squirrely & Melvin (1981)  
Climax Blues Band - FM/Live  
Cream - Wheels of Fire (live at the Fillmore) (1968)  
Deep Purple - Made in Japan (1972)  
Depeche Mode - 101 (1989)  
Derek and the Dominos - Derek and the Dominos Live  
Diana Ross & the Supremes Farewell (1970)  
Dire Straits - Alchemy (1983)  
The Doors - Absolutely Live  
The Doors - Alive She Cried (1983)  
Bob Dylan - Hard Rain  
Bob Dylan The Bootleg Series Vol. 4: Bob Dylan Live 1966, The "Royal Albert Hall" Concert (1998)  
Eric Clapton - Rainbow Concert (1971)  
Eric Clapton - Live with Delaney and Bonnie Bramlett  
Peter Frampton Frampton Comes Alive! (1976)  
Gorillaz - Demon Days Live (2006)  
Grand Funk Railroad - Live Album (1970)  
The Grateful Dead Live/Dead (1969)  
The Grateful Dead Europe '72 (1972)  
Green Day - Bullet In A Bible (2005)  
Guns N' Roses - Live Era '87-'93 (1999)  
Hall and Oates - Live At The Apollo (1985)  
Humble Pie - Performance Rockin' The Fillmore (1971)  
Iggy & The Stooges - Metallic K.O. (1976)  
Jean-Luc Ponty - Jean-Luc Ponty: Live (1979)  
Jefferson Airplane - Bless Its Pointed Little Head  
Jimi Hendrix Band of Gypsys (1970)  
John Lennon and the Plastic Onon Band - Live Peace in Toronto (1970)  
Johnny Winter And - Live  
Kanye West - Late Orchestration (2006)  
KISS Alive! (1975)  
Led Zeppelin - How the West Was Won (2003)

The Song Remains the Same  
Lynyrd Skynyrd - One More From the Road (1976)  
The Meatmen - We're The Meatmen... and You Still Suck!!! (1988)  
Metallica - S&M—Live with Michael Kamen and the San Francisco Orchestra (2002)  
Motörhead - No Sleep 'til Hammersmith (1981)  
Nine Inch Nails - And All That Could Have Been (2002)  
Nirvana Unplugged in New York (1994)  
Nirvana From the Muddy Banks of the Wishkah (1996)  
Phish A Live One (1995)  
Phish - Slip Stitch and Pass (1997)  
Phish - Hampton Comes Alive (1999)  
Pink Floyd - Ummagumma (1969)  
Pink Floyd - Is There Anybody Out There?: The Wall Live 1980-1981 (1980)/(2000)  
Pink Floyd - P\*U\*L\*S\*E (1995)  
Queen - Live Killers (1979)  
Ramones It's Alive (1979)  
REO Speedwagon - You Get What You Play For  
The Rolling Stones Get Yer Ya-Ya's Out (1970)  
Roy Buchanan - Live Stock (1975)  
Rory Gallagher - Irish Tour '74 (1974)  
Roxy Music - Viva! (1976)  
Social Distortion Live at the Roxy (1998)  
Steppenwolf - Steppenwolf Live (1970)  
Talking Heads - The Name Of This Band Is Talking Heads (1981)  
Talking Heads Stop Making Sense (1984)  
The Temptations Temptations Live! (1967)  
Ten Years After - Recorded Live (1973?)  
Theatre Of Hate - Retribution Over The Westworld (1996)  
The Who Live at Leeds (1970)  
Wings - Wings Over America (1976)  
UFO Strangers in the Night (1979)

## Lo-fi music

**Lo-fi music** is a [musical genre](#) which uses lo-fi recording practices. The aim is to sound authentic, rather than over-produced. Many lo-fi artists use inexpensive cassette tape recorders for their music.

Lo-fi's roots date back to The Beach Boys (the Smiley Smile album), The Beatles and Buddy Holly (Holly recorded some songs in a converted garage). As a genre, lo-fi is mainly associated with recordings from the 1980s onwards,

when cassette technology such as Tascam's four-track Portastudio became widely available. Prime early exponents included Daniel Johnston, Beat Happening and the label K Records, and the New Zealand music scene around the Tall Dwarfs and Flying Nun Records. Lo-fi found a wider audience with the success of Beck, Sebadoh, Pavement, Eric's Trip, and Elliott Smith.

Often lo-fi artists will record on old or poor recording equipment, originally out of financial necessity but now mainly due to the unique aural qualities available from the technologies. Many artists associated with the lo-fi movement, such as Bill Callahan or Bob Log III, have frequently rejected the use of finer recording equipment, trying to keep their sound raw instead, whereas others such as Guided By Voices and The Mountain Goats slowly moved to using professional studios.

Lo-fi techniques are espoused by some genres outside the [indie rock](#) rock world, particularly by [black metal](#) artists, where the very low-quality of the recording has become almost a desirable quality, said by fans to convey a rawness and depth of feeling otherwise unattainable. Some fans deliberately seek out extremely lo-fi concert bootlegs, such as the infamous Dawn Of The Black Hearts, which are of such low quality as to defy normal conceptions of music.

DIY Punk is also well noted for its trend toward lo-fi sound, produced for the most part on inexpensive four-track machines such as the Tascam, and copied from tape to tape on home recording equipment, degrading the quality still further. In DIY Punk lo-fi is prized mainly because it indicates a rejection of the values of commercialism.

In addition to aesthetic motivations, many bands and artists have produced lo-fi recordings for financial reasons. The use of time and equipment in a recording studio can be prohibitively expensive for artists in the early stages of their career, though in recent years digital recording techniques and equipment have put studio-quality recording within the reach of more people, at least in the Western / European countries where the "indie" aesthetic originates.

## Loudness

**Loudness** is the quality of a sound that is the primary psychological correlate of physical intensity. Loudness is also affected by parameters other than intensity, including: frequency, bandwidth, and duration.

Loudness is often approximated by a power function with an exponent of 0.6 when plotted vs. sound pressure or 0.3 when plotted vs. sound intensity (Stevens' power law). More precise measures have been subsequently made that show that loudness grows more rapidly (with a higher exponent) at low and high levels and less rapidly (with a lower exponent) at moderate levels.

When sensorineural hearing loss (damage to the cochlea) is present, the perception of loudness is altered. Sounds at low levels (often perceived by those without hearing loss as relatively quiet) are no longer audible to the hearing impaired, but interestingly, sounds at high levels often are perceived as having the same loudness as they would for an unimpaired listener. This can be described by a phenomenon called Recruitment. The most common cause of sensorineural hearing loss is exposure to elevated sound levels.

Units used to measure loudness:

- Sone
- Phon

Note: Loudness, a subjective measure, is often confused with objective measures of sound intensity such as decibels. Filters such as A-weighting attempt to adjust intensity measurements to correspond to loudness as perceived by the average human. However, true perceived loudness varies from person to person and cannot be measured this way.

## Other uses of the word loudness

A "loudness" control on a stereo alters a frequency response curve or uses audio level compression to make a selection sound louder.

A person who emits noise (with the [voice](#) or otherwise) either loudly or a lot of the time can be described as loud. Whether this is an insult or a compliment

is a matter of personal preference: some people self-describe as "loud" while many others consider "loud" people to be intensely irritating.

Clothing that is distasteful and bright-colored may also be referred to as **loud**; this is an example of poetic synaesthesia.

## Louisiana blues

The **Louisiana blues** is a type of [blues](#) music that is characterized by plodding rhythms that make the sound dark and tense. As a result of this sound, a subgenre appeared called [swamp blues](#) (based largely out of Baton Rouge), which emphasizes the dark sound and laidback rhythms of the standard Louisiana blues.

## Lounge music

**Lounge music** refers to music played in the lounges and bars of hotels and casinos, or at standalone [piano bars](#). Generally, the performers include a singer and one or two other musicians. The performers play or [cover](#) songs composed by others, especially pop standards, many deriving from the days of Tin Pan Alley. Notionally, much lounge music consists of sentimental favorites enjoyed by a lone drinker over a martini, though in practice there is much more variety.

The term can also refer to laid-back [electronic music](#), also named [downtempo](#), because of the reputation of lounge music as low-key [background](#)

[music](#).

## Overview

While the performers are often minimally paid, many people attempting a musical career start as lounge musicians. For example, the Beatles performed first as a lounge act at a bar in Hamburg, Germany. Billy Joel worked as a lounge musician and penned the song "Piano Man" about his experience.

Patrons of the lounge have been known to request the performers to play music which the performers are ill-equipped musically to play. For example, a duo of a singer and a piano player could be requested to perform "Immigrant Song" by Led Zeppelin. The resultant performance could be considered as bad music, a parody or both (a travesty).

An example of stereotypical interaction between a lounge musician and audience might be:

*Audience member:* Do you know "Rhapsody In Blue"?

*Lounge musician:* No, but if you hum a few bars I can fake it.

Reputedly, the most-requested lounge song is either "Smoke Gets In Your Eyes", or "Misty".

Lounge music has enjoyed brief resurgences in popularity in the 1980s and 1990s, led by deliberately ironic figures such as Buster Poindexter and Jaymz Bee. Richard Cheese's Lounge Against The Machine have added to this resurgence by covering [metal music](#), punk rock, and other [alternative rock](#) hits in the style of lounge music. Other artists have taken lounge music to new heights by recombining rock with pop, such as Jon Brion and the surrounding regulars of Café Largo.

## Popular culture

Comedians have long lampooned lounge singers. The "Vegas Lounge Singer" was lampooned famously by Andy Kaufman as Tony Clifton. Bill Murray portrayed a particularly bad 1970s lounge singer on Saturday Night Live, best known for providing his own lyrics to the John Williams theme from Star Wars, and an over-the-top version of the Morris Albert hit "Feelings". Later, Will Ferrell and Ana Gasteyer portrayed a goofy married duo of lounge-style musicians, but in incongruous venues such as high school dances.

In the early 1990's a lounge revival led by groups like Love Jones, The Coctails and Combustible Edison was a direct contradiction to the [Grunge](#)

music that dominated the period. These groups wore suits and played music inspired by earlier works by Antonio Carlos Jobim, Louis Prima and many others.

The film *Swingers* was set in the "Lounge Nation" scene in Los Angeles and the Soundtrack to *Swingers* featured some newer acts like Love Jones, Joey Altruda and Big Bad Voodoo Daddy as well as legendary performers like Dean Martin, Louis Jordan and Tony Bennett.

The film *The Fabulous Baker Boys* portrayed a lounge act.

## Golden Age of Lounge Music

Lounge music can also specifically refer to a form of "hip" (not "hip-hop") generally easy listening music that was popular during the 50's and 60's, yet distinct from what was "pop rock" of that era. This is considered to be the golden age of lounge music. At this time, while pop rock music was more popular with younger folks, lounge music was more popular with older folks. Typically, teenagers of the time would listen to pop rock, while their older siblings or parents would listen to lounge.

While some of the lounge music during this period was truly slow, easy listening, a lot of the music was uptempo, with the distinction being sometimes being blurred. While pop music was a generally country, blues, or rock and roll, lounge music was generally anything that wasn't strictly of those genre (or a mix of them), but that still was meant for popular consumption (and indeed, was popular with most folks who weren't interested in that pop music.)

A good deal of lounge music was pure instrumental (i.e., no main vocal part, although there could be minor vocal parts.) Sometimes, this music would be theme music from movies or TV shows, although such music could be produced independently from other entertainment productions. These instrumentals could be produced with an orchestral arrangement, or from an arrangement of instruments very similar to that found in jazz, or even rock and roll.

Often, a general theme of lounge music was exoticness, showcasing music that was popular outside the USA, such as various Latin genres (e.g., Bossa Nova, Cha-Cha-Cha, Mambo), Polynesian, French, etc. Such music could have some instruments exaggerated (e.g., a Polynesian song might have various an exotic percussion arrangement using bongos, and vocalists imitating wild animals.) One of the exotic subgenres could be called space music, which attempted to give the feeling of zooming into outer space, which is an activity that had high public interest at the time.

One interesting subgenre of lounge music was swinging music, which was nothing more than a schmaltzy continuation of the swing jazz era of the 1930's

and 40's, but with more of an emphasis on the vocalist. The legendary Rat Pack of Frank Sinatra, Dean Martin, and Sammy Davis Jr., along with similar artists such as Wayne Newton, Louis Prima and Sam Butera, are a prime example of this subgenre. Such artists performed mainly at featured lounges at Las Vegas casinos.

## Low Bap

**Low Bap** is a sub-genre of the Greek [hip hop music](#) scene, that emerged in the mid-1990s as the sound of the prominent Greek hip hop group Active Member. It's characterized by slower tempo and [rapping](#) than usual.

Categories: [Hip hop genres](#)

## Lowercase

Originally coined by minimal artist Steve Roden, **lowercase** is an extreme form of [ambient minimalism](#) in which very quiet sounds bookend long stretches of silence. Roden started the movement with an album entitled *Forms of Paper*, in which he made recordings of himself handling paper in various ways. These recordings were actually commissioned by the Hollywood branch of the Los Angeles Public Library.

Many artists have contributed to the lowercase movement, including electronic music pioneer and educator Kim Cascone, Tetsu Inoue and Bernhard Gunter.

Some of the labels that publish lowercase music include Trente Oiseaux, 12k, and raster-noton, which features famed composer Ryuichi Sakamoto in collaboration with Carsten Nicolai, a.k.a. Alva Noto.

## Lullaby

A **lullaby** is a soothing [song](#) sung to children before they go to sleep. The idea is that the song sung by a familiar voice will lull the child to sleep. Lullabies written by established [classical](#) composers are often given the form-name **berceuse**, which is a French word for lullaby, or cradle song. A famous berceuse is Frédéric Chopin's berceuse for solo piano, opus 57. Perhaps the most famous berceuse of all time, though it is called a lullaby, is Johannes Brahms' song *Wiegenlied*.

Johannes Brahms wrote his famous "Lullaby" as a cradle song, and hence *Wiegenlied* to which it translates in German, originally for a young singer whom he knew, Bertha Faber, on the occasion of the birth of her first child. The English lyrics are similar to the original German lyrics.

Typically a berceuse is in triple meter, or in a compound meter such as 6/8. Tonally most berceuses are simple, often merely alternating tonic and dominant harmonies: since the intended effect is to put a baby to sleep, wild chromaticism would be somewhat out of character. Another characteristic of the berceuse--for no reason other than convention--is a tendency to stay on the "flat side" --for example the berceuses by Chopin, Liszt and Balakirev are all in Dm.

Other famous examples of the genre include one by Maurice Ravel for violin and piano, *Berceuse sur le nom de Gabriel Fauré*; the *Berceuse élégiaque* by Ferruccio Busoni; the Berceuse by Igor Stravinsky which is featured in the Firebird ballet, and Lullaby for String Quartet by George Gershwin.

In Tamil (a language of southern India), a lullaby is called a *thaalattu* (*thal* means "tongue"). A melodious sound is created by frequent movement of the tongue at the beginning of the song, hence the name.

## Rock-a-bye Baby

One of the most famous lullabies, "Rock-a-bye Baby", is hardly lulling. Although it starts mildly enough, it quickly turns to disaster:

*Rock a bye baby on the tree top,  
When the wind blows the cradle will rock,  
When the bough breaks the cradle will fall,  
And down will come baby, cradle and all.*

The author of this lullaby isn't certainly known. The *Great American Baby Almanac* reports that it was written by a pilgrim on the Mayflower and was inspired by a custom of the Wampanoag native people, who suspend their cradleboards in trees during fine weather.

## Hush Little Baby

Another famous lullaby, generally known as "Hush Little Baby" makes many promises to the child if it will only be quiet and go to sleep, a sentiment with which parents will be familiar:

*Hush little baby, don't say a word,  
Momma's going to buy you a mockingbird*

and goes on to promise "a looking glass", "a horse and coach", and other treasures. This song has had the unusual distinction of two separate manifestations as a popular song, first as the eponymous "Bo Diddley" and then, in a near-fugue arrangement, as "Mockingbird", a hit first for the brother-and-sister team, Inez and Charlie Foxx in 1963, and then, for then husband and wife, James Taylor and Carly Simon in 1974, singing the Foxx arrangement. Toby Keith and his teenage daughter Krystal covered the song in 2004.

In 2005 [rapper](#) Eminem adapted "*Mockingbird*" into a song for his daughter. In it, he threatens to break the bird's neck if it won't sing.

## Summertime

A famous lullaby is "Summertime" from the Porgy and Bess musical of 1935. Sometimes it is also referred to as the Gershwin Lullaby. Although many of the jazz improvisations of this song have "wild chromaticism", the original is quite soothing, and somewhat slow and melancholy, in natural minor. The recurring gentle rocking back and forth between A-minor 6th and E-seventh, in the orchestral strings version, is simultaneously both sad and comforting. Additionally, many parents sing this song (unaccompanied) to their children, at bed time.

E+ Am6 E7 Am6 Summertime, and the living is easy ... So hush little baby, don't you cry.

## All the Pretty Little Horses

Another famous lullaby is "All the Pretty Little Horses" which many children simply know by the first three words of the lyrics: "Hush a bye". Like Summertime this song is also played in natural minor.

Dm Hush a bye,

Gm don't you cry.

Am Bb Dm Go to sleep my little ba-by; When you wake, you'll have cake, and all the pretty little horses.

Black and bays, Dapples and greys, Coach and six little horses.

## Pop Culture

In the 1998 video game *The Legend of Zelda: Ocarina of Time*, *Zelda's Lullaby* is the first song that players are taught by Impa in the Castle Courtyard. The song is said to have mystical powers, capable of doing extraordinary things. The song is played on the ocarina and is played when players press the left-c, up-c, right-c, left-c, up-c, right-c buttons on the controller while holding the ocarina.

In the 2000 video game *The Legend of Zelda: Majora's Mask*, *Goron's Lullaby* is a song players learn in the Northern Mountain. Players learn the first part from the frozen Goron Elder, and the rest from the Goron Baby in the Goron Shrine. It is used to put the Baby Goron to sleep, as well as the Giant Goron in front of Snowhead Temple. The song is played on the ocarina and is played when players press the A, right-c, left-c, A, right-c, left-c, right-c, A buttons on the controller while holding the ocarina.

## Lute

The **lute** is a plucked [string instrument](#) with a fretted neck and a deep round back. The words 'lute' and 'oud' may have derived from Arabic *al'ud*, "the wood", though recent research by Eckhard Neubauer suggests that *'ud* may simply be an Arabized version of the Persian name *rud*, which meant string, stringed instrument, or lute. Gianfranco Lotti suggests that the "wood" appellation originally carried derogatory connotations, because of proscriptions of instrumental music in early Islam.

The player of a lute is called a *lutenist*, *lutanist* or *lutist* and a maker of lutes (or any string instrument) is called a *luthier*.

## Description of the instrument

Lutes are made almost entirely of wood. The soundboard is a thin flat plate of resonant wood (usually spruce), teardrop-shaped. In all lutes the soundboard has a single (sometimes triple) decorated soundhole under the strings, called the *rose*. The soundhole is not open, but rather covered with a grille in the form of an intertwining vine or a decorative knot, carved directly out of the wood of the soundboard. The *back* or the shell is assembled from thin strips of wood called *ribs* joined (with glue) edge to edge to form a deep rounded body for the instrument. There are braces inside to give the instrument strength; see the photo among the external links below. The *neck* is made of light wood, with a veneer of hardwood (usually ebony) to provide durability for the *fretboard* beneath the strings. Unlike most modern stringed instruments, the fretboard is mounted flush with the top. The *pegbox* for lutes before the [Baroque](#) era was angled back from the neck at almost 90° (see image), presumably to help hold the low-tension strings firmly against the *nut*. The *tuning pegs* are simple pegs of hardwood, somewhat tapered, that are held in place by friction in holes drilled through the *pegbox*. There are no gears or other aids for tuning the instrument.

The frets are made of loops of gut tied around the neck. They fray with use, and must be replaced from time to time. A few additional partial frets of wood are usually glued to the body of the instrument, to allow stopping the highest-pitched courses up to a full octave higher than the open string (see image). Strings were historically made of gut (or extremely rarely of metal), and are still made of gut or a synthetic substitute, with metal windings on the lower-pitched strings.

The lute's strings are arranged in *courses*, usually of two strings each, though the highest-pitched course usually consists of only a single string, called the *chantarelle*, in later Baroque lutes 2 upper courses are single. The courses are numbered sequentially, counting from the highest pitched, so that the *chantarelle* is the *first course*, the next pair of strings is the *second course*, etc. Thus an 8-course lute will usually have 15 strings, and a 13-course lute will have 24.

The courses are tuned in unison for high or intermediate pitches, but for lower pitches one of the two strings is tuned an octave higher. (The course at which this split starts changed over the history of the lute.) The two strings of a course are virtually always stopped and plucked together, as if a single string, but in extremely rare cases a piece calls for the two strings of a course to be stopped and/or plucked separately. The tuning of a lute is a somewhat

complicated issue, and is described in a separate section of its own, below. The result of this design is an instrument extremely light for its size.

## History and evolution of the lute

The origins of the lute are obscure. Various types of lutes were in use in ancient Egyptian, Hittite, Greek, Roman, Bulgar, Ghandarese, Turkic, Chinese, Armenian/Cilician cultures. The Lute developed its familiar forms in Persia, Armenia, Byzantium and the Arab lands in the early 7th century.

As early as the 6th century the Bulgars brought the short-necked variety of the instrument to the Balkans, and in the 9th century Moors brought it to Spain/Catalonia. The long-necked Pandora/Quitra had been common Mediterranean lute previously. The Quitra didn't become extinct however, but continued its evolution, its descendants being Chitarra Italiana, Chitarrone and Colascione.

In about the year 1500 many Spanish, Catalan and Portuguese lutenists adopted vihuela de mano, a viol-shaped instrument tuned like the lute, but both instruments continued in coexistence. This instrument also found its way to parts of Italy that were under Spanish domination (especially Sicily and the papal states under the Borgia pope Alexander VI), where it was known as the viola da mano.

The most important point of transfer of the lute from Muslim to Christian European culture might have been Sicily, where it was brought either by Byzantine or later by Saracen musicians. Because these singer-lutenists were used at court following the Christian conquest of the island, it became the most-often depicted instrument in ceiling paintings in the Palermo's royal Cappella Palatina, dedicated by the Norman King Roger II in 1140. By the 14th century, lutes had disseminated throughout Italy. Probably due to the cultural influence of the Hohenstaufen kings and emperor, based in Palermo, the lute had also made significant inroads into the German-speaking lands by the 14th century.

Medieval lutes were 4- or 5-course instruments, plucked using a quill for a plectrum. There were several sizes, and by the end of the Renaissance, seven different sizes (up to the great octave bass) are documented. Song accompaniment was probably the lute's primary function in the Middle Ages. Very little music securely attributable to the lute survives from the era before 1500. Medieval and early-Renaissance song accompaniments were probably mostly improvised, hence the lack of written records.

In the last few decades of the 15th century, in order to play Renaissance polyphony on a single instrument, lutenists gradually abandoned the quill in favor of plucking the instrument with the fingertips. The number of courses

grew to six and beyond. The lute was the premier solo instrument of the 16th century, but continued to be used to accompany singers as well.

By the end of the Renaissance the number of courses had grown to ten, and during the Baroque era the number continued to grow until it reached 14 (and occasionally as much 19). These instruments, with up to 26-35 strings, required innovations in the structure of the lute. At the end of the lute's evolution the archlute, theorbo and torban had long extensions attached to the main tuning head in order to provide a greater resonating length for the bass strings, and since human fingers are not long enough to stop strings across a neck wide enough to hold 14 courses, the bass strings were placed outside the fretboard, and were played "open", i.e. without fretting/stopping them with the left hand.

Over the course of the Baroque era the lute was increasingly relegated to the continuo accompaniment, and was eventually superceded in that role by keyboard instruments. The lute fell out of use after 1800.

## **The lute in the modern world**

The lute enjoyed a revival with the awakening of interest in historical music around 1900 and throughout the century, and that revival was further boosted by the [early music](#) movement of the second half of the Twentieth Century. Julian Bream is famous for his lute concerts during that time period, as well as Hans Neemann, Walter Gerwig, Suzanne Bloch and Diana Poulton. Lute performances are now not uncommon, there are many professional lutenists, especially in Europe where employment is to be found. And new compositions for the instrument are being produced.

Lutes built at present are invariably replicas or near copies of those surviving historical instruments that are to be found in museums or private collections. They are custom-built or must be bought second hand in a very limited market. As a result, lutes are generally more expensive than mass-produced modern instruments such as the guitar, though not nearly as expensive as the violin. Unlike in the past there are many types of lutes encountered today: renaissance lutes of 6 to 10 courses in many pitches for solo and ensemble performance of Renaissance works, the archlute of Baroque works, 11-course lutes in d-minor tuning for 17th century French, German and Czech music, 13/14-course d-minor tuned German Baroque Lutes for later High Baroque and Classical music, theorbo for basso continuo parts in Baroque ensembles, gallichons/mandoras, bandoras, orpharions and others.

Also in modern Greece there are several lute-related instruments: laouto, and outi.

## The lute repertoire

Notable [composers](#) of lute music include:

Renaissance--Italy

Vincenzo Capirola

Francesco Canova da Milano,

Renaissance--Central Europe

Bálint Bakfark,

Melchior Newsidler

Renaissance--England

John Dowland,

John Johnson,

Philip Rosseter,

Thomas Campion,

Baroque--Italy

Alessandro Piccinini

Antonio Vivaldi,

Johannes Hieronymus Kapsberger

Baroque--France

Robert de Visée,

Denis Gaultier

Baroque--Germany

Johann Sebastian Bach,

Silvius Leopold Weiss,

Wolf Jakob Lauffensteiner,

Joachim Bernhard Hagen,

Adam Falkenhagen,

Karl Kohaut

Modern and Contemporary (see the Index of Contemporary Lute Music by David Parsons and Lynda Sayce)

Johann Nepomuk David--Germany

Vladimir Vavilov-- Russia

Sandor Kallosz-- Hungary and Russia

Stefan Lundgren-- Germany and Sweden

Toyohiko Satoh -- Japan and Netherlands

Ronn McFarlane -- USA

Paulo Galvão-- Portugal

Rob MacKillop--Scotland

Jozef van Wissems-- Netherlands

Aleksandr Danilevsky France and Russia

Roman Turovsky-Savchuk-- USA and Ukraine

Many historical lute pieces were published, but great many more are found only in manuscripts, perhaps belonging to the composer or perhaps belonging to some amateur lutenist who would copy in unpublished pieces, or have a renowned guest indict a new composition while visiting.

The modern repertoire is largely drawn from historical publications and manuscripts, though quite a few modern compositions do exist. The historical corpus is vast, consisting of over 40,000 pieces, and about half of it exists only in the original manuscripts and has never been published. Much material circulates among lutenists in facsimiles of the manuscripts or as photocopies of handwritten copies. Historical lute music is most commonly written in tablature, though sometimes in [ordinary musical notation](#) instead. Several computer programs now exist designed specifically for the editing and printing of lute tablature.

Ottorino Respighi's famous orchestral suites called *Ancient Airs and Dances* are drawn from various books and articles on 16th- and 17th-century lute music transcribed by the musicologist Oscar Chilesotti, including eight pieces from a German manuscript *Da un Codice Lauten-Buch*, now in a private library in northern Italy.

## Tuning conventions

Lutes were made in a large variety of sizes, with varying numbers of strings/courses, and with no permanent standard for tuning. However, the following seems to have been *generally* true of the Renaissance lute: A 6-course Renaissance tenor lute would be tuned to the same intervals as a tenor viol, with intervals of a *perfect fourth* between all the courses except the 3rd and 4th, which differed only by a *major third*. The tenor lute was usually tuned nominally "in g"(there was no pitch standard before the 20th century), named after the pitch of the highest course, yielding the pattern [(G'G) (Cc) (FF) (AA) (dd) (g)] from the lowest course to the highest. (Much renaissance lute music can be played on a guitar by tuning the guitar's third string down by a half tone.)

For lutes with more than six courses the extra courses would be added on the low end. Due to the large number of strings lutes have very wide necks, and it is difficult to stop strings beyond the sixth course, so additional courses were usually tuned to pitches useful as bass notes rather than continuing the regular pattern of fourths, and these lower courses are most often played without stopping. Thus an 8-course tenor Renaissance lute would be tuned to [(D'D) (F'F) (G'G) (Cc) (FF) (AA) (dd) (g)], and a 10-course to [(C'C) (D'D) (Eb'Eb) (F'F) (G'G) (Cc) (FF) (AA) (dd) (g)].

However, none of these patterns were *de rigueur*, and a modern lutenist will occasionally be seen to retune one or more courses between performance pieces. Manuscripts bear instructions for the player, e.g. *7<sup>e</sup> choeur en fa* = "seventh course in *fa*" (= F in the standard C scale).

The first part of the seventeenth century was a period of considerable diversity in the tuning of the lute, particularly in France. However, by around 1670 the scheme known today as the "Baroque" or "d-minor" tuning became the norm, at least in France and in northern and central Europe. In this case the first six courses outline a d-minor triad, and an additional five to seven courses are tuned generally scalewise below them. Thus the 13-course lute played by Weiss would have been tuned [(A''A') (B''B') (C'C) (D'D) (E'E) (F'F) (G'G) (A'A') (DD) (FF) (AA) (d) (f)], or with sharps or flats on the lower 7 courses appropriate to the key of the piece.

Modern lutenists tune to a variety of pitch standards, ranging from A = 392 to 470 Hz, depending on the type of instrument they are playing, the repertory, the pitch of other instruments in an ensemble and other performing expediencies. No attempt at a universal pitch standard existed during the period of the lute's historical popularity. The standards varied over time and from place to place.

## Quotations

*The art of playing the lute formed a major part of instrumental music making in the Renaissance before keyboard instruments assumed central significance. It was a refined, soft, and at the same time colorful art, in sharp contrast to the agitated times in which it was practiced.*

— Karl Schumann [1]

*This style knows nothing of the otherwise usual requirements and prohibitions of voice-leading; it can only be understood in relation to the fingering technique; it frequently applies the sound of open strings and in no way avoids the otherwise so despised parallel 5ths and octaves or unisons. The dissonances and other conflicting sounds which appear so often...strike me as exciting and revealing.*

— Carl Orff [1]

[1] Quotation taken from the liner notes to the Wergo edition of Orff's *Kleines Konzert*, with English translations by John Patrick Thomas.

## Lute song

The **lute song** was a generic form of music in the late [Renaissance](#) and very early [Baroque](#) eras, generally consisting of a singer accompanying himself on a [lute](#), though lute songs may often have been performed by a singer and a separate lutenist.

Many of the composers of lute songs were themselves lutenists, and performed the songs themselves; many were also [madrigalists](#) or composers of [chansons](#). In general, lute songs were written from about 1550 to around

1650, though there is evidence that some music was performed this way much earlier (for instance, Baldassare Castiglione mentions that [frottola](#) were sometimes performed by solo voice and lute, presumably in the first decade or so of the 16th century.)

The lute song flourished in Italy, France and England; it had different styles and names in each location. In England, it was called the ayre (or air). Famous composers included John Dowland, Thomas Campion, and Philip Rosseter. In Italy, composers of lute songs included Vincenzo Galilei and Luzzasco Luzzaschi; the songs written later in the 16th century were the first to show Baroque characteristics. The French lute song was called the [air de cour](#), and had a somewhat longer lifespan than elsewhere, due to the influence of *musique mesurée*; it also influenced early French [opera](#).

## Lyre

A **lyre** is a [stringed musical instrument](#) well known for its use in Classical Antiquity. The recitations of the Ancient Greeks were accompanied by it.

According to ancient Greek mythology, the young god Hermes created the lyre from the body of a large tortoise shell (kheilos) which he covered with animal hide and antelope horns. Lyres were associated with Apollonian virtues of moderation and equilibrium, contrasting the Dionysian [pipes](#) which represented ecstasy and celebration.

Places in southern Europe, western Asia, or north Africa have been proposed as the historic birthplace of the genus. Some of the heroes and improvers of the lyre were of the Aeolian or Ionian Greek colonies on the coasts of Asia (ancient Asia Minor, modern day Turkey) bordering the Lydian empire. Some mythic masters like Orpheus, Musaeus, and Thamyris were believed to have been born in Thrace, another place of heavy Greek colonization. The name kissar (kithara) given by the ancient Greeks to Egyptian box instruments reveals the apparent similarities recognized by

Greeks themselves. The cultural peak of ancient Egypt, and thus the possible age of creation, predates the 5th century classic Greece. Thus we can infer that the instrument might have existed in one of Greece's adjacent countries, either Thrace, Lydia, or Egypt, and was introduced into Greece at pre-classic times.

## Construction

The frame of a lyre consists of a hollow body or sound-chest. From this sound-chest are raised two arms, which are sometimes hollow, and are bent both outward and forward. They are connected near the top by a crossbar or yoke. Another crossbar, fixed on the sound-chest, forms the bridge which transmits the vibrations of the strings. The deepest note was the farthest from the player; but, as the strings did not differ much in length, more weight may have been gained for the deeper notes by thicker strings, as in the [violin](#) and similar modern instruments, or they were turned with slacker tension. The strings were of gut. They were stretched between the yoke and bridge, or to a tailpiece below the bridge. There were two ways of tuning: one was to fasten the strings to pegs which might be turned; the other was to change the place of the string upon the crossbar; probably both expedients were simultaneously employed.

## Number of Strings

The number of strings varied at different epochs, and possibly in different localities - four, seven and ten having been favourite numbers. They were used without a finger-board, no Greek description or representation having ever been met with that can be construed as referring to one. Nor was a bow possible, the flat sound-board being an insuperable impediment. The plectrum, however, was in constant use. It was held in the right hand to set the upper strings in vibration; at other times it hung from the lyre by a ribbon. The fingers of the left hand touched the lower strings.

There is no evidence as to what the stringing of the Greek lyre was in the heroic age. Plutarch says that Olympus and Terpander used but three strings to accompany their recitation. As the four strings led to seven and eight by doubling the tetrachord, so the trichord is connected with the hexachord or six-stringed lyre depicted on so many archaic Greek vases. We cannot insist on the accuracy of this representation, the vase painters being little mindful of the complete expression of details; yet we may suppose their tendency would be rather to imitate than to invent a number. It was their constant practice to

represent the strings as being damped by the fingers of the left hand of the player, after having been struck by the plectrum which he held in the right hand. Before Greek civilization had assumed its historic form, there was likely to have been great freedom and independence of different localities in the matter of lyre stringing, which is corroborated by the antique use of the chromatic (half-tone) and enharmonic (quarter-tone) tunings pointing to an early exuberance, and perhaps also to an Asiatic bias towards refinements of intonation.

## Modern Greece

Lyre, or Lyra (lýra) is still the dominant folk instrument of some areas in Greece, such as in Crete and areas with Pontian populations in Northern Greece (Greek Macedonia). This version of Lyra is held vertically, resting on the thighs of the player, and is played with a bow like a violin.

## Lyrics

**Lyrics** are the words in [songs](#). Lyrics can be written as the accompanying [music](#) is composed, or added afterwards. Sometimes, however, music is adapted to or written for a song or poem that has already been written. The meaning conveyed in lyrical verses can be explicit or implicit. Some lyrics are so abstract as to be completely unintelligible. In such cases, there is a tendency to emphasize the form, [articulation](#), [meter](#), and symmetries of the expressions. There are many websites that feature lyrics to songs.

## Etymology and usage

From the Greek, a **lyric** was originally a song sung with a [lyre](#). A **lyric poem** is one that expresses a subjective, personal point of view.

I would be the Lyric Ever on the lip, Rather than the Epic Memory lets slip. -Thomas Bailey Aldrich

The word *lyric* came to be used for the "words of a popular song"; this meaning was recorded in 1876 . The plural *lyrics* was used only in referring to the words of multiple songs; to refer to the words of a single song as its *lyrics* instead of its *lyric* was considered erroneous. Even so, such usage became increasingly common (probably because of the association between *lyrics* and the plural form *words*), and is predominant in modern usage. Use of the singular form *lyric* is still grammatically acceptable; it is still considered erroneous to refer to an individual word in a song as a *lyric*.

## Academic study

Lyrics can be studied from an academic perspective. For example, some lyrics can be considered a form of social commentary. Lyrics often contain political, social and economic themes as well as aesthetic elements, and so can connote messages which are culturally significant. Lyrics can also be analyzed with respect to the sense of unity (or lack of unity) it has with its supporting music. Analysis based on tonality and contrast are particular examples.

Chinese lyrics (^) are Chinese poems written in the set metrical and tonal pattern of a particular song.

Manchester

## [Timeline of alternative rock](#)

The term **Madchester** was coined for an [alternative](#) music scene that developed in Manchester, UK, at the end of the 1980s and the beginning of the 1990s.

The scene mixed [indie rock](#) and [dance music](#). Artists associated with the scene included the Stone Roses, the Happy Mondays, the Inspiral Carpets, 808 State, James and A Guy Called Gerald. At that time, the Haçienda nightclub was a major catalyst for the distinctive musical ethos in the city.

## **Before Madchester**

The music scene in Manchester immediately before the Madchester era had been dominated by [indie](#) bands such as The Smiths, New Order and The Fall. These bands were to become a major influence on the Madchester scene, but just as important was the Haçienda nightclub.

The Haçienda had been opened by Factory Records in 1982. For the first few years of its life it played predominantly indie music, but gradually began featuring more disco, [hip-hop](#) and [electro](#) (in this respect, the club enjoyed a relationship of mutual influence with its part-owners New Order).

In 1986, it became the first club outside the US to take [house music](#) seriously, with DJs Mike Pickering and Graeme Park hosting the *Nude* night on Fridays. This night quickly became legendary, and helped to turn around the reputation and fortunes of the Haçienda, which went from making a consistent loss to being full every night of the week by early 1987.

Other clubs in Manchester started to follow the Haçienda's lead: The Boardwalk in the city centre, the International (and later the International 2) in Longsight and the Osbourne Club in Miles Platting.

Another key factor in the build-up to Madchester towards the end of that year was the sudden arrival of the drug ecstasy in the city - legend has it that a friend of the Happy Mondays was a pioneer in bringing the drug into the country from Amsterdam. According to Haçienda DJ Dave Haslam: "Ecstasy use changed clubs forever; a night at the Haçienda went from being a great night out, to an intense, life changing experience" .

During 1988 [Acid House](#) became popular throughout the UK, another influence on the club culture building in Manchester.

## **Madchester artists' early careers**

Although the Madchester scene cannot really be said to have started before the autumn of 1988 (the term "Madchester" would not be coined until a year after that), many of its most significant bands and artists were around on the local scene before then.

The **Stone Roses** were formed in 1984 by singer Ian Brown and guitarist John Squire, who had grown up on the same street in Timperley, a leafy suburban town to the south of Manchester. They had been in bands together since 1979, when they were both 16, but the Stone Roses was the first to release a record, "So Young", in 1985. The line-up was completed by Alan "Reni" Wren on drums and, from 1987, Gary "Mani" Mounfield on bass.

The **Happy Mondays** were formed in Salford in 1981. The members between then and the break-up of the band in 1992 were Shaun Ryder, his brother Paul, Mark "Bez" Berry, Paul Davis, Mark Day and Gary Whelan. They were signed to Factory Records, supposedly after Hacienda DJ Mike Pickering saw them at a Battle of the Bands contest in which they came last. They released two singles - "45", produced by Pickering in 1985, and "Freaky Dancin'", produced by New Order's Bernard Sumner in 1986 - before putting out an album produced by John Cale and bearing the snappy title *Squirrel and G-Man Twenty Four Hour Party People Plastic Face Carnt Smile (White Out)* in 1987.

The **Inspiral Carpets** were formed in Oldham in 1986. The line-up was Clint Boon (organ), Stephen Holt (vocals - Tom Hingley would not join up until the beginning of 1989), Graham Lambert (guitar), Martyn Walsh (bass) and Craig Gill (drums). They released a flexi-disc a year later, and in 1988 the *Planecrash* EP (on their own Cow Records) brought them to the attention of John Peel, placing them well in the frame for the onset of Madchester.

**James** were formed in 1981 by Paul Gilbertson and Jim Glennie (after whom the band was named), recruiting Drama student Tim Booth on vocals and Gavan Whelan on drums (Gilbertson and Whelan were to leave the band before it attained commercial success). They released their first EP, *Jim One* on Factory Records in 1983, and attracted critical enthusiasm, as well as a loyal local following and the patronage of Morrissey. However, sales of their two albums for Sire Records, *Stutter* in 1986 and *Strip-Mine* in 1988, were disappointing and, at the time Madchester hit, the band was using t-shirt sales to fund its own releases through Rough Trade Records. Madchester helped bring them their belated commercial success and single "Sit Down" became one of the most popular anthems of the era.

**808 State** was formed in 1988 by the owner of the Eastern Bloc Records shop on Oldham Street, Martin Price, together with Graham Massey and Gerald Simpson. The three put together an innovative live [acid house](#) set, performing at various venues around town, and releasing an acclaimed and influential album *Newbuild* on Price's own label. Simpson left soon after the release of *Newbuild*, but went on to record as A Guy Called Gerald.

## Madchester begins

In the autumn of 1988, a series of record releases came together as the first rumblings of a serious new music scene in Manchester.

In October, the Stone Roses released "Elephant Stone" (produced by Peter Hook of New Order) as a single. Also in October, Happy Mondays released the single "Wrote for Luck" (followed by the Bummed album, produced by Martin Hannett, in November). In November, A Guy Called Gerald released his first solo single, "Voodoo Ray".

Although none of these singles achieved mainstream success, all three got attention in Manchester, and "Wrote for Luck" and "Voodoo Ray" were recognised as significant records nationally within the indie and dance communities respectively.

The growth of the local scene had been boosted by the success of the Hacienda's pioneering Ibiza nights in the summer of 1988 and the launch of the Hot acid house night (hosted by Mike Pickering and John Da Silva) in November.

By December, some sense had started to develop in the British music press that there was something going on in the city. According to Sean O'Hagan, writing in the NME (17/12/88): "There is a particularly credible music biz rumour-come theory that certain Northern towns— Manchester being the prime example— have had their water supply treated with small doses of mind-expanding chemicals ... Everyone from Happy Mondays to the severely disorientated Morrissey conform to the theory in some way. Enter A Guy Called Gerald, out of his box on the limitless possibilities of a bank of keyboards" .

However, the enthusiasm of the media at this stage shouldn't be overstated. The idea that the whole country should be focussing on Manchester developed slowly.

Interest in the Stone Roses increased as they gigged around the country and released the "Made of Stone" single in February 1989. This didn't chart, but was well received and the band were looking like they were on the brink of being the biggest thing in the country by the time they release their eponymous debut album (produced by John Leckie) in March.

Bob Stanley (later of Saint Etienne), reviewing the album in Melody Maker (29/4/89) wrote: "this is simply the best debut LP I've heard in my record buying lifetime. Forget everybody else. Forget work tomorrow" [3]. The NME didn't put it quite so strongly, but reported nonetheless that it was being talked of as "the greatest album ever made".

## "Baggy"

In May, the Happy Mondays released the single "Lazyitis" and the Inspiral Carpets put out their first single with new singer Tom Hingley, "Joe". Like the Stone Roses, the Inspiral Carpets were producing sixties - inspired indie music. All three of the main players in the emerging scene took a dance influence, particularly from 70s funk, with disco basslines and wah-wah guitar being added to their indie jingle-jangle. The Inspiral Carpets added the distinctive sound of the Farfisa organ, a style which would also be adopted by later Manchester bands, such as The Charlatans.

This sound, which was to become known as "baggy", generally includes a combination of funk, psychedelia, guitar rock and house music. In the Manchester context, the music can be seen as mainly influenced by the indie music that had dominated the city's music scene during the 80s, but also absorbing the various influences coming through the Hacienda.

Alongside the music, a way of dressing emerged that gave baggy its name. Baggy jeans (often flared) alongside brightly coloured casual tops and general sixties style became the standard uniform of Manchester youth - frequently topped off with a fishing hat in the style sported by the Stone Roses drummer Reni. The fashion, like the music, was somewhere between [rave](#) and retro.

The majority of bands on the Manchester scene would produce music that could be described as "baggy", including James, The Charlatans, Northside and The Mock Turtles. However, in the early 1990s the sound spread across the country, with bands such as The Farm, Flowered Up, Candy Flip, Such Perfect Liars, and (early on) Blur trading where manunians had gone before.

Baggy wasn't restricted to Manchester, but it should be remembered that Manchester wasn't restricted to baggy either. The return of 808 State with the seminal "Pacific" single later in 1989 reminds us of the role electronic music played, but the Manchester scene also gave a home to hip-hop artists Ruthless Rap Assassins and MC Tunes.

## Manchester hits the big time

During the summer of 1989, interest in the Manchester scene continued to grow, and media hype was well underway by the time the Happy Mondays released a Vince Clarke remix of "Wrote for Luck" as a single in September.

November was the month when Manchester seemed to have conquered the consciousness of the country, though, with four of the defining singles of the movement being released: "Move" by the Inspiral Carpets, "Pacific" by 808 State, The Manchester Rave On EP by the Happy Mondays and "Fools Gold"/"What the World is Waiting For" by the Stone Roses.

The Happy Mondays record, featuring the lead track "Hallelujah!", coined the term "Madchester" - it had originally been suggested by their video directors the Bailey Brothers as a potential t-shirt slogan.

November was a further triumphant month for the Stone Roses in particular, who performed an ecstatically-received gig at London's Alexandra Palace, and were invited onto BBC2's high-brow Late Show (where they caused a stir when the electricity cut out during their performance and they stormed off). On 23rd November, one of the defining moments of Madchester occurred when the Stone Roses and the Happy Mondays appeared on the same edition of Top of the Pops. The "Fools Gold" single made number 8 in the UK singles chart, at that time a major feat for an indie band.

Madchester's role as an industry bandwagon from this time on is hard to deny. James were amongst the first beneficiaries of this. The local success of their self-financed singles "Come Home" and "Sit Down" (the latter becoming something of a Manchester anthem during 1989, with clubs full of people ritually sitting on the floor to it) led to a deal with Fontana, and they were to score chart hits with "How Was it For You" and a re-recorded version of "Come Home" (sounding distinctly baggier) in the summer of 1990.

The Charlatans were originally from Birmingham, but having a singer (Tim Burgess) from Northwich in Cheshire and some support slots with the Stone Roses, they became accepted as a central band to the Manchester scene. They released a debut single "Indian Rope" in January 1990 and their second "The Only One I Know" quickly became seen as a classic, making the UK top ten.

A number of other bands joined the fray during 1990, including World of Twist, New Fast Automatic Daffodils, The High, Northside and Intastella. These bands are sometimes seen as bandwagoners (Northside in particular are sometimes, probably unfairly, seen as a cynical invention of Factory Records to cash in on the Madchester scene). Others would point to a pioneering exploration of the possibilities of indie-dance crossover - a journey to which minor players gave an invaluable contribution.

## **Commercial success**

Due to its limited promotional resources and its predominantly anti-commercial ethos, indie music had, for the most part, represented a specialist market during the 1980s. For example, The Smiths, probably the most prolific and successful indie band of the mid-80s, had struggled to make the UK top ten singles chart.

It's in the context that the chart success of Madchester bands should be measured. It should not be seen as confusing that on the one hand a review of

the UK music press of the time would give the impression that Madchester was an all-conquering cultural force, whilst on the other hand, sales of records by the bands involved seem decent but unspectacular by the standards of 2005. There is no doubt that the scene broke new commercial ground during 1990.

"Step On" and "Kinky Afro" by the Happy Mondays both made number 5 in the singles charts, whilst James scored the biggest Madchester hit, making number 2 in 1991 with a re-recording of "Sit Down". In the album charts, the Happy Mondays made number 4 with Pills 'n' Thrills and Bellyaches, and the Inspiral Carpets got to number 2 with Life. The Charlatans were the only Madchester band to take the number 1 spot, with the album Some Friendly in the autumn of 1990.

Outside the UK, the success of Madchester was limited, although some releases gained recognition in specialist charts around the world. In the US, the albums The Stone Roses, Pills 'n' Thrills and Bellyaches and Some Friendly reached the lower echelons of the US album chart. The Happy Mondays toured the US in 1990 and were alone amongst Madchester bands in troubling the Billboard 100, with "Step On" reaching number 57.

## Decline

The peak of Madchester was in the summer of 1990. On May 27th, the Stone Roses performed at Spike Island in the Mersey Estuary, supported by DJs Frankie Knuckles and Dave Haslam. This concert was seen by many as a one-band Woodstock for the times.

A rapid succession of chart hits followed during the summer, including "One Love" by the Stone Roses, "This Is How It Feels" by the Inspiral Carpets, "The Only One I Know" by The Charlatans and "Kinky Afro" by the Happy Mondays.

After this, however, Madchester's recorded output slowed. The end of the year saw triumphal concerts by James and a double-header with the Happy Mondays and 808 State, both at Manchester G-Mex, which seem, in retrospect, to mark the end of the era.

The Stone Roses cancelled their June 1990 tour of the US, issuing a press statement saying: "America doesn't deserve us yet". The real reasons are probably more complicated - the Roses also cancelled a gig in Spain and an appearance on the UK chat show Wogan. They would not face the public again until the end of 1994, spending the intervening time in and out of studios in Wales (where they recorded at leisure a second album, Second Coming) and fighting in court to release themselves from their contract with Silvertone Records.

The making of the next Happy Mondays album, Yes Please! was also problematic, and it would not be released until October 1992. The band flew to

Barbados to record it, making repeated requests of Factory Records for extra time and additional funds (almost certainly in part to fuel growing drug habits). This is reputed to have been the major factor in the bankruptcy of the label in November 1992.

With the two bands seen as the most central to the scene out of action, media fascination with Madchester dwindled. James, Inspiral Carpets, 808 State and The Charlatans continued to record, with varying degrees of success, during the 1990s, but ceased to be seen as part of a localised scene.

Local bands catching the tail-end of Madchester, such as The Mock Turtles, became part of a wider baggy scene. The music press in the UK began to place more focus on shoegazing bands from the south of England and bands emerging through US [grunge](#).

## Legacy

### Musical legacy

The immediate influence of Madchester was in inspiring the wider baggy movement in the UK, with bands from various parts of the country producing music in the early 1990s heavily influenced by the main Madchester players. These bands included Flowered Up (from London), The Farm (from Liverpool), the Soup Dragons (from Glasgow) and Ocean Colour Scene (from Birmingham). Blur, from Colchester, certainly adopted a baggy style in their early career, although in an interview with Select Magazine in 1991 they claimed, rather implausibly, to have "killed" the genre.

Subsequently, the influence of Madchester on [Britpop](#) in the mid-1990s was fairly clear, depending on which bands are discussed. Oasis are a clear example, and their guitarist Noel Gallagher worked as a roadie for the Inspiral Carpets during the Madchester era.

The "big beat" dance music movement of the late 1990s also owed much to Madchester's eclectic approach to clubbing, with the Manchester DJ-ing duos the Chemical Brothers and Mint Royale being heavily inspired by their experiences in the Manchester clubland of the early 1990s.

More generally, the Madchester scene was groundbreaking in the way it brought together [dance music](#) and [alternative rock](#), in particular the combination of the types of drumming found in funk and disco music (and sampled in 80s hip-hop music) with jingle-jangle guitar. In the 1990s, this became a commonplace formula, found frequently in even the most commercial music. Arguably, Madchester is owed a debt (or to be blamed, depending on your viewpoint) every time a jukebox plays an Alanis Morissette song.

From a marketing point of view, it might be speculated that the Madchester experience taught the music industry a number of lessons in the selling of alternative music. Some might find it tempting to suggest that there is no coincidence in the development of hype around the grunge bands in Seattle, Washington (an industrial, north-western city of the US) soon after Madchester died down.

## **Impact on Manchester**

The cultural impact of Madchester within its home city and surrounding administrative areas was significant, although hard to assess in the long-term, taking into account the full picture.

The mushrooming of Manchester's nightlife has certainly had a long-term impact, particularly with the subsequent development of the Gay Village and Northern Quarter. City centre living is also something that began to catch on in Manchester in the wake of Madchester. The city centre had not been seen as a residential area, but by 1994, high-end flats were selling for over a million pounds. The growth in the residential market in the centre of the city continues to this day.

The attraction of the city was such that, at the height of Madchester in 1990, the University of Manchester was the most sought-after destination for university applicants in the UK, a position shared year-on-year by Oxford and Cambridge in the normal course of things.

The scene also gave an undoubted boost to the city's media and creative industries. This was not only the case at the grass-roots. The BBC launched *The 8.15 From Manchester*, a Saturday morning kids' TV show (with a theme tune by the Inspiral Carpets, a re-write of "Find out Why"). This ran during 1990 and 1991, cashing in on the street-cred of the city at the time.

Organised crime became an unfortunate side-story to Madchester, with the vibrancy of the clubbing scene in the city (and the popularity of illegal drugs, particularly ecstasy) producing a fertile environment for gangsterism. During the 1990s, this was to get worse, with shootings becoming frighteningly regular in areas such as Moss Side and Longsight, and occurring from time to time in the city centre. Violent incidents at the Hacienda led to a campaign against it by Greater Manchester Police, and contributed to its closure in 1997.

The Stone Roses, the Happy Mondays, 808 State and James are amongst the bands commemorated on a Manchester "walk of fame" commissioned for Oldham Street in the city's Northern Quarter at the end of the 1990s.

## Madrigal

A **madrigal** is a setting for 3–6 voices of a secular text, often in Italian. The madrigal has its origins in the [frottola](#), and was also influenced by the [motet](#) and the French [chanson](#) of the [Renaissance](#). It is related mostly by name alone to the [Italian trecento madrigal](#) of the late 13th and 14th centuries; those madrigals were settings for 2 or 3 voices without accompaniment, or with instruments possibly doubling the vocal lines.

The madrigal was the most important secular form of music of its time. It bloomed especially in the second half of the 16th century, losing its importance by the third decade of the 17th century, when it vanished through the rise of newer secular forms as the [opera](#) and merged with the [cantata](#) and the dialogue.

Its rise started with the *Primo libro di Madrigali* of Philippe Verdelot, published in 1533 in Venice, which was the first book of identifiable madrigals. This publication was a great success and the form spread rapidly, first in Italy and up to the end of the century to several other countries in Europe. Especially in England the madrigal was highly appreciated since the publication of Nicholas Yonge's *Musica Transalpina* in 1588, a collection of Italian madrigals with translated texts which started a madrigal-culture of its own. The madrigal had a much longer life in England than in the rest of Europe: composers continued to produce works of astonishing quality even after the form had gone out of fashion on the Continent.

Late madrigalists were particularly ingenious with so-called "madrigalisms" — passages in which the music assigned to a particular word

expresses its meaning, for example, setting *riso* (smile) to a passage of quick, running notes which imitate laughter, or *sospiro* (sigh) to a note which falls to the note below. This technique is also known as "word-painting" and can be found not only in madrigals but in other vocal music of the period. The most important of the late madrigalists are certainly Luca Marenzio, Carlo Gesualdo, and Claudio Monteverdi, who integrated in 1605 the basso continuo into the form and later composed the book *Madrigali guerrieri et amorosi* (1638) (Madrigals of War and Love), which is, however, an example of the early [Baroque](#) madrigal; some of the compositions in this book bear little relation to the *a cappella* madrigals of the previous century.

## Madrigal comedy

**Madrigal comedy** is a term for a kind of entertainment music of the late 16th century in Italy, in which groups of related, generally a cappella [madrigals](#) were sung consecutively, generally telling a story, and sometimes having a loose dramatic plot. It is an important precursor to [opera](#). The term is of 20th century origin (Alfred Einstein).

The first collection of madrigals, sung as a set and telling a coherent (and highly comic) story, was *Il cicalamento delle donne al bucato* (the gossip of women in the laundry), by Alessandro Striggio, which was written in 1567. Later madrigal comedies are sometimes divided into acts, including a prologue, and while not "acted" in the sense of an opera, they may have been performed on stage with elaborate painted backdrops (for example, there is an existing woodcut showing the prologue of Orazio Vecchi's *L'Amfiparnaso* (1597): a singer is evidently in costume in a backdrop showing a city street). Vecchi's direction in the score, however, is for the singers not to act, but for the audience to fill in the action internally, using their imagination. He speaks to the audience in the prologue to the work: "the spectacle I speak of is to be seen in your mind; it enters not through your eyes, but through your ears: instead of looking, listen, and be silent."

The form was popular especially in the 1590s and few years after 1600, only in Italy, but seems to have fallen out of favor with the advent of opera right at 1600, although *a cappella* madrigals were also disappearing at this time as well. The music of madrigal comedies is light, and the subject matter was invariably comic.

Principal composers of madrigal comedy included Alessandro Striggio, Adriano Banchieri, Giovanni Croce, and Orazio Vecchi.

## Madrigal dinner

A **Madrigal Dinner** or Madrigal Feast is an American form of dinner theater often held by schools and church groups during the Christmas season. It is set in the middle ages, and is generally comedic in nature. The meal is divided into courses, each of which is heralded with a traditional song. A play is performed between the courses, and a concert of choral music concludes the festivities.

## Music

The music performed at a madrigal dinner is usually mixed choral music from the medieval to renaissance periods. Both popular and sacred songs from the renaissance are common, although modern music with renaissance or biblical texts can often be heard. Most selections are in English, Italian, German, or French. Although the dinner takes its name from the [madrigal](#) genre of music, many other styles can be heard. [Christmas carols](#) are also featured.

Several selections performed at the presentation of the meal's courses are traditional to the madrigal dinner genre. These include The Wassail Song and the Boar's Head Carol. Although they may incorporate small phrases of latin or French, the presentation songs are primarily sung in English. Each madrigal dinner has a complement of presentation music which is used every year.

## **Dramatics**

The play is performed either after the main course has been served, or in small acts between the courses. The theme is lighthearted and romantic, reminiscent of the King Arthur legends, and often revolves around the marriage of a prince or princess. Many characters are canonical, including the King, Queen and Court Jester, and appear in every play. Other characters may be minstrels, thieves, wizards, knights, visiting royalty, Greek gods and goddesses, enchanted princesses, or many other mythical figures. The audience is invited to play a role in the proceedings, either as members of the royal court or as guests at a royal event, such as a wedding. Audience participation is often used to enforce this role.

In addition, many madrigal dinners employ roving entertainers, who perform for the guests at their tables alone or in groups. These may be jugglers, poets, beggars, instrumentalists, comedians, or singers. At some shows, the singers will break into small groups and entertain among the audience - a practice known as wenching. The songs performed here are usually modern medievally-styled tunes, christmas carols and other traditional tunes. Most wenching songs are upbeat and quick, and many are bawdy.

## **Food**

Although intended to imitate a meal that might have been served during the middle ages, the food at a madrigal dinner is often regional and will vary from show to show. Courses usually include a wassail or drinks course, salad, a main course, and dessert. Although the Boar's Head Carol is the most popular madrigal song to announce the main course, the most popular meat for the main course is chicken.

During the song which accompanies each course, a symbolic object may be carried to the king's throne by two or more ceremonial guards. A boar's head is the universal symbol of the main course. However, since the head is not actually part of the meal and will be used for many years, most madrigal dinners use an imperishable head. Sometimes this is the head of a real boar, pig, or javelina, preserved by taxidermy, and sometimes it is a replica, made from papier-mâché or plaster. The Boar's Head Carol equates the presentation of the head with the presence of Christ in the festivities.

## **Madrigale spirituale**

A **madrigale spirituale** (Italian; pl. *madrigali spirituali*) is a [madrigal](#), or madrigal-like piece of music, with a sacred rather than a secular text. Most examples of the form date from the late [Renaissance](#) and early [Baroque](#) eras, and principally come from Italy and Germany.

*Madrigali spirituali* were almost always intended for an audience of cultivated, often aristocratic amateurs. They were performed at private houses, academies, and courts of noblemen in Italy and adjacent countries, but almost certainly were not used liturgically. The *madrigale spirituale* was an a cappella form, though instrumental accompaniment was used on occasion, especially after 1600.

During the Counter-Reformation, there was to some degree a reaction against the secularization of the art of music in Italy, Spain and the southern (Catholic) portion of Germany. While this did not stop the composition of secular music—indeed the explosion of forms and styles of secular music continued unabated—many composers began to adapt the most advanced secular compositional forms to religious usage. On occasion, existing madrigals were merely fitted with a religious text, usually in Latin, without any other change (such adaptations are called "contrafacta"). But some of the *madrigali spirituali* reached heights of expressive and emotional intensity at least equal to that of the finest madrigalists in their secular compositions.

The form was probably encouraged by the Jesuits; some collections were dedicated to them, especially in the 1570s and 1580s.

Some famous examples of *madrigali spirituali* include Lassus's sublimely beautiful *Lagrime di San Pietro* (Munich, 1595); Guillaume Dufay's *Vergine bella*, (ca. 1470) setting a poem in praise of the Blessed Virgin Mary by Petrarch; Giovanni Pierluigi da Palestrina's *First Book of Madrigals* (1581), also setting Marian poems by Petrarch; Carlo Gesualdo's *Tenebrae Responsories* (1611); and the huge collection by Giovanni Francesco Anerio, *Teatro armonico spirituale* (Rome, 1619).

## Madrigal (Trecento)

The **Madrigal** is an Italian musical form of the 14th century. The form flourished ca. 1300 – 1370 with a short revival near 1400. It was a composition for two (or rarely three) voices, sometimes on a pastoral subject. In its earliest development it was simple construction: Francesco da Barberino in 1300 called it a "raw and chaotic singalong".

Its origins are obscure, and debated, with one school of thought seeing it as a secular mutation of the [conductus](#) of the [ars antiqua](#), and another seeing it as deriving from 13th century secular monophonic song with an improvised accompaniment. Little Italian music from the 13th century has survived, so links between medieval forms such as the conductus and [troubador](#) song and the music of the trecento are largely inferential.

The earliest stage in the development of the madrigal is seen in the Rossi Codex, a collection of music from ca. 1350 or earlier, compiled around 1370. It has been suggested that the ornamentation of the upper voices may be improvised above a skeletal structure.

In the madrigal's later stages of development its uppermost voice was often highly elaborate, with the lower voice, the tenor, much less so. The form at this time was probably a development of *connoisseurs*, and sung by small groups of *cognoscenti*; there is no evidence of its widespread popularity, unlike the madrigal of the 16th century. By the end of the 14th century it had fallen out of favor, with other forms (in particular, the ballata and imported French music) taking precedence, some of which were even more highly refined and ornamented.

The text of the madrigal is divided into three sections: two strophes called *terzetti* set to the same music and a concluding section called the *ritornello* usually in a different [meter](#).

By the beginning of 15th century the term was no longer used musically. The later 16th century [madrigal](#) is unrelated, although it often used texts written in the 14th century (for instance by Petrarch).

Important composers of the madrigal in the [Trecento](#) include:

Jacopo da Bologna  
Giovanni da Cascia  
Vincenzo da Rimini

Maestro Piero  
Lorenzo da Firenze  
Niccolò da Perugia  
Francesco Landini  
Donato da Cascia  
Johannes Ciconia (later revivalist)

## Mafioso rap

**Mafioso rap** is a hip hop sub-genre which flourished in the mid-1990s. It is the pseudo-Mafia extension of East Coast hardcore rap, and was the counterpart of West Coast G-Funk rap during the 1990s.

## Overview

In contrast to West Coast gangsta rappers, who tended to depict realistic urban life on the ghetto streets, Mafioso rappers' subject matter included self-indulgent and luxurious fantasies of rappers as Mobsters, or *Mafiosi*, while making numerous references towards notorious crime organizations of the Italian underworld, including the Gambino crime family and Cosa Nostra. Fantasized and fictional narratives told by Mafioso rappers are often adapted

versions of classic crime thrillers, most notably Bonnie and Clyde, The Godfather, Goodfellas, Casino, King of New York, and Scarface. Another trademark feature of Mafioso rap is the idolizing of high profile organized crime figures. These crime kingpins range from legendary gangsters of the 1920s and 1930s such as Al Capone, Frank Costello, and Lucky Luciano, to the druglords of Latin America (including Pablo Escobar).

## History

The Mafia has been a staple reference for hip-hop artists since the genre's earliest days. LL Cool J, for instance, was among the first rappers to do so in his song "I'm Bad": "Not the last Mafioso, I'm an MC cop.". Similarly, Kool G Rap was one of the first rappers to make the Mafioso lifestyle a major theme in his lyrics. On his debut album, *Road to the Riches* (1989), Kool G Rap showcases graphic narratives about the "*glamorous life*" of a criminal:

*Gettin' richer and richer, the police took my picture  
But I still supplied, some people I knew died  
Murders and homicides for bottles of suicide  
Money, jewelry, livin' like a star  
And I wasn't too far from a Jaguar car  
In a small-time casino, the town's Al Pacino  
For all of the girls, the pretty boy Valentino  
I shot up stores and I kicked down doors  
Collecting scars from little neighborhood wars  
Many legs I broke, many necks I choked  
And if provoked I let the pistol smoke  
Eyes of hate and their hearts get colder  
Some young male put in jail  
His lawyer so good his bail is on sale  
Lookin' at the hourglass, how long can this power last?  
Longer than my song but he already fell  
He likes to eat hardy, party  
Be like John Gotti, and drive a Maserati*

Kool G Rap's epic tales, chronicling the crime underworld of drug trafficking and the luxurious pleasures of the high-end illegal business, inspire the related Mafioso rap phenomenon of the mid-1990s, which later achieved some mainstream success and great critical acclaim with albums such as Raekwon's *Only Built 4 Cuban Linx*, AZ's *Doe Or Die*, and Jay-Z's *Reasonable Doubt*. At the genre's zenith in the mainstream music industry, mafioso-inspired albums,

including Nas's It Was Written and Biggie's Life After Death, went on to become multi-platinum commercial successes.

## Gothcore

**Mallcore** is a derogatory term used to describe [nu metal](#), [metalcore](#) and similar genres, most often used by fans of extreme metal claiming the genre has no noteworthy resemblance with [heavy metal](#). It is also used by fans of [hardcore punk](#) referring to metalcore, which is very often and incorrectly called hardcore.

## Meaning

Some use the term in the context that the music is only modestly unsuited to be heard in a shopping mall as opposed to the more aggressive, louder "extreme metal" bands, and that it is marketed to angsty, depressed mall-going teenagers. "Mallgoth" / "Mallcore Kid" refer to fans of [nü metal](#) and [metalcore](#) bands, who are stereotypically mall-going teenagers, and who often shop at Hot Topic.

Roadrunner Records are often associated with the term mallcore, since their current artist catalog includes mostly [nü metal](#) or [metalcore](#) bands (with the exception of a few: Opeth, former band Deicide, DragonForce, newly signed [death metal](#) band Daath, and some others), as opposed to the [death metal](#) and speed metal they started with in the 1980s.

Thus, veteran Roadrunner Records fans, who claim to listen to "true" metal (Though ironically, they are mostly extreme metal fans, not the original heavy metal fans) dismiss the company as appealing to the "mall goths." The term is used typically only by detractors and not "mall goths" themselves, as they typically (and erroneously) call their music "hardcore" or "metal." (It should be noted that the term mallgoth is also used to refer to "poseurs" of the [goth](#) scene.)

## "Mall metal"

"Mall metal" is another derogatory term, aimed specifically at mallcore bands who play [metalcore](#) as opposed to [nü metal](#). Mall metal is typically characterized by taking the signature styles and sounds of trademark metal acts, and marketing them to a broader, more mainstream audience. Taking its material from a variety of genres, mall metal acts typically follow a set of basic guidelines: Hardcore riffs (known to scenesters as "Jhun Jhun's") are played by one guitarist, as the other guitar player mixes the effect with simplistic solo influences, usually borrowed from trademarked [death metal](#) acts in Europe.

The overnight success of mall metal labels like Trustkill acted as a launch pad to acts in the twenty first century. Countless scores of metalcore acts were embarking on mall metal quests of their own. Bands like Atreyu, Korn, Limp Bizkit and Avenged Sevenfold paved the way and within months it seemed the sensation was just beginning to take off. Of course, with the rise of mall metal's popularity, hardcore purists were quick to disregard this sub-genre claiming its only intent was making money.

Halfway through the first decade of the new millennium, it seemed that mall metal has finally peaked. The successful U.S. nationwide mall chain, Hot Topic, helped the mall metal scene like no other source, allowing mall metal enthusiasts to have an established "base camp" at their local shopping center.

Though in 2006 thrash band Slayer announced that they were to release an EP exclusively through Hot Topic.

## Mambo

**Stylistic origins:** Cuban son montuno and danzon mixed with American [big band swing](#)

**Cultural origins:** 1940s Cubans in Havana, drawing on Haitian-Cuban influences

**Typical instruments:** [conga](#), bongo, timbales, claves, upright bass, [piano](#), [trombone](#), [trumpet](#), [saxophone](#)

**Mainstream popularity:** Significant in Cuba, sporadic in US and elsewhere, peaking in the 1950s

Cha-cha-cha - Pachanga

[Boogaloo](#) - Mozambique - Salsa music

**Mambo** is a Cuban musical form and [dance](#) style. The word *mambo* (*conversation with the gods*) is the name of a priestess in Haitian Voodoo, derived from the language of the African slaves that were imported into the Caribbean.

## History

The history of modern mambo begins in 1938, when a danzon called "Mambo" was written by Orestes and Cachao López. The song was a danzon, descended from European [ballroom dances](#) like the English country dance, French contredanse and Spanish contradanza, but it used rhythms derived from African folk music. The contradanza had arrived in Cuba in the 18th century, where it became known as danza and grew very popular. The arrival of black Haitians later that century changed the face of contradanza, adding a syncopation called cinquillo (which is also found in another contradanza-derivative, Argentine [tango](#)).

By the end of the 19th century, contradanza had grown lively and energetic, unlike its European counterpart, and was then known as danzon. The 1877 song "Las alturas de Simpson" was one of many tunes that created a wave of popularity for danzon. One part of the danzon was a coda which became improvised overtime. The bands then were brass (orquestra típica), but was followed by smaller groups called charangas.

The most influential charanga was that of Antonio Arcano, who flourished in the late 1930s. It was Arcano's cellist, Orestes Lopez, whose "Mambo" was the first modern song of the genre. His brother, bassist and composer Cachao López, is often described as "the inventor of the mambo".

In the late 1940s, a musician named Perez Prado came up with the [dance for the mambo](#) and became the first person to market his music as "mambo". After Havana, Prado moved his music to Mexico, and then New York City. Along the way, his style became increasingly homogenized in order to appeal to mainstream American listeners.

Following in the footsteps of Prado came a wave of mambo musicians, such as Enrique Jorrin. Some experimented with new techniques, such as faster beats and the use of side steps in the dance; this latter innovation formed the foundation of chachachá, and was the result of Jorrin's experimentation. Chachachá was very pop-oriented, especially after Arthur Murray further simplified the dance. Mambo remained popular throughout the United States and Cuba until the 1960s, when a combination of [boogaloo](#) and pachanga (both modified forms of mambo) were created.

Some of New York's biggest mambo dancers and bands of the 50s included Mambo Aces, Killer Joe Piro, Paulito and Lilon, Louie Maquina, Cuban Pete, Machito, Tito Puente, Tito Rodriguez and Jose Curbelo.

By the mid-1950's mambo mania had reached fever pitch. In New York the mambo was played in a high-strung, sophisticated way that had the Palladium Ballroom, the famous Broadway dance-hall, jumping. The Ballroom soon

proclaimed itself the "temple of mambo," for the city's best dancers--the Mambo Aces, "Killer Joe" Piro, Paulito and Lilon, Louie Maquina and Cuban Pete--gave mambo demonstrations there and made a reputation for their expressive use of arms, legs, head and hands. There was fierce rivalry between bands. The bands of Machito, Tito Puente, Tito Rodriguez and Jose Curbelo delighted habitues such as Duke Ellington, Bob Hope, Marlon Brando, Lena Horne and Dizzy Gillespie, not to mention Afro-Americans, Puerto Ricans, Cubans, Upper East-Side WASPs and Jews and Italians from Brooklyn. Class and color melted away in the incandescent rhythm of the music. Even jazz musicians such as Erroll Garner, Charlie Parker, Sonny Rollins and Sonny Stitt fell under the mambo's charm, as can be heard on the many Latin recordings they made in the 1950's.

In 1954 the cha-cha-cha, a kind of mambo created by the Cuban violinist Enriqu  Jorin, a member of the Orquesta America Charanga, swept through Havana and New York. Easier to dance than the mambo, with a squarish beat and a characteristic hiccup on the third beat, it spread to Europe, before being dethroned in the early 1960's by the pachanga and then the boogaloo.

Mambo returned to prominence in the 1990s when Guinness used Perez Prado's track Guaglione in an advertising campaign featuring the dancing of Dublin actor Joe McKinney. The song was released as a single and reached number 2 in the UK charts. In 1999, Lou Bega released a remix of Mambo No. 5, another Prado original, which became a hit across Europe.

## Mandolin

A **mandolin** is a small, plucked, stringed [musical instrument](#), descended from the mandora. It is characterized by:

- Eight strings in four pairs (courses), normally tuned to the tones g, d', a', and e" (like the violin), that are plucked with a plectrum,

- A body with a teardrop-shaped soundtable (i.e. face), or one that is essentially oval in shape,
- A neck with a flat (or slightly radiused) fretted fingerboard, and a flat nut and bridge,
- Tuning pegs inserted through the back of the neck's head, or machined metal gears and pins in lieu of the pegs,
- A soundtable with a soundhole, or f-shaped soundholes, that are open and not latticed.

In [Indian classical music](#) and Indian light music, the mandolin is likely to be tuned to E-B-E-B. As there is no concept of absolute pitch in Indian Classical music, any convenient tuning maintaining the relative pitch between the strings to E-B-E-B can be used.

Some guitarists tune a mandolin in fourths, the same as the bottom four guitar strings (E-A-D-G) or the top four guitar strings (D-G-B-E) allowing the same fingerings as a guitar.

Like the [guitar](#), the mandolin has relatively poor sustain; that is, the volume of a plucked string decays quickly. A note cannot be maintained for an arbitrary length of time as with a bowed note on a violin. Its small size and higher [pitch](#) makes this problem more severe than with the guitar, and the use of tremolo (rapid picking of one or more pairs of strings) is often used to create a sustained note or chords. This technique works particularly well with a mandolin's paired strings, where one of the pair is sounding while the other is being struck by the pick, giving a more rounded sound than a single coursed instrument can.

## Mandolin forms

Mandolins come in several forms. The Neapolitan style, known as a round-back or bowl-back, (or tater-back or tater-bug, colloquial American), has a vaulted back made of a number of strips of wood in a bowl formation, similar to a [lute](#), and usually a canted, two-plane, uncarved top. The Portuguese, a flat-back style, is derived from the cittern. Another form has a [banjo](#)-style body.

Other variants include the Howe-Orme guitar-shaped mandolin (manufactured by the Elias Howe Company between 1897 and roughly 1920), which featured a cylindrical bulge along the top from fingerboard end to tailpiece, and the Vega mando-lute (more commonly called a cylinder-back mandolin manufactured by the Vega Company between 1913 and roughly 1927), which had a similar longitudinal bulge but on the back rather than the front of the instrument.

In the early twentieth century, another new mandolin-style, with carved top and back construction inspired by violin family instruments, began to supplant the European-style bowl-back instruments, especially in the United States. This new style is credited to mandolins designed and built by Orville Gibson who founded the Gibson company in 1902. Gibson mandolins evolved into two families: the Florentine or F-style, which has a scroll near the neck and two points on the lower body; and the A-style, which is pear shaped and has no points. These styles generally have either two f-shaped soundholes like a violin, or an oval sound hole directly under the strings. Naturally, there is much variation among makers, and different styles exist as well, but these are the most common. The Gibson F-hole F5-style mandolins are considered the most typical and traditional for playing American [Bluegrass music](#), while the A-style is generally more appropriate for Irish, folk, or classical music. The differences are more than cosmetic or aesthetic since the F5-style model is usually built to take much heavier strings and is consequently louder and "punchier" than the A-style model, making it more suited to the hard-driving percussive sound typical of [bluegrass music](#).

Numerous modern mandolin makers build instruments that are largely replicas of the Gibson F-5 Artist models built in the early 1920s by Gibson acoustician Lloyd Loar. Original Loar-signed instruments are sought after and extremely valuable.

As with almost every other contemporary string instrument, another modern variant is the electric mandolin.

## Mandolin family

The mandolin is the soprano member of the mandolin family, as the [violin](#) is the soprano member of the [violin family](#). Its scale length is typically about 13.75 inches (350mm).

Other members of the mandolin family are:

- The **mandola** (US and Canada), termed the **tenor mandola** in Europe, Ireland and the UK, which is tuned to a fifth below the mandolin, in the same relationship as that of the [viola](#) to the [violin](#). Some also call this instrument the "alto mandola." Its scale length is typically about 16.5 inches (420mm).
- The **octave mandolin** (US and Canada), termed the **octave mandola** in Europe, Ireland, and the UK, which is tuned to an octave below the mandolin. Its scale length is typically about 20 inches (500mm), although

instruments with scales as short as 17 inches (430mm) or as long as 21 inches (530mm) are not unknown.

- The **mandocello**, which is classically tuned to an octave plus a fifth below the mandolin, in the same relationship as that of the [cello](#) to the violin. Today, it is not infrequently restrung for octave mandolin tuning or the Irish bouzouki's GDAD. Its scale length is typically about 25 inches (635 mm).
- The piccolo or sopranino mandolin is a rare member of the family, tuned one octave above the tenor mandola and one fourth above the mandolin; the same relation as that of the [piccolo](#) or sopranino violin to the [violin](#) and [viola](#). One model was manufactured by the Lyon & Healy company under the Leland brand. A handful of contemporary luthiers build piccolo mandolins, including Stephen Gilchrist of Australia and Jamie Wiens of Canada. Its scale length is typically about 9.5 inches (240mm).
- The mando-bass, which has 4 single strings, rather than double courses, and is tuned like a double bass. These were made by the Gibson company in the early twentieth century, but appear to have never been very common. Reportedly, most mandolin orchestras preferred to use the ordinary double bass, rather than a specialised mandolin family instrument.
- The Irish bouzouki is also considered a member of the mandolin family; although derived from the Greek [bouzouki](#), it is constructed like a flat backed mandolin and uses fifth-based tunings (most often GDAD, an octave below the mandolin, sometimes GDAE, ADAD or ADAE) in place of the guitar-like fourths-and-third tunings of the four-course Greek [bouzouki](#). Although the bouzouki's bass courses are most often tuned in unisons, on some instruments one of each pair is replaced with a lighter string and tuned in octaves, in the fashion of the 12-string [guitar](#). Although occupying the same range as the **octave mandolin/octave mandola**, the Irish bouzouki is distinguished from the former instrument by its longer scale length, typically from 22 inches (560mm) to 24 inches (610 inches), although scales as long as 26 inches (660mm) are not unknown.
- The modern cittern is also an extension of the mandolin family, being typically a five course (ten string) instrument having a scale length between 20 inches (500mm) and 22 inches (560mm). It is most often tuned to either

DGDAD or GDADA, and is essentially an octave mandola with a fifth course at either the top or the bottom of its range. Some luthiers, such as Stefan Sobell also refer to the octave mandola or a shorter-scaled Irish bouzouki as a cittern, irrespective of whether it has four or five courses.

## Mandolin history

Mandolins evolved from the Lute family in Italy during the seventeenth and eighteenth centuries, and the deep bowled mandolin produced particularly in Naples became a common type in the nineteenth century. The original instrument was the mandola (*mandorla* is "almond" in Italian, describing the instrument's body shape) and evolved in the fifteenth century from the [lute](#). A later, smaller mandola was developed and became known as a mandolina.

Further back, around 15,000 BC to 8,000 BC, single stringed instruments have been seen in cave paintings. They were bowed, struck and plucked. From these, the families of instruments developed. Single strings were long and gave a single melody line. To shorten the scale length, other strings were added with a different tension so one string took over where another left off. In turn, this led to being able to play diads and chords. The bowed family became the rabob, rebec and then the fiddle becoming the violin and modern family by 1520 (incidentally also in Naples). The plucked family led to lute-like instruments in 2000 BC Mesopotamia, and developed into the *oud* or *ud* before appearing in Spain in 711 courtesy of the Moors.

Over the next centuries, frets were added and the strings doubled to courses, leading to the first Lute appearing in the thirteenth century. The history of the lute and the mandolin are intertwined from this point. The lute gained a fifth course by the fifteenth century, a sixth a century later, and up to thirteen courses in its heyday. As early as the fourteenth century a miniature lute or *mandora* appeared. Similar to the mandola, it had counterparts in Assyria (*pandura*), the Arab countries (*dambura*), and Ukraine (*kobza-bandura*). From this, the *mandolino* (a small gut-strung mandola with six strings tuned *g b e' a' d g* sometimes called the *Baroque mandolin* and played with a quill, wooden plectrum or finger-style) was developed in several places in Italy. The mandolino was sometimes called a *mandolin* in the early eighteenth century (around 1735) Naples.

The first evidence of mandolins is from literature regarding popular Italian players who travelled through Europe teaching and giving concerts. Notable is Signor Leone and G. B. Gervasio who travelled widely between 1750 and 1810.[2] This, with the records gleamed from the Italian Vinaccia family of luthiers in Naples, Italy, musicologists believe that the Mandolin was developed

in Naples by the Vinaccia family. Gennaro Vinaccia was active circa 1710 to circa 1788, and Antonio Vinaccia was active circa 1734 to circa 1796.[3] An early extant example of a mandolin is one built by Antonio Vinaccia in 1772 which resides at the Victoria and Albert Museum in London, England. Another is by Giuseppe Vinnacia built in 1763, residing at the Kenneth G. Fiske Museum of Musical Instruments in Claremont, California.[4] The earliest extant mandolin was built in 1744 by Gaetano Vinaccia. It resides in the Conservatoire Royal de Musique in Brussels, Belgium.

These early mandolins are termed *Neapolitan* mandolins, because of their origin from Naples. They are distinguished by a teardrop-shaped body with a bowled back that is constructed from curved strips of wood along its length. The soundtable is bent just behind the bridge, the bending achieved with a straight hot poker. This "canted" table aids the body to support a greater string tension. A hardwood fingerboard is flush with the soundtable. Ten metal or ivory frets are spaced along the neck in semitones, with additional frets glued upon the soundtable. The strings are brass except for the lowest string course which are gut or metal wound onto gut. The bridge is a moveable length of ivory placed in front of ivory pins that hold the strings. Wooden tuning pegs are inserted through the back of a flat pegboard. The mandolins have a tortoise shell pick guard below the soundhole under the strings. A quill or tortoise shell is used as a plectrum.

Other luthiers that built mandolins included Calace (1863 onwards) in Naples, Luigi Embergher (1856–1943), Ferrari family (1716 onwards, also originally mandolino makers) and De Santi (1834–1916) in Rome. The Neapolitan style of mandolin construction was adopted and developed by others, notably in Rome, giving two distinct but similar types of mandolin — Neapolitan and Roman.

The twentieth century saw the rise in popularity of the mandolin for celtic, bluegrass, jazz and classical styles. Much of the development of the mandolin from Neapolitan bowl-back to the flat-back style (actually, gently rounded) is thanks to Orville Gibson (1856–1918) and his chief designer Lloyd Loar.

## Mandolin music

Mandolins have a long history and much early music was written for them. In the first half of the 20th century, they enjoyed a period of great popularity in Europe and the Americas as an easier approach to playing string music. Many professional and amateur mandolin groups and orchestras were formed to play traditional string repertory. Just as this practice was falling into disuse, the mandolin found a new niche in American [country](#), old-time music, [bluegrass](#) and [folk music](#). More recently, the Baroque and Classical mandolin repertory

and styles have benefited from the raised awareness of and interest in [Early music](#). Tremolo and fingerpicking methods are used while playing a mandolin.

## **The United States of America**

The mandolin's popularity in the United States was spurred by the success of a group of touring young European musicians known as the Spanish Students, or in Spanish, the Estudiantes Españoles. The group debuted in the U.S. on January 2, 1880 in New York City. Ironically, this ensemble did not play mandolins but rather bandurrias, which are also small, double-strung instruments superficially resembling the mandolin. The success of the Figaro Spanish Students spawned several groups who imitated their musical style and colorful costumes. In many cases, the players in these new [musical ensembles](#) were Italian-born Americans who had brought mandolins from their native land. Thus, the Spanish Student imitators did primarily play mandolins and helped to generate enormous public interest in an instrument that previously was relatively unknown in the United States.

Mandolins were a fad instrument from the turn of the century to the mid-twenties. Instruments were marketed by teacher-dealers, much as the title character in the popular musical *The Music Man*. Often these teacher-dealers would conduct mandolin orchestras: groups of 4-50 musicians who would play various mandolin family instruments together. The instrument was primarily used in an ensemble setting well into the 1930s, although the fad died out at the beginning of the 1920's; the famous Lloyd Loar Master Model from Gibson (1923) was designed to boost the flagging interest in mandolin ensembles, with little success. The true destiny of the "Loar" as the defining instrument of bluegrass music didn't appear until Bill Monroe purchased F5 S/N 73987 in a Florida barbershop in 1943 and popularized it as his main instrument.

Single mandolins were first used in southern string band music in the 1930's, most notably by brother duets such as the sedate Blue Sky Boys (Bill Bolick and Earl Bolick) and the more hard-driving Monroe Brothers (Bill Monroe and Charlie Monroe). However, the mandolin's modern popularity in country music can be directly traced to one man: Bill Monroe, the father of [bluegrass music](#). After the Monroe Brothers broke up in 1939, Bill Monroe formed his own group, after a brief time called the Blue Grass Boys, and completed the transition of mandolin styles from a "parlor" sound typical of brother duets to the modern "bluegrass" style. He joined the Grand Ole Opry in 1939 and its powerful clear-channel broadcast signal on WSM-AM spread his style throughout the South, directly inspiring many musicians to take up the mandolin. Monroe famously played Gibson F5 mandolin, signed and dated July 9, 1923, by Lloyd Loar, chief acoustic engineer at Gibson. The F5 has since become the most imitated tonally and aesthetically by modern builders.

Monroe's style involved playing lead melodies in the style of a fiddler, and also a percussive chording sound referred to as "the chop" for the sound that is made by the quickly struck and muted strings. He also perfected a sparse, percussive blues style, especially up the neck in keys that had not been used much in country music, notably B and E. He emphasized a powerful, syncopated right hand at the expense of left-hand virtuosity. Monroe's most influential follower of the second generation is Frank Wakefield and nowadays Mike Compton of the Nashville Bluegrass Band and David Long, who often tour as a duet.

The other major original bluegrass stylists, both emerging in the early 1950's and active still in 2005, are generally acknowledged to be Jesse McReynolds (of Jim and Jesse) who invented a syncopated banjo-roll style of crosspicking and Bobby Osborne of the Osborne Brothers, who is a master of clarity and sparkling single-note runs. Highly-respected and influential modern bluegrass players include Herschel Sizemore and Doyle Lawson and the multi-genre Sam Bush who is equally at home with old-time fiddle tunes, rock, reggae and jazz. Ronnie McCoury of the Del McCoury Band has won numerous awards for his Monroe-influenced playing. The late John Duffey of the original Country Gentlemen and later the Seldom Scene did much to popularize the bluegrass mandolin among folk and urban audiences, especially on the east coast and in the Washington, DC area.

Jethro Burns, best known as half of the comedy duo Homer and Jethro, was also the first important jazz mandolinist. Tiny Moore popularized the mandolin in Western swing music. He initially played an 8-string Gibson but switched after 1952 to a 5-string solidbody electric instrument built by Paul Bigsby. Modern virtuosos David Grisman, Sam Bush and Mike Marshall, among others, have worked since the early 1970s to demonstrate the mandolin's versatility for all styles of music. Chris Thile of California is the best-known of the younger generation of players; the band Nickel Creek features his virtuoso playing in its blend of traditional and pop styles.

A handful of rock musicians use mandolins. One example is Tim Brennan of the Irish-American punk rock band Dropkick Murphys. In addition to electric guitar, bass, and drums, the band uses several instruments associated with traditional Celtic music, including mandolin, tin whistle, and Great Highland bagpipes. The band explains that these instruments accentuate the growling sound they favor. The 1991 R.E.M. hit "Losing My Religion" also featured a simple mandolin lick played by guitarist Peter Buck, who also played the mandolin in nearly a dozen other songs. Every song on Mark Heard's final album, 1992's *Satellite Sky*, was written on a mandolin, Heard's antique National Silvo electric mandolin was prominently featured on every track of the recording. Jack White of The White Stripes played mandolin for the film *Cold Mountain*, and plays mandolin on the song *Little Ghost* on the White Stripes album *Get Behind Me Satan*.

## The United Kingdom

The mandolin has been used extensively in the traditional music of England and Scotland for generations and has recently featured in the playing of Matt Bellamy in the modern band Muse, and was introduced very clearly by Vivian Stanshall on Mike Oldfield's album "Tubular Bells". It was used extensively by the British folk-rock band Lindisfarne, who featured two members on the instrument, Ray Jackson and Simon Cowe, and whose "Fog on the Tyne" was the biggest selling UK album of 1971-1972. "Maggie May" by Rod Stewart, which hit No. 1 on both the British charts and the Billboard Hot 100, also featured Jackson's playing. It has also been used by other British rock musicians, including Led Zeppelin, whose bassist John Paul Jones is an accomplished mandolin player and has recorded numerous songs on mandolin including "Going to California", "That's the Way", and "The Battle of Evermore", and McGuinness Flint, for whom Benny Gallagher played the mandolin on their most successful single, "When I'm Dead And Gone". Gallagher was also briefly a member of Ronnie Lane's Slim Chance, and played mandolin on their hit "How Come". The popular song "Please Please Please Let Me Get What I Want" by The Smiths featured a mandolin solo played by Johnny Marr. More recently, the Glasgow-based band Sons and Daughters (band) has featured the mandolin, as played by Ailidh Lennon, on tracks such as "Fight," "Start to End," and "Medicine."

## Ireland

The mandolin is becoming a somewhat more common instrument amongst Irish traditional musicians. Fiddle tunes are readily accessible to the mandolin player because of the equivalent range of the two instruments and the practically identical (allowing for the lack of frets on the fiddle) left hand fingerings.

Although almost any variety of acoustic mandolin might be adequate for Irish traditional music, virtually all Irish players prefer flat-backed instruments with oval sound holes to the Italian-style bowl-back mandolins or the carved-top mandolins with f-holes favoured by bluegrass mandolinists. The former are often too soft-toned to hold their own in a session (as well as having a tendency to not stay in place on the player's lap), whilst the latter tend to sound harsh and overbearing to the traditional ear. Greatly preferred are flat-topped "Irish-style" mandolins (remniscent of the WWI-era Martin Army-Navy mandolin) and carved (arch) top mandolins with oval soundholes, such as the Gibson A-style of the 1920s. The mandolins built by British luthier Stefan Sobell are perhaps the most highly-prized for Irish traditional music, although

many other makers, such as Ireland's Joe Foley, also make well-regarded mandolins.

Noteworthy Irish mandolinists include Andy Irvine (who almost always tunes the E down to D), Mick Moloney, Paul Kelly, and Claudine Langille. John Sheahan and Barney McKenna, fiddle player and tenor banjo player respectively, with The Dubliners are also accomplished Irish mandolin players. The Dubliners 'Live at the Gaiety' DVD features an extensive mandolin duet of a three-tune 'set', two hornpipes and a reel. The instruments used are flat-backed, oval hole examples as described above: in this case made by UK luthier Fylde.

## **Continental Europe**

An increased interest in [bluegrass music](#), especially in Central European countries such as the Czech Republic and Slovak Republic, has inspired many new mandolin players and builders. These players often mix traditional folk elements with bluegrass; see the article on [Czech bluegrass](#) for example..

## **Brazil**

The mandolin (called "bandolim") has a long and rich tradition in Brazilian folk music, especially in the style called choro. The composer and mandolin virtuoso Jacob do Bandolim did much to popularize the instrument, and his influence continues to the present day. Some contemporary mandolin players in Brazil include Jacob's disciple Deo Rian, and Armandinho (the former, a traditional choro-style player, the latter an eclectic innovator).

The mandolin came into Brazil by way of Portugal. Portuguese music has a long tradition of mandolins and mandolin-like instruments (see, for example, the Portuguese guitar).

The mandolin is used almost exclusively as a melody instrument in Brazilian folk music - the role of chordal accompaniment being taken over by the cavaquinho and nylon-strung [guitar](#). Its popularity, therefore, has risen and fallen with instrumental folk music styles, especially choro. The later part of the 20th century saw a renaissance of choro in Brazil, and with it, a revival of the country's mandolinistic tradition.

## **Greece**

The mandolin has been long played in the Hellenic Islands, where the Ottoman Empire did not control. Mandolin had a long tradition in the Eptanese ([Ionian Islands]) and Crete. In ionian islands and espetically in Corfu,

Zakynthos (Zante) and Cefalonia it is common to see choirs accompanied by mandolin players (mantolinos) whereas the development of songs for mandolin has been a custom during the Venetian rule in the Ionian Islands (kantades).

In Crete along with the [lyre](#) and the [lute](#) it represents one of the main instruments of the Cretan Music. Its appearance in Crete is dated by the age of the Venetian domination on the island. It had a big impression on the residents, it was used in different variants (e.g. mantola), as an instrument to accompany the lyre, the violin and the lute. Stelios Foustalierakis has said that the mandolin and the mpougari were accompanying the lyre in the beginning of the 20th century in the city of Rethimno. There are also reports that the mandolin was mostly a woman's musical instrument as it was the only one that the women of the island were playing. Nowadays it is played mainly by its own, in musical teams, as well as in personal and family events of residents of the Ionian Islands and Crete.

## **Mandolin players**

Renowned modern mandolinists include Bill Monroe, David 'Dawg' Grisman, Mike Marshall, Sam Bush, Nic Zuppari, Chris Thile, Mike Compton, Cas Davey, Simon Mayor, and Tim Ware - all of whom revolutionized the use of the instrument through the incorporation of various styles such as bluegrass, newgrass, classical, rock and jazz. U. Srinivas (popularly known as mandolin Srinivas) was a child prodigy who plays Indian Classical Music on the mandolin. Famous electric mandolin players include Canadian Nash the Slash and Todd Macdonald of art folk group The Winks.

David "Dawg" Grisman accords Dave Appollon as one of the most virtuosic mandolinists of all time. His complete recordings are sold through Dave Grisman's Acoustic Disc Web site,

Classical mandolinists of the past include: Samuel Adelstein, Samuel Siegel, Valentine Abt, Giuseppe Pettine, Aubrey Stauffer, and William Place, Jr. of the United States; Raffaele Calace; Silvio Ranieri; Laurent Fantauzzi, Carlo Munier of Italy and Hugo D'Alton of the UK.

Prominent modern mandolinists who play the classical repertoire include Carlo Aonzo of Savona, Italy; Caterina Lichtenberg born in Bulgaria but primarily based in Germany; Gertrude Weyhofen of Germany; Richard Walz of France; and Alison Stephens of the United Kingdom.

Jack White of the White Stripes has played the mandolin. The 2005 song, "Little Ghost" from the album "Get Behind Me Satan" features a mandolin. White has also played a mandolin live during "Little Ghost" and "The Denial Twist"

Above all, there are several virtuosos classical-mandolin players from Israel, like Jacob Reuven and Alon Sarel which play mostly violin repertoire on their special instruments (Israeli made, by Arik Kerman).

While David Grisman is known as one of today's greatest living mandolin masters, his enduring legacy may be that through his Acoustic Disc label he has made available many of the world's greatest mandolinists for the enjoyment and education of generations to come.

## Marching band

A **marching band** is a group of instrumental musicians who generally perform outdoors, and who incorporate movement – usually some type of marching – with their [musical](#) performance. Instrumentation typically includes brass, woodwinds, and percussion instruments and the music usually incorporates a strong rhythmic component suitable for marching.

In addition to traditional parade performances, many bands also perform field shows at special events (often American football games) or at marching band competitions. Marching bands are generally categorized by function and by the style of field show (if any) they perform. Increasingly, Marching Bands are performing indoor concerts, in addition to any "Pep Band" duties, that implement many of the songs, traditions, and flair from outside performances.

## Types of Marching Bands

Marching bands can be categorized based on primary function, instrumentation, and style.

- *Parade bands* generally play marches. Instrumentation varies, and can contain anything from [bagpipes](#) or fifes and [drums](#) all the way to full [wind](#) and [percussion](#) sections. Many military and veterans' organizations have their own parade bands.
- *Show bands* (field shows) have the main role of performing at sporting events, usually American football games. They perform a field show before the game and at halftime (and sometimes after the game as well). Show bands typically march in time to the music, and may also participate in parades and competitions. Show bands contain [brass](#) and percussion instruments, but may or may not use [woodwinds](#) or a [percussion pit](#).

- Carnival Bands are a UK variant of Show bands. Carnival bands typically march in time to the music, and may also participate in parades and competitions. Carnival Bands contain [brass](#) and [percussion](#), but may or may not use [woodwinds](#). The main competition body for carnival bands is The Carnival Band Secretaries League (CBSL). The CBSL Champions 2001 to 2005 are the Derby Midshipmen Band
- [Scramble bands](#) are a variation on show bands. They generally do not march in time with the music, and often incorporate comedic elements into their performances.
- Historically black college and university (HBCU) bands are another variation on show bands that incorporate energetic dance moves into their field shows.
- *Drum and bugle corps* is a genre of marching ensemble that is distinctly divided into [classic](#) and [modern](#) corps. Both groups have long, continuous histories and developments separate from marching bands. As the name implies, bugles and [drums](#) form the musical background of the corps, but modern competitive drum corps incorporate other brass instruments and orchestral percussion. In the United States, Drum Corps International (DCI) is the governing body for competitive junior drum and bugle corps, while Drum Corps Associates (DCA) is the governing body for competitive all-age (or senior) drum and bugle corps.
- Ancient Fife and Drum Corps

This article will focus primarily on parade and show bands.

## History

Marching bands evolved out of [military bands](#). As musicians became less and less important in directing the movement of troops on the battlefield, the bands moved into increasingly ceremonial roles. An intermediate stage which provided some of the instrumentation and music for marching bands was the modern [brass band](#), which also evolved out of the military tradition.

Many military traditions survive in modern marching band. Bands that march in formation will often be ordered to "dress" their "ranks" and "cover [down]" their "files". They may be called to "attention", and given orders like

"about face" and "forward march". Uniforms of many marching bands still resemble military uniforms.

Outside of police and military organizations, modern marching band is most commonly associated with American football, and specifically the halftime field show. Many U.S. universities had bands before the twentieth century.

Another innovation that appeared at roughly the same time as the field show and marching in formations was the [fight song](#). University fight songs are often closely associated with the university's band. Some of the more recognizable and popular fight songs, such as the University of Wisconsin's "On Wisconsin," Michigan's "The Victors," Notre Dame's "Victory March," and the United States Naval Academy's "Anchors Aweigh" are widely utilized by high schools across the country.

Other changes in marching band have been:

- adoption of the tradition by secondary schools (high schools, junior high schools, and middle schools)
- the addition of a [dance](#) team, cheerleaders (sometimes called *poms*), and/or baton twirlers
- the addition of colorguard members

Since the inception of Drum Corps International in the 1970s, many marching bands that perform field shows have adopted changes to the activity that parallel developments with [modern drum and bugle corps](#). These bands are said to be *corps-style* bands. Changes adopted from drum corps include:

- marching style: instead of a traditional high step, drum corps tend to march with a fluid roll step to keep musicians' torsos completely still
- the adaptation of the color guard, rifle, and sabre units into "auxiliaries", who march with the band and provide visual flair by spinning and tossing flags or mock weapons and using dance in the performance
- moving marching timpani and keyboard percussion into a stationary sideline percussion section (*pit*), which has since incorporated many different types of percussion instruments
- the addition of vocalists and/or electric instruments (marching bands have as a general rule adopted these aspects before drum corps, for instance the Drum Corps International circuit has only allowed electronic amplification since 2004 and has yet to permit electronic instruments without penalties)
- marching band competitions are judged using criteria similar to the criteria used in drum corps competitions, with emphasis on individual aspects of the band (captions for music performance, visual performance, percussion, guard, and general effect are standard).

## Personnel and instrumentation

The size and composition of a marching band can vary greatly. Many bands have fewer than twenty members. Some have over 500. However, all share at least some of the same elements.

A marching band is typically led by one or more [drum majors](#), who conduct the band, sometimes using a large baton or mace. In most school bands, the drum major is the student leader of the band, followed by students within the band that lead a section, squad, letter, row, etc. Bands may also be led by a more traditional conductor, especially during field shows, where a stationary conductor on a ladder or platform may be visible throughout the performance. Usually clapping or a whistle is used to issue commands.

Marching instrumentation nearly always includes percussion, the instruments being adapted for mobile, outdoor use. [Marching percussion](#) (the drumline or back battery) typically includes snare drums, bass drums, and [cymbals](#). Racks of multiple tom-tom drums, also called tenor drums, quads, or tri-toms, may be used. The glockenspiel, or "marching xylophone", is another common marching band percussion instrument.

Show bands tend to have similar wind instrumentation. Woodwinds are optional but tend to include [saxophones](#) and [piccolos](#) in addition to [flutes](#) and [clarinets](#). Double-reed instruments are rare, as are all string instruments. If used, they are usually in the [pit](#). Brass sections tend to include mellophones instead of [horns](#), and sousaphones instead of [tubas](#). Bb [trumpets](#), [trombones](#), and euphoniums (though often referred to as baritones in the American usage) are common. Eb trumpets and flugelhorns are also sometimes used.

For bands that include a [pit](#) (also known as a front ensemble), stationary instrumentation may include orchestral percussion such as [timpani](#), wood blocks, marimbas, [xylophones](#), [vibraphones](#), chimes, as well as a multitude of auxiliary percussion equipment. Instruments that are more modern may include [synthesizers](#) and [electric guitars](#) as well as electric basses.

Instrumentation varies widely from band to band, so no generalization is completely correct. There are bands where members play string instruments, or bang on mailboxes and trashcans with drumsticks.

Large bands also require a number of support staff who can move equipment, repair instruments and uniforms, and manipulate props used in performances. In high school bands, these activities are usually performed by volunteers, typically parents of band members or the band members of the lower grades.

## Auxiliary groups

Many bands have auxiliaries who add a visual component to the performance. For ceremonial bands, this could be a traditional color guard or honor guard. For show bands and drum corps, this could include dancers, cheerleaders, or some type of drill team. Auxiliaries may be collectively referred to as *color guard*, though the term correctly refers only to those carrying flags for ceremonial purposes.

Auxiliaries may perform as independent groups. In the early 1970s, color guards began to hold their own competitions in the winter (after the American football season, and before the beginning of the summer [drum and bugle corps](#) competitions). There are also numerous cheerleading and dance competitions in the off-season.

The color guard of a marching band or drum and bugle corps may contain sabers, rifles, and tall flags. In modern bands, other props are often used: flags of all sizes, horizontal banners, vertical banners, streamers, pom-poms, even tires and hula hoops. While military color guards were typically male, band color guards tend to be primarily female, though it is becoming more common for males to join as well. Guards most often have a special uniform or costume that is distinctive from that of band, and may or may not match. Colorguard can compete without the band in such competitions as winter guard.

## Performance elements

The goal of each band's performance is different. Some bands aim for maximum uniformity and precision. Others – especially [scramble bands](#) – want to be as entertaining as possible. Many U.S. university marching bands aim for maximum sound "impact" on the audience. Some bands perform primarily for the enjoyment of their own members. However, there are some common elements in almost all band performances.

## Music

The traditional music of the marching band is the military march, but since show bands evolved from the concert and brass band traditions as well, music has always been varied. Often, music from other genres is adapted for the specific instrumentation of a marching band. Commercial arrangements that are tailored for the "average" band instrumentation are also available. Military and university bands typically have a repertoire of "traditional" music associated with the organization they serve. Many competitive bands will

choose to use an arrangement of popular music varied for marching band, as well as music from a movie or other such theme.

Music may be memorized, or it may be carried on flip folders that clip onto the instruments, called lyre clips. Having music memorized is usually considered an advantage for competitive bands in addition to preventing obstruction of vision caused by the flip folders. It is also a point of honor in some bands that memorize their music.

## **March steps**

Many bands use some variation of the glide step. This step involves bringing the heel gently to the ground with the toe pointed, and then rolling forward onto the toes before lifting the foot. Using a glide step is the easiest way for wind players to avoid bouncing the mouthpiece of their instrument on their lips or in their mouth, thus aiding in the production of a steady tone even when the band is moving.

Along with the roll or glide step, there is also a 'high step.' Many traditional style colleges and universities such as: The Spartan Marching Band, the University of Wisconsin-Madison, Ohio University, the Spirit of Troy, and University of Oklahoma execute this style. In addition, most Historically Black Colleges or Universities (HBCUs) like Prairie View Agricultural and Mechanical University, Texas Southern University, University of Arkansas at Pine Bluff, Florida Agricultural and Mechanical University, Jackson State University, Southern University and Agricultural and Mechanical College, Norfolk State University, Tennessee State University, and Alabama State University still utilize this style of marching. Some secondary schools that have deep tradition in their marching band also high step. While this historical style may slowly be replaced in some programs by "low step" marching, it is still exciting to see this style with a marching band.

## **Variations of the high step:**

- There is one high step where the band member rolls his or her foot out to the toe, bending the knee. The knee then locks, and the leg is lifted out in front of the marcher before it is put down in the new position.

- Another high step involves bringing the foot up to the inside of the leg to the knee before coming down and forward. Some bands may refer to this as "tucking." This is also the style for many HBCU bands.

- An older high step involves the lifting of the knee with legs directly in front, thighs parallel to the ground, and toes pointed downward. When the leg is elevated, it should give the appearance of a 90-degree angle with the thigh

and leg, and the body and thigh. The leg is then lowered, and this is repeated with the other leg. This is informally referred to as the "chair." The University of Minnesota marching band uses this style.

## Marking Time

When a band is not moving, the members may *mark time*, or march in place. The step used usually resembles the step that is used for marching forward, though mixing a high step mark time with a roll step march (or vice versa) produces an interesting visual effect. Some bands forgo marking time and instead come to a complete halt when not marching.

When band members are marching in one direction but want to focus their sound in another, they may rotate their bodies at the waist, so that only the upper portion of the body faces in the direction of play. This is known as "shifting" or "sliding." Percussion players, whose large drum harnesses often prevent them from twisting their torsos, and sometimes tuba and sousaphone players, will instead use a *crab step* when moving sideways. During a crab step, the musician crosses one leg over the other, either marching on the toes or rolling the foot sideways. Percussionists may also substitute roll step when their instruments would interfere with performing the high step.

## Backward Marching

A *back march* may be used when the band wishes to move in the opposite direction from where it is projecting its sound. There are several ways to back march, one of which is to walk backwards, putting each foot down and rolling from the toe to the heel (the exact reverse of the roll step). Another variation involves marching on the toes, dragging the toe of the moving foot on the ground to improve balance. With this method, the heel of the foot never touches the ground. Using peripheral vision to align oneself to formations or field markings is even more important during backward marching.

Even when marking time, it is always considered good form for all band members to stay *in step* – that is, step with the same foot at the same time. A large majority of bands *step off* with, or start marching on, the left foot, the Cadets drum and bugle corps being the only exception. Staying in step is generally easier when the band is playing music or when the drums are playing a marching cadence. When the band and percussion are not playing, rhythm may be maintained in a variety of ways: a drummer may play clicks or rim shots, the drum major may clap, a drum major or band member may vocalize a sharp syllable like "hit", "hut", or "dhut" (the last is usually characteristic of the drum line, and often said before playing in the rhythm; dhut,dhut, dhut dhut

dhut dhut [one, two, one two three four] ) , or band members may chant the military call of "Left, left, left right left".

## **Uniforms**

Nearly all marching bands use some kind of uniform. Military-style uniforms are most common, but there are bands that use everything from matching T-shirts and shorts to formal wear. Capes, rank cords, and other embellishments are common. Sometimes uniforms have substantially different colors on the front and back, so if band members turn suddenly (flank) the audience will see a striking change of color. Many Ivy League band members wear a jacket and tie while performing. The University of Oregon band wears outfits that are designed to look like their football team's uniforms. Drum Majors often wear more formal outfits or costumes that match the theme of the music.

Common design elements include hats (typically shakos, helmets, or Australian-style brimmed hats) with feather plumes, capes, and the school or organization's name or symbol. Sousaphone players traditionally wear a military-style beret, as other hats may be in the way of the bell. It is also common for band uniforms to have a stripe down the leg and light-colored shoes (or spats over dark shoes) to emphasize the movement of the legs while marching. However, competitive bands may opt for dark pants and shoes to hide members who are out of step. Some bands include dark colored socks as a piece of the uniform, and members who forget, and wear white socks, will attach black electrical tape over the offending socks. This is considered a mark of shame or of inexperience among other marchers.

Some auxiliary groups use uniforms that resemble gymnastics or cheerleading outfits.

Occasionally, a band will forgo traditional uniforms in favor of costumes that fit the theme of its field show. The costumes may or may not be uniform throughout the band. This kind of specialized uniform change is usually confined to competitive marching bands.

## **Parade marching**

For parades, the band lines up in a marching block composed of ranks (rows) and files (columns). Typically, each member tries to stay within his or her given rank and file, and to maintain even spacing with neighboring musicians. It is usually the responsibility of the people at the end of each rank and the front of each file to be in the correct location; this allows other band members to *guide* to them.

Band members also try to keep a constant pace or step size while marching in parade. This usually varies between 22 and 30 inches (56–76 cm) per stride. A step size of 22.5 inches is called 8-to-5 because the marcher covers five yards (about 4.6 m) in eight steps. A step size of 30 inches is called 6-to-5 because five yards are covered in six steps. Because yard lines on an American football field are five yards apart, exact 8-to-5 and 6-to-5 steps are most useful for field shows.

*A drum cadence (sometimes called a walkbeat or street beat) is usually played when the band is marching, sometimes alternating with a song. This is how the band keeps time. Alternately, a drum click or rim shot may be given on the odd beats to keep the band in step. Between songs and cadences, a roll is usually given to indicate what beat in the measure the band is at. Cadence tempo varies from group to group, but is generally between 112 and 144 beats per minute.*

## **Field marching**

While playing music during a field show, the band makes a series of formations on the field, which may be pictures, geometric shapes, curvilinear designs, or blocks of players. These maneuvers are collectively called *drill*. Typically, each band member has an assigned position in each formation. There are as many ways of getting from one formation to the next as there are bands:

- each member can move independently – this is called *scattering*
- all the members can move together without deforming the picture – this is called *floating*
- the members can stay in their lines and arcs, but slowly deform the picture
- the members can break into ranks or squads, each of which performs a maneuver (such as a *follow-the-leader*) which may or may not be scripted – an unscripted move is sometimes called a *rank option*
- each member may have a specifically scripted move to perform – in these cases, the desired visual effect is often the move itself and not the ending formation

Many bands use a combination of the above techniques, sometimes adding dance [choreography](#) that is done in place or while marching. Players may point the bells of their instruments in the direction they are moving, or *slide* (also called traverse) with all the bells facing in the same direction. Bands that march in time with the music typically also synchronize the direction of individuals' turns, and try to maintain even spacing between individuals in formations. Sometimes bands will specifically have wind players turn their

instruments away from the audience in order to emphasize the dynamics of the music.

Auxiliaries can also add to the visual effect. Backdrops and props may be used on the field that fit the theme of the show or the music being performed. In comedic shows, an announcer may read jokes or a funny script between songs; formations that are words or pictures (or the songs themselves) may serve as punch lines.

## Phasing

In addition to staying in step and marching uniformly, one of the challenges with playing in large outdoor arenas is *phasing*. This is when part of the band gets behind or ahead of another part of the band, and such an occurrence is sometimes called an *ensemble tear*.

Phasing may be a subjective effect, due to the finite speed of sound. Even if all members of a band are playing at once, the sound from their instruments may reach listeners at different times. For example, if two musicians, one standing on the front sideline of the football field and one on the back sideline, begin playing exactly when they see the beat of the conductor's baton, the sound produced by the musician on the front sideline will reach listeners in the stand before the sound played by the back musician. This is because the speed of sound is significantly slower than the speed of light. Sound may also echo off parts of the stadium or nearby buildings.

Phasing can be reduced in several ways, including:

- keeping formations compact
- having players listen to the drums in addition to watching the drum major, to get a uniform idea of tempo (this only works if the drill is not spread across the entire field)
- having musicians make constant adjustments and keep watching or listening to sources of tempo so as to try and make their sound reach the audience at the same time as other musicians
- having players located near the back of the field watch the drum major, and all other players "listen back", playing along with those watching the drum major.

## Rehearsals

Some bands will perform the same field show at all of their appearances during a single season. Others will avoid repeating a performance in front of the same crowd. In either case, the amount of rehearsal required varies greatly depending on the number and complexity of the formations, and the difficulty of the music. Some bands do a new field show every week, but only practice drill for two or three hours immediately before the performance. Other bands can practice a single show upwards of 20 hours per week (or more, for some competitive [drum and bugle corps](#)) for an entire season.

Music for parade and show bands is typically learned separately, in a [concert band](#) setting. It may even be memorized before any of the marching steps are learned. When rehearsing drill, positions and maneuvers are usually learned without playing the music simultaneously – a common technique for learning drill is to have members sing their parts or march to a recording produced during a music rehearsal. Many bands learn drill one *picture* or form at a time, and later combine these and add music. Rehearsals may also include physical warm-up (stretching, jumping jacks, etc.), *music warm-up* (generally consisting of breathing exercises, [scales](#), technical exercises, chorales, and [tuning](#)), *basics* (simple marching in a block to practice proper technique), and *sectionals* (in which either staff or band members designated *section leaders* rehearse individual sections).

When learning positions for drill, an American football field may be divided into a 5-yard grid, with the yard lines serving as one set of guides. The locations where the perpendicular grid lines cross the yard lines, sometimes called *zero points*, may be marked on a practice field. Alternately, band members may only use field markings – yard lines, the center line, hash marks, and yard numbers – as guides (but note that different leagues put these markings in different places). In order for members to learn their positions more quickly, they may be given *drill charts*, which map their locations relative to the grid or field markings for each formation. In other groups, spray chalk is used to mark the location of each person after each set of drill, with a different color and shape for each move.

Members may also group into squads, ranks, sections, or (especially with [scramble bands](#) that primarily form words) letters. Instead of each member having an individual move, moves are then learned on a squad-by-squad (rank-by-rank, etc.) basis.

March steps and traditional music and drill that are unique to an organization are often taught at a band camp, a time set aside for intense rehearsal before the performance season begins. Many U.S. university bands meet for a week of band camp prior to the beginning of the autumn semester. Other band camps exist for individual band members, drum majors, and auxiliaries to practice their skills and learn generic techniques in the off-season. For many bands, band camp is actually camp: the groups board at a campground for a period of time. Other groups simply hold band camp at their

typical rehearsal facilities. Many bands have an initiation night that helps build a greater bond between the musicians.

## **Competitions**

In competitions, bands are usually judged on criteria such as musicality, uniformity, visual impact, artistic interpretation, and the difficulty of the music and drill. Competition exists at all levels, but is most common in the U.S. among secondary school bands and drum and bugle corps. Performances designed for a competition setting usually include more esoteric music (including but not limited to adaptations of modern orchestral pieces).

### **National and Regional Competitions**

In the United States, Bands of America holds the Grand National Championships for high school marching bands every November in the RCA Dome in Indianapolis. They also hold regional championships throughout the United States each fall. Bands are divided into three classes based on school size.

Bands in most competitions are classified by the number of wind players. Bands can ask or "petition" up a class to challenge themselves but may not move down. An example classification used in some U.S. competitions is as follows:

- A – Up to 36 wind players
- AA – 37–54 wind players
- AAA – 55–77 wind players
- AAAA – 78–100 wind players
- Open – 101 or more wind players

### **Local Competitions**

In addition to the Bands of America competitions, many states also hold local championships for high school marching band. In this case, school size is the determining factor in which class bands compete in, rather than the amount of wind players. Examples of these local circuits include:

- New York State Field Band Conference  
Musical Arts Conference

Eastern Marching Band Association  
Southern California School Band and Orchestra Association

## **The Sudler Trophy**

The Sudler Trophy is an award bestowed by the John Philip Sousa Foundation on one university marching band each year. No school may win the award twice. The official description of the trophy is:

The purpose of the Sudler Trophy is to identify and recognize collegiate marching bands of particular excellence who have made outstanding contributions to the American way of life. The Sudler Trophy is awarded annually to a college or university marching band which has demonstrated the highest musical standards and innovative marching routines and ideas, and which has made important contributions to the advancement of the performance standards of college marching bands over a period of years.

The following are the recipients of the Sudler Trophy since its inception in 1982:

1982 University of Michigan  
1983 University of Illinois at Urbana-Champaign  
1984 The Ohio State University  
1985 Florida A&M University  
1986 University of Texas at Austin  
1987 University of Oklahoma  
1988 Michigan State University  
1989 University of Kansas  
1990 University of Iowa  
1991 Arizona State University  
1992 Northwestern University  
1993 University of California, Los Angeles (UCLA)  
1994 James Madison University  
1995 Purdue University  
1996 University of Nebraska-Lincoln  
1997 West Virginia University  
1998 University of Massachusetts Amherst  
1999 Texas Tech University

## Marching percussion

**Marching percussion** instruments are specially designed to be played while moving. This is achieved by attaching the drum(s) to a special *harness* (also called a *carrier* or *rack*) worn by the drummer. The drums are designed and tuned for maximum articulation and projection of sound, as marching activities are almost always outdoors or in large interior spaces. Articulation is paramount to producing a "clean" sound from all the drummers in the line. These instruments are used by [marching bands](#), [drum and bugle corps](#), [indoor percussion ensembles](#), and pipe bands.

## Snare drums

Marching snare drums are deeper in size than snares normally used for [orchestral](#) or [drum kit](#) purposes. This gives the drum the big, full sound necessary for outdoor use. They can be 13 or 14 inches in diameter. Many snare drums utilize a metal suspension ring on the top (or *batter*) side of the drum, allowing for extremely tight tuning of aramid fiber heads without damaging the shell. The bottom (or *resonant*) side of the drum has a tightly tuned head and plastic snare wires, which are often taped to the head to limit their movement and make the sound more staccato. For outdoor use, a piece of curved plastic, called a "scoop," may be attached to the back of the bottom

hoop to help project the sound forward to the audience. Snare lines vary in size from as few as 2 or 3 drummers in small high school marching bands to as many as 12 or more in very large college marching bands. Lines of 4–5 are common in high school marching bands; 7–10 is most common in [drum corps](#) and college marching bands.

Snare drums used in pipe bands are similar in construction to standard marching snare drums, but have an additional set of snares underneath the top head, which results in a more pronounced snare sound. Some drum corps have experimented with pipe band snare drums both in place of standard marching snare drums and as a special effect used only during a segment of the show.

The head or playing surface of the snare drum can also be varied to give the drum a different sound. Depending on the music or style that the drumline plays, different brands and types of heads may be used.

The lead snare player in a drumline is almost universally referred to as the "center snare" and is often the section leader of the drumline.

## Tenor drums

Modern marching bands and drum corps use multi-tenors, which consist of several single-headed tom-toms played by a single drummer. The bottoms of the shells are open and beveled to project the sound of the drum forward. Double-ply Mylar heads are typically used for increased sound projection and durability. They are typically played with wooden or aluminum mallets that have disc-shaped heads made of nylon. Mallets with felt or fleece heads, drum sticks, drum brushes, and other implements are occasionally used to achieve different [timbres](#).

A full-size set of tenors consists of 10, 12, 13, and 14-inch toms arranged in an arc, often with an additional one or two smaller (6 or 8-inch) toms called *gock* or *spock* drums inside of the arc. Because a full-sized set of tenors with a carrier can exceed 40 pounds, smaller and lighter versions of tenors outfitted with 8, 10, 12, and 13-inch toms are often used by lines with smaller or younger players. All multi-tenors based on the four-drum configuration are called *quads* despite the fact that there may be a total of five or six drums counting the gock drums. Sets with one gock drum are called *quints*, and sets with two gock drums are called *sextets*, *hexes*, or *sixpacks*. To produce different sounds between gock drums with the same diameter, head type, shell depth, and/or tuning between the two drums may vary.

Lines of as few as 1 or 2 tenor drummers are common in high schools and junior high schools. Many large college marching bands have 5 or more. Most drum corps consider 4 or 5 tenors to be optimal.

Modern multi-tenors evolved from horizontally mounted dual single-headed bass drums first used by the Boston Crusaders Drum and Bugle Corps in the late 1960s. Early multi-tenors had shells with a flat bottom. These drums sounded a lot like [timpani](#), so they were called *timp-toms*. As the drums got smaller, more drums were added. The largest sets of multi-tenors had 7 drums and were carried by both the 1977 and 1992 Spirit of Atlanta Drum and Bugle Corps tenor lines. Pipe bands and traditional marching bands and drum corps use single tenors, which are double-headed drums much like snare drums without snares. Some show bands such as those at historically black colleges and universities use both single tenors and multi-tenors.

## Bass drums

Bass drums used by modern ensembles come in a variety of sizes, typically in 2-inch increments from 16 to 32 inches. Unlike tenors and snares, bass drums are mounted vertically and played on both heads. Each drummer plays and carries one drum, and a line is created by having several people carry different-sized drums. Such drums are called tonal bass drums. Despite the moniker, they are not tuned to definite pitches; they are just tuned so each drum has a distinguishable tone, often tuned with relative pitches to one another. The lowest drum in a line, however, is often tuned to have a low "thump" like a traditional bass drum rather than a tone. Many groups try to use the largest size bass drummer that is comfortable to carry as the bottom bass drum and the fact that larger people are generally more able to carry a bigger drum for long periods of time.

Unlike snare and tenor players, each bass drummer only plays one segment of the entire bass drum part. This is known as a *split part*. A *unison* is a note all the bass drummers play together. Lines can vary in size from as few as 3 players in small high schools to as many as 9 in very large college marching bands. A line of 5 is the most common in a drum corps.

Pipe bands and some traditional groups use a single bass drummer, who typically carries the pulse of the group. The drums used by these groups are usually thinner and larger than tonal bass drums to produce a "thump" rather than a tone. Some traditional groups, however, have adopted tonal bass drums.

## Cymbals

Cymbals are not played just as orchestral clash cymbals, as there is a change in the grip of the straps. The hand goes through the hoop and the hand

twists causing the hand to be flat against the bell of the cymbal. – each player carries two cymbals of identical size and crashes them together, in addition to other sound effects. Cymbal players often perform *visuals* – movements that are eye-pleasing and boost the general effect of the group. There is generally a 1-to-1 or 1-to-2 ratio of cymbal players to snares, as snare drummers sometimes play on the cymbals at some point during the performance. The number of cymbal players can vary according to their use. Cymbal parts are often split in the same manner as bass drum parts – each cymbalist plays one component of a larger part. Some drum corps (or less often, marching bands) do not have marching cymbal players at all, instead choosing to march additional hornline or color guard members, or other percussion instruments. In indoor percussion ensembles, the trend seems to be towards keeping or expanding cymbal sections.

## Mallet instruments

Marching mallet percussion instruments, such as glockenspiels and [xylophones](#), are not typically used except for parades, as the front ensemble plays on full-size orchestral mallet instruments. However, they were common before band and drum corps circuits allowed large percussion instruments to be grounded.

Many traditional groups still use marching mallet percussion instruments, as these groups often lack a front ensemble.

## Timpani

Marching [timpani](#) are rarely used today because standard pedal timpani are used in the [front ensemble](#). They were commonly used when competition circuits required all percussion instruments to be carried. In a timpani line, each player carries one drum, which is equipped with a hand crank for tuning.

## Maroon music

The Maroons are a number of diverse peoples in the Caribbean, South America, North America and Central America, the descendents of escaped slaves. The Seminole music tradition of the United States is an example, as are numerous communities in Jamaica, Suriname and French Guiana.

The Surinamese, Guianan and French Guianan escaped slaves managed to hide in the dense jungles of the area, and formed communities like the Aluku, Saramaka and Ndjuka. Their traditional sung stories are called mato, and there is also a kind of popular Maroon music called aleke. Traditional dances include *awasa*, a women's social dance.

The Jamaican Maroons are known for instruments like the *abeng*, a kind of horn.

**Martial music**, also known as **military pop** and **martial industrial**, is a [music genre](#) originating in late 20th century Europe. It often borrows musically from [classical music](#), [neofolk](#), [neoclassical](#), traditional European marches and from elements of [industrial](#) and [dark ambient](#).

### Origins

The genre name *military pop* was coined by the Austrian musician Gerhard, founder of Allerseelen, to describe the direction his music was going at the time, leaning away from an ambient sound into something more militaristic. It has since been used by other artists such as Dernière Volonté to describe their musical sound. This term is often used in place of *martial music* or *martial industrial*.

## Themes

Themes range from pounding, percussive [soundtrack](#)-like music to rally-worthy dark parade music to cabaret appropriate sexually-charged carnal declarations to mournful marches. Essentially, anything that could be made with traditional European martial instrumentation relating to the artists within this genre could be considered a part of this musical movement.

## Culture

Martial music fans range from people very politically active to cultural admirers to uniform fetishists. Due to use of European uniforms, this is sometimes misunderstood as being a means of expression of a single, unified political tendency by Antifa, groups such as the Anti-Defamation League and sometimes local news agencies, though artists in this genre range from the left (such as Militia) to the right (such as Von Thronstahl) to completely apolitical.

## Related genres

### Neofolk Music

The work of some [neofolk](#) music artists sometimes has musical and thematic elements in common with Martial Music and developed very close to it. Many artists that could be classified as a part of this field regularly work with, could be classified as a part of or play shows with artists of this musical movement in particular.

## Mass

The **Mass**, a [form](#) of sacred musical composition, is a [choral](#) composition that sets the fixed portions of the Eucharistic liturgy (principally that of the Roman Catholic Church, and also the Anglican Church) to music. Most Masses are settings of the liturgy in Latin, the traditional language of the Roman Catholic Church.

Masses can be a cappella, for the human voice alone, or they can be accompanied by instrumental obbligatos up to and including a full orchestra. Many masses, especially later ones, were never intended to be performed during the celebration of an actual mass.

## Form of the Mass

Generally, for a composition to be a full Mass, it must contain the following six sections, which together constitute the Ordinary of the Mass:

## I. Kyrie

The Kyrie is the first movement of a setting of the Ordinary of the Mass:

*Kyrie eleison; Christe eleison; Kyrie eleison (šÁÁ¹μ μ»μ·Ã¿½; ŠÁ¹ÃÃμ  
μ»μ·Ã¿½; šÁÁ¹μ μ»μ·Ã¿½)*

Lord have mercy; Christ, have mercy; Lord, have mercy.

Kyrie movements often have a structure that reflects the concision and symmetry of the text. Many have a ternary (ABA) form, where the two appearances of the phrase "Kyrie eleison" are comprised of identical or closely related material and frame a contrasting "Christe eleison" section. Famously, Mozart sets the "Kyrie" and "Christe" texts in his Requiem Mass as the two subjects of a double fugue.

## II. Gloria

The Gloria is a celebratory passage praising God and Christ:

*Gloria in excelsis Deo et in terra pax hominibus bonae voluntatis.  
Laudamus te, benedicimus te, adoramus te, glorificamus te, gratias agimus  
tibi propter magnam gloriam tuam, Domine Deus, Rex caelestis, Deus  
Pater omnipotens.*

Glory to God in the highest, and on earth peace to men of good will.  
We praise You, we bless You, we adore You, we glorify You, we give  
thanks to You for Your great glory, Lord God, heavenly King,  
almighty God the Father.

*Domine Fili unigenite, Iesu Christe, Domine Deus, Agnus Dei, Filius Patris,  
qui tollis peccata mundi, miserere nobis; qui tollis peccata mundi, suscipe  
deprecationem nostram. Qui sedes ad dexteram Patris, miserere nobis.*

Lord Jesus Christ, only begotten Son, Lord God, Lamb of God, Son  
of the Father, You who take away the sins of the world, have mercy  
on us; You who take away the sins of the world, hear our prayers.  
You who sit at the right hand of the Father, have mercy upon us.

*Quoniam tu solus Sanctus, tu solus Dominus, tu solus Altissimus, Iesu  
Christe, cum Sancto Spiritu in gloria Dei Patris. Amen.*

For You are the only Holy One, the only Lord, the only Most High,  
Jesus Christ, with the Holy Spirit in the glory of God the Father,  
Amen.

### III. Credo

The longest text of the Mass, this is a setting of the Nicene Creed:

*Credo in unum Deum, Patrem omnipotentem,  
factorem caeli et terrae, visibilium omnium et invisibilium.*

I believe in one God, the Father Almighty  
Maker of heaven and earth, and of all things visible and invisible:

*Et in unum Dominum Iesum Christum,  
Filium Dei unigenitum, et ex Patre natum ante omnia saecula.  
Deum de Deo, Lumen de Lumine, Deum verum de Deo vero,  
genitum non factum, consubstantialem Patri;  
per quem omnia facta sunt. Qui propter nos homines et propter nostram  
salutem descendit de caelis.*

*Et incarnatus est de Spiritu Sancto ex Maria Virgine, et homo factus est.  
Crucifixus etiam pro nobis sub Pontio Pilato, passus et sepultus est,  
et resurrexit tertia die, secundum Scripturas,  
et ascendit in caelum, sedet ad dexteram Patris.*

*Et iterum venturus est cum gloria, iudicare vivos et mortuos,  
cuius regni non erit finis;*

And in one Lord Jesus Christ,  
the only-begotten Son of God, begotten of the Father before all  
worlds;  
God of God, Light of Light, very God of very God;  
begotten, not made, being of one substance with the Father,  
by Whom all things were made;  
Who for us men and for our salvation came down from Heaven, and  
became man.

and was incarnate by the Holy Ghost of the Virgin Mary, and was  
made man:

And was crucified also for us under Pontius Pilate; he suffered and  
was buried:

And the third day he rose again according to the Scriptures:  
And ascended into Heaven, and sitteth on the right hand of the  
Father:

And he shall come again, with glory, to judge both the quick and the  
dead:

Whose Kingdom will have no end;

*Et in Spiritum Sanctum, Dominum et vivificantem,  
qui ex Patre (Filioque) procedit.  
Qui cum Patre et Filio simul adoratur et conglorificatur:*

*qui locutus est per prophetas.  
Et unam, sanctam, catholicam et apostolicam Ecclesiam.  
Confiteor unum baptisma in remissionem peccatorum.  
Et expecto resurrectionem mortuorum,  
et vitam venturi saeculi. Amen.*

And I believe in the Holy Ghost the Lord, and Giver of Life,  
Who proceedeth from the Father [*and the Son*]  
Who with the Father and the Son together is worshipped and  
glorified,  
Who spake by the Prophets.  
And I believe in One Holy, Catholic, and Apostolic Church,  
I acknowledge one Baptism for the remission of sins.  
And I look for the Resurrection of the Dead:  
And the Life of the world to come. *Amen.*

The *Credo* movement presents unique challenges to the composer due to its length.

#### **IV. Sanctus**

The Sanctus is a doxology praising the Trinity:

*Sanctus, Sanctus, Sanctus, Domine Deus Sabaoth; pleni sunt coeli et terra gloria tua*

Holy, Holy, Holy, Lord God of Hosts; Heaven and earth are full of  
Your glory.

*Hosanna in excelsis*

Hosanna in the highest.

#### **V. Benedictus**

The *Benedictus* is a continuation of the Sanctus:

*Benedictus qui venit in nomine Domini.*

Blessed is he who comes in the name of the Lord

*Hosanna in excelsis* is usually repeated after the *Benedictus* section, often with musical material identical to that used after the *Sanctus*, or very closely related.

In Gregorian chant the *Sanctus* (with *Benedictus*) was sung whole at its place in the mass. However, as composers produced more embellished settings of the *Sanctus* text, the music often would go on so long that it would run into the consecration of the bread and wine. This was considered the most

important part of the Mass, so composers began to stop the *Sanctus* halfway through to allow this to happen, and then continue it after the consecration is finished. This practice was forbidden for a period in the twentieth century.

## VI. Agnus Dei

The *Agnus Dei* is a setting of the "Lamb of God" litany:

*Agnus Dei, qui tollis peccata mundi,  
miserere nobis*

Lamb of God, who takes away the sins of the world,  
have mercy upon us.

*Agnus Dei, qui tollis peccata mundi,  
dona nobis pacem.*

Lamb of God, who takes away the sins of the world,  
give us peace.

In a Requiem Mass, the words "*dona nobis pacem*" are replaced by "*dona eis requiem*" (grant them rest).

## Other Sections

In a liturgical Mass, there are other sections that may be sung, often in [Gregorian chant](#). These sections, the "Proper" of the Mass, change with the day and season according to the Church calendar, or according to the special circumstances of the mass. The Proper of the Mass is usually not set to music in a Mass itself, except in the case of a Requiem Mass, but may be the subject of [motets](#) or other musical compositions. The sections of the Proper of the Mass include the Introit, Gradual, Alleluia or Tract (depending on the time of year), Offertory and Communion.

## Mass Compositions of the Middle Ages and Renaissance

Prior to individual composers composing music for the Mass, the music of the Mass was purely Gregorian chant. Gregorian chant offered many Mass music options which were supposed to be sung on certain days. In these different forms (such as the *Missa Angelis*), the melodies were specified for many other sections besides the ones shown here. However, individual composers only wrote music for the *Sanctus*, *Gloria*, etc. So a composer's Mass would "override" those sections which the composer composed, but the

rest of the parts sung in Gregorian chant would remain according to the rules of Gregorian chant.

These sections of the Mass as a musical composition have been standard since the Middle Ages; the very earliest Masses may include other parts, and omit some of the standard ones. The first complete Mass we know of whose composer can be identified was the *Messa de Nostre Dame (Mass of Our Lady)* by Guillaume de Machaut in the 14th century. Many masses by Guillaume Dufay and others in the 15th and 16th centuries used melodies from popular songs, such as *L'homme armé* as *cantus firmus*, scandalizing the conservative-minded. Such a practice was of great antiquity, however; it had been attributed to the 4th century heretic, Arius, that he allowed his sacred songs or hymns contained in his book *Thaleia* to be set to melodies with infamous associations.

The mass as a musical form flourished during the Renaissance, where it served as the principal large-scale form of composition for most composers. Many important masses were composed by Josquin des Prez. At the end of the 16th century a cappella choral counterpoint reached an apogee in masses by the English William Byrd, the Castilian Tomas Luis de Victoria and the Roman Giovanni Pierluigi da Palestrina, whose Mass for Pope Marcellus is credited with saving polyphony from the censure of the Council of Trent. By the time of Palestrina, however, the mass had already been replaced by other forms, principally the [motet](#) and the [madrigale spirituale](#), as the most significant outlet for expression in the realm of sacred music; composers such as Lassus wrote relatively few masses, preferring the greater latitude for expression offered by the other forms.

## Baroque through present day

After the Renaissance, the mass tended not to be the central genre for any one composer, yet some of the most famous of all musical works of the Baroque, Classical, and Romantic periods are masses. Many of the most famous of the great masses of the Romantic era were Requiem masses. In the 20th century, composers continued to write masses, in an even wider diversity of style, form and function than before.

Among the Masses written for the Ordinary of the Mass are:

The Mass in B Minor by Bach (coincidentally a staunch Lutheran)

The Mass in C minor and 18 others by Mozart

The masses of Joseph Haydn, including Nelson Mass and Mass in Time Of War

The Mass in C major and Missa Solemnis by Beethoven

Missa Choralis and Hungarian Coronation Mass by Liszt  
 Mass in G Major and 5 others by Schubert  
 Mass in F minor and 2 others by Bruckner  
 Messe Solennelle and Caecilienmesse by Gounod  
 Petite Messe Solennelle (1863) by Gioacchino Rossini  
 Mass of Life by Frederick Delius  
 Mass in G Minor by Ralph Vaughan Williams  
 The Mass by Igor Stravinsky  
 The Mass by Leonard Bernstein  
 The Mass by David Maslansky  
 The Mass of the Children by John Rutter

## Musical reforms of Pius X

Pope St. Pius X initiated many regulations to the mass music in the early 20th century. He felt that most of the masses composed by the famous composers were not appropriate for a church setting, and advocated primarily gregorian chant and polyphony. He was primarily influenced by the work of the Abbey of Solesmes. Some of the rules he put forth include the following:

- That any Mass be composed in an integrated fashion, not by assembling different compositions for different parts
- That all percussion instruments should be forbidden
- That ideally the choir should be all male
- That the congregation itself should ideally be trained to sing along with the Gregorian chant.

[Minimalist music](#)

**Math rock** is a style of [rock music](#) that emerged in the late 1980s. It is characterised by complex, atypical [rhythmic](#) structures, stop/start dynamics and angular, dissonant riffs.

## Characteristics

Whereas most rock music uses a basic 4/4 beat (however accented or syncopated), math rock frequently uses odd-time meters such as 7/8, 11/8, or 13/8, or features constantly changing meters based on various groupings of 2 and 3. This rhythmic complexity, seen as "mathematical" in character by many listeners and critics, is what gives the genre its name. Musically, math rock derives from other rock genres, including [rock](#), [heavy metal](#), [progressive rock](#) or [punk rock](#). Math rock often sounds familiar but somehow "off". It fits into those genres but is never a classic example.

Musicians who purposely turn to mathematics to find new creativity in their music are also classified math rockers. They manipulate, twist and syncopate to confuse, to delay, to create something that is a twist on rock, punk, or pop, something familiar but "wrong", something new. Some math rock artists and fans refer condescendingly to rock bands who do not use complex meters as merely "4/4 bands."

Lyrics are generally not the focus of math rock; the voice is treated as just another sound in the mix. Often, lyrics are not overdubbed, and are positioned low in the mix, as in the recording style of Steve Albini. Several math rock groups have been entirely [instrumental](#).

## Development

While a few artists who emerged from the 1960s, like Henry Cow, Captain Beefheart and Frank Zappa, and many more bands of the 1970s and 1980s such as Genesis, Gentle Giant, Rush, King Crimson, Jethro Tull, and Pink

Floyd had experimented with unusual meters, such groups were generally grouped under the heading [progressive rock](#). Canadian punk rock group No Means No (founded in 1979) have been cited as a "secret influence" on some math rock.

In the 1990s a heavier, rhythmically complex style grew out of the broader noise rock scenes active in Chicago and other Midwestern cities, with influential groups also coming out of Japan and Southern California. These groups shared influences ranging from the music of 20th century composers such as Igor Stravinsky, John Cage, and Steve Reich, as well as the chaotic free-jazz approach of John Zorn's Naked City, and critics soon dubbed the style "math rock."

### **Midwestern groups**

During the 1990s, the greatest concentration of math rock bands was in the urban centers of the U.S.'s Midwestern "Rust Belt," ranging from Minneapolis to Buffalo, with Chicago being a central hub. The Chicago-based engineer Steve Albini is a key figure in the scene, and many math rock bands from around the country have enlisted him to record their albums, giving the genre's recorded catalog a certain uniformity of sound, and lumping his bands past and present, Shellac, Rapeman, and Big Black into the pigeonhole as well. Also, many math rock records were released by Chicago-based Touch and Go Records, as well as its sister labels, Quarterstick Records and Skin Graft Records.

Some key bands of this period include Bastro, Table, Cheer-Accident, Shellac, and Breadwinner. Also out of the Chicago area, from nearby DeKalb, Illinois, is U.S. Maple, which formed out of the ashes of the Jesus Lizard-esque Shorty. U.S. Maple took a more deconstructive approach to their brand of rock music, similar to that of Captain Beefheart. Their music has a free-form approach to rhythm, with songs only occasionally coalescing into conventional rock beats. Thus, aesthetically, the group is not as "mathy" as other bands in the genre, but the same thought process of dismantling rock music still applies.

Several other math rock groups of the 1990s, all characterized by extreme rhythmic complexity and sonic brutality, were based in Midwestern cities: Cleveland's Craw and Keelhaul, St. Louis's Dazzling Killmen, and Minneapolis' Colossamite.

### **Pittsburgh groups**

The city of Pittsburgh is home to one of the most defining examples of the math rock genre: the four-piece Don Caballero. Formed in 1991, "Don Cab," as

the group is affectionately known, successfully blends heavy noise rock sounds with avant-garde [jazz](#) influences and the fierce non-stop drumming of Damon Che. Like many other bands in the style, the band despises the "math rock" label applied to them by critics. Even so, it should come as no surprise that a temporary bass player Matt Jencik, a member of another former Pittsburgh math rock band, Hurl, also spent time in Don Caballero. The group's former guitarist Mike Banfield has noted Breadwinner to be an important early influence on the band's sound. Their other former guitarist, Ian Williams, drew quite heavily from the minimalist works of Steve Reich, shown especially in the group's final release, American Don. Williams has taken this approach further with his newest outfit, Battles. Don Caballero disbanded in 2001 after a van accident that abruptly ended their support tour of American Don. However, Che reformed the band in 2004 with an entirely different lineup consisting of members of the Pittsburgh-based math rock band Creta Bourzia.

### **San Diego groups**

Formed in 1990, San Diego's Drive Like Jehu, which featured the off-kilter guitar of John Reis from Rocket from the Crypt was a blistering, shining example of technical rock music, highly demonstrated on the band's swan song, Yank Crime. The group disbanded in 1994. Other San Diego bands of the time that have been likened to Jehu include Antioch Arrow, Clikitat Ikatowi, and Heavy Vegetable. The latter band took a more melodic approach than the previous two, and featured the songwriting genius of Rob Crow who was able to fuse melody and harmony as well as complex rhythms seamlessly.

### **Japanese groups**

Several math rock groups from Japan developed close relationships with Chicago's Skin Graft label, leading to a cross-fertilization between the math rock scenes in the two nations. The most important Japanese groups include Zeni Geva and Ruins, with Yona-Kit being a collaboration between Japanese and U.S. musicians. It is very likely that Japanese math rock exerted an early influence on some (if not many) of the earliest U.S. math rock groups, as both Zeni Geva and Ruins were formed several years before their North American counterparts became active in the genre.

### **D.C. area groups**

Washington, D.C. also contributed to the sound of math rock with the bands Faraquet, Frodus, 1.6 Band, Autoclave, later Jawbox, and Circus Lupus

among some others. The latter is said to have influenced the sound of early Q and Not U. However, since D.C.-oriented bands tended to throw in odd-meters into their already eclectic mix of influences, some were branded with the genre name.

Richmond based Breadwinner spawned a number of later math rock bands in the town. While direct descendents of Breadwinner include Sliang Laos and Ladyfinger, there were many other notable Richmond area bands in the genre: Alter Natives, Mao Tse Helen, Mulch and King Sour.

Buzzard a band originally from Norfolk Virginia included metal elements that eventually evolved into an entirely original instrumental math rock outfit at place with any RIO or Canterbury ethos.

### **The Louisville sound**

In 1991, Slint, then a young band out of Louisville, released the album *Spiderland*. It is considered an extremely influential landmark album to not only math rock but across the underground music network and beyond. The short-lived group's sound, based on the interlocking of multiple "clean" (non-distorted) guitars playing in generally compound meters, was more sedate and not as metal-influenced as most other math rock groups, and thus its style (and those of its imitators) represents a separate branch of the category. Several groups which followed Slint's lead also used unusual meters; such bands include Bitch Magnet, Rodan, Crain, The For Carnation, June of 44, Sonora Pine, and Shipping News.

### **Vanguardia Paulista**

In the early 1980s São Paulo, Brazil gave rise to a movement called **Vanguardia Paulista** ("**São Paulo Vanguard**" in English) that flourished in South America's largest city as the Brazilian military dictatorship began to crumble. The original Vanguarda Paulista was an avant-garde wing of Popular Brazilian Music ([MPB](#)) championed by artists like Arrigo Barnabé, Alice Ruiz, Hélio Ziskind, Patife Band and many others who played an angular jazz-rock with constantly shifting time signatures reminiscent of Frank Zappa or Henry Cow. In the early 21st Century, there is a [new wave](#) of art-rock bands emerging, such as Hurtmold, Objeto Amarelo and Retórica that have been heavily influenced by sounds from the Northern Hemisphere made by all of the bands mentioned elsewhere in this article. These newer Brazilian groups are sometimes referred to as the **Vanguardia Nova** or **New Vanguard**.

## Contemporary math rock

By the turn of the 21st century, most of the later generation bands such as Thumbnail and Sweep the Leg Johnny had disbanded, and the genre had, like most musical movements identified in the ever-shifting and elusive underground rock scene, been roundly disavowed by most bands labeled with the "math rock" moniker. However, the influences of the movement can clearly be heard in the abiding avant-garde and [indie rock](#) scenes. Present-day bands that have managed to be tagged with the "math-rock" label include Oxes out of Baltimore, Midiron Blast Shaft out of Philadelphia, Yowie from St. Louis, Big Bear from Boston, and the San Francisco's Sleepytime Gorilla Museum.

A closely-related genre is [post-rock](#), into which some of these same bands are classified; post-rock, though, tends to be defined by a softer-edged, more jazzy and melodic sound.

## Mathcore

**Mathcore**, also known as **tech hardcore** or **chaotic hardcore**, is a style of [hardcore punk](#) recognized for a high level of technical musicianship. The subgenre has its roots in bands like Rorschach, Deadguy, Converge, Kiss it Goodbye, Training For Utopia, Botch, The Dillinger Escape Plan, Turmoil, Coalesce, Bloodlet, Groundwork, Resurrection, Acme, and Starkweather.

The music is usually filled with discordant, somewhat technical riffing, complex time signatures and song structures, and usually indecipherable lyrics. Songs played by bands of this style tend to vary from mere seconds in

length to over 15 minutes and rarely feature a conventional verse-chorus song structure. Other styles of music, such as [blues-rock](#) and [free jazz](#) have been known to inspire various mathcore bands. Coalesce have been influenced by the former, to the extent of releasing a Led Zeppelin cover EP named 'There is Nothing New Under the Sun', whereas The Dillinger Escape Plan are known to credit the latter.

This style is currently being promoted by bands such as Playing Enemy, Knut, and Daughters.

Other notable bands in this style: As the Sun Sets, Between The Buried And Me, Psyopus, Ion Dissonance, Curl Up and Die, The End, Inner Surge, Candiria, The Power and the Glory, Creation is Crucifixion, Foreign Objects, Into The Moat, The Red Chord, Look What I Did, Chapter 13, The Number Twelve Looks Like You, Every Time I Die, The Tony Danza Tapdance Extravaganza , Evelynn, Judas Factor, Ambush, Dragbody, Indecision, Shora, Ananda, Carol, and i.m. society.

## Maxi single

A **maxi single** or **maxi-single** is a music single release with more than the usual two tracks (generally an a-side song and a b-side song).

### The first maxi-singles

The term came into wide use in the 1980s, where it usually referred to 12" vinyl singles with 3 or 4 tracks. A typical practice was to release a 2-song single on 7" vinyl and cassette, and a maxi-single on 12" vinyl.

## The early CD era

When CDs began to appear as a single format in the late 1980s (see [CD single](#)), songs were often released in two CD formats simultaneously, as a logical application of the vinyl record format to CD. There would be a regular single on a 3" CD with two tracks, similar to a 7" record. There would also be a full-size 5" CD, often with 3 or 4 tracks, which was considered the maxi-single despite often containing only marginally more music than its smaller counterpart.

Example: Erasure - *Sometimes* (European 5" CD maxi-single) Released by Mute in 1988 in Europe. Includes 3 different songs. Packaged in a slim jewel case with insert. Labelled "Maxi-Single-CD" on front cover.

## Cassette maxi-singles

Occasionally, a cassette single would also be released in two cassette formats simultaneously: a traditional cassingle with two tracks and a cassette maxi-single with more tracks, generally remixes. This practice was experimented with in the early 1990s but was uncommon even then.

Example: Pet Shop Boys - *So Hard* (cassette maxi-single) Released by EMI in 1990 in the USA. Includes 3 mixes and one b-side. Packaged in a standard cassette case with "j-card" insert. Oddly, the spine calls it a "12 inch maxi-single" despite the fact that it's on a cassette.

## 1990s CD maxi-singles

Shortly after the advent of the 1990s, CD had clearly become the music format of choice. As the 1990s progressed, nearly every single released was available on CD, and vinyl and cassette single releases gradually became less common.

The UK became a thriving market for CD singles, but in 1998 the UK Chart Supervisory Committee reduced the maximum playing time of chart-eligible CD singles from 40 to 20 minutes, though 12" vinyl singles could still play for up to 40 minutes. While Maxi-CDs had been much loved among the dance community, as most if not all of the remixes that had been commissioned by the label could be released commercially, lobbying by artists in other genres who felt obliged to record extra and cover tracks to provide enough material for their single releases was to blame for the rule change. As a result, UK singles from the mid-1998 often appeared as 3 separately-sold CDs with 3 tracks each, or more commonly, 2 CDs and an extra format (such as 7", 12" or DVD single). Very often, at least 1 track was common to all formats. Single releases in the US and elsewhere still included many tracks (primarily remixes) and called themselves maxi-singles to differentiate from the 3-track UK versions.

Example: Saint Etienne - *Who Do You Think You Are?* (US CD single) Released by Warner Music in 1993 in the USA. Includes 8 different tracks, 6 of which are versions of the title song. Digipak packaging. Labelled "compact disc maxi-single" on the front cover.

## Digital maxi singles

A digital maxi single is a series of [digital downloads](#) mostly containing remixes. Unlike a normal maxi single, tracks can be bought and sold based on

preference. In terms of chart usage, even if a single had a maxi single and a digital maxi single released with the exact same content, they would still be counted differently. For instance, the maxi single would be counted as two points, while the digital maxi single (if all songs were downloaded and if the single were to contain the standard five tracks) would be counted as ten points.

### **The maxi-single today**

With music stores in the US devoting increasingly less shelf space to singles, the format's future in the US remains in doubt. In the UK, having watched sales of CDs drop since the previous rule change, and amid allegations that the consumer no longer felt that UK issued singles were good value for money, the Chart Supervisory Committee once again changed the rules governing the formats of singles released in the UK. From early 2003, a format described as a "Maxi-CD" was again reintroduced, alongside a new 2-track CD single with a lower retail price. The current UK rules allow for up to 40 minutes of audio tracks on a Maxi-CD, as long as all tracks are remixes of the title track. In practice, however, many UK Maxi-CDs still contain only 3 mixes and come nowhere near the maximum allowable playing time. However, releases on dance labels (such as EMI's Positiva, for instance) are nearly always Maxi-CDs in the true sense, with more than 3 mixes.

Example: Erasure - *Breathe* (US CD single) Released by Mute in 2005 in the USA. Includes 8 different tracks, 6 of which are versions of the title song, plus a CD-ROM section with the video of the title song. Standard jewel case packaging.

## **Mazurka**

The **mazurka** (Polish: *mazurek*, probably named after Poland's Mazury district) is a Polish [folk dance](#) in triple time with a lively tempo, containing a heavy accent on the third or second beat. The dance became popular at balls.

Several [classical](#) composers have written mazurkas, with the best known being more than fifty composed by Frédéric Chopin for solo [piano](#). In the 1920s, Karol Szymanowski wrote a set of twenty for piano. The Polish national anthem is a mazurka.

In Swedish folk music, the quaver or eight-note polska has a similar rhythm to the mazurka, and the two dances have a common origin.

The dance was also common as a popular dance in the United States in the late 19th century. In the Southern United States it was sometimes known as a **mazuka**.

The mazurka has also been used outside Poland. In Russia, Tchaikovsky composed six for solo piano and one for his Swan Lake score; Borodin wrote

two in his Petite Suite for piano; Mikhail Glinka also wrote two, Wieniawski wrote two for violin with piano (the popular "Obertass", op. 19), and Alexander Scriabin used the form as well. In France, Impressionistic composers Claude Debussy and Maurice Ravel both wrote Mazurkas: Debussy's is a stand-alone piece, and Ravel's is part of a suite of pieces known as *La Parade*, an early work which is not very well known.

The mazurka features in Leo Tolstoy's *Anna Karenina*.

The Mazurka is an important dance in many Russian novels. As well as Tolstoy's *Anna Karenina*, the dance is prominently featured in Ivan Turgenev's novel *Fathers and Sons*. Arkady reserves the Mazurka for Madame Odintsov with whom he is falling in love.

## Mbaqanga

**Mbaqanga** is a style of South African [music](#) that is usually sung by people from rural areas. Many South African musicians sing and enjoy this type of music. These musicians receive little money, but do it out of enjoyment. Mahlathini, a legend in this music, died poor. The reason for this is that this type of music is mostly listened to by the peoples from the rural areas who do not have access to CDs, records or cassette players, so they do not buy the music to support these musicians.

By the middle of the 1950s, the evolving indigenous South African music exploded in popularity given its increased reach to a massively growing urban population. A typical area was the township of Sophiatown near Johannesburg, which had grown since the 1930s into an area of new urban lifestyles for black city dwellers. Its unsure legal status as a "freehold" area, and its proximity to the urban centre of Johannesburg, Sophiatown attracted adventurous performers of new music and became a seed-bed for the rapidly developing black musical culture.

Thus marabi and kwela have started to come together into what is broadly thought of as mbaqanga. Singing stars such as Miriam Makeba, Dolly Rathebe and Letta Mbulu created a large base of fans. Famous mbaqanga players included Mahlathini and the Mahotella Queens and the Soul Brothers.

The cyclic structure of marabi met with traditional dance styles such as the Zulu indlamu, with influences of big band swing. The indlamu input developed into the "African stomp" style, giving a notably African rhythmic impulse to the music and making it quite irresistible to its new audiences.

Such is the power of music that it created a common arena where black people could mingle with adventurous and liberal whites attracted by its vibrancy, becoming an icon for the first real cultural and social interchange between the races to take place in 20th century South Africa.

Eventually the apartheid drive of the white Nationalist government brought this vital era to an end, forcibly removing the inhabitants of Sophiatown to townships such as Soweto, outside Johannesburg, in 1960. Sophiatown was razed and the white suburb of Triomf built in its place; in 2006, the name Sophiatown was restored to the area.

## M-Base

**M-Base** (short for "macro-basic array of structured extemporization") is a concept of how to create modern [music](#) which reached its peak in the mid-to-late-80s and early 90s. It was also a word used to reference a collective of musicians, poets and dancers in this same time period who were associated with the movement. M-Base is often seen as a kind of [jazz](#), but, strictly speaking, this is not entirely accurate, and the participants do not view M-Base in this manner.

M-Base is built on the innovations of Charlie Parker, John Coltrane and especially the free funk of Ornette Coleman's electric bands, along with many other spontaneous composers. It is also influenced by the rhythmic innovations of many of the groups led by singer James Brown, as well as having direct roots in West African Music and West African cultural and philosophical ideas. One of its most noticeable musical traits is the innovative use of overlapping rhythmic cycles of various lengths inside of which the participants improvise, giving the music an unpredictable form. Other characteristics are curvilinear melodic elements, non-standard harmonic structures coupled with a mastery of improvisation based on these forms, resulting in a decidedly non-western cultural and philosophical bent.

Some of the main exponents of this concept in the 1980s – 1990s were saxophonist Steve Coleman (whose present style is an extension of these ideas), saxophonist Greg Osby, trombonist Robin Eubanks, saxophonist Gary Thomas, pianist Tim Murphy, and singer Cassandra Wilson, who are all still active in music performing and recording. Their more recent performances, especially Coleman's, still demonstrate a debt to M-Base. Additionally, many newer musicians in the spontaneous composition arena – along with various artists in other areas utilizing spontaneous creation in poetry, dance, and popular forms like Hip-Hop – are also heavily influenced by the M-Base conception.

## Medieval music

The term **Medieval music** encompasses European music written during the Middle Ages. This era begins with the fall of the Roman Empire (476 AD) and ends in approximately the middle of the fifteenth century. Establishing the end of the Medieval era and the beginning of the [Renaissance](#) is admittedly arbitrary; 1400 is used here.

## Overview

### Style and trends

The first proviso when approaching a putative medieval musical repertoire is to appreciate that the only music available to us today is that which was written down. As expensive items like parchment and skills in literacy of word and music were generally only found in possession of rich organisations such as the Church, what has come down to us in manuscript may or may not represent the true picture of music-making in general in the period. The general trend in manuscripts of Medieval music is toward complexity in [harmony](#), [rhythm](#), text, and orchestration. At the start of the era, the notated music is presumed to be monophonic and homorhythmic with what appears to be a unison sung text and no notated instrumental support. In earlier Medieval notation, rhythm cannot be specified, although neumatic notations can give clear phrasing ideas, and somewhat later notations indicate rhythmic modes. The simplicity of [chant](#), with unison voice and natural declamation, is most common. The notation of Polyphony develops, and the assumption is that formalised polyphonic practices first arose in this period. Harmony, in consonant intervals of perfect fifths, octaves, (and later, perfect fourths) begins to be notated. Rhythmic notation allows for complex interactions between multiple vocals lines in a repeatable fashion. The use of multiple texts and the notation of instrumental accompaniment has developed by the end of the era.

### Instruments

The instruments used to perform medieval music are largely still in existence, in different forms. However, those instruments are less popular today. The medieval [cornett](#) differed immensely from its modern day counterpart, the [trumpet](#), not least in traditionally being made in ivory or wood rather than metal. Cornetts in medieval times were quite short. They were either straight or somewhat curved, and construction became standardised on a curved version by approximately the middle 15th century. In one side, there would be several holes. The [flute](#) was once made of wood rather than silver or other metal, and could be made as a side-blown or end-blown instrument. The recorder, on the other hand, has more or less retained its past form. The gemshorn is similar to the recorder in having finger holes on its front, though it is really a member of the ocarina family. One of the flute's predecessors, the [pan flute](#), was popular in medieval times, and is possibly of Hellenic origin. This instrument's pipes were made of wood, and were graduated in length to produce different pitches. Many medieval string instruments were most alike to the modern-day guitar, such as the [lute](#), [mandolin](#), psaltery, and [zither](#). The dulcimer, similar in structure to the others, was not plucked but hammered. The hurdy-gurdy was played with a rosined wheel of wood attached to a handle, as opposed to a modern day bow. String instruments without sound boxes, such as the [harp](#) and Jew's harp were popular also. Early versions of the [organ](#), [fiddle](#) (or vielle), and [trombone](#) (called the sackbut) existed as well.

## Genres

In this era, music was both sacred and secular, although almost no early secular music has survived, and since [notation](#) was a relatively late development, reconstruction of this music, especially before the 12th century, is currently subject to conjecture (see [authentic performance](#)).

## Theory and notation

In music theory the period saw several advances over previous practice, mostly in the conception and notation of rhythm. Previously music was organised rhythmically into "longs" and "breves" (in other words, "shorts"), though often without any clear regular differentiation between which should be used. The most famous music theorist of the first half of the 13th century, Johannes de Garlandia, was the author of the *De mensurabili musica* (about 1240), the treatise which defined and most completely elucidated the rhythmic modes, a notational system for rhythm in which one of six possible patterns was denoted by a particular succession of note-shapes (organized in what is called "ligatures"). The melodic line, once it had its mode, would generally

remain in it, although rhythmic adjustments could be indicated by changes in the expected pattern of ligatures, even to the extent of changing to another rhythmic mode. A German theorist of a slightly later period, Franco of Cologne, was the first to describe a system of notation in which differently shaped notes have entirely different rhythmic values (in the *Ars Cantus Mensurabilis* of approximately 1260), an innovation which had a massive impact on the subsequent history of European music. Most of the surviving notated music of the 13th century uses the rhythmic modes as defined by Garlandia.

Philippe de Vitry is most famous in music history for writing the [Ars Nova](#) (1322), a treatise on music which gave its name to the music of the entire era. His contributions to notation, in particular notation of rhythm, were particularly important, and made possible the free and quite complex music of the next hundred years. In some ways the modern system of rhythmic notation began with Vitry, who broke free from the older idea of the rhythmic modes, short rhythmic patterns that were repeated without being individually differentiated. The notational predecessors of modern time meters also originate in the *Ars Nova*; for Franco, a breve (for a brief explanation of the mensural notation in general, see the article Renaissance music) had equalled three semibreves (that is, half breves) (on occasion, two, locally and with certain context; almost always, however, these two semibreves were one of normal length and one of double length, thereby taking the same space of time), and the same ternary division held for all larger and smaller note values. By the time of *Ars Nova*, the breve could be pre-divided, for an entire composition or section of one, into groups of two or three smaller semibreves by use of a "mensuration sign," equivalent to our modern "time signature." This way, the "tempus" (denoting the division of the breve, which ultimately achieved the same primacy over rhythmic structure as our modern "measure") could be either "perfect," with ternary subdivision, or "imperfect," with binary subdivision. *Tempus perfectus* was indicated by a circle, while *tempus imperfectus* was denoted by a half-circle (our current "C" as a stand-in for the 4/4 time signature is actually a holdover from this practice, not an abbreviation for "common time", as popularly believed). In a similar fashion, the semibreve could in turn be divided into three "minima" or "minims" (*prolatio perfectus* or major prolation) or two (*prolatio imperfectus* or minor prolation) and, at the higher level, the longs into three or two breves (*modus perfectus* or perfect mode, or *modus imperfectus* or imperfect mode respectively).

For the duration of the Medieval period, most music would be composed primarily in perfect tempus, with special effects created by sections of imperfect tempus; there is a great current controversy among musicologists as to whether such sections were performed with a breve of equal length or whether it changed, and if so, at what proportion. In the highly syncopated works of the [Ars subtilior](#), different voices of the same composition would sometimes be written in different tempus signatures simultaneously.

Many scholars, citing a lack of positive attributory evidence, now consider "Vitry's" treatise to be anonymous, but this does not diminish its importance for the history of rhythmic notation. The first definitely identifiable scholar to accept and explain the mensural system was Johannes de Muris (Jehan des Mars), who can be said to have done for it what Garlandia did for the rhythmic modes.

For specific Medieval music theorists, see also: Isidore of Seville, Aurelian of Réôme, Odo of Cluny, Guido of Arezzo, Hermannus Contractus, Johannes Cotto (Johannes Afflighemensis), Johannes de Muris, Franco of Cologne, Johannes de Garlandia (Johannes Gallicus), Anonymous IV, Marchetto da Padova (Marchettus of Padua), Jacques of Liège, Johannes de Grocheo, Petrus de Cruce (Pierre de la Croix), and Philippe de Vitry.

### Early chant traditions

[Chant](#) (or plainsong) is a monophonic sacred form which represents the earliest known music of the Christian church. The Jewish Synagogue tradition of singing [psalms](#) was a strong influence on Christian chanting.

Chant developed separately in several European centres. The most important were Rome, Spain, Gaul, Milan, and Ireland. These chants were all developed to support the regional liturgies used when celebrating the Mass there. Each area developed its own chants and rules for celebration. In Spain, [Mozarabic chant](#) was used and shows the influence of North African music. The Mozarabic liturgy even survived through Muslim rule, though this was an isolated strand and this music was later suppressed in an attempt to enforce conformity on the entire liturgy. In Milan, [Ambrosian chant](#), named after St. Ambrose, was the standard. Celtic chant was used in Ireland.

Around 1011 AD, the Catholic Church wanted to standardize the [Mass](#) and chant. At this time, Rome was the religious centre of Europe, and Paris was

the political centre. The standardization effort consisted mainly of combining these two (Roman and Gallican) regional liturgies. This body of chant became known as Gregorian Chant.

## **Gregorian chant**

A doctrinally unified version which came together from under the supervision of Rome in approximately the ninth century was called [Gregorian chant](#), a type of [plain song](#) that was central to the musical tradition of Europe in the Medieval era. The actual [melodies](#) that make up the repertory probably come from several sources, some as far back as the pontificate of Gregory the Great himself (c. 590–604). Many of them were probably written in the politically stable, relatively literate setting of western monasteries during the reign of Charlemagne.

The earliest surviving sources of chant showing musical notation are from the early ninth century, though the consistency of the music across a wide area implies that some form of chant notation, now lost, may have existed earlier than this. It should be noted that music notation existed in the ancient world—for example Greece—but the ability to read and write this notation was lost around the fifth century, as was all of the music that went with it.

To what extent the music of the Gregorian chant represents a survival of the music of the ancient world is much debated by scholars, but certainly there must have been some influence, if only from the music of the synagogue. Only the smallest of scraps of ancient music have survived (for instance, the Seikilos epitaph), but those that have show an unsurprising similarity of mode, shape and phrase conception to later Western music.

Chant survived and prospered in monasteries and religious centres throughout the chaotic years of the early middle ages, for these were the places of greatest stability and literacy. Most developments in western classical music are either related to, or directly descended from, procedures first seen in chant and its earliest elaborations.

## **Early polyphony: organum**

Around the end of the ninth century, singers in monasteries such as St. Gall in Switzerland began experimenting with adding another part to the chant, generally a [voice](#) in parallel motion, singing in mostly perfect fourths or fifths with the original tune (see [interval](#)). This development is called organum, and represents the beginnings of [harmony](#) and, ultimately, [counterpoint](#). Over the next several centuries organum developed in several ways.

The most significant was the creation of "florid organum" around 1100, sometimes known as the school of St. Martial (named after a monastery in south-central France, which contains the best-preserved manuscript of this repertory). In "florid organum" the original tune would be sung in long notes while an accompanying voice would sing many notes to each one of the original, often in a highly elaborate fashion, all the while emphasizing the perfect consonances (fourths, fifths and octaves) as in the earlier organa. Later developments of organum occurred in England, where the interval of the third was particularly favoured, and where organa were likely improvised against an existing chant melody, and at Notre Dame in Paris, which was to be the centre of musical creative activity throughout the thirteenth century.

Much of the music from the early Medieval period is anonymous. Some of the names may have been poets and lyric writers, and the tunes for which they wrote words may have been composed by others. Attribution of monophonic music of the Medieval period is not always reliable. Surviving manuscripts from this period include the *Musica Enchiriadis*, *Codex Calixtinus* of Santiago de Compostela, and the *Winchester Troper*.

For information about specific composers or poets writing during the early Medieval period, see Pope Gregory I, St. Godric, Hildegard of Bingen, Hucbald, Notker Balbulus, Odo of Arezzo, Odo of Cluny, and Tutilo.

## **Liturgical drama**

Another musical tradition of Europe originated during the early Middle Ages was the liturgical drama. In its original form, it may represent a survival of Roman drama with Christian stories - mainly the Gospel, the Passion, and the lives of the saints - grafted on. Every part of Europe had some sort of tradition of musical or semi-musical drama in the middle ages, involving acting, speaking, singing and instrumental accompaniment in some combination. Probably these dramas were performed by travelling actors and musicians. Many have been preserved sufficiently to allow modern reconstruction and performance (for example the *Play of Daniel*, which has been recently recorded).

## **Goliards**

The Goliards were itinerant poet-musicians of Europe from the tenth to the middle of the thirteenth century. Most were scholars or ecclesiastics, and they wrote and sang in Latin. Although many of the poems have survived, very little of the music has. They were possibly influential - even decisively so - on the [troubadour](#)-trouvère tradition which was to follow. Most of their poetry is

secular and, while some of the songs celebrate religious ideals, others are frankly profane, dealing with drunkenness, debauchery and lechery.

## High Medieval music (1150-1300)

### *Ars antiqua*

The flowering of the Notre Dame school of polyphony from around 1150 to 1250 corresponded to the equally impressive achievements in Gothic architecture: indeed the centre of activity was at the cathedral of Notre Dame itself. Sometimes the music of this period is called the Parisian school, or Parisian organum, and represents the beginning of what is conventionally known as *Ars antiqua*. This was the period in which [rhythmic](#) notation first appeared in western music, mainly a context-based method of rhythmic notation known as the rhythmic modes.

This was also the period in which concepts of formal structure developed which were attentive to proportion, [texture](#), and architectural effect. Composers of the period alternated florid and discant organum (more note-against-note, as opposed to the succession of many-note melismas against long-held notes found in the florid type), and created several new musical forms: clausulae, which were melismatic sections of organa extracted and fitted with new words and further musical elaboration; [conductus](#), which was a song for one or more voices to be sung rhythmically, most likely in a procession of some sort; and tropes, which were rearrangements of older chants with new words and sometimes new music. All of these genres save one were based upon chant; that is, one of the voices, (usually three, though sometimes four) nearly always the lowest (the tenor at this point) sang a chant melody, though with freely composed note-lengths, over which the other voices sang organum. The exception to this method was the conductus, a two-voice composition that was freely composed in its entirety.

The [motet](#), one of the most important musical forms of the high Middle Ages and Renaissance, developed initially during the Notre Dame period out of the clausula, especially the form using multiple voices as elaborated by Pérotin, who paved the way for this particularly by replacing many of his predecessor (as canon of the cathedral) Léonin's lengthy florid clausulae with substitutes in a discant style. Gradually, there came to be entire books of these substitutes, available to be fitted in and out of the various chants. Since, in fact, there were more than can possibly have been used in context, it is probable that the clausulae came to be performed independently, either in other parts of the mass, or in private devotions. The clausulae, thus practised, became the motet when troped with non-liturgical words, and was further developed into a

form of great elaboration, sophistication and subtlety in the fourteenth century, the period of *Ars nova*.

Surviving manuscripts from this era include the Codex Montpellier, Codex Bamberg, and the El Codex musical de Las Huelgas.

Composers of this time include Léonin, Pérotin, W. de Wycombe, Adam de St. Victor, and Petrus de Cruce (Pierre de la Croix). Petrus is credited with the innovation of writing more than three semibreves to fit the length of a breve. Coming before the innovation of imperfect tempus, this practice inaugurated the era of what are now called "Petronian" motets. These late 13th-century works are in three, sometimes four, parts and have multiple texts sung simultaneously. These texts can be either sacred or secular in subject, and with Latin and French mixed. The Petronian motet is a highly complex genre, given its mixture of several semibreve breves with rhythmic modes and sometimes (with increasing frequency) substitution of secular songs for chant in the tenor. Indeed, ever-increasing rhythmic complexity would be a fundamental characteristic of the 14th-century, though music in France, Italy, and England would take quite different paths during that time.

## **Troubadours and trouvères**

The music of the [troubadours](#) and trouvères was a vernacular tradition of monophonic secular song, probably accompanied by instruments, sung by professional, occasionally itinerant, musicians who were as skilled as poets as they were singers and instrumentalists. The language of the troubadours was Occitan (also known as the langue d'oc, or Provençal); the language of the trouvères was Old French (also known as langue d'oïl). The period of the troubadours corresponded to the flowering of cultural life in Provence which lasted through the twelfth century and into the first decade of the thirteenth. Typical subjects of troubadour song were war, chivalry and courtly love. The period of the troubadours ended abruptly with the Albigensian Crusade, the fierce campaign by Pope Innocent III to eliminate the Cathar heresy (and appropriate the wealth of a defenceless people) which effectively exterminated the entire civilization. Surviving troubadours went either to Spain, northern Italy or northern France (where the trouvère tradition lived on), where their skills and techniques contributed to the later developments of secular musical culture in those places.

The music of the trouvères was similar to that of the troubadours, but was able to survive into the thirteenth century unaffected by the war of extermination against the Albigenses. Most of the more than two thousand surviving trouvère songs include music, and show a sophistication as great as that of the poetry it accompanies.

The Minnesinger tradition was the Germanic counterpart to the activity of the troubadours and trouvères to the west. Unfortunately, few sources survive from the time; the sources of Minnesang are mostly from two or three centuries after the peak of the movement, leading to some controversy over their accuracy.

For information about specific composers writing secular music in middle Medieval era, see Berenguer de Palou, Arnaut Daniel (one of the finest poets of the age, in addition to being a composer), Giraut de Bornelh, Marcabru, Peire Cardenal, Raymond Lull, Bernart de Ventadorn, Bertran de Born (Dante), Jaufré Rudel, Alfonso X of Castile, Wolfram von Eschenbach, Walther von der Vogelweide, and Niedhart von Reuenthal.

## Late Medieval music (1300-1400)

### France: *Ars nova*

The beginning of the [\*Ars nova\*](#) is one of the few clean chronological divisions in medieval music, since it corresponds to the publication of the Roman de Fauvel, a huge compilation of poetry and music, in 1310 and 1314. The Roman de Fauvel is a satire on abuses in the medieval church, and is filled with medieval motets, lais, rondeaux and other new secular forms. While most of the music is anonymous, it contains several pieces by Philippe de Vitry, one of the first composers of the isorhythmic motet, a development which distinguishes the fourteenth century. The isorhythmic motet was perfected by Guillaume de Machaut, the finest composer of the time.

During the *Ars nova* era, secular music acquired a polyphonic sophistication formerly found only in sacred music, a development not surprising considering the secular character of the early Renaissance (and it should be noted that while this music is typically considered to be "medieval", the social forces that produced it were responsible for the beginning of the literary and artistic Renaissance in Italy—the distinction between Middle Ages and Renaissance is a blurry one, especially considering arts as different as music and painting). The term "*Ars nova*" (new art, or new technique) was coined by Philippe de Vitry in his treatise of that name (probably written in 1322), in order to distinguish the practice from the music of the immediately preceding age.

The dominant secular genre of the Ars Nova was the [\*chanson\*](#), as it would continue to be in France for another two centuries. These chansons were composed in musical forms corresponding to the poetry they set, which were in the so-called formes fixes of rondeau, ballade, and virelai. These forms significantly affected the development of musical structure in ways that are felt

even today; for example, the ouvert-clos rhyme-scheme shared by all three demanded a musical realization which contributed directly to the modern notion of antecedent and consequent phrases. It was in this period, too, in which began the long tradition of setting the mass ordinary. This tradition started around mid-century with isolated or paired settings of Kyries, Glorias, etc., but Machaut composed what is thought to be the first complete mass conceived as one composition. The sound world of Ars Nova music is very much one of linear primacy and rhythmic complexity. "Resting" intervals are the fifth and octave, with thirds and sixths considered dissonances. Leaps of more than a sixth in individual voices are not uncommon, leading to speculation of instrumental participation at least in secular performance.

Surviving French manuscripts include the Ivrea Codex and the Apt Codex.

For information about specific French composers writing in late Medieval era, see Jehan de Lescurel, Philippe de Vitry, Guillaume de Machaut, Borlet, Solage, and François Andrieu.

## **Italy: *Trecento***

*Main article:* [Music of the trecento](#)

Most of the music of *Ars nova* was French in origin; however, the term is often loosely applied to all of the music of the fourteenth century, especially to include the secular music in Italy. There this period was often referred to as *Trecento*.

Italian music has always, it seems, been known for its lyrical or melodic character, and this goes back to the 14th century in many respects. Italian secular music of this time (what little surviving liturgical music there is, is similar to the French except for somewhat different notation) featured what has been called the *cantilina* style, with a florid top voice supported by two (or even one; a fair amount of Italian Trecento music is for only two voices) that are more regular and slower moving. This type of texture remained a feature of Italian music in the popular 15th and 16th century secular genres as well, and was an important influence on the eventual development of the trio texture that revolutionized music in the 17th.

There were three main forms for secular works in the Trecento. One was the [madrigal](#), not the same as that of 150-250 years later, but with a verse/refrain-like form. Three-line stanzas, each with different words, alternated with a two-line *ritornello*, with the same text at each appearance. Perhaps we can see the seeds of the subsequent late-Renaissance and Baroque ritornello in this device; it too returns again and again, recognizable each time, in contrast with its surrounding disparate sections. Another form, the *caccia* ("chase,") was written for two voices in a canon at the unison.

Sometimes, this form also featured a ritornello, which was occasionally also in a canonic style. Usually, the name of this genre provided a double meaning, since the texts of caccia were primarily about hunts and related outdoor activities, or at least action-filled scenes. The third main form was the *ballata*, which was roughly equivalent to the French *ballade*.

Surviving Italian manuscripts include the Squarcialupi Codex and the Rossi Codex. In all, however, significantly less Italian music survives from the 14th century than French.

For information about specific Italian composers writing in late Medieval era, see Francesco Landini, Gherardello da Firenze, Andrea da Firenze, Lorenzo da Firenze, Paolo da Firenze (Paolo Tenorista), Giovanni da Firenze (aka Giovanni da Cascia), Bartolino da Padova, Jacopo da Bologna, Donato da Cascia, Lorenzo Masini, Niccolò da Perugia, and Maestro Piero.

### **Germany: *Geisslerlieder***

The Geisslerlieder were the songs of wandering bands of flagellants, who sought to appease the wrath of an angry God by penitential music accompanied by mortification of their bodies. There were two separate periods of activity of Geisslerlied: one around the middle of the thirteenth century, from which, unfortunately, no music survives (although numerous lyrics do); and another from 1349, for which both words and music survive intact due to the attention of a single priest who wrote about the movement and recorded its music. This second period corresponds to the spread of the Black Death in Europe, and documents one of the most terrible events in European history. Both periods of Geisslerlied activity were mainly in Germany.

There was also French-influenced polyphony written in German areas at this time, but it was somewhat less sophisticated than its models. In fairness to the mostly anonymous composers of this repertoire, however, most of the surviving manuscripts seem to have been copied with extreme incompetence, and are filled with errors that make a truly thorough evaluation of the music's quality impossible.

### **Mannerism and *Ars subtilior***

As often seen at the end of any musical era, the end of the Medieval era is marked by a highly manneristic style known as [\*Ars subtilior\*](#). In some ways, this was an attempt to meld the French and Italian styles. This music was highly stylized, with a rhythmic complexity that was not matched until the 20th century. In fact, not only was the rhythmic complexity of this repertoire largely unmatched for five and a half centuries, with extreme syncopations, mensural

trickery, and even examples of *augenmusik* (such as a chanson by Baude Cordier written out in manuscript in the shape of a heart), but also its melodic material was quite complex as well, particularly in its interaction with the rhythmic structures. Already discussed under *Ars Nova* has been the practice of isorhythm, which continued to develop through late-century and in fact did not achieve its highest degree of sophistication until early in the 15th century. Instead of using isorhythmic techniques in one or two voices, or trading them among voices, some works came to feature a pervading isorhythmic texture which rivals the integral serialism of the 20th century in its systematic ordering of rhythmic and tonal elements. The term "mannerism" was applied by later scholars, as it often is, in response to an impression of sophistication being practised for its own sake, a malady which some authors have felt infected the *Ars subtilior*.

For information about specific composers writing music in [\*Ars subtilior\*](#) style, see Anthonello de Caserta, Philippus de Caserta (aka Philipoctus de Caserta), Johannes Ciconia, Matteo da Perugia, Lorenzo da Firenze, Grimace, Jacob Senleches, and Baude Cordier.

## Transitioning to the Renaissance

Demarcating the end of the Medieval era and the beginning of the Renaissance, with regards to the composition of music, is problematic. While the music of the fourteenth century is fairly obviously medieval in conception, the music of the early fifteenth century is often conceived as belonging to a transitional period, not only retaining some of the ideals of the end of the Middle Ages (such as a type of polyphonic writing in which the parts differ widely from each other in character, as each has its specific textural function), but also showing some of the characteristic traits of the Renaissance (such as the international style developing through the diffusion of Franco-Flemish musicians throughout Europe, and in terms of texture an increasing equality of parts). The Renaissance began early in Italy, but musical innovation there lagged far behind that of France and England; the Renaissance came late to England, but musical innovation there was ahead of continental Europe.

Music historians do not agree on when the Renaissance era began, but most historians agree that England was still a medieval society in the early fifteenth century (see a discussion of periodization issues of the Middle Ages). While there is no consensus, 1400 is a useful marker, because it was around that time that the Renaissance came into full swing in Italy.

The increasing reliance on the interval of the third as a consonance is one of the most pronounced features of transition into the Renaissance. Polyphony, in use since the 12th century, became increasingly elaborate with highly independent voices throughout the 14th century. With John Dunstaple and

other English composers, partly through the local technique of *fauxborden* (an improvisatory process in which a chant melody and a written part predominantly in parallel sixths above it are ornamented by one sung in perfect fourths below the latter, and which later took hold on the continent as "*fauxbordon*"), the interval of the third emerges as an important musical development; because of this *Contenance Angloise* ("English countenance"), English composers' music is often regarded as the first to sound less truly bizarre to modern, unschooled audiences. English stylistic tendencies in this regard had come to fruition and began to influence continental composers as early as the 1420s, as can be seen in works of the young Dufay, among others. While the Hundred Years' War continued, English nobles, armies, their chapels and retinues, and therefore some of their composers, travelled in France and performed their music there; it must also of course be remembered that the English controlled portions of northern France at this time.

English manuscripts include the Worcester Fragments, the Old St. Andrews Music Book, the Old Hall Manuscript, and Egerton Manuscript.

For information about specific composers who are considered transitional between the Medieval and the Renaissance, see Roy Henry, Arnold de Lantins, Leonel Power, John Dunstaple, Guillaume Dufay, and Gilles Binchois.

## Medieval rock

**Medieval Rock** (literal transl. of German **Mittelalter-Rock**) is a variation of [Folk Rock](#) / [Gothic Rock](#) into a style reminiscent of [medieval music](#).

Medieval Rock commonly makes use of [Medieval](#) instruments, such as the [Bagpipe](#), the Shawm, the Hurdy-Gurdy, and the [Harp](#), and/or medieval [lyrics](#) accompanied by elements of [modern rock music](#), such as [Electric Guitars](#), [Bass Guitars](#), [Drums](#), and [Electronica](#). Often, bands of this genre originally played Irish folk music or medieval market music, sometimes developing more towards [heavy metal](#) as they gained popularity.

In the 1970s, Ougenweide became one of the first bands in Germany to experiment with this style. After Subway to Sally gained fame for its unconventional Medieval Rock and [Folk Rock](#) in 1990, several bands followed suit, the most famous of which was In Extremo, who blended [bagpipes](#), [harps](#), [sitar](#)s, and other medieval [instruments](#) with [electric guitars](#) to make their own style of "Medieval Rock." Another German band, Tanzwut, began blending [electronics](#) with medieval instruments to make "electronic Medieval Rock." Similar to this band is Qntal; however, they do not use guitars, just electronics. Letzte Instanz's first album, Brachialromantik, is often categorized by many as Medieval Rock. However, possibly the most well-known example of Medieval Rock is the Norwegian band Satyricon's "Dark Medieval Times," an offshoot of the [black metal](#) genre that includes numerous references to castles, knights, and bloody battlefields.

## Medieval Rock Bands

The following bands are well-known examples of the Medieval Rock genre:

- Adaro
- Asgard
- Blackmore's Night
- Cornix Maledictum
- Cumulo Nimbus
- Filia Irata
- Haggard
- Helium Vola
- In Extremo
- Imatra Lopus
- Mägo de Oz
- Morgenstern
- Ohrenpeyn
- Potentia Animi
- Qntal
- Saltatio Mortis
- Schelmish
- Subway to Sally (in their earlier years)

Tanzwut  
Vivus Temporis

Since the similarity to [rock music](#), medieval music, folk and folk metal strongly varies across bands and songs, the classification of such music is often difficult. For example, Schandmaul, Faun, Cultus Ferox und Corvus Corax are not Medieval Rock bands, as their style is classified simply as [Medieval Music](#). However, most German bands internationally recognised as [folk metal](#) bands are actually part of this genre.

## Meditation music

**Meditation and music** includes [music](#) played with or listened to during meditation, music the performance of which is a meditation, or music which is meditative. Music may distract from or enhance meditation, and meditation may involve music making.

Musical training is similar to meditation and musicians may study meditation for the benefits during performance, such as deep breathing and concentration. According to Claudio Naranjo, "the essence of meditation is also the essence of art." Composers such as John Cage (42333 (1952), Imaginary Landscape No. 4 for twelve radios (1951)), La Monte Young, Terry Riley, Stuart Dempster, and Anthony Newman have combined meditation and music while composers such as Karlheinz Stockhausen (Mantra (1970), Hymnen (1969), Stimmung (1968), and Es und Aufwärts den Sieben Tagen (1968, It and Upwards from the Seven Days)), Olivier Messiaen (listening to his works such as Quartet for the End of Time (1941) is meditating), and Ben Johnston (Visions and Spells, a realization of Vigil (1976), requires a meditation period prior to performance) have written meditative pieces. R. Murray Schafer's concept of clairaudience (clean hearing) and those in his The Tuning of the World (1977) are meditative. (Von Gunden 1983, p.103-104)

Stockhausen describes *Es und Aufwärts* as requiring "intuitive playing" and the performer is instruction to play only when not thinking or in a state of nonthinking (Von Gunden asserts that this is contradictory and should be "think about your playing"). The first recording (Deutsche Grammophon 2530 255), made from the tape of the first reading, features a surprising "constant dense

sonic texture." John Cage is influenced by Zen and his pieces such as above are "meditations that measure the passing of time". (ibid)

## Melodic death metal

**Melodic death metal** (often referred to as **melodeath**) is a subgenre of [death metal](#). It contains more melodic guitar riffs and solos, which are sometimes acoustic, and also occasional 'clean' singing as opposed to traditional [death grunt](#) vocals. The song structures are generally more progressive, using diverse themes throughout the song. Death and Morbid Angel, often considered the "godfathers" of death metal, are primary influences on the genre, and its progenitors include At the Gates and Carcass, with the release of their Heartwork album. Sentenced is also often credited with creating the first melodeath album with the release of North From Here. Some credit In Flames as the band which popularised the sub-genre. Melodic death metal, though from the same geographic area as [black metal](#), rarely speaks of Satanism or the downfall of Christianity, but has more poetic themes, which vary greatly. Traditionally, lyrics deal with more expressionist themes.

One extremely important piece of the melodic death jigsaw puzzle is the Gothenburg style, named after the city from which it originated. It is not certain what band originally started the Gothenburg sound, but it is widely accepted that In Flames, At the Gates, and Dark Tranquillity are the three major popularizers of the style, and some of the only widely known bands to practice it, with newer bands such as Arch Enemy and The Haunted appearing and practicing the style only recently.

It was originally thought that nearly all melodic death metal bands are from the Scandinavian and Northern European regions, especially from Sweden and Finland, however, in recent years, the genre has gained somewhat of a popularity boost, acquiring a small underground status in the North American areas of Florida, New York, California, and some parts of Canada, especially among North American fans of the Scandinavian bands which still pioneer the genre today but are looking for some closer-to-home bands.

## Melodic hardcore

**Melodic hardcore** is a subgenre of [hardcore punk](#). It is more melodic with less fury than traditional hardcore. Melodic hardcore is not emo, nor [pop punk](#), rather having an emphasis on melody, nonetheless some bands share common scene origins as emo and pop punk bands.

Hüsker Dü are the most influential melodic hardcore band, they combine the speed, wall-of-sound guitars and aggression of hardcore with melody. Hüsker Dü has been cited as one of the influences on emo, but this topic is debatable.

Dag Nasty is another touchstone band (usually wrongly categorized as "emo"), hailing from DC, in the mid 1980s, with Dave Smalley of Boston's DYS on vocals and Brian Baker (ex-Minor Threat on guitar, Dag Nasty's sound was an extension of the direction Minor Threat was proceeding with the *Out Of Step* lp before they broke up.

Gorilla Biscuits came out of the late 80s youth crew straight edge scene, and while they were initially just one of many Youth Of Today clones of the era, albeit sounding a little more like Side By Side, they eventually matured into an unstoppable force with the release of the seminal "Start Today" album -- echos of which are still being felt in today's post-hardcore and modern emo scenes. In some ways Gorilla Biscuits paved the way for post-hardcore, as the guitarist Schreifels went on to start one of the defining post hardcore bands with Quicksand, Moondog, writing music for the Civ project as well as his own World's Fastest Car, Walter & The Motorycycles, Rival Schools and Walking Concert bands.

Hailing from New Jersey, Turning Point was also under the influence of Youth of Today style youth crew hardcore, but by the time they had passed their demo and first 7" growing pains, their later era material (the lp and on) is the perfect defining moment of this sound melodic hardcore sound. These records were to be a direct influence on other New Jersey bands like Lifetime.

Many of these melodic hardcore bands are what form part of the sound that has become known as pop hardcore and modern instances of emo (as much of a misnomer as that term has come to be). See 21st Century Emo.

## Defining musical characteristics

The recognizable element of hardcore (and later in [post-hardcore](#)) is what is usually called the "octave chord". This is what creates that resonating octave higher melody line that follows the power chords. This style is not exclusive in its usage to melodic hardcore bands (ie NOFX uses it) although it is a defining sound of this genre. Again, many "modern emo" bands have adopted the usage of octave chords as well.

Emo guitar players also rely heavily on minor seventh & minor ninth chords used in combination with an open string modal playing style. This style was probably picked up from Alex Lifeson (Freewill), extended by Brian Baker in Dag Nasty (Values Here) and fully realized by Dan Yemin with his work in Lifetime.

To create the perfect melodic hardcore sound, these bands usually use Gibson SG guitars with a Marshall half-stack. Baker, however used a Roland Jazz Chorus 120 and Yemin typically played a Fender Stratocaster through a Crate amplifier.

## List of melodic hardcore bands

*A list of melodic hardcore bands. Some are influences, some are influenced. Some have been unjustly labeled as emo, some evolved into "modern emo" (21st Century Emo).'*

## Melodic motion

**Melodic motion** is the quality of movement of a [melody](#), including nearness or farness of successive [pitches](#) or [notes](#) in a [melody](#). This may be described as conjunct or disjunct, stepwise or skipwise, respectively.

Bruno Nettl (1956, p.51-53) describes various types of **melodic movement** or **contour**:

- Ascending
- Descending
- Undulating: equal movement in both of the above directions
- Pendulum: extreme undulation which uses a large range and large [intervals](#)
- Tile, terrace, or cascading: a number of descending phrases in which each phrase begins on a higher pitch than the last ended
- Arc
- Rise: may be considered a [musical form](#), a contrasting section of higher pitch, a "musical plateau"

Other examples include:

- Double tonic: smaller pendular motion in one direction

These all may be [modal frames](#) or parts of modal frames.

# Melodic music

**Melodic music** is a term that covers various genres of non-classical music which are primarily characterised by the dominance of a single strong [melody](#) line. [Rhythm](#), tempo and beat are subordinate to the melody line or tune, which is generally easily memorable, and followed without great difficulty. Melodic music is found in all parts of the world, overlapping many genres, and may be performed by a [singer](#) or [orchestra](#), or a combination of the two.

The fundamental principles and structural norms of melodic music were established in what is sometimes known as the [Common practice period](#), dating from the 18th century to the early 20th century. Melodic music tends to have a consistent [metre](#), pulse and tempo, things that are far less emphasised in contemporary music.

In the west, melodic music has developed largely from folk song sources, and been heavily influenced by [classical music](#) in its development and orchestration. In many areas the border line between classical and melodic popular music is imprecise. [Opera](#) is generally considered to be a classical form. The lighter [operetta](#) is considered borderline, whilst stage and film [musicals](#) and musical comedy are firmly placed in the popular melodic category. The reasons for much of this are largely historical.

Other major categories of melodic music include music hall and vaudeville, which, along with the ballad, grew out of European [folk music](#). Orchestral dance music developed from localised forms such as the jig, [polka](#) and [waltz](#), but with the admixture of Latin American, negro [blues](#) and [ragtime](#) influences, it diversified into countless sub-genres such as [big band](#), [cabaret](#) and [Swing](#). More specialised forms of melodic music include military music and religious music.

[Traditional pop music](#) overlaps a number of these categories: big band music and musical comedy, for example, are closely allied to traditional pop.

## Examples of Melodic Composers

Irving Berlin  
Noel Coward  
Noel Gay  
Oscar Hammerstein II  
Lionel Monckton  
Jacques Offenbach  
Richard Rodgers  
Johann Strauss II  
Arthur Sullivan

## Melody

In [music](#), a **melody** or *tune* is a series of linear events or a succession, not a simultaneity as in a [chord](#). However, this succession must contain change of some kind and be perceived as a single entity (possibly Gestalt) to be called a melody. Most specifically this includes patterns of changing [pitches](#) and [durations](#), while most generally it includes any interacting patterns of changing events or quality. "Melody may be said to result where there are interacting patterns of changing events occurring in time." (DeLone et. al. (Eds.) 1975, p.270-1) A melody is a single succession of pitches, not to be confused with harmony. (Two or more pitches sounding simultaneously.)

"The events occurring in time must involve change of some kind to be understood as related or unrelated...The essential elements of any melody are duration, pitch, and quality [ [timbre](#), texture, and loudness]" Melodies often consist of one or more musical phrases, motifs, and is usually repeated throughout a song or piece in various forms. Melodies may also be described by their [melodic motion](#) or the pitches or the intervals between pitches (predominantly conjunct or disjunct or with further restrictions), pitch range, tension and release, continuity and coherence, cadence, and shape (ibid, p.290-301).

"Many extant explanations [of melody] confine us [sic] to specific stylistic models, and they are too exclusive." (ibid, p.270) Different musical styles use melody in different ways. For example:

- [Rock music](#), [melodic music](#), and other forms of [popular music](#) and [folk music](#) tend to pick one or two melodies ([verse](#) and [chorus](#)) and stick with them; much variety may occur in the phrasing and [lyrics](#). "Gino Stefani makes *appropriation* the chief criterion for his 'popular' definition of melody (Stefani 1987a). Melody, he argues, is music 'at hand'; it is that dimension which the common musical competence extracts (often with little respect for the integrity of the source), appropriates and uses for a variety of purposes: singing, whistling, dancing, and so on." (Middleton, p.96)
- In western [classical music](#), [composers](#) often introduce an initial melody, or [theme](#), and then create variations. Classical music often has several melodic layers, called polyphony, such as those in a fugue, a type of [counterpoint](#). Often melodies are constructed from motifs or short melodic fragments, such as the opening of Beethoven's Ninth. Richard Wagner

popularized the concept of a [leitmotif](#): a motif or melody associated with a certain idea, person or place.

- While in both most [popular music](#) and classical music of the [common practice period](#) pitch and duration are of primary importance in melodies, the contemporary music of the 20th and 21st centuries pitch and duration have lessened in importance and quality has gained importance, often primary. Examples include musique concrete, klangfarbenmelodie, Elliott Carter's Eight Etudes and a Fantasy which contains a movement with only one note, the third movement of Ruth Crawford-Seeger's String Quartet 1931 (later reorchestrated as Andante for string orchestra) in which the melody is created from an unchanging set of pitches through "dissonant dynamics" alone, and György Ligeti's Aventures in which recurring phonetics create the linear form. Melodies take form through constant motion and movement.
- [Jazz musicians](#) use the melody line, called the "lead" or "head", as a starting point for [improvisation](#).
- Indian classical music relies heavily on melody and [rhythm](#), and not so much on [harmony](#) as the above forms.
- Balinese gamelan music often uses complicated variations and alterations of a single melody played simultaneously, called heterophony.

"The continuity and diegetic function of almost all vocal melody draw us along the linear thread of the song's syntagmatic structure, producing a 'point of perspective' from which the otherwise disparate parts of the [musical texture](#) can be placed within a coherent 'image'." (Middleton 1990, p.264) Melodies form pictures, images and ideas in the minds of the listeners. Each composer uses many techniques in their melodies to draw pictures.

## Melody type

A **melody type** is a term used by musicologists and ethnomusicologists to represent a set of melodic formulas, figures, and patterns which are used in the composition of an enormous variety of music, especially non-Western and early Western music. Such music is generally composed by a process of centonization, either freely (i.e. improvised) or in a fixed pattern.

Most cultures which compose music in this way organize the patterns into distinct melody types. These are often compared to modern Western [scales](#), but they in fact represent much more information than a sequence of permissible pitches, since they include how those pitches should function in the music, and indicate basic formulas which serve as a basis for [improvisation](#). In non-improvised music, such as codified liturgical music, it is still usually clear how the developed from set patterns.

Melody types are considered the precursors to [modes](#) and, later, [scales](#). These later developments place less emphasis on the stock of melodic figures, and allow more free composition.

## Melody types around the world

Modes in Gregorian chant as used in certain genres such as the Tract  
Weisen (or Töne) in the music of the Meistersingers  
Echos in Byzantine, Armenian, and Russian chant  
Nomos in Ancient Greek music  
the system of Jewish cantillation  
Maqam in Arabian music  
Makam in Turkish music  
Risqolo in Syrian music  
Meqam in Kurdish music  
Muqam in Uyghur music

Mugam in Azeri music  
Shashmakom in Uzbek music  
Dastgah in Persian music  
Raga in Indian music  
Pathet in Indonesian music

## Extra-melodic implications

In most cases, these melody types are associated with extra-musical implications, particularly emotions (see Indian *rasa*, for instance). They are also often associated with certain times. For example, most [ragas](#) are associated with a certain time of day, or a wayang performance in Java implies a certain succession of pathets.

Many of these traditions have a corresponding rhythmic framework. These include:

- Usul in Arabian and Turkish music
- Tala in Indian music
- Bentuk in Javanese music

## Membranophone

A **membranophone** is any [musical instrument](#) which produces sound primarily by way of a vibrating stretched membrane. It is one of the four main divisions of instruments in the original [Hornbostel-Sachs](#) scheme of [musical instrument classification](#).

Most membranophones are [drums](#). Hornbostel-Sachs divides drums into three main types: struck drums, where the skin is hit with a stick, the hand, or something else; string drums, where a knotted string attached to the skin is pulled, passing its vibrations onto the skin; and friction drums, where some sort

of rubbing motion causes the skin to vibrate (a common type has a stick passing through a hole in the skin which is pulled back and forth).

In addition to drums, there is another kind of membranophone, called the *singing membranophone*, of which the best known type is the kazoo. These instruments modify a sound produced by something else, commonly the human voice, by having a skin vibrate in sympathy with it.

## Memphis blues

The **Memphis blues** is a style of [blues](#) music that was created in 1920s and 1930s by Memphis-area musicians like Frank Stokes, Sleepy John Estes, Furry Lewis and Memphis Minnie. The style was popular in vaudeville and medicine shows, and was associated with Memphis' main entertainment area, Beale Street. Some musicologists believe that it was in the Memphis blues that the separate roles of rhythm and lead guitar were defined. This two guitar concept has become standard in [rock and roll](#) and much of [popular music](#).

In addition to guitar based blues, [jug bands](#), such as Gus Cannon's Jug Stompers and the Memphis Jug Band, were extremely popular practitioners of Memphis blues. The jug band style emphasized the danceable, syncopated rhythms of early [jazz](#) and a range of other archaic folk styles. It was played on simple, sometimes homemade, instruments such as harmonicas, violins, mandolins, banjos, and guitars, backed by washboards, kazoo, jews harp and jugs blown to supply the bass.

After World War II, electric instruments became popular among Memphis blues musicians. As African-Americans left the Mississippi Delta and other impoverished areas of the south for urban areas, many musicians gravitated to Memphis' blues scene, changing the classic Memphis blues sound. Musicians such as Howlin' Wolf, Willie Nix, Ike Turner, and B.B.King performed on Beale Street and in West Memphis, and recorded some of the classic electric blues, rhythm and blues and rock & roll records for labels such as Sun Records. These musicians had a strong influence on later musicians in these styles, notably the early rock & rollers and [rockabillys](#), many of whom also recorded for Sun Records.

"**Memphis Blues**" is also the title of a [song](#) published by W.C. Handy in 1912. It is not the first blues published, but was an important early blues-influenced hit. Handy based it on his earlier political campaign song, "Mr. Crump Don't Like It."

## Memphis rap

**Memphis rap** is a specific type of [Southern hip hop](#) music that originated in Memphis, Tennessee. With stylistic roots in [gangsta rap](#), it is the origin of "Buck" music, sometimes called "[Crunk](#)" music.

## History

**Memphis rap** dates back to the early 1980s. Crunk artists such as Lil Jon have stated in interviews that their influence for crunk came from Memphis. Memphis was "choppin' & screwin'" music back in the early 1980s when DJs would mix together and slow down vinyl albums and blend in their own basslines over a popular song or phrase such as the famous words "Say hello to my little friend" off the movie Scarface. This concept and Memphis rap were pioneered by early Memphis DJs such as Ray the Jay, Spanish Fly, DJ BK, DJ Paul, and many others.

## Memphis soul

**Memphis soul** is stylish, funky, uptown [soul music](#) that is not as hard edged as Southern soul. It is a shimmering, sultry style produced in the 1960s and 1970s at Stax and Hi Records in Memphis, Tennessee, featuring tasteful, melancholic, melodic horns, organ, bass, and drums.

[Pop/Soul/blues](#) trumpeter Willie Mitchell is one of several prime movers in the development of the style in the 1960s and 1970s. A representative Memphis soul artist is Al Green, who recorded at Hi Records. Several Stax artists also sometimes performed in this style, including Booker T. & the M.G.'s, who also sometimes played a harder-edged Southern soul. After the rise of [disco](#) in the late 1970s, Memphis soul declined in popularity.

# Mensural notation

**Mensural notation** is the musical notation system which was used from the later part of the 13th century until about 1600. "Mensural" refers to the ability of this system to notate complex rhythms with great exactness and flexibility. Mensural notation was the first system in the development of European music that systematically used individual note shapes to denote temporal durations. In this, it differed from its predecessor, Modal notation, which was the first system to introduce a limited way of notating rhythms. Mensural notation is most closely associated with the successive periods of the [late medieval Ars nova](#) and the [Franco-Flemish](#) or [Dutch school](#) of [Renaissance music](#). Its name was coined by 19th-century scholars with reference to the usage of medieval theory, going back to the treatise *Ars cantus mensurabilis* ("The art of measured chant") by Franco of Cologne (c. 1280).

## Note values

The basic note values of mensural notation are essentially identical to the modern ones. Mensural notation uses the **Breve**, nominally the ancestor of the modern double whole note; the **Semibreve** (modern whole note, the **Minim** (half note), **Semiminim** (quarter note / crotchet), **Fusa** (eighth note / quaver), **Semifusa** (sixteenth note / semiquaver), and very rarely smaller ones. There were also two larger values, the **Longa** and the **Maxima** (or **Duplex longa**).

Differences between Mensural and modern notation are partly superficial, but partly quite fundamental:

Modern notation

White notation (15th–16th cent.)

Black notation (14th–15th cent.)

Franconian notation (13th cent.)

- Notes were written diamond- rather than oval-shaped, and they had their stems perched directly on top (or bottom, very occasionally) rather than to one side. Before the mid-15th century, all notes were written in solid, filled-in form (**Black Notation**), but after that the larger note values were written hollow, like today (**White Notation**).
- Each note had a much shorter temporal value than its nominal modern counterpart. This is because in the course of time, composers invented new note shapes for ever smaller temporal divisions of rhythm, and the older, longer notes were slowed down in proportion. Thus, the basic metrical relationship of a long to a short beat shifted from longa–breve in

the 13th century, to breve-semibreve in the 14th and 15th, to semibreve-minim by the end of the 16th, and finally to minim–semiminim (i.e. half and quarter notes) in modern notation. What was originally the shortest of all note values used, the semibreve, has today evolved into the longest note used routinely, the whole note.

- While the relation of each note value to the next smaller one in modern notation is invariably 2:1, the mensural system was more flexible. The principal members of the system – *maxima*, *longa*, *breve*, and *semibreve* – could all contain either two or three of the next smaller units. Whether a note was to be read as triplex (*perfecta*) or duplex (*imperfecta*) was a matter partly of context (see below) and partly of mensuration signs, a system comparable to modern time signatures (see below).
- Sequences consisting of the larger members of the system (*maxima*, *longa*, *breve*, and *semibreve*) could optionally be written together as ligatures.
- Bar lines and ties were not used.

## Context-dependent note values

In order to understand the principles by which notes had their triplex (*perfect*) or duplex (*imperfect*) value determined by context, it is necessary to look at the evolution of the notational system in the context of the rhythmic nature of the medieval music it was first used for. Most music in the 13th and 14th centuries followed the basic pattern of a fairly swift 6/4 meter (in modern notation). Melodies therefore consisted mainly of (in modern notation) dotted half notes, or alternating sequences of half notes and quarter notes, or groups of three quarter notes. Beginning with Franco of Cologne in the late 13th century, all these were notated using the *longa* and *breve* notes. Simplifying somewhat, a *longa* was automatically understood to fill a whole triplex metric group (be *perfect*) whenever it was in the neighborhood of other notes that did the same, i.e. whenever it was followed by another *longa*, or by a full group of three *breves*. When, however, the *longa* was preceded or followed by a single short note, then they were understood to form one of the characteristic sequences of a simple half and a quarter note together. Thus, the *longa* had to be reduced to a value of two (be made *imperfect*). When, finally, there were only two *breves* in between two *longs*, then the two *breves* had to fill up a triplex metrical group together. This was done by lengthening (*alterating*) the second *breve* to a value of two, resulting in a syncopated short-long rhythm as opposed to the otherwise dominating long-short one.

This basic principle, of inherently *perfect* long notes being *imperfect*ed by adjacent short notes, or alternatively of short notes being *alterated* into longer

ones, was elaborated into an intricate set of precedence rules by notation theorists. In order to avoid remaining ambiguities, a separator dot (*tractulus*) was introduced to make clear which notes were supposed to form a triplex group together. It could be placed between a *long* and a *breve* to enforce *perfect* (triplex) value on the former when the latter would otherwise have *imperfected* it (*signum perfectionis*, historically the origin of the modern lengthening dot). It could also be used to disambiguate the readings of sequences of more than three *breves* in a row (*divisio modi*). The following (adapted from "Notation" in *New Grove Dictionary of Music and Musicians*) shows some of the resulting possibilities:

At the earliest stage, the rules of perfection and imperfection were applied only to the relation between *longa* and *brevis*. Beginning from the mid-14th century (with Philippe de Vitry's theory of the [Ars nova](#)), the same principles were also applied to the next smaller note values, the *semibreves* and *minims*. All subdivisions further down remained inherently and invariably imperfect.

## Rests

Just like the notes, the rest symbols already had the same shapes that were later to develop into the modern symbols (with the smaller values being successively introduced in the course of the period of **Mensural notation**). Unlike the notes themselves, rests had a fixed, invariable duration and could not be *perfected*, *imperfected* or *altered*; however, they could in turn induce *imperfection* on a neighbouring larger note. For *longa* rests, there were two separate forms for the *perfect* (triplex) and for the *imperfect* (duplex) *longa*. As a consequence of their invariant duration, a sequence of rests could be used as an indication of the prevailing meter of a composition (in the absence of modern bar notation). This is often found at the beginning of the tenor voice of a composition.

## Ligatures

Ligatures are groups of notes written together. They were a holdover from the modal rhythmic system which preceded **mensural notation**, and they retained some of the original rhythmic meaning they had had there.

The origins of ligature semantics can be found in a rhythmical re-interpretation of the ligature neumes used since much earlier in the notation of [Gregorian plainchant](#). In modal notation, ligatures had been used to represent stereotyped sequences of short and long notes, grouping notes together in much the same way as metric feet are used to group short and long syllables

in Latin poetry. The most basic rhythmical unit was felt to be a group of one short and one long note (brevis-longa), like an iamb in poetry, filling an upbeat pattern in the typical 6/4 meter mentioned above. All other two-note groups were classified in terms of deviation from this basic pattern. In medieval terminology, a two-note ligature possessed "propriety" (*proprietas*) if and only if its first note was short; and it possessed "perfection" (*perfectio*) if and only if its second note was long. (Note that this sense of *perfectio* is unrelated to the issue of *perfect vs. imperfect* in the sense of triplex vs. duplex duration of the long note as discussed above.)

1. Accordingly, a note pair *cum proprietate et cum perfectione* could be written with the most basic of ligature shapes, those inherited from plainchant, namely the descending *clivis* and the ascending *podatus*.
2. If, by way of exception, the first note was to be long (*sine proprietate*), this was signaled by a reversal of the use of stems: leave out the stem of the descending *clivis*; add a stem to the ascending *podatus*.
3. If, conversely, the second note was to be short (*sine perfectione*), this was signaled by a change in the noteheads themselves: replace the descending sequence of square heads with a single diagonal beam; fold out the second note of the ascending to the right.
4. If both exceptions co-occurred (*sine proprietate et sine perfectione*), both graphical alterations were combined accordingly.
5. In addition to sequences of a *longa* and a *breve*, ligatures could also contain a pair of *semibreves* (but never a single one). These were called *cum opposita proprietate*, and consistently marked by an upward-pointing stem at the left of the note pair.

|    | <b>Value</b> | <b>Medieval terminology</b>        | <b>Descending</b> | <b>Ascending</b> | <b>Alternative ascending</b> |
|----|--------------|------------------------------------|-------------------|------------------|------------------------------|
| 1. | BL           | cum proprietate, cum perfectione   |                   |                  |                              |
| 2. | LL           | sine proprietate, cum perfectione  |                   |                  |                              |
| 3. | BB           | cum proprietate, sine perfectione  |                   |                  |                              |
| 4. | LB           | sine proprietate, sine perfectione |                   |                  |                              |
| 5. | SS           | cum opposita proprietate           |                   |                  |                              |

In the course of time, some alternate versions of the ascending ligatures were developed (last column). Thus, the basic ascending *podatus* shape was replaced by one where the second note was both folded out to the right, and

marked with an extra stem (two alterations cancelling each other out, as it were). The ascending L-L (*sine proprietate*) was modified accordingly. Some confusion consequently arose about how to write an ascending L-B or B-B (*sine perfectione*). This, in the end, was the only area of ligature notation that was controversial among contemporary theoreticians, with some authors prescribing one set of values to two ligature shapes, and other authors just the reverse.

For ligatures of more than two notes, the following rules hold:

- Any notehead with an upward stem to its left is the first of a pair of *semibreves* (*cum opposita proprietate*).
- Any medial notehead with a downward stem to its right is a *longa*.
- A prolonged, double-wide notehead with a downward stem to its right is a *maxima*.
- Any other notehead not covered by any of the rules above is a *brevis*.
- The *perfect* or *imperfect* duration of each note within a ligature is determined according to the same principles as for the standalone notes.

By the late 15th century, the most common ligatures by far were those *cum opposita proprietate* (S-S), but all were still in routine use.

## Modes and mensuration signs

Unlike the original system of Franco of Cologne, which was geared towards the invariant metric pattern of 6/4 (with inherently triplex *longa*), later compositions from the 14th-century [Ars nova](#) onwards could display a greater variety of basic metric patterns. They can be defined as different combinations of duplex (*imperfect*) and triplex (*perfect*) subdivisions on successive hierarchical levels:

|                  |  |  |
|------------------|--|--|
| <b>Maximodus</b> | perfectus<br>1 <i>maxima</i> = 3 <i>longae</i>     | imperfectus<br>1 <i>maxima</i> = 2 <i>longae</i>     |
| <b>Modus</b>     | perfectus<br>1 <i>longa</i> = 3 <i>breves</i>      | imperfectus<br>1 <i>longa</i> = 2 <i>breves</i>      |
| <b>Tempus</b>    | perfectum<br>1 <i>brevis</i> = 3 <i>semibreves</i> | imperfectum<br>1 <i>brevis</i> = 2 <i>semibreves</i> |
| <b>Prolatio</b>  | maior<br>1 <i>semibrevis</i> = 3 <i>minimae</i>    | minor<br>1 <i>semibrevis</i> = 2 <i>minimae</i>      |

The perfect *modus* and *maximodus* were rare in practice. Of most practical importance were the subdivisions from the *brevis* downwards (by that time, the *semibreves* and no longer the *breves* had taken over the function of the basic counting unit). The four possible combinations of *tempus* and *prolatio* could be

signaled by a set of **mensuration signs** at the beginning of a composition: a circle for *tempus perfectum*, a semicircle for *tempus imperfectum*, each combined with a dot for *prolatio maior*, or no dot for *prolatio minor*. These correspond to modern 9/8, 3/4, 6/8, and 2/4 meters respectively.

Tempus perfectum Prolatio maior 9/8

Tempus perfectum Prolatio minor 3/4

Tempus imperfectum Prolatio maior 6/8

Tempus imperfectum Prolatio minor 2/4

## Proportions and colorations

An individual composition was not limited to a single set of *tempus* and *prolation*. Meters could be shifted in the course of a piece, either by inserting a new mensuration sign, or by using numeric **proportions**. A "3" indicates that all notes will be reduced to one-third of their value; a "2" indicates double tempo; a fraction "3/2" indicates three in the time of two, etc. The proportion "2" could also be expressed by a vertical stroke through the mensuration sign (the root of the modern "alla breve" signature).

The use of numeric proportions can interact with the use of different basic mensurations in fairly complex ways. This has led to a certain amount of uncertainty and controversy over the correct interpretation of these notation devices, both in contemporary theory and in modern scholarship.

Another way of altering the metrical value of notes was **coloration**. This refers literally to the device of writing a note in a different color. In (earlier) **Black Notation**, colored notes were written in red. In (later) **White Notation**, coloring involved a switch between hollow and filled-in shapes. Colored notes are understood to have 2/3 of their normal duration, and are always imperfect with respect to their next smaller sub-divisions. Coloration was variously used to notate shorter passages of triplet or hemiolic rhythms. Coloration of single notes could also be used to override rules of perfection/imperfection that would otherwise have been called for.

## Pitch notation

Whereas the rules of notating rhythm in Mensural notation were in many ways different from the modern system, the notation of [pitch](#) already followed much the same principles. Notes were written on staves of five (sometimes six) lines, prefixed with clefs, and could be altered by accidentals.

## Clefs

Mensural notation generally uses C-clefs and F-clefs, on various lines; G-clefs, while used infrequently throughout the period, did not come into completely routine use until the later 16th century. Clefs original bore shapes more or less closely resembling the letter they represented, but in the course of time they developed more ornamental shapes like these 15th century examples:

## Accidentals and musica ficta

Accidentals in mensural notation look essentially identical to those of today, and include both sharps and flats, of which flats are somewhat more common. Key signatures appear from the 14th century on, with one flat (always B-flat) the most common, and two flats (with the addition of E-flat) becoming increasingly common through subsequent decades; these are, in fact, the only flat key signatures which appeared prior to the mid 16th century. Much rarer are sharp key signatures, which never move beyond F- and C-sharp. Occasionally, flats appeared without the presence of a clef; in these cases, the flats essentially serve as a clef, since as we have seen, they are always B and E-flats, respectively.

The most significant difference between Mensural and modern notation in the area of pitch is the use of [musica ficta](#): while some accidentals were written out, most routine chromatic alterations were not notated and left to be supplied by the performer.

## History

The most important early stages in the historical development of **Mensural notation** are found in the works of Franco of Cologne (c. 1260), Petrus de Cruce (c. 1300), and Philippe de Vitry (1322). Franco, in his *Ars cantus mensurabilis*, was the first to describe the relations between *maxima*, *longa* and *breve* in terms that were independent of the fixed patterns of earlier Modal notation. He also refined the use of *semibreves*: while in earlier music, one *brevis* could occasionally be replaced by two *semibreves*, Franco described the subdivision of the *brevis* as triplex (*perfect*), dividing it either into three equal or two unequal semibreves (resulting in predominantly triplet rhythmic micro-patterns.)

Petrus de Cruce introduced subdivisions of the *brevis* into even more short notes. However, he did not yet notate these as separate smaller hierarchy levels (*minima*, *semiminima* etc.), but simply as variable numbers of semibreves. The exact rhythmical interpretation of these groups is partly

uncertain. The technique of notating complex groups of short notes by sequences of *semibreves* was later used more systematically in the notation of [Italian Trecento](#) music.

The decisive refinements that made notation even of extremely complex rhythmic patterns on multiple hierarchical metrical levels possible were introduced in France during the time of the [Ars nova](#), with Philippe de Vitry as the most important theoretician. The Ars nova introduced the shorter note values below the semibreve; it systematized the relations of perfection/imperfection across all levels down to the *minima*, and it introduced the devices of proportions and coloration.

During the time of the [Franco-Flemish](#) or [Dutch school](#) in [Renaissance music](#), the French notation system gradually spread throughout Europe. This period brought the replacement of Black with White Notation (due at least in part to the more widespread use of paper, rather than vellum, for music). It also brought a further slowing down of the duration of the larger note values while introducing even more new small ones (*fusa*, *semifusa* etc.). Towards the end of this period, the original rules of perfection/imperfection (as they dealt primarily with the larger members of the system) became gradually obsolescent together with the use of these note values themselves, as did the use of ligatures. During the 17th century, the system of mensuration signs and proportions gradually developed into the modern time signatures, and new notation devices for time measurements, such as bar lines and ties, were introduced, thus ultimately leading towards the modern notation system.

## Example

The following example shows the use of **Mensural notation** in the mid-15th century. It is a three-part English carol, *Hail Mary full of grace*, as contained in the manuscript Ms. Selden B.26, f.23, c.1450. The example illustrates the use of perfect and imperfect breves and altered semibreves within a *tempus perfectum cum prolatione minore* (6/8 time), as well as the use of some ligatures *cum opposita proprietate*, and the occasional use of coloration for the notation of hemiolic (3/4 instead of 6/8) patterns.

## Merenrap

**Merenrap**, or **meren-rap**, is a style of [hip hop music](#) which was formed from the fusion of Dominican merengue music with [rapping](#). The song credited with giving birth to the genre was "Soy Chiquito (No Inventes Papito, No Inventes)", recorded by Santi Y Sus Duendes and Lisa M in 1990. Other artists include Proyecto Uno.

## Metalcore

**Stylistic origins:** [Hardcore punk](#) – [Heavy metal music](#)

**Cultural origins:** late 1980s North America

**Typical instruments:** [Guitar](#) - [Bass](#) - [Drums](#) (Double kick)

**Mainstream popularity:** Little to none during the careers of the bands, has gained much popularity in recent years

[Deathcore](#) - [Fashioncore](#) - [Grindcore](#) - [Moshcore](#) - [Mathcore](#) - [Swede-core](#) - Emotional Metalcore

**Metalcore** is a musical genre consisting of a mix between [heavy metal](#) and [hardcore](#). Although the genre has risen in popularity since the turn of the millennium, it is not a new genre, as many would believe, since bands such as Integrity have been around since the late 1980s.

Defining the metalcore sound is not an easy task as bands have often fused hardcore-influenced sound and attitude with almost any imaginable type of metal. In fact, the earliest signs of this genre before a name could be put to it was called '[crossover](#)'. The band that declared the crossover was Dirty Rotten Imbeciles on their late 1980's album of the same name. Other bands like Nuclear Assault are the bleeding edge pioneers themselves.

It should be noted that metalcore and crossover are generally considered separate identities, with [crossover](#) referring to a mix of [thrash metal/hardcore punk](#) popular in the 80s and metalcore referring to the newer generation of bands mixing modern hardcore with styles like the Gothenburg school of [melodic death metal](#) and technical [death metal](#). *note: Death metal came from Thrash Metal.*

## Early scene

Nuclear Assault was amongst the first to call their music a heavy metal-hardcore punk hybrid. Although not thought of as a metalcore band today, Judge was arguably one of the earliest bands to start fusing heavy metal-influenced riffing with more traditional hardcore sound without being a [thrash metal](#) band. This idea obviously spread outwards, and although their first real release ("Those Who Fear Tomorrow") wasn't until 1991, Integrity was formed in 1989. Most songwriting by metalcore bands at this time was similar to New York hardcore bands, but differed in their harder sound thanks to use of double bass drums, harder distortion and louder, more gruff vocal shouts. This basic sound of metalcore has received the epithets - which can be used both with and without derision - "tough guy hardcore" due to the lyrical focus, which is often similar to older hardcore in that they call for moral and mental strength and integrity, but may also have a slight focus on violence, or "[moshcore](#)" due to the often breakdown-centric, mosh-friendly songwriting that some bands use.

During the middle of the 1990s, bands started expanding the metalcore sound, prime examples being All Out War who used straightforward thrash riffing, as well as bands such as Rorschach, Starkweather, Orange County's Adamantium, and Deadguy, who experimented with looser, often discordant songwriting as well as more untraditional rhythm. Converge, although starting

out as self-confessed "hardcore kids with leftover Slayer riffs", have since bloomed into a hybrid of hardcore, metal and progressive [instrumental](#) and electronic experimentation, they like to call it "punk-metal". Zao is another band that left a mark upon the genre with their Carcass-like vocals and varied songwriting, particularly the Christian bands of the genre.

## Later scene

From the late 1990s and particularly after the turn of the millennium, metalcore has grown immensely, to the point where major record companies are taking interest in the genre. Recent (2005) releases, such as Norma Jean's "O God, the Aftermath" have managed to sell well enough to make it onto Billboard charts.

One sound that has become immensely popular (dubbed by fans as "Gothencore") is to mix Gothenburg [melodic death metal](#), popularized by bands such as At the Gates and In Flames, together with modern hardcore, occasionally incorporating breakdowns. Today, many popular metalcore bands play this style, including Killswitch Engage, Trivium, Bullet For My Valentine, Caliban (band), As I Lay Dying, Unearth and Darkest Hour.

Some bands, such as Botch, expanded on the blueprints of Rorschach and Deadguy, bringing forth intense mathematic influenced guitar riffs, as well as songs.

## Breakdowns

Central to many bands of the genre, quite a few of which eschew traditional verse-chorus-verse songwriting, is the breakdown (also known as a down beat). Stereotypically, a breakdown consists of slowing a song down, giving the guitars room to play a set of rhythmically oriented riffs, usually on open strings so as to achieve the lowest sound for which the guitars are tuned. These riffs are often accented by the drummer through double bass drums and the overuse of the china cymbal. Breakdowns are usually responded to by an audience by [hardcore dancing](#). Vocalists also tend to throw in a single, repeated statement throughout the breakdown, giving those who are not dancing an opportunity to sing along. Many metalcore bands rely on having memorable breakdowns rather than memorable choruses. Songs with breakdowns have become more common, and some bands have used them far more often than was previously the norm, with some songs even resembling one elongated breakdown.

## Metalhead

**Metalhead** is a popular term for a devoted fan of [heavy metal music](#) and is often used interchangeably with the term “headbanger”. Headbanger is the older term, dating back to 1968 when it was coined to describe a group of fans violently banging their heads against a crowd barrier at a Led Zeppelin concert. Since the early 1990s however, the use of the term has declined in favour of the more fashionable “metalhead” tag, which is possibly an America invention with an etymology similar to the likes of words such as “pothead”, where the individual’s immersion in a chosen subculture becomes a defining factor in one’s lifestyle. The term “headbanger” maintains popular usage in Continental Europe, where the more traditional forms of metal music remain very much in

style and where American terminology is often incorporated into the local vernacular at a slower rate than elsewhere.

There is one school of thought among the heavy metal subculture that the “metalhead” and “headbanger” labels represent distinctive groups within it, with metalhead being a generic term for metal fans as a whole and headbangers representing older fans or fans of older metal styles. This idea does have some merit as older heavy metal fans often dress in a distinctively ‘retro’ fashion from younger fans, favour different or more traditional bands and eschew some aspects of the culture that have developed in recent years. Nevertheless, both groups share common interests that go beyond a preferred musical style and together comprise a distinctive counterculture.

## Fashion

*Main article: [heavy metal fashion](#)*

Apart from the music itself, the most distinctive aspect of metalhead culture is its fashion. Like the music at its cultural core, these fashions have experienced levels of change and diversity over the decades. The evolution of metalhead fashion has in fact been quite pronounced, from a style that could almost be defined as a uniform in earlier times to a far more broadminded look recently. Some aspects of this fashion have spawned a backlash that seems to be renewing an interest in older trends among some members of the sub-culture.

Typically, the heavy metal fashions of the late 1970s – 1980s comprised blue jeans or drill pants, motorcycle boots or hi-top sneakers and black t-shirts, traditionally augmented with a sleeve-less jacket of denim or leather emblazoned with woven patches and button pins from heavy metal artists. Like in other cultural groups, this jacket was often seen as the individual’s defining symbol within the sub-culture. The intricacy of decoration could be seen as both a reflection of one’s dedication to the genre as well as one’s status within the group. This outfit could also be supplemented by jewellery and accessories that included studded leather wrist- and arm-bands, bullet belts, chains and even rings depicting skulls and other death- and horror-inspired designs. The metalheads of this era generally wore their hair quite long, with lengths beyond the shoulder being not uncommon. The relatively small number of female metal devotees of the era were generally discouraged from dressing in a similar fashion as traditionally this costume was reserved almost exclusively for males; indeed it wasn’t that unusual for female metalheads to adopt dress similar to that of [Goths](#) or [punks](#).

By the early 1990s, metalhead fashion changed direction somewhat. This seems to correspond with the rise of the more diverse and even more extreme forms of heavy metal around the same time. [Death metal](#), [black metal](#) and [grindcore](#) began to dominate the culture as the more traditional forms of metal wavered under the influence of the [grunge](#) movement and metalhead fashion reflected this shift. As heavy metal music itself diversified and branched out, so did the fashions associated with it. A growing influence from Goth and [industrial music](#) and hardcore punk became increasingly evident. Black jeans and army fatigue pants began to replace the more traditional blue jeans and the patch-clad “battle jackets” were pushed aside in favour of long-sleeve t-shirts and military-style coats. The jewellery and accessories of the previous era also became less prominent but were by no means forgotten.

While long hair had been a defining aspect of metal culture in the 70s and 80s, by the 90s shorter hairstyles and even completely shaven heads had begun to grow in popularity and acceptance. An increasing Nationalist-Socialist influence among some pockets of the heavy metal subculture was probably partly responsible for this but there were certainly many bands and artists of no clear political or philosophical persuasion that were choosing to either wear shorter hair or none at all. Certainly influential acts such as Metallica and individual artists like Kerry King of Slayer and Phil Anselmo of Pantera either cut their hair short or shaved it completely, and the new singers of both Iron Maiden and Judas Priest adopted far shorter hair than had once been seen as acceptable among metalheads, although in Judas Priest’s case former vocalist Rob Halford had worn closely-cropped hair since at least the late 1970s. In a strange contrast to the shorter length of head hair, it could be argued that beards and facial hair rose in popularity among metalheads in the 90s. Whereas the metalhead of the late 70s and early 80s had a tendency to eschew facial hair except for the occasional moustache, during the 90s beards, most particularly goatees, became rather fashionable.

## **Socio-economic background and traditions**

Metalheads are typically drawn from the working classes and in Europe and North America are almost exclusively white, although metalheads of other socio-economic and ethnic backgrounds are not completely unheard-of. Indeed, heavy metal music has an almost worldwide following and metalheads can be found in virtually every country in the world with the exception of most of Africa, where only South Africa has a really notable scene. Wherever a metalhead sub-culture appears, it is usually founded in the poorer working class areas of major towns and cities. Members are often disaffected youth, very often unemployed or employed in menial or labour-intensive occupations

and often have very little outside interests beyond heavy metal music itself. Themes and messages vary by genre or band. Some bands, particularly [thrash](#) acts, have addressed social issues in their music, while other bands are devoted to fantasy subjects, historical themes and cartoon-style violence. One of metal music's key defining aspects is that of complete escapism, while another key defining aspect is social criticism, so metalhead culture is geared towards these philosophies. Many black metal bands espouse philosophies that can be considered extremely right-wing or even neo-fascist in nature and a high degree of socialist rhetoric can be found in the music of some grindcore bands. Despite the social involvement of many heavy metal bands, metalheads are often portrayed as unintelligent. Even though they are stereotypically portrayed in films such as *Airheads* (1994), *This is Spinal Tap* (1984), *Wayne's World* and, perhaps most infamously, in the MTV cartoon series *Beavis and Butt-head*, this level of escapism should not suggest that metalheads are any less intelligent or distanced from the real world as any other sub-culture, although their often shabby appearance and level of indifference to outside influences can be mistaken for dim-witted ignorance. Further examination of the metalhead as a humorous stereotype can be found in the 1986 documentary *Heavy Metal Parking Lot*. The 2005 documentary *Metalhead: A Headbanger's Journey* and the 1999 film *Detroit Rock City* are somewhat more kindly and generous depictions of heavy metal and the metalhead sub-culture.

Metalheads in general have little respect for organised religion. Indeed, this facet of the culture is one of its principle elements, as bands, artists and fans across the spectrum have often been united in their scorn of religious belief and practises. Religious iconography is quite prominent in metalhead culture, but usually in a blasphemous fashion, with crucifixes and other holy objects often depicted inverted or otherwise debased. One infamous album by the Swedish black metal band *Marduk* features cover art showing a nun masturbating with the Holy Cross. The level of disrespect for Christian belief in particular among metalheads often leads to accusations of widespread Satanism among its members. Yet while Satanic imagery plays a significant role in metalhead culture, very little Satanism is actually practised and the rejection of organised religion can be so strong that even Satanism itself (and pagan and Wiccan beliefs) is decried by some within it. However, it is also not uncommon for heavy metal musicians to follow organised religion without necessarily addressing their personal religious beliefs in their music, often paradoxically with the expectations of their fanbase. Alice Cooper, Dave Mustaine and Dave Ellefson of *Megadeth*, Dan Spitz of *Anthrax*, Max Cavalera of *Soulfly*, Nicko McBrain of *Iron Maiden*, wrestler-cum-metal singer Chris Jericho and guitarist Marty Friedman are all avowed Christians.

In what may seem a further paradox, there is also a healthy Christian metalhead culture. This sub-culture within a sub-culture is often derided and

criticised by the majority of metalheads, but in almost every other characteristic it is identical except in its respect for the Church.

In the early 2000s, metal heads began to be known as Moshers due to the type of dance metalheads adopted (moshing). Mosher is a term more commonly associated with newer styles of metal such as [Metalcore](#) and [Nu Metal](#). These moshers tended to wear baggier jeans which would come over the feet and often trail behind them and rip. The jeans would normally have a chain attached to a hitcher at the front of the jeans and would wrap around to the back of the jeans. They would normally be held up by studded belts. Black T-shirts were often worn with emblems of their favorite bands or other motifs such as flames, skulls and other various images. Shirts could be worn also over a t-shirt being open to show the motif. Hoodies were worn by most metal heads and would either be plain black, or another dark colour and even sometimes red, or would be emblazoned with the logo of a popular metal band. Big chunky shoes such as Vans were worn and became known as fat shoes due to their size. Piercings were common and would normally be the bottom lip or between the lip and the chin.

## Behaviour

Whereas most subcultures exhibit some form of rhythmic dancing into their behaviour, among metalheads it is almost completely absent. In place of dancing as it is usually defined, metalheads are more likely to indulge in headbanging, where the head is vigorously shaken up and down (or “windmilled” in a circular motion) while the lower body remains still. Headbanging usually also involves “air guitar”, where hand movements replicate frantic guitar-playing. Both the head and hand movements can follow the beat of the music, but often do not and can appear to an observer as random spastic upper body movement with no correlation to any sense of rhythm. During the early 80s with the rise of thrash metal, elements of the hardcore punk culture began to be incorporated into metalhead lifestyle, some of the more prominent aspects of which included slamdancing and moshing, where fans would form rings in the crowd within which they would run into each other and/or violently push and shove one another, and stage-diving, where fans would climb onto the stage with the band and launch themselves into the crowd. Later, crowd-surfing, where individuals are lifted and carried forward over the heads of others in the audience, also became popular. While these behaviours were generally restricted to the punk and metalhead cultures during the 1980s, by the early 90s moshing, stage-diving and crowd-surfing had spilled over to virtually all spheres of [alternative rock](#) music to the extent

that by the end of that decade it could no longer be held as an identifier of any one particular music sub-culture.

Perhaps one of the most dominant features of the metalhead culture is the hand-signal formed by a fist with the pinky and index fingers extended, known variously as the “devil’s horns”, the “metal fist” and other similar descriptors. This gesture was originally popularised by singer Ronnie James Dio while a member of Black Sabbath in the 1980s and was quickly adopted into the metalhead sub-culture. “Throwing the horns” or “showing the metal fist” very soon became a way for metalheads to recognise and acknowledge each other and to show their appreciation for almost anything from a song or a band to virtually anything else they enjoyed. While the gesture still has strong ties to metal, over the last decade or so its appearance in popular mainstream films such as *Bill and Ted’s Excellent Adventure* has caused it to be adopted into almost every youth sub-culture, often to the chagrin of metalheads who feel that its status as a sacred element of their lifestyle has been cheapened by its overuse outside the community.

Commonality among metalheads is also found in their typical interest in a range of subjects that have a particular connection with the music itself. These subjects seem to chiefly but not exclusively include horror films, science fiction, occultism, blood and gore imagery, weaponry (e.g. swords, knives, firearms etc) and militaria, fantasy (with particular attention to the work of JRR Tolkien), and Celtic and Nordic culture and mythology.

Within the culture itself, metalheads often distinguish themselves according to what genre of metal they especially enjoy. While on one hand metalheads have a tendency to consider each other part of a larger brotherhood, this desire to sub-divide into smaller groups dedicated to particular sub-genres has possibly undermined the idea of a fraternal spirit. Occasionally, there is reluctance for fans of particular sub-genres of metal to mingle with fans of other sub-genres and even some debate among fans as to whether particular sub-genres are truly representative of metal music. These debates are significantly more volatile when it comes to the classification of [nu-metal](#), [metalcore](#) and, to some extent, grindcore, and to their relevancy as part of metalhead culture. To some metalheads, the likes of metalcore and nu-metal are low quality imitations of real heavy metal, mainstream and popularist (and therefore watered-down) versions of metal that have no real affiliation to the metal culture. On the other hand, there are others who argue that these styles have some merit as they often lead to newer fans discovering the “real” metal. It should be noted however that heavy metal music has never been afraid to court mainstream popularity. Some of the best known acts like Iron Maiden, Judas Priest, Motorhead, and Metallica have enjoyed immense worldwide commercial success and many others like Dream Theater, Opeth and Nightwish have attracted large and dedicated followings that often include many people who don’t usually listen to heavy metal.

## Recent developments

In the late 1990s, outside influences began to be infused into metalhead culture once again. The rise of nu-metal saw facets of hip-hop and ghetto culture being introduced, including the adoption of sportswear, dreadlocks and African-American slang. Unlike the adoption of earlier influences however, these new aspects were seen by some to be at odds with the traditional metalhead outlook, particularly as many metalheads consider nu-metal to be a completely different style of music with a totally different culture. The explosion in the popularity of metalcore since 2002 has also brought with it changes in fashion particularly, as fans of the genre are typically neater in appearance with shorter hair, usually dyed black, and a tendency toward favouring "label" clothing and footwear. Many of these newer fans are also seen to be associating themselves with the culture for purely fashionable reasons. As with members of the nu-metal fanbase, there is some debate as to whether these fans can be properly described as metalheads as they are traditionally recognised or if they are, as many metalheads themselves believe, a new and different sub-culture.

## Subgroups

As mentioned above, metalheads are often keen to divide themselves into smaller subgroups with the subculture, some of which may include:

- [Black Metallers](#): A metalhead whose primary taste in metal is [black metal](#). Band examples: Darkthrone, Burzum, Mayhem.
- [Death Metallor](#): A metalhead whose primary taste in metal is [death metal](#). This naturally includes death metal's sub-categories: goregrind, [grindcore](#) (to an extent) etc. Band examples: Death, Deicide, Cannibal Corpse.
- [Power Metallers](#): A metalhead whose primary taste in metal is [power metal](#). Band examples: Iced Earth, Hammerfall, Manowar.
- [Doom Metallers](#): A metalhead whose primary taste in metal is [doom metal](#). Band examples: (early) Black Sabbath, Candlemass, Electric Wizard.
- [Thrash Metallers](#): Also known as 'Thrashers'. A metalhead whose primary taste in metal is [thrash metal](#). Most "Thrash Metallers" also enjoy it's sub-genre, [Death metal](#). Band examples: Megadeth, Metallica, Kreator, Anthrax, Slayer.
- Trad Metallers: A metalhead whose primary taste in metal is traditional metal. Sometimes arrogantly referred to as "true metallers". Band

examples: Judas Priest, Iron Maiden.

- [Folk Metallers](#): A metalhead whose primary taste in metal is [folk metal](#). A strong interest in Nordic mythology is almost universal. Often enjoy listening to [folk music](#) such as Tenhi. Band examples: Finntroll, Korpiklaani, Ensiferum.
- [Viking Metallers](#): A metalhead whose primary taste in metal is [viking metal](#). Often like folk metal too, are interested in Nordic mythology and the Celts. Band Examples: Moonsorrow, Amon Amarth, Falkenbach.

Categories: [Heavy metal](#)

## Metre

**Metre** or **meter** is the measurement of a [musical](#) line into measures of stressed and unstressed "beats", indicated in Western [music notation](#) by a symbol called a time signature. Properly, "metre" describes the whole concept of measuring rhythmic units, but it can also be used as a specific descriptor for a measurement of an individual piece as represented by the time signature—for example, "This piece is in 4/4 metre" is equivalent to "This piece is in 4/4 time" or "This piece has a 4/4 time signature".

Metre is an entrainment, a representation of changing aspects of music as patterns of temporal invariance, allowing listeners to synchronize their perception, cognition, and behaviour with musical rhythms. [Rhythm](#) is distinguished from metre in that rhythms are patterns of duration while "metre involves our initial perception as well as subsequent anticipation of a series of beats that we abstract from the rhythm surface of the music as it unfolds in time" (London 2004, p.4-5).

**Ametric** music includes [chant](#), some graphically scored works since the 1950s, and non-European folk music such as honkyoku repertoire for shakuhachi (Karpinski 2000, p.19).

## Rhythmic metre

There are four different time signatures in common use:

- Simple duple (ex. 4/4)
- Simple triple (ex. 3/4)
- Compound duple (ex. 6/8)
- Compound triple (ex. 9/8)

## Beats divided in two      Beats divided in three

**Two beats per measure**    simple duple                      compound duple

**Three beats per measure** simple triple                      compound triple

If each beat in a measure is divided into two parts, it is simple metre, and if divided into three it is compound. If each measure is divided into two beats, it is duple metre, and if three it is triple. Some people also label quadruple, while some consider it as two duples. The latter is more consistent with the above labelling system, as any other division above triple, such as quintuple, is considered as duple+triple (12123) or triple+duple (12312), depending on the accents in the musical example. However, in some music a quintuple may be treated and perceived as one unit of five, especially at faster tempos.

"Once a metric hierarchy has been established, we, as listeners, will maintain that organization as long as minimal evidence is present" (Lester 1986, p.77). Duple time is far more common than triple (Krebs 2005, p.16). Most popular music is in 4/4 time, though often may be in 2/2 or cut time such as in bossa nova. Doo-wop and some other rock styles are frequently in 12/8, or may be interpreted as 4/4 with heavy swing. Similarly, most classical music before the 20th century tended to stick to relatively straightforward metres such as 4/4, 3/4 and 6/8, though variations on these such as 3/2 and 6/4 are also found. By the 20th century, composers were using less regular metres, such as 5/4 and 7/8.

Also in the 20th century, it became relatively more common to switch metre frequently—the end of Igor Stravinsky's *The Rite of Spring* is a particularly extreme example—and the use of asymmetrical rhythms where each beat is a different length became more common: such metres include already discussed quintuple rhythms as well as more complex constructs along the lines of 2+5+3/4 time, where each bar has a 2-beat unit, a 5-beat unit, and a 3-beat unit, with a stress at the beginning of each unit; similar metres are used in various folk musics. Other music has no metre at all (free time) (such as drone-based music as exemplified by La Monte Young), features rhythms so complex that any metre is obscured (such as in [serialism](#)), or is based on additive rhythms (such as some music by Philip Glass).

Metre is often combined with a rhythmic pattern to produce a particular style. This is true of dance music, such as the [waltz](#) or [tango](#), which have particular patterns of emphasizing beats which are instantly recognizable. This is often done to make the music coincide with slow or fast steps in the dance, and can be thought of as the musical equivalent of prosody. Sometimes, a particular musician or composition becomes identified with a particular metric pattern; such is the case with the so-called Bo Diddley beat. Some examples (Scruton 1997):

March rhythms

Polka rhythms

Siciliano rhythms  
Waltz rhythms

## Polymetre

**Polymetre** is the use of two metric frameworks simultaneously, or in regular alternation. Examples include Béla Bartók's "Second String Quartet". Leonard Bernstein's "America" (from West Side Story) employs alternating measures of 6/8 (compound duple) and 3/4 (simple triple). This gives a strong sense of two, followed by three, stresses (indicated in bold type): // I-like-to **be**-in-A // **ME RI CA**//.

An example from the rock canon is "Kashmir" by the seminal British hard-rock quartet Led Zeppelin, in which the percussion articulates 4/4 while the melodic instruments present a riff in 3/4. In "Toads Of The Short Forest" (from the album Weasels Ripped My Flesh), composer Frank Zappa explains: "At this very moment on stage we have drummer A playing in 7/8, drummer B playing in 3/4, the bass playing in 3/4, the organ playing in 5/8, the tambourine playing in 3/4, and the alto sax blowing his nose." The math metal band Meshuggah uses complex polymetres even more extensively; typically the songs are constructed in 4/4, with guitar riffing and bass drum patterns in unusual metres such as 11/8 and 23/16. Usually the riffs are forced to resolve after 4 or 8 measures resulting in a shorter 'fitpiece' which has a different metre from the rest of the section.

Perceptually there appears to be little or no basis for polymetre as research shows that listeners either extract a composite pattern that is fitted to a metric framework, or focus on one rhythmic stream while treating others as "noise". This upholds the tenet that "the figure-ground dichotomy is fundamental to all perception" (Boring 1942, p.253), (London 2004, p.49-50).

## Metric structure

**Metric structure** includes metre, tempo, and all [rhythmic](#) aspects which produce temporal regularity or structure, against which the foreground details or durational patterns are projected (Wittlich 1975, chap. 3).

Rhythmic units can be metric, intrametric, contrametric, or extrametric.

**Metric levels** may be distinguished. The beat level is the metric level at which pulses are heard as the basic time unit of the piece. Faster levels are **division levels**, and slower levels are **multiple levels** (Wittlich 1975, chap. 3).

**Hypermetre** is large-scale metre (as opposed to surface-level metre) created by hypermeasures which consist of hyperbeats (Stein 2005, p.329).

The term was coined by Cone (1968) while London (2004, p.19) asserts that there is no perceptual distinction between metre and hypermetre.

A metric modulation is a modulation from one metric unit or metre to another.

## Deep structure

C. S. Lee (1985) has described musical metre in terms of deep structure, where, through rewrite rules, different metres (4/4, 3/4, etc) generate many different surface rhythms. For example the first phrase of The Beatles' A Hard Day's Night, without the syncopation, may be generated from its metre of 4/4:

4/4 4/4 4/4 / \ / \ / \ 2/4 2/4 2/4 2/4 2/4 2/4 | / \ | | | \ | 1/4 1/4  
| | | \ | / \ / \ | | | | 1/8 1/8 1/8 1/8 | | | | | | | | | | It's  
been a hard day's night (Middleton 1990, p.211).

## Metre in song

Issues involving metre in [song](#) reflect a combination of musical metre and poetic metre, especially when the song is in a standard [verse](#) form. Traditional and popular songs fall heavily within a limited range of metres, leading to a fair amount of interchangeability. For example, early hymnals commonly did not include musical notation, but simply texts. The text could be sung to any tune known by the singers that had a matching metre, and the tune chosen for a particular text might vary from one occasion to another.

One case that illustrates the potential use of this principle across [musical genres](#) is The Blind Boys of Alabama's rendition of the [hymn](#) *Amazing Grace*, which is sung to the musical setting made famous by The Animals in their version of the [folk song](#) *The House of the Rising Sun*.

## Mexican cumbia

**Mexican cumbia** is the form of [cumbia](#) dance and music found in Mexico. In fact, it consists of several different rhythms in its own. It includes the Cumbia Norteña (Northern Cumbia), consisting of drums, congas, accordion, bajo sexto, and bass guitar. Mexican singer Rigo Tovar further popularized this music by adding elements of [rock and roll](#) and introducing [electric guitars](#) and [synthesizers](#) in the 1970s and 1980s. Yet another style of cumbia popular around the central area is the Sonidero. Sonidero music consists of similar instrumental elements (guitar, keyboards, bass guitar, drums, congas, and guiro.) It is a special and distinct sub-genre because of the keyboard sounds used. Grupo Soñador and Celso Piña is a good example of that style of [cumbia](#).

## Mezzo-soprano

### [Vocal ranges](#)

#### Female ranges

[Soprano](#)

**Mezzo-soprano**

[Contralto](#)

#### Male ranges

[Sopranist](#)

[Alto](#)

[Tenor](#)

[Baritenor](#)

[Baritone](#)

[Bass-baritone](#)  
[Bass](#)

A **mezzo-soprano** (meaning "half [soprano](#)" in Italian) is a female [singer](#) with a range usually extending from the A below middle C to the A two octaves above (i.e. A3-A5, middle C = C4). Mezzo-sopranos generally have a darker (or richer) vocal tone than sopranos, and their voice type sits between the soprano and the [contralto](#). The terms Dugazon and Galli-Marié are sometimes used to refer to light mezzo-sopranos, after the names of famous singers. A castrato with a mezzo-soprano range was called a *mezzo-soprano castrato*.

Mezzo-sopranos typically sing secondary roles in operas, with Bizet's Carmen and Rosina (in Rossini's Barber of Seville) as the most notable exceptions. Typical roles for mezzo-sopranos include "witches, bitches, and breeches", a common expression that summarizes their function in opera. Witches are the old hags, nurses, and wise women, such as Azucena and Ulrica (which can also be performed by [contraltos](#)); breeches are male roles sung by female singers, such as Cherubino; and bitches are villains and seducers, such as Amneris or Eboli.

Some roles designated for soubrette sopranos are also often sung by mezzo sopranos. This gives the roles a fuller and more dramatic quality, which often suits them well. Such roles include Despina in *Così fan tutte* and Zerlina in *Don Giovanni*. Other roles designated for dramatic sopranos walk a fine line between soprano and mezzo territory. Mezzos quite often play Santuzza in *Cavalleria rusticana*, Lady Macbeth in Verdi's *Macbeth*, and even Isolde in *Tristan und Isolde*. These examples are simply proof that the line between soprano and mezzo soprano is not clearly defined.

In [soul music](#), a person will sometimes be classified mezzo-soprano, if she can sing both contralto and soprano. To earn this classification however, she must be able to reach the D and even E above Soprano C, as well as the corresponding note below Middle C, thus possessing a three-octave range.

## Mezzo-soprano roles in operas

Zweite Dame (2nd Lady) (*Die Zauberflöte*)  
Dritte Dame (3rd Lady) (*Die Zauberflöte*)  
Adriano (*Rienzi*)  
Alisa (*Lucia di Lammermoor*)  
Amneris (*Aida*)  
Annius (*La clemenza di Tito*)  
Baba the Turk (*The Rake's Progress*)  
Berta (*Il Barbiere di Siviglia*)

Brangäne (Tristan und Isolde)  
Carmen (Carmen)  
Cecilius (Lucio Silla)  
Cenerentola (La Cenerentola)  
Charlotte (Werther)  
Cherubino (Le Nozze di Figaro)  
Dalila (Samson et Dalila)  
Dido (Dido and Aeneas)  
Dorabella (Cosi fan tutte)  
Emilia (Otello)  
Erika (Vanessa)  
Flora (La traviata)  
Fricka (Das Rheingold, Die Walküre)  
Gertrude (Hamlet)  
Idamantes (Idomeneo)  
Isabella (L'italiana in Algeri)  
La Zia Principessa (Suor Angelica)  
Laura (La Gioconda)

Lola (Cavalleria rusticana)  
Maddalena(Rigoletto)  
Mallika (Lakmé)  
Marcellina (Le Nozze di Figaro)  
Marguerite (Le Damnation de Faust)  
Meg Page (Falstaff)  
Mercedes (Carmen)  
Mignon (Mignon)  
Nicklausse (Tales of Hoffmann)  
Octavian (Der Rosenkavalier)  
Olga (Eugene Onegin)  
Orfeo (Orfeo ed Euridice)  
Orlofsky (Die Fledermaus)  
Ortrud (Lohengrin)  
Ottavia (L'incoronazione di Poppea)  
Pauline (The Queen of Spades)  
Preziosilla (La forza del destino)  
Princess Eboli (Don Carlos)  
Romeo (I Capuleti e i Montecchi)  
Rosina (The Barber of Seville)  
Serse (Serse)  
Sesto (La clemenza di Tito)  
Siebel (Faust)  
Stephano (Romeo et Juliette)

Suzuki (Madama Butterfly)  
Sonyetka (Lady Macbeth of the Mtsensk District)  
The Composer (Ariadne auf Naxos)  
The Countess (The Queen of Spades)  
Tancredi (Tancredi)  
Urbain (Les Huguenots)  
Venus (Tannhäuser)

## **Mezzo-soprano roles in operettas and musicals**

Adelaide (Guys and Dolls)  
Anne Catherick (The Woman in White)  
Cleo Wellington (Glamorous Night)  
Dinah (Trouble in Tahiti)  
Grizabella (Cats)  
Iolanthe  
Eva Peron (Evita)  
Ellen Scott (Miss Saigon)  
Fantine (Les Misérables)  
Helena Landless (The Mystery of Edwin Drood)  
Kim (Miss Saigon)  
Leona Samish (Do I Hear A Waltz?)  
Linda (Lost in the Stars)  
Lisa (Pirates: a Romeo and Juliet Story)(Pop style of singing is required)  
Liza Elliot (Lady in the Dark)  
Lucy (Jekyll and Hyde)  
Mad Margaret (Ruddigore)  
Madame Thénardier (Les Misérables)  
Marian Halcombe (The Woman in White)  
Marguerite (The Scarlet Pimpernel)  
Madame Giry (The Phantom of the Opera)  
Meg Giry (The Phantom of the Opera)  
Mei Li (Flower Drum Song)  
Miss Hannigan (Annie)  
Mrs. Lovett (Sweeney Todd)  
Nellie Forbush (South Pacific)  
Nessarose (Wicked)  
Nettie Fowler (Carousel)  
The Old Lady (Candide)  
Orlofsky (Die Fledermaus)

Phoebe Meryll (The Yeomen of the Guard)  
Red Riding Hood (Into the Woods)  
Rosemary (How to Succeed in Business Without Really Trying)  
Rose Maurant (Street Scene)  
Tessa (The Gondoliers)  
The Narrator (Joseph and the Amazing Technicolor Dreamcoat)(Can be played by a soprano with a decent belt capability)  
Vera (King's Rhapsody)  
Mother (Ragtime)  
Ulla (The Producers)  
The Lady of the Lake (Monty Python's Spamalot) (can also be played by an Alto)  
The Witch (Into the Woods)  
Maureen Johnson (Rent)  
Anna Leonowens (The King And I)

## Miami bass

**Miami bass** (also known as ***booty music***, a term that may also include other genres) is a type of [hip hop music](#) that became popular in the 1980s and 1990s, known for applying the Roland TR-808 sustained kick drum, slightly higher dance tempos, and occasionally sexually explicit lyrical content. Music author Richie Unterberger has characterized Miami bass as using rhythms with a "stop start flavor" and "hissy" [cymbals](#) with lyrics that "reflected the language of the streets, particularly black Miami ghettos such as Liberty City"<sup>[1]</sup>. Miami bass has never had consistent mainstream acceptance, but has had a profound impact on the development of drum'n'bass and [Southern rap](#).

Unterberger has called Maggotron (James McCauley, also known as DXJ, Maggozulu 2, Planet Detroit and Bass Master Khan) the "father of Miami bass". He created the Miami bass sounds with [vocoders](#) and what Maggotron referred to as the "thrombic boomulator" to produce the distinctive low-pitched and distorted vocals<sup>[2]</sup>. In the 80s, the focus of Miami bass was on the [DJs](#) and record producers rather than the performers. [Record labels](#) like Pandisc were also well-known. "Bass Rock Express" by MC ADE is often credited as the first Miami bass record ever.

Luther 'Luke Skyywalker' Campbell, of the crew 2 Live Crew, did the most to popularize Miami bass in the late 1980s and early 1990s. Their *The 2 Live Crew Is What We Are*, released in 1986, became controversial for sexually explicit and profane lyrics. The 1989 *As Nasty As They Wanna Be*, and its hit single "Me So Horny", was even more controversial and led to legal troubles for 2 Live Crew and retailers; all charges were eventually overturned on appeal.

Miami Bass is closely related to the modern [Ghettotech](#) genre of techno, that combines Chicago house/electro with the Miami bass sound. Ghettotech follows the same sexually-orientated lyrics, hip-hop basslines and streetwise attitude but with harder, uptempo Roland TR-909 techno-style kick beats.

## Microhouse

**Microhouse** music also known as **Buftech** takes [minimal house](#) to a new level, focusing on the essential dance-inducing elements of [house music](#): the beat, the bass and the melody. Drawing from [minimal techno](#) and the [glitch](#) genre for its unique drums and chopped melody sound, it cuts house down to its bare bones. Microhouse can be thought of as a bridge between the minimal techno and tech house genres - its click-and-cut aesthetic mixes well and compliments techno while the funkier house and dub influences give it a greater accessibility and more danceable sound.

[Percussion](#) in microhouse is reminiscent of [tech house](#) drums, replacing typical house kick drums and hi-hats with small bits of noise. Microhouse artists often experiment with different ways of sampling to achieve this. Sampling is integral to microhouse and is one of the main contrasts between it and minimal techno. Rather than being synthesizer based, extremely short ('micro') samples of the human voice, musical instruments, everyday noises and computer created wave patterns are arranged to form complex melodies. Vocals in microhouse are often very simplistic, nonsensical, and monotone in nature, but some artists such as Matthew Herbert have been releasing microhouse songs with full vocal tracks.

The term *microhouse* is usually credited to music journalist Philip Sherburne, writing for the magazine Wire in 2001. It is generally accepted that the genre began life in Germany in the late 1990s, urged along by record labels like Kompakt, Perlon, Spectral Sound, Fabric, Telegraph and Force Inc.

Microhouse is somewhat obscure when compared to other genres of house and techno, but several cities including Cologne, Paris, Montreal, the Bay Area, Detroit, Chicago and Portland, Oregon have budding scenes.

## Military band

A **military band** is a group of soldiers assigned to musical duties. A typical military band consists mostly of wind and percussion instruments. The conductor of a band usually bears the title of bandmaster. The military band should be capable of playing ceremonial and marching music, including the [national anthems](#) and patriotic songs of not only their own nation but others as well, both while stationary and as a [marching band](#).

Military bands also play a part in military funeral ceremonies.

There are two types of historical traditions in military bands. The first is military field music. This type of music includes bugles (or other natural instruments such as natural trumpets or natural horns), [bagpipes](#), or fifes and almost always [drums](#). This type of music was used to control troops on the battlefield as well as for entertainment. Following the development of instruments such as the keyed trumpet or the saxhorn family of brass instruments, a second tradition of the all brass military band was formed.

During the American Civil War most Union regiments had both types of groups within the unit. However, due to changes in military tactics by the end of World War I field musical had been mostly phased out in favor of the brass bands. These performed in a concert setting for entertainment, as well as continued to perform drill and martial events. In the United States, these bands were increased in instrumentation to include woodwinds, which gives us the modern military band in the United States, as well as the basis for high school and college marching bands and [concert bands](#).

Field music is still popular at ceremonial functions, with many organizations such as police, fire, and veterans groups maintaining pipe and drum, fife and drum, or drum and bugle corps.

In the United States Army, the band is attached to the headquarters element and one of its duties is to provide security for the command post. British Army bandsmen are trained to work in NBC 'Casualty Decontamination Areas' and 'General Duties'. Modern-day military musicians often perform a variety of other styles of music in different ensembles, from [chamber music](#) to [rock and roll](#).

## Milonga

**Milonga** is a South American form of [music](#), as [dance](#), as the term for the place where [tango](#) is danced. The term *milonga* comes from a similar African expression that means "[lyrics](#)."

## Music

The **Milonga** originated in the Río de la Plata area of Argentina and Uruguay, and was very popular in the 1870s. The Milonga was derived from an earlier style of singing known as the *payada de contrapunto*.

The song was set to a lively 2/4 tempo, and often included musical improvisation. Over time, dance steps and other musical influences were added, eventually giving rise to the [tango](#). Despite 2/4 formula, [rhythm](#) is irregular. It is syncopated, consisting of 8 beats with accents on the 1st, 4th, 5th and 7th beats.

- Regular 2/4

[1] 2 3 4 [5] 6 7 8

- Milonga

[1] 2 3 [4] [5] 6 [7] 8

- 332

[1] 2 3 [4] 5 6 [7] 8

## Dance

Although Milonga uses the same basic elements as Tango, it is much nearer to the African roots, especially in that it requires a greater relaxation of legs and body. Movement is normally faster, and pauses are not made: As the beat goes on, dancers continue setting their feet. It is rather a kind of rhythmic walking without complicated figures, with a much more "rustic" style than Tango.

There are different styles of Milonga: *Milonga Lisa* (Simple Milonga), in which the dancer steps on every beat of the music; and *Milonga con Traspíe*, in which the dancer uses Traspíes or contrapasos (changes of weight from one foot to the other and back again in double time) to interpret the music. Thus, dynamics may be danced without having to run fast or without the use of much space.

- [Tango](#)

## Minimal house

Less is more has been the approach of minimal house.

Groundwork is laid with simple, 4/4 beats (usually around 125-130 beats-per-minute) usually only barely accompanied by sparse, percussive effects, synthesizer work, and simplistic vocal. Minimal house, is a style where sound aesthetic and function are merged into an entity of hypnotic movement and form.

Also categorized as minimal tech-house or [microhouse](#).

### [House](#)

[Acid](#) - [Ambient](#) - [Chicago](#) - [Dark](#) - [Deep](#) - Dream - [Garage](#) - [Ghetto](#) - [Hard](#) - [Hip](#) - Italo - [Latin](#) - [Minimal](#) - [Microhouse](#) - Progressive - [Pumpin'](#) - [Tech](#) - [Tribal](#)

## Minimal techno

**Minimal techno** is a [minimalist](#) sub-genre of [Techno music](#). It's characterized by stripped-down, [glitchy](#) sound, simple 4/4 beat (usually around 120-135 BPM), repetition of short loops, and subtle changes. Related styles are Minimal Electronica, ambient techno, [minimal house](#), [microhouse](#) and [tech house](#).

Minimal techno is often [atonal](#), featuring consonant [harmony](#). Melodies, when present, are usually short loops of one or two bars. Emphasis is put on creating unique sounds. Musical development is achieved mostly by adding or removing instruments (sounds) on eight-bar phrase boundaries and adjusting [effects](#).

Notable artists include Plastikman (Richie Hawtin), Daniel Bell, Ricardo Villalobos, Ø (Mika Vainio), Akufen (Marc Leclair), Basic Channel, Jeff Milligan, Sleeparchive (Roger Semsroth) and Sutekh (Seth Horvitz). Some record labels specializing in minimal techno are M\_nus, Foundsound, Force Inc, Kompakt, Perlon, Revolver Canada and Sähkö Recordings.

## Minimalism

**Minimalism** describes movements in various forms of art and design, especially visual art and [music](#), where the work is stripped down to its most fundamental features. In other fields of art, it has been used to describe the novels of Ernest Hemingway, the plays of Samuel Beckett, the films of Robert Bresson, the stories of Raymond Carver, and even the automobile designs of Colin Chapman.

As a specific movement in the arts it is identified with developments in post-World War II Western Art, most strongly with the visual arts. The term has expanded to encompass a movement in music which features repetition and iteration, for example the music of Steve Reich, Philip Glass and Terry Riley. (See also [Post-Minimalism](#)). It is rooted in the spare aspects of [Modernism](#), and is often associated with [Postmodernism](#) and reaction against [Expressionism](#) in both painting and composition.

The term "minimalist" can also refer to anything which is spare, stripped to its essentials, or providing only the outline of structure, independent of the particular art movement, and "minimalism" the tendency to reduce to fundamentals. It is sometimes applied to groups or individuals practicing asceticism and the reduction of physical possessions and needs to a minimum.

### Minimalism in visual art

A minimalist painting, for example, will typically use a limited number of colors, and have a simple geometric design. Minimalist sculpture on the other hand is greatly focused on the materials (see David Smith and Donald Judd). While many believe minimalism to be a movement specific to geometric representations, it extends far outside this constraint.

There were three notable phases of the minimalist movement:

First the distillation of the forms wherein the greatest contributors were probably the Russian Constructivists and the Romanian sculptor Constantin Brâncuși. The Russian Constructivists proclaiming the distillation was in order to create a universal language of art which the masses were meant to understand. It may have also supported the rapid industrialization planned for the massive country. Brâncuși's work was much more of a search for the purity

of the form and thus paved the way for the abstractions that were to come, such as minimalism.

The second (and most notable) phase in the movement came with artists including Carl Andre, Anne Truitt, Dan Flavin, Sol LeWitt, Frank Stella, Donald Judd, Ad Reinhardt and Robert Smithson. It commenced in 1964 with the exhibition of Dan Flavin's 'Monument for V Tatlin' which was an assembly of neon lighting tubes. The tubes had not been modified in any way by the artist, merely arranged. The assembly did not signify anything other than itself. It simply existed. These 1960s artists were anti-Romantic. They very explicitly stated that their art was not self-expression, in complete opposition to the previous decade's Abstract Expressionists. Very soon they created a minimal style, whose features included: rectangular and cubic forms purged of all metaphor, equality of parts, repetition, neutral surfaces, industrial materials, all of which leads to immediate visual impact. Later minimal sculptors included Tony Smith, Larry Bell and John McCracken.

Ad Reinhardt summed up the style in these terms: 'The more stuff in it, the busier the work of art, the worse it is. More is less. Less is more. The eye is a menace to clear sight. The laying bare of oneself is obscene. Art begins with the getting rid of nature.'

This style was heavily criticised. It was called futile, mechanistic, mandarin, elitist, circular, pedantic and authoritarian. Some critics thought they were dealing with outright fraud.

Also notable are the *post-minimalists*, including Eva Hesse, Martin Puryear, Tyrone Mitchell, Melvin Edwards and Joel Shapiro. The keystone of post-minimalism is the often distinct references to objects without direct representation. This has become a predominant trend in modern sculpture.

## Musical minimalism

*Main article: [Minimalist music](#)*

In [classical music](#) of the last 35 years, the term **minimalism** is sometimes applied to music which displays some or all of the following features: repetition (often of short musical phrases, with minimal variations over long periods of time) or stasis (often in the form of drones and long tones); emphasis on consonant harmony; a steady pulse. Minimalist music is sometimes very similar, currently, to electronic music and composition.

It should be noted that the minimalist movement in music bears only an occasional relationship to the movement of the same name in visual art. This connection is probably one reason why many minimalist composers dislike the term. Philip Glass, whose group initially performed at art galleries where his

minimalist visual artist friends were showing, reportedly said of minimalism, "*That word should be stamped out!*"

## Minimalist design

The term **minimalism** is also used to describe a trend in design and architecture wherein the subject is reduced to its necessary elements. Minimalist design has been highly influenced by Japanese traditional design and architecture.

Architect Ludwig Mies van der Rohe adopted the motto "Less is more" to describe his aesthetic tactics of flattening and emphasizing the building's frame, eliminating interior walls and adopting an open plan, and reducing the structure to a strong, transparent, elegant skin. Designer Buckminster Fuller adopted a similar saying, "Doing more with less", but his concerns were more oriented towards technology and engineering than aesthetics.

Contemporary architects working in this tradition include John Pawson, Eduardo Souto de Moura, Tadao Ando, and Peter Zumthor.

## Minimalist music

**Minimalist music** is a genre of [experimental music](#) named in the 1960s which displays some or all of the following features:

- emphasis on consonant harmony, if not functional tonality;
- reiteration of musical phrases or smaller units such as figures, motifs, and cells, with subtle, gradual, and/or infrequent variation (no musical development) over long periods of time, possibly limited to simple repetition;
- stasis, often in the form of drones, pulses, and/or long tones.

The term *minimalist music* is derived from the concept of [minimalism](#), which was earlier applied to the visual arts. Previously the terms [process music](#) or

*systems music* were used, particularly for music constructed using fairly strict rules.

## Brief history

The history of minimal music can be traced back to the 19th century with Robert Schumann . However, the word "minimalism" was first used in relation to music in 1968 by Michael Nyman in a review of Cornelius Cardew's piece *The Great Digest*. Nyman later expanded his definition of minimalism in music in his 1974 book *Experimental Music: Cage and Beyond*. Tom Johnson, one of the few composers to self-identify as minimalist, also claims to have been first to use the word as new music critic for the *Village Voice*. He describes "minimalism" (1989, p. 5):

"The idea of minimalism is much larger than most people realize. It includes, by definition, any music that works with limited or minimal materials: pieces that use only a few notes, pieces that use only a few words of text, or pieces written for very limited instruments, such as antique cymbals, bicycle wheels, or whisky glasses. It includes pieces that sustain one basic electronic rumble for a long time. It includes pieces made exclusively from recordings of rivers and streams. It includes pieces that move in endless circles. It includes pieces that set up an unmoving wall of saxophone sound. It includes pieces that take a very long time to move gradually from one kind of music to another kind. It includes pieces that permit all possible pitches, as long as they fall between C and D. It includes pieces that slow the tempo down to two or three notes per minute."

Many people, especially popular music fans, find minimalist music less difficult music to listen to than [serialism](#) and other avant-garde classical music. For some, especially romantic and earlier music fans, it is easy music to find annoying, due to the repetition, perceived lack of complexity, or rigidity of [process music](#). The most prominent minimalist composers are John Adams, Philip Glass, Steve Reich, and Terry Riley; while the less well known La Monte Young is generally credited as the "father" of minimalism. Female composers such as Pauline Oliveros, Eliane Radigue, Maryanne Amacher and Laurie Spiegel have been said to have been as innovative and influential as the "big four" minimalist composers.

There is much variety in the music called minimal, in every regard from instrumentation to [structure](#) to technique. The early compositions of Glass and Reich tended to be very austere, with little embellishment on the principal [theme](#), and written for small instrumental ensembles (of which the composers were members), made up, in Glass' case, of organs, winds--particularly

saxophones--and vocalists, in Reich's case with more emphasis on mallet and percussion instruments. (These works would be scored for any combination of such instruments: one piece by Reich, the aptly named *Six Pianos*, is scored just so.) Adams' works have most often been written for more traditional [classical](#) forces: orchestra, [string quartet](#), even solo piano. (Though all four major minimalists have written symphonies and quartets etc, none have written them so exclusively as Adams.) His works tend also to be much more approachable for the classical ear; there is a minimalist core to his work, but there is also a more traditional philosophy and stylistic diversity behind his compositions, and a phrase in an Adams work is less likely to stay unchanged and in the same instrument(s) for a long time than in would be in another minimalist's work. Some of Adams' orchestral works have been described as "maximalist", although this is not a word that would be widely recognized by reviewers as having a consistent meaning, for example serialist Charles Wuorinen self-identifies as a maximalist.

David Cope (1997) lists the following qualities:

- Silence
- Concept music
- Brevity
- Continuities: requiring slow modulation of one or more parameters
- Phase and pattern music, including repetition

The minimalist movement in music bears only a passing connection to the movement of the same name in the visual arts. This is probably one reason why many minimalist composers dislike the term. Philip Glass, whose group initially performed at art galleries where his minimalist visual artist friends were showing, reportedly said of minimalism, "That word should be stamped out!"

The use of phase techniques and intense repetition may, in some cases, be seen as a broadening of the harmonic pallett through microtones (as in the music of Young, Riley, Oliveros and others), related to European spectral composers such as Scelsi and Dumitrescu. American and Japanese [noise](#) musicians often refer to this end of minimalism as an antecedent.

## Minimalist style in music

The most identifiable traits of minimalism in music are the use of repeated motivic fragments, presented unaltered in themselves or in slow transformations, to establish a harmonic texture. While this is not unprecedented in itself--Richard Wagner would use an arpeggiated E-flat as the basis for the opening of his opera *Das Rheingold*--the pervasiveness of the

technique and the use of layering and phase of these fragments which is identifiable as "minimalist". This is related to, but not the same as, repetition of whole sections of music, again not unprecedented but not made as pervasive a stylistic trait in previous styles. Layering often produces the major development of a section, as one voice is added on top of another to produce the final full effect.

Consonant harmony is a feature much noted - it means the use of intervals which in a tonal context would be considered to be "stable", that is the form to which other chords are resolved by voice leading. In minimalism this function of stability is ignored.

Another trait of the minimalist movement established at an early point in time is the use of *phase* in consonant context to provide variety. A famous example is Terry Riley's *In C* which gives musicians fragments of music which they are to play at their own pace until they stop. The resulting texture varies with the different choices that performers make.

This means that the "texture" of much minimalist music is based on canonic imitation, exact repetitions of the same material, offset in time. Famous pieces that use this technique are the number section of Glass' *Einstein on the Beach* and Adams' *Shaker Loops*.

Over time minimalist composers adopted more and more chromatic material for repetition, for example Philip Glass' *Symphony No. 2*, and the operas of John Adams. There was also an increasing movement to incorporate found sounds, tape, electric or electronic sources of music. Minimalism in classical music often cross fertilizes with popular experimental music, such as the work of Brian Eno and Mike Oldfield, as well as [electronica](#) and [house \(music\)](#), where DJs layer different recordings on top of each other without regard for their source.

The development of minimalist music proceeds as a movement which was consciously aware of its being a post-serialist movement in music, drawing from the use of silence and layering in Cage, but seeking a more melodic basis for its materials. Many of the individual traits of minimalist music occur in serial works of the same period, for example the use of layering in Berio's *Sinfonia*, or the long suspended tones of Morton Feldman.

These traits were also the feature of composers who rejected 20th century chromatic harmony for other reasons, often liturgical or religious. These composers often went back to Medieval and early Renaissance harmony and practice more deliberately, producing works which had more formally worked out canonic imitation in a [modal](#) rather than tonal context. Among these Arvo Pärt is one who has gained a wide following and had numerous recordings and performances of his work.

Minimalism is sometimes associated with an ideology that justifies the moving away from the greater complexity of [modernism](#) by arguing from the point of view of [postmodernism](#). Specifically, postmodernism states that

progress in music is illusory, and therefore there is no need to have ever more advanced and complex systems of composing, that the purpose of minimalist music is repose, rather than "western" style development, and that minimalism embodies more "eastern" values of meditation, trance and concentration. Philip Glass specifically argues that there has been a disintegration of the concept of "high" and "low" music, and that music of this movement is important because it allows incorporation of, and dialog with, popular styles in a way that previous music did not. These arguments are far from universal among listeners, composers and performers of minimalist music, but are commonly cited in the struggles for performance, attention and acceptance of minimalist music.

Minimalist music is frequently used in movie scores and other media to provide a backdrop or mood for a particular scene or opening, or as an episode in a score. It has been adopted for sections of work by composers from other styles, including the late work of Lukas Foss.

There are those who argue, most notably Kyle Gann, that minimalism, as such, ended in music sometime in the 1980s, and that music since that point in time should be regarded as [post-minimalist](#). According to Gann the breaking out of the strongly framed repetition and stasis of minimalist music represents a stark departure from previous practice.

## Critical reception of minimalism

### Criticisms of minimalism

Minimalist music has been controversial from its inception, and criticisms have been levelled from two other viewpoints specifically.

The first set of criticisms are from proponents of musical modernism who regard minimalism as a betrayal of progress, a banalization of modernity and backsliding into kitsch. They argue that minimalism represents a surrender of "high" art to the values of "popular" art. These critiques mirror other "late modern" critiques of postmodernity. Namely, there is no such thing, merely a backsliding counter-enlightenment impulse that seeks the lowest common denominator rather than pursuing the more rigorous, and important, project of advancing human knowledge and good.

The second set of criticisms is often levelled by those who are adherents of what may be called more "traditional" forms of western classical music, particularly as they had evolved through the 19th century. They criticise minimalism for being repetitive, boring, without movement, and shallow. There have been frequent jokes whose punchline involves repeating the name of a minimalist composer over and over again, with Philip Glass being a common target. In their view, this music goes nowhere, and lacks intrinsic interest.

## Critical supporters of minimalism

(Will be inserted on completion of this section.)

## Minimalist composers

Early minimalists include:

David Behrman  
Gavin Bryars  
Cornelius Cardew  
Tony Conrad  
Jon Gibson  
Philip Glass  
Terry Jennings  
Petr Kotik (born in Czechoslovakia)  
Douglas Leedy  
Richard Maxfield  
Robert Moran  
Phill Niblock  
Pauline Oliveros  
Charlemagne Palestine  
Steve Reich  
Terry Riley  
Howard Skempton  
Yoshi Wada (born in Japan)  
La Monte Young

Other more current minimalists include:

- **Australia**
  - Nigel Westlake
- **Belgium**
  - Wim Mertens
- **Czechoslovakia**
  - Petr Kotik (based in the United States)
- **Finland**
  - Erkki Salmenhaara
- **Germany**
  - Peter Michael Hamel
  - Hauke Harder
  - Hans Otte

Ernstalbrecht Stiebler  
Harald Weiss  
Walter Zimmermann

- **Hungary**

- Zoltán Jeney  
László Melis  
László Sály  
László Vidovszky

- **Italy**

- Fulvio Caldini  
Giovanni Sollima

- **Japan**

- Jo Kondo  
Yoshi Wada (based in the United States)

- **Netherlands**

- Louis Andriessen  
Simeon ten Holt

- **Portugal**

- Ernesto Rodrigues  
Telectu

- **Serbia and Montenegro**

- Vladimir Toši

- **South Africa**

- Kevin Volans (based in Ireland)

- **United Kingdom**

- Bob Dickinson  
Orlando Gough  
Steve Martland  
Michael Nyman  
Andrew Poppy  
Daniel Patrick Quinn

- **United States**

- John Adams  
Glenn Branca  
Harold Budd  
Rhys Chatham (based in France)  
Philip Corner (based in Italy)  
DAC Crowell  
Kurt Doles  
Paul Drescher  
Arnold Dreyblatt (based in Germany)  
William Duckworth  
Janice Giteck

Daniel Goode  
Tom Johnson (based in France)  
Elodie Lauten  
Daniel Lentz  
Ingram Marshall  
Meredith Monk  
Tim Risher  
Mikel Rouse  
Frederic Rzewski  
Stephen Scott  
Wayne Siegel (based in Denmark)  
Carl Stone  
Morton Subotnick

A number of composers showing a distinctly religious influence have been labeled the "mystic minimalists":

Henryk Górecki  
Hans Otte  
Arvo Pärt  
John Tavener

Other composers whose works have been described as precedents to minimalism include:

- Jakob van Domselaer, whose early-20th century experiments in translating the theories of Piet Mondrian's De Stijl movement into music represent an early precedent to minimalist music.
- Alexander Mosolov, whose orchestral composition *Iron Foundry* (1923) is made up of mechanical and repetitive patterns
- George Antheil, whose 1924 *Ballet Mecanique* is characterized by much use of motoric and repetitive patterns, as well as an instrumentation made up of multiple player pianos and mallet percussion
- Erik Satie, seen as a precursor of minimalism as in much of his music, for example his score for Francis Picabia's 1924 film *Entr'acte* which consists of phrases, many borrowed from bawdy popular songs, ordered seemingly arbitrarily and repetitiously, providing a rhythmic counterpoint to the film.
- Colin McPhee, whose *Tabuh-Tabuhan* for two pianos and orchestra (1936) features the use of motoric, repetitive, pentatonic patterns drawn from the music of Bali (and featuring a large section of tuned percussion)
- Carl Orff, who, particularly in his later theater works *Antigone* (1940-49) and *Oedipus der Tyrann* (1957-58), utilized instrumentations (six pianos and multiple xylophones, in imitation of gamelan music) and musical patterns (motoric, repetitive, triadic) reminiscent of the later music of Steve Reich and Philip Glass

- Yves Klein, whose 1947 *Monotone Symphony* consisted of a single sustained chord, predating similar works by La Monte Young by several years.
- Morton Feldman, whose works prominently feature some sort of repetition as well as a sparseness
- Alvin Lucier, whose acoustical experiments demand a stripped-down musical surface to bring out details in the phenomena

## Rock bands influenced by minimalism

Autopsia  
Ashra (Manuel Göttsching)  
Cant  
Circle  
Coil  
Do Make Say Think  
Faust  
Gastr Del Sol  
Godspeed You! Black Emperor  
David Grubbs  
Isis  
King Crimson  
Low  
Neu!  
Jim O'Rourke  
M83  
Polyrock  
Polmo Polpo  
Radiohead  
Shellac  
Sigur Rós  
Slint  
Sonic Youth  
Spacemen 3  
Stereolab  
The For Carnation  
Tirez Tirez  
Tortoise  
Union Wireless

The Velvet Underground  
The White Stripes

## Minimalist trance

An emerging style of [electronic trance music](#) developed in the early 2000s, **minimal psytrance** is a form of [psychedelic trance](#) which developed as a backlash to the older and (some would argue) stale and overused sound of [goa trance](#). One of the first artists to create this genre was arguably Daniel

Vernunft with his acclaimed Shiva Chandra identity, who continues to this day to release excellent releases under that name and as a member of the group Auricular.

Minimal psytrance can be likened to minimal sounding [progressive music](#) but is generally more involved and contains more complex developments (hence the psychedelic component). It can be lighter or darker music, but is generally darker and edgier than mainstream/progressive trance, and slower, less 'busy' or more progressive than typical "full-on" psychedelic trance. When lighter, minimal psytrance is often described as jovial and bouncy, appropriate at the beginning or end of a party.

In many respects minimal psytrance is an amalgamation of various styles. To some, minimal psytrance is heard to derive some of its heritage from [techno](#). There is also a significant component of minimal psytrance which sounds as if it is derived from house music or otherwise utilizes elements typically found in house music, often specifically tech-house or minimal house.

Currently, Denmark, Sweden and Germany have created the most renowned minimalist labels. In the last couple of years Australia has added its own artists and labels to the minimalist trance scene.

## Minnesang

**Minnesang** was the tradition of lyric and [song](#) writing in Germany which flourished in the 12th century and continued into the 14th century. People who

wrote and performed Minnesang are known as **Minnesingers (Minnesänger)**. The name derives from the word *minne*, Middle High German for *love* which was their main subject, and an individual song was a *minneliet*. The **Minnesänger** were similar to the French [troubadours](#); they wrote love poetry in the courtly love tradition in Middle High German in the high middle ages.

## Social Status

In the absence of reliable biographical information, there has been debate about the social status of the Minnesanger. Some clearly belonged to the higher nobility - the 14th century Codex Manesse includes songs by dukes, counts, kings, and the Emperor Henry VI. Some Minnesänger, as indicated by the title Meister ("master"), were clearly educated commoners, such as Meister Konrad von Würzburg. It is thought that many were ministeriales, that is, members of a class of lower nobility, vassals of the great lords. Broadly speaking, the Minnesänger were writing and performing for their own social class at court, and should be thought of as courtiers rather than "professional" hired musicians. Friedrich von Husen, for example, was part of the entourage of Friedrich Barbarossa, and died on crusade. As a reward for his service, Walther von der Vogelweide was given a fief by the Emperor Frederick II.

Several of the best known Minnesingers are also noted for their epic poetry, among them Henric van Veldeke, Wolfram von Eschenbach and Hartmann von Aue.

## History

The earliest texts date from perhaps 1150, and the earliest named Minnesänger are Der von Kurenberg and Dietmar von Aist, clearly writing in a native German tradition in the 3rd quarter of the 12th century. This is referred to as the Danubian tradition.

From around 1170, German lyric poets came under the influence of the Provençal [troubadours](#) and the Northern French trouvères. This is most obvious in the adoption of the strophic form of the [canzone](#), at its most basic a seven-line stanza with the rhyme scheme ab|ab|cxc, and a musical AAB structure, but capable of many variations.

A number of songs from this period match trouvère originals exactly in form, indicating that the German text could have been sung to an originally French tune, which is especially likely where there are significant commonalities of content. Such songs are termed *contractures*. For example,

Friedrich von Hausen's "Ich denke underwilen" is regarded as a contracture of Guiot de Provins's "Ma joie premeraine".

By around 1190, the German poets began to break free of Franco-Provençal influence. This period is regarded as the period of *Classical Minnesang* with Albrecht von Johansdorf, Heinrich von Morungen, Reinmar von Hagenau developing new themes and forms, reaching its culmination in Walther von der Vogelweide, regarded both in the Middle Ages and in the present day as the greatest of the Minnesänger.

The later Minnesang, from around 1230 is marked by a partial turning away from the refined ethos of classical minnesang and by increasingly elaborate formal developments. The most notable of these later Minnesänger, Neidhart von Reuenthal introduces characters from lower social classes and often aims for humorous effects.

## Melodies

Only a small number of Minnelied melodies have survived to the present day, mainly in manuscripts dating from the 15th century or later, which may present the songs in a form other than the original one. Additionally, it is often rather difficult to interpret the [musical notation](#) used to write them down. Although the contour of the [melody](#) can usually be made out, the [rhythm](#) of the song is frequently hard to fathom.

There are a number of recordings of Minnesang using the original melodies, as well as Rock groups such as Ougenweide performing songs with modern instruments.

## Later developments

In the 15th century Minnesang developed into and gave way to the tradition of the Meistersingers. The two traditions are quite different, however (Minnesingers were mainly aristocrats, while Meistersingers were merchants, for example).

At least two [operas](#) have been written about the Minnesang tradition: Richard Wagner's Tannhäuser and Richard Strauss' Guntram.

## Notable Minnesänger

### Danubian Lyric

Dietmar von Aist  
Der Kurenberger  
Meinloh von Sevelingen

### **Early Courtly Lyric**

Friedrich von Hausen  
Kaiser Heinrich VI  
Heinrich von Veldeke or Henric van Veldeke

### **Classical Minnesang**

Albrecht von Johansdorf  
Gottfried von Strassburg  
Hartmann von Aue (1170-)  
Heinrich von Morungen  
Reinmar von Hagenau (- ca. 1210)  
Walter von der Vogelweide  
Wolfram von Eschenbach

### **Later Minnesang: 13th Century**

der Regenboge  
Friedrich von Sonnenburg  
Gottfried von Neifen  
Heinrich von Meissen (Frauenlob) (1250/1260-1318)  
Hugo von Montfort  
Konrad von Würzburg (1220/1230-1287)  
Neidhart von Reuenthal (1st half of the 13th century)  
Otto von Botenlauben  
Reinmar von Zweter (1200-after 1247)  
Der Tannhäuser  
Ulrich von Liechtenstein (ca. 1200-1275)  
Walther von Klingen (1240-1286)

### **Later Minnesang: 14th Century**

Johannes Hadlaub (End of 13th century - 1340)  
Muskatblüt  
Oswald von Wolkenstein

## **Famous Minnelied**

The following love poem, of unknown authorship, is found in a latin codex of the 12th century from the Tegernsee monastery.

### **Middle High German original**

Dû bist mîn ich bin dîn.  
des solt dû gewis sîn.  
dû bist beslozen  
in mînem herzen.  
verlorn ist das sluzzelfîn.  
dû muost immêr darinne sîn!

### **Modern German**

Du bist mein! Ich bin dein.  
Dessen sollst Du gewiss sein.  
Du bist fest  
In meinem Herzen.  
Verloren ist das Schlüsselein.  
Musst wohl für immer drinnen sein!

### **English**

You are mine, I am yours  
Of that you may be sure  
Deep within my heart  
You're safely locked away  
But I have lost the key  
And there you'll ever stay

## **Editions**

The standard collections are

- 12th and early 13th Century Minnesang (up to Reinmar von Hagenau):
  - H.Moser, H.Tervooren, *Des Minnesangs Frühling*.
    - Vol. I: Texts, 38th edn (Hirzel, 1988) ISBN 3777604488
    - Vol II: Editorial Principles, Melodies, Manuscripts, Notes, 36th edn (Hirzel, 1977) ISBN 3777603317
    - Vol III: Commentaries (Hirzel, 2000) ISBN 3777603686
- 13th Century Minnesang after Walther von der Vogelweide:
  - Carl v. Kraus, G.Kornrumpf, *Deutsche Liederdichter des 13. Jahrhunderts* (Niemeyer 1978) ISBN 3484102845.
- 14th and 15th centuries:
  - Thomas Cramer, *Die kleineren Liederdichter des 14. und 15. Jhs.*, 4 Vols (Fink 1979-1985)

There are separate editions of Walther's works, and of a number of the most prolific Minnesänger. There are many published selections with Modern German translation.

# Minstrel show

The **minstrel show**, or **minstrelsy**, was an indigenous form of American entertainment consisting of stereotypical comic skits, variety acts, [dancing](#), and [music](#), usually performed by white people in blackface. Although blackface dates back to as early as 1604,[1] the minstrel show as such has later origins. It began with brief burlesques and comic entr'actes in the early 1830s and emerged as a full-fledged form in the next decade. By the end of the 1850s, minstrel shows as such had become a "lifeless... [but] profitable" institution,[2] which lingered on for several decades. By the turn of the century, the minstrel show enjoyed but a shadow of its former popularity, having been replaced for the most part by vaudeville. It survived as professional entertainment until about 1910, and was performed by amateurs until 1950 or so. Blackface outlived minstrelsy by some decades, as it had preceded it.

Blackface minstrelsy was the first distinctly American theatrical form. In the 1830s and 1840s, it was at the core of the rise of an American [music industry](#), and for several decades it provided the lens through which white America saw black America. On the one hand, it had strong racist aspects; on the other, it resulted in the first broad awareness by white Americans of aspects of African American folk culture.

## History

### Early development

Blackface characters began appearing on the American stage by the late 17th century, usually as servant types with little role but to provide some element of comic relief.[3] Eventually, similar performers appeared in entr'actes in New York theaters and in less respectable venues like taverns and circuses. As a result, the blackface "Sambo" came to supplant the tall tale Yankee and Frontiersman characters in popularity. Charles Mathews, George Washington Dixon, and Edwin Forrest built reputations as blackface performers. In fact, Constance Rourke claimed that Forrest's impression was so good he could fool African Americans when he mingled with them in the streets.[4] It would be Thomas Dartmouth Rice's song and dance number "Jump Jim Crow" that would bring blackface performance to a new level of prominence in the early 1830s. At the height of Rice's success, The Boston Post wrote, "The two most popular characters in the world at the present are Victoria and Jim Crow." By the 1840s, blackface performers took to calling themselves "Ethiopian delineators" and performed solo and in small teams.

Blackface soon found a home in the taverns of New York's less respectable precincts of Lower Broadway, the Bowery, and Chatham Street. It also invaded the "respectable" stage as part of the era's general stratification of theaters. "Decent" houses at first limited the number of such acts they would show, but beginning in 1841, blackface performers frequently took to the stage at even the classy Park Theatre, much to the protest of some patrons. Theater was a participatory activity, and the lower classes came to dominate the playhouse. They threw things at actors or orchestras who performed unpopular material, and rowdy audiences eventually prevented the Bowery Theatre from staging high drama at all. Typical of the period were short burlesques, often with mock Shakespearean titles like "Hamlet the Dainty", "Bad Breath, the Crane of Chowder", "Julius Sneezer", or "Dars-de-Money".

Meanwhile, at least some whites were interested in black song and dance performed by actual African Americans. Nineteenth century New York slaves shingle danced for spare change on their days off, and musicians played what they claimed to be "Negro music" on so-called black instruments like the banjo. The New Orleans Picayune wrote that a singing New Orleans street vendor called Old Corn Meal would bring "a fortune to any man who would start on a professional tour with him".[7] Rice responded by adding a "Corn Meal" skit to his act. Meanwhile, there had been several attempts at legitimate black stage performance, the most ambitious probably being New York's African Grove theater, founded and operated by free blacks in 1821, with a repertoire drawing heavily on Shakespeare. It was harassed out of existence by authorities unwilling to tolerate its mostly black audiences behaving in the same boisterous manner typical of all New York theatergoers of the time.

White, working-class Northerners often identified with the characters portrayed in early blackface performances. This coincided with the rise of groups struggling for workingman's nativism and pro-Southern causes, and faux black performances came to confirm pre-existing racist concepts and to establish new ones. Following a pattern that had been pioneered by Rice, minstrelsy united workers and "class superiors" against a common black enemy, symbolized especially by the character of the black dandy. In this same period, the class-conscious but racially inclusive rhetoric of "wage slavery" was largely supplanted by a racist one of "white slavery". This suggested that the abuses against northern factory workers were a graver ill than the treatment of black slaves—or by a less class-conscious rhetoric of "productive" vs. "unproductive" elements of society. On the other hand, views on slavery were fairly evenly presented, and some songs even suggesting the creation of a coalition of working blacks and whites to end the institution.

Among the appeals and racial stereotypes of early blackface performance were the pleasure of the grotesque and its infantilization of blacks. These allowed (by proxy, and without full identification) childish fun and other "low" pleasures in an industrializing world where workers were increasingly expected

to abandon such things. Meanwhile, the more respectable could view the vulgar audience itself as a spectacle.

## Height

With the Panic of 1837, theater attendance suffered, and concerts were one of the few attractions that could still make money. In 1843, four blackface performers, led by Dan Emmett, combined to stage just such a concert at the New York Bowery Amphitheatre, calling themselves the Virginia Minstrels. The minstrel show as a complete evening's entertainment was born. The show had little structure. The four sat in a semicircle, played songs, and traded wisecracks. One gave a stump speech in dialect, and they ended with a lively plantation song. The term "minstrel" had previously been reserved for traveling white singing groups, but Emmett and company made it synonymous with blackface performance, and by using it, signalled that they were reaching out to a new, middle-class audience.[13] The Herald wrote that the production was "entirely exempt from the vulgarities and other objectionable features, which have hitherto characterized negro extravaganzas." [14] In 1845, the Ethiopian Serenaders purged their show of low humor as well and surpassed the Virginia Minstrels in popularity. Shortly thereafter, E. P. Christy founded Christy's Minstrels, combining the refined singing of the Ethiopian Serenaders (epitomized by the work of Christy's composer Stephen Foster) with the Virginia Minstrels' bawdy schtick. Christy's company also established the three-act template into which minstrel shows would fall for the next few decades. This change to respectability prompted theater owners to enforce new rules that made playhouses calmer and quieter.

Minstrels toured the same circuits as opera companies, circuses, and European itinerant entertainers, with venues ranging from lavish opera houses to makeshift tavern stages. Life on the road entailed "endless series of one-nighters, travel on accident-prone railroads, [living] in poor housing subject to fires, [playing] in empty rooms that they had to convert into theaters, [facing] arrest on trumped up charges, [being] exposed to deadly diseases, and [enduring] managers and agents who skipped out with all the troupe's money." The more popular groups stuck to the main circuit that ran through the Northeast or even went to Europe, which allowed their competitors to establish themselves in their absence. By the late 1840s, a southern tour had opened from Baltimore to New Orleans, ending with a boat ride up the Mississippi. Circuits through the Midwest and as far as California followed by the 1860s. As its popularity increased, theaters sprang up specifically for minstrel performance, often with names such as the "Ethiopian Opera House". Many amateur troupes performed only a few local shows before disbanding. Meanwhile, celebrities like Emmett continued to perform a solo act, as well.

The rise of the minstrel show coincided with the growing abolitionist movement. Many Northerners were concerned for the oppressed blacks of the South, but most had no idea how these slaves lived day-to-day. Blackface performance had been inconsistent on this subject; some slaves were happy, others victims of a cruel and inhuman institution.[16] However, in the 1850s minstrelsy became decidedly mean-spirited and pro-slavery as race replaced class as its main focus.[17] Most minstrels projected a greatly romanticized and exaggerated image of black life with cheerful, simple slaves always ready to sing and dance and to please their masters. (Less frequently, the masters cruelly split up black lovers or sexually assaulted black women.) The lyrics and dialogue were generally racist, satiric, and of largely white origin. Songs about slaves yearning to return to their masters were plentiful, and some of these are still popular today, such as "Dixie", "Carry Me Back to Old Virginny", and "My Old Kentucky Home". The message was clear: do not worry about the slaves; they are happy with their lot in life. Moreover, figures like the Northern dandy and the homesick ex-slave reinforced the idea that African Americans did not belong, nor want to belong, in Northern society.

Minstrelsy's reaction to Uncle Tom's Cabin is indicative of plantation content at the time. "Tom acts" largely came to replace other plantation narratives, particularly in the third act. These sketches sometimes supported Stowe's novel, but just as often they turned it on its head or attacked the author. Whatever the intended message, it was usually lost in the joyous, slapstick atmosphere of the piece. Characters such as Simon Legree sometimes disappeared, and the title was frequently changed to something more cheerful like "Happy Uncle Tom" or "Uncle Dad's Cabin". Uncle Tom himself was frequently portrayed as a harmless bootlicker to be ridiculed. Some troupes, known as "Tommer" companies, came to specialize in such burlesques, and theatrical "Tom shows" integrated elements of the minstrel show and competed with it for at time.

Minstrelsy's racism (and misogyny) could be rather vicious. There were "comic" songs in which blacks were "roasted, fished for, smoked like tobacco, peeled like potatoes, planted in the soil, or dried up and hung as advertisements", and there were multiple songs in which a black man accidentally put out a black woman's eyes. On the other hand, the fact that the minstrel show broached the subjects of slavery and race at all is perhaps more significant than the racist manner in which it did so. Despite these pro-plantation attitudes, minstrelsy was banned in many Southern cities. Its association with the North was such that as secessionist attitudes grew stronger, minstrels on Southern tours became convenient targets of anti-Yankee sentiment.

What humor was not specifically race-related came from lampoons of other subjects, including aristocratic whites such as politicians, doctors, and lawyers. Women's rights was the only other serious subject to appear with any

regularity in antebellum minstrelsy, almost always to ridicule the notion. The women's rights lecture became common in stump speeches. When one character joked, "Jim, I tink de ladies oughter vote," another replied, "No, Mr. Johnson, ladies am supposed to care berry little about polytick, and yet de majority ob em am strongly tached to parties." [22] Most minstrel humor was simple and relied heavily on slapstick and wordplay. Performers also told nonsense riddles: "The difference between a schoolmaster and an engineer is that one trains the mind and the other minds the train."

With the outbreak of the Civil War, minstrels remained mostly neutral and satirized both sides. However, as the war reached Northern soil, troupes turned their loyalties to the Union. Sad songs and sketches came to dominate in reflection of the mood of a bereaved nation. Troupes performed skits about dying soldiers and their weeping widows, and about mourning white mothers. "Weeping, Sad, and Lonely" became the hit of the period, selling over a million copies of sheet music. To balance the somber mood, minstrels put on patriotic numbers like "The Star Spangled Banner", accompanied by depictions of scenes from American history that lionized figures like George Washington and Andrew Jackson. Social commentary grew increasingly important to the show. Performers criticized Northern society and those they felt responsible for the breakup of the country, who opposed reunification, or who profited from a nation at war. Emancipation was either opposed through happy plantation material or mildly supported with pieces that depicted slavery in a negative light. Eventually, direct criticism of the South became more biting.

## **Decline**

Those minstrels who stayed in New York and similar cities followed Barnum's lead by advertising relentlessly and emphasizing the spectacle of minstrelsy. Troupes ballooned; as many as 19 performers could be on stage at once, and J. H. Haverly's United Mastodon Minstrels had over 100 members. [25] Scenery grew lavish and expensive, and specialty acts like Japanese acrobats or circus freaks sometimes appeared. These changes made many minstrel shows unprofitable for smaller troupes, who complained loudly about them.

Minstrels also fragmented to satisfy outlying tastes. Female acts had made a stir in variety shows, and Madame Rentz's Female Minstrels ran with the idea, first performing in 1870 in skimpy costumes and tights. Their success gave rise to at least 11 all-female troupes by 1871, one of which did away with the convention of blackface altogether. Ultimately, the "girlie show" emerged as a form in its own right. Mainstream minstrelsy continued to emphasize its propriety, but traditional troupes adopted some of these elements in the guise

of the female impersonator. A well-played wench character became critical to success in the postwar period.

This new minstrelsy maintained the emphasis on refined music. Most troupes added jubilees, or African American [spirituals](#), to their repertoire in the 1870s. These were fairly authentic religious slave songs borrowed from traveling black singing groups. Other troupes drifted further from minstrelsy's roots. When George Primrose and Billy West broke with Haverly's Mastadons in 1877, they did away with blackface for all but the endmen and dressed themselves in lavish finery and powdered wigs. They decorated the stage with elaborate backdrops and performed no slapstick whatsoever. Their brand of minstrelsy differed from other entertainments only in name.

Social commentary continued to dominate the content of most performances, with plantation material constituting only a small part of the repertoire. This effect was amplified as black minstrelsy took off in its own right and stressed its connection to the old plantations. The main target of criticism was the moral decay of the urbanized North. Cities were painted as corrupt, as homes to unjust poverty, and as dens of "city slickers" who lay in wait to prey upon new arrivals. Minstrels stressed traditional family life; stories told of reunification between mothers and sons thought dead in the war. Women's rights and disrespectful children, low church attendance, and sexual promiscuity became symptoms of decline in family values and of moral decay. Of course, Northern black characters carried these vices even further. African American members of Congress were one example, pictured as pawns of the Radical Republicans.

By the 1890s, minstrelsy formed only a small part of American entertainment, and by 1919 a mere three troupes dominated the scene. Small companies carried the traditional minstrel show into the 20th century, now with an audience mostly in the rural South, while black-owned troupes continued traveling to more outlying areas like the West. These black troupes were one of minstrelsy's last bastions, as more white actors moved into vaudeville.

## **Black minstrelsy**

In the 1840s and 50s, William Henry Lane and Thomas Dilward became the first African Americans to perform on the minstrel stage. All-black troupes followed as early as 1855. These companies emphasized that their ethnicity made them the only true delineators of black song and dance, with one advertisement describing a troupe as "SEVEN SLAVES just from Alabama, who are EARNING THEIR FREEDOM by giving concerts under the guidance of their Northern friends." White curiosity proved a powerful motivator, and the shows were patronized by people who wanted to see blacks acting "spontaneously" and "naturally", as if on exhibit. Promoters seized on this, one

billing his troupe as "THE DARKY AS HE IS AT HOME, DARKY LIFE IN THE CORNFIELD, CANEBRAKE, BARNYARD, AND ON THE LEVEE AND FLATBOAT." Keeping with convention, black minstrels still corked the faces of at least the endmen. One commentator described a mostly uncorked black troupe as "mulattoes of a medium shade except two, who were light . . . The end men were each rendered thoroughly black by burnt cork." The minstrels themselves also promoted their performing abilities, often quoting reviews that favorably compared them to popular white troupes. These black companies often featured female minstrels, as well.

One or two African American troupes dominated the scene for much of the late 1860s and 1870s. The first of these was Brooker and Clayton's Georgia Minstrels, who played the Northeast around 1865. Sam Hague's Slave Troupe of Georgia Minstrels formed shortly thereafter and toured England to great success beginning in 1866. In the 1870s, white entrepreneurs bought most of the successful black companies. Charles Callender obtained Sam Hague's troupe in 1872 and renamed it Callender's Georgia Minstrels. They became the most popular black troupe in America, and the words "Callender" and "Georgia" came to be synonymous with the institution of black minstrelsy. J. H. Haverly in turn purchased Callender's troupe in 1878 and applied his strategy of enlarging troupe size and embellishing sets. When this company went to Europe, Gustave and Charles Frohman took the opportunity to promote their Callender's Consolidated Colored Minstrels. Their success was such that the Frohmans bought Haverly's group and merged it with theirs, creating a virtual monopoly on the market. The company split in three to better canvas the nation, dominating black minstrelsy throughout the 1880s. At the same time, individual black performers like Billy Kersands, James Bland, Sam Lucas, and Wallace King grew famous as any featured white performer.

Racism made black minstrelsy a difficult profession. When playing Southern towns, performers had to stay in character even off stage, dressed in ragged "slave clothes" and perpetually smiling. Troupes left quickly after each performance, and some had so much trouble securing lodging that they hired out whole trains or had cars custom built to sleep in, complete with hidden compartments in which to hide should things turn ugly. Even these were no haven, as whites sometimes used the cars for target practice. Their salaries, though higher than those of most blacks of the period, failed to reach levels earned by white performers; even superstars like Kersands earned slightly less than featured white minstrels. Unsurprisingly, most black troupes did not last long.

In content, early black minstrelsy differed little from its white counterpart. As white troupes drifted from plantation subjects in the mid-1870s however, black troupes placed a new emphasis on it. The addition of jubilee singing gave black minstrelsy a popularity boost as the black troupes were rightly believed to be the most authentic performers of such material. Other significant

differences were that the black minstrels added religious themes to their shows while whites shied from them, and that the black companies commonly ended the first act of the show with a military high-stepping, [brass band](#) burlesque, a practice adopted after Callender's Minstrels used it in 1875 or 1876. Although black minstrelsy lent credence to racist ideals of blackness, many African American minstrels worked to subtly alter these stereotypes and to poke fun at white society. One jubilee described heaven as a place "where de white folks must let the darkeys be" and they could not be "bought and sold". In plantation material, old darkey characters were rarely reunited with long-lost masters like they were in white minstrelsy.

African Americans formed a large part of the black minstrels' audience, especially for smaller troupes. In fact, their numbers were so great that many theater owners had to relax rules relegating black patrons to certain areas. Theories as to why blacks would look favorably upon negative images of themselves vary. Perhaps they felt in on the joke, laughing at the over-the-top characters from a sense of "in-group recognition". Maybe they even implicitly endorsed the racist antics, or they felt some connection to elements of an African culture that had been suppressed but was visible, albeit in racist, exaggerated form, in minstrel personages. They certainly got many jokes that flew over whites' heads or registered as only quaint distractions. Another draw for black audiences was simply seeing fellow African Americans on stage; black minstrels were largely viewed as celebrities. Educated African Americans, on the other hand, either disregarded black minstrelsy or openly disdained it. Still, black minstrelsy was the first large-scale opportunity for African Americans to enter American show business.

## Structure

The Christy Minstrels established the basic structure of the minstrel show in the 1840s. A parade to the theater often preceded the performance, as it gathered a crowd of potential ticket buyers. The performance itself was divided into three major sections. During the first, the entire troupe danced onto stage singing a popular song and doing a dance called the "walk around". Upon the instruction of the *interlocutor*, a sort of host, they then arranged themselves in a semicircle and sat down. Various stock characters always took the same positions: the genteel interlocutor sat in the middle, flanked by *Tambo* and *Bones*, who served as the *endmen* or *cornermen*. The interlocutor and the endmen then exchanged jokes and performed a variety of humorous songs. Over time, this part also came to include maudlin numbers not always performed in dialect. One minstrel, usually a [tenor](#), came to specialize in this

part, and many such singers became celebrities, especially with women. An upbeat plantation song and dance ended the act.

The second portion of the show, called the *olio*, was historically the last to evolve, as its real purpose was to allow for the setting of the stage for act three behind the curtain. It had more of a variety-show structure. Performers would dance, play instruments, do acrobatics, and demonstrate other amusing talents. Parodies of European-style entertainments were offered, and European troupes themselves sometimes performed. The highlight was when one actor, typically one of the endmen, delivered a stump speech in a black version of the dialect used by Frontiersman and Yankee stage characters. These were long orations, often about society and politics, during which the dim-witted character tried to speak eloquently, only to deliver countless malapropisms, jokes, and unintentional puns. Topics ranged from random nonsense to contemporary social issues. All the while, the speaker moved about like a clown, standing on his head and almost always falling off of his stump at some point. With blackface makeup serving as fool's mask, these stump speakers could deliver biting social criticism without offending the audience, though the focus was usually on sending up unpopular issues as well as making fun of blacks' ability to make sense of them. Many troupes developed a stump specialist with a trademark style and material.

The afterpiece rounded out the production. In the early days of the minstrel show, this was often a skit set on a Southern plantation that usually included song-and-dance numbers and featured Sambo- and Mammy-type characters in slapstick situations. The emphasis lay on the "simple glorification of plantation life and the presentation of happy, contented slaves."<sup>[36]</sup> Nevertheless, antislavery viewpoints sometimes played a part, mostly with respect to family members separated by slavery, runaways, or even slave uprisings.<sup>[36]</sup> A few stories highlighted black trickster figures who managed to get the better of their masters.<sup>[37]</sup> Beginning in the mid-1850s, performers began to perform burlesque renditions of other plays; both Shakespeare and contemporary playwrights were common targets. The humor of these came from the inept black characters trying to perform some element of high white culture. Slapstick humor pervaded the afterpiece, including cream pies to the face, inflated bladders, and on-stage fireworks. Material from *Uncle Tom's Cabin* dominated beginning in 1853. The afterpiece allowed the minstrels to introduce new characters, some of whom became quite popular and spread from troupe to troupe.

## Characters

The earliest minstrel characters took as their base popular white stage archetypes — frontiersmen, fishermen, hunters, and riverboatmen whose depictions drew heavily from the tall tale — and added exaggerated blackface speech and makeup. These Jim Crows and Gumbo Chaffs fought and boasted that they could "wip [their] weight in wildcats" or "eat an alligator".[38] As public opinion changed, however, so did the Negro stereotypes in minstrelsy. Eventually, several stock characters emerged, each representing a specific black stereotype. Chief among these were the slave, who often maintained the earlier name Jim Crow, and the dandy, known frequently as Zip Coon. The two formed a dichotomy of blackness, both equally ludicrous.

The white actors who portrayed these characters spoke an ersatz, exaggerated form of Black English Vernacular. These characters were stupid and silly at best, grotesque and alien at worst. The blackface makeup and illustrations on programs and sheet music depicted them with huge eyeballs, overly wide noses, and thick-lipped mouths that hung open or grinned foolishly; one character expressed his love for a woman with "lips so large a lover could not kiss them all at once". They had huge feet. They preferred "possum" and "coon" to more civilized fare. Minstrel characters were also described in animalistic terms. They had "wool" instead of hair, and they "bleated" like sheep. They had "darky cubs", not children. Other ludicrous claims were that blacks had to drink ink when they got sick "to restore their color" and that they had to file their hair rather than cut it. They were also inherently musical, dancing and frolicking through the night with no need for sleep.

Thomas "Daddy" Rice introduced the earliest slave archetype when he first performed "Jump Jim Crow" and its accompanying dance. He claimed to have learned the dance by watching an old, limping black stable hand who was dancing and singing, "Wheel about and turn about and do jus' so/Eb'ry time I wheel about I jump Jim Crow." Other early minstrel performers quickly adopted Rice's Jim Crow, and the character would later give his name to the racial segregation laws of the 1870s.

Jim Crow and slave characters in general eventually came to be low-comedy types, and the name changed to match the instruments they played: Brudder Tambo (or simply Tambo) for the tambourine and Brudder Bones (or Bones) for the bone castanets. These "endmen" (for their position in the minstrel semicircle) were ignorant and poorly spoken, being conned, electrocuted, or run over. They also happily shared their stupidity; one slave character said that to get to China, one had only to go up in a balloon and wait for the world to rotate below. They were also highly musical and unable to sit still, constantly contorting their bodies wildly while singing.

Tambo and Bones' simple-mindedness and lack of sophistication were highlighted by playing them off a straight man master of ceremonies called the interlocutor. This character, though usually in blackface, spoke in aristocratic English and used a much larger vocabulary. The humor of these exchanges

came from the misunderstandings on the part of the endmen when talking to the interlocutor:

**Interlocutor:** I'm astonished at you, Why, the idea of a man of your mental calibre talking about such sordid matters, right after listening to such a beautiful song! Have you no sentiment left?

**Tambo:** No, I haven't got a cent left.

Tambo and Bones were favorite characters of the audience, and their repartee with the interlocutor was for many the best part of the show. There was also an element of laughing with them for the audience, as they frequently made light of the interlocutor's grandiose ways.

The interlocutor was also responsible for beginning and ending each segment of the show. To this end, he had to be able to gauge the mood of the audience and know when it was time to move on. Accordingly, the actor who played the role was paid very well in comparison to other non-featured performers.

There were many variants on the slave archetype. The old darky or old uncle formed the head of the idyllic black family. Like other slave characters, he was highly musical and none-too-bright, but he also had favorable aspects like his loving nature and the sentiments he raised regarding love for the aged, ideas of old friendships, and the cohesiveness of the family. His death was a common theme in sentimental songs, as well as the pain it caused his master. Alternatively, the master could die, leaving the old darky to mourn. Stephen Foster's "Old Uncle Ned" is the most popular song on this subject. Less frequently, the old darky might be cast out by a cruel master when he grew too old to work. After the Civil War, this character became the most common figure in plantation sketches. He frequently cried about the loss of his home during the war, only to meet up with someone from the past such as the child of his former master. In contrast, the trickster appeared less frequently, often called "Jasper Jack". By outsmarting his white master, he exemplified antislavery sentiment.

Female characters ranged from the sexually provocative wench to the laughable funny old gal. These roles were almost always played by men (most famously Barney Williams, George Christy, and Francis Leon) in drag, even though American theater outside of minstrelsy was filled with actresses at this time. Mammy or the old auntie was the old darky's counterpart. She often went by the name of "Aunt Dinah Roh" after the song of that title. Mammy was lovable to both blacks and whites, matronly, but also hearkening to European peasant woman sensibilities. Her main role was to be the devoted mother figure in scenarios about the perfect plantation family.

The wench, yaller gal, or prima donna was a mulatto who combined the light skin and facial features of a white woman with the perceived sexual

promiscuity and exoticism of a black woman. Her beauty and flirtatiousness made her a common target for male characters, though she usually proved capricious and elusive. After the Civil War, the wench emerged as the most important specialist role in the minstrel troupe; men could alternately be titillated and disgusted, while women could admire the illusion and high fashion.[46] The role was most strongly associated with the song "Lucy Long", so the character many times bore that name. Actress Olive Logan commented that some actors were "marvelously well fitted by nature for it, having well-defined soprano voices, plump shoulders, beardless faces, and tiny hands and feet." Many of these actors were teen-aged boys. In contrast was the "funny old gal", a slapstick role played by a large man in motley clothing and large, flapping shoes. The humor she invoked often turned on the male characters' desire for a woman who would be perceived by the audience as unattractive.

The counterpart to the slave was the dandy, a common character in the afterpiece. He was a northern urban black man trying to live above his station by mimicking white, upper-class speech and dress—usually to no good effect. Dandy characters often went by Zip Coon, after the song popularized by George Washington Dixon, though others had pretentious names like "Count Julius Caesar Mars Napoleon Sinclair Brown". Their clothing was a ludicrous parody of upper-class dress: coats with tails and padded shoulders, white gloves, monocles, fake mustaches, and gaudy watch chains. They spent their time primping and preening, going to parties, dancing and strutting, and wooing women. Like other urban black characters, the dandies' pretentiousness showed that they had no place in white society while sending up adverse social changes like *nouveau-riche* white culture.

The black soldier became another stock type during the Civil War and merged qualities of the slave and the dandy. He was acknowledged for playing some role in the war, but he was more frequently lampooned for bumbling through his drills or for putting on airs, thinking his uniform made him the equal of his white counterparts. He was usually better at retreating than fighting, and, like the dandy, he preferred partying to serious pursuits. Still, his introduction allowed for some return to themes of the breakup of the plantation family.

Non-black stereotypes also played a significant role in minstrelsy, and although still performed in blackface, were distinguished by their lack of black dialect. Native Americans before the Civil War were usually depicted as innocent symbols of the pre-industrial world or as pitiable victims whose peaceful existence had been shattered by the encroachment of the white man. As the United States turned its attentions West, however, Native Americans became savage, pagan obstacles to progress. These characters were formidable scalpers to be feared, not ridiculed; any humor in such scenarios usually derived from a black character trying to act like one of the frightful savages. One sketch began with white men and Native Americans enjoying a communal meal in a frontier setting. As the Native Americans became

intoxicated, they grew more and more antagonistic, and the army ultimately had to intervene to prevent the massacre of the whites. Even favorably presented Native American characters usually died tragically. The message conveyed was that such people had no place in American society.

Minstrels caricatured East Asians by their strange language ("ching chang chung"), odd eating habits (dogs and cats), and propensity for wearing pigtails. These depictions began during the California Gold Rush when minstrels encountered Chinese out West. Parodies of Japanese acrobats also became popular when a Japanese troupe toured the U.S. beginning in 1865. A run of Gilbert and Sullivan's *Mikado* in the mid-1880s inspired another wave of Asian characterizations.

The few white characters in minstrelsy were stereotypes of immigrant groups like the Germans and Irish. Irish characters first appearing in the 1840s, stereotyped as hotheaded, odious drunkards who spoke in a thick brogue. This portrayal was a reaction to both the Irish's Catholicism and their willingness to work for cheap wages, which frightened non-Irish workers. However, beginning in the 1850s, many Irishmen joined minstrelsy, and Irish theatergoers probably came to represent a significant part of the audience, so this negative image was muted. By the 1870s, the Irish were mostly portrayed in a positive light, still ready to fight and drink, but otherwise like any other white audience member.

Germans, on the other hand, were portrayed favorably from their introduction to minstrelsy in the 1860s. They were responsible and sensible, though still humorous for their large size, hardy appetites, and heavy "Dutch" accents. Part of this positive portrayal no doubt came about because some of the actors portraying German characters were German themselves.

## Music and dance

Music and dance were the heart of the minstrel show and a large reason for its popularity. Troupes marketed sheet music of the songs they featured so that viewers could enjoy them at home and other minstrels could adopt them for their act. Early blackface songs often consisted of unrelated verses strung together by a common chorus. In this pre-Emmett minstrelsy, the music "jangled the nerves of those who believed in music that was proper, respectable, polished, and harmonic, with recognizable melodies."

How much influence African American music had on minstrel performance remains a debated topic. Minstrel music certainly contained some element of black culture, added onto a base of European tradition with distinct Irish and Scottish [folk music](#) influences being prevalent. Cockrell argues that early minstrel music mixed both African and European traditions and that

distinguishing black and white urban music during the 1830s is impossible. The earliest minstrels might very well have observed black music either in the South or while working alongside blacks in the North or on riverboats. The inauthenticity of the music and the Irish and Scottish elements in it are explained by the fact that slaves were rarely allowed to play native African music and therefore had to adopt and adapt elements of European folk music.

Minstrel music in the time of Rice was thus a juxtaposition of "vigorous earth-slapping footwork of black dances ... with the Irish lineaments of blackface jigs and reels." The minstrel show texts sometimes even mixed black lore (including stories about talking animals or slave tricksters) with humor from the region southwest of the Appalachians, itself a mixture of traditions from different races and cultures. Minstrel instruments were also a *mélange*: African banjo, bones, and tambourine with European fiddle. In short, early minstrel music and dance was not true black culture; it was a white reaction to it. It was also "the first concerted appropriation of and commercial exploitation of a black expressive form."

In the late 1830s, a decidedly European structure and "refined" style became all the rage. The banjo, played with "scientific touches of perfection" and popularized by Joel Sweeney, became the heart of the minstrel band. Songs like the Virginia Minstrels' hit "Old Dan Tucker" have a catchy tune, a "rhythmic energy [that] propels the song along", and a "harmonic scheme" to "[support] the melody". Minstrel music was now for singing as well as dancing. Some commentators even described the music as vulgar because it was "entirely too elegant" and that the "excellence" of the singing "[was] an objection to it." Others complained that the minstrels had foregone their black roots. In short, the Virginia Minstrels and their imitators wanted to please a new audience of predominantly white, middle-class Northerners, by playing music the spectators would find familiar and pleasant.

Despite the elements of ridicule contained in blackface performance, mid-19th century white audiences by and large believed the songs and dances to be authentically black. For their part, the minstrels always billed themselves and their music as such. The songs were called "plantation melodies" or "Ethiopian choruses", among other names. By using the black caricatures and so-called black music, the minstrels added a touch of the unknown to the evening's entertainment, which was enough to fool audiences into accepting the whole performance as authentic. Furthermore, the white minstrel performers had little ready access to authentic black music, anyway. They could not have learned and played it without traveling to the South, and slave owners were wary of slave music in the first place. Compounding the problem is the difficulty in ascertaining how much minstrel music was written by black composers, as the custom at the time was to sell all rights to a song to publishers or other performers. Insofar as the minstrels had authentic contact with black culture, it was via neighborhoods, taverns, theaters, and waterfronts

where blacks and whites could mingle freely. Many troupes claimed nevertheless to have carried out more serious "fieldwork".

The minstrels' dance styles, on the other hand, were much more true to their alleged source. The success of "Jump Jim Crow" is indicative: It was an old English tune with fairly standard lyrics, which leaves only Rice's dance—wild upper-body movements with little movement below the waist—to explain its popularity. Dances like the Turkey Trot, the Buzzard Lope, and the Juba Dance all had their origins in the plantations of the South, and some were popularized by black performers such as William Henry Lane, Signor Cornmeali ("Old Corn Meal"), and John "Picayune" Butler. One performance by Lane in 1842 was described as consisting of "sliding steps", like a shuffle, and not the high steps of an Irish jig."<sup>[60]</sup> Lane and the white men who mimicked him moved about the stage with no obvious foot movement. The "walkaround" is of West African origin. A common feature of the minstrel show's first act, it featured a competition between individuals hemmed in by the other minstrels. Elements of white tradition remained, of course, such as the fast-paced "breakdown" that formed part of the repertoire beginning with Rice. Minstrel dance was generally not held to the same mockery as other parts, though contemporaries such as Fanny Kemble argued that minstrel dance was merely a "faint, feeble, impotent—in a word, pale Northern reproductions of that ineffable black conception."

The introduction of the "jubilee", or African American [spiritual](#), marked the minstrels' first undeniable adoption of black music. These songs remained relatively African American in nature, antiphonal with a repetitive structure that relied heavily on call and response. The black troupes sang the most authentic jubilees, while white companies inserted humorous verses and replaced religious themes with plantation imagery, often starring the Old Darky. "Jubilee" eventually became synonymous with "plantation".

## Legacy

Minstrel-show characters played a powerful role in shaping assumptions about African Americans. However, unlike vehemently anti-black propaganda from the time, minstrelsy made this attitude palatable to a wide audience by couching it in the guise of well intentioned paternalism. Black Americans were in turn expected to uphold these stereotypes, or else risk white retaliation.

Popular entertainment perpetuated the racist stereotype of the uneducated, ever-cheerful, and highly musical black well into the 1950s. Even as the minstrel show was dying out in all but amateur theater, blackface performers became common acts on vaudeville stages and in legitimate drama. These entertainers kept the familiar songs, dances, and pseudo-black dialect, often in

nostalgic looks back at the old minstrel show. The most famous of these performers is probably Al Jolson, who took blackface to the big screen in the 1920s in films such as *The Jazz Singer* (1927). Likewise, when the sound era of cartoons began in the late 1920s, early animators such as Walt Disney gave characters like Mickey Mouse (who already resembled blackface performers) a minstrel-show personality as well; the early Mickey is constantly singing and dancing and smiling.[63] Radio shows also got into the act, a fact perhaps best exemplified by the popular Amos & Andy program. As recently as the mid-1970s the BBC screened *The Black and White Minstrel Show* on television, starring the George Mitchell Minstrels. The racist archetypes that blackface minstrelsy helped to create still persist to this day; some argue that this is even true in hip-hop culture and movies. The 2000 Spike Lee movie *Bamboozled* alleges that modern black entertainment is nothing more than an outgrowth of the minstrel shows of a century past, for example.

Meanwhile, African American actors were limited to the same old minstrel-defined roles for years to come and by playing them, made them more believable to white audiences. On the other hand, these parts opened the entertainment industry to African American performers and gave them their first opportunity to alter those stereotypes. Many famous singers and actors gained their start in black minstrelsy, including Ma Rainey, Ida Cox, Ethel Waters, Bessie Smith, and Butterbeans and Susie.

The very structure of American entertainment also bears minstrelsy's imprint. The endless barrages of gags and puns appear in the work of the Marx Brothers and David and Jerry Zucker. The varied structure of songs, gags, and dramatic pieces continued into vaudeville, variety shows, and to modern sketch comedy shows like *Hee Haw* or, more distantly, *Saturday Night Live* and *In Living Color*. Jokes once delivered by endmen are still told today: "Why did the chicken cross the road?" "Why does a fireman wear red suspenders?" Other jokes form part of the repertoire of modern comedians: "Who was that lady I saw you with last night? That was no lady—that was my wife!"

Another important legacy of minstrelsy is its music. Many minstrel tunes are still popular folk songs sung today. Most have been expunged of the exaggerated black dialect and the overt references to blacks. "Dixie", for example, was adopted by the Confederacy as its unofficial national anthem and remains popular today, and "Carry Me Back to Old Virginny" was sanitized and made the state song of Virginia (until 1997, when its association with racism resulted in its removal as state song).[65] "My Old Kentucky Home" remains the state song of Kentucky. The instruments of the minstrel show were also largely kept on, especially in the South. Minstrel performers from the last days of the shows, such as Uncle Dave Macon, helped popularize instruments such as the banjo and fiddle in modern Country-Western music. And by introducing America to black dance and musical style, minstrelsy opened the nation to black cultural forms for the first time on a large scale.

## Mixing console

In professional audio, a **mixing console**, **mixing desk** (Brit.), or **audio mixer**, also called a **sound board** or **soundboard**, is an electronic device for combining (also called "mixing"), routing, and changing the level, tone, and/or dynamics of audio signals. A mixer can mix analog or digital signals, depending on the type of mixer. The modified signals (voltages or digital samples) are summed to produce the combined output signals.

Mixing consoles are used in many applications, including recording studios, public address systems, sound reinforcement systems, broadcasting, television, and film post-production. An example of a simple application would be to enable the signals that originated from two separate microphones (each

being used by vocalists singing a duet, perhaps) to be heard through one set of speakers simultaneously. When used for live performances, the signal produced by the mixer will usually be sent directly to an amplifier, unless that particular mixer is “powered” or it is being connected to powered speakers.

## Structure

The input strip is usually separated into these sections:

- Input Jacks
- Input Section
- EQ Section
- AUX Section
- Fader / Bus

On the Yamaha Console to the right, these sections are color coded.

Each signal that is input into the mixer has its own channel. Depending on the specific mixer, each channel is stereo or monaural. On most mixers, each channel has an XLR input, and many have RCA or quarter-inch Jack plug line inputs.

Below each input, there are usually several rotary controls (knobs, pots). The first is typically a *trim* or *gain* control. The inputs buffer the signal from the external device and this controls the amount of amplification or attenuation needed to bring the signal to a nominal level for processing. This stage is where most noise or interference is picked up, due to the high gains involved (around +50 dB, for a microphone). Balanced inputs and connectors, such as XLR or Tip-Ring-Sleeve (TRS) quarter-inch connectors, reduce interference problems.

There may be *insert* points after the buffer/gain stage, which are used to send to and return from external processors which should only affect the signal of that particular channel. Insert points are most commonly used with effects that control a signal's amplitude, such as noise gates, expanders, and compressors.

The Aux sends are used to send the incoming signal to external devices. Aux sends can either be pre-fade or post-fade, in that the level of a pre-fade send is set by the control, whereas post-fade depend on the position of the channel fader as well. Aux sends can be used to send the signal to an external processor such as a reverb, which can then be routed back through another channel or designated aux returns on the mixer. These will normally be post-fader. Pre-fade aux's are used to provide a monitor mix to musicians onstage, this mix is thus independent of the main mix.

Further channel controls affect the equalization of the signal by separately attenuating or boosting a range of frequencies (e.g., bass, midrange, and treble frequencies). Most large mixing consoles (24 channels and larger) usually have sweep equalization in one or more bands of its parametric equalizer on each channel, where the frequency and affected bandwidth of equalization can be selected. Smaller mixing consoles have few or no equalization control. Some mixers have a general equalization control (either graphic or parametric).

Each channel on a mixer has an audio taper pot, or potentiometer, controlled by a sliding volume control (*fader*), that allows adjustment of the level, or amplitude, of that channel in the final *mix*. A typical mixing console has many rows of these sliding volume controls. Each control adjusts only its respective channel (or one half of a stereo channel); therefore, it only affects the level of the signal from one microphone or other audio device. The signals are summed to create the main *mix*, or combined on a *bus* as a submix, a group of channels that are then added to get the final mix (for instance, many drum mics could be grouped into a bus, and then the proportion of drums in the final mix can be controlled with one bus fader).

There may also be *insert* points for a certain bus, or even the entire mix.

On the right hand of the console, there are typically one or two master controls that enable adjustment of the console's main mix output level.

Finally, there are usually one or more VU or peak meters to indicate the levels for each channel, or for the master outputs, and to indicate whether the console levels are overmodulating or clipping the signal. Most mixers have at least one additional output, besides the main mix. These are either individual bus outputs, or auxiliary outputs, used, for instance, to output a different mix to on-stage monitors. The operator can vary the mix (or levels of each channel) for each output.

As audio is heard in a logarithmic fashion (both amplitude and frequency), mixing console controls and displays are almost always in decibels, a logarithmic measurement system. This is also why special audio taper pots or circuits are needed. Since it is a relative measurement, and not a unit itself (like a percentage), the meters must be referenced to a nominal level. The "professional" nominal level is considered to be +4 dBu. The "consumer grade" level is 10 dBV.

For convenience, some mixing consoles rack's contain a patch bay or patch panel. These maybe more useful for those not using a computer with several plugins on their software.

Toshimaru Nakamura is perhaps the first person to use a mixing board as a musical instrument.

Most, but not all, audio mixers can

- add external effects.
- use monaural signals to produce stereo sound by adjusting the position of each signal on the sound stage (pan and balance controls).
- provide phantom power (typically 48 volts) required by some microphones.
- create an audible tone via an oscillator, usually at 440Hz, 1 kHz, or 2 kHz

Some mixers can

- add effects internally.
- interface with computers or other recording equipment (to control the mixer with computer presets, for instance).
- be powered by batteries.

## Mobb Music

**Mobb Music** is a style of [west coast rap](#) music that began in the San Francisco Bay Area in the late 1980s. The basic instrumental style is derived primarily from [funk music](#), with a heavy focus on synthesizers, ultra low bass lines and Roland TR-808 drums. The lyrics tend to deal with same subject matter as [G-Funk](#) did in southern california (i.e. Sex, Violence, Drugs).

The sound of Mobb Music, can be attributed to a host of producers such as Mike Mosley, Sean T, One Drop Scott, Cellski, Ant Banks, JT the Bigga Figga, DJ Darryl, Khayree, Ric Roc, and Studio Tone. Bay Area hip hop artists, E-40, B-Legit, Suga-T, D-Shot, Too \$hort, Mac Dre, San Quinn, The Luniz, RBL Posse, Dru Down, Mac Mall, Celly Cel, C-Bo, JT the Bigga Figga, 11/5, Cold World Hustlas, 3xCrazy, UDI, Guce, and Spice 1 are among the most prominent artists who contributed to the development of Mobb Music.

While the classic Mobb albums still sell very well throughtout Northern California, commercially it has been replaced in the region by a new form of bay area rap music called [hyphy](#) rap, which has a faster tempo and fits in better with current commercial trends. Many of the big artists from the golden era of Mobb Music are now adapting to the current format of bay area rap music, particularly the original pioneers of Mobb Music, E-40 and Too Short.

## Mod Revival

**Stylistic origins:** Mod, [punk rock](#), [Ska](#), Northern soul  
**Cultural origins:** mid-late 1970s, London & South East England  
**Typical instruments:** [Guitar](#) - [Bass](#) - [Drums](#) - Some brass  
**Mainstream popularity:** Mainly late 1970s-early 1980s, with some continuing interest  
**Derivative forms:** Big influence on Britpop, British Ska revival

London, "Home Counties"

[Timeline of alternative rock](#)

The **Mod Revival**, sometimes known as **Punk Mod**, is a name given to a genre of [rock music](#) in the late 1970s and early 1980s, mainly centred in Southern England. Its mainstream popularity was relatively short, and it has been criticised for lack of originality.

Largely spurred on by The Jam, who were far and away the biggest band of the genre, and also the film Quadrophenia, which romanticised the original Mods, it took its energy from the New Wave of the time, and its inspiration from 1960s Mod bands such as The Who. The movement post-dated a Teddy Boy revival. The Mod Revivalists would often come to blows with the Teddy Boy revivalists (literally) as well as clashing with Skinheads (partly a successor of Mods), casuals and [punk rockers](#).

Many of these later mods were fans of bands such as The Jam, The Chords, The Purple Hearts, The Merton Parkas, Secret Affair, The Lambrettas, and The Scene.

In the North of England, the Huddersfield band, The Killermeters (fronted by Vic Vespa) produced the anthem SX 225, and formed the nucleus of a small local scene. Bradford's own The Scene played support to The Killermeters at many of their early gigs.

In the early and mid 80s a scene closely linked the original mod ethics grew up around the Shepherds Bush club Sneakers. Run by Paul Hallam and Richard "Shirlee" Early the club encouraged rare rnb and soul mixed with tailor made smart clothes. Another main player at the time was soon to be Acid Jazz creator Eddie Piller.

Contemporary bands such as The Ordinary Boys take much of their inspiration from the Mod Revival, and [Britpop](#) was also highly influenced by it musically and in terms of fashion. In some ways it had more direct influence than the original movement.

## Differences from original Mods

There were several notable differences in the Mod revival from the original movement...

- A strong New Wave influence (although it was maintained it was a backlash)
- An interest in [Ska](#) and [Reggae](#), and other West Indian genres, rather than American soul.
- Sometimes less peacockish, colorful, and dandified clothing.

## Mod revival influence

The Mod revival also influenced the Ska revival & [Two Tone](#) of the early 1980s, best known from such bands as The Specials, The Beat, The Selecter, and Madness. Often these bands wore mod-like clothes, and their influence in "black music" paralleled that of the original mods.

Although not strictly a Mod revival band, The Vapors, were often seen as allied with it, and were championed by Bruce Foxton of the Jam.

Various Mod Revival members such as Paul Weller were to form The Style Council, a mid-1980s Soul influenced band, and Weller would later be nicknamed "The Modfather" for his idolisation by the Britpop movement.

## Notable Mod Revival bands

The Jam  
The Merton Parkas  
Secret Affair  
The Scene  
The Chords  
Purple Hearts  
The Lambrettas  
The Killermeters

Bands associated with the mid eighties mod revival :

- The Gents
- Makin' Time
- The Risk
- The Moment
- The JetSet
- The Threads
- The Inclyned

## Modal frame

In [music](#) a **melodic mode** (van der Merwe 1989, p.102-103) or **modal frame** is one of "a number of types permeating and unifying [African](#), European, and [American song](#)" and [melody](#). (Middleton 1990, p.203) including parlour music. "Mode" and "frame" are used in this context interchangeably. Melodic modes allow melodies which are not chord-based or determined by the [harmony](#) but instead by melodic features. A **note frame** is a melodic mode that is atonic (without a tonic) or has an unstable tonic. Examples include:

- **floor note**: the bottom of the frame, felt to be the lowest note though isolated notes may go lower
- **ceiling note**: the top of the frame
- **central note**: the center of mode, around which other notes cluster or gravitate
- [chant](#) tunes (Bob Dylan's "Subterranean Homesick Blues")
- axial tunes ("A Hard Day's Night", "Peggy Sue", Marvin Gaye's "Can I Get A Witness", and Roy Milton's "Do the Hucklebuck")
- oscillating (Rolling Stone's "Jumpin' Jack Flash")

- open/closed ("Hey Bo Diddley")
- [terrace](#)
- shout-and-fall
- ladder of thirds
- **Upper or lower focus** (adapted from Ekueme, Lazarus): portion of the mode on which the melody temporarily dwells
- **Melodic dissonance**: the quality of a note which is modally unstable and attracted to other more important tones in a non-harmonic way
- **Melodic traid**: arpeggiated triads which appear in a melody but not in the harmony, see non-harmonic arpeggio
- Level: a temporary modal frame contrasted with another built on a different foundation note. A "change" (as in chord change) in levels is called a shift.
- **Co-tonic**: a melodic tonic different from and as important as the harmonic tonic
- **Secondary tonic**: a melodic tonic, though different form and subordinate to the harmonic tonic
- **Pendular third** (adapted from Nketia, J.H.): Alternating notes a third apart, most often a neutral, see double tonic

Other songs with modal frames indicated are "A Day in the Life" and "My Generation".

## Modal jazz

**Stylistic origins:** [Jazz](#), Medieval music  
**Cultural origins:** Late 1950s  
**Typical instruments:** [Piano](#), [Saxophone](#), [Trumpet](#), Double Bass, [Drums](#)  
**Mainstream popularity:** Early 1960s

**Modal jazz** is jazz played using [musical modes](#) rather than [chord](#) progressions.

## History

An understanding of modal jazz requires knowledge of [musical modes](#). Modes are the seven scales used in medieval music which were 'rediscovered' by composers like Claude Debussy and frequently used by 20th century composers. In [bebop](#) as well as in [hard bop](#), musicians used chords to provide the background for their solos. A song would start out with a theme, which would introduce the chords used for the solos. These chords would be repeated throughout the whole song, while the soloists would play their parts. By the 1950s, improvising over chords had become such a dominant part of jazz, that sidemen at recording dates were sometimes given nothing more than a list of chords to play from. Creating innovative solos became exceedingly difficult.

In the latter 1950s, spurred by the experiments of composer and bandleader George Russell, musicians frustrated with ever repeated chords tried the modal approach. They chose not to write their songs using chords, but instead used modal scales. This meant that the bassist, for instance, did not have to 'walk' from one important note of a chord to that of another - as long as he stayed in the scale being used and accentuated the right notes within the scale, he could go virtually everywhere. The pianist, to give another example, would not have to play the same chords or variations of the chords, but could do anything, as long as he stayed within the scale being used. The overall result was more freedom of expression.

In fact, the way that a soloist creates a solo changed dramatically with the advent of modal jazz. Before, the goal of a soloist was to play a solo that fit into a set of chords. However, with modal jazz, a soloist must create a melody in

one scale (typically), which could be potentially boring for the listener. Therefore, the goal of the musician was now to make the melody as interesting as possible. Modal jazz was, in essence, a return to melody.

## Theory

It is possible for the bassist and the pianist to move to notes within the mode that are dissonant with the prime (tonic) chord of that mode. For example: within the ionian mode, the C is the final (prime) note. Other notes, such as the note B, are dissonant with C, so that they are not used in a non-modal jazz song when playing the chord C. In a modal song, these other notes may be used. This means that the notes played will not be recognized as a part of C major.

Among the significant compositions of modal jazz were So What by Miles Davis and Impressions by John Coltrane. They follow the same AABA song form and were in D dorian for the A sections and modulated a half step up to Eb Dorian for the B section. (Dorian mode is the natural minor scale with a raised sixth.)

In improvising within a modal context, a musician would basically start by thinking about playing the notes within that specific mode (e.g., D dorian: D, E, F, G, A, B, C, D). It is also possible to take several notes from that mode (though not all) to create smaller scales or note choices for improvisation. For example, in D dorian, one may play the notes of the D minor triad. This is what Miles Davis does at the beginning of his solo in "So What". The player may even choose any of the triads available in that mode: C maj, Dmin, Emin etc. One thing to note is that choosing an upper structure triad of the chord will result in tension.

The player may also use the many different pentatonic scales within the scale such as C major pentatonic, F major pentatonic and G major pentatonic. Note that these scales are also relative A minor, D minor and E minor pentatonic, respectively.

## Compositions

Miles Davis recorded one of the best selling jazz albums of all time in this modal framework. Kind of Blue is an exploration into the possibilities of modal jazz. Included on the songs from these recordings is the tenor horn of John Coltrane who, with, Giant Steps, would begin to explore the possibilities of modal improvisation. This record is considered a kind of test album in many conservatories focusing on jazz improvisation. The compositions "So What"

and "All Blues" from *Kind of Blue* and "Cousin Mary" and "Naima" from the album *Giant Steps* are considered contemporary [jazz standards](#).

## Modern musical symbols

This is intended to be a comprehensive guide on the various symbols encountered in modern [sheet music](#).

### Lines

#### Staff

The background structure of a musical score. Lines and spaces correspond to different notes on the diatonic scale. For example, on the treble staff, the lowest line is E above middle C (E4 in note-octave notation). The space above it is F4, and so on. A common use of the staff is the grand staff, which combines bass and treble staves into one system, joined by a brace.

#### Ledger lines

Used to extend the staff if any note heads fall above or below it. Such ledger lines are placed behind the note heads.

#### Bar line

Used to separate two measures.

#### Double bar line

Used to separate two sections of music.

#### Dotted bar line

Subdivides measures.

#### End bar line

Marks the end of a song.

### Notes and rests

Note and rest values are not absolutely defined, but are proportional in duration to all other note and rest values. For the purpose of definition, the duration of the quarter note will be known as R, for "reference length."

## **Note**

## **Duration Rest**

### **Longa**

Also known as a "quadruple whole." This value is archaic.

*Duration:*  $R \times 16$

### **Breve**

Also known as a "double whole."

*Duration:*  $R \times 8$

### **Semibreve**

Also known as a "whole."

*Duration:*  $R \times 4$

### **Minim**

Also known as a "half."

*Duration:*  $R \times 2$

### **Crotchet**

Also known as a "quarter."

*Duration:*  $R$

### **Quaver**

Also known as an "eighth."

*Duration:*  $R / 2$

### **Semiquaver**

Also known as a "sixteenth."

*Duration:*  $R / 4$

### **Demisemiquaver**

Also known as a "thirty-second."

*Duration:*  $R / 8$

### **Hemidemisemiquaver**

Also known as a "sixty-fourth."

*Duration:*  $R / 16$

### **Quasihemidemisemiquaver**

Also known as a "hundred-twenty-eighth or "semihemidemisemiquaver."

*Duration:*  $R / 32$

### **Beamed notes**

Beams connect and emphasize quavers and shorter note values.

### **Dotted note**

Putting dots to the right of a note head lengthens that note's duration.

One dot lengthens the note by one-half, two dots by three-quarters, three

dots by seven-eighths, and so on. Rests can be dotted in the same way as notes.

### **Multi-measured rest**

Indicates how many measures to sustain a rest.

Durations shorter than the 128th are not unknown. 256th notes occur in works of Vivaldi and even Beethoven. An extreme case is the Toccata Grande Cromatica by early-19th-century American composer Anthony Phillip Heinrich, which uses note values as short as 2048ths; however, the context shows clearly that these notes have one beam more than intended, so they should really be 1024th notes.

## **Pauses**

### **Breath mark**

In a score, this symbol tells the performer to breathe in (or make a slight pause for non-wind instruments). This pause does not affect tempo.

### **Caesura**

Indicates a brief, silent pause, during which time is not counted. In ensemble playing, time begins again when so indicated by the conductor. Commonly known as "railroad tracks."

### **Bold text**

## **Clefs**

Clefs define the pitch range, or tessitura, that the staff after them represents.

### **G clef**

The centre of the spiral defines the line or space it rests on as the note G above middle C, or approximately 392 Hz. Positioned here, it assigns G above middle C to the *second line from the bottom* of the staff, and is known as a "treble clef."

### **C clef**

This clef points to which line or space represents middle C, or approximately 262 Hz. Positioned here, it makes the *centre line on the staff* middle C, and is known as an "alto clef."

### **F clef**

The line or space between the dots in this clef denotes F below middle C, or

approximately 175 Hz. Positioned here, it makes the *second line from the top* of the staff F below middle C, and is known as a "bass clef."

### **Neutral clef**

Used for pitchless instruments, such as those used for percussion. Each line can represent a specific percussion instrument within a set, such as in a drum set. Two different styles of neutral clefs are pictured here.

Clefs (not neutral clefs) can also be modified by octave numbers. An eight or fifteen above a clef raises the intended pitch range by one or two octaves respectively. Similarly, an eight or fifteen below a clef lowers the pitch range by one or two octaves respectively.

## **Accidentals and key signatures**

Accidentals modify the pitch of the notes that follow them on the same position on the staff.

### **Double flat**

Lowers the pitch of all forthcoming notes on that level by two semitones.

### **Flat-and-a-half**

Lowers the pitch of all forthcoming notes on that level by three quarter tones.

### **Flat**

Lowers the pitch of all forthcoming notes on that level by one semitone.

### **Demiflat**

Lowers the pitch of all forthcoming notes on that level by one quarter tone.

### **Natural**

Cancels any previous accidental on that level.

### **Demisharp**

Raises the pitch of all forthcoming notes on that level by one quarter tone.

### **Sharp**

Raises the pitch of all forthcoming notes on that level by one semitone.

### **Sharp-and-a-half**

Raises the pitch of all forthcoming notes on that level by three quarter tones.

### **Double sharp**

Raises the pitch of all forthcoming notes on that level by two semitones.

Key signatures define the principal triad of all notes that follow them. If no key signature is used, the default key is C major/A minor. The key signature examples shown here are used with the treble staff.

### **Flat key signature**

Lowers the pitch of all forthcoming notes on the levels the accidentals fall on. Different keys are denoted by differing numbers of accidentals; for example, if only the first two flats are used, the key is Bb major/G minor.

## Sharp key signature

Raises the pitch of all forthcoming notes on the levels the accidentals fall on. Different keys are denoted by differing numbers of accidentals; for example, if only the first four sharps are used, the key is E major/C# minor.

## Time signatures

Time signatures define the meter of the notes that follow them. Music is marked off in sections called measures, and time signatures tell you what the duration of those measures is. They do NOT tell you to accent the first note in a measure. The same music marked off in measures of a different duration will sound precisely the same if properly played, but since music can be marked off in an infinite number of ways, it makes sense to mark it off in a way that conveys information about the way the piece actually sounds, and those time signatures tend to suggest, but only SUGGEST, prevailing groupings of beats or pulses.

### Specific time

The bottom number stands for a note value, and the top number tells you how many of these note values fit in each measure.

### Common time

This symbol is a throwback from sixteenth century rhythmic notation. It once meant the equivalent of 2/4 and now means the equivalent of 4/4.

### Cut time

Indicates 2/2 time.

### Metronome mark

Written at the start of a score, this symbol precisely defines the tempo of the score by assigning absolute durations to all note values within the score. In this particular example, the performer is told that 120 crotchets, or quarter notes, fit into one minute of time.

## Articulations

### Tie

Indicates that the two notes joined together are to be played as one note. This can also indicate a note sustained over two or more measures.

**Slur**

Indicates that the two notes are to be played in one physical stroke or one uninterrupted breath.

**Legato**

Notes covered by this sign are to be played with no gaps. Sometimes indistinguishable from a slur.

**Glissando**

A steady glide from one note to the next.

**Ligature**

Also known as a phrase mark.

**Triplet**

Condenses three notes into the normal duration of two notes. If the involved notes are beamed, the brackets on either side of the number can be omitted. This can be generalized to a tuplet, where a certain number of notes are condensed into the normal duration of the greatest integer power of two notes less than that number, e.g., six notes played in the normal duration of four notes.

**Chord**

Three or more notes played simultaneously. If only two notes are played, it is called an *interval*.

**Arpeggio**

Like a chord, except the notes are played one at a time in sequence. Also known as a *rolled chord*.

## Dynamics

Dynamics are how the volume of the song varies while it is performed.

**Mezzo-piano**

Half as soft as *piano*.

**Piano**

Soft.

**Pianissimo**

Very soft.

**Mezzo-forte**

Half as loud as *forte*.

**Forte**

Loud.

**Fortissimo**

Very loud.

**Sforzando**

Literally "straining", denotes a strong, sudden increase in volume.

**Crescendo**

A gradual increase in volume. Can be extended under many notes to indicate that the volume steadily increases during the playing of those notes.

**Diminuendo or Decrescendo**

A gradual decrease in volume. Can be extended the same way as crescendo.

## Accents

Accents specify how individual notes are performed. They can be fine-tuned by combining more than one such symbol over or under a note.

**Staccato**

Buffered by a short silence before and after the note.

**Staccatissimo**

Buffered by a longer silence before and after the note.

**Marcato**

The note is played louder than the surrounding notes.

**Left-hand pizzicato or Stopped note**

A note on a stringed instrument where the string is plucked with the left hand (the hand that usually stops the strings) rather than bowed. On the [horn](#), this accent indicates a "stopped note" (a note played with the stopping hand shoved further into the bell of the horn).

**Snap pizzicato**

On a stringed instrument, a note played by stretching a string away from the frame of the instrument and letting it go, making it "snap" against the frame. Also known as a Bartók pizzicato.

**Natural harmonic or Open note**

On a stringed instrument, denotes that a natural harmonic is to be played. On a valved brass instrument, denotes that the note is to be played "open" (without lowering any valve).

**Tenuto**

This symbol has two meanings. It can mean prolong the note slightly or it can mean give the note a slight accent. Combining a tenuto with a staccato yields a "portato."

**Fermata**

An indefinitely-sustained note.

**Sull'arco**

On a bowed string instrument, the note is played while drawing the bow upward.

## Giù arco

Like *sull'arco*, except the bow is drawn downward.

## Ornaments

Ornaments modify the pitch pattern of individual notes.

### Trill

A rapid alternation between the specified note and the next higher tone or semitone within its duration. Also called a "shake." When followed by a wavy horizontal line, this symbol indicates an extended, or running, trill.

### Mordent

An insertion of the semitone below the specified note within its value (this particular case can be called a "lower mordent"). Without the vertical line, the inserted semitone is above the specified note, and the ornament is known as an upper mordent.

### Turn

Also known as a *gruppetto*, combines an upper mordent and a lower mordent, in that order, into the specified note's value. If the symbol is reversed, the lower mordent is played first.

### Grace note

Also known as an *appoggiatura*, it means the first half of the principal note's duration has the pitch of the grace note (the first two-thirds if the principal note is a dotted note).

### Slashed grace note

Also known as an *acciaccatura*, it means the principal note's duration begins with the pitch of the grace note for only a very small part of the principal note's value.

## Octaves

### Ottava alta

Notes under the dashed line are played at the next higher octave.

### Ottava bassa

Notes above the dashed line are played at the next lower octave.

### Quindicesima alta

Notes under the dashed line are played two octaves above normal.

### Quindicesima bassa

Notes above the dashed line are played two octaves below normal.

## Pedal marks

Pedal marks are used by pianists.

### **Engage pedal**

Tells the pianist to put the sustain pedal down.

### **Release pedal**

Tells the pianist to let the sustain pedal up.

### **Variable pedal mark**

Denotes frequent use of the sustain pedal. The lower line tells the pianist to keep the sustain pedal depressed for all notes it appears under. The inverted "V" shape indicates the pedal is momentarily released, then depressed again.

## Repetition and codas

### **Tremolo**

A rapidly-repeated note. If the tremolo is between two notes, then they are played in rapid alternation. The number of slashes through the stem (or number of diagonal bars between two notes) indicates the frequency at which the note is to be repeated (or alternated). As shown here, the note is to be repeated at a demisemiquaver (thirty-second note) rate.

### **Repeat signs**

Enclose a passage that is to be played more than once. If there is no left repeat sign, the right repeat sign sends the performer back to the start of the song.

### **Simile marks**

Denote that preceding groups of beats or measures are to be repeated.

### **Volta brackets**

Denote that a repeated passage is to be played in different ways on different playings.

### **Da capo**

Tells the performer to repeat playing of the song from its beginning. This is followed by *al fine*, which means to repeat to the word *fine* and stop, or *al coda*, which means repeat to the coda sign and then jump forward.

### **Dal segno**

Tells the performer to repeat playing of the song starting at the nearest segno. This is followed by *al fine* or *al coda* just as with *da capo*.

### **Segno**

Mark used with *dal segno*.

### **Coda**

Indicates a forward jump in the song to its ending passage, marked with the same sign. Only used after playing through a *D.S. al coda* or *D.C. al coda*.

## Modern soul

**Modern Soul** is a style of music with its own associated clothing and dance styles [obvious precursors to the Disco era of the later 70s] that developed in the north of England in the early 1970s. It was given birth to by the Northern Soul [aka "Northern"] scene. In the early 70s, some "Northern" DJs began looking in the record shops of the USA and UK for something more complex, more contemporary rather than staying put with the known "Northern" stompers. What emerged was a richer, more complex sound, that was, like "Northern," lyrically and melodically "soulful," but took advantage of the developments in record production, Hi-Fi and FM radio technology. With it being contemporary, it also offered the tantalising prospect of a steady stream of new releases being available. "Modern Soul" records are not necessarily "modern" at any one point in time. Some current "Modern" favourites are some 30 years old! The records were simply "Modern" when the innovative "Northern" DJs began to play them.

A large proportion of Modern Soul's original audience came from the Northern Soul scene, retaining their adoration of underground and rare, independent label soul music. One of the first Modern Soul clubs per se was Blackpool Mecca, which was fronted by the innovative and knowledgeable DJ, Ian Levine. Ian broke from the "Northern" mould, by playing a wonderful new release by the Carstairs ["It really hurts me girl"] in the early 70s. Around the same period, Colin Curtis played The Anderson Brothers' - "I can see him loving you" and another key, "Modern" track emerged: Don Thomas - "Come on Train." With the arrival of such "Modern" records, the main protagonists of the two genres had a falling-out and went their separate and somewhat parallel ways, with soul clubs generally siding either with "Modern" or "Northern." "Modern" was here to stay and became a major force, drawing many more people towards The Music and its venues. Liverpool, the only major Northern city of the West-East swathe, running approximately from Preston in the North,

to Stoke in the South, had remained largely immune from the charms of Northern in the 60s and 70s, preferring to listen to Motown and Funk [similar to the London Soul and Funk scene], has proven to be a more fertile area for the Modern sound. There is probably not a single major centre of Northern England that does not have its share of world-class Modern Soul collections.

Despite their initial profound differences, "Northern" and "Modern Soul" started out and remain inextricably linked genres, indeed some DJs such as Richard Searling and "Soul Sam" [*Martin Barnfather*] have championed both the Northern and Modern Soul scenes simultaneously for several decades. Nowadays most soul venues play music from both genres, literally side by side. A Greg Perry track, could immediately follow a track by The Vibrations ... no problem! In the early 70s such a mix would have been politically incorrect.

"Modern Soul," with a richer, more FM radio-friendly production has yielded more crossover hits and many of the stars of "Modern Soul" have had lucrative careers, unlike the stars of the "Northern" scene, who, almost to a man/woman, saw their entire careers' output sink without trace, at best only scoring minor hits locally.

Tracks by artists such as LeRoy Hutson, Greg Perry, Lou Courtney, Breakwater, Johnny Bristol, Johnnie Taylor, Bessie Banks, Randy Brown, Jean Carne, Phyllis Hyman, Chapter 8, The Controllers, William DeVaughn, Lamont Dozier, Sam Dees, Loleatta Holloway, Willie Hutch, Al Johnson, Anthony White, Gloria Scott, Howard Johnston, Leon Ware, We the People, Luther Vandross and Bobby Womack, The Valentine Brothers and the Whispers, to name but a small fraction of artists have helped shape the "Modern Soul" sound; filling both dancefloors and record boxes since the 70s, right through to the present day.

Like its older, ["Northern"] Soul Sister, the "Modern Soul" genre is a healthy and flourishing one in the 21st century.

[20th century](#) (1900 – 2000)

[Contemporary classical music](#)

**Modernism in music** is characterized by a desire for or belief in progress and science, [surrealism](#), anti-romanticism, political advocacy, general intellectualism, and/or a breaking with tradition or [common practice](#). Ezra Pound's modernist slogan, "Make it new," in music. Modern music is often thought to begin with, or just after, Debussy's impressionism, rising to rhetorical, if not commercial, dominance after World War Two, and then being gradually superseded by [postmodern music](#).

## Defining musical modernism

Musicologist Carl Dahlhaus restricted his definition of musical modernism to progressive music in the period 1890-1910: "The year 1890...lends itself as an obvious point of historical discontinuity....The "breakthrough" of Mahler, Strauss, and Debussy implies a profound historical transformation....If we were to search for a name to convey the breakaway mood of the 1890's (a mood symbolized musically by the opening bars of Strauss's Don Juan) but without imposing a fictitious unity of style on the age, we could do worse than revert to [the] term "modernism" extending (with some latitude) from the 1890 to the beginnings of our own twentieth-century modern music in 1910....The label "late [romanticism](#)"...is a terminological blunder of the first order and ought to be abandoned forthwith. It is absurd to yoke Strauss, Mahler, and the young Schoenberg, composers who represent modernism in the minds of their turn-of-the-century contemporaries, with the self-proclaimed anti-modernist Pfitzner, calling them all "late [romantics](#)" in order to supply a veneer of internal unity to an age fraught with stylistic contradictions and conflicts."

Thus, Daniel Albright (2004) dates musical modernism from 1894-5 (Debussy's *Prélude à 'L'après-midi d'un faune* and Strauss's *Till Eulenspiegels lustige Streiche*), and considers musical modernism's main features to be:

1. *Comprehensiveness and depth.*
2. *Semantic specificity and density.*
3. *Extensions and destructions of tonality.*

However, as an alternative to this definition Albright proposes: "Modernism is a testing of the limits of aesthetic construction." Besides eliminating the progress meta-narrative of the above definition, this definition is also capable of application to more the music, artists, and movements considered modernist: [Expressionism](#) & New Objectivity, Hyperrealism & Abstractionism, [Neoclassicism](#) & Neobarbarism, Futurism & the mythic Method.

The modern music would, in turn, give rise to [postmodernism](#). Albright cites John Cage's 1951 composition of *Music of Changes* as the beginning of post-modern music.

## **Examples of modernism in music**

### **Expansion and destruction of tonality**

Modernist movements include expansion to common practice tonality, such as Debussy, Strauss, Mahler, the young Schoenberg, and the polytonality of Darius Milhaud, Paul Hindemith, and Ives. Alternatives to common practice include the twelve tone technique of the older Arnold Schoenberg and pupils, the serialism of Milton Babbitt and Pierre Boulez, as well as the high dissonance of Carl Ruggles, Ruth Crawford-Seeger, and Charles Seeger's dissonant counterpoint and Henry Cowell's tone clusters.

### **Comprehensiveness and depth**

Gustav Mahler attempted extreme comprehensiveness and depth, to write the music of the whole world.

### **Science and sci-fi**

Futurists such as Ferruccio Busoni and Luigi Russolo looked to a future of music liberated to the point of being able to use any sound, even "noises" such as factory and mechanical sounds, while Edgard Varese gave his pieces scientific names such as *Hyperprism* and *Intégrales*, comparing the musical structures to crystals, before creating electronic tape pieces such as *Poème Électronique*, premiered in the Le Corbusier designed Philips Pavilion at the 1958 Brussels World's Fair with 400 speakers, designed with assistance by Iannis Xenakis. Xenakis himself applied mathematical concepts to the composition of music.

### **Extended techniques and sounds**

John Cage and Lou Harrison wrote works for [percussion](#) orchestras, Harrison eventually writing for and building gamelans, while Cage popularized [extended techniques](#) on the piano in his prepared piano pieces. Harry Partch built his own ensemble of instruments, mostly percussion and string

instruments, to allow the performance of his theatrical ("corporeal") justly tuned microtonal music. Alois Haba specialized in alternative equal temperaments rather than the standard twelve-tone equal temperament and Ives wrote quarter tone pieces for piano.

## **Speech and singing**

One of the aesthetical boundaries tested was that between speech and singing, with composers such as Leoš Janáček, Schoenberg, Alban Berg, and Harry Partch suggesting greater attention to and use of speech in music. Berg wrote *Wozzeck* using Schoenberg's Sprechstimme, Janáček based his melodies and motifs upon rhythms and inflections of Hungarian speech, and Partch devised his first just intonation instruments partly so as to play the fine pitch inflections of speech. Luciano Berio explored all manner of vocal sounds in his piece *Sequenza III* for solo female voice. It was written for and performed by his wife Cathy.

Artists who were non-professional composers also wrote music with an emphasis on speech. Ezra Pound wrote a monophonically chanted opera, T.S. Eliot wrote "The Music of Poetry" (1942), while dada artist Kurt Schwitters wrote "speech-music" that proved highly influential on later sound poets such as Ursonate: Rondo (1921-32), based on a single word, fmsbwtözäu, from a Raoul Hausmann poem.

## **Visual art and music**

Schoenberg was a painter, while dada and futurist visual artists such as Jean Cocteau and Luigi Russolo wrote music. Theodor Adorno accused Igor Stravinsky's music of being a "pseudomorphism of painting." Xenakis created the Philips Pavilion at the 1958 Brussels World Fair after his earlier piece *Metastasis*. The ballet became more respected during the modernist period, see Emile Jaques-Dalcroze, and the development of the film industry created a market and outlet for film composers such as communist Hanns Eisler who borrowed Brecht and Weill's ideas of alienation from the theater.

## **Individualism**

Many modernists are ardent individualists, such as Varese, transcendentalist Charles Ives, Conlon Nanarrow, who became an expatriot in Mexico after fighting in the Spanish Civil War, and Elliott Carter. Carter composes atonal music with complex [rhythms](#) and often highly individualized parts, but refuses to be confined by writing twelve tone or serial music.

## **Ethnomusicology and political advocacy**

Béla Bartók devoted much of his time to the study and preservation in recording of Hungarian folk music, which influenced his music, while Ruth Crawford-Seeger abandoned modernist composition for years while working as an ethnomusicologist studying, transcribing, and setting [folk music](#).

The Seegers were communists, while Ives was, politically, blatantly populist, if androcentric, and considered that some insurance should be affordable for everyone. He petitioned William Howard Taft in 1920 to transform the presidential election into a national referendum. Schoenberg wrote a Zionist play about the establishment of a Jewish homeland in Africa. Filippo Tommaso Marinetti was one of the first fascists in Italy.

## **Neoclassicism**

Igor Stravinsky abandoned the "Dyonysian" modernism of his early work *The Rite of Spring* for a more "Apollonian" neo-classicism. Aaron Copland shifted from a highly dissonant modernist style to the populism of many of his works.

George Perle sees a "common practice" in the, "shared premise of the harmonic equivalence of inversionally symmetrical pitch-class relations," among modernist composers such as Varèse, Alban Berg, Bela Bartók, Schoenberg, Alexander Scriabin, Igor Stravinsky, and Anton Webern.

## **History of modernism in music**

### **Late 19th century origins**

As with many other arts, the consciousness of modernity appeared before music which is now labelled "modernist". Mahler and Puccini both thought of themselves as modern composers and were concerned with their place in modern music. The end of the 19th century and beginning of the 20th century saw a host of harmonic, melodic and instrumental innovations in music, but in an effort to preserve and build upon the past, rather than radically alter it.

The defining break with the Victorian and [Romantic](#) tradition was the alliance of music with the depiction of new subjects, removing old unities, and with an intent to push the audience forward. The rise of musical modernism can be tied to the rise of expressionism, primitivism and cubism in the arts, Freudian theory in philosophy and the range of other artistic and scientific ideas which flowered forth from 1890 through the beginning of the First World

War. There was a conscious sense of seeing an analog between changes in music and changes in the other arts among the first wave of musical modernists.

The transitional moment came with the introduction by Debussy and Ravel of an expanded chord vocabulary now labelled "impressionism", this movement in painting and music is generally regarded as transitional, because while the intent was aesthetic appeal, its means were a departure from the formal, some might say academic, norms which held in the arts. While initially controversial, Impressionism became widely acceptable very quickly in all but the most conservative of artistic circles. However, the precedent for a radical break with previous technique had been set.

Another transitional force was the synthesis by Richard Strauss and Gustav Mahler of the music of Wagner. By detaching Wagner's musical innovations from the setting of the musical drama, Strauss and Mahler excited a generation of composers eager to use the broader range of chromatic possibilities which their techniques offered.

A third, and less carefully examined, road into musical modernism was the progressively more percussive use of the orchestra found in both Italian opera and in Russian concert music. While Rimsky-Korsakov is not generally thought of as a precursor to Modernism, some of his innovations were influential on the young Igor Stravinsky as well as other young Russians of the early 20th century. These included a use of exotic scales rarely seen in western music, as well as a brighter, colorful style of orchestration increasingly reliant on percussion for its effect.

## **Alternative categorizations**

Despite Albright's definitions he points out examples of his three traits of modernism long before 1894. Orlando Gibbons' *The Cries of London*, Joseph Haydn's *The Creation*, and many romantic works attempt maximal comprehensiveness and depth, such as Ludwig van Beethoven's Ninth Symphony. Semantic specificity has always existed, such as in Clement Janequin's *Le chant des oiseaux* (birds), Alessandro Poglietti's *Rossignolo* (nightingale), Antonio Vivaldi's *The Four Seasons*, Beethoven's Sixth Symphony, or Haydn's *The Seasons*. Composers have long used semantic density to indicate disorder, while Nicolas Gombert has used four voices singing four simultaneous different antiphons to the Virgin Mary, as would be heard by the omniscient Mary. Chromaticism has existed since the Greeks in some conception or another, such as Carlo Gesualdo's *Tristis est anima mea*.

Albright also points out that there are few traits of postmodernism not present in modernism. Erik Satie and the neoclassicism of Stravinsky is

sometimes near indistinguishable with bricolage and polystylism. Surrealist Marcel Duchamp wrote chance music while Cage was still into percussion.

## Musical modernism's reception and controversy

Many people have criticized musical modernism, including George Rochberg and Fred Lerdahl. Stanley Cavell (1976, p.187) describes the "burden of modernism" as caused by a situation wherein the "procedures and problems it now seems necessary to composers to employ and confront to make a work of art at all *themselves* insure that their work will not be comprehensible to an audience."

Brian Ferneyhough coined the neologism "too-muchness" to describe the excess of information contained in music exhibiting the New Complexity. Arved Ashby compares the information conveyed when "Modernism Goes to the Movies" (2004) with the failure to communicate attributed to modernist music by Lerdahl and others and concludes that "the tendency to fault modernist music [for being non-syntactical] would seem, then, to stem from interrelated desires to limit the powers of music in general and to prevent it from keeping pace with the sociogenetic, media-related tendencies of recent decades."

## Modinha

A **modinha** is a kind of sentimental love song. The modinha is of uncertain origin, but it may have evolved in either Brazil or Portugal. In 1739, Domingos Caldas Barbosa wrote a series of modinhas that were extremely popular, especially in salons. The modinha of the late 19th century was sung in the streets or as an outdoor serenade, usually accompanied by [flute](#), [guitar](#), and cavaquinho.

## Moog synthesizer

The term **Moog** (pronounced /moʊg/ to rhyme with "vogue", not /muɔg/) **synthesizer** can refer to any number of analog synthesizers designed by Dr. Robert Moog or manufactured by Moog Music.

### Moog synthesizers

Moog synthesizers were one of the first widely-used [electronic musical instruments](#). Robert Moog created the first subtractive synthesizer to utilize a keyboard as a controller in 1964 and demonstrated it at the AES convention. It sometimes took hours to set up the machine for a new sound.

Robert Moog employed his theremin company (R. A. Moog Co., which would later become Moog Music) to manufacture and market his synthesizers. Unlike the few other 1960s synthesizer manufacturers, the instruments were shipped with an organ-style keyboard as the standard user interface to his synthesizers. Nevertheless, at the time the modular Moog was not necessarily considered a musical instrument, but rather a sophisticated, studio-oriented professional audio system which could be *used* as a musical instrument; the keyboard was simply a convenient and familiar--though by no means only--way to control it. Particularly because of the pitch instability of its oscillators--they

generally could not stay in tune for more than a few seconds at a time--as well as the atonal nature of electronic music of the time (for which the ability of the synthesizer to stay in tune was irrelevant), the original Moog synthesizer was suited best to creating electronic sound effects and signal processing. Later modular Moogs would have much-improved oscillators and were far more suited to actual musical performance.

The first Moog instruments were modular synthesizers. In 1971 Moog Music began production of the Minimoog Model D which was among the first widely available, portable and relatively affordable synthesizers. Unlike the modular synthesizer, the Minimoog was specifically designed as a self-contained musical instrument for keyboard players (besides the extremely user-friendly physical design, it also stayed in tune reasonably well) and was the first to really solidify the synthesizer's popular image as a "keyboard" instrument. The Minimoog became the most popular monophonic synthesizer of the 1970s, selling approximately 13,000 units between 1971 and 1982.

Another widely used and extremely popular Moog synthesizer was the Taurus bass pedal synthesizer. Released in 1975, its pedals were similar in design to [organ](#) pedals and triggered synthetic bass sounds. The Taurus was known for a "fat" bass sound and was used by musicians such as Genesis, Rush, U2, Yes, The Police, Yngwie Malmsteen and many others. Production of the original was discontinued in 1981, when it was replaced by the Taurus II.

Moog Music was the first company to commercially release a keytar, the Moog Liberation.

The last Moog synthesizers were manufactured in 1985 before the original Moog Music declared bankruptcy in 1986. In 2001, Robert Moog's company Big Briar was able to acquire the rights to the Moog name and officially became Moog Music. (See Moog Music.) Moog Music has been producing the Minimoog Voyager, modeled after the original Minimoog, since 2002.

In March of 2006, Moog Music unveiled the Little Phatty Analog Synthesizer, boasting "hand-built quality and that unmatched Moog sound, at a price every musician can afford". The first limited edition run of 1200 will be a Bob Moog Tribute Edition with a Performer edition soon to be announced.

## Moog synthesizers in culture

It is believed that the first grammophone record to feature a Moog synthesizer was Cosmic Sounds by The Zodiac. The first popular music album to feature the instrument was 1967's Pisces, Aquarius, Capricorn, & Jones, Ltd. by The Monkees. Wendy Carlos released major Moog albums in 1968 and 1969: Switched-On Bach and The Well-Tempered Synthesizer. The former earned Carlos three Grammys. Also in 1969, The Beatles used a Moog throughout the Abbey Road album. It was also featured prominently on Emerson, Lake & Palmer's song "Lucky Man," Keith Emerson's Moog solo at the end making it arguably the group's most popular piece. Another famous use of the Moog was in Tangerine Dream's electronic landmark album Phaedra in 1974. Glenn Tilbrook, a member of the new wave band Squeeze, was also known to use the Mini Moog with regularity.

The success of Carlos' *Switched-On Bach* sparked a series of other synthesizer records in the late 1960s to mid 1970s. These albums featured [covers](#) of songs arranged for Moog synthesizer in the most dramatic and flamboyant way possible, covering [rock](#), [country](#) and other genres of music. The albums often had "Moog" in their titles (i.e. *Country Moog Classics*, *Exotic Moog with Martin Denny*, etc.) although many used a variety of other brands of synthesizers and even [organs](#) as well. The kitsch appeal of these albums continue to have a small fanbase and the 1990s band Moog Cookbook is a tribute to this style of music.

One well known use of the synthesizer was in the 1971 movie A Clockwork Orange, in which Carlos wrote all the original music for the Moog, along with several Moog versions of classical music, creating a very eerie mood that was considered very successful at expressing the strange society of the movie.

A popular Moog user (and programmer) is Stevie Wonder who won numerous Grammy awards in 1973 for his synthesizer rich Talking Book and also in 1974 where he grabbed the 'Album of the Year' award with yet another Moog-tinted album Innervisions.

Popularity surged in the 1970s, then declined in the 1980s as [digital synthesizers](#) gained traction in the market. By the mid-1990s, analog synthesizers were again highly sought after and prized for their classic sound. As of 2004, more than 15 companies are making Moog-style synthesizer modules.

## List of Moog synthesizers

Moog modular synthesizer (1963–1980)  
Minimoog (1970–1982)  
Moog Satellite (1974–1979)  
Moog Sonic 6 (1974–1979)  
Micromoog (1975–1979)  
Polymoog (1975–1980)  
Minitmoog (1975–1976)  
Moog Taurus (1976–1983)  
Multimoog (1978–1981)  
Moog Prodigy (1979–1984)  
Moog Liberation (1980)  
Moog Opus-3 (1980)  
Moog Concertmate MG-1 (1981)  
Moog Rogue (1981)  
Moog Source (1981)  
Memorymoog (1982–1985)  
Moogerfooger (1998–present)  
Minimoog Voyager (2002–present)  
Little Phatty (2006–present)

## Lam

**Mor lam** (Thai/Isan: ๓-!-) is an ancient Lao form of [song](#) in Laos and Isan (Northeastern Thailand). *Mor lam* means expert song, or expert singer, referring to the music or artist respectively. Other romanisations used include **mo lam**, **maw lam**, **maw lum**, **moh lam** and **mhor lum**. In Laos, the music is known simply as **lam** (ລຳ); **mor lam** (ໂມຣລຳ) refers to the singer.

The characteristic feature of *lam* singing is the use of a flexible melody which is tailored to the tones of the words in the text. Traditionally, the tune was developed by the singer as an interpretation of glawn poems and accompanied primarily by the [khene](#), a [free reed](#) mouth organ, but the modern form is most often [composed](#) and uses electrified [instruments](#). Contemporary forms of the music are also characterised by quick tempi and rapid delivery, while tempi tend to be slower in traditional forms and in some Lao genres. Some consistent characteristics include strong rhythmic accompaniment, vocal leaps, and a conversational style of singing that can be compared to American [rap](#).

Typically featuring a theme of unrequited love, *mor lam* also reflects the difficulties of life in rural Isan and Laos, leavened with wry humour. In its heartland performances are an essential part of festivals and ceremonies, while the music has gained a profile outside its native regions thanks to the

spread of migrant workers, for whom it remains an important cultural link with home.

## History

In his *Traditional Music of the Lao*, Terry Miller identifies five factors which helped to produce the various genres of lam in Isan: animism, Buddhism, story telling, ritual courtship and male-female competitive folksongs; these are exemplified by *lam phi fa*, *an nangsue*, *lam phuen* and *lam glawn* (for the last two factors) respectively. Of these, *lam phi fa* and *lam phuen* are probably the oldest, while it was *mor lam glawn* which was the main ancestor of the commercial *mor lam* performed today.

After Siam extended its influence over Laos in the 18th and 19th centuries, the music of Laos began to spread into the Thai heartlands; even King Mongkut's vice-king Pinklao becoming enamoured of it. But in 1865, following the vice-king's death, Mongkut banned public performances, citing the threat it posed to Thai culture and its role in causing drought.[2] Performance of mor lam thereafter was a largely local affair, confined to events such as festivals in Isan and Laos. However, as Isan people began to migrate to the rest of the country, the music spread with them. The first major mor lam performance of the 20th century in Bangkok took place at the Rajdamnoen Boxing Stadium in 1946. Even then, the number of migrant workers from Isan remained fairly small, and *mor lam* was paid little attention by the outside world.

In the 1950s and 1960s, there were efforts in both Thailand and Laos to put the educational aspect of *lam* to political use. The USIS in Thailand and both sides in the Lao civil war recruited mor lam singers to include propaganda in their performances, in the hope of persuading the rural population to support the cause. The Thai attempt was unsuccessful, taking insufficient account of performers' practices and audiences' demands, but more success was had in Laos; the victorious Communists continued to maintain a propaganda troupe even after the revolution.

*Mor lam* started to spread in Thailand in the late 1970s and early 1980s, when more and more people left Isan in search of work. Mor lam performers began to appear on television, led by Banyen Rakgaen, and the genre soon gained a national profile. The music remains an important link to home for Isan people in the capital, where *mor lam clubs* and *karaoke* bars act as meeting places for migrants.

Contemporary *mor lam* is very different from that of previous generations. None of the traditional Isan genres is commonly performed today: instead singers perform three-minute songs combining *lam* segments with luk thung or [pop](#) style sections, while comedians perform skits in between blocks of songs.

- *Lam Sithandone* (also called *Lam Si Pan Don*), from Champassak is similar in style to the *lam glawn* of Ubon. It is accompanied by a solo khene, playing in a *san* mode, while the vocal line shifts between *san* and *yao* scales. The rhythm of the vocal line is also indeterminate, beginning in speech rhythm and shifting to a metrical rhythm.
- *Lam Som* is rarely performed and may now be extinct. From Champassak, the style is hexatonic, using the *yao* scale plus a supertonic C, making a scale of A-B-C-D-E-G. It uses speech rhythm in the vocal line, with a slow solo khene accompaniment in meter. It is similar to Isan's *lam phuen*. Both *Lam Som* and *Lam Sithandone* lack the descending shape of the vocal line used in the other southern Lao styles.
- *Lam Khon Savane* from Savannakhet is one of the most widespread genres. It uses the *san* scale, with a descending vocal line over a more rigidly metrical ensemble accompaniment. *Ban Xoc* and *Mahaxay* are musically very similar, but *Ban Xoc* is usually performed only on ceremonial occasions while *Mahaxay* is distinguished by a long high note preceding each descent of the vocal line.
- *Lam Phu Thai* uses the *yao* scale, with a descending vocal line and ensemble accompaniment in meter.
- *Lam Tang Vay* is a Lao version of Mon-Khmer music, with a descending ensemble accompaniment.
- *Lam Saravane* is also of Mon-Khmer origin. It uses the *yao* scale. The descending vocal line is in speech rhythm, while the khene and drum accompaniment is in meter.
- *Khap Thum Luang Phrabang* is related to the court music of Luang Phrabang, but transformed into a folk-song style. The singer and audience alternately sing lines to a set melody, accompanied by an ensemble.
- *Khap Xieng Khouang* (also called *Khap Phuan*) uses the *yao* scale and is typically sung metrically by male singers and non-metrically by women.
- *Khap Ngeum* uses the *yao* scale. It alternates declaimed line from the singer and non-metrical khene passages, at a pace slow enough to allow improvisation.
- *Khap Sam Neua* uses the *yao* scale. Singers are accompanied by a solo khene, declaiming lines each ending in a cadence.
- *Khap Thai Dam*

## Performers

Traditionally, young *mor lam* were taught by established artists, paying them for their teaching with money or in kind. The education focussed on

memorising the texts of the verses to be sung; these texts could be passed on orally or in writing, but they always came from a written source. Since only men had access to education, it was only men who wrote the texts. The musical education was solely by imitation. Khaen-players typically had no formal training, learning the basics of playing from friends or relatives and thereafter again relying on imitation. With the decline of the traditional genres this system has fallen into disuse; the emphasis on singing ability (or looks) is greater, while the lyrics of a brief modern song present no particular challenge of memorisation.

The social status of *mor lam* is ambiguous. Even in the Isan heartland, Miller notes a clear division between the attitudes of rural and urban people: the former see *mor lam* as, "teacher, entertainer, moral force, and preserver of tradition", while the latter, "hold mawlum singers in low esteem, calling them country bumpkins, reactionaries, and relegating them to among the lower classes since they make their money by singing and dancing".

## Performance

In Laos, *lam* may be performed standing (*lam yuen*) or sitting (*lam nang*). Northern *lam* is typically *lam yuen* and southern *lam* is typically *lam nang*. In Isan *lam* was traditionally performed seated, with a small audience surrounding the singer, but over the latter half of the 20th century the introduction of stages and amplification allowed a shift to standing performances in front of a larger audience.

Live performances are now often large-scale events, involving several [singers](#), a [dance troupe](#) and comedians. The dancers (or *hang khreuang*) in particular often wear spectacular costumes, while the singers may go through several costume changes in the course of a performance. Additionally, smaller-scale, informal performances are common at festivals, temple fairs and ceremonies such as funerals and weddings. These performances often include [improvised](#) material between songs and passages of teasing dialogue (Isan \*-", *soi*) between the singer and members of the audience.

## Characteristics

### Instruments

The traditional instruments of *mor lam* are:

- the [khene](#): a mouth pipe organ, consisting of approximately fourteen bamboo tubes above a mouthpiece;
- the phin: a [lute](#), normally three-stringed;
- the ching: small [bells](#) resembling [cymbals](#);
- the saw: a bowed [string instrument](#);
- [panpipes](#); and
- [hand drums](#).

Many genres (including the *khap* of northern Laos and *lam glawn* and *lam phuen* in Isan) were traditionally accompanied only by the khene, but ensembles have become more common. Most commercial artists now use at least some electric instruments, most often a [keyboard](#) set up to sound like a 1960s Farfisa-style organ; [electric guitars](#) are also common. Other western instruments are also becoming popular, such as the [saxophone](#) and the [drum kit](#).

## Music

*Lam* singing is characterised by the adaptation of the [vocal line to fit the tones of the words used.[17] It also features staccato articulation and rapid shifting between the limited number of [notes](#) in the scale being used, commonly delivering around four syllables per second.<sup>[18]</sup> There are two pentatonic scales, each of which roughly corresponds to intervals of a western diatonic major scale as follows:

The actual [pitches](#) used vary according to the particular khene accompanying the singer. The khene itself is played in one of six [modes](#) based on the scale being used.

Because Thai and Lao do not include phonemic stress, the rhythm used in their poetry is demarcative, i.e. based on the number of syllables rather than on the number of stresses. In *glawn verse* (the most common form of traditional *lam* text) there are seven basic syllables in each line, divided into three and four syllable hemistiches. When combined with the musical beat, this produces a natural rhythm of four on-beat syllables, three off-beat syllables, and a final one beat rest:

In actual practice this pattern is complicated by the subdivision of beats into even or dotted two-syllable pairs and the addition of prefix syllables which occupy the rest at the end of the previous line; each line may therefore include eleven or twelve actual syllables.[22] In the modern form, there are sudden tempo changes from the slow introduction to the faster main section of the song. Almost every contemporary *mor lam* song features the following [bass rhythm](#), which is often ornamented [melodically](#) or rhythmically, such as by dividing the crotchets into quavers:

The *ching* normally play a syncopated rhythm on the off-beat, giving the music a characteristically quick rhythm and tinny sound.

## Content

*Mor lam* was traditionally sung in the Lao or Isan language. The subject matter varied according to the genre: love in the lam glawn of Ubon; general knowledge in the lam jot of Khon Kaen; or Jataka stories in lam phun. The most common verse form was the four-line glawn stanza with seven main syllables per line, although in Khon Kaen the technical subject matter led to the use of a free-form series of individual lines, called *glawn gap*. In Laos, it is the regional styles which determine the form of the text. Each style may use a metrical or a speech-rhythm form, or both; where the lines are metrical, the *lam* styles typically use seven syllables, as in Isan, while the *khap* styles use four or five syllables per line. The slower pace of some Lao styles allows the singer to improvise the verse, but otherwise the text is memorised.

In recent decades the Ubon style has come to dominate *lam* in Isan, while the Central Thai influence has led to most songs being written in a mix of Isan and Thai. Unrequited love is a prominent theme, although this is laced with a considerable amount of humour. Many songs feature a loyal boy or girl who stays at home in Isan, while his or her partner goes to work as a migrant labourer in Bangkok and finds a new, richer lover.

The *glawn* verses in *lam tang san* were typically preceded by a slower, speech-rhythm introduction, which included the words *o la naw* ("oh my dear", an exhortation to the listeners to pay attention) and often a summary of the content of the poem. From this derives the *gern* (Thai ๔) used in many modern songs: a slow, sung introduction, generally accompanied by the khene, introducing the subject of the song, and often including the *o la naw*. The *plaeng* (Thai ๕) is a sung [verse](#), often in Central Thai, while the actual *lam* (Thai ๓) appears as a chorus between *plaeng* sections.

## Recordings

As few *mor lam* artists write all their own material, many of them are extremely prolific, producing several [albums](#) each year. Major singers release their recordings on audio tape, CD and VCD formats. The album may take its name from a title track, but others are simply given a series number.

Mor lam VCDs can also often be used for [karaoke](#). A typical VCD [song video](#) consists of a performance, a narrative film, or both intercut. The narrative depicts the subject matter of the song; in some cases, the lead role

in the film is played by the singer. In the performance, the singer performs the song in front of a static group of dancers, typically female. There may be a number of these recordings in different costumes, and costumes may be modern or traditional dress; the singer often wears the same costume in different videos on the same album. The performance may be outdoors or in a studio; studio performances are often given a psychedelic animated backdrop. Videos from Laos tend to be much more basic, with lower production values.

Some of the most popular current artists are Banyen Rakgan, Chalermphol Malaikham, Jintara Poonlarp, Siriporn Ampaipong, and Pornsack Songsaeng. In 2001, the first album by Dutch singer Christy Gibson was released.

## Mor lam sing

**Mor lam sing** (Thai/Isan มอ-ลัม-ซิง) is a fast-paced, racy, modernized version of the traditional Lao/Isan song form *mor lam*. *Sing* comes from the English word "racing" (a reference to the music's speed and its origins among Isan's biker fraternity). A lead singer is accompanied by the khaen, a bamboo mouth organ, Western [drums](#) and electric [keyboards](#) and [bass](#). The style was invented in Chaiyaphum province around 1985, and was popularised over the next few years after it was taken up by Ratdri Sivilai in Khon Kaen. It is based on the Khon Kaen style of lam tang san, but it incorporates string instrumentation, luk thung singing styles and extensive use of the Central Thai language rather than Isan.

The songs are generally about disappointment in love or the hardships of life away from the Northeast of Thailand. Sexual innuendo is prominent, and

feature young, fancifully dressed female dancers, called "*hang khreuang*".

Among the most popular *mor lam sing* artists are the groups Rock Salaeng and Rock Sadert.

## Mosh

**Moshing** is a type of [dance](#) characterized by jumping around and or pushing others to loud [punk](#), [hardcore](#), and [heavy metal](#) music. Moshing is [popular](#) with many, especially young, fans. Moshing is also gaining popularity in the [Rap](#) and [Breakcore](#) (a genre of extreme electronic dance music) scenes.

Moshing is typically done in a **mosh pit** or circle pit. Originally this was just a group of people typically directly in front of the stage who were engaged in this form of dancing. It is now more frequent that there are mosh or circle pits throughout the entire audience.

Mosh fashion relates to the music genre. Specifically, it began with wearing what one would wear to a concert where there would be a mosh pit.

## Origins and History

### Origins

The term "mosh" probably came from the term "mash" or dance (as in "monster mash"). In the early eighties, it was frequently spelled "mash", but pronounced "mosh", as in the 1982 song "Total Mash" by the Washington D.C. based hardcore group "Scream", on their "Still Screaming" album. Later, the term began to appear in fanzines of the time with it's current spelling. The Jamaican pronunciation is likely due to the influence of ska and reggae on punk rock, as in the song lyric "Mash it up in Zimbabwe" in the song "Zimbabwe" on Bob Marley's 1979 "Survival" album.

The term "mosh" has often been credited to Vinnie Stigma of the hardcore group Agnostic Front as an acronym for "March Of Skin Heads", but most authorities cite Darryl Jennifer, bass guitarist for Bad Brains as the term's originator, from his Jamaican-accented pronunciation of the word "mash", in

"Mash down Babylon.", referring to the Rastafarian religious idea of the corrupt world-system. Many early punk scenes referred to this type of dance as 'thrashing', and the term 'moshing' term gradually gained significance during the hardcore metal crossover days.

This fusion was created by bands like DRI. Slam dancing originated in Southern California during the west coast second generation punk movement. It began as bands like Black Flag & The Circle Jerks started playing extreme hardcore punk. The kids from the beach cities began attending shows and took the pogo to the next level of physical contact.

## History

Mosh pits (or Circle pits) appeared in 1981, if not earlier, at a number of [punk rock](#) concerts. The dance form later spread to the [heavy metal music](#) scene, where headbanging and crowd surfing were incorporated. In the mid-1980s, when [thrash metal](#) bands like Slayer, Megadeth, and Anthrax were still playing club venues, mosh pits were a regular part of the concert experience. By the time of the Woodstock 1999 music festival, moshing had been described as a full-scale riot. To solve these problems, venues that expect moshing now typically provide crowd control, including having concert rules, removing problem-causing audience members, and a "T-barricade" that separates the pit into two halves as well as from the band.

Nirvana's successful video "Smells Like Teen Spirit" brought mosh pits to a wide mainstream audience in 1991.

In May 1996, The Smashing Pumpkins played a gig in The Point Depot in Dublin, Ireland. The venue was over-crowded and despite the band's repeated requests for moshing to stop, a 17-year-old fan from Cork, Bernadette O'Brien, was crushed to death. The concert ended early and the following night's performance in Belfast was cancelled out of respect for her.

## Michael Moore's *The Awful Truth*

In 2000, Michael Moore's *The Awful Truth* television show took a portable mosh pit across the United States to Iowa and challenged the candidates in the presidential primaries to dive into it. The premise was that the show would endorse any presidential hopeful crazy enough to do it. At one debate this mosh pit was called "the defining moment of the 2000 election" by New York Times columnist Gail Collins.

At a town hall event staged by Ronald Reagan's former ambassador to the United Nations' Economic and Social Council, Alan Keyes, aides went outside to investigate the commotion. When informed that Keyes could get the

endorsement of "The Awful Truth with Michael Moore," Keyes' national field director dove into the pit, hoping that his actions would help win the endorsement. He then brought out another one of Keyes supporters, dressed as Uncle Sam, who also jumped in. Another supporter dressed as a shark jumped out off the stage onto a car, damaging it.

Alan Keyes, after several minutes of convincing by his daughter, dived into the mosh pit himself. He fell backwards into the screaming crowd of youths to the sound of Rage Against the Machine and surfed the crowd. After a couple of body slams with a young man from Ames High School, he left the pit with the show's endorsement.

Michael Moore said of the incident, "We knew Alan Keyes was insane. We just didn't know *how* insane until that moment." Details about this incident and the adventure of the portable mosh pit can be found on Mr. Moore's web site.

The only book on moshing is *Moshpit Culture* by Joe Ambrose, anarchist writer and collaborator with, amongst others, Iggy Pop, William Burroughs, Lydia Lunch, Sol Melendez, and Richard Hell. Ambrose's book contains a history of moshing and first hand reports from a variety of mosh subcultures, plus interviews with young moshers and members of Slipknot, Sepultura, Trail of Dead, Soulfly, and Bullet For My Valentine.

## Types of Moshing

Moshing is a catch-all term for any dance performed in a mosh pit or circle pit at a party or dance . Certain moves are seen with certain passages of music (for example the "two-step" for floor-tom breakdowns).

It has always been mosh etiquette to help up those who fall down. Also, moshers generally try to avoid tripping others, therefore avoiding the entire falling 'incident'.

Moshing can be referred to by several different names, depending upon the subculture in which it is found: [hardcore dancing](#), *throwdown*, *mashing*, or most simply, *moshing*. Slam dancing is characterized by its aggressive nature: the movements consist of violent contact with other dancers - pushing and shoving other dancers and body-slamming, or throwing your body into another dancer are the normal forms of slamdancing.

*Moshing* means different things within different genres of music:

- [Breakcore](#), a genre of extreme electronic dance music, attracts many ex-punkers or metal heads and also their mosh-pits.
- [Grindcore](#) also has its own style of dancing, often referred to as the *grind* (not to be confused with the urban dance style), which resembles a blend of skanking and more of a slower mosh.

- Wall of Death where the crowd is divided into two halves, the music is built up into a crescendo and then as it reaches fever pitch a signal is given by the band and the two sides run at each other and the intro breaks into the song proper. It results in moshing and fighting.
- [Metal](#) performances are known for having large mosh pits fueled by the genre's popularity and large venue bookings. Due to the rapid tempo of Metal music, the tempo of dance elevates to a fevered pitch. This frantic moshing, known as a Speed Pit or Speed Mosh, is commonly practiced during shows of such bands as Iced Earth and Slayer. The faster the metal is, the crazier it will get. Additionally, metal shows are typical for having the largest people and most brutal pits imaginable, as this is the fan base the music attracts. It's thought that [thrash metal](#) was the first heavy metal subgenre that had pits, due to the nature of [Punk rockers](#) to like the thrash metal sound. Metal moshing generally consists of pushing, a variety of shoulder and body checks, Irish whips (a wrestling move that involves taking a person by the arm and launching them in a direction) and a contest in which two moshers lock hands and spin at a frantic pace, seeing who can hold on the longest. The loser is usually sent flying into a crowd.
- [Punk rock](#) moshing generally involves slam dancing (aimless slamming into one another), the pogo (jumping up and down into other people, invented by Sid Vicious of the Sex Pistols according to hearsay, but this is a myth), and circle pitting, and is generally much less violent and dramatic than found at [hardcore punk](#) shows. However, with punk/hardcore, the moshing is generally much faster than at metal shows seeing as the music's beat is much quicker. Punk was where the mosh pit was invented.
  - [Hardcore](#): [Hardcore dancing](#) is much faster and formulaic. It also includes people windmilling, moves resembling aggressive breakdancing, and solitary martial arts maneuvers. These are often frowned upon by other dancers, especially if attempted at a non-hardcore concert. This is often due to the fact that hardcore dancers can be reckless, and pose an unnecessary threat to those who wish to Speed Mosh. Another form of hardcore dancing which involves the whole mosh pit is the circle pit, in which people skank at running speed around the circumference of the pit. It can include two-steps, windmills, and swinging the arms and legs violently. In some venues large pillars in the middle of the pit form a nucleus to charge around, such as The Underworld in Camden, U.K. Whilst other forms of moshing promote camaraderie and friendship between dancers, Hardcore Dancing is criticized for it's lack of camaraderie and more alienating overtone.
- [Hip hop](#) related
  - The Gangsta walk, originally called the "buck jump," is circling the dance floor as quick and wild as you possibly can. First commonly seen at [rap](#) shows in the Memphis, Tennessee area.

- Skank slam dancing is now seen in [ska](#) or ska-core shows.
- [Industrial](#) shows, especially Industrial-Metal or Industrial-Rock, will have mosh pits similar to that of metal. Industrial pits combine conventional moshing found at either punk or metal shows with dancing similar to that found in a club playing [EBM](#) or [Industrial](#) music. Due to the clockwork nature of [Industrial](#)'s rhythm, fans also like to stomp their feet on the ground (which generates a huge vibration since boots are a popular footwear choice) as well.

## Risks, criticism and precautions

Although most participants consider moshing fun, minor injuries can occur and there is a risk of serious injury.

Supporters of moshing agree that there is some physical risk associated with the activity. Supporters argue that slam dancing can establish friendship and camaraderie, that reports of death or serious injury relate to crowd surfing or stage diving, completely different activities. And despite the fact that injury can occur in a moshpit, no one is forced to go into one - those that do make the choice themselves, and are well aware of the risks.

Critics have charged slam dancing with inciting or condoning violence. Violence on the concert floor inevitably leads to some injuries. It is argued that an escalating cycle of violence can be observed. These charges are reflected in media reports.

To many, moshing is a kind of extreme sport. Many people in the pit do believe in stimulating friendship and camaraderie. Violence is usually directed against others in the pit, and often only escalates when it is badly received by someone who is outside or not used to the pit. The pit is meant to be fun. If a participant falls they risk being trampled, but someone nearby will always help a fallen person to their feet.

There tends to be some conflation between the actual dangers of moshing and the types of behavior which critics say it causes.

There are definite risks for those participating in moshing or approaching too close to the mosh pit. Many supporters actually believe that the point of moshing is its physicality and that its risks can be compared to the risks of any physically challenging sport. Some suggest there is a desire to be bruised fulfilled by mosh pits, as a form of basic stress relief.

It may be suggested that moshing reflects a modern "rite-of-passage trial" where young people choose to test their courage and strength among friends and/or strangers in an unpredictable situation teetering on the edge of chaos.

In many Western cultures, there are very few outlets for a youth's natural inclination toward violence and the moshpit is an excellent excuse to let off steam. As it is meant to be, it is a sort of battle between consenting adults, and outside the pit there is no battle, often good friendships are struck up between "true hardcores". Violence escalates mainly when this concept is misunderstood whether it is inside or outside the pit.

Even though moshing is done to the aforementioned music genres, heavy metal and similar genres are not completely subject to danceability standards since people started dancing to [house music](#) and genres similar to that; since house music is what people commonly refer to as "dance music" compared to the genres moshing is dedicated to.

## Moshcore

**Moshcore** is a style of [metalcore](#), derived from [hardcore](#) featuring [guitar](#)-based instrumentation, basic [chord progressions](#), aggressive 4/4 [rhythms](#) and assertive vocals. It is also known as *Tough Guy Hardcore*. Distortion is usually introduced into the guitar sounds, which can create a [heavy metal](#) effect that further sets moshcore apart from punk rock. Moshcore is created and played mostly for [mosh](#) dancing in a "mosh pit", which can be a violent activity involving high impact body contact (and some physical risk). The style emerged during the late 1990s in Germany and the northeastern United States. It is stylistically different from the punk subgenre of "Hardcore", and is generally "heavier" than punk hardcore, but often employs a much "friendlier" and much less abrasive musical style than other Hardcore subgenres, like Crust.

Moshcore was influenced by the late 80's hardcore scene in New York. Bands such as Sick of It All, Judge, Leeway and Madball are examples. Moshcore's references to violence along with an evolution away from its hardcore roots has caused some controversy and backlash in many DIY hardcore communities. Examples can be heard in songs such as "Get the Kid

"With the Sideburns" by Reversal Of Man and "V.R.S. (Victory Records Sucks)" by Good Clean Fun.

The most famous moshcore band is Hatebreed who, having appeared on the soundtracks for Hollywood movies (XXX and The Punisher) have achieved some mainstream acceptance. Their vocalist Jamey Jasta has hosted MTV2's Headbanger's Ball.

Moshcore is considered as the simplest expression of metalcore, with songs averaging around one or two minutes in length and written in a tradition closer to 1980s [hardcore](#) with traditional elements such as [mosh](#) breakdowns and singalongs, but the guitars have a more metallic edge. Lyrics tend to be focused on personal issues such as self-determination, mental strength, unity (within the hardcore and metalcore scene) and sometimes straight edge, a tradition which has been continued from older hardcore bands.

## Notable bands

Bury Your Dead  
Hatebreed  
Madball  
Hoods  
Earth Crisis  
Integrity  
Irate  
Most Precious Blood  
Terror  
Throwdown  
On Broken Wings  
Walls of Jericho (also famed for having a female vocalist)  
Too Young to Die

Although bands such as All Out War have a sound closer to [thrash metal](#) than old-school hardcore, their image and attitude identify closely with moshcore.

## Motet

In Western music, **motet** is a word that is applied to a number of highly varied [choral](#) musical compositions.

The name comes either from the Latin *movere*, ("to move") or a Latinized version of Old French *mot*, "word" or "verbal utterance." The Mediaeval Latin

for "motet" is "motectum". If from the Latin, the name describes the movement of the different voices against one another.

According to Margaret Bent (1997), "'a piece of music in several parts with words' is as precise a definition of the motet as will serve from the thirteenth to the late sixteenth century and beyond. This is actually very close to one of the earliest descriptions we have, that of the late thirteenth-century theorist Johannes de Grocheio." Grocheio was also one of the first scholars to define a **motet**. Grocheio believed that the motet was "not intended for the vulgar who do not understand its finer points and derive no pleasure from hearing it: it is meant for educated people and those who look for refinement in art."

## Medieval motets

The earliest motets arose, in the thirteenth century (Bent, 1997), out of the *organum* tradition exemplified in the Notre Dame school of Léonin and Pérotin. The motet arose from discant (clausula) sections, usually strophic interludes, in a longer sequence of organum, to which upper voices were added. Usually the discant represented a strophic sequence in Latin which was sung as a discant over a *cantus firmus*, which typically was a [Gregorian chant](#) fragment with different words from the discant. The motet took a definite rhythm from the words of the verse, and as such appeared as a brief rhythmic interlude in the middle of the longer, more chantlike organum.

The practice of discant over a *cantus firmus* marked the beginnings of [counterpoint](#) in Western music. From these first motets arose a [medieval](#) tradition of secular motets. These were two or three part compositions in which several different texts, sometimes in different vernacular languages, were sung simultaneously over a Latin *cantus firmus* that once again was usually adapted from a passage of Gregorian chant. It is suspected that, for the sake of intelligibility, in performance the *cantus firmus* and one or another of the vocal lines were performed on instruments.

Increasingly in the 14th and 15th centuries, motets tended to be isorhythmic; that is, they employed repeated rhythmic patterns in all voices—not just the *cantus firmus*—which did not necessarily coincide with repeating melodic patterns. Philippe de Vitry was one of the earliest composers to use this technique, and his work evidently had an influence on that of Guillaume de Machaut, one of the most famous named composers of late medieval motets.

## Renaissance motets

The name of the motet was preserved in the transition from medieval to [Renaissance music](#), but the character of the composition was entirely changed. While it grew out of the medieval isorhythmic motet, the Renaissance composers of the motet generally abandoned the use of a repeated figure as a *cantus firmus*. Guillaume Dufay was a transitional figure; he wrote one of the last motets in the medieval, isorhythmic style, the *Nuper rosarum flores* which premiered in 1436 and was written to commemorate the completion of Filippo Brunelleschi's dome in the Cathedral of Florence. During this time, however, the use of *canti firmi* in works such as the parody mass tended to stretch the *cantus firmus* out to great lengths compared to the multivoice descant above it; this tended to obscure the rhythm supplied by the *cantus firmus* that is apparent in the medieval isorhythmic motet. The cascading, passing chords created by the interplay between multiple voices, and the absence of a strong or obvious beat, are the features that distinguish medieval and renaissance vocal styles.

Instead, the Renaissance motet is a short polyphonic musical setting in imitative counterpoint, for chorus, of a religious text not specifically connected to the liturgy of a given day, and therefore suitable for use in any service. The texts of antiphons were frequently used as motet texts. This is the sort of composition that is most familiarly named by the name of "motet," and the Renaissance period marked the flowering of the form.

In essence, these motets were sacred [madrigals](#). The relationship between the two forms is most obvious in the composers who concentrated on sacred music, especially Giovanni Pierluigi da Palestrina, whose "motets" setting texts from the Canticum Canticorum, the Biblical "Song of Solomon," are among the most lush and madrigal-like of Palestrina's compositions, while his "madrigals" that set poems of Petrarch in praise of the Blessed Virgin Mary would not be out of place in church. The language of the text was the decisive feature: if it's Latin, it's a motet; if the vernacular, a madrigal. Religious compositions in vernacular languages were often called [madrigali spirituali](#), "spiritual madrigals." Like most madrigals, Renaissance motets developed in episodic format, with separate phrases of the source text being given independent melodic treatment and contrapuntal development; contrapuntal passages often alternate with monody.

Secular motets continued to be written; these motets typically set a Latin text in praise of a monarch or commemorating some public triumph; the themes of courtly love often found in the medieval secular motet were banished from the Renaissance motet. This was one of the pre-eminent forms of [Renaissance music](#). Other important composers of Renaissance motets include:

Alexander Agricola  
Gilles Binchois  
Antoine Busnois

William Byrd  
Johannes Vodnianus Campanus  
Loyset Compère  
Josquin Des Prez  
John Dunstaple  
Antoine de Févin  
Francisco Guerrero  
Nicolas Gombert  
Heinrich Isaac  
Pierre de La Rue  
Orlando di Lasso  
Cristóbal de Morales  
Jean Mouton  
Jacob Obrecht  
Johannes Ockeghem  
Giovanni Pierluigi da Palestrina  
Thomas Tallis  
John Taverner  
Tomás Luis de Victoria

In the latter part of the 16th century, Giovanni Gabrieli and other composers developed a new style, the polychoral motet, in which two or more [choirs](#) of singers (or instruments) alternated. This style of motet was sometimes called the *Venetian motet* to distinguish it from the *Netherlands* or *Flemish* motet written elsewhere.

## Baroque motets

The name "motet" was preserved into [Baroque music](#), especially in France, where the word was applied to *petits motets*, sacred choral compositions whose only accompaniment was a basso continuo; and *grands motets*, which included instruments up to and including a full [orchestra](#). Jean-Baptiste Lully was an important composer of this sort of motet. Lully's motets often included parts for soloists as well as choirs; they were longer, including multiple movement in which different soloist, choral, or instrumental forces were employed. Lully's motets also continued the Renaissance tradition of semi-secular Latin motets in works such as *Plaude Laetare Gallia*, written to celebrate the baptism of King Louis XIV's son; its text by Pierre Perrin begins:

*Plaude laetare Gallia  
Rore caelesti rigantur lilia,  
Sacro Delphinus fonte lavatur*

*Et christianus Christo dicatur.*

(Rejoice and sing, France: the lily is bathed with heavenly dew. The Dauphin is bathed in the sacred font, and the Christian is dedicated to Christ.)

In Germany, too, pieces called motets were written in the new musical languages of the Baroque. Heinrich Schütz wrote many motets in a series of publications called *Symphoniae sacrae*, some in Latin and some in German.

Johann Sebastian Bach also wrote six surviving works he called motets; Bach's motets were relatively long pieces in German on sacred themes for choir and *basso continuo*. Bach's motets are:

- BWV 225 *Singet dem Herrn ein neues Lied* (1726)
- BWV 226 *Der Geist hilft unser Schwachheit auf* (1729)
- BWV 227 *Jesu, meine Freude* (?)
- BWV 228 *Fürchte dich nicht* (?)
- BWV 229 *Komm, Jesu, komm!* (1730 ?)
- BWV 230 *Lobet den Herrn alle Heiden* (?)

## The motet since Bach

Later 18th-century composers wrote few motets, although Mozart's well-known *Ave verum corpus* is in this genre.

In the 19th century German composers continued to write motets occasionally, notably Johannes Brahms (in German) and Anton Bruckner (in Latin). French composers of motets included Camille Saint-Saëns and César Franck. Similar compositions in the English language are called [anthems](#), but some later English composers, such as Charles Villiers Stanford, wrote motets in Latin. The majority of these compositions are a cappella, but some are accompanied by organ.

In the 20th century, composers of motets have been conscious imitators of earlier styles, such as Ralph Vaughan Williams, Hugo Distler, Ernst Krenek, and Giorgio Pacchioni.

## Motown Sound

The **Motown Sound** is a style of [soul music](#) with distinctive characteristics, including the use of tambourine along with [drums](#), [bass](#) instrumentation, a distinctive melodic and [chord](#) structure, and a "call and response" singing style originating in [gospel music](#).

Among the most important architects of The Motown Sound were the members of Motown's in-house team of songwriters and record producers, including Motown founder Berry Gordy, William "Smokey" Robinson, Norman Whitfield & Barrett Strong, and the team of Brian Holland, Lamont Dozier and Edward Holland, Jr., collectively known as Holland-Dozier-Holland. Crucial to the sound was the work of Motown's in-house band, The Funk Brothers, who performed the instrumentation on most Motown hits from 1959 to 1972. However, according to Berry Gordy, "the Motown sound is made up of rats, roaches, and love" (Hirshey 1994, p.187).

## About the Motown Sound

While there were many hugely popular African American musicians prior to the 1960s, Motown soul was the most consistently chart-topping genre until hip-hop. In contrast to previous genres of black popular music, Motown soul used African-American performers instead of grooming white musicians for crossover fame. It was also among the first genres of African-American popular music to move beyond simple lyricisms into the realm of socio-political topics, allowing for a wide range of African-American viewpoints to be expressed in song.

The Motown Sound was also defined by the use of orchestration, string sections, charted horn sections, carefully arranged harmonies and other more refined pop music production techniques. It was also one of the first styles of pop music of that era wherein [girl groups](#)--including The Supremes, Martha & the Vandellas and The Marvelettes--were showcased as an act, as opposed to individual female artists.

The Motown producers and the Funk Brothers band used a number of innovative techniques to develop the Motown Sound. Many tracks featured two drummers instead of one, either overdubbed or playing in unison, and

three or four guitar lines as well. Bassist James Jamerson often played his instrument with only his index finger, and created many of the bubbling basslines apparent on Motown songs such as "You Can't Hurry Love" by The Supremes. While the Funk Brothers had exclusive contracts with Motown, they often secretly recorded instrumental tracks for outside acts, most notably "Cool Jerk" by The Capitols and "Agent Double-O Soul" by Edwin Starr.

The style was also showcased by the work of non-Motown artists, including Dusty Springfield and British band The Foundations. On a side note, Great Britain was also the scene where the Motown Sound (and that of numerous smaller record companies) was kept alive by the [northern soul](#) movement, so called due to the fact that it was centered in the northern parts of England.

According to Smokey Robinson, the Motown Sound had little to do with Detroit: "People would listen to it, and they'd say, 'Aha, they use more bass. Or they use more drums.' Bullshit. When we were first successful with it, people were coming from Germany, France, Italy, Mobile, Alabama. From New York, Chicago, California. From *everywhere*. Just to record in Detroit. They figured it was in the air, that if they came to Detroit and recorded on the freeway, they'd get the Motown sound. Listen, the Motown sound to me is *not* an audible sound. It's spiritual, and it comes from the people that make it happen. What other people didn't realize is that we just had one studio there, but we recorded in Chicago, Nashville, New York, L.A.--almost every big city. And we still got the sound"<sup>[1]</sup>.

The sound was saluted in a Rod Stewart song, "The Motown Song" in 1991.

## Examples

"(Love Is Like a) Heat Wave" by Martha & The Vandellas  
"My Girl" by The Temptations  
"I Can't Help Myself (Sugar Pie, Honey Bunch)" by The Four Tops  
"How Sweet It Is (To Be Loved by You)" by Marvin Gaye  
"Rescue Me" by Fontella Bass  
"You Can't Hurry Love" by The Supremes  
"Cool Jerk" by The Capitols  
"Build Me Up Buttercup" by The Foundations  
"I Want You Back" by The Jackson 5  
"The Motown Song" by Rod Stewart

## Movement

In [music](#), a **movement** is a division of a larger [composition](#) or [musical form](#) intended to be performed in succession, though complete in and of itself. Different forms of music have separate regulations in regard to the number of movements required. However, it is important to note that the number of movements in a piece has very little to do with the form. For example, Beethoven's Symphony No. 6 in F Major and Berlioz's *Symphonie Fantastique* both have 5 movements, while it is customary for a [symphony](#) to have only 4 movements.

Each movement has a distinct tempo and structure in regard to its intended position within the complete piece. For example, it is customary for the 1st movement in a symphony to be allegro or allegretto, the 2nd andante or adagio, the 3rd a scherzo or menuet in allegro or allegretto, and the 4th allegro, vivace, presto, etc.

In concerts it is customary to applaud when the entire work is completed, not between movements. However, it must be noted that during the classical era it was commonplace to applaud subsequent to the completion of each respective movement. In fact, applause was sometimes so loud and unyielding that conductors would simply play movements again.

## Mozarabic chant

**Mozarabic chant** (also known as **Hispanic chant**, **Old Hispanic chant**, **Old Spanish chant**, or **Visigothic chant**) is the liturgical [plainchant](#) repertory of the Mozarabic rite of the Roman Catholic Church, related to but distinct from [Gregorian chant](#). It is primarily associated with Spain under Visigothic rule and with the Catholic Mozarabs living under Muslim rule, and was soon replaced by the chant of the Roman rite following the Christian reconquest. Although its original medieval form is largely lost, a few chants have survived with readable

musical notation, and the chanted rite was later revived in altered form and continues to be used in a few isolated locations in Spain, primarily in Toledo.

## Name

No wholly satisfactory name has been found for this chant tradition, leading to several competing names. *Mozarabic* is the most common name, referring to the Mozarabs, Christians in Spain and Portugal living under Muslim rule. However, the chant almost certainly existed before the Muslim occupation in 711. Visigothic refers to the Visigoths who were driven from France and came south, dominating the Iberian peninsula and converting from Arianism to Catholicism in 587, and their Iberian descendants; however, the Catholic rite existed in Spain prior to their conversion, and the chant was not limited to Visigoths, so *Old Spanish* has been used as an alternative. But again, the chant was found in Portugal as well as Spain, so *Hispanic* or *Old Hispanic* are also used by scholars. "Hispanic" has its own ambiguity, though, so "Mozarabic" will probably remain despite its slight inaccuracy.

## History

The basic structure of the rite that came to be known as the Mozarabic rite was documented by St. Isidore of Seville in the 7th century. The Credo had already been introduced into the Mozarabic rite in the Third Council of Toledo of 589, in which the Visigoths officially converted to Catholicism. (The Credo would not be used in the Roman rite in Rome itself until after 1014, at the request of the Holy Roman Emperor Henry II.)

The Mozarabic rite shares similarities with the Ambrosian rite and Gallican rite, and differs from the Roman rite. As the Christian reconquest of Spain went on, the Roman rite supplanted the Mozarabic. With the papal appointment of a French abbot as the new archbishop of Toledo, which had been recaptured in 1085, Roman influence could be enforced throughout the Spanish Church. Following its official suppression by Pope Gregory VII, the Mozarabic rite and its chant disappeared in all but six parishes in Toledo.

The Mozarabic rite was revived by Cardinal Jiménez de Cisneros, who published in 1500 and 1502 a Mozarabic Missal and Breviary, incorporating elements of the Roman rite, and dedicated a chapel to preserving the Mozarabic rite. However, the chant used for this restored Mozarabic rite shows significant influence from [Gregorian chant](#), and does not appear to resemble the Mozarabic chant sung prior to the reconquest.

## General characteristics

Mozarabic chant is largely defined by its role in the liturgy of the Mozarabic rite, which is more closely related to the northern "Gallic" liturgies such as the Gallican rite and the Ambrosian rite than the Roman rite. Musically, little is known about the chant. Most of the surviving music is written in neumes that show the contour of the chant, but no pitches or intervals. Only twenty or so sources contain music that can be transcribed.

However, some things are known about the Mozarabic repertory. Like all [plainchant](#), Mozarabic chant was monophonic and a cappella. In accordance with Roman Catholic tradition, it is primarily intended to be sung by males.

As in Gregorian chant, Mozarabic chant melodies can be broadly grouped into four categories: recitation, syllabic, neumatic, and melismatic. Recitations are the simplest, comprised primarily of a simple reciting tone. Syllabic chants have mostly one note per syllable. Neumatic chants have a small number of notes, often just two or three, notes per syllable. Melismatic chants feature long, florid runs of notes, called melismas, on individual syllables.

In both Mozarabic and Gregorian chant, there is a distinction between antiphonal and responsorial chants. Originally, responsorial chant alternated between a soloist singing a verse and a chorus singing a refrain called the respond, while antiphonal chant alternated between two semi-choruses singing a verse and an interpolated text called an antiphon. In the developed chant traditions, they took on more functional characteristics. In an antiphonal chant, the antiphon is generally longer and more melodic than the verse, which is usually sung to a simpler formula called a [psalm tone](#). In a responsorial chant, the verse and refrain are often comparable in style and melodic content.

Mozarabic chants used a different system of [psalm](#) tones for psalm antiphons than Gregorian chant. Unlike the standardized Gregorian classification of chants into eight [modes](#), Mozarabic chant used between four and seven, depending on the local tradition. Many Mozarabic chants are recorded with no musical notation at all, or just the incipit, suggesting that the psalm tones were followed simple and frequently used formulas.

## Chants of the Office

The musical forms encountered in Mozarabic chant present a number of analogies with those of the Roman rite. For example, a comparable distinction exists between antiphonal and responsorial singing. And Mozarabic chant may

be seen to make use of three styles: syllabic, neumatic and melismatic, much as in Gregorian chant. In the following descriptions of the principal musical items in both the Mozarabic Office and Mass, some of these analogies will be discussed further. The items from the Mass are presented here in the appropriate liturgical order.

The *Antiphons* are the largest category of Office chants. Most are moderately syllabic, with simple recitations used for the verses, sung in antiphony.

The *Alleluiatici* are also antiphonal chants, whose text usually involves an alleluia, similar in style to regular antiphons. Unlike the [Gregorian](#) repertory, these are sung at Matins and Vespers even on penitential days, when "alleluia" is omitted from the liturgy.

Matins features a musical form called the *missa*, which consists of an Alleluiaticus framed by two Antiphons and a *Responsory*. Later missae show common musical material thematically uniting the missa. The Responsories, which are primarily found at the end of a missa, are generally neumatic, consisting of melodic formulas that adjust to fit the lengths of different phrases, ending in a fixed cadence.

Other Office chants include the morning-themed *Matutinaria*, the *Benedictiones* using texts from the Book of Daniel, the melismatic *Soni*, and the alleluiatic *Laudes*. The *Psallendi*, unrelated to the Psallendae of [Ambrosian chant](#), end with the Doxology.

The neumatic Vespertini, like the Lucernaria of Ambrosian chant, usually allude to the lighting of lamps or to nightfall. They show a high degree of *[[centonization]*, construction from a vocabulary of stock musical phrases, and *adaption*, application of a pre-existing melody to a new text.

*Preces* are short, lightly neumatic musical prayers in rhyme with a refrain. They exist in both the Mozarabic rite and the Gallican rite, but the concordance between the two rites appears to be liturgical and not musical. Finally, the Office chants include a number of *Hymns*, many of which are found throughout Catholic Europe, although we do not know if the same melodies were used.

## Chants of the Mass

The Mass is the Christian celebration of the Eucharist. Plainchant occurs prominently in the Mass for several reasons: to communally affirm the faith, to expand on the scriptural lessons, and to cover certain actions.

*Praelegenda* are opening chants corresponding to the [Gregorian](#) Introit, which use the same antiphonal structure and psalm tones found in the Mozarabic Office.

Unlike the Gregorian Gloria, the Mozarabic *Gloria in excelsis Deo* only occurs in some local Mozarabic traditions.

The *Trisagion*, in which the Greek word "hagios" is sung three times, sometimes quite melismatically or translated into the Latin "sanctus," corresponds to the simple threefold "Kyrie eleison" sung at the end of the Laus missa of the Ambrosian rite. This is not the liturgical counterpart of the Gregorian Sanctus.

Following the Trisagion are the *Benedictiones*. Like the Benedictiones of the Office, these come from the Book of Daniel, but use more complex melodies, whose refrain structure derives directly from the biblical poetry.

The *Psalmi* are neumatic and melismatic responsorial chants which function similarly to the Gregorian Gradual. On a few holidays, the Psalmo leads directly into a Clamor. Clamores conclude with the refrain of the preceding Psalmo. During Lent, Threni substitute for Psalmi. Each Threnus has a non-repeating refrain followed by several verses, which are sung to the same melody. This function of replacing another chant on certain penitential days is similar to the way the Gregorian Tract replaces the Alleluia.

Just as the Gregorian Gradual is followed by the Alleluia, the Mozarabic Psalmo is followed by the *Laus*. Like the Gregorian Alleluias, the Laudes include two melismas on the word "alleluia" surrounding a simpler verse. During Lent, the Laudes use different texts.

The *Sacrificium* corresponds to the Gregorian Offertory. The Sacrificia appear to be closely related to the Soni chants of the Office.

A few Mozarabic Masses include the *Ad pacem*, a special Antiphon sung for the kiss of peace, or the *Ad sanctus*, similar to the Gregorian Sanctus.

Corresponding to the [Ambrosian](#) Confractorium is the *Ad confractionem panis*, sung for the breaking of the bread. The chant *Ad accedentes*, corresponding to the Gregorian Communion, follows.

# Musica Popular Brasileira

**MPB** (*Música Popular Brasileira*, literally "Brazilian Popular Music") is a [musical genre](#) of Brazilian popular music that combines traditional Brazilian urban music styles (like samba, samba-canção and choro) with more contemporary pop and rock influences. Signifying more than the sum of the three words would indicate, MPB is a contemporary trend that has brought the world many renowned Brazilian artists.

MPB as a style debuted in the 1960s, with the abbreviation being applied to the type of music that emerged following the advent of the bossa nova. MPB artists and audiences were largely connected to the intellectual and student population, causing MPB to be known as "university music". MPB was born out of an attempt to produce a Brazilian "national" music, thus revitalizing traditional styles. MPB made a considerable impact at that time, boosted by several televised music festivals.

The earliest MPB borrowed elements of the bossa nova and often relied on thinly-veiled criticism of social injustice and dictatorial repression, being based on progressive opposition to the military dictatorship, large landowners, and imperialism. Early MPB is closely associated with the short-lived artistic movement known as tropicalia.

The climate that created the MPB movement ceased to exist after 1969, but the abbreviation has survived, albeit with a less specific meaning. Transforming from a left-wing musical movement, MPB became the core of Brazil's national music, and the term still indicates a certain aesthetic quality in modern Brazilian music.

## Notable performers

Adriana Calcanhotto  
Caetano Veloso  
Carlinhos Brown  
Cássia Eller -- a rock singer, with a fondness for MPB composers.  
Cazuza --  
Chico Buarque  
Djavan  
Dorival Caymmi  
Elis Regina  
Gal Costa  
Gilberto Gil

Ivan Lins  
João Bosco  
Jorge Benjor, formerly Jorge Ben  
Joyce  
Maria Bethânia  
Marisa Monte  
Milton Nascimento  
Nana Caymmi  
Ney Matogrosso  
MPB-4  
Os Mutantes -- a progressive rock group which had a key role in the birth of MPB

## MTV Video Music Awards

The **MTV Video Music Awards** were established in 1984 by MTV to celebrate the top [music videos](#) of the year. Originally beginning as an alternative to the [Grammy Awards](#), the MTV Video Music Awards is now a respected pop culture awards show in its own right.

The statues given to winners of the award are often called "Moon Men" because the statue is of an astronaut on the moon, one of the earliest representations of MTV.

The eligibility period for the Video Music Awards begins July 1. They are presented annually and broadcast live on MTV. Past broadcasts have been held in New York, Los Angeles and Miami.

The 2006 MTV Video Music Awards will be held at New York's Radio City Music Hall on Thursday, August 31.

## Memorable Moments

### 1980s

- Madonna's performance at the First Annual MTV Video Music Awards in 1984 is considered to be the first controversial incident in a career that would see many more. She took the stage to sing "Like A Virgin" wearing a combination bustier/wedding gown, which included her trademark "Boy Toy" belt. During the performance, she rolled around on the floor, revealing lacy stockings and garters, and made a number of sexually suggestive

moves. While such a performance would probably not raise eyebrows today, it was shocking to a mid-1980s audience. However, Madonna seemed to thrive on the controversy, and it only served to increase her popularity.

- Controversial comic Andrew Dice Clay's appearance on the 1989 Video Music Awards to promote his new movie, *The Adventures of Ford Fairlane*, earned him a "lifetime ban" from the network when he started performing some of his already-notorious nursery rhymes.
- After performing on the 1989 VMA's with Tom Petty, Guns N' Roses guitarist Izzy Stradlin was assaulted by Mötley Crüe lead singer Vince Neil, leading to a verbal battle between Vince and Guns N' Roses lead singer Axl Rose when Axl stood up for Izzy.

## 1990s

- Conflict between Poison's Bret Michaels and C.C. DeVille culminated in a fistfight at the Video Music Awards in 1991, provoked by DeVille's live performance which was perceived as inept. DeVille was fired and replaced by Pennsylvaniaian guitar virtuoso Richie Kotzen.
- The 1991 VMAs included the first public appearance by Paul Reubens after his lewd-conduct arrest earlier that year. Taking the stage in costume as Pee Wee Herman, he received a standing ovation, after which he asked the audience, "*Heard any good jokes lately?*"
- In 1992, MTV had requested Nirvana perform their smash hit "Smells Like Teen Spirit," while the band themselves had indicated they preferred to play their new songs, "Rape Me" and "tourette's". This did not go over well with network executives, who continued to push for "Teen Spirit." Finally, offering a compromise, MTV executives offered the band a choice to play either "Teen Spirit" or "Lithium," which the band appeared to accept. However, at the actual performance, Nirvana began to play, and Kurt Cobain played the first few chords of the song, "Rape me" much to the horror of MTV execs. The band did finally return to their regular performance of "Lithium." Near the end of the song, frustrated that his

amp had stopped functioning, bassist Krist Novoselic decided to toss his bass into the air for dramatic effect. Unfortunately, he misjudged the landing, and the bass ended up bouncing off of his forehead, forcing him to stumble off the stage in a daze.

- Axl Rose challenged Kurt Cobain to a fight during the 1992 Video Music Awards, after Cobain and his wife, Courtney Love, egged him on.
  - When Cobain was trashing the band's equipment at the end performance, drummer Dave Grohl ran to the mic and began yelling "*Hi, Axl!*" repeatedly.
  
- Guns N' Roses' hit ballad "November Rain" became the most requested video on MTV, eventually winning an MTV Video Music Award for best cinematography in 1992. During the awards show, the band performed "November Rain" with singer Elton John. Because of the dispute Axl had with Cobain, moments before the "November Rain" performance, Cobain spat on the keys of what he thought was Axl's piano. Cobain later revealed that he was shocked to see Elton John play on the piano he had spat on.
  
- Pearl Jam and Neil Young took the stage in 1993, and gave an amazing performance of Young's classic "Rocking in the Free World." It was a solid mixture of classic and contemporary rock, and it helped to solidify Pearl Jam as being a step above other bands of the time. This followed a Pearl Jam only performance of their song "Animal"... one of the few songs to ever be performed that never had a video on MTV.
  
- RuPaul caused a bit of controversy at the 1993 MTV Video Music Awards when he was given the opportunity to present an award with legendary actor Milton Berle, who performed an altogether different type of drag early in his career. The two had conflicts back-stage, and when Berle inappropriately touched RuPaul's breasts, RuPaul ad-libbed the line "*So you used to wear gowns, but now you're wearing diapers.*" The press picked this up as a crack in the "love everyone" message RuPaul presented, and depicted the incident as a young newcomer treating a legend poorly. Eventually the hullabaloo faded.
  
- At the 1994 MTV Video Music Awards on September 8, Madonna was announced to present the award for Video of the Year. She came out arm-

in-arm with an unannounced David Letterman, to a wild ovation. At the microphone, Letterman told her, "*I'll be out by the car. Watch your language,*" and then left. Madonna has made several appearances on Letterman's show since, the two now treating the incident with humor.

- On September 4, 1996, the four original members of Van Halen made their first public appearance together since their infamous break-up in 1985, presenting an MTV Video Music Award. Their appearance was greeted with a twenty second standing ovation, and fueled widespread speculation about a reunion tour. After the ousting of vocalist Sammy Hagar on Father's Day 1996, the original line-up of Van Halen, featuring vocalist David Lee Roth, recorded two new songs for a highly anticipated greatest hits album, entitled Best Of Vol. 1. Backstage, after presenting an award to Beck, the reunion soured bitterly, and reportedly, David Lee Roth and guitarist Eddie Van Halen nearly came to blows. During media interviews, Roth advised Van Halen not to talk about his personal issues, such as his impending hip replacement surgery. Van Halen claims that Roth said, "tonight is about me, man, not your fucking hip!" Van Halen, infuriated at what he perceived as Roth's egotism, lunged at Roth and told him, "if I ever see you again, you'd better be wearing a cup, pal!" Van Halen also fumed about Roth's behaviour while presenting an MTV Music Award to Beck, calling it "disrespectful," and "embarrassing." Several weeks later, the public learned that Van Halen would not reunite with Roth, to much outrage. Roth released a media statement apologizing to fans, stating that he was an unwitting participant in a publicity stunt to sell more copies of the greatest hits album, and that he had been led to believe that he was rejoining Van Halen. The following day, Eddie and Alex Van Halen released a media statement, stating that they had been honest with Roth, and never led him to believe that he had been re-hired. Many were infuriated by this situation, and largely took Roth's side in the argument. Subsequently, Van Halen's popularity declined.
- In 1997, Puff Daddy released his debut album No Way Out, featuring the successful tribute single "I'll Be Missing You", dedicated to the recently murdered Notorious B.I.G. The song featured Puff Daddy, Biggie's widow Faith Evans and R&B group 112. The song sampled the melody of The Police's hit song "Every Breath You Take." All these artists performed the song with former Police vocalist Sting during the 1997 Video Music Awards.

- The odd pairing of presenters Martha Stewart and Busta Rhymes at the 1997 Video Music Awards. They presented the best dance video award to the Spice Girls for their music video "Wannabe."
- While accepting the MTV Video Music Award for Best New Artist Video of 1997 ("Sleep To Dream"), Fiona Apple appealed to her audience not to be enamored of celebrity culture. Referring to the MTV/Music Industry she proclaimed "this world is bullshit" and quoted Maya Angelou: "Go with yourself." Though her comments were generally greeted with cheers and applause at the awards ceremony, the media backlash was huge; host Chris Rock made a derisive comment about her speech, which only added to the backlash. Some considered her remarks hypocritical, seeing a contradiction between her appearance in a risqué music video in only her underwear, and her telling young women to ignore celebrity culture. However she was unapologetic: "*When I have something to say, I'll say it.*"
- At the 1998 Video Music Awards, actress Rose McGowan arrived with then-boyfriend Marilyn Manson wearing a see-through dress, no bra, and a thong.
- Lil' Kim showed up at the 1999 MTV Video Music Awards with an entire breast exposed and only a tiny piece of fabric over the nipple. Kim's outfit became even more controversial later that night, when she appeared on stage with Mary J. Blige and Diana Ross to present an award, and Ross reached over, cupped her hand under Kim's exposed breast and jiggled it while both laughed heartily. It was later described as Ross getting to second base with Kim on national television.

## 2000s

- At the 2000 Video Music Awards, the award for Best Rock Video went to Limp Bizkit. As Fred Durst was making his speech, Tim Commerford, the bassist for Rage Against the Machine, climbed onto the scaffolding of the set and threatened to jump. Fred Durst responded by saying Limp Bizkit was "*the most hated band in the world.*" The show soon went into a commercial break. Commerford, along with his bodyguard, was sentenced to a night in jail, though he later claimed the stunt was intended as a joke.

- Also at the 2000 VMAs, Britney Spears gave a memorable live performance of "(I Can't Get No) Satisfaction" and her own hit "Oops!... I Did It Again" in medley form. While she began her segment in a black suit, she shocked the media while, at only the age of eighteen, ripped that off to display a revealing, flesh-colored stage outfit.
- The next year, at the 2001 Video Music Awards, Britney Spears again shocked the nation when she took the stage to give a performance of her then-new single, "I'm a Slave 4 U". Along with dancing in a very revealing outfit while wet, the performance is probably most remembered for featuring the singer 'charming' a flesh-colored snake. A media frenzy ensued, and involved criticisms against Spears by the PETA organisation.
- Also at the 2001 awards, Michael Jackson made a surprise appearance at the end of 'N Sync's performance and, surrounded by members of the group, performed some of his trademark dance moves to the beatboxing of member Justin Timberlake.
- Triumph, the Insult Comic Dog appeared at the 2002 MTV Video Music Awards and had a confrontation with Eminem (which MTV later removed from rebroadcast airings). Eminem also had a confrontation with Moby, who had called the rapper's music misogynistic and homophobic. Eminem challenged Moby to a fight while he was on stage with which the audience gave a downpour of boos.
- Eminem also had an embarrassing moment accepting his award for Best Male Video (Without Me) at the 2002 VMAs, from the hands of Christina Aguilera, who he had dissed in 2000's video "The Real Slim Shady." Aguilera herself had some attention from the media because of her very revealing outfit. It is said by MTV that Christina and Eminem finally stopped their feud in the backstage, hugging each other.
- At the 2002 VMAs, Axl Rose unveiled the new lineup of Guns N' Roses. The band's set was the show's finale, and although the performance was meant to be kept a secret (host Jimmy Fallon frequently alluded to a major event that would occur at the end of the show before finally donning a G'n'R t-shirt when he introduced the band), some New York radio outlets announced the performance earlier in the day. The band, which included

nine members and was fronted by a dreadlocked, gravelly-voiced Axl Rose, played a set consisting of "Welcome to the Jungle," "Madagascar," and "Paradise City."

- At the 2003 Video Music Awards, Madonna provoked the public once again by portraying a groom and kissing her brides, Britney Spears and Christina Aguilera, on stage. The gender role-reversal and lesbian theme instantly made front page headlines. The three singers performed a medley of her early hit, "Like A Virgin", and her then latest release, "Hollywood", with a guest rap by Missy Elliott. The design resembled Madonna's performance of "Like A Virgin" at the 1984 VMAs: the same wedding cake set, wedding dresses and "Boy Toy" belt worn by Madonna in 1984 now adorned Aguilera and Spears.
- The MTV Video Music Awards on August 28, 2005 were held three days after Hurricane Katrina, a Category 1 hurricane at the time, hit just north of Miami, Florida on August 25, 2005. Local residents in the area were without power and could not watch the broadcast. Hurricane Katrina passed through Florida before hitting along the Central Gulf Coast August 29 near Buras-Triumph, Louisiana as a Category 3 storm.
- At the 2005 MTV Video Music Awards, Beavis and Butt-head appeared in a couple of Viewers Choice award skits, saying to "Vote to put Beavis and Butt-head back on MTV!" This may be a sign that the show is coming back soon, but was more than likely a promotional appearance for the November 8, 2005 retail release of *The Best of Beavis and Butt-Head Volume One: The Mike Judge Collection*.
- At the 2005 MTV Video Music Awards, Fat Joe made a disparaging comment about G-Unit during a performance: "I'd like to tell the people home I feel so safe tonight with all this police protection courtesy of G-Unit. . ." Later in the show, after G-Unit's performance, 50 Cent addressed the crowd with a profanity-laden criticism of Fat Joe — much of which was edited before being shown on television. Kanye West was shown, making sure nothing else would happen.
- The 2005 MTV Video Music Awards was the first to have a performance in Spanish, when Shakira performed her hit song "La Tortura" featuring

Alejandro Sanz. It was also the first time that a Latin video was nominated at the awards.

## **MTV Video Music Award Host Cities**

September 14, 1984 - Radio City Music Hall, (New York City, New York) hosted by Dan Aykroyd and Bette Midler  
September 13, 1985 - Radio City Music Hall, (New York City, New York) hosted by Eddie Murphy  
September 5, 1986 - Palladium, (New York City, New York)/Gibson Amphitheatre (Los Angeles, California)  
September 11, 1987 - Gibson Amphitheatre, (Los Angeles, California) hosted by Julie Brown  
September 7, 1988 - Gibson Amphitheatre, (Los Angeles, California) hosted by Arsenio Hall  
September 6, 1989 - Gibson Amphitheatre, (Los Angeles, California) hosted by Arsenio Hall  
September 6, 1990 - Gibson Amphitheatre, (Los Angeles, California) hosted by Arsenio Hall  
September 5, 1991 - Gibson Amphitheatre, (Los Angeles, California) hosted by Arsenio Hall  
September 9, 1992 - UCLA's Pauley Pavilion, (Los Angeles, California) hosted by Dana Carvey  
September 2, 1993 - Gibson Amphitheatre, (Los Angeles, California) hosted by Christian Slater  
September 8, 1994 - Radio City Music Hall, (New York City, New York) hosted by Roseanne Barr  
September 7, 1995 - Radio City Music Hall, (New York City, New York) hosted by Dennis Miller  
September 4, 1996 - Radio City Music Hall, (New York City, New York) hosted by Dennis Miller  
September 4, 1997 - Radio City Music Hall, (New York City, New York) hosted by Chris Rock  
September 10, 1998 - Gibson Amphitheatre, (Los Angeles, California) hosted by Ben Stiller  
September 9, 1999 - Metropolitan Opera House, (New York City, New York) hosted by Chris Rock  
September 7, 2000 - Radio City Music Hall, (New York City, New York) hosted by Marlon Wayans and Shawn Wayans

September 6, 2001 - Metropolitan Opera House, (New York City, New York) hosted by Jamie Foxx  
August 29, 2002 - Radio City Music Hall, (New York City, New York) hosted by Jimmy Fallon  
August 28, 2003 - Radio City Music Hall, (New York City, New York) hosted by Chris Rock  
August 29, 2004 - American Airlines Arena, (Miami, Florida) No official host  
August 28, 2005 - American Airlines Arena, (Miami, Florida) hosted by Sean "Diddy" Combs  
August 31, 2006 - Radio City Music Hall, (New York City, New York)

Best Video from a Film

## Musette de cour

The **musette de cour** or **baroque musette** is a musical instrument of the [bagpipe](#) family. Visually, the musette is characterised by the short, cylindrical shuttle-drone and the two chalumeaux. Both the chanters and the drones have a cylindrical bore and use a double reed, giving a quiet tone similar to the [oboe](#). The instrument is always bellows-blown.

*Note:* the qualified name *de cour* does not appear in original music for the instrument; title-pages refer to it simply as *musette*, allowing occasional confusion with the *oboe piccolo*.

## History

First appearing in France, at the very end of the sixteenth century, the musette was refined over the next hundred years by a number of instrument-making families. The best-known contributions came from the Hotteterre family: Martin Hotteterre added a second chanter, the *petit chalumeau*, extending the instrument's range by six semitones. The bourdon, originally designed to accompany essentially modal music, became simpler as the chalumeaux became more complicated. The final form of the musette is fully chromatic, with a range of an octave and half starting from F above middle C; the bourdon provides drones for C, D and G.

The qualification *de cour* refers to the instrument's connection with the French court and aristocracy of the early seventeenth century. "Exotic" - in the sense of *imported* or *out of place* - elements were fashionable, resulting in the appearance of traditional instruments such as [bagpipe](#), hurdy-gurdy and galoubet in compositions for professionals and amateurs alike. The musette may well have benefited from being a bellows-blown instrument, too; it was generally considered unseemly for women to play any mouth-blown instrument. Borjon de Scellery, however, does explicitly identify grimacing and pulling faces as a habit of ill-trained musette-players.

At the height of its popularity, the musette (like the hurdy-gurdy) was used not just for chamber-music but also in larger-scale compositions such as operas, where it was associated with shepherds, peasants and other pastoral elements. After the French Revolution, the musette seems to have fallen

rapidly out of favour while simpler forms of bagpipe remained popular as folk-instruments. As a result, musicologists examining French baroque music at the end of the 19th century found it difficult to imagine that what they took to be the same as a simple folk bagpipe could ever have had a place in highly sophisticated music for the court.

The "authentic performance" approach generally familiar from the 1970s onward, plus skilful restoration of original instruments by makers such as Rémi Dubois (Verviers, Belgium), has made it possible to hear works such as Chédeville's "Pastor Fido" (based on Vivaldi's "Seasons"), chamber-music by Boismortier and even Rameau's opéra-ballet "Les Fêtes d'Hébé" in their original form.

## **Chalumeaux (chanters)**

The frontispiece in Borjon de Scellery's *Traité* (1672) shows a shepherd surrounded by a number of instruments. They include an early musette, with a single chalumeau that appears to have six finger-holes and no keys. The first full-page plate then illustrates a chalumeau with seven finger-holes and three keys, giving a range of one octave.

The second full-page plate illustrates a more developed form of the musette, where a *grand chalumeau* with five keys is complemented by a *petit chalumeau* with six keys. Jacques Hotteterre's *Méthode* (1738) illustrates the most usual final form of the instrument; the six-key *petit chalumeau* is the same as de Scellery's, but the *grand chalumeau* now has seven keys.

The *petit chalumeau*, as already mentioned, was added by Martin Hotteterre; though physically connected to the *grand chalumeau*, and sharing the the same wind-supply from the bellows, it has its own double reed and functions as a separate instrument. The lowest note on the *petit chalumeau* is an A flat a semi-tone below the higher A on the *grand chalumeau*, and keeping the two chalumeaux in tune and in balance is one of the difficulties of the instrument.

The *grand chalumeau* is open, so it always sounds. The *petit chalumeau* is closed, like the later Northumbrian pipes, so it sounds only when a key is pressed. The fingering system on both chalumeaux is "closed", meaning that (except while playing some ornaments) only one hole at a time is opened.

## **Bourdons (drones)**

Following the principle of the rackets and the [bassoon](#), the short cylinder of the musette drone contains air-ways that double back on themselves. Openings in each air-way (the equivalent of finger-holes) are uncovered by moving *layettes* (sliders) fixed in four *coulisses* (runners). The two lowest notes use the same air-way, so cannot be played together.

The earliest musettes had up to nine *coulisses* and twelve *layettes*, so that you could play music in a range of modes and always have a drone using the home-note of the mode. As the chalumeaux developed and became fully chromatic, so it became possible to play music in different modes but starting on the same note; fewer possible drone-notes were needed, and the bourdon was simplified. Even so, the bourdon still contains four or more separate reeds that have to be kept adjusted and in tune.

## Repertory

The musette was an instrument both for professionals, members of ensembles and orchestras in the court or noble households, and for amateurs. As a result, the music written for the instrument ranges from simple transcriptions of popular tunes – folk-dances in Borjon de Scellery's *Traité*, songs from current operas in Hotteterre's *Méthode* – to quite demanding pieces by the best-known composers of the day. The bulk of music written for the musette is not solo music; duos are the most popular form, followed by trio-sonatas. Much of the music available for the instrument was described as suitable for musette, hurdy-gurdy, recorder or transverse flute; or for all these plus oboe or violin. Modern editions, usually for recorder, give people the chance to discover a lot of musette music, though it needs the drone(s) to be heard as the composer intended.

Composers (in alphabetical order) include Bâton, Boismortier, Buterne, Chédeville (*l'Ainé* and *le Cadet*), Corrette, Delavigne, J.J. Hotteterre, Naudot and Rameau. Interest in the musette seems to have been confined almost exclusively to French composers, though the tranquil dance-form with the same name is more widespread. There are both *Lyra* (hurdy-gurdy) and *Musette* movements in Telemann orchestral suites, for example, and a *Musette* in the *Anna Magdalena Bachbüchlein*.

The *Traité* by Borjon de Scellery, while mentioning the *petit chalumeau* and including it in the illustrations, concentrates on the *grand chalumeau* and includes [mostly] dance-tunes and popular songs in its examples. The *Méthode* by Hotteterre covers the full range of the developed form of the instrument, and as well as examples taken from popular operas includes a number of original compositions designed to extend the player's skill in specific areas. Both these works also teach how to read music, de Scellery

providing examples in standard notation and in musette tablature, and advice on basic maintenance. It is clear that they are expecting their readers to live in Paris or one of the largest provincial towns, where they will readily find instrument-makers and tutors to help them.

## Music

### What is music?

The [definition of music](#) as sound with particular characteristics is taken as a given by psychoacoustics, and is a common one in [musicology](#) and performance. There are observable patterns to what is broadly labeled music, and while there are understandable cultural variations, the properties of music are the properties of sound as perceived and processed by humans.

Greek philosophers and medieval theorists defined music as tones ordered horizontally (as melodies) and vertically (as harmonies). Music theory, within this realm, is studied with the presupposition that music is orderly and often pleasant to hear. However, in the 20th century, composers challenged the notion that music had to be pleasant by creating music that explored harsher, darker timbres.

20th century composer John Cage disagreed with the notion that music was pleasant melodies. Instead, he argued that any sounds we can hear can be music, saying, for example, "There is no [noise](#), only sound,". According to musicologist Jean-Jacques Nattiez (1990 p.47-8,55): "The border between

music and noise is always culturally defined--which implies that, even within a single society, this border does not always pass through the same place; in short, there is rarely a consensus.... By all accounts there is no *single* and *intercultural* universal concept defining what music might be."

The composer Anton Webern expressed in his legendary statement *With me, things never turn out as I wish, but only as is ordained for me-as I must* stating the underlying generative process of music. The German philosopher Johann Wolfgang Von Goethe stated the nature of patterns and forms as the basis of music by stating that "architecture is frozen music". By this he meant that any natural stimuli that has underlying structural-patterns is musical in form.

Other definitions of music list the aspects or elements that make up music. Molino (1975: 43) argues that, in addition to a lack of consensus, "any element belonging to the total musical fact can be isolated, or taken as a strategic variable of musical production." Nattiez gives as examples Mauricio Kagel's *Con Voce* [with voice], where a masked trio silently mimes playing instruments. In this example, sound, a common element, is excluded, while physical gesture, a less common element in definitions of music, is given primacy.

## Aspects of music

*Main article:* [Aspects of music](#)

The traditional or classical European [aspects of music](#) often listed are those elements given primacy in European-influenced classical music: [melody](#), [harmony](#), [rhythm](#), [tone color/timbre](#), and [form](#). A more comprehensive list is given by stating the aspects of sound: [pitch](#), [timbre](#), [loudness](#), and [duration](#).<sup>1</sup> These aspects combine to create secondary aspects including structure, [texture](#) and style. Other commonly included aspects include the spatial location or the movement in space of sounds, gesture, and dance.

Silence has long been considered an aspect of music, ranging from the dramatic pauses in Romantic-era symphonies to the avant-garde use of silence as an artistic statement in 20th century works such as John Cage's 4'33."John Cage considers duration the primary aspect of music because it is the only aspect common to both "sound" and "silence."

As mentioned above, not only do the aspects included as music vary, their importance varies. For instance, melody and harmony are often considered to be given more importance in classical music at the expense of rhythm and timbre. It is often debated whether there are aspects of music that are

universal. The debate often hinges on definitions, for instance the fairly common assertion that "tonality" is a universal of all music may necessarily require an expansive definition of tonality.

A pulse is sometimes taken as a universal, yet there exist solo vocal and instrumental genres with free, improvisational rhythms with no regular pulse;2 one example is the alap section of a Hindustani music performance.

According to Dane Harwood, "We must ask whether a cross-cultural musical universal is to be found in the music itself (either its structure or function) or the way in which music is made. By 'music-making,' I intend not only actual performance but also how music is heard, understood, even learned." <sup>3</sup>

## Common terms

*Main article:* [Musical terminology](#)

Common terms used to discuss particular pieces include [melody](#), which is a succession of notes heard as some sort of unit; [chord](#), which is a simultaneity of notes heard as some sort of unit; [chord progression](#), which is a succession of chords (simultaneity succession); [harmony](#), which is the relationship between two or more pitches; [counterpoint](#), which is the simultaneity and organization of different melodies; and [rhythm](#), which is the organization of the durational aspects of music.

## Production

*Main article:* [Music industry](#)

Music is composed and performed for many purposes, ranging from aesthetic pleasure, religious or ceremonial purposes, or as an entertainment product for the marketplace. Amateur musicians compose and perform music for their own pleasure, and they do not attempt to derive their income from music. Professional musicians are employed by a range of institutions and organizations, including armed forces, churches and synagogues, symphony orchestras, broadcasting or film production companies, and music schools. As well, professional musicians work as freelancers, seeking contracts and engagements in a variety of settings.

Although amateur musicians differ from professional musicians in that amateur musicians have a non-musical source of income, there are often many links between amateur and professional musicians. Beginning amateur

musicians take lessons with professional musicians. In community settings, advanced amateur musicians perform with professional musicians in a variety of ensembles and orchestras. In some rare cases, amateur musicians attain a professional level of competence, and they are able to perform in professional performance settings.

A distinction is often made between music performed for the benefit of a live audience and music that is performed for the purpose of being recorded and distributed through the music retail system or the broadcasting system. However, there are also many cases where a live performance in front of an audience is recorded and distributed (or broadcast).

## **Performance**

Someone who performs, composes, or conducts music is a musician. Musicians perform music for a variety of reasons. Some artists express their feelings in music. Performing music is an enjoyable activity for amateur and professional musicians, and it is often done for the benefit of an audience, who is deriving some aesthetic, social, religious, or ceremonial value from the performance. Part of the motivation for professional performers is that they derive their income from making music. As well, music is performed in the context of practicing, as a way of developing musical skills.

## **Solo and ensemble**

Many cultures include strong traditions of solo or soloistic performance, such as in [Indian classical music](#), and in the Western Art music tradition. Other cultures, such as in Bali, include strong traditions of [group](#) performance. All cultures include a mixture of both, and performance may range from improvised solo playing for one's enjoyment to highly planned and organized performance rituals such as the modern classical [concert](#) or religious processions.

[Chamber music](#), which is music for a small ensemble, is often seen as more intimate than symphonic works. A performer is called a [musician](#) or singer, and they may be part of a [musical ensemble](#) such as a [rock band](#) or symphony [orchestra](#).

## **Oral tradition and notation**

*Main article: [Musical notation](#)*

Music is often preserved in memory and performance only, handed down orally, or aurally ("by ear"). When the composer of music is no longer known, this music is often classified as "traditional". Different musical traditions have different attitudes towards how and where to make changes to the original source material, from quite strict, to those which demand [improvisation](#) or modification to the music.

When music is written down, it is generally notated so that there are instructions regarding what should be heard by listeners, and what the musician should do to perform the music. This is referred to as [musical notation](#), and the study of how to read notation involves [music theory](#), harmony, the study of performance practice, and in some cases an understanding of historical performance methods.

Written notation varies with style and period of music. In Western Art music, the most common types of written notation are scores, which include all the music parts of an ensemble piece, and parts, which are the music notation for the individual performers or singers. In popular music, jazz, and blues, the standard musical notation is the lead sheet, which notates the melody, chords, lyrics (if it is a vocal piece), and structure of the music. Nonetheless, scores and parts are also used in popular music and jazz, particularly in large ensembles such as jazz "big bands."

In popular music, guitarists and electric bass players often read music notated in tablature, which indicates the location of the notes to be played on the instrument using a diagram of the guitar or bass fingerboard. Generally music which is to be performed is produced as [sheet music](#). Tablature was also used in the Baroque era to notate music for the lute, a stringed, fretted instrument.

To perform music from notation requires an understanding of both the musical style and the performance practice that is associated with a piece of music or genre. The detail included explicitly in the music notation varies between genres and historical periods. In general, art music notation from the 17th through to the 19th century required performers to have a great deal of contextual knowledge about performing styles. For example, in the 17th and 18th century, music notated for solo performers typically indicated a simple, unornamented melody. However, it was expected that performers would know how to add stylistically appropriate ornaments such as trills and turns.

In the 19th century, art music for solo performers may give a general instruction such as to perform the music expressively, without describing in detail how the performer should do this. It was expected that the performer would know how to use tempo changes, accentuation, and pauses (among other devices) to obtain this "expressive" performance style.

In the 20th century, art music notation often became more explicit, and used a range of markings and annotations to indicate to performers how they should play or sing the piece. In popular music and jazz, music notation

almost always indicates only the basic framework of the melody, harmony, or performance approach; musicians and singers are expected to know the performance conventions and styles associated with specific genres and pieces. For example, the "lead sheet" for a jazz song may only indicate the basic outlines of the melody and the chord changes. The performers in the jazz ensemble are expected to know how to "flesh out" this basic structure.

## **Improvisation, interpretation, composition**

*Main articles: [Musical composition](#), [Improvisation#Musical improvisation](#), and [Free improvisation](#)*

Most cultures use at least part of the concept of preconceiving musical material, or [composition](#), as held in western classical music. Even when music is notated precisely, there are still many decisions that a performer has to make. The process of a performer deciding how to perform music that has been previously composed and notated is termed interpretation.

In some musical genres, such as jazz and blues, even more freedom is given to the performer to engage in [improvisation](#) on a basic melodic, harmonic, or rhythmic framework. The greatest latitude is given to the performer in a style of performing called [free improvisation](#), which is material that is spontaneously "thought of" (imagined) while being performed, *not* preconceived. Improvised music usually follows stylistic or genre conventions and even "fully composed" includes some freely chosen material (see [precompositional](#)). Composition does not always mean the use of notation, or the known sole authorship of one individual.

Music can also be determined by describing a "process" which may create musical sounds, examples of this range from wind chimes, through computer programs which select sounds. Music which contains elements selected by chance is called [Aleatoric music](#), and is often associated with John Cage and Witold LutosBawski.

## **Compositions**

[Musical composition](#) is a term that describes the makeup of a piece of music. Methods of composition vary widely, however in analyzing music all forms -- spontaneous, trained, or untrained -- are built from elements comprising a musical piece. Music can be composed for repeated performance or it can be improvised; composed on the spot. The music can be performed entirely from memory, from a written system of [musical notation](#), or some combination of both. Study of composition has traditionally been dominated by examination of methods and practice of Western classical

music, but the definition of [composition](#) is broad enough to include spontaneously improvised works like those of [free jazz](#) performers and African drummers.

What is important in understanding the composition of a piece is singling out its elements. An understanding of music's formal elements can be helpful in deciphering exactly how a piece is constructed. A universal element of music is how sounds occur in time, which is referred to as the [rhythm](#) of a piece of music.

When a piece appears to have a changing time-feel, it is considered to be in rubato time, an Italian expression that indicates that the tempo of the piece changes to suit the expressive intent of the performer. Even random placement of random sounds, which occurs in musical montage, occurs within some kind of time, and thus employs time as a musical element.

## Reception and audition

The field of [music cognition](#) involves the study of many aspects of music including how it is processed by listeners.

Music is experienced by individuals in a range of social settings ranging from being alone to attending a large concert. Musical performances take different forms in different cultures and socioeconomic milieus. In Europe and North America, there is often a divide between what types of music are viewed as "high culture" and "low culture." "High culture" types of music typically include Western art music such as Baroque, Classical, Romantic, and modern-era symphonies, concertos, and solo works, and are typically heard in formal concerts in concert halls and churches, with the audience sitting quietly in seats.

On the other hand, other types of music such as jazz, blues, soul, and country are often performed in bars, nightclubs, and theatres, where the audience may be able to drink, dance, and express themselves by cheering. Until the later 20th century, the division between "high" and "low" musical forms was widely accepted as a valid distinction that separated out better quality, more advanced "art music" from the popular styles of music heard in bars and dance halls.

However, in the 1980s and 1990s, musicologists studying this perceived divide between "high" and "low" musical genres argued that this this distinction is not based on the musical value or quality of the different types of music. Rather, they argued that this distinction was based largely on the socioeconomic standing or social class of the performers or audience of the different types of music.

For example, whereas the audience for Classical symphony concerts typically have above-average incomes, the audience for a hip-hop concert in an inner-city area may have below-average incomes. Even though the performers, audience, or venue where non-"art" music is performed may have a lower socioeconomic status, the music that is performed, such as blues, hip-hop, punk, or funk may be very complex and sophisticated.

Deaf people can experience music by feeling the vibrations in their body, a process which can be enhanced if the individual holds a resonant, hollow object. A well-known deaf musician is the composer Ludwig van Beethoven, who composed many famous works even after he had completely lost his hearing. Recent examples of deaf musicians include Evelyn Glennie, a highly acclaimed percussionist who has been deaf since the age of twelve, and Chris Buck, a virtuoso violinist who has lost his hearing.

## Media

The music that composers make can be heard through several media; the most traditional way is to hear it live, in the presence, or as one of, the musicians. Live music can also be broadcast over the radio, television or the internet. Some musical styles focus on producing a sound for a performance, while others focus on producing a recording which mixes together sounds which were never played "live". Recording, even of styles which are essentially live often uses the ability to edit and splice to produce recordings which are considered "better" than the actual performance.

In many cultures there is less distinction between performing and listening to music, as virtually everyone is involved in some sort of musical activity, often communal. In industrialized countries, listening to music through a recorded form, such as [sound recording](#) or watching a [music video](#), became more common than experiencing live performance, roughly in the middle of the 20th century.

Sometimes, live performances incorporate prerecorded sounds. For example, a [DJ](#) uses disc records for scratching, and some 20th-century works have a solo for an instrument or voice that is performed along with music that is prerecorded onto a tape. Audiences can also become performers by using [Karaoke](#), invented by the Japanese, which uses music video and tracks without voice, so the performer can add their voice to the piece.

## Education

Professional musicians in some cultures and musical genres compose, perform, and improvise music with no formal training. Musical genres where professional musicians are typically self-taught or where they learn through informal mentoring and creative exchanges include blues, punk, and popular music genres such as rock, pop and hip-hop.

Undergraduate university degrees in music, including the Bachelor of Music, the Bachelor of Music Education, and the Bachelor of Arts with a major in music typically take three or four years to complete. These degrees provide students with a grounding in music theory and music history, and many students also study an instrument or learn singing technique as part of their program.

Graduates of undergraduate music programs can go on to further study in music graduate programs. Graduate degrees include the Master of Music, the Master of Arts, the PhD, and more recently, the Doctor of Musical Arts, or DMA. The Master of Music degree, which takes one to two years to complete, is typically awarded to students studying the performance of an instrument or voice or composition. The Master of Arts degree, which takes one to two years to complete and often requires a thesis, is typically awarded to students studying musicology, music history, or music theory.

The PhD, which is required for students who want to work as university professors in musicology, music history, or music theory, takes three to five years of study after the Master's degree, during which time the student will complete advanced courses and undertake research for a dissertation. The Doctor of Musical Arts, or DMA is a relatively new degree that was created to provide a credential for professional performers or composers that want to work as university professors in musical performance or composition. The DMA takes three to five years after a Master's degree, and includes advanced courses, projects, and performances.

## **Music as Part of General Education**

The incorporation of music training from preschool to postsecondary education is common in North America and Europe, because involvement in music is thought to teach basic skills such as concentration, counting, listening, and cooperating. In elementary schools, children often learn to play instruments such as the recorder, sing in small choirs, and learn about the history of Western art music. In secondary schools students may have the opportunity to perform some type of musical ensembles, such as choirs, marching bands, jazz bands, or orchestras, and in some school systems, music classes may be available.

At the university level, students in most arts and humanities programs can receive credit for taking music courses, which typically take the form of an

overview course on the history of music, or a music appreciation course that focuses on listening to music and learning about different musical styles. As well, most North American and European universities have some type of musical ensembles that non-music students are able to participate in, such as choirs, marching bands, or orchestras.

The study of Western art music is increasingly common outside of North America and Europe, such as STSI in Bali, or the Classical music programs that are available in Asian countries such as South Korea, Japan, and China. At the same time, Western universities and colleges are widening their curriculum to include music of non-Western cultures, such as the music of Africa or Bali (e.g. Gamelan music).

Both amateur and professional musicians take [music lessons](#), short private sessions with an individual teacher. Amateur musicians typically take lessons to learn musical rudiments and beginner- to intermediate-level musical techniques.

## Study

*Main articles:* [musicology](#) and [music theory](#)

Many people also study *about* music in the field of [musicology](#). The earliest definitions of [musicology](#) defined three sub-disciplines: systematic musicology, historical musicology, and comparative musicology. In contemporary scholarship, one is more likely to encounter a division of the discipline into [music theory](#), [music history](#), and [ethnomusicology](#). Research in musicology has often been enriched by cross-disciplinary work, for example in the field of psychoacoustics. The study of music of non-western cultures, and the cultural study of music, is called [ethnomusicology](#).

In [Medieval](#) times, the study of music was one of the Quadrivium of the seven Liberal Arts and considered vital to higher learning. Within the quantitative Quadrivium, music, or more accurately harmonics, was the study of rational proportions.

[Zoomusicology](#) is the study of the music of non-human animals, or the musical aspects of sounds produced by non-human animals. As George Herzog (1941) asked, "do animals have music?" François-Bernard Mâche's *Musique, mythe, nature, ou les Dauphins d'Arion* (1983), a study of "ornitho-musicology" using a technique of Ruwet's *Language, musique, poésie* (1972) paradigmatic segmentation analysis, shows that birdsongs are organized according to a repetition-transformation principle. In the opinion of Jean-Jacques Nattiez (1990), "in the last analysis, it is a human being who decides what is and is not musical, even when the sound is not of human origin. If we acknowledge that sound is not organized and conceptualized (that is, made to form music) merely by its producer, but by the mind that perceives it, then music is uniquely human."

Music theory is the study of music, generally in a highly technical manner outside of other disciplines. More broadly it refers to any study of music, usually related in some form with compositional concerns, and may include mathematics, physics, and anthropology. What is most commonly taught in beginning music theory classes are guidelines to write in the style of the [common practice period](#), or tonal music. Theory, even that which studies music of the common practice period, may take many other forms. [Musical set theory](#) is the application of mathematical [set theory](#) to music, first applied to atonal music. Speculative music theory, contrasted with analytic music theory, is devoted to the analysis and synthesis of music materials, for example [tuning systems](#), generally as preparation for composition.

See also: [Musical analysis](#).

# History

*Main article: [History of music](#)*

The history of music in relation to human beings predates the written word and is tied to the development and unique expression of various human cultures. Music has influenced man, and vice versa, since the dawn of civilization. Popular styles of music varied widely from culture to culture, and from period to period. Different cultures emphasized different [instruments](#), or techniques. [Music history](#) itself is the (distinct) subfield of [musicology](#) and history, which studies the history of [music theory](#).

As there are many definitions for music there are many divisions and groupings of music, many of which are caught up in the argument over the definition of music. Among the larger genres are [classical music](#), [popular music](#) or commercial music (including [rock and roll](#)), [country music](#) and [folk music](#).

There is often disagreement over what constitutes "real" music: late-period Beethoven string quartets, Stravinsky ballet scores, [serialism](#), bebop-era [Jazz](#), [rap](#), [punk rock](#), and [electronica](#) have all been considered non-music by some critics when they were first introduced.

The term [world music](#) has been applied to a wide range of music made outside of Europe and European influence, although its initial application, in the context of the World Music Program at Wesleyan University, was as a term including all possible music genres, including European traditions. (In academic circles, the original term for the study of world music, "comparative musicology", was replaced in the middle of the twentieth century by "ethnomusicology", which is still an unsatisfactory coinage.)

Genres of music are as often determined by tradition and presentation as by the actual music. While most classical music is acoustic and meant to be performed by individuals or groups, many works described as "classical" include samples or tape, or are mechanical. Some works, like Gershwin's Rhapsody in Blue, are claimed by both jazz and classical music.

As world cultures have been in greater contact, their indigenous musical styles have often merged into new styles. For example, the US-American [bluegrass](#) style contains elements from Anglo-Irish, Scottish, Irish, German and some African-American instrumental and vocal traditions, which were able to fuse in the US' multi-ethnic "melting pot" society.

Many current [music festivals](#) celebrate a particular musical genre.

## Music and movement

The topic of **music and movement** in the curriculum is an area that has long been neglected up until recently. Educators are now becoming more aware of the benefits of a quality [music](#) and [movement](#) program because of increased studies. Researchers have found that music and movement programs have a positive impact on child development for children between birth and their primary school years in many of the developmental domains. Singing songs to children and with them will teach them about beat, tones, and [lyrics](#) which are all important in developing auditory discrimination. The use of instruments will promote fine motor development and encourage creative development. Creative movement helps children learn many concepts such as balance, coordination, [rhythm](#), and is also an important tool for developing self-esteem and body awareness and the own development of the child itself.

## Annotated Bibliography

This annotated bibliography will help educators learn about the importance of music and movement programs, and create their own programs within their classroom. Below are links to external websites that provide information in the form of online articles, lesson plans and activities, and sites to purchase materials. Providing this an annotated bibliography will allow the reader to know what the website contains before accessing it.

## Online Articles

This article focuses on the link between music and intellect. It goes on to discuss the many different research experiments that have been conducted that all seek to prove that there is a link between music and children's functioning. All of the studies that were discussed did find that music was beneficial for children and in most cases seen an improvement in the area that was being studied which included math and science skills, spatial skills, and even music aptitude. This article also focuses on what educators and caregivers can do to incorporate music into their daily routine. It concludes with giving direct points regarding the benefits of music and movement.

This article discusses the importance of creative movement and its many benefits. Creative Movement is an exciting way for children to explore movement through music. Creative movement also teaches children a lot about their own personal bodies, the space around them, and their other classmates. This article also goes on to discuss the many other benefits of creative movement. It outlines many findings in relation to child development, sensory awareness, social development, health and fitness, language development and cognitive learning, self-esteem and so much more. While the article isn't very in-depth it does give a great overview of the benefits of creative movement.

This article gives a very general description about how children progress in their individual music development. While the article was very short it did give a lot information about how children progress for infancy to childhood. Siting a lot of research has been done in the area of children and music. One of the most interesting findings is that young children develop musically through a predictable sequence to basic music competence. The article also went on to describe what parents and caregivers can do to ensure that their child is developing appropriately.

Start the music was a report based on the early childhood music summit. The meeting was held as a way to educate the public about the importance of music and to make it an essential component in early childhood development. Many of the benefits of music and movement programs/activities which have been found in extensive research studies were addressed. The summit also

addressed three needs that they viewed as very important that needed to be met. They are;

1. Music educators and providers of early childhood education need to identify and create ways that enable music to be treated as a basic and integral part of every young child's education,
2. Both teachers and care providers must be encouraged to provide quality music instruction to all children, and
3. Those with "authorization authority" i.e., legislators and politicians, school board members, state- and district-level administrators, principals, and in the end, the general public, are a target for the Summit's messages.

Strategies were created for each of the above needs. This can help educators who do not have a strong music program to create one. Overall the notes from the summit were very informative and provided a lot of great ideas that school boards need to implement.

## **Lesson Plans/Activities**

This site allows educators to share their music and movement ideas. There are different links which make it a lot easier to find what you're searching for. The links are everyday songs and finger plays, creative movement activities, holiday songs and finger plays, musical instruments, themed songs, sharing classical musical with children, music links, and CDs and cassettes. This site is a great resource for educators to have.

The Early Childhood Music and Movement Association (ECMMA) is an organization of professional educators dedicated to the ideal that all children should be given the advantage of music and movement instruction during their early years from birth to age seven. The website lists the many focuses of the ECMMA which have to do with the advancements in music and movement development, educating and encouraging early childhood educators, and supporting the family system. This website also provides information about certification programs, links to readings, and information about conferences.

Kindermusik is a community of families and teachers passionately committed to bringing music to children's lives through developmentally appropriate curricula, CDs, books, instruments, and activities. They offer classes to the public throughout Canada and the United States. There is even a class locator so you can search for a class in your area. Besides offering classes this site educates about the importance of music for young children. They have a lot of statistics posted on their site from numerous research

studies that they have conducted. There is also a section where parents/caregivers/educators can purchase materials that are used during the Kindermusik sessions. This would allow families to continue the songs that they have learned within their home. Kindermusik is truly dedicated to bringing music and movement into the lives of families. This site provides a great deal of information about their programs and the importance of music in a young child's life.

## **Classroom Materials**

The Best Children's Music website provides quality materials and resources for both home and school. The website is broken up into age categories to make searching for materials quick and easy. What is available are CD's and cassettes that the website claims are kid tested and parent approved so you can be sure your getting a quality product.

This website provides many resources for teaching music and movement. This online catalogue has many different brightly coloured musical instruments. The first two pages contained instruments, while the last page has books and scarves. All of the materials on this site are geared towards young children. They are all brightly coloured and incorporate animals (bear tambourine and monkey bells). The prices seemed somewhat reasonable ranging from \$8.75 for one rainmaker to \$58 for a bundle of rhythm materials. For an early childhood educator this site would provide a lot of useful resources to add to their collection.

West Music Company is a site dedicated to music. Educators can browse online and find exactly what they are looking for or they can request a catalogue. It was very easy to find what I was looking for on this site because of a search option. This option listed all of the musical resources that they have available so you can easily find what you need (there was even a section for early childhood). There were resources available that were appropriate for all ages. There were the typical brightly coloured early childhood instruments, guitars for all ages, and even full drum sets. Educators who are teaching children how to play a certain instrument would also be able to find instruction books for their students. Overall I think that this website provides everything that an educator would need to create a successful music and movement program within their classroom.

## **Ontario Specific Information**

This is the section in the Ontario Curriculum that focuses on the arts. The site explains what children will be learning and specific outcomes for Music and Drama and Dance in their primary and junior years.

## Music awards

### Music cognition

**Music cognition** is an interdisciplinary field involving such disparate areas as cognitive science, music theory, psychology, musicology, neuroscience, computer science, philosophy, etc. The field aspires to account for the underlying mental processes that occur when people listen to music or perform music.

#### Overview

**Music cognition** clearly came to be recognized as a discipline in the early 1980's, with the creation of the Society for Music Perception and Cognition and the journal Music Perception. The field of music cognition focuses on how the mind makes sense of music as it is heard. It also deals with the related question of the cognitive processes involved when musicians perform music. Topics in the field include (but are not limited to):

- A listener's perception of grouping structure (motives, phrases, sections, etc.)
- [Rhythm](#) and meter (perception and production)
- [Key](#) inference
- Expectation (including melodic expectation).
- Musical similarity
- Emotional response
- Expressive, musical performance

#### Accessibility

Pieces of music and other works of art are commonly judged on their accessibility, with some feeling that less-accessible works are superior and some considering them inferior. For instance, [serial music](#) is often valued by its creators and others for its high concentration of information while being criticized by Fred Lerdahl and others for being literally unintelligible.

## Music competitions

### Music disk

**Music disk**, or **musicdisk**, is a term used by the demoscene to describe a collection of songs made on a computer. They are essentially the computer

equivalent of a music album. A music disk is typically packaged in the form of a program with a custom user interface, so the listener does not need other software to play the songs. The "disk" part of the term comes from the fact that music disks were once made to fit on a single floppy disk, so they could be easily distributed between friends and at demo parties. On modern platforms, music disks are usually downloaded to a hard disk drive.

Songs in a music disk are typically composed with a tracker, a type of program popular in the demoscene. Amiga music disks usually consist of MOD files, while PC music disks often contain multichannel formats such as XM or IT. Music disks are also common on the Commodore 64 and Atari ST, where they use the native SID and YM formats, respectively.

Related terms include **music pack**, which can refer to a demoscene music collection that does *not* include its own player, and **chipdisk**, a music disk containing only [chiptunes](#), which have become popular on the PC given the large size of MP3 music disks.

## Music education

**Music education** comprises the application of education methods in teaching [music](#).

### History

#### 17th century

Music education in North America can be traced to the colonies of the seventeenth century. In the South, there existed no organized music education system. However, rote learning played a major role in the transmission of music traditions. In the Northern colonies, music was already an important consideration in the lives of the Pilgrims. The Bay Psalm Book, especially later editions, provided methods for solmization along with performance instruction. Thus Northern colonists could succeed in teaching themselves rudimentary music skills, as related to psalm singing.

### Standards

For much of its existence, music education standards in the United States were determined locally or by individual teachers. In modern times there has

been a significant move toward regional and/or national standards. MENC: The National Association for Music Education, created nine content standards, called the *National Standards for Music Education*, adopted in 1994:

1. [Singing](#), alone and with others, a varied repertoire of music.
2. Performing on instruments, alone and with others, a varied repertoire of music.
3. Improvising melodies, variations, and accompaniments.
4. Composing and arranging music within specified guidelines.
5. Reading and notating music.
6. Listening to, analyzing, and describing music.
7. Evaluating music and music performances.
8. Understanding relationships between music, the other arts, and disciplines outside the arts.
9. Understanding music in relation to history and culture.

Many states and school districts have adopted their own standards for music education. Often, these local standards are derived in some form from the National Standards. For example, in Florida, the Sunshine State Standards set grade-level expectations for music students from pre-kindergarten through 12th grade.

## Settings

### United States

Music education in the United States occurs in different classroom settings.

- **General music** instruction.
- **Ensemble** classes, such as a school [chorus](#), [band](#), or [orchestra](#).

Musical ensembles may be considered a curricular class; additionally, there may also be auxiliary or extracurricular ensembles available.

### Great Britain

The British education system in schools up to the age of 14 is defined by the National Curriculum. Under the National Curriculum music is a

compulsory subject. The National Curriculum divides music education into three Key Stages which roughly align with the Primary/Middle/Secondary School division. In areas where a Primary/Secondary School division exists, both Key Stage 1 and Key Stage 2 are taught at the Primary School level. Each Key Stage is divided into 5 programmes of study: performing, composing, appraising, listening and breadth of study. Each programme is of equal weight (e.g. composing is equally as important as listening). After 14 years of age (Year 10 onwards) the study of music is optional, but all schools are legally obliged to offer music education to those pupils aged 14-16 who desire it. Music is examined at 16 at GCSE (General Certificate of Secondary Education) level and may be studied further at those schools and colleges that choose to offer the higher qualifications of AS and A levels in music.

The teaching of instrumental technique is an extracurricular activity. Pupils are often excused from lessons on a weekly basis for their instrumental lessons. The provision of these lessons depends very much on the Local Education Authority, and so varies wildly in different areas of the United Kingdom.

School ensembles generally rehearse at lunchtimes or after school. Each school is free to make its own arrangements regarding such teaching. A successful school orchestra is viewed as good material towards the "value added" criteria of OFSTED, the national school inspection authority.

## Professional organizations

- MENC: The National Association for Music Education [3]

## Music events

### Music festival

A **music festival** is a festival that presents a number of musical performances usually tied together through a theme or genre.

Music festivals may be subdivided by [musical genre](#):

### [Blues](#) festivals

- America
  - Chicago Blues Festival
  - Long Beach Blues Festival, Long Beach, California
  - Waterfront Blues Festival, Portland, Oregon
  
- Australia
  - East Coast Blues & Roots Music Festival, Australia
  
- Canada
  - Ottawa Bluesfest
  - Mont Tremblant Blues Festival
  
- Europe
  - August Blues Festival, (Haapsalu, Estonia)
  - Notodden Blues Festival
  - Liri Blues Festival (Isola del Liri, Italy)
  - Pistoia Blues Festival, (Pistoia, Italy)
  - Blues nights, (Varniai, Lithuania)

- Legendary Rhythm & Blues Cruise

## **Brass Band festivals**

- Great American Brass Band Festival

## **Classical music festivals**

- Argentina
  - Semana Musical Liao Liao
- Austria
  - Salzburg Festival
- Australia
  - Australian Festival of Chamber Music, in Townsville, Queensland
  - Darwin International Guitar Festival, in Darwin, Northern Territory
- Canada
  - Ottawa Chamber Music Festival
- Czech Republic
  - Prague Spring International Music Festival
  - Prague Autumn International Music Festival
- France
  - Aix-en-Provence Festival
  - La Folle Journée, in Nantes
  - Musique-Cordiale, Seillans in the Var

- Germany
  - Schleswig-Holstein Musik Festival
  
- Puerto Rico
  - Casals Festival
  
- Spain
  - Festival de Musica de Canarias
  - Festival de Otoño in Madrid
  - Veranos de la Villa in Madrid
  - Festival de Musica in Santander
  
- Switzerland
  - Verbier Festival
  - Musikfestwochen Winterthur
  
- Turkey
  - Istanbul International Music Festival
  
- United Kingdom
  - The Proms
  - Canterbury Festival
  - Cheltenham Music Festival
  - Chichester Festival
  - Edinburgh International Festival
  - GuilFest
  - Three Choirs Festival
  
- United States
  - Aspen Music Festival and School, in Aspen, Colorado
  - Bellingham Festival, in Bellingham, Washington
  - Hot Springs Music Festival, in Hot Springs, Arkansas
  - Park City International Music Festival, in Park City, Utah
  - Sitka Summer Music Festival, in Sitka, Alaska
  - Spoleto USA, in Charleston, South Carolina
  - Tanglewood, near Lenox, Massachusetts

- Europe
  - European Festival of Youth Choirs

## **Country music festivals**

- Australia
  - Tamworth Country Music Festival
- Canada
  - Merritt Mountain Music Festival

## **Dance and electronic music festivals**

- North America
  - Canada
    - World Electronic Music Festival
  - United States
    - Detroit Electronic Music Festival (Detroit, Michigan)
    - Global Gathering (Miami, Florida)
    - Ultra Music Festival (Miami, Florida)
- Europe
  - Czech Republic
    - CzechTek
    - Summer of Love
    - Love Planet
  - Finland
    - Koneisto
  - Germany
    - Love Parade (Berlin)
    - Nature One (Hunsrück)
    - Mayday (Dortmund)
  - Hungary
    - Mayday
  - Italy

- Dissonanze festival
- Poland
  - Mayday
- Portugal
  - Boom festival
- Russia
  - Mayday
- Serbia and Montenegro
  - EXIT
- Spain
  - Sónar (Barcelona)
  - Point Sound Festival - Caspe (Zaragoza)
  - Rocket Festival (Andalucia)
- Switzerland
  - Street Parade
- United Kingdom and Ireland
  - Creamfields (Liverpool)
  - The Glade (Newbury, Berkshire)
  - Global Gathering (near Stratford-upon-Avon)
  - Homelands (Winchester)
  - Infest (Bradford)
  - GuilFest Guildford UK
- Australia
  - Earthcore
  - Rainbow Serpent Festival
  - What Is Music
- South Africa
  - Tribal Council
- New Zealand
  - Alpine Unity
  - Starburst (Nelson)
  - The Gathering (Nelson)
  - Vizionz (Golden Bay)
- Japan
  - The Gathering

## **Folk music festivals**

- United States

- Central Ohio Folk Festival
  - Falcon Ridge Folk Festival
  - Great Lakes Folk Festival
  - Hypnotic Clambake Folk Fest
  - Kerrville Folk Festival
  - MerleFest
  - New England Folk Festival (NEFFA)
  - Newport Folk Festival
  - Pickathon
  - Philadelphia Folk Festival
  - String Band Rendezvous
  - Woody Guthrie Folk Festival
- Australia
    - National Folk Festival (Australia)
    - Port Fairy Folk Festival
    - Woodford Folk Festival
- Canada
    - Calgary Folk Music Festival
    - CKCU Ottawa Folk Festival
    - Edmonton Folk Music Festival
    - Mariposa Folk Festival
    - Northern Lights Festival Boréal
    - Vancouver Folk Music Festival
    - Winnipeg Folk Festival
- Colombia
    - Vallenato Legend Festival
- Europe
    - Estonia
      - Viljandi Folk Festival (Estonia)
    - Finland
      - Kaustinen Folk Music Festival
    - UK
      - Cambridge Folk Festival
      - Cheltenham Folk Festival
      - Home County Folk Festival

Cropredy Festival  
Llangollen International Eisteddfod  
Middlewich Folk And Boat Festival  
Pontardawe International Folk Festival (Wales)  
Royal National Mod (Scotland)

## **Folklife festivals**

Festival of American Folklife (Smithsonian Institution)  
Kentucky Folklife Festival  
Kutztown Festival  
Louisiana Folklife Festival  
Northwest Folklife Festival  
Texas Folklife Festival  
Prout Prout Festival  
UK = Green Man Festival

## **Hip Hop festivals**

Hip Hop Kemp, Czech Republic  
Splash Festival, Chemnitz, Germany

## **Jazz festivals**

- America
  - Chicago Jazz Festival
  - The Lincoln Center's Folk & Heritage Festival
  - New Orleans Jazz & Heritage Festival
  - Playboy Jazz Festival, Hollywood Bowl, Los Angeles, California
  - Rochester International Jazz Festival
  - Smithsonian Institution's Festival of American Folklife
  
- Canada

- Festi Jazz International de Rimouski
- Festival International de Jazz de Montréal
  
- Europe
  - Belgium
    - Blue Note Festival
    - Gaume Jazz Festival
  - France
    - Nice Jazz Festival (Nice)
  - Finland
    - April Jazz
    - Pori Jazz
  - Germany
    - JazzFest Berlin
  - Ireland
    - Cork Jazz Festival
  - Italy
    - Umbria Jazz
    - Roccella Jazz (Roccella Jonica)
    - No Borders Music Festival (Tarvisio)
  - Lithuania
    - Kaunas Jazz Festival
  - Malaysia
    - Penang Island Jazz Festival
  - Netherlands
    - North Sea Jazz Festival
  - Prague
    - Prague International Jazz Festival
  - Switzerland
    - Montreux Jazz Festival
  - UK
    - Brecon Jazz Festival
    - Cheltenham Jazz Festival

## Opera festivals

- Glimmerglass Opera Festival  
Glyndebourne

Ilmajoki Music Festival  
Savonlinna Opera Festival

## **Pop Music Festivals**

- Acapulco
- [Eurovision](#)
- OTI-Same as [Eurovision](#), but in Iberoamerica.
- Sanremo
- Viña del Mar

## **Reggae music festivals**

### **Jamaican Reggae Festivals**

- Splash Festival, Jamaica  
Reggae Sunsplash, Ocho Rios, Jamaica  
Sting reggae music festival, Kingston, Jamaica  
Reggae Sunfest, Montego Bay, Jamaica  
OUR MUSIC FEST, Sherman NY, U.S.A.

### **International Reggae Festivals**

- Bob Marley Outernational Day, Perth, Western Australia
- Seasplash Reggae Festival, Pula, Croatia
- MIDEM Reggae Showcase, Cannes, France  
Chiemsee Reggae Summer, Übersee, Germany  
Summerjam, Cologne, Germany  
LB27 Reggae Camp, Komarom, Hungary
- Rototom Sunsplash, Italy
- Two 77 Splash, Amsterdam Netherlands
- Reggae Sundance, Eindhoven Netherlands

- Ostróda Reggae Festival, Ostróda, Poland
- Soca Reggae Riversplash, Tolmin, Slovenia,
- Uppsala Reggae Festival, Sweden
- Notting Hill Carnival, London, UK
- Reggae on the River, Humboldt County, California, United States
- Reggae on the Rocks (RoR), Morrison, CO, USA,
- International Reggae Festivals at ReggaeSeen
- Spanish Reggae Festivals
- Mariporrón, La Rioja, Spain

## **Religious music festivals**

### **Christian music festivals**

- Creation Festival
- Cornerstone Festival
- Ichthus Festival
- Onefest
- Australian Gospel Music Festival
- Parachute
- Sonshine Festival
- Samstock Music
- Purple Door
- Flevo Festival
- One Way Festival

## **Rock Music festivals**

### **Historic festivals**

- Monterey Pop Festival (Monterey, California, 1967)
- Woodstock (Bethel, New York, 1969), Woodstock 1994 (Saugerties, New York), and Woodstock 1999 (Rome, New York)
- Altamont Speedway concert (Livermore, California, 1969)

Festival Express (Toronto, Winnipeg and Calgary, Canada), 1970  
Isle of Wight Festival (Isle of Wight, 1970)  
Erie Canal Soda Pop Festival (Griffin, Indiana, 1972)  
Summer Jam at Watkins Glen (Watkins Glen, New York, (1973))  
California Jam (Ontario, California, 1974)  
Ozark Music Festival (Missouri State Fairgrounds, Sedalia, Missouri, 1974)  
US Festival (San Bernardino, California, 1983 & 1984)  
Live Aid (multi-venue, 1985)  
Molson Canadian Rocks for Toronto (Toronto, Ontario, Canada, 2003)  
Live 8 (multi-venue, 2005)  
Volunteer Jam (multi-venue in Tennessee)

### **Festivals at multiple venues**

- Anger Management Tour
- Area Festival
- Edgefest
- Curiosa
- Family Values Tour
- Gigantour
- Lilith Fair
- Lollapalooza
- Monsters of Rock
- Music As A Weapon
- Ozzfest
- Sounds Of The Underground
- Summer Sanitarium
- Warped Tour

### **Current festivals**

- Asia
  - Japan
    - Fuji Rock Festival (Naeba)
  - Taiwan
    - Spring Scream
- Australia and New Zealand
  - Big Day Out (Sydney, Melbourne, Adelaide, Gold Coast, Perth, Auckland)

- Bloodlust (Sydney)
- Edgefest (New Zealand concert tour) New Zealand
- Falls Festival (Lorne, Victoria and Marion Bay, Tasmania)

- Sunfest, London, Ontario. Annual World Music festival
- Voix d'Amériques, Montréal, Quebec. Annual spoken word festival.
- WOMAD (World of Music, Arts & Dance) Festival in New Plymouth, New Zealand March 11-13 2005
- Couleur Café Festival in Brussels, Belgium
- Beale Street Music Festival in Memphis, Tennessee; occurs in early May annually; multi-genre with emphasis on blues and rock
- Crossingborder the Netherlands

# Music genre

A **music genre** is a category (or genre) of pieces of [music](#) that share a certain style or "basic musical language" (van der Merwe 1989, p.3). Music may also be categorised by non-musical criteria such as geographical origin though a single geographical category will often include a wide variety of sub-genres.

Categorizing music, especially into finer genres or subgenres, can be difficult for newly emerging styles or for pieces of music that incorporate features of multiple genres. Attempts to pigeonhole particular [musicians](#) in a single genre are sometimes ill-founded as they may produce music in a variety of genres over time or even within a single piece. Some people feel that the categorization of music into genres is based more on commercial and marketing motives than musical criteria. John Zorn, for example, a musician whose work has covered a wide range of genres, wrote in *Arcana: Musicians on Music* that genres are tools used to "commodify and commercialize an artist's complex personal vision". Others contend that it is actually the artist who chooses (knowingly or not) to create an artistic work that can be easily classified within a genre. These contentions are not mutually exclusive; Some say there is a tradeoff in which most artists seek individual expression as well as the approval/acceptance of an audience, and audiences like any group of human beings prefer to identify themselves with the things they love... hence the need for a label.

Some genre labels are quite vague, and may be contrived by critics; [post-rock](#), for example, is a term devised and defined by Simon Reynolds. Another example of this is [video game music](#), which while defined by its media, can also represent its own style, as well as that of any other musical genre.

Categorizing music by genre does make it easier to trace threads through [music history](#), and makes it easier for individuals to find artists that they enjoy. Moreover, the use of genre labels may actually drive the development of new music (especially in a commercial context) insofar as it helps cultivate the interest and participation of a target audience in the early and middle stages of a musical trend. Most new genre labels are aimed at the youth market, who typically desire to contrast the mainstream, yet conform to their peer group... resulting in readily marketed fads of all kinds, including music genres. Swing, Rock, New-Wave, Rap, and Grunge are all examples of music genres in which millions of young people enjoyed being different... in unison. This disproportionate commercial targeting of genres towards the youth market may diminish as young people increasingly shift from being music "buyers"... to being music "downloaders", with or without a purchase involved.

Although there are many individual genres, it is possible to group these together into a number of overlapping major groupings.

## Classical music (or art music)

*Main article:* [European classical music](#)

The term classical music refers to a number of different, but related, genres. Without any qualification, the usual meaning of "classical music" in the English language is European classical music (an older usage describes specifically the Western art music of the [Classical music era](#)). It can also refer to the classical (or *art*) music of non-Western cultures such as [Indian classical music](#) or Chinese classical music.

In a Western context, classical music is generally a classification covering music composed and performed by professionally trained artists. Classical music is a written tradition. It is composed and written using [music notation](#), and as a rule is performed faithfully to the score. *Art music* is a term widely used to describe classical music and other serious forms of artistic musical expression, Western or non-Western, especially referring to serious music composed after 1950. In common usage, "classical music" often refers to orchestral music in general, regardless of when it was composed or for what purpose (film scores and orchestral arrangements on pop music recordings, for example).

## Gospel

*Main article:* [Gospel music](#)

Gospel is a musical genre characterised by dominant vocals (often with strong use of [harmony](#)) referencing lyrics of a religious nature, particularly Christian. Subgenres include contemporary gospel and urban contemporary gospel.

## Jazz

*Main article:* [Jazz](#)

Jazz is a musical form that grew out of a cross-fertilization of [folk blues](#), [ragtime](#), and European music, particularly band music. It has been called the first native art form to develop in the United States of America. The music has gone through a series of developments since its inception. In roughly chronological order they are [Dixieland](#), [swing/big band](#), [bebop](#), [hard bop](#), [cool jazz](#), [free jazz](#), [jazz fusion](#) and [smooth jazz](#).

Jazz is primarily an [instrumental](#) form of music. The instrument most closely associated with jazz may be the [saxophone](#), followed closely by the

[trumpet](#). The [trombone](#), [piano](#), double bass, [guitar](#) and [drums](#) are also primary jazz instruments. The [clarinet](#) and [banjo](#) were often used, especially in the earlier styles of jazz. Although there have been many renowned jazz vocalists, and many of the most well-known jazz tunes have lyrics, the majority of well-known and influential jazz musicians and composers have been instrumentalists. During the time of its widest popularity, roughly 1920 to 1950, jazz and [popular music](#) had a very intimate connection. Popular songs drew upon jazz influences, and many jazz hits were reworkings of popular songs, or lyrics were written for jazz tunes in an attempt to create popular hits.

The single most distinguishing characteristic of jazz is [improvisation](#). Jazz also tends to utilize complex [chord](#) structures and an advanced sense of [harmony](#). These characteristics in combination with the use of improvisation require a high degree of technical skill and musical knowledge from the performers.

The art form today is a widely varied one, using influences from all of the past styles, although the root of modern jazz is primarily [bebop](#). Modern jazz can also incorporate elements of [rock and roll](#), [electronica](#), and [hip-hop](#).

Jazz was a direct influence on [Rhythm and blues](#), and therefore a secondary influence on most later genres of popular music. Modern American art music composers have often used elements of jazz in their compositions.

## Latin American

Latin American Music, [music](#) of Mexico, Central America, South America, and the Caribbean (see West Indies). The region of Latin America contains a rich variety of cultural and musical heritages, including those of lowland Native Americans in the Amazon River area and parts of Central America; those of highland Native Americans in Mexico, Guatemala, and the Andes; those of African Americans, especially in the Caribbean, Ecuador, Suriname, Guyana, French Guiana, coastal Venezuela, Colombia, and northeastern Brazil; and those of people of Spanish and Portuguese descent.

## The Blues

*Main article:* [Blues](#)

The Blues is a vocal and instrumental music form which emerged in the African-American community of the United States. Blues evolved from West African [spirituals](#), work songs, field hollers, shouts and [chants](#) and has its earliest stylistic roots in West Africa. This musical form has been a major influence on later American and Western [popular music](#), finding expression in [ragtime](#), [jazz](#), [big bands](#), [rhythm and blues](#), [rock and roll](#) and [country music](#),

as well as conventional pop songs and even modern [classical music](#). Due to its powerful influence that spawned other major musical genres originating from America, **blues** can be regarded as the root of pop as well as American music.

## Rhythm and blues

*Main article: [Rhythm and blues](#)*

Rhythm and blues is a name for black popular music tradition. When speaking strictly of "rhythm 'n' blues", the term may refer to black pop-music from 1940s to 1960s that was not [jazz](#) nor [blues](#) but something more lightweight. The term "R&B" often refers to any contemporary black pop music. Early-1950s R&B music became popular with both black and white audiences, and popular records were often covered by white artists, leading to the development of [rock and roll](#).

A notable subgenre of rhythm 'n' blues was doo-wop, which put emphasis on polyphonic singing. In the early 1960s rhythm 'n' blues took influences from [gospel](#) and [rock and roll](#) and thus [soul music](#) was born. In the late 1960s, [funk](#) music started to evolve out of soul; by the 1970s funk had become its own subgenre that stressed complex, "funky" rhythm patterns and monotonistic compositions based on a riff or two. In the early to mid 1970s, [hip hop music](#) (also known as "rap") grew out of funk and reggae (see below). Funk and soul music evolved into contemporary [R&B](#) (no longer an acronym) in the 1980s, which cross-pollinated with hip-hop for the rest of the 20th century and into the 21st century.

## Rock

*Main article: [Rock and roll](#)*

Rock, in its broadest sense, can refer to almost all [popular music](#) recorded since the early 1950s. Its earliest form, rock and roll, arose from multiple genres in the late 1940s, most importantly [jump blues](#). Although invented by Chuck Berry, it was first popularized by performers like Bill Haley, Buddy Holly, and Elvis Presley, who fused the sound with [country music](#), resulting in [rockabilly](#). In addition, [gospel music](#) and a related genre, [R&B](#) (rhythm and blues), emerged later in the decade. R&B soon became one of the most popular genres, with [girl groups](#), [garage rock](#) and [surf rock](#) most popular in the US, while harder, more blues-oriented musicians became popular in the UK, which soon developed into [British blues](#), merseybeat, mod and skiffle.

Starting the mid-1960s, a group of British bands that played variations on American R&B-influenced blues became popular on both sides of the Atlantic -- the British Invasion, a catchall term for multiple genres. These groups, including the Beatles, fused the earlier sounds with Appalachian folk music, forming [folk rock](#), as well as a variety of less-popular genres, including the [singer-songwriter](#) tradition. Early [heavy metal](#) and [punk rock](#) bands formed in this period, though these genres did not emerge as such for several years.

The most popular genre of the British Invasion was [psychedelic music](#), which slowly morphed into [bluegrass](#)-influenced jam bands like the Grateful Dead and ornate, [classically](#)-influenced [progressive rock](#) bands. Merseybeat and mod groups like The Yardbirds and The Who soon evolved into [hard rock](#), which, in the early 1970s specialized into a gritty sound called [glam rock](#), as well as a mostly underground phenomenon called [power pop](#). In the early to mid-1970s, singer-songwriters and pop musicians led the charts, though punk rock and [krautrock](#) also developed, and some success was achieved by [southern rock](#) and [roots rock](#) performers, which fused modern techniques with a more traditionalist sound. In the 1980s, rock continued to evolve as metal became popular and punk continued to evolve into other forms including [New Wave](#), [post-punk](#), and [alternative rock](#). The two encountered a fusion of sorts, creating [grunge](#) in the early 1990s, a style of alternative rock (which includes [Britpop](#), [gothic rock](#), and [shoegazing](#), among others).

## Country music

*Main article: [Country music](#)*

Country music is usually used to refer to honky tonk today. Emerging in the 1930s in the United States, honky tonk country was strongly influenced by the [blues](#), as well as [jug bands](#) (which cannot be properly called honky tonk). In the 1950s, country achieved great mainstream success by adding elements of [rock and roll](#); this was called [rockabilly](#). In addition, from [Swing](#) and [bluegrass](#) emerged as a largely underground phenomenon. Later in the decade, the [Nashville sound](#), a highly polished form of country music, became very popular. In reaction to this, harder-edged, gritty musicians sprung up in Bakersfield, California, inventing the Bakersfield sound. Merle Haggard and similar artists brought the Bakersfield sound to mainstream audiences in the 1960s, while Nashville started churning out countrypolitan. During the 1970s, the most popular genre was [outlaw country](#), a heavily rock-influenced style. The late 1980s saw the Urban Cowboys bring about an influx of pop-oriented stars during the 1990s. Modern bluegrass music has remained mostly

traditional, though [progressive bluegrass](#) and close harmony groups do exist, and the sound is the primary basis for jam bands like the Grateful Dead .

## Electronic music

*Main article: [Electronic music](#)*

Electronic music started long before the invention of the [synthesizer](#) with the use of tape loops and analogue electronics in the 1950s and 1960s. Well known examples include the theme music to the TV series Doctor Who, recorded in 1963 by Delia Derbyshire, and the catch-all "[electronica](#)," which can sometimes include all of the above electronic sub-genres, but usually refers to electronic music without lyrics.

One of the first people to popularize the synthesizer was Wendy Carlos who performed classical music on the synthesizer on the recording Switched-On Bach. Space music was popularized by the group Tangerine Dream, among others, as a precursor to new age music. New age music served to support and perpetuate the values of the [new age](#) movement.

Though there is some overlap between the various sub-genres of electronic music, Brian Eno, the creator of ambient music, claimed that ambient had a bit of "evil" in it, whereas new age music did not. Eno's creation was less values-driven than new age; his goal was to create music like wallpaper, insofar as the listener could listen to or easily ignore the music.

Naturally, many people have met electronic music also in the form of [video game music](#).

## Electronic dance music

Although many artists in the 50s and 60s created pure [electronic music](#) with [pop](#) structures, fully formed electronic dance music as we know it today really emerged in 1977 with Giorgio Moroder's *From Here to Eternity* album.

There are now many subgenres of electronic music, these include: [techno](#) (mechanical sounding dance music featuring little melody and more noise), [trance](#) (with a distinct style of instrumentation focused on complex, uplifting chord progressions and melodies), [Goa trance](#) (spawning from [industrial music](#) and tribal dance, focusing on creating psychedelic sound effects within the songs), [house music](#) (fully electronic [disco](#) music), big beat (using older drum loops and more melodic elements sampled and looped), [drum and bass](#) (an offshoot of hardcore and Jamaican dancehall, utilizing quick tempos with sampled break beats, most notably the [amen break](#) and the funky drummer), [gabber](#), (a Dutch development on techno, which features extremely high tempos and lots of overdrive and distortion on the music, especially the bass

drum being distorted into a square wave tone), [happy hardcore](#) (a less confronting take on Gabba, fusing elements of drum and bass as well and often including sped up vocals from 70s pop music), [synthpop](#) (features strong pop songwriting/melodies with roots in 1980's dance music), and electro. Of these subgenres, trance and house are probably the most widespread.

Electronic dance music is often composed to fit easily into a live [DJ](#) set.

## Electronica

Electronic music that does not fall into the new age, techno or dance categories are often referred to as "left-field" or "[electronica](#)". Styles of electronica include [ambient](#), [downtempo](#), [illbient](#) and [trip-hop](#) (among countless others, see [list of electronic music genres](#)), which are all related in that they usually rely more on their atmospheric qualities than electronic dance music, and make use of slower, more subtle tempos, sometimes excluding rhythm completely.

IDM (an abbreviation for [intelligent dance music](#)) is an elusive and confusing genre classification that can only be truly defined by flagbearers and flagburners like Aphex Twin and Autechre.

All electronic music owes at least its historical existence to early pioneers of tape experiments known as [musique concrète](#), such as John Cage, Pierre Schaeffer and Karlheinz Stockhausen, as well as early synthesists like Wendy Carlos, Jean-Michel Jarre, and Morton Subotnick . (See [electronic art music](#)).

## Melodic music

*Main article: [Melodic music](#)*

Melodic music is a term that covers various genres of non-classical music which are primarily characterised by the dominance of a single strong [melody](#) line. [Rhythm](#), tempo and beat are subordinate to the melody line or tune, which is generally easily memorable, and followed without great difficulty. Melodic music is found in all parts of the world, overlapping many genres, and may be performed by a singer or [orchestra](#), or a combination of the two.

In the west, melodic music has developed largely from [folk song](#) sources, and been heavily influenced by classical music in its development and orchestration. In many areas the border line between classical and melodic popular music is imprecise. [Opera](#) is generally considered to be a classical form. The lighter [operetta](#) is considered borderline, whilst stage and film [musicals](#) and musical comedy are firmly placed in the popular melodic category. The reasons for much of this are largely historical.

Other major categories of melodic music include music hall and vaudeville, which, along with the [ballad](#), grew out of European folk music. Orchestral dance music developed from localised forms such as the jig, [polka](#) and [waltz](#), but with the admixture of Latin American, negro [blues](#) and [ragtime](#) influences, it diversified into countless sub-genres such as [big band](#), [cabaret](#) and [Swing](#). More specialised forms of melodic music include military music, religious music. Also [video game music](#) is often melodic.

[Traditional pop music](#) overlaps a number of these categories: [big band](#) music and musical comedy, for example, are closely allied to traditional pop.

## **Ska, Reggae, Dub, and related forms**

In Jamaica during the 1950s, American [R&B](#) was most popular, though mento (a form of [folk music](#)) was more common in rural areas. A fusion of the two styles, along with soca and other genres, formed [ska](#), an extremely popular form of music intended for dancing. In the 1960s, [reggae](#) and [dub](#) emerged from [ska](#) and American [rock and roll](#).

Starting the late 1960s, a rock-influenced form of music began developing -- this was called rocksteady. With some [folk](#) influences (both Jamaican and American), and the growing urban popularity of the Rastafari movement, rocksteady evolved into what is now known as [roots reggae](#). In the 1970s, a style called Lovers rock became popular primarily in the United Kingdom by British performers of ballad-oriented reggae music. The 1970s also saw the emergence of [Two Tone](#) in Coventry, England, with bands fusing ska and [punk](#), as well as covering original [ska](#) tracks. Punk band The Clash also used Dub and reggae elements.

Dub emerged in Jamaica when sound system DJs began taking away the vocals from songs so that people could dance to the beat alone. Soon, pioneers like King Tubby and Lee Scratch Perry began adding new vocals over the old beats; the lyrics were rhythmic and rhyme-heavy. After the popularity of reggae died down in the early 1980s, derivatives of dub dominated the Jamaican charts. These included [ragga](#) and dancehall, both of which remained popular in Jamaica alone until the mainstream breakthrough of American [gangsta rap](#) (which evolved out of dub musicians like DJ Kool Herc moving to American cities). Ragga especially now has many devoted followers throughout the world.

Reggaeton is a fusion of reggae and [rap](#), popular in Latin America, but gradually appearing in the mainstream charts.

## **Punk rock**

*Main article: [Punk rock](#)*

Punk rock is a subgenre of rock music. The term "punk rock" can only rarely be applied without any controversy. Perhaps the only bands *always* considered "punk" are the first wave of punk bands, such as The Clash, The Sex Pistols and the Ramones, and even then they may be labeled "[sellouts](#)" by more hardcore fans. Before this, however, a series of underground musicians helped define the music throughout the 1970s.

Punk is often considered especially important for its "Do-it-yourself" philosophy. Many punk musicians encouraged their fans and audience members to learn to play instruments and form their own bands, and doing so was implicitly encouraged by the apparent simplicity of the music. Since punk bands were often ignored by major labels, the definitions of the many sub-genres, and the question of which groups belong in which sub-genres, is often a subject of heated debate.

The derivative genres of punk can be roughly grouped into four general styles -- [hardcore punk](#), [New Wave](#), [post-punk](#) and [alternative rock](#). See those articles and their associated categories (look near the bottom of the article pages) for more information on the many styles of punk rock.

## **Hip hop / Rap / Rapcore**

*Main article: [Hip hop music](#)*

Hip hop music can be seen as a subgenre of R&B tradition (see above). Hip hop culture, the movement from which the music came, began in inner cities in the US in the 1970s. The earliest recordings, from the late-1970s and early 1980s, are now referred to as [old school hip hop](#). In the later part of the decade, regional styles developed. [East Coast hip hop](#), based out of New York City, was by far the most popular as hip hop began to break into the mainstream. [West Coast hip hop](#), based out of Los Angeles, was by far less popular until 1992, when Dr. Dre's *The Chronic* revolutionized the West Coast sound, using slow, stoned, lazy beats in what came to be called [G Funk](#). Soon after, a host of other regional styles became popular, most notably [Southern rap](#), based out of Atlanta and New Orleans, primarily. Atlanta-based performers like OutKast and Goodie Mob and Ludacris soon developed their own distinct sound, which came to be known as [Dirty South](#). As hip hop became more popular in the mid-1990s, [alternative hip hop](#) gained in popularity among critics and long-time fans of the music.

De La Soul's *3 Feet High and Rising* (1989) was perhaps the first "[alternative hip hop](#)" blockbuster, and helped develop a specific style called [jazz rap](#), characterized by the use of live instrumentation and/or [jazz](#) samples. Other less popular forms of hip hop include various non-American varieties;

Japan, Britain, Mexico, Sweden, Finland, France, Germany, Italy and Turkey have vibrant hip hop communities. In Puerto Rico, a style called reggaeton is popular. Electro hip hop was invented in the 1980s, but is distinctly different from most old school hip hop (as is go go, another old style). Some other genres have been created by fusing hip hop with [techno \(trip hop\)](#) and [heavy metal \(rapcore\)](#). In the late 1980s, Miami's hip hop scene was characterized by bass-heavy grooves designed for dancing -- Miami bass music. Acid Rap is mainly credited to Detroit and the Midwest. There are also rappers with Christian themes in the lyrics -- this is [Christian hip hop](#).

Perhaps the most recent development in hip hop is the Backpacker sub-genre. Characterized by a renewed focus on poetry and Hip hop culture, it includes artists such as Sage Francis, Atmosphere, and Eyedea and Abilities.

## **Contemporary African music**

Since the 1960s, most African popular music incorporates traditional local vocal, instrumental, and percussive styles, but also draws heavily on rock, reggae, and/or hip hop. For example raï, which originated in Algeria and spread throughout North Africa and to the North African diaspora, especially in France, began with [topical songs](#) based in the local traditional music, but, starting around 1980, began to incorporate elements of hip hop.

Other notable contemporary African genres include Zulu jive (South Africa), Highlife (Ghana, Nigeria), Zouk (Cape Verde), Soukous (Zaire, Congo) and in Nigeria jùjú music (now nearly a century old, and constantly evolving) and [Afrobeat](#). Many African countries have also developed their own versions of reggae and hip hop.

## **Subjectivity**

One of the problems with the grouping of music into genres is that it is a subjective process that has a lot to do with the individual's personal understanding and way of listening to music. This is especially true in sub-genres. One example is Led Zeppelin, which could be called heavy metal, hard rock, or blues, depending on one's interpretation.

## Music hardware

Mechanical or electronic devices, *other than instruments*, constructed to create or aid in the creation of musical sounds ... hardware sequencers (or devices which incorporate them) for example, the "stomp boxes" popular with guitarists, "loopers" used for Live looping, samplers ....

In other words, *things* which a musician might buy to enable or enhance a live performance, as opposed to gear designed for production.

## Music history

In [musicology](#), **music history** is the study of how [music](#) has developed over time, and may include manuscript studies, textual criticism, iconography, studies of the relationship between words and music, and the relationship between music and society. [Ethnomusicology](#) and music archeology are also fields of study within music history. However, *music history* often means the study of the history of [music theory](#).

In 1957 Marius Schneider (p.xvii) wrote that, "Until a few decades ago the term 'history of music' meant merely the 'history of European art music'. It was only by degrees that the scope of music was extended to include the indispensable foundation of non-European and, finally, [prehistoric music](#)."

In the studies of primitive music which attempt to relate the music to the culture around it there are two prevailing approaches, that of the "Berlin school"'s Kulturkreis and the US "cultural area" tradition. Adherents to Kulturkreis include Curt Sachs, who analyzed the distribution of instrument types according to the Gräbner, Schmidt, Ankermann, Preuss, and other's culture circles, finding that they matched or correlated. According to this theory all cultures pass through the same stages, with cultural difference indicating the age and speed of a culture, both of which cause cultures to be in different stages. The cultural area theory, however, analyzes music according to regions in which people share the same culture (for example, all traditional Inuit owned a kayak, a cultural commonality that defined the Inuit cultural area), without assigning those areas historical meaning or value. In

each theory, the regions of that theory necessarily overlap, populated with people who share parts of more than one culture, with cultural centers being easier to define. (Nettl 1956, p.93-94)

## Music history of the United States

The **music history of the United States** includes many styles of folk, popular and [classical](#) music. Some of the most well-known genres of American music are [blues](#), [rock and roll](#), [country](#), [hip hop](#), [jazz](#) and [gospel](#). American music history began with the Native Americans, the first people to populate North America. The music of these people was highly varied in form, and was mostly religious in purpose.

With the arrival of large numbers of colonizers from European countries like France, Spain and Great Britain. These people brought Christian [choirs](#), [musical notation](#), [broadsides](#), as well as large numbers of West African slaves. These African Americans played a variety of instruments, especially including [drums](#) and [string instruments](#) similar to the [guitar](#) and [banjo](#), as well as polyrhythms and call-and-response style vocals.

As the United States incorporated more lands, spreading west towards the Pacific Ocean, a number of immigrants began to arrive in the country, bringing with them their own instruments and styles. During this time, the United States grew to incorporate the Cajun and Creole music of Louisiana, the Polynesian music of Hawaii and Tex-Mex and Tejano music. Immigrants brought with them the Eastern European polka, Chinese and Japanese music Ukrainian and Polish fiddling, Scottish and Irish music, Ashkenazi Jewish klezmer, and other styles of Indian, Russian, French, German, Italian, Arab and Latin music.

In the 20th century, American popular music has achieved great international acclaim. Even since the [ragtime](#) and minstrel songs of the 19th century, [African American music](#) has remained at the heart of American popular music. The rural [blues](#) of poor black Southerners and the [jazz](#) of black urbanites were among the earliest styles of American popular music. At

the time, black performers typically did not perform their own material, instead using songs produced by the music publishing companies of Tin Pan Alley. African American blues evolved during the 20th century, mixing with Appalachian folk music and other styles to create genres like [country music](#) and [rhythm and blues](#). During this time, jazz diversified into steadily more experimental fields. By the end of the 1940s, jazz had grown into such varied fields as [bebop](#) and [swing](#).

Rock and roll was soon to become the most important component of American popular music, beginning with the [rockabilly](#) boom of the 1950s. In the following decade, [gospel](#) evolved into secular [soul](#). Rock, country and soul, mixed with each other and occasionally other styles, spawned a legion of subgenres over the next few days, ranging from [heavy metal](#) to [punk](#) and [funk](#). In the 1970s, urban African Americans in New York City began performing spoken lyrics over a beat provided by an emcee; this became known as [hip hop music](#). By the dawn of the 21st century, hip hop had become a part of most recorded American popular music.

## **American roots music**

The first musicians anywhere in North America were Native Americans, who consist of hundreds of ethnic groups across the country, each with their own unique styles of [folk music](#). Of these cultures, many, and their musical traditions, are now extinct, though some remain relatively vibrant in a modern form, such as Hawaiian music.

By the 16th century, large-scale immigration of English, French and Spanish settlers brought new kinds of folk music. This was followed by the importation of Africans as slaves, bringing their music with them. The Africans were as culturally varied as the Native Americans, descended from hundreds of ethnic groups in West Africa. American music is, like most of its hemispheric neighbors, a mixture African, European and native influences. Still later in the country's history, ethnic and musical diversity grew as the United States grew into a melting pot of different peoples. Immigration from China began in large numbers in the 19th century, most of them settling on the West Coast. Later, Japanese, Indian, Scottish, Polish, Italian, Irish, Mexican, Swedish, Ukrainian and Armenian immigrants also arrived in large numbers.

## **African American music**

*Main article: [African American music](#)*

In the 19th century, African-Americans were freed from slavery following the American Civil War. The music of these slaves was primarily African in origin, displaying polyrhythm and other distinctly African traits. Work songs and [field hollers](#) were popular, but it was [spirituals](#) which became a major foundation for music in the 20th century.

Spirituals (or *Negro spirituals*, as they were then known) were Christian songs, dominated by passionate and earthy vocals, which were performed in an African-style call-and-response format using hymns derived from those sung in colonial New England choirs, which were based on Moravian, English and Dutch church music. These hymns spread south through Appalachia in the late 18th century, where they were partnered with the music of the African slaves. During the Great Awakening of religious fervor in the early 19th century, spirituals spread across the south. Among some whites, slave music grew increasingly popular, especially after the American Civil War, when black and white soldiers worked together and Southern slaves fled north in huge numbers.

By the end of the century, minstrel shows had spread across the country, and even to continental Europe. In minstrel shows, performers imitated slaves in crude caricatures, singing and dancing to what was called "Negro music", though it had little in common with authentic African American folk styles. An African American variety of dance music called the cakewalk also became popular, evolving into [ragtime](#) by the turn of the century.

## **Appalachian folk music**

The Appalachian Mountains run along the East Coast of the United States. The region has long been historically poor compared to much of the rest of the country; many of the rural Appalachian people travelled to cities for work, and were there labeled hillbillies, and their music became known as hillbilly music. In the 19th and early 20th centuries, Irish and Scottish immigrants arrived in large numbers. They mingled there with poor whites of other ethnic backgrounds, as well as many blacks. The result was a diverse array of folk styles which have been collectively referred to as Appalachian folk music. These styles included [jug bands](#), honky tonk and [bluegrass](#), and are the root of modern country music.

Appalachian folk music began its evolution towards pop-country in 1927, when Jimmie Rodgers and the Carter Family began recording in a historic session with Ralph Peer (Barraclough and Wolff, 537). Rodgers sang often morbid lyrical themes that drew on the blues to create tales of the poor and unlucky (Collins, 11), while the Carters preferred more upbeat ballads with clear vocals, complementary instrumentation and wholesome lyrics (Garofalo,

53). Their success paved the way for the development of popular country, and left its mark on the developing genre of [rock and roll](#).

### **Other forms of American roots music**

Though Appalachian and African American folk music became the basis for most of American popular music, the United States is home to a diverse assortment of ethnic groups. In the early 20th century, many of these ethnic groups supported niche record industries and produced minor folk stars like Pawlo Humeniuk, the "King of the Ukrainian Fiddlers" (Kochan and Kytasty, 308). Some of these ethnic musicians eventually became well-known across the country, such as Frankie Yankovic, the Slovenian polka master.

This same period also saw the rise of Native American powwows around the turn of the century. These were large-scale inter-tribal events featuring spiritual activity and musical performances, mostly group percussion based (Means, 594).

Large-scale immigration of Eastern European Jews and their klezmer music peaked in the first few decades of the 20th century. People like Harry Kandel and Dave Tarras become stars within their niche, and made the United States the international center for klezmer (Broughton, 583).

In Texas, ethnic Mexicans who had lived in the area for centuries, played a distinct style of conjunto, different from that played in Mexico. The influence of Czech [polka](#) music was a major distinguishing characteristic of this music, which gradually evolved into what is now known as [norteño](#) (Burr, 604).

The Cajuns and Creoles of Louisiana have long constituted a distinct minority with their own cultural identity. The Cajuns are descendents of French-Canadians from the region of Acadia, the Creoles are black and French-speaking. Their music was a mixture of bluesy work songs mixed with jazz and other influences, and included styles like la la and juré. Though these genres were geographically limited, they were modernized and mixed with more mainstream styles, evolving into popular zydeco music by the middle of the century (Broughton and Kaliss, 558).

### **Popular music**

The first field of American music that could be viewed as [popular](#), rather than [classical](#) or [folk](#), was the singing of the colonial New England choirs, and travelling singing masters like William Billings. It was here that techniques and traditions like shape note, lined-out hymnody and Sacred Harp were created, gradually spreading south and becoming an integral part of the Great

Awakening. The Great Awakening was a period of religious fervor, among whites and blacks (both slave and free), that saw passionate, evangelical "Negro spirituals" grow in popularity (Ferris, 98).

During the 19th century, it was not spirituals that gained truly widespread acclaim, but rather peppy comic songs performed by minstrels in blackface, and written by legendary songwriters like Stephen Foster and Daniel Emmett. During the Civil War, popular ballads were common, some used liberally by both the North and the South as patriotic songs. Finally, late in the century, the African American cakewalk evolved into [ragtime](#), which became a North American and European sensation, while mainstream America was enthralled by the brass band marches of John Philips Sousa.

Tin Pan Alley was the biggest source of [popular music](#) early in the 20th century (Garofolo, 17). Tin Pan Alley was a place in New York City which published [sheet music](#) for dance songs like "After the Ball Is Over". The first few decades of the 20th century also saw the rise of popular, comic [musical theater](#), such as the vaudeville tradition and composers and writers like Oscar Hammerstein II, Jerome Kern and Ira Gershwin. At the same time, [jazz](#) and [blues](#), two distinct but related genres, began flourishing in cities like Chicago and New Orleans and began to attract some mainstream audiences.

Blues and jazz were the foundation of what became American popular music. The ability to sell recorded music through phonographs changed the music industry into one that relied on the charisma of star performers rather than songwriters. There was increased pressure to record bigger hits, meaning that even minor trends and fads like Hawaiian steel guitar left a permanent influence (the steel guitar is still very common in country music). Dominican merengue and Argentinian tango also left their mark, especially on jazz, which has long been a part of the music scene in Latin America. During the 1920s, classic female blues singers like Mamie Smith became the first musical celebrities of national renown. [Gospel](#), blues and jazz were also diversifying during this period, with new subgenres evolving in different cities like New York, New Orleans and Chicago.

Jazz quickly replaced the blues as American popular music, in the form of [big band swing](#), a kind of [dance music](#) from the early 1930s. Swing used large ensembles, and was not generally improvised, in contrast with the free-flowing form of other kinds of jazz. With swing spreading across the nation, other genres continued to evolve towards popular traditions. In Louisiana, Cajun and Creole music was adding influences from blues and generating some regional hit records, while Appalachian folk music was spawning [jug bands](#), honky tonk bars and close harmony duets, which were to evolve into the pop-folk of the 1940s, bluegrass and country.

## 1940s and 1950s

In the 1940s, blues became the basis for [rock and roll](#), while jazz evolved into an ever more experimental [bebop](#) scene. Country and folk music further developed as well, gaining newfound popularity and acclaim for hard-edged [folk music](#). Perhaps most importantly, the 1940s saw the rise of the youth culture. Teenagers from across the country began to identify with each other and launched numerous trends. The first teen stars arose, beginning with the bobby soxer idol Frank Sinatra; this opened up new audiences for popular music, which had been primarily an adult phenomenon prior to the 40s.

### Roots of country music

*Main article:* [Country music](#)

The early 1940s saw the first major commercial success for Appalachian folk. Singers like Pete Seeger emerged, in groups like the Almanac Singers and The Weavers. Lyrically, these performers drew on early [singer-songwriters](#) like Woody Guthrie, and the whole scene became gradually associated with the political left (Garofolo, 196). By the 1950s, the anti-Communism scare was in full swing, and some performers with a liberal or socialist bent were blacklisted from the music industry.

In the middle of the 40s, [Western swing](#) reached its peak of popularity. It was a mixture of diverse influences, including [swing](#), [blues](#), [polka](#) and popular cowboy songs, and included early stars like Bob Wills, who became among the best known musicians of the era.

With a honky tonk root, modern [country music](#) arose in the 1940s, mixing with [R&B](#) and the blues to form [rockabilly](#). Rockabilly's earliest stars were Elvis Presley and Bill Haley, who entertained to crowds of devoted teenage fans. At the time, black audiences were listening to R&B, doo wop and gospel, but these styles were not perceived as appropriate for white listeners. People like Haley and Presley were white, but sang in a black style. This caused a great deal of controversy from concerned parents who felt that "race music", as it was then known, would corrupt their children. Nevertheless, rockabilly's popularity continued to grow, paving the way for the earliest rock stars like Chuck Berry, Little Richard and Fats Domino.

Among country fans, rockabilly was not well-regarded. Instead, the pop sounds of singers like Hank Williams and Patsy Cline became popular. Williams had an unprecedented run of success, with more than ten chart-topping singles in two years (1950-1951), including well-remembered songs still performed today like "I'm So Lonesome I Could Cry" and "Cold, Cold Heart". It was performers like Williams that established the city of Nashville,

Tennessee as the center of the country music industry. There, country and pop were mixed, resulting in what was known as the [Nashville Sound](#).

## **Gospel and doo wop**

*Main articles:* [Gospel](#)

The 1950s also saw the widespread popularization of [gospel music](#), in the form of powerful singers like Mahalia Jackson. Gospel first broke into international audiences in 1948, with the release of Jackson's "Move On Up a Little Higher", which was so popular it couldn't be shipped to record stores fast enough. As the music became more mainstream in the later part of the decade, performers began adding influences from [R&B](#) to make a more palatable and dance-able sound. Early in the next decade, the lyrics were secularized, resulting in [soul music](#). Some of soul's biggest stars began performing in the 50s gospel scene, including Sam Cooke, Dinah Washington, Dionne Warwick and Aretha Franklin.

Doo wop, a complex type of vocal music, also became popular during the 1950s, and left its mark on 1960s soul and R&B. The genre's exact origins are debatable, but it drew on groups like the Mills Brothers and The Ink Spots, who played a kind of R&B with smooth, alternating lead vocals. With the addition of gospel inflections, doo wop's polished sound and romantic ballads made it a major part of the 50s music scene, beginning in 1951. The first popular groups were bands like The Five Keys ("Golden Teardrops") and The Flamingos ("My Reverie"). Doo wop diversified considerably later in the decade, with groups like The Crows creating a style of uptempo doo wop, while singers like Frankie Lymon became sensations; Lymon became the first black teen idol in the country's history after the release of the Top 40 pop hit "Why Do Fools Fall in Love" (1956).

## **Latin music**

Latin music imported from Cuba (chachachá, [mambo](#), rumba) and Mexico (ranchera and mariachi) had brief periods of popularity during the 50s. The earliest popular Latin music in the United States came with rumba in the early 1930s, and was followed by calypso in the mid-40s, mambo in the late 40s and early 50s, chachachá and charanga in the mid-50s, bolero in the late 50s and finally [boogaloo](#) in the mid-60s, while Latin music mixed with jazz during the same period, resulting in [Latin jazz](#) and the bossa nova fusion [cool jazz](#).

The first Mexican-Texan pop star was Lydia Mendoza, who began recording in 1934. It was not until the 40s, however, that musica norteña became popularized by female duets like Carmen y Laura and Las Hermanas

Mendozas, who had a string of regional hits. The following decade saw the rise of Chelo Silva, known as the "Queen of the (Mexican) Bolero", who sang romantic pop songs.

The 50s saw further innovation in the Mexican-Texan community, as electric guitars, drums and elements of rock and jazz were added to conjunto. Valeria Longoria was the first major performer of conjunto, known for introducing Colombian [cumbia](#) and Mexican ranchera to conjunto bands. Later, Tony de la Rosa modernized the conjunto big bands by adding electric guitars, amplified bajo sexto and a drum kit and slowing down the frenetic dance rhythms of the style. In the mid-1950s, bandleader Isidro Lopez used accordion in his band, thus beginning the evolution of Tejano music. The rock-influenced Little Joe was the first major star of this scene.

## **Cajun and Creole music**

Louisiana's Cajun and Creole communities saw their local music become a brief mainstream fad during the 1950s. This was largely due to the work of Clifton Chenier, who began recording for Speciality Records in 1955. He took authentic Cajun and Creole music and added more elements of rock and roll: a rollicking beat, frenetic vocals and a dance-able rhythm; the result was a style called zydeco. Chenier continued recording for more than thirty years, releasing over a hundred albums and paving the way for later stars like Boozoo Chavis and Buckwheat Zydeco.

## **1960s and 70s**

In the 1960s, music became heavily involved in the burgeoning youth counter culture, as well as various social and political causes. The beginning of the decade saw the peak of doo wop's popularity, in about 1961, as well as the rise of [surf](#), [girl groups](#) and the first [soul](#) singers. [Psychedelic](#) and [progressive rock](#) arose during this period, along with the roots of what would later become [funk](#), [hip hop](#), salsa, [electronic music](#), [punk rock](#) and [heavy metal](#). An American [roots revival](#) occurred simultaneously as a period of sexual liberation and racial conflict, leading to growth in the lyrical maturity and complexity of popular music as songwriters wrote about the changes the country was going through.

### **Early 1960s**

The first few years of the 1960s saw major innovation in [popular music](#). [Girl groups](#), [surf](#) and hot rod, and the [Nashville Sound](#) were popular, while an Appalachian folk and African American blues [roots revival](#) became dominant among a smaller portion of the listening audience. An even larger population of young audiences in the United Kingdom listened to American blues. By the middle of the decade, [British blues](#) and [R&B](#) bands like The Beatles, The Who and the Rolling Stones were topping the charts in what became known as the British Invasion, alongside newly-secularized [soul music](#) and the mainstreaming of the [Bakersfield Sound](#). Folk-based [singer-songwriters](#) like Bob Dylan also added new innovations to popular music, expanding its possibilities, such as by making singles more than the standard three minutes in length.

## Psychedelic rock

*Main article: [Psychedelic rock](#)*

Psychedelic rock became the genre most closely intertwined with the youth culture. It arose from the British Invasion of blues in the middle of the decade, when bands like The Beatles, Rolling Stones and The Who dominated the charts and only a few American bands, such as The Beach Boys and The Mamas & the Papas, could compete. It became associated with hippies and the anti-war movement, civil rights, feminism and environmentalism, paralleling the similar rise of Afrocentric Black Power in [soul](#) and [funk](#). Events like Woodstock became defining symbols for the generation known as the Baby Boomers, who were born immediately following World War 2 and came of age in the mid to late 60s.

Later in the decade, psychedelic rock and the youth culture splintered. [Punk rock](#), [heavy metal](#), [singer-songwriter](#) and [progressive rock](#) appeared, and the connection between music and social activism largely disappeared from popular music.

## Soul and funk

*Main articles: [Soul](#) and [funk](#)*

In the middle of the decade, female soul singers like Dionne Warwick, Aretha Franklin and Diana Ross were popular, while innovative performers like James Brown invented a new style of soul called [funk](#). Influenced by psychedelic rock, which was dominating the charts at the time, funk was a very rhythmic, dance-able kind of soul. Later in the decade and into the 70s, funk too split into two strands. Sly & the Family Stone made pop-funk palatable for the masses, while George Clinton and his [P Funk](#) collective

pioneered a new, psychedelia- and heavy metal-influenced form of avant-garde funk. Album-oriented soul also appeared very late in the decade and into the next, with artists like Marvin Gaye, Al Green and Curtis Mayfield taking soul beyond the realm of the single into cohesive album-length artistic statements with a complex social conscience.

It was in this context, of album-oriented soul and funk, influenced by Black Power and the civil rights movement, that African Americans in Harlem invented [hip hop music](#).

## Country and folk

*Main articles:* [Country](#) and [folk music](#)

Merle Haggard led the rise of the [Bakersfield Sound](#) in the 60s, when the perceived superficiality of the Nashville Sound led to a national wave that almost entirely switched country music's capital and sound within the space of a few years. At the same time, bluegrass became a major influence on jam bands like Grateful Dead and also evolved into new, progressive genres like [newgrass](#). As part of the nationwide [roots revival](#), Hawaiian slack-key guitar and Cajun swamp pop also saw mainstream success.

## Tejano

With the widespread success of Tony de la Rosa's big band conjunto in the late 1950s, the style became more influenced by rock and pop. Esteban Jordan's wild, improvised style of accordion became popular, paving the way for the further success of El Conjunto Bernal. The Bernal brothers' band sold thousands of albums and used faster rhythms than before.

## 1970s

The early 1970s saw popular music being dominated by folk-based [singer-songwriters](#) like John Denver, Carol King and James Taylor, followed by the rise of [heavy metal](#) subgenres, glam, [country rock](#) and later, [disco](#). Philly soul and pop-funk was also popular, while [world music](#) fusions became more commonplace and a major klezmer revival occurred among the Jewish community. Beginning in the early 70s, [hip hop](#) arose in New York City, drawing on diverse influences from both white and black folk music, Jamaican toasting and the performance poetry of Gil Scott-Heron.

## Heavy metal

*Main article: [Heavy metal](#)*

[Heavy metal](#)'s early pioneers included the British bands Led Zeppelin and Black Sabbath, though American cult bands Blue Cheer and The Velvet Underground also played a major role. Their music was hard-edged and bluesy, with an often menacing tone that became more pronounced in later subgenres. In the beginning of the 70s, heavy metal-influenced [glam rock](#) arose, and musicians like David Bowie became famous for gender-bending costumes and themes. Glam was followed by mainstream bombastic [arena rock](#) and light [progressive rock](#) bands becoming mainstream, with bands like Styx and Chicago launching popular careers that lasted most of the decade. Hair metal, a glitzy form of Los Angeles metal, also found a niche audience but limited mainstream success.

## Outlaw country

*Main article: [Outlaw country](#)*

With the Bakersfield Sound the dominant influence, outlaw country singers like Willie Nelson and Waylon Jennings were the biggest country stars of the 70s, alongside [country rock](#) bands like Lynyrd Skynyrd and Allman Brothers Band who were more oriented towards crossover audiences. Later in the decade and into the next, these both mixed with other genres in the form of [heartland rockers](#) like Bruce Springsteen, while a honky tonk revival hit the country charts, led by Dwight Yoakam.

## Hip hop

*Main article: [Hip hop music](#)*

Hip hop was a cultural movement that began in Harlem in the early 1970s, consisting of four elements. Two of them, [rapping](#) and DJing, make up [hip hop music](#). These two elements were imported from Jamaica by DJ Kool Herc. At neighborhood block parties, [DJs](#) would spin popular records while the audience danced. Soon, an MC arose to lead the proceedings, as the DJ began isolating and repeating the percussion breaks (the most popular, dance-able part). MCs' introductions became more and more complex, drawing on numerous African-derived vocal traditions, and became the foundation of [rapping](#). By the end of the decade, hip hop had spread across the country, especially in Los Angeles and Chicago.

## Salsa

Cuban and Puerto Ricans in New York invented salsa in the early 1970s, using multiple sources from Latin America in the pan-Latin melting pot of the city. Puerto Rican plena and [bomba](#) and Cuban chachacha, son montuno and [mambo](#) were the biggest influences, alongside Jamaican, Mexican, Dominican, Trinidadian, Argentinian, Colombian and Brazilian sources. Many of the earliest salsa musicians, like Tito Puente, had had a long career in various styles of Latin music. Salsa grew very popular in the 70s and into the next two decades, spreading south to Venezuela, Colombia, Puerto Rico, Mexico, Peru and especially Cuba.

## **Punk rock**

*Main article: [Punk rock](#)*

Punk rock arose as a reaction against what had come before. Early punks believed that hollow greed had destroyed American music, and hated the perceived bombast and arrogance of the biggest bands of the 1970s. It arose in London and New York, with numerous regional centers by the end of the decade when bands like The Ramones saw unprecedented success for their defiantly anti-mainstream genre. It was the British band The Clash, however, that became wildly popular, more so in the UK than the U.S., and set the stage for adoption of elements of punk in popular music in the 80s.

## **1980s and 90s**

The 1980s began with [New Wave](#) dominating the charts, and continued through a new form of silky smooth soul, and ended with a popular hair metal trend dominating mainstream America. Meanwhile, the first glimmer of punk rock's popularity began, and new [alternative rock](#) and [hardcore](#) found niche markets. Hip hop diversified as a few artists gained mainstream success, finally breaking through in the last few months of the decade.

## **Hip hop**

*Main article: [Hip hop music](#)*

In the 1980s, hip hop saw its first taste of mainstream success with LL Cool J and Kurtis Blow. Meanwhile, hip hop was continuing its spread from the East Coast to most major urban areas across the country, and abroad. At the end of the decade, two albums broke the genre into the mainstream. Public Enemy's *It Takes a Nation of Millions to Hold Us Back* and N.W.A.'s

Straight Outta Compton broke through with highly controversial and sometimes violent lyrics. N.W.A. proved especially important, launching the career of Dr. Dre and the dominant [West Coast rap](#) sound of the next decade. That same year (1989), De La Soul's 3 Feet High and Rising became the earliest release of [alternative hip hop](#), and numerous regional styles of hip hop saw their first legitimization, including Chicago [hip house](#), Los Angeles [electroclash](#), Miami's [bass](#), Washington D.C.'s go go and Detroit's [ghettotech](#).

## 1990s

As the 90s began, hair metal was dominating the charts, especially formulaic bands like Extreme. In reaction to that, the first few years saw a sea change in American popular music. Nirvana's Nevermind launched the defiantly anti-mainstream grunge movement among mainstream audiences, while Dr. Dre's The Chronic brought his West Coast [G Funk](#) sound to widespread success.

Both these trends died out quickly, however, grunge done in by Kurt Cobain's death and disillusionment with grunge, a form of *alternative rock*, becoming mainstream. G Funk lasted a few years, displacing [East Coast rap](#) as the dominant sound of hip hop. A rivalry began, fed by the music news, focusing on West Coast's Tupac Shakur and the East Coast's Notorious B.I.G.. By the middle of the decade, Tupac and Biggie were shot dead, and Dr Dre's Death Row Records had fallen apart. East Coast rappers like Puff Daddy and Busta Rhymes re-established the East Coast, while Atlanta's OutKast and other performers found a mainstream audience.

Alanis Morissette, one of the top-selling artist of the 90s, injected renewed popularity to singer-songwriters such as Tori Amos, Jewel, and Sarah MacLachlan. In the wake of grunge and gangsta rap came a fusion of soul and hip hop, called nu soul, some popularity for British [Britpop](#) and the rise of bands like Sublime and No Doubt, playing a form of pop punk influenced by Jamaican ska and British two tone ska/punk fusionists from the early 80s. [Techno](#) also became popular, though nowhere's near as much so as in most of the rest of the world.

At the turn of the millennium, [bubblegum pop](#) groups like Backstreet Boys and Britney Spears were dominating the charts, many of them with a Latin beat (Shakira, Ricky Martin), and rappers like Jay-Z and Eminem were huge stars. Some [garage rock](#) revivalists like The White Stripes and The Hives became highly-hyped bands in the [indie rock](#) field, and achieved substantial mainstream success. The first few years of the 2000s saw the further rise of pop-hip hop, fed by the breakthrough success of Eminem. Indeed, hip hop became an essential element of nearly all popular music during this period, resulting in new fusions like [nu metal](#). Pop thug rappers like Ja Rule were

nationally renowned, though hard-edged hip made a return within a few years with the rise of 50 Cent.

## Music in professional wrestling

**Music in professional wrestling** serves a variety of purposes.

The most common uses of music is that of the entrance theme, a song or piece of instrumental music which plays as a performer approaches the ring. After a match, the entrance theme of the victor will normally be played as they exit the ring. Entrance themes are used to alert the audience to the immediate arrival of a wrestler, and to increase anticipation.

Entrance themes are often tailored to the character of the wrestler they are written or selected for. For example, Jacob and Eli Blu (The Blu Brothers) had an entrance theme which resembled a piece of [Blues](#) music. The Undertaker has often used entrance themes which resemble a dirge. In practice, modern day entrance themes are normally [rock](#) or [rap](#) music, as these genres of music are popular with the professional wrestling key demographics.

Due to licensing costs, entrance themes are often composed by the promotion for which the wrestlers perform in order to avoid having to pay royalties. A promotion might also purchase music from production libraries, which is considered to be cheaper than the royalties of commercial music. However, small promotions with television deals are not obliged to pay royalties, and so may use popular songs for their wrestlers. Due to less restrictive copyright laws in Mexico, Lucha Libre promotions use mostly popular songs. As well, ECW used popular music in order to promote a hip, edgy, counter-culture image, despite the greater expense involved.

The history of entrance themes is not clear, but Gorgeous George is often cited as being the first wrestler to be accompanied to the ring by music. Sgt. Slaughter also claims to have introduced the idea to Vince McMahon, Sr. of playing the Marines' Hymn prior to his entrance at a Madison Square Garden show in the 1970s. However, the practice did not become widespread until the 1980s, when the Fabulous Freebirds, Hulk Hogan and various World Class Championship Wrestling employees began using rock music for entrance themes.

Music is also used as a promotional tool, played during advertisements and video packages.

## Music industry

The **music industry** is the industry that creates, performs, promotes, and preserves [music](#).

The music industry is made up of:

- [musicians](#) such as [singers](#)
- [musical ensembles](#)
- Musicians' Unions
- [composers](#) and [songwriters](#)
- publishers such as Carlin America
- writers' copyright collectives and performance rights organisations like ASCAP and BMI
- [record industry](#) ("record" in this context means sound recordings in fixed form, be they tangible or digital)
  - record producers
  - record manufacturers
  - [record labels](#)
  - record distributors
- [A&R](#)
- band managers
- tour promoters
- bookers
- roadies

*and so on...*

## History

The first stirrings of a music industry came in the mid-to-late 18th century, when performers and composers such as Wolfgang Amadeus Mozart began to seek opportunities to market their music and performances to the general public, rather than survive entirely on patronage from the aristocracy and church. After Mozart's death, his wife, the soprano Constanze Weber, continued the process of commercialization of his music through an unprecedented series of memorial concerts, the slow but steady sale of his manuscripts, and a collaboration with her second husband, Georg Nissen, on a biography of her first.

In the 19th century the music industry was dominated by [sheet music](#) publishers. In the United States, the music industry arose in tandem with the rise of blackface minstrelsy. The group of music publishers and songwriters which dominated popular music in the United States was known as Tin Pan Alley. In the early 20th century the phonograph industry grew greatly in

importance, and the [record industry](#) eventually replaced the sheet music publishers as the industry's largest force.

Just as radio and television did before it, the advent of file sharing technologies may change the balance between record companies, song writers, and performing artists. Bands such as Metallica have fought back against peer-to-peer programs such as the infamous Napster, and the arguments for and against technology to circumvent them - digital rights management systems - remain controversial.

## Music information retrieval

**Music information retrieval** or **MIR** is the interdisciplinary science of retrieving information from [music](#).

This includes:

Computational methods for classification, clustering, and modelling  
(Musical feature extraction for mono- and polyphonic music, similarity and pattern matching, retrieval)

Formal methods and databases

(Applications of automated music identification and recognition, such as score following, automatic accompaniment, Routing and filtering for music and music queries, Query languages, Standards and other metadata or protocols for music information handling and retrieval, Multi-agent systems, distributed search)

Web software for music information retrieval

(Semantic Web and musical digital objects, Intelligent agents, Collaborative software, Web-based search and semantic retrieval)

Human-computer interaction and interfaces

(Multi-modal interfaces, User interfaces and usability, Mobile applications, User behaviour)

Music perception, cognition, affect, and emotions

(Music similarity metrics, Syntactical parameters, Semantic parameters, Musical forms, structures, styles and genres, Music annotation methodologies)

Music analysis and knowledge representation

(Automatic summarization, citing, excerpting, downgrading, transformation, Formal models of music, digital scores and representations, Music indexing and metadata)

Music archives, libraries, and digital collections

(Music digital libraries, Public access to musical archives, Benchmarks and research databases)

Intellectual property rights and music

(National and international intellectual property right issues, Digital rights management, Identification and traceability)

Sociology and Economy of music

(Music industry and use of MIR in the production, distribution, consumption chain, User profiling, Validation, User needs and expectations, evaluation of music IR systems, building test collections, experimental design and metrics)

# Music journalism

**Music journalism** is a specialized branch of entertainment journalism — especially criticism and reportage about [music](#). Ranging from lengthy profiles of [singers](#) and [bands](#) to brief [album](#) reviews, music journalism is at least several decades old. Magazines such as Rolling Stone, Urb, New Musical Express, and The Source are well known for their musical journalism.

## History of music journalism

Before about the 1840s, reporting on music was either done by musical journals, such as (in the areas that later became Germany) Allgemeine Musikalische Zeitung (published by Breitkopf & Hartel and then by Rieter-Biederman, from 1798–1882) or the Neue Zeitschrift für Musik (founded by Robert Schumann); in London such journals as the Musical Times as of 1844 (Musical Times and singing-class circular until 1906), and so on; which was its major competitor in Germany\*, and which gradually supplanted it, or else by reporters at newspapers whose main interest was in politics, and which gave only slight attention to music. Several changes — possibly education, the Romantic movement generally and in music, popularization (including what some referred to as Lisztomania), among others, led to an increasing interest in music among the general papers, and an increase in the number of critics by profession (and of varying degrees of competence and integrity, of course. The situation here was distinguished from that before the 1840s, in that the critics now — on the whole — were not also musicians; and so this could be considered a turningpoint of a kind.)

The main source for the claim that music criticism underwent a fundamental change in the 1840s–50s, is a letter by Liszt, and admittedly, given the time and the context— the beginnings of the War of the Romantics, the contrast he describes may be produced by nostalgia for a time when artists critiqued artists (his own ideal, as his writings are interpreted by Alan Walker; of course, such a situation runs a risk of creating a guild mentality, though in that same context this might have seemed less true) However, the contemporary situation he describes can be independently confirmed.

\* I use "Germany" as a convenient shorthand here for Germanspeaking regions in a certain geographical radius, since Germany under a single government, though the goal of a movement for quite some time in the 19th century, only began with Bismarck.

## Modern Music Journalism

The profession of music journalism, which started off without precedents, direction, or ground rules, found its feet in less than a century. The world of modern music journalism can be partially divided into — on the magazines' side — recording and concert reviewers, interviewers, publishing staff, and editorialists and other writers. A record label or musician's promoters will often send free recordings, or demonstration copy to the magazine to be passed on to its reviewers for audition. Announcements of future expected recordings might be made available by some recording companies and published by some magazines (by Gramophone in classical music, for example).

## Music lesson

While many individuals are content to play a [musical instrument "by ear"](#) or by practicing individual pieces until a reasonable proficiency is achieved, others wish to develop mastery of one or more instruments, and commonly seek formal instruction in the form of **music lessons**. For people attempting to learn their first instrument, typical elements of such a lesson are as follows.

## Posture and style

Perhaps one of the most obvious things one needs to know about playing an instrument is how to perform on it. This includes how to hold it, how to manipulate one's fingers and how to achieve the correct posture for maximum playing results.

For all instruments, the best way to move the fingers to achieve a desired effect is to learn to play with the least tension in your hands and body. Maximum technique is achieved with the most relaxed muscles. This also prevents forming habits which may lead to injuries resulting from incorrect use of the skeletal frame and muscles. For example, when playing the [piano](#), see piano lesson, "fingering"—that is, which fingers to put on which keys—is a skill slowly learnt as the student advances, and there are many standard techniques which a teacher can pass on. In addition to fingering, a [guitar](#) player learns how to strum, pluck, etc; players of [wind instruments](#) learn about breath control and embouchure, and [singers](#) learn how to make the most of their vocal cords without hurting them.

There are many myths and misconceptions among music teachers, especially in the western classical tradition, about "good" posture and "bad" posture. Students who find that playing their instruments causes them physical pain should bring this to their teachers' attention. It is a potentially serious, if often overlooked aspect of learning to play an instrument. Learning to use one's body in a manner consistent with the way their anatomy is designed to work can mean the difference between a crippling injury and a lifetime of enjoyment. Many music teachers would caution students about taking "no pain, no gain" as an acceptable response from their music teacher regarding a complaint of physical pain.

Concerns about use-related injury and the ergonomics of musicianship have gained more mainstream acceptance in recent years. Musicians have increasingly been turning to medical professionals, physical therapists, and specialized techniques seeking relief from pain and prevention of serious injury. There exist a plurality of special techniques for an even greater plurality of potential difficulties. The Alexander Technique is just one example of these specialized approaches.

## Theory

In order to more fully understand the [music](#) being played, the student must learn about the underlying [music theory](#). Along with reading [musical notation](#), students learn rhythmic techniques like controlling tempo and recognizing time signatures, as well as the theory of [harmony](#), including [chords](#) and key signatures.

In addition to basic theory, a good teacher will stress *musicality*, or how to make the music sound good. This includes tone, phrasing, and proper use of dynamics.

## Technical exercises

Although not universally accepted, many teachers drill students with the repetitive playing of certain patterns, such as [scales](#), arpeggios, and [rhythms](#). In addition, there are flexibility studies, which make it physically easier to play the instrument. There are sets of exercises for piano designed to stretch the connection between fourth and fifth fingers, making them more independent. Brass players practice *lip slurs*, which are unarticulated changes in embouchure between partials.

## Pieces

The teacher will give the student a set of pieces of slowly increasing difficulty. Besides using pieces as an aid to teaching various elements of playing style, a good teacher will also inspire more intangible qualities such as expressiveness and musicianship. Pieces are undeniably more enjoyable than theory or scales, and an emphasis on pieces is usually required to maintain motivation.

## Examinations and other benchmarks

A popular measure of progress, especially for children, is external assessment of the progress of the pupil by a regular examination. There are a number of exam boards which offer the chance for pupils to be assessed on either music theory or practice. These are available for almost every musical instrument.

One common way to mark progress is to have graded examinations, for example from grade 1 (beginner) to grade 8 (ready to enter higher study at music school).

Some teachers prefer other methods of target-setting for their pupils. The most common is the pupil's concert, which gives experience in playing in public and under a certain degree of pressure, without outright criticism or a more or less arbitrary marking system. Another is the graded system of books

followed by teachers of the Suzuki method, in which the completion of each book is celebrated, without a system of marking or ranking of pupils.

## Benefits of music lessons

Many people believe that music lessons provide children with important developmental benefits beyond simply the knowledge or skill of playing a musical instrument. Research suggests that musical lessons may enhance intelligence and academic achievement, build self-esteem and improve discipline.

A recent Rockefeller Foundation Study found that music majors have the highest rate of admittance to medical schools, followed by biochemistry and the humanities. On SAT tests, the national average scores were 427 on the verbal and 476 on math. At the same time, music students averaged 465 on the verbal and 497 on the math - 38 and 21 points higher, respectively. However, the observed correlation between musical and mathematical ability may be inherent rather than acquired.

Skills learned through the discipline of music may transfer to study skills, communication skills, and cognitive skills useful in every part of a child's studies at school, though. An in-depth Harvard University study found evidence that spatial-temporal reasoning improves when children learn to make music, and this kind of reasoning improves temporarily when adults listen to certain kinds of music, including Mozart (Rauscher, Shaw & Ky, 1993). This finding which has been named "The Mozart effect" suggests that music and spatial reasoning are related psychologically (i.e., they may rely on some of the same underlying skills) and perhaps neurologically as well. However, there has been considerable controversy over this as later researchers have failed to reproduce the original findings of Rauscher (e.g. Steele, Bass & Crook, 1999), questioned both theory and methodology of the original study (Fudis & Lembesis 2004) and suggested that the enhancing effects of music in experiments have been simply due to an increased level of arousal (Thompson, Schellenberg & Husain, 2001).

A relationship between music and the strengthening of math, dance, reading, creative thinking and visual arts skills has also been reported in literature. (Winner, Hetland, Sanni, as reported in *The Arts and Academic Achievement - What the Evidence Shows*, 2000)

## Music licensing

**Music licensing** is the licensed use of copyrighted [music](#).

There is extensive international law which covers music licensing. Nothing in this article should be considered a substitute for qualified legal advice.

## Definitions

The following words and phrases will turn up regularly in any comprehensive discussion of music licensing, and are listed in no particular order:

license

the right, granted by the copyright holder, for a given person or entity to broadcast, recreate, perform, or listen to a recorded copy of a copyrighted work

licensor

the owner of the licensed work

licensee

the person or entity to whom the work is licensed

performance

for the purposes of this article, the live performance of a musical piece, regardless of whether it's performed by the original artist or in the manner it is best known

broadcast

the replaying of pre-recorded works to multiple listeners through various media or in a 'semi-live' setting such as a bar or bookstore, and including radio, tv, webcasting, podcasting, etc. (Note: Using this definition and the previous one, you find the information that leads to phrases like 'live broadcast performance'.)

performing rights organization

large companies, the best-known of whom are ASCAP, BMI, and to a lesser extent SESAC (there are others as well) whose fundamental job it is to keep track of every single performance or broadcast of all works protected under copyright. A more in-depth analysis of how these organizations work will be threaded throughout the body of this article

copyright

literally, 'the right to copy.' Prior to 1909, no effective international law of copyright existed. The first major international copyright law conventions were the Berne Convention for the Protection of Literary and Artistic Works created in 1886. It is not within the scope of this document to examine the various changes, additions, and ancillary agreements to the Berne Convention.

synchronization licensing

the licensing of musical works to be performed as a soundtrack, 'bumper', 'lead-in' or background to a motion picture.

**publisher**

for the purposes of copyright, a publisher is the owner of the copyrighted work. It is now standard practice for songwriters of even the slightest prominence to form a 'publishing company' who actually owns the rights to their work; the reasons for this are matters of legal finery and largely not of value to the scope of this article. This phrasing is reflective of the state of media at the time of the Berne Convention, when all music distribution was done on paper as sheet music (or player piano rolls).

## **Music Licensing Basics**

### **What is Music Licensing?**

Music licensing is the process by which songwriters, in theory, get paid for their work. In much the same way you don't own that copy of Doom or Windows (or Linux), a purchaser of recorded music does not own the music, they own the media that music is stored on, and they have a limited right to use the music for themselves, so long as 'using' doesn't mean 'making unlicensed copies of' or 'broadcasting' the recorded work.

There has long been a school of thought that those who buy music have the right to do as they please with it. By the same token there is school of thought that says that an artist or composer has the sole exclusive right to decide how and when their work will be used, and for what price.

While the arguments on both sides are loud and have both valid, positive points and invalid, negative points, it is not the intent of this article to engage that particular debate. However, it is worth noting that the debate exists; at its very basic level, it comes down to a question of the right of an artist to be paid versus the right of a consumer to own what they purchase.

### **What is Broadcasting?**

There are, of course, many different definitions of 'broadcasting,' but for the purposes of a discussion of music licensing, 'broadcasting' may be considered to mean the playback of pre-recorded or live music for groups of people other than the licensed purchaser of a given work, beyond what might be normally expected in a social setting. Playing music in your car is not broadcasting, unless you're playing it out of your car for a large group of

people, for instance at a tailgate party. There has been some legal wrangling over the years about what, exactly, constitutes a 'broadcast' for the purpose of license/copyright enforcement. Legal claims are filed nearly every day across the world against bookstores, bars, and live music venues which broadcast music without paying for it.

In a nutshell: If you are playing music in so that people outside of your close, immediate area can hear it, you're broadcasting, and by law you are required to keep track of what you play and pay for it. This is equally true of non-profit organizations, live music bars, bars or clubs that feature pre-recorded music, bookstores that play music, coffee shops that play music, roller-skate rinks, podcasts...anyone.

### **So why aren't grocery stores and elevators being sued?**

Because they're paying. Generally speaking, the 'background' music you hear in places like grocery stores or elevators is a service which is purchased from one of many organizations which offer it (the largest of these, of course, is Muzak). Part of the fee paid for this service is used to cover licensing costs.

### **How do they figure out who gets paid, and how much?**

The easiest way to look at this issue is by examining the day-to-day operations of the average music radio station. Every time a song is played someone, or something, makes a note of the title of the track, the name of the artist, and the time it was played, and this information is submitted to the Publishing Rights Organizations. There is a fairly complex series of calculations involved. First, the total number of songs played is tabulated. Then the total amount of license income is calculated. The second number, divided by the first, represents a single 'share' - a value equaling the percentage of cash that a single play of a single song amounts to (this is, of course, a minuscule number). This 'share' is then multiplied by the number of times a given song is played to arrive at the total value of that song's license royalties during that quarter.

For instance:

Let's say that in Q12005, 100 songs were played (this is, of course, a very, VERY small fraction of the total number of songs played in a quarter, but we're going for ease of calculation here). Let's further say that the total amount of royalties collected in that quarter was \$200. Therefore, each song played is worth two bucks. So, if Aerosmith's "Dream On" was played 3 times, Aerosmith gets six dollars as their share for that quarter.

This constitutes a dramatic oversimplification of the process, and the processes for each PRO are slightly different, as are the percentages, but in a nutshell, this is how it's figured.

## **Recorded music**

### **Radio**

Radio stations pay fees for the rights to broadcast music. They may pay to BMI (Broadcast Music Incorporated) and ASCAP, just to name a few.

### **Live music**

### **Home video**

Licensing issues are often encountered when television shows or films using copyrighted music are released on Digital Versatile Disc (DVD) format.

When a song is cleared for usage on a TV show, the clearance typically only applies to television airings of the show in question. Thus, when the show is released on DVD, the rights to the song must be renegotiated in order for the song in question to be included on the DVD.

If the process of clearing the rights to the song is prohibitively expensive for the company releasing the show on DVD, or if clearance is refused by the copyright holders of the original song, a number of solutions can be chosen from. The affected song is usually replaced with a similar (sound-alike) one which is cheaper to license or the footage containing the copyrighted song is edited out; depending on the show and the television company involved. In a few cases, television shows which use so much copyrighted music such that the cost of licensing is high are withheld from release on DVD.

## **Artists Who Usually Refuse Permission to Licence their Music in Films and Advertisements**

Led Zeppelin usually refuse permission. Exceptions being Almost Famous, School of Rock and Fast Times at Ridgemont

High.

The Beatles. Rights to most of their songs are owned by Michael Jackson, who, since the mid 1980s has usually refused permission.

The Rolling Stones. One Notable exception being Start Me Up, which was Licensed to Microsoft for the launch of Windows 95.

## Music loop

In electronic music, a **loop** is a sample which is repeated. "Loops are short sections of tracks (probably between one and four bars in length), which you believe might work being repeated." A loop is not "any sample, but...specifically a small section of sound that's repeated continuously." Contrast with a one-shot sample. (Duffell 2005, p.14) "A loop is a sample of a performance that has been edited to repeat seamlessly when the audio file is played end to end." (Hawkins 2004, p. 10) Loops may be repeated through the use of tape loops, delay effects, two record players (cutting), sampling, or a sampler.

While repetition is used in the musics of all cultures the first musicians to use loops were electronic pioneers Edgard Varèse and Karlheinz Stockhausen. Stockhausen's music in turn influenced the Beatles to experiment with tape loops, and their use of loops in early psychedelic works (most notably 1966's "Tomorrow Never Knows" and 1968's avant-garde "Revolution 9") brought the technique into the mainstream. Later, inspired by Terry Riley to use one tape on two tape machines, Brian Eno and Robert Fripp created the technical basis for their No Pussyfooting album - this technological concept was later dubbed Frippertronics.

Today followers including Stefan Keller, David Torn, Andre LaFosse, Matthias Grob, Per Boysen, Rick Walker, Florian Antoine, Andy Butler and Steve Lawson use digital hardware and software devices to create and modify loops, often in conjunction with various electronic musical effects. In 1992-1993 dedicated digital devices were invented specifically for the use in live looping, or loops that are recorded in front of a live audience.

Another approach was the use of pre-recorded loops, first exemplified by Grandmaster Flash and his turntablism. Use of pre-recorded loops made its way into many styles of popular music, including hip hop, trip hop, techno, drum and bass, and contemporary dub, as well as into mood music on soundtracks. Royalty-free loops are available online from various vendors, including Sonic Foundry. This has spawned a new genre of artist who create musical loops for the software, such as producer Bill Laswell, Nine Inch Nails drummer Jerome Dillon, and multi-instrumentalist Bradley Fish.

Programs to create music using loops range in features, user friendliness, and of course price. Some of the most widely used are, Sonic Foundry's ACID, Cakewalk Sonar, Propellerhead Software's ReCycle, GarageBand, FL Studio (formerly Fruity Loops), Ableton Live, Augustus Loop, Multi Loop, and Ambi Loop.

A famous festival for loop based music is Loopstock in the San Luis Obispo, California region, established 2002, and the Y2K? series, established in 2000 in Santa Cruz, California. The Y2K4 International Live Looping Festival in October 2004 drew 50 loopers from 5 different countries and all over the United States in four days in two cities (San Francisco and the main festival in Santa Cruz). There were 20 live looping festivals in 12 countries in 2004 in this burgeoning international movement.

The musical loop is one of the most important features of video game music.

## Music of Africa

Africa is a continent with a wide range of ethnic, cultural and linguistic diversity. A general description of **African Music** is not possible as there is no distinctly pan-African music, only shared forms of musical expression. Nevertheless, there are regional similarities between dissimilar groups, as well as popular trends known across the continent.

Sub-Saharan music has as its distinguishing feature a rhythmic and complexity that has spread to other regions, especially to the Americas. Many Caribbean and Latin American music genres like [rumba](#) and salsa, as well as [African American music](#) were founded to varying degrees on musical traditions from Africa, taken there by African slaves

The remarkable aspect of African polyrhythm is the discernible coherence of the resultant rhythmic pattern. Pitch polyphony exists in the form of parallel intervals (generally thirds, fourths, and fifths), overlapping choral antiphony and solo-choral response, and occasional simultaneous independent melodies. In addition to voice, many [wind](#) and [string instruments](#) perform melodic functions. Common are bamboo [flutes](#), ivory [trumpets](#), and the one-string ground bow, which uses a hole in the ground as a resonator.

During colonial times, European instruments such as [saxophones](#), trumpets, and [guitars](#) were adopted by many African musicians; their sounds were integrated into the traditional patterns. Scale systems vary between regions but are generally diatonic.

Music is highly functional in African ethnic life, accompanying birth, marriage, hunting, and even political activities. Much music exists solely for entertainment, ranging from narrative songs to highly stylized musical theater. Similarities with other cultures, particularly Indian and Middle Eastern, can be ascribed primarily to the Islamic invasion.

## Folk music

African [folk music](#) is mostly functional in nature. There are many different kinds of work songs, and ceremonial or religious music, but none of these are performed outside of their intended social context. Traditional African music is rhythmically complex, and are polyrhythmic. African [musical instruments](#) include a wide array of [drums](#) and other [percussion instruments](#), including talking drums, slit gongs, rattles and water drums, as well as melodic instruments like [fiddles](#), [harps](#) and the balafon, and lamellophones such as the mbira.

## Popular music

Genres of popular African Music include:

- [Afrobeat](#)

- Apala
- Benga
- Bikutsi
- Highlife
- Isicathamiya
- Jùjú
- Kwaito
- Kwela
- Makossa
- Mbalax
- [Mbaqanga](#)
- Mbube
- Morna
- Palm-wine
- Rai
- [Rumba](#)
- Soukous/Congo/Lingala
- Taarab

## National anthem

"Advance Australia Fair"

The earliest **music of Australia** was the [folk music](#) of the Australian Aborigines. Aboriginal music declined after European colonisation, and has only recently begun to be revived, often with modernised influences. Bands like Yothu Yindi have generated an increased interest in Aboriginal music in Australia, New Zealand, the United Kingdom and elsewhere. Australia has also been home to notable [classical](#) composers as well as artists working in [popular music](#) genres such as [rock](#), [jazz](#), [country](#), [Gospel music](#) and [electronic music](#).

## Indigenous Australian music

*Main article:* [Indigenous Australian music](#)

Indigenous Australian music has become a vehicle for social protest, and has been linked, by both performers and outsiders, with similar forms from Native Americans; Jamaican singer Bob Marley is often credited with helping to revive traditional Aboriginal music, as did the movie *Wrong Side of the Road*, which depicted Aboriginal [reggae](#) bands struggling for recognition and linked it with land rights. Yothu Yindi's sudden pop success in the 1990s surprised many observers, and helped bring many Aboriginal issues into mainstream Australian affairs. In 1980, the Central Australian Aboriginal Media Association (CAAMA) began broadcasting traditional music and has become extremely successful. CAAMA has helped popularise remote musical communities, such as Blek Bala Mujik whose "Walking Together" became a sort of Australian anthem after its use in a Qantas commercial. The Deadlys are the major showcase of contemporary Indigenous Australian music.

## Classical music and contemporary classical music

Perhaps the first Australian musician to gain international recognition (at the end of the 19th Century) was [soprano](#) Dame Nellie Melba. She was

followed half a century later by another prominent soprano, Dame Joan Sutherland.

The first important composer of classical music in Australia is Alfred Hill, who was trained in Leipzig (Germany) but even studied the music of the native people of Australia and New Zealand, e.g. the Mori.

Composer Peter Sculthorpe is notable for his incorporation of the sounds of the Australian bushland and outback in his symphonic works such as *Kakadu*, *Mangrove* and *Earth Cry*.

## Jazz

*Main article:* [Australian jazz](#)

The history of jazz and related genres in Australia extends back into the 19th century. During the gold rush era of the 1850s American, British and locally formed 'blackface' (white actor-musicians in blackface) minstrel troupes began to tour Australia, touring not only the capital cities but also many of the booming regional towns like Ballarat and Bendigo. Minstrel orchestra music featured jazz-like musical characteristics including improvisatory embellishment and polyrhythm in the (pre-classic) banjo playing and clever percussion breaks. Some genuine African-American minstrel and jubilee singing troupes toured from the 1870s. A more jazz-like form of minstrelsy reached Australia in the late 1890s in the form of improvisatory and syncopated coon-song and cake-walk music, two early forms of ragtime. The next two decades brought ensemble, piano and vocal ragtime and leading (mostly white) American ragtime artists, including Ben Harney, 'Emperor of Ragtime' Gene Greene and pianist Charlie Straight. Some of these visitors taught Australians how to 'rag' (improvise unsyncopated popular music into ragtime-style music).

By the mid 1920s, phonograph machines, increased contact with American popular music and visiting white American dance musicians had firmly established jazz (meaning jazz inflected modern dance and stage music) in Australia. The first recordings of jazz in Australia are Mastertouch piano rolls recorded in Sydney from around 1922 but jazz began to be recorded on disc by 1925, first in Melbourne and soon thereafter in Sydney.

Soon after World War 2, jazz in Australia diverged into two strands. One was based on the earlier collectively improvised called "dixieland" or traditional jazz. The other so-called modernist stream was based around big band swing, small band progressive swing, boogie woogie, and, by 1947, watered down version of bebop. By the 1950s American bop, itself, was dividing into so-called 'cool' and 'hard' bop schools, the latter being more

polyrhythmic and aggressive. This division reached Australia on a small scale by the end of the 1950s. From the mid-1950s [rock and roll](#) began to draw young audiences and social dancers away from jazz. British-style dixieland, called Trad, became popular in the early 1960s. Most modern players stuck with the 'cool' (often called West Coast) style, but some experimented with free jazz, modal jazz, experiment with 'Eastern' influences, art music and visual art concept, electronic and jazz-rock fusions.

The 1970s brought tertiary jazz education courses and continuing innovation and diversification in jazz which, by the late 1980s, included world music fusion and contemporary classical and jazz crossovers. From this time, the trend towards eclectic style fusions has continued with ensembles like The Catholics, Australian Art Orchestra, Tongue and Groove, AustraLYSIS, Wanderlust, The Necks and many others. It is questionable whether the label jazz is elastic enough to continue to embrace the ever-widening range of improvisatory musics that are associated with the term jazz in Australia. However, mainstream modern jazz and dixieland still have the strongest following and patron still flock to hear famous mainstream artists who have been around for decades, such as One Night Stand players Dugald Shaw and Blair Jordan, reeds player Don Burrows and trumpeter James Morrison and, sometimes, the famous pioneer of traditional jazz in Australia, Graeme Bell.

## Country music

*Main article:* [Australian country music](#)

Australia has a long tradition of country music, which has developed a style quite distinct from its U.S. counterpart. *Waltzing Matilda*, often regarded as Australia's unofficial [National anthem](#), is a quintessential Australian country song, influenced more by Celtic folk ballads than by American Country and Western music. This strain of Australian country music, with lyrics focusing on strictly Australian subjects, is generally known as "bush music" or "bush band music." The most successful Australian bush band is Melbourne's Bushwackers, active since the early 1970s.

Another, more Americanized form of Australian country music was pioneered in the 1930s by such recording artists as Tex Morton, and later popularized by Slim Dusty, best remembered for his 1957 song "A Pub With No Beer". In recent years local contemporary country music, featuring much

[crossover](#) with [popular music](#), has enjoyed considerable popularity in Australia; notable musicians of this genre include Beccy Cole, Gina Jeffries, Lee Kernaghan, Sara Storer, Keith Urban, and the hugely successful Kasey Chambers.

## Rock and popular music

*Main article:* [Australian rock](#)

Australia has produced a wide variety of popular and rock music. While many musicians and bands (some notable examples include the 1960s successes of The Easybeats and the folk-pop group The Seekers, through the heavy rock of AC/DC, and the slick pop of INXS and more recently Savage Garden) have had considerable international success, there remains some debate over whether Australian popular music really has a distinctive sound. Perhaps the most striking common feature of Australian music, like many other Australian art forms, is the dry, often self-deprecating humor evident in the lyrics.

### First wave of Australian rock

In the mid-1950s, American [rockabilly](#) was spreading across the world. Sydney's independent record label Festival Records was the first to get on the bandwagon in Australia, releasing Bill Haley & the Comets' "Rock Around the Clock" in 1956. It became the biggest-selling Australian single ever.

Johnny O'Keefe was the first Australian rock star, rising to fame by imitating Americans like Elvis Presley and Little Richard. O'Keefe and other "first wave" bands were popular until about 1961, when a wave of clean-cut family bands took their place.

Though mainstream audiences in the early sixties preferred a clean band, grungier bands inspired by American and British [surf](#), [garage](#) and [psychedelic rock](#) were appearing major cities, including Sydney and Melbourne. These included The Atlantics and The Denvermen.

### Second wave of Australian rock

The "second wave" of Australian rock is said to have begun in about 1964, with the advent of Billy Thorpe & the Aztecs. There were also cult acts like The Throb, as well as a wave of acts from New Zealand, including Dinah Lee and The La De Das.

## **Third wave of Australian rock**

The "third wave" of Australian rock began in about 1970 with the last of the early 60s groups dissolving. Few acts from this era got major international success, and it was even difficult to achieve continued fame across Australia, due to low radio airplay.

By the end of the decade, artists like John Paul Young (the first Australian to have an international hit with 1978's "Love Is in the Air") were able to get on Australian radio and had developed a unique sound to Australian rock. One of the reasons for the increased exposure was the success of a television show called Countdown as well as the first all-rock radio station Double Jay. Hard rock band AC/DC also found a major audience in the late 70s and early 80s, touring all over the world, while a score of Australian expatriates like Olivia Newton-John and Peter Allen became pop stars. Icehouse also formed in the late 1970's

This period also saw bands like Skyhooks moving towards New Wave, and punk rock bands like The Saints, as well as electronic musical groups, such as Severed Heads and Essendon Airport. Perhaps most influential of the underground scenes, however, was Australian pub rock, which began in Adelaide in the early 1970s with bands like Cold Chisel and Midnight Oil.

## **1980s**

In the 1980s, numerous innovative Australian rock bands arose. These included Hunters & Collectors, perhaps best known for their hit "Throw Your Arms Around Me", The Church ("Under the Milky Way"), Hoodoo Gurus, John Farnham, Men at Work, The Go-Betweens and The Triffids. During this period a number of Australian bands began to reflect their urban environment in songs dealing with day to day experiences of inner-city life eg Paul Kelly & the Coloured Girls perhaps best exemplified in his songs "From St. Kilda to Kings Cross" and "Leaps & Bounds", John Kennedy's Love Gone Wrong in songs such as "King Street" and The Mexican Spitfires in tracks like "Sydney Town" and "Town Hall Steps." This decade also saw the rise of world music groups like Dead Can Dance; of special importance is Yothu Yindi, who helped found the field of Aboriginal rock.

The first annual ARIA Music Awards were held in 1987. John Farnham and Crowded House were the most successful artists of the event.

## **1990s: indie rock**

*Main article: [Australian indie rock](#)*

In the 1990s, the excesses of the 80s provided a bleak backdrop for commercial music, with only bands like AC/DC and INXS able to break into the US and European markets. On the home front, the indie scene that sprouted power pop bands like RatCat and Falling Joys began to become popular. There was also success for songwriters like Tom Morgan from Sydney band Smudge who collaborated with popular US band The Lemonheads. Morgan was affiliated with the Half A Cow record label which was one of many label/records stores that existed during the 90s. Half A Cow owner Nic Dalton also played in The Lemonheads and had his own bands such as Godstar and Sneeze.

American and British alternative music, especially genres such as [grunge](#) and [Britpop](#) became popular toward the mid 90s, leading to the rise of Australian alternative bands which included Regurgitator, Powderfinger, Silverchair, Something for Kate and the Clouds. With the 90s came the centralization of many of the independent labels that saw the passing of labels such as Red Eye and Waterfront after the failed attempt by Polydor to provide a commercial outlet for these independent labels.

[Industrial](#) and [electronic music](#) also saw some fame in the 1990s, especially with bands such as Itch-E and Scratch-E, Severed Heads and Snog. The most internationally popular Australian band of the decade, however, was undoubtedly the [electropop](#) duo Savage Garden.

## **2000s and later**

Later in the 1990s, and into the new millennium, [garage rock](#) saw a resurgence in Australia, alongside the US and UK. Bands such as Jet and The Vines rose to prominence. During this time Australian roots music came to some prominence with artists such as John Butler (leading the John Butler Trio), and The Waifs. Even more popular were singers-songwriters such as Missy Higgins, Delta Goodrem (famous from Neighbours), and Ben Lee.

The Dance scene in Australia (especially in Sydney) is growing, with the success of Australian acts overseas such as Kylie Minogue, Rogue Traders and Slinkee Minx. Minogue's early success helped catapult Australian Dance music into the US, UK and Europe.

Somewhat belatedly, [Australian hip hop](#) artists began to receive commercial attention through artists like Hilltop Hoods, MC Trey, Maya Jupiter, 1200 Techniques and The Herd.

There is also a small, but vibrant underground [hardcore punk](#) and straight edge music scene with bands such as Embodiment 12:14, I Killed The Prom Queen and Parkway Drive (band) as well as an emerging electro pop-rock movement started with Sydney-based band Sam Joole Band.

Alt-Rock bands like Architecture in Helsinki, Augie March, The Avalanches, Because of Ghosts, Lucius Hunt, Expatriate, Sleep parade and Snowman have also begun to spring up and feature in the annual Triple J Hottest 100.

## Music of Brasil

Strong influences on the music of Brazil come from all parts of the world but there's a regional music very popular with influence from Africa, Europe, the natives of the Amazon rainforest and of other parts of the country. Samba is undoubtedly the most internationally famous form of Brazilian music, though bossa nova and other genres have also received international attention.

## Brazilian music history

### Colonial music

The earliest known descriptions of music in Brazil date from 1578, when Jean De Léry, a French Calvinist pastor, published *Viagem à Terra do Brasil* (*Journey to the Land of Brazil*). He described the [dances](#) and transcribed the music of the Tupi people. In 1587, Gabriel Soares de Sousa wrote *Tratado Descritivo do Brasil* about the music of several native Brazilian ethnic groups, including the Tamoios and Tupinambás.

King João VI of Portugal was a noted lover of music, and spent a period of time in Brazil. He sent for prominent European musicians to join him, including Austrian pianist Sigismund von Neukomm and composer Marcos Portugal. A local Brazilian musician, José Maurício Nunes Garcia, an organist and clavichordist, was appointed Inspector to the Royal Chapel.

In 1739, Domingos Caldas Barbosa wrote a series of modinhas that were extremely popular. Modinhas are a kind of sentimental love song of uncertain origin, as it may have evolved either in Brazil or Portugal.

Lundu was the first kind of African music to flourish in Brazil. Lundu, a style of comedic song and dance, was extremely popular and was even performed in the Portuguese court.

## Independent Brazil

Brazil became independent in 1822, following the Brazilian War of Independence. Soon after, the African comic song lundu spread from poor blacks to broader, middle-class and white audiences.

Towards the end of the 18th century a form of comedic dance called bumba-meu-boi became very popular. It was a musical retelling of the story of a resurrected ox. These dances are led by a chamador, who introduces the various characters. Instruments used include the pandeiro, the tamborim, the [accordion](#) and the [acoustic guitar](#).

## Classical music

During the 18th century and the first half of the 19th century, the classical music in Brazil was strongly influenced by the music style practiced in Europe, particularly the viennese classical style. The first major brazilian composer was José Maurício Nunes Garcia, a priest who composed several sacred pieces and some secular music. He wrote the [opera](#) *Le Due Gemelle* ("The two twins"), the first opera written in Brazil, but the music is nowadays lost. About 250 works written by him are known in the present days.

Near the end of the 19th century, Carlos Gomes (from Campinas) produced in a number of Italian-style [operas](#), such as *Il Guarany* (based on a novel by José de Alencar). Brasília Itiberê was another prominent classical composer, the first to use elements of Brazilian music in Western classical music, in his *Sertaneja* (1869).

In 1922, the Week of Modern Art revolutionized Brazilian literature, painting and music. Heitor Villa-Lobos led a new vanguard of composers who used Brazilian folk music in their compositions.

By the end of the 1930s, there were two schools of Brazilian composition. Camargo Guarnieri was the head of the Nationalist school, inspired by the writer Mário de Andrade. Other composers including Guerra Peixe, Oscr Lorenzo Fernandez, Francisco Mignone, Luciano Gallet and Radamés Gnattali. Beginning in 1939, Hans Joachim Koellreutter, creator of the Live Music Group, founded another school, characterized by the use of

dodecaphonism and atonalism. Other composers in this school included Edino Krieger, Cláudio Santoro and Eunice Catunda.

## Folk music

The earliest music in what is now Brazil must have been that of the native peoples of the area. Little is known about their music, since no written records exist of this era. With the arrival of Europeans, Brazilian culture began to take shape as a synthesis of native musical styles with European elements (especially Portuguese music) and [African music](#).

## Indigenous music

The native peoples of the Brazilian rainforest play instruments including [whistles](#), [flutes](#), horns, [drums](#) and rattles. Much of the area's folk music imitates the sound of the Amazon Rainforest. When the Portuguese arrived in Brazil, the first natives they met played an array of reed [flutes](#) and other [wind](#) and [percussion instruments](#). The Jesuit missionaries introduced songs which used the Tupi language with Christian lyrics, in an attempt to convert the people to Christianity, and also introduced [Gregorian chant](#) and the flute, bow, and the clavichord.

## Eastern Amazônia

Eastern Amazônia has long been dominated by carimbó music, which is centered around Belém. In the 1960s, carimbo was electrified and, in the next decade, DJs added elements from [reggae](#), salsa and merengue. This new form became known as lambada and soon moved to Bahia, Salvador by the mid-1980s. Bahian lambada was synthesizer-based and light pop music. French record producers discovered the music there, and brought it back with them to France, where a Bolivian group called Los K'jarkas saw their own composition launch an international dance craze. Soon, lambada had spread throughout the world and the term soon became meaninglessly attached to multiple varieties of unrelated Brazilian music, leading to purist scorn from Belém and also Bahia.

Another form of regional [folk music](#), bumba-meu-boi, was popularized by the Carnival celebrations of Parintins and is now a major part of the Brazilian national scene

## Popular music

The field of Brazilian popular music can be traced back to the 1930s, when radio spread songs across the country. Popular music included instruments like cuicas, [tambourines](#), frying pans, [flutes](#), [guitars](#) and the [piano](#). The most famous singer, Carmen Miranda, eventually became an internationally-renowned Hollywood film star. Her songwriter was Ary Barroso, one of the most successful songwriters in early Brazil, along with Lamartine Babo and Noel Rosa.

### Música Popular Brasileira

*Main article: [Música Popular Brasileira](#)* Tropicalia eventually morphed into a more popular form, [MPB](#) (*música popular Brasileira*), which now refers to any Brazilian pop music. Well-known MPB artists include chanteuses Gal Costa, Maria Bethânia and Elis Regina and singer/songwriters Chico Buarque, Milton Nascimento, Gilberto Gil, Caetano Veloso, Ivan Lins, Djavan and others.

### Choro

In Rio de Janeiro in the 1870s a type of reserved and private music called choro developed out of fado and European salon music. Choro was usually instrumental and improvised, frequently including solos by virtuosos. Originally, a choro band used two [guitars](#) and cavaquinho, later picking up the bandolim, the [clarinet](#) and the [flute](#). Famous choro musicians include Joaquim Antonio da Silva Calado Júnior, Valdir Azevedo, Jacob do Bandolim, Pixinguinha and Chiquinha Gonzaga; Pixinguinha's "Lamentos" is one of the most influential choro recordings. In addition to composing choros, another composer, Ernesto Nazareth composed tangos, waltzes and polkas. Nazareth was influenced by Chopin but his music had a distinctly Brazilian flavor. Nazareth has also been compared to his contemporary Scott Joplin. The late 1960s saw a revival of the choro, beginning in the suburbs of Rio de Janeiro, and culminating with artists like Paulinho da Viola. Modern-day choro groups include Os Ingênuos.

### Bossa nova

*Main article: [Bossa nova](#)* Antonio Carlos Jobim and other 1950s [composers](#) helped develop a [jazzy](#) popular sound mixed with a smooth

samba beat called bossa nova, which developed at the beach neighborhoods of Ipanema and, later, the Copacabana nightclubs. The first bossa nova records by João Gilberto quickly became huge hits in Brazil. Bossa nova was introduced to the rest of the world by American jazz musicians in the early 1960s, and songs like "The Girl from Ipanema", which remains the biggest Brazilian international hit, eventually became standards.

## **Tropicalia**

*Main article: Tropicalia* By the end of the decade, artists like Caetano Veloso and Gilberto Gil combined American and European styles with electric guitars and different kinds of genuine Brazilian music, beginning a [genre](#) called Tropicalia. These songs, not unlike the music coming out of Britain and America at the same time, was often very politicized and was perceived as threatening by the establishment. The military government of the time went as far as to exile Veloso and Gil to England.

## **Música nordestina**

Música nordestina is a generic term for any popular music from the large region of Northeastern Brazil, including both coastal and inland areas. Rhythms are slow and plodding, and are derived from [accordions](#) and [guitars](#) instead of [percussion instruments](#) like in the rest of Brazil. In this region, African rhythms and Portuguese melodies combined to form maracatu and dance music called baião has become popular. Most influentially, however, the area around Recife, the home of forró.

## **Repentismo**

Northeastern Brazil is known for a distinctive form of literature called literatura de cordel, which are a type of [ballads](#) that include elements incorporated into music as repentismo, an improvised lyrical contest on themes suggested by the audience.

## **Frevo**

Frevo is a style of music from Recife. In the 1950s, it spread south, to cities like Salvador. In Salvador, frevo bands began playing during Carnival, originally in trios called trios elétricos. Overtime, the bands moved from

playing on pickup trucks to fully amplified bands and stages. *Trios eléctricos* remain a primary feature of the Salvadoran Carnival today.

## **Forró**

Forró is played by a trio consisting of a [drum](#) and a [triangle](#) and led by an [accordion](#). Forró is rapid and eminently danceable, and became one of the foundations for lambada in the 1980s. Luiz Gonzaga was the preeminent early forró musician who popularized the genre in Rio de Janeiro and São Paulo in the 1940s with songs like "Asa Branca".

## **Rock**

The Brazilian [rock n' roll](#) exists since the "first rock song", "Rock Around the Clock", was covered (and also recorded in Portuguese), in 1954. The 1960's had, inspired by the Beatles, many young singers like Roberto Carlos and his Jovem Guarda. The real "boom" of Brazilian rock was in the 1980's, with many bands and artists like Barão Vermelho, Legião Urbana, Lulu Santos, Paralamas do Sucesso and festivals like Rock in Rio.

## **Heavy Metal**

Brazil also has some internationally famous Heavy Metal and Hard Rock bands, like Angra (band), Dr Sin, Shaaman, Sepultura, Soulfly.

## **Hardcore/Punk**

Brazil also very bands of Hardcore/Punk, like Cólera, Ratos de Porão, Inocentes, Olho Seco, Garotos Podres, Mukelka Di Rato, Blind Pigs, Dead Fish, Againe, Noção de Nada, Reffer...

## **Raggamuffin Dancehall**

Music original from Jamaica, but in Brazil have the **Raggademente**, represents of raggamuffin dancehall from South America. He is one of the pioneer raggaman in Brazil and is the principal dancehall artist in the country.

## **Afro Brazilian music**

## **Samba**

By the beginning of the 20th century, samba had begun to evolve out of choro in Rio de Janeiro's neighborhood, inhabited mostly by poor blacks descended from slaves. Samba's popularity grew through the 20th century, especially internationally, as awareness of samba de enredo (a type of samba played during Carnival) has grown. Other types of samba include:

- Samba de breque - reggaeish and choppy
- Samba-canção - typical variety of nightclubs.
- Samba pagode - modern popular variety.

## **Capoeira music**

The Afro-Brazilian sport of capoeira is never played without its own music, which is usually considered to be a call-and-response type of folk music. The main instruments of capoeira music include the berimbau, the pandeiro and the atabaque. Capoeira songs may be improvised on the spot, or they may be popular songs written by older *mestres* (teachers), and often include accounts of the history of capoeira, or the doings of great mestres.

## **Maracatu**

This type of music is played primarily in the Recife and Olinda regions during Carnival. It is an Afro-Brazilian tradition. The music serves as the backdrop for parade groups that evolved out of ceremonies conducted during colonial times in honour of the Kings of Congo, who were African slaves occupying symbolic leadership positions among the slave population. The music is played on large alfaia drums, large metal gonguê bells, snare drums and shakers.

## **Afoxê**

Afoxê is a kind of religious music, part of the Candomblé tradition. In 1949, a group called Filhos de Gandhi began playing afoxê during Carnival parades in Salvador; their name translates as Sons of Gandhi, associating black Brazilian activism with Mahatma Gandhi's Indian independence movement. The Filhos de Gandhi's 1949 appearance was also revolutionary because, up until then, the Carnival parades in Salvador were meant only for light-skinned people.

## Samba-reggae

The band Olodum, from Pelourinho, are generally credited with the mid-1980s invention of samba-reggae, a fusion of Jamaican [reggae](#) with samba. Olodum retained the politically-charged lyrics of 1970s bands like Ilê Aiyê.

## Music of Salvador: Late 60s to mid-70s

In the latter part of the 1960s, a group of black Bahians began dressing as Native Americans during the Salvadoran Carnival, identifying with their shared struggles through history. These groups included Comanches do Pelô and Apaches de Tororó and were known for a forceful and powerful style of percussion, and frequent violent encounters with the police. Starting in 1974, a group of black Bahians called Ilê Aiyê became prominent, identifying with the Yoruba people of West Africa. Along with a policy of loosening restrictions by the Brazilian government, Ilê Aiyê's sound and message spread to groups like Grupo Cultural do Olodum, who established community centers and other philanthropic efforts.

## Other Afro-Brazilian music genres

Afro-Brazilian music also include:

- lundu
- Axé music
- Pagode
- [Brazilian funk](#)
- Afoxê
- Carimbo
- Maxixe
- xote
- Baião
- Lambada
- Merengue
- Ilê Aiyê: see - Olodum
- Baile funk

## Music of Canada

Canadian music includes [pop](#) and [folk](#) genres; the latter includes forms derived from England, France (particularly in Quebec), Ireland, Scotland, and various Inuit and Indian ethnic groups.

Outside of Canada, artists like The Band, Céline Dion, D.O.A., Rush, Shania Twain, Alanis Morissette, Dream Warriors, Avril Lavigne, Sum 41, Bryan Adams, Anne Murray, Sarah McLachlan, Skinny Puppy, Front Line Assembly and the Barenaked Ladies have achieved success in genres ranging from [folk-rock](#) to industrial, electronic music and [hip hop](#).

Within Canada, artists are recognized with Juno Awards and induction into the Canadian Music Hall of Fame.

## Folk music

Canadian folk music includes Quebecois, English, Irish, Scottish and First Nations and Inuit forms, as well as other genres from immigrant communities representing Vietnam, Haiti, India, China, and other countries.

## French-Canadian music

French settlers brought music with them when inhabiting what is now Quebec and other areas throughout Canada. Since the arrival of French music in Canada, there has been much intermixing with the [Celtic music](#) of Anglo-Canada.

French-Canadian folk music is generally performed to accompany dances like the jig, jeux dansé, ronde, cotillon, and quadrille. The [fiddle](#) is a very common instrument, played by virtuosos like Jean Carignan, Jos Bouchard, and Joseph Allard. Other instruments include the German diatonic [accordion](#), played by the likes of Philippe Bruneau and Alfred Montmarquette, spoons, bones, and Jew's harps.

## **Quebec music**

French immigrants to Quebec established their musical forms in the future province, but there was no scholarly study until Ernest Gagnon's 1865 collection of 100 folk songs. In 1967, Radio-Canada released The Centennial Collection of Canadian Folk Songs (much of which was focused on French-Canadian music), which helped launch a revival of Quebec folk. Singers like Yves Albert, Edith Butler, and, especially, Félix Leclerc and Gilles Vigneault, helped lead the way. The 1970s saw purists like La Rêve du Diable and La Bottine Souriante continued the trend. As Quebec folk continued to gain in popularity, artists like Harmonium, Kate and Anna McGarrigle, Jim Corcoran, Bertrand Gosselin, and Paul Piché found a mainstream audience.

Since 1979, Quebec music artists have been recognized with the Felix Award.

## **Maritime music**

Folk songs are those passed on orally, usually composed by unknown persons. In the Maritime Provinces (New Brunswick, Nova Scotia, Prince Edward Island), sea shanties are widespread among the whaling and fishing workers. The lumber camps of New Brunswick have also produced their own body of folk songs.

Irish and Scottish settlers in the eastern provinces of Canada brought traditions of fiddling and other forms of music. Having declined in popularity during the 20th century, John Allan Cameron and Stan Rogers inspired a revival of Maritime traditions beginning in the late 1970s. Soon, Cape Breton Island and other Eastern locations were hotbeds of musical innovation. The Rankins, Mary Jane Lamond, Natalie MacMaster, Barra MacNeils, and, [punk rock](#)-inspired Ashley MacIsaac brought Cape Breton music to mainstream Canadians. Scott Macmillan's Celtic Mass for the Sea further brought

Maritime music, this time from Halifax, into pop markets. Barachois and Albert Arsenault have popularized Acadian folk music.

## **Newfoundland music**

Anglo-Canadian folk ballads are particularly well-preserved in Newfoundland. The widespread "Barbara Allen" is found in dozens of variations, as are songs like "The Farmer's Curst Wife", "Lord Randall", and "The Sweet Trinity". With the advent of printing, [broadsides](#) were found throughout Canada, many of them Anglo songs telling sad songs about unfulfilled love. In addition to the influence of English West Country folk music and sea shanties, Newfoundland music heavily incorporates themes from Irish music, with elements of the provinces French and Portuguese history also represented.

As with the Maritime provinces, contemporary artists were the catalyst for a revival of interest in traditional music. Great Big Sea, Figgy Duff and Irish Descendants carried the traditional sounds of Newfoundland across Canada and around the world.

## **Western Canada**

Among the lumber camps of Ontario and British Columbia, and among the homesteaders and farmers of Alberta, Saskatchewan, and Manitoba, Anglo settlers adopted numerous American songs. "Bury Me Not on the Lone Prairie", for example, and the song known as "Prairie Land", "Saskatchewan" or "Alberta Land", which is adapted from an American song called "Beulah Land".

## **First Nations**

*Main article: [Native American music](#)*

The native peoples of Canada are of a number of diverse ethnic groups, each of which have their own musical traditions. There are some general similarities, however. Music is usually social (public) or ceremonial (private). Public, social music may be [dance music](#) accompanied by rattles and [drums](#). Private, ceremonial music includes vocal songs with accompaniment on [percussion](#), used to mark occasions like Midewivin ceremonies and Sun Dances.

Folk songs may be written by an individual, or they may be passed on from generation to generation, said to have been received through a vision or

dream. These songs generally have one [melody](#), which may be performed by an individual or a group.

Instruments include drums, rattles and [flutes](#), constructed from natural objects.

Powwows are a common part of native music today. These are meetings and intertribal celebrations of music, dance and culture. The musical traditions of powwows draw on those adapted from the Plains Nations.

Few First Nations bands have gone mainstream in Canada. Arguably, the band that became the most popular was Kashtin, a duo that released their self-titled debut in 1989 an album that would eventually go double platinum despite that all the songs were in the band's native language, Innu.

## **Inuit music**

Approximately 25,000 Inuit live in Northern Canada, primarily spread across Nunavut, the Northwest Territories, and Nunavik (northern Quebec). Prior to European contact, Inuit music was based around [drums](#) but has since grown to include [fiddles](#) and [accordions](#). Music was [dance](#)-oriented and requested luck in hunting, gambling, or weather, and only rarely, if ever, expressing traditional purposes like love or specialized forms like work songs and lullabies. In the 20th century, Inuit music was influenced by Scottish and Irish sailors, as well as, most influentially, American [country music](#). The Canadian Broadcasting Corporation has long been recording Inuit music, beginning with a station in Iqaluit in 1961. Accordion players like Charlie Panigonak and Simeonie Keenainik quickly found an audience, with the latter notably incorporating musical influences like [polkas](#) and jigs from Quebec and Newfoundland.

Throat singing has become well-known as a curiosity. In katajjaq, female singers produce [melodies](#) from deep in their throats. A pair of singers stare at each other in a sort of contest. Common in Northern Quebec and Baffin Island, katajjaq singers perform in sync with each other, so that is producing a strong accent while the other is producing a weak one. The contest ends when one singer begins laughing, runs out of breath or the pair's voices become simultaneous. To some extent, young Inuit have revitalized the genre, and musicians like Tudjaat have even incorporated pop structures.

## **Other immigrant communities**

Montreal's large immigrant communities include artists like Zekuhl (a band consisting of a Mexican, Chilean and a Quebecer raised in Cameroon), Karen Young, Eval Manigat (Haiti), and Lorraine Klaasen (South Africa), while

Toronto has a large Balkan and Turkish community that has produced, most famously, the Flying Bulgar Klezmer Band and Staro Selo, alongside Punjabi by Nature, who incorporate [bhangra](#), [rock](#), [dub](#), and English Punjabi pop, and the Afro-Nubians, who included musicians from across North America, Europe and Africa. Outside of these major cities, important artists include Uzume-Taiko and Silk Road Music from Vancouver and Finjan from Winnipeg.

## Popular music

Before the explosion of modern [popular music](#) in the 1950s, Canada produced several notable stars. Bea Lillie of the World War 1 era, songwriter Shelton Brooks, doo wop group The Four Lads, bandleader Guy Lombardo, pop stars Gisele MacKenzie and Robert Goulet, jazz virtuosos Maynard Ferguson, Moe Koffman, and Oscar Peterson, and pop-country stars Wilf Carter and Hank Snow were all well-known.

After Elvis Presley's [rockabilly](#) style reached Canada in 1955, The Four Lads became one of the most prominent groups of the Canadian white R&B scene, which also included The Diamonds and The Crew Cuts. Crooner Paul Anka, however, became the first major pop star from Canada.

## Canadian popular styles

### Country music

[Country music](#) evolved out of the diverse musical practices of the Appalachian region of the United States. Appalachian folk music was largely Scottish and Irish, with an important influence also being the African American country blues. Parts of Ontario, British Columbia and the Maritime provinces shared a tradition with the Appalachian region, and country music became popular quite quickly in these places. Fiddlers like George Wade and Don Messer helped to popularize the style, beginning in the late 1920s. Wade was not signed until the 1930s, when Victor Record's, inspired by the success of Wilf Carter the year before, signed him, Hank Snow and Hank LaRivière.

Canadian country as developed by Carter, Snow and Earl Heywood, used a less nasal and more distinctly pronounced vocal style than American music, and stuck with more traditional ballads and narratives while American country began to use more songs about bars and lovers quarrels. This style of country music became very popular in Canada over the next couple decades. Later popular Canadian country stars range from Stompin' Tom Connors to Shania Twain.

Radio and television stations in Canada which play country music, however, are often more flexible in how they define the genre than their counterparts in the United States. Canadian country stations frequently play artists more commonly associated with [folk music](#), such as Bruce Cockburn, Leahy and The Rankin Family.

## **Jazz**

[Jazz](#) is a genre of [African American music](#), present in Canada since at least the 1910s. In 1919 and 1920 in Vancouver, Jelly Roll Morton, a legendary New Orleans pianist, played with his band, while native Canadian groups like the Winnipeg Jazz Babies and the Westmount Jazz Band of Montreal, also found regional acclaim.

During the [swing](#) boom of the late 1930s and early 1940s, Canada produced such notable bandleaders as Ellis McLintock, Bert Niosi, Jimmy Davidson, Mart Kenney, Stan Wood, and Sandy De Santis.

In the 1940s, the first two prominent Canadian jazz musicians arose. They were Bert Niosi and Oscar Peterson. Peterson became especially internationally acclaimed, and is considered the premier Canadian jazz musician.

Recently, the best known Canadian jazz artist is the singer and pianist Diana Krall.

## **Chansonniers**

Chansonniers were Quebecois singer-songwriters from the 1950s and 60s. They sang simple, poetic songs with a social conscience. The first chansonniers were La Bolduc, Raymond Lévesque and Félix Leclerc. It was not until the 60s, however, that chansonniers became such a major part of the Quebecois music scene. This was largely due to the formation of Les Bozos in 1959. Les Bozos was an informal collective of chansonniers, including Lévesque, Jean-Pierre Ferland, Claude Léveillé, Clémence Desrochers, and Jacques Blanchet.

With the first stars popularizing the chansonnier format, a new generation of popular singers emerged in the 60s. These included Gilles Vigneault, Pierre Létourneau, Pierre Calvé, Hervé Brousseau, Georges Dor, Monique Miville-Deschênes, and Claude Gauthier. The boîtes à chansons, a kind of performance place for chansonniers, also appeared during the 1960s, spread across Quebec.

## **Rock**

Ronnie Hawkins, an Arkansas-born [rockabilly](#) singer, became the most prominent figure in Canadian rock beginning in 1958. He did more than any other to popularize Canadian [hard rock](#). He formed a backing band called The Hawks, which produced some of the earliest Canadian rock stars. Among them were the members of The Band, who began touring with Bob Dylan in 1966 and then struck out on their own in 1968, releasing well-remembered albums like *Music from Big Pink* and *The Band*.

Often, however, Canadian records were simply [covers](#) of American or British pop hits. One important example was a Winnipeg band called Chad Allan & the Expressions, who had a 1965 hit with a version of Johnny Kidd & the Pirates' "Shakin' All Over". Folkier singers like Gordon Lightfoot, Joni Mitchell, Leonard Cohen, Denny Doherty (of The Mamas & the Papas), David Clayton-Thomas, Neil Young, Andy Kim, Zal Yanovsky (of The Lovin' Spoonful), John Kay (of Steppenwolf), and Ian & Sylvia also found international audiences. Their success paved the way for a new wave of Canadian singer-songwriters, including Stan Rogers, Murray McLauchlan, Bruce Cockburn and Willie P. Bennett.

### **Guess Who?**

The decks stacked as they were against Canadian artists building successful long-term careers, the Expressions wanted radio stations and record buyers to believe they were a British Merseybeat band in disguise. So when they released their debut album, it didn't bear their own name -- instead, it was labelled "Guess Who?"

The ruse worked, and within a few years The Guess Who were one of Canada's biggest musical names. To this day, their best-known songs ("American Woman", "Share the Land", "These Eyes", etc.) remain among Canada's most enduring classic rock anthems.

### **1970s**

In 1970, the Canadian government introduced new Canadian content regulations, requiring AM radio stations to devote 30 per cent of their musical selections to Canadian content. Although this was (and still is) controversial, it quite clearly contributed to the development of a nascent Canadian pop star system. The Juno Awards were first held in 1971, partially as an attempt to revitalize the Canadian pop industry.

The most immediate effect of the Canadian content regulations was the sudden rise to fame of Anne Murray, whose 1970 "Snowbird" was a multi-million selling record. Led by The Guess Who, Murray and The Irish Rovers, the early 1970s were a golden age for Canadian music. Following in these

pioneers' footsteps was a wave of new bands, including April Wine, Triumph, The Stampeders, Five Man Electrical Band, Crowbar, Trooper, Fludd, Saga, Prism and Chilliwack.

The Canadian music industry was still nascent, however, with little independent music media and a limited distribution infrastructure. The two most internationally renowned bands to arise from this industry were Bachman-Turner Overdrive and Rush, both dominated by powerful managers. Bachman-Turner Overdrive's manager, Bruce Allen, went on to Loverboy and eventually manage such major pop stars as Bryan Adams, Martina McBride, and Anne Murray.

### **Diversification in the late 1970s**

Canadian pop music evolved with the times, reflecting worldwide trends. In the late 1970s, as [punk rock](#) and [disco](#) ruled the landscape, Canadian punkers such as D.O.A., The Viletones, The Forgotten Rebels, Pointed Sticks, Rough Trade, Diodes, Teenage Head, The Demics, and The Young Canadians were there, along with disco divas like Patsy Gallant, Lisa Dalbello, France Joli, and Claudja Barry.

Pop rockers such as Sweeney Todd, Nick Gilder, Red Rider, Doucette, Triumph, Dan Hill, Trooper, and Prism were also significant in the late 1970s.

Canadian cultural critics have noted that in general, the late 1970s were a lesser era for Canadian music. Many of the acts who had defined the earlier half of the decade were no longer recording, and the new artists emerging in this era simply didn't seem to be able to capture the Canadian pop *zeitgeist* in the same way. Many of them, in fact, were only "one-hit wonders".

However, a number of established Canadian acts, including Rush, Bruce Cockburn, Gino Vannelli, April Wine and Neil Young, remained influential and recorded some of their most popular material of all during this period, and former Guess Who lead singer Burton Cummings emerged as a popular solo artist. Another of this period's most influential and popular rock bands, Heart, resulted from the collaboration of two sisters from Seattle with a supporting band from Vancouver.

### **Folk music**

Some of Canada's most influential folk artists also emerged in this era, notably Stan Rogers, Ferron, Murray McLauchlan, and Kate and Anna McGarrigle.

In the 1970s, chansonniers grew steadily less popular with the encroachment of popular rock bands and other artists. Some performers did

emerge, however, including Jacques Michel, Claude Dubois, and Robert Charlebois.

Joni Mitchell, one of the most influential folk and popular music singer songwriters of the 20th century, is also Canadian, born in Alberta.

## **1980s**

When New Wave became popular in the early 1980s, acts such as The Parachute Club, Rough Trade, Spoons, Trans-X, Rational Youth, Men Without Hats, Norman Iceberg, Images in Vogue, and Martha and the Muffins were along for the ride. (Rough Trade were particularly notable for "High School Confidential", one of the first explicitly lesbian-themed pop songs to crack the Top 40 anywhere in the world.)

The 1980s also produced mainstream pop-rockers such as Bryan Adams, Tom Cochrane, Platinum Blonde, Honeymoon Suite, Headpins, Helix, Toronto, Sheriff, and Corey Hart. As well, the era produced the quirky art-pop of Jane Siberry -- who never exactly became a pop star, but remains one of Canada's most enduring cult artists -- and the country cowpunk of k.d. lang, who did eventually become one of pop music's biggest names. Lisa Dalbello, who had emerged in the late 1970s as a dance-pop singer, also transformed herself into a darker, edgier art-rocker, shedding her first name and becoming simply Dalbello in 1984. Another musician from this period, Annette Ducharme, has had more success as a songwriter for other musicians than as a recording artist.

In the late 1980s, the Canadian recording industry continued to produce popular acts such as Alannah Myles, Tú, Blue Rodeo, Andrew Cash, Barney Bentall, Jeff Healey, Frozen Ghost, Sass Jordan, and Colin James. However, [alternative rock](#) also emerged as an influential genre, with independent artists such as 54-40, The Tragically Hip, Sarah McLachlan, Spirit of the West, Cowboy Junkies, The Pursuit of Happiness, and The Grapes of Wrath all gaining their first widespread attention during this time.

## **Media**

The 1980s were also notable for the emergence of several media outlets which transformed the Canadian music scene by providing new venues for artists to promote their music.

Toronto radio station CFNY emerged as an influential player in Canadian music during the New Wave era. It was the first commercial radio station in Canada to support many of Canada's new and emerging artists, as well as alternative artists from the United States and Great Britain. It retained its

tastemaker status throughout the decade, until new owners in 1989 tried to turn it into a conventional Top 40 station.

CFNY also created the U-Knows, which later became the CASBY Awards, to promote and honour independent and alternative artists.

As in the United States, [music videos](#) became an important marketing tool for bands in the early 1980s. With the debut of MuchMusic in 1984 and MusiquePlus in 1986, both English and French Canadian musicians had outlets to promote their music through video. The networks, however, were not just an opportunity for artists to get their videos played -- the networks created VideoFACT, a fund to help emerging artists *produce* their videos.

## 1990s

While the alternative revolution of the 1990s was kicked off in the United States by Nirvana and in the United Kingdom by The Stone Roses, in Canada it was ignited by an unassuming demo tape by the Barenaked Ladies. After the Yellow Tape became the hottest item in Canadian record stores in the fall of 1991, Barenaked-mania took the country by storm -- in turn, paving the way for an explosion of Canadian bands to rule the airwaves.

The roster of artists emerging in this decade includes Matthew Good Band, Sloan, The Gandharvas, Change of Heart, Skydiggers, Eric's Trip, the Doughboys, Crash Test Dummies, The Lowest of the Low, 13 Engines, The Rankin Family, Alanis Morissette, Rheostatics, Ashley MacIsaac, Susan Aglukark, Our Lady Peace, The Philosopher Kings, Junkhouse, Treble Charger, Deborah Cox, Jann Arden, Ron Sexsmith, Hayden, Céline Dion, Rufus Wainwright, Crash Vegas, Loreena McKennitt, and Shania Twain. The Barenaked Ladies didn't just clear the way for alternative bands, but for a whole new Canadian pop landscape, defined by a national pride and self-confident distinctiveness that had never been seen before in Canadian music.

No band benefitted more from that landscape, however, than The Tragically Hip. Unlike the Guess Who, The Tragically Hip's lyrics proudly wore their Canadian perspective on their sleeves. And while the Hip never made it big outside of Canada, it finally didn't matter: their Canadian fan base alone was enough to sustain a long, healthy career.

Alanis Morissette, too, kicked off another revolution in Canadian music. Just as Dalbello had a decade earlier, Morissette began as a dance-pop artist before transforming herself into an alternative rocker in 1995. However, Morissette's transformation launched an era in which Canadian women ruled the pop charts worldwide.

In the late 1990s, Morissette, Shania Twain, Céline Dion and Sarah McLachlan were arguably the four most popular and influential recording artists in the world, but several other Canadian women made waves of their

own. Deborah Cox's 1998 single "Nobody's Supposed to be Here" was the longest-running chart topper in the history of Billboard magazine's R&B charts, Jann Arden scored an international hit with "Insensitive", and Kim Stockwood's "Jerk" topped the charts in several countries as well.

Also in the late 1990s, Elton John's 1997 re-recording of "Candle in the Wind" in memory of Diana, Princess of Wales spent almost two years on the Canadian Top 40 charts, substantially longer than in any other country. This was, in fact, a structural quirk of the Canadian market rather than a reflection on Canadian tastes in music -- whereas some countries combine radio airplay and sales into a unified hits chart, in Canada these are separate charts. So few CD singles are available in Canadian record stores, in fact, that in some weeks, a single that is available on CD can chart on sales of less than 100 copies.

## Hip hop

Canadian [hip hop](#) developed much more slowly than the rock scene. Although Canada certainly had hip hop artists right from the early days of the scene, the infrastructure simply wasn't there to get their music to the record-buying public. Even Toronto, Canada's largest and most multicultural city, had difficulty getting an urban music station on the radio airwaves until 2000, so even if a Canadian hip-hop artist could get signed, it was exceedingly difficult for them to get exposure.

Devon, Maestro Fresh Wes and Dream Warriors did manage, for a brief time in the late 80s and early 90s, to break through to mainstream pop. In 1991, Milestone Radio applied to the CRTC for an urban station in Toronto, which would have been the first such station in Canada, but that application was denied in favour of a [country music](#) station (something which Toronto already had on its radio dial.)

The decision was controversial, and hurt the Canadian hip hop scene considerably. Only one Canadian rapper, Michie Mee, made an appearance on the national pop charts between 1992 and 1998 -- and even she only managed it by partnering with the hard rock band Raggadeath. (Snow, who had a hit in 1993 with "Informer", is sometimes mistakenly labelled a rapper, but in fact was more accurately described as dancehall reggae than as hip-hop.)

It should be noted that many American hip-hop bands were popular in Canada, and that Black Canadian musicians such as Infidels, Deborah Cox and The Philosopher Kings had notable successes in the pop and rock genres. But for Canadian hip-hoppers, by and large the door was closed.

That began to change in 1997, when several pivotal events occurred in close succession: Dubmatique broke through as the first Quebec rap band to

top the francophone pop charts, the Vancouver hip hop band Rascalz gathered an all-star crew of emerging Canadian rappers to record the anthem "Northern Touch", which beat the odds to become the first Canadian hip hop hit in half a decade, and a controversy erupted in Toronto when Milestone was again passed over for an urban radio station. Instead, the CBC was awarded 99.1 to move its existing Radio One station from the AM band -- and, ominously, this was believed at the time to be the last available FM frequency in the city.

Then, in 1998, Rascalz refused the Juno Award for Best Rap Recording, citing that the award was presented during the non-televised portion of the ceremony along with the technical awards. Stung by the allegation of racism, the Junos moved the Rap award to the main ceremony the following year. Also that year, Maestro Fresh Wes, now known simply as Maestro, broke Canadian hip-hop's hit jinx, with "Stick to Your Vision" becoming his first chart hit since 1991.

Hip-hop and [trip-hop](#) acts such as Esthero, Choclair, Saukrates and Kardinal Offishall were also beginning to make waves in the press, as the Rascalz controversy and Maestro's comeback renewed attention on Canadian hip-hop.

In the same year, the CBC's Toronto station completed its move to FM. Because the FM frequency offered better broadcast coverage, the CBC found that it was able to surrender two repeater transmitters serving communities outside of the city.

## **2000s**

The 2000s have provided a number of new Canadian pop stars as well, with such acts as Avril Lavigne, Sam Roberts, Nickelback, Nelly Furtado, Shawn Desman, Simple Plan, Jacynthe, Hawksley Workman, Jarvis Church, Hot Hot Heat, Sarah Harmer, Prozzak, Sum 41, Pilate, The Trews, Billy Talent, Alexisonfire, Bedouin Soundclash and Kathleen Edwards emerging during this era. Canadian hip-hop, which is discussed more extensively in the following section, also finally made its mainstream breakthrough with the 2001 debut of Flow 93.5, Canada's first urban music radio station, in Toronto.

The decade has also been notable for a surprising number of stunningly ambitious [indie rock](#) albums by bands such as The New Pornographers, The Arcade Fire, Broken Social Scene, The Hidden Cameras, The Dears, The Constantines, Metric, The Weakerthans, Godspeed You! Black Emperor, Stars, The Sadies, Feist, Wolf Parade, The Stills, The Unicorns, Royal City, Cuff the Duke, Black Mountain, Chad VanGalen, The Meligrove Band and Jim Guthrie. Although none of these bands have yet had a mainstream Top 40 hit, each of them has attracted a large following by pursuing unique

interpretations of pop and rock music, subverting many of the conventions of the genres in a way that is still fresh and accessible. The Canadian indie rock scene has been the focus of national and international attention in many publications, such as Spin, The New York Times Magazine, Rolling Stone, as well the Canadian edition of Time Magazine.

## **Canadian Idol**

An influential musical tastemaker in this era has been the television show Canadian Idol. Like its counterpart American Idol, the Canadian show offered audiences an interactive contest to crown a pop star. The series attracted huge audiences, ultimately choosing Ryan Malcolm as its first winner. While Malcolm did subsequently have a couple of Top 40 hits, his post-*Idol* album was panned by music critics, and did not sell as well as had been hoped. It remains to be seen whether Malcolm can build a long-term career on his *Idol* victory.

However, as with the American series, other *Idol* contestants -- most notably Billy Klippert, Gary Beals and Toya Alexis -- have also been offered recording deals as a result of their *Idol* exposure, and may also emerge as major pop stars as well.

On September 16, 2004, Kalan Porter was named as the second Canadian Idol, winning over Theresa Sokyrka. Both winner, runner-up, and third-place contestant Jacob Hoggard have released mainstream records (Jacob with band Hedley). Melissa O'Neil became the third winner -- and the first female winner -- on September 14, 2005, narrowly winning over runner-up Rex Goudie.

In 2006 the Canadian Idol contestants were recognized by the Juno Awards with 8 nominations, including Album of the Year, Artist of the Year, Pop Album of the Year, Rock Album of the Year, and New Group of the year.

## **Hip hop**

In 1999, the CRTC held hearings to assign the two FM frequencies surrendered by the CBC in 1998. One of the frequencies was awarded to Milestone, on the company's third application. (The other frequency was awarded to Aboriginal Voices for a station to serve First Nations communities.)

In 2000, CBC Television created and aired Drop the Beat, a television series about hip hop music and culture.

Finally, in 2001, Milestone's CFXJ (Flow 93.5) debuted as Canada's first urban music station. Urban stations quickly followed in several other

Canadian cities, as well, and for the first time, Canadian hip-hop artists had a network of radio outlets for their music. Swollen Members, Nelly Furtado, k-os, Buck 65, Sixtoo, Jully Black, Jarvis Church, Shawn Desman, Glenn Lewis, Remy Shand, and Toya Alexis were among the rap and R&B acts to benefit from this new era in Canadian music.

## **Classical music**

[Classical music](#) in Canada is performed by a variety of orchestras, such as the Toronto Symphony Orchestra, the Montreal Symphony Orchestra, and many smaller orchestras and groups; such as the Canadian Brass.

Several important musicians of international stature were born and raised in Canada. These include the pianist Glenn Gould, violinist Lara St. John, tenor Ben Heppner, soprano Isabel Bayrakdarian, and many more.

With regard to composition, the earliest composers of classical music in Canada were generally Quebecois catholics who wrote religious music. In the twentieth century Canada has had many internationally-known composers, such as R. Murray Schafer, Srul Irving Glick, John Beckwith, Louis Applebaum, and Lucio Agostini.

## **Canto Pop**

After 1997, many Hong Kong music stars immigrated to Canada and have maintained dual citizenship. Among the most eminent Cantopop stars are Leon Lai, and Nicholas Tse, who apart from being the face of Coca Cola cans in China, and a multi-million seller of songs, co-starred in Jackie Chan's latest film.

## **Patriotic Canadian Songs**

Here are a few patriotic tunes sung in Canada.

The Maple Leaf Forever  
Something to Sing About  
Ode to Newfoundland  
Gens du pays (in Québec)

## Music awards

Canada has many different music awards, both for different genres of music and for geographic regions. Some of these are:

- Juno Awards - Canada's main annual music industry awards
- CASBY Awards - independent and alternative music
- U-Knows - indie rock and alternative music, became the CASBYs in 1986
- Canadian Country Music Awards
- East Coast Music Awards
- Felix Awards - annual prize for members of the Quebec music industry

## References

- Foran, Charles. "No More Solitudes". 2000. In Broughton, Simon and Ellingham, Mark with McConnachie, James and Duane, Orla (Ed.), *World Music, Vol. 2: Latin & North America, Caribbean, India, Asia and Pacific*, pp 350-361. Rough Guides Ltd, Penguin Books. ISBN 1-85828-636-0

## Music of Europe

The **music of the Europe** includes a number of kinds of distinct folk and popular music, including some of the most widely-recognized [classical](#) styles in the world.

The music of Europe includes the music of Western Europe, Central Europe, Eastern Europe, Northern Europe, Southern Europe. It is a part of Western music.

## Music of immigrant communities in the United States

The vast majority of the inhabitants of the United States are immigrants or descendents of immigrants. This article will focus on the music of these communities and discuss its roots in countries across Africa, Europe and Asia, excluding only [Native American music](#), indigenous and immigrant

Latinos, Puerto Rican music, Hawaiian music and [African American music](#). The music of **Irish- and Scottish-Americans** will be a special focus, due to their extreme influence on Appalachian folk music and other genres. These sorts of music are often sustained and promoted by a variety of ethnic organizations.

## Armenia

Following the 1915 massacres of ethnic Armenians by the Young Turk government in Turkey, large numbers of Armenians settled in the Central Valley area, especially around Fresno. Of the second- and third-generation musicians from this community, Richard Hagopian became a minor star in the Armenian-American community.

The ethnically-Armenian [heavy metal](#) band System of a Down has included references to the Armenian genocide in their lyrics.

## Cape Verde

There are more Cape Verdeans outside of their homeland than there are in the island chain itself. In the United States, California and Hawaii are home to large Cape Verdean populations, but the largest concentration is in New England, especially Boston and Rhode Island. Many of these immigrants came via whaling ships in the 19th century. Cape Verdean music is most famously morna, but other genres exist and the Cape Verdean community has produced string bands like The B-29s, Notias, Augusto Abrio and the Cape Verdean Serenaders. There were also Cape Verdean big bands, including the Creole Vagabonds and the Don Verdi Orchestra. More modern musicians include Frank de Pina, Mendes Brothers (and their influential record label, MB Records), Saozinha, Creole Sextet and Rui Pina.

## China

Chinese-American bands include Bok Gwai. The pop-rapper Jin has lately gained some national renown as well.

## Czech

Though associated with Slovenia, Germany and Poland as well, the Czech Republic includes Bohemia, the ancestral home of [polka](#) music. Polka has a long history in the United States, and the city of Chicago, among others, had produced numerous innovations in the genre.

## Eastern European Jews

Early in the 20th century, Eastern European immigrants settled across the United States. Many were Ashkenazi Jews, who brought with them their swift, eminently dance-able klezmer music. Harry Kandel, a clarinetist, stood out in the field, alongside Abe Schwartz, Naftule Brandwein and Dave Tarras.

Later, in the 1980s, a new generation of klezmer [roots revivalists](#) made innovative fusions of klezmer with [punk rock](#) and other influences. These bands include the Flying Klezmer Bulgar Band and The Klezmatics.

## England

*Main article: [Anglo-American music](#)*

As the homeland of many of the settlers of the original 13 Colonies, and a major source of immigration thereafter, England's musical traditions are closely tied to those of the United States, especially Appalachian folk music. In the 1850s, there was a thriving [brass band](#) tradition in the US, drawing on British bands formed around factory workers.

## Philippines

There is an organization that gives out Filipino American Music Entertainment Awards.

## France

The most well-known kind of French music in the United States is that of the Cajuns of Louisiana. Cajun and Creole music has spawned many popular artists in the zydeco genre, including Clifton Chenier.

## Germany

German immigrants brought with them a variety of music, [waltzes](#), [polkas](#) and oom-pah bands among them. A German musical society of the mid-19th century formed the Seventh Regiment Band, the only exclusively regimental band of the time and one of the most popular brass bands of the Civil War-era. German bandleader Friedrich Wilhelm Wieprecht was also influential, collecting full scores for his compilation of instrumentations of popular works, für die jetzige Stimmenbesetzung. Instruments included the [bassoon](#), contrabassoon, bass [tuba](#), [trumpet](#), [trombone](#), [clarinet](#), [piccolo](#), [oboe](#), French horn, saxhorn, [drums](#) and [cymbal](#). Wieprecht was recognized at the time as a key figure in the reorganization of the Prussian military bands.

The Amish are a religious community found in the Midwest, descended from German (and Swiss) settlers. They eschew modern technology in favor of simple living. Amish music is entirely religious, and is sung in a style that has not been widely performed in Europe for centuries.

Pennsylvania German culture is a mixture of British, South German and other elements. The songs are primarily German, many based on British tunes. Pennsylvania spirituals are a well-known kind of folk hymn, most of which date to the early 19th century.

## Greece

Greek-American music includes styles like rebetiko. Performers include Annaboubala, Johnny Otis, Tatiana Troyanos and Dimitrius Mahlis.

## Iran

After the 1979 revolution, the new Iranian government banned all [pop music](#) and many other genres. Numerous Iranians, including musicians, entered into exile, many settling in the Los Angeles-area. The Iranian-American scene produced several stars in the Iranian-in-exile community, including Dariush, Ebi, Homeira, Hayedeh, Mahasti, Moein, Farzin and more.

There are also many newcomers in Persian/Iranian Music who have made huge impression. Below are a list of them:

Andy, Mansour, Sandy, Leyla Foroohar, Farshid Amin, Shahrzad Sepanlou, Kamran Delan, Arash, Shadmehr Aghili, Jamshid, Cameron Cartio, Mohammad, Kamran & Hooman, Fereydoun, Hi-5, Shaghayegh, Shahriar and much more

## Ireland

*Main article: [Celtic music in the United States](#)*

Joseph Halliday, a Dubliner, is notable for having introduced the keyed bugle in 1810. While not a technical innovation (the keyed trumpet was already known), it did become extremely popular in the burgeoning [brass band](#) tradition and inspired a whole family of instruments, the ophicleides. In the middle of the 19th century, Irish bandleader Patrick Sarsfield Gilmore was very influential, having introduced a wide range of reed instruments as well as developing instrumentation that allowed a large wind ensemble to approximate the effects of a full orchestra.

The 1960s saw the Clancy Brothers (with Tommy Makem) become minor celebrities in the United States, especially in the Irish-American community. They appeared at Carnegie Hall and on the Ed Sullivan Show. Mick Moloney's Irish-American Music and Dance Festival has existed for over twenty years and remains an important part of the Irish-American scene.

In the eighties several high-profile Irish artists emigrated to the USA, including Mary Black, Dolores Keane and Maura O'Connell. At the same time groups sprang up in America to play Irish music at a professional level. Mick Moloney founded Green Fields of America in 1977 to bring together immigrant Irish and native-born players of Irish music. Although they did not record an album until 1989, they created a ripple. The band contained several people who went on to achieve international fame - Seamus Egan, Eileen Ivers and Jerry O'Sullivan. Another early Irish-American band was Cherish The Ladies formed in 1985.

The rules of the All-Ireland championships allowed certain non-Irish citizens to compete. Thanks to Irish cultural centres in New York and Chicago, young US citizens began to win in dancing and fiddling. Chicago-born Liz Carroll came second in 1974 with her fiddling. In 1992 she was a member of Trian, who recorded two highly regarded albums of strictly traditional no-frills Irish instrumentals. Some films gave exposure to Irish music - "Barry Lyndon" (1975 - The Chieftains), "The Brothers McMullen" (1984 - Seamus Egan), "Dancing at Lughnasa" (1998 - Arty McGlynn) and "Titanic" (1997). The touring stage show "Riverdance" (1995) was probably

the biggest single publicity blaze in the cause of Irish-American music. The New York "Kips Bay Ceilidh Band" recorded an admired album of dance tunes (1993).

Celtic new age music from Clannad (Ireland), harpist Loreena McKennitt (Canada) and Nightnoise (Ireland) were popular in a low-key way in the USA. Triona and Mícheál O Dhomhnaill from Nightnoise had emigrated to the US in the 70s and started recording in 1984. There were pop hits for Enya (originally from Clannad). Among the immigrants from Ireland was Susan McKeown. She had been recording since 1990 but won international praise for "Lowlands" (2000). In 1996 the Irish-American supergroup Solas was formed. The group contained multi-instrumentalist Seamus Egan and a powerful new singer Karan Casey. The Chieftains had been visiting America since the 70s but by 2003 the audience was big enough to justify a DVD, live from Nashville. You can now confidently say that no Celtic musician has made the grade till he has performed in America.

## Italy

Italian-Americans are concentrated on the Eastern Seaboard, especially in New York City. Their music includes [square dances](#), tarantellas, [mazurkas](#), [waltzes](#) and [polkas](#), and music for [mandolin](#), [banjo](#), [guitar](#) and [accordion](#).

Italian folk traditions have had a lasting influence of barbershop singing and doo wop. Neapolitan bandleader Francis Scala was bandleader of the U.S. Marine Band after immigrating in 1840; as is common in Naples, he placed the clarinet (which he played himself) in a prominent place in his performances.

## Jamaica

Undoubtedly the most influential Jamaican-American entertainer is DJ Kool Herc, who is often credited as the inventor of [hip hop](#). He immigrated to New York City and brought with him the roots of hip hop -- a [DJ](#) isolating and repeating a percussion break while an [MC](#) spoke over the beats.

Second generation Jamaican Busta Rhymes was later an important [gangsta rapper](#) during the 1990s; his style is similar to that found in Jamaican [dub](#) and dancehall.

For more information about Caribbean cultural influence in the United States, see Holger Henke's, *The West Indian Americans*, Westport: Greenwood Press 2001.

## Japan

Large-scale Japanese immigration to the United States began early in the 20th century, and traditional music came with them. California and Hawaii were two of the biggest destinations for these immigrants. The first North American taiko group was Seiichi Tanaka's San Francisco Taiko Dojo in San Francisco, which was founded in 1968.

## Norway

Norwegian-American folk music in the United States is mostly found in Minnesota and surrounding states. Reinlenders, [polkas](#) and [waltzes](#) are played; of these, waltzes are by far the most common. Instruments include the psalmodikon, [fiddle](#) and [accordion](#). Celebrations like Syttende Mai have become an important outlet for traditional Norwegian music.

## Poland

The Polish community is strongest in the area around Detroit, Michigan. The city's Polish-American community spawned a wave of musicians that are usually considered [polka](#) players, though their actual output is quite varied. New York City, Chicago and Minneapolis also have Polish-American musical traditions. Chicago's Orkiestra Makowska, led by George Dzialowy, defined that city's unique sound for many years.

More than 50,000 Polish-Americans live in the area around Houston, Texas. There is a rich tradition of Polish fiddling from Texas that had declined into obscurity until a recent revitalization by performers like Brian Marshall. Polish settlers arrived beginning in the middle of the 19th century, settling in Panna Maria, a village just south of San Antonio. A few decades later, a new wave of Polish migrants settled in Chappell Hill, Stoneham, Brenham, Bremond, Anderson, Carlos and New Waverly. These people's [folk music](#) consisted of bowed bass, [fiddle](#) and sometimes a [clarinet](#), with the later additions of [drums](#), [accordions](#) and [guitars](#). Within Texas, Polish music was diverse, with a rhythmic style predominant in the Chappell Hill/Brenham area, and a melodic sound in Bremond.

## Serbia and Montenegro

There is a Serbian rock scene in the Greater Cleveland area.

## Slovenia

Slovenian-American [polka](#) musician Frankie Yankovich is by far the most famous musician of that genre. He began his career in the 1930s, beginning with some regional hits in the Detroit and Cleveland areas, followed by mainstream success in the later 1940s.

## Ukraine

Ukrainian-Americans in the Cleveland and Detroit area have kept a folk scene alive, also producing a minor crossover star in the 1920s and 30s, Pawlo Humeniuk, the *King of the Ukrainian Fiddlers*.

## Vietnam

There is a Vietnamese American Philharmonic orchestra. Popular musicians in the Vietnamese-American community include Thanh Lan.

## Music of Mesopotamia

This article treats the **music of Ancient Mesopotamia** (see [music](#) and Ancient Mesopotamia). Ancient Mesopotamian culture was influenced by the Sumerians, about whom far less is known. The cultures from Ancient Mesopotamia were among the first that developed writing, the first known Sumerian writing dating from 4000 BCE.

Melodically Ancient Mesopotamian music was organized with complex modes and modal types, including pentatonic, diatonic, and chromatic scales, similar to contemporary Arab and Indian music such as in a current [raga](#) or maqamat. Ancient Mesopotamian harmony was most likely limited to fourth and fifth chords (dyads), as in African and archaic Italian folk music, and the systematic use of drones which the Ancient Mesopotamians originated.

Rhythmically, the music was intricate and complex, as witnessed by the rhythmic complexity of Mesopotamian influenced Syriac, Arab, Indian, and medieval European musics, all of which share 2 against 3 (as hemiola or cross-rhythm). (ibid, p.11)

## Instrumentation

Instruments which originated in Ancient Mesopotamia include the bow harp, lyre or lute, and the reed pipe. These instruments spread north into Egypt, then Greece, through Greece to Rome, and through Rome to Europe. From Egypt they spread south and westward further into Africa. Contemporary East African lyres and West African lutes preserve many features of Mesopotamian instruments. (van der Merwe 1989, p.10)

The vocal tone or timbre was probably similar to the pungently nasal sound of the narrow-bor reed pipes, and most likely shared the contemporary "typically" Asian vocal quality and techniques, including little dynamic changes and more graces, shakes, mordents, glides and microtonal inflections. Singers probably expressed intense and withdrawn emotion, as if listening to oneself, as shown by the practice of cupping a hand to the ear (as is still current in many Arab and folk musics). (ibid, p.11)

## Religious music

Ea, ruler of the deep, was the patron god of music. The sound quality of the [drum](#) (Babylonian: *balag*), made from a bull hide, and pipe, made from reed, were also metaphorically compared to their material's strength, the bull being strong and the reed weak. Instruments were often decorated with images of Ea or bulls, while Ea wrote his name with the sign for a drum, it serving as a personification of his essence. Ramman, god of thunder and winds, was associated with the singing voice and the reed-pipe (*hallhallatu*). One of the names of Ishtar translates as "the soft reed-pipe". Her partner Tammuz was the "god of the tender voice". (Wellesz 1957, p.230-231)

Temples, which existed in all large cities employed liturgists, most importantly the precentor (Sumerian: *gala*, Akkadian: *kalu*) who intoned the cantillation, the chief precentor (Sumerian: *galamah*, Akkadian: *kalamahhu*) being the highest position in the city. Many were part time employees and all were unconsecrated, though they were well educated, especially in cantillation (*kalutu*), formed guilds and were housed in the temple college. They also employed a choir of temple musicians (Sumerian: *nar*, Akkadian:

*naru*), who were both instrumentalists and vocalists who started providing the response during liturgy and eventually became increasingly associated with private penitential events, including funerals and magic, and dissociated from sacred public service and seen in secular culture. Another sacred musical occupation was called *ilukaka* (Sumerian, Akkadian: *zammeru*), which probably meant generic musician or instrumentalist, though the *zammeru* also sang in services. (ibid, p.231-232)

Category: [Ancient music](#)

## Music of Mexico

The **music of Mexico** is extraordinarily diverse and features a wide range of different musical styles. The best-known Mexican genre by far is ranchera, interpreted by a band called mariachi. This style of traditional Mexican song is considered old-fashioned but nonetheless respected traditional music and is usually listened to as much as modern music. Mexican ranchera styles, including [norteño](#) and banda, are not only popular within Mexico itself, but they are also frequently enjoyed by Mexican immigrants in both rural and urban American communities. [Norteño](#), similar to Tejano music and Tex-Mex, arose in the 1830s and 40s in the Rio Grande border region of southern Texas. Influenced by Bohemian immigrant miners, its rhythm was derived from the European [polka](#) dance popular during the 1800s. Banda, similar to

norteño in musical form, originated from the Mexico state of Sinaloa during the 1960s. Other new styles such as [cumbia](#), [pop](#), and [rock](#) have seen increased popularity as the music of Mexico faces a new generation of young people.

Southern Mexican [folk music](#) is centered around the marimba, which remains popular in Chiapas and Oaxaca. In Yucatán the traditional Jarana music and dance is popular.

Modern Mexican musical styles are also changing Mexican music. [Cumbia](#), pop, [hip-hop](#), and rock, which are heavily influenced by music from the Caribbean islands and the United States, are increasingly becoming popular among Mexican youths on both sides of the border.

## Contemporary genres

Today, there are many popular modern Mexican musical genres. Widely popular country music includes [norteño](#), banda, and duranguense bands, which play rancheras, corridos, and sometimes [cumbia](#) songs. Spanish rock, hip-hop, and electronic music are other modern genres popular among Mexicans and Mexican Americans.

### Norteño

[Norteño](#) music (similar to Tex-Mex and Tejano in the United States) almost always has the [accordion](#) as the lead instrument, with [guitars](#) serving as its roots. Norteño is an outgrowth of corridos which told tales of the Mexican Revolution. In the late 1920s, the corridos entered a golden age when Mexicans on both sides of the border recorded in San Antonio-area hotels, revolutionizing the genre alongside Mexico's political revolution. By the time the golden age ended, Narciso Martínez and Santiago Jimenez had introduced the [accordion](#), which had been introduced by Bohemian miners who immigrated to the country in the late 19th century. Alongside the accordion came the [polka](#), which, alongside [waltzes](#), chotis and [mazurka](#), mixed with corridos to form modern norteño in the early 1950s. Although norteño originated in the American state of Texas, it is popular among Mexican Americans from virtually any region of the United States. Later in the century, bands such as Los Tigres del Norte and Los Cadetes de Linares added influences from [cumbia](#), [rock music](#), and other new styles, thus creating a unique new blend in some of their new songs.

### Banda

Banda music, or Mexican big band music, originated in the northwestern Mexican state of Sinaloa. In the 1990s, banda exploded in popularity in the rest of the country and also among Hispanics in the United States. Originally instrumental, this style was popularized by Banda el Recodo, Julio Preciado, and other major stars who started including lyrics and converting popular songs into this genre.

## **Duranguense**

Música duranguense (often called *duranguense* or *el pasito duranguense*) is a type of music which originated from the northern Mexican state of Durango. In the United States, it has become increasingly popular in Chicago, which has a large community of immigrants from Durango. This music is based on both [brass](#) and [wind instruments](#) and includes the [clarinet](#), [trumpet](#), [flute](#), and [drums](#). Duranguense bands usually play their songs at a rapid, danceable tempo and tend to rely much more on percussion than banda does. In the 2000s, música duranguense rapidly gained recognition along with banda and norteño as a style of Mexican music. Duranguense bands play mainly rancheras, [polkas](#), and [cumbias](#). Some of the most popular artists include Grupo Montez, Patrulla 81, Alacranes Musical, Los Horoscopos de Durango, and Conjunto Atradecer.

## **Cumbia and pop**

*Main article:* [Mexican cumbia](#)

The 1980s saw Colombian cumbia become even more popular in Mexico than its native land, and it was by far the dominant genre throughout the decade, before banda overtook it in the 1990s. In the early 1970s and 1980s Mexican bands like Rigo Tovar y su Costa Azul and Los Bukis topped the charts, and helped, by the end of the decade, inspire grupera bands such as Yonics, Bronco, El Gran Silencio and Los Kumbia Kings.

## **Hip-hop and reggaeton**

Hip-hop is becoming increasingly popular among Mexican youths in both Mexico and the United States. Some of the most famous Mexican hip-hop artists are Cartel de Santa and Control Machete. Reggaeton, from Puerto Rico, is also popular among Mexican youths and is increasingly influencing Mexican-American hip-hop rhythms.

## Rock

The same period saw a relaxation of regulations that restricted imports of foreign music. The result was the appearance of Mexican rock bands like Café Tacuba, Los Caifanes, Maná, and Maldita Vecindad. The latter are "grandfathers" to the Latin ska movement, with Panteón Rococó as the most prominent band. Mexico City has also a considerable movement of bands playing [surf rock](#) inspired in their outfits by local show-sport lucha libre, with Lost Acapulco initiating and leading the movement.

## Electronic music

[Electronic music](#) is prominent in the North with the Nortec Collective and the Static Discos Label, Nopalbeat in Guadalajara, and Discos Konfort, Filtro and Noiselab Collective among others in Mexico City. Electronic music is by far most popular among young people. Electronic music has been getting stronger in Mexico over the last ten years and is heavily influenced by American and European disco music.

The cities with most electronic music parties raves and events are Mexico D.F., Guadalajara, Cancún, Acapulco, Monterrey, Ciudad Juárez, Puebla and Tijuana.

## Latin alternative

An eclectic range of influences is at the heart of Latin Alternative, a music created by young players who have been raised not only on their parents' music but also on rock, hip-hop and electronica. It represents a sonic shift away from regionalism and points to a new global Latin identity.

The name "Latin Alternative" was coined in the late 1990s by record company executives as a way to sell music that was -- literally -- all over the map. It was marketed as an alternative to the slick, highly produced Latin pop that dominated commercial Spanish-language radio, such as Ricky Martin or Shakira.

Artists within the genre, such as Kinky and Cafe Tacuba, have set out to defy traditional expectations of Latin music. Now, in an age of Internet connections, downloading and sampling, Latin Alternative has become not just a reaction to outside influences but its own genre.

## Classical music

Mexico has a long tradition of classical music, as far back as the 16th century, when it was a Spanish colony. Music of New Spain, especially that of Juan Gutierrez de Padilla and Hernando Franco, is increasingly recognized as a significant contribution to New World culture.

Puebla was a significant center of music composition in the 17th century, as the city had considerable wealth and for a time was presided over by Bishop Juan de Palafox y Mendoza, who was an enthusiastic patron of music. Composers during this period included Bernardo de Peralta Escudero (mostly active around 1640), and also Juan Gutiérrez de Padilla, who was the most famous composer of the 17th century in Mexico. The construction of the cathedral in Puebla made the composition and performance of polychoral music possible, especially compositions in the Venetian polychoral style. Late in the century, Miguel Matheo de Dallo y Lana set the verse of poet Sor Juana Inés de la Cruz.

In the 18th century, Ignacio Jerusalem, an Italian-born composer, brought some of the latest operatic styles as well as early classical (*galant*) styles to Mexico. His best-known composition is probably the *Matins for the Virgin of Guadalupe* (1764). Ignacio was *maestro di capilla* at the cathedral in Mexico City from 1749 until his death in 1769.

In the 19th century the waltzes of Juventino Rosas reached world recognition. In the 20th century, Carlos Chavez, is a composer of note who wrote symphonies, ballets, and more. Another recognized composer is Silvestre Revueltas who wrote such pieces as "The night of the mayas", "Homenaje a García Lorca", "Sensemayá" based on a poem by Nicolas Guillen, "Janitzio" and "Redes". Manuel M. Ponce is recognized as an important composer for the spanish classical guitar, responsible for widening the repertorium for this instrument. Jose Pablo Moncayo with compositions such as "Huapango", and Blas Galindo with "Sones de Mariachi", are also recognized as adapters of mexican sons into symphonic music .

## Music of the trecento

The trecento was a period of vigorous activity in Italy in the arts, including painting, architecture, literature, and music. The **music of the trecento** paralleled the achievements in the other arts in many ways, for example in pioneering new forms and new forms of expression, especially in secular song in the vernacular language, Italian. In these regards the music of the trecento was a [Renaissance](#) phenomenon, even though the predominant musical language was more closely related to that of the late [middle ages](#). Although the positioning of beginnings and ends of musical eras, especially the [middle ages](#) and [Renaissance](#), has always been controversial, the music

of the trecento has usually been classified by musicologists as belonging to the end of the medieval era.

## History

### Background

Very little Italian music remains from the 13th century, so the immediate antecedents of the music of the trecento must largely be inferred. The music of the [troubadors](#), who brought their lyrical, secular song into northern Italy in the early 13th century, after they fled their home regions — principally Provence — during the Albigensian Crusade, was a strong influence, and perhaps a decisive one; many of the trecento musical forms are closely related to those of the troubadors of more than a century before. Another influence on trecento music was the [conductus](#), a type of polyphonic sacred music which had the same text sung in all parts; texturally, trecento secular music is more like the conductus than anything else that came before, although the differences are also striking, and some scholars (for example Hoppin ) have argued that the influence of the conductus has been overstated.

### Early trecento

Some of the poetry of Dante Alighieri (1265–1320) was set to music at the time it was written, but none of the music has survived. One of the musicians to set Dante's poetry was his friend Casella (died 1299 or 1300), memorialized in Canto II of *Purgatorio*. Poems of Dante set by others included canzoni and ballatas; most likely the settings were monophonic.

The earliest polyphonic secular vocal music of the trecento to survive is found in the Rossi Codex, and includes music by the first generation of trecento composers: Maestro Piero, Giovanni da Cascia, as well as numerous composers who are anonymous. Other composers of the first generation include Vincenzo da Rimini and Jacopo da Bologna, who was probably the teacher of Francesco Landini. All of these composers were associated with aristocratic courts in the north of Italy, specifically Milan, Padua, and Verona. Some extremely obscure names survive in later sources, such as Bartolo da Firenze (fl. 1330–1360), who may have been the first Italian composer to write a polyphonic [mass](#) movement: a setting of the Credo.

This generation of composers usually wrote music with both voices singing the same text, in the manner of the conductus, and they preferred the form of the [madrigal](#). While some of their music was still monophonic in the manner of the preceding century, much was for two voices, and Jacopo da Bologna wrote a few madrigals for three voices. Jacopo wrote one [motet](#) which has survived; motets from 14th century Italy are extremely rare. Indeed relatively little sacred music was produced by any composers in 14th century Italy: the almost complete focus on secular music by these composers, many of whom had musical careers in churches and could have been expected to write large quantities of sacred music, as did their descendants, is unique in medieval and early Renaissance history.

### **Peak of the trecento**

The center of musical activity moved south in mid-century, to Florence, which was the cultural center of the early Renaissance. Characteristic of the next generation of composers, most of them Florentine, was a preference for the ballata, a form which seems to have exploded into popularity around mid-century. By far the most famous composer of the entire trecento, Francesco Landini (c.1325–1397), was a member of this generation. Other composers of this group besides Landini included Gherardello da Firenze, Lorenzo da Firenze, and Donato da Cascia. Also by mid-century, influence of French music was becoming apparent in the secular work of the native Italian composers.

Greater independence of voices was characteristic of the music of this generation, and points of imitation are common; in addition, the uppermost voice is often highly ornamented. Landini's music was particularly admired for its lyricism and expressive intensity: his fame has endured for six hundred years, and numerous contemporary recordings exist of his work.

The preferred form at this time was the *ballata*, which is closely related to the French [virelai](#). Landini wrote 141 which have survived, but only 12 madrigals. Another form which became popular after the middle of the century was the caccia, most likely derived from the French chace, which was a two-voice canon.

Giovanni Boccaccio mentions Florentine music in the Decameron. He tells how in 1348, the year the Black Death ravaged Florence, members of a group of friends gathered to tell stories and sing songs, to instrumental accompaniment. While Boccaccio mentioned no composers by name, many of the Florentine musicians whose names have come down to us were in their early careers at this time.

### **Late trecento and transitional era**

The last generation of composers of the era included Niccolò da Perugia, Bartolino da Padova, Andrea da Firenze, Paolo da Firenze, Matteo da Perugia, and Johannes Ciconia, the first member of the group who was not a native Italian. Their principal form was the ballata, and the ornamentation of the parts is considerably less than in the music of the preceding group of composers. Text-painting is evident in some of their music: for example, some of their programmatic compositions include frank imitations of bird-calls or various dramatic effects. Ballate continued to be composed into the 15th century, and the form is closely related to the later [frottola](#).

Ciconia, as a Netherlander, was one of the first of the group which was to dominate European music for the next two hundred years; early in his life he spent time in Italy learning the lyrical secular styles. Ciconia was also a composer of sacred music, and represents a link with the Burgundian school, the first generation of Netherlanders, which dominated the early and middle 15th century. Ciconia spent most of his Italian years in cities of northern Italy, including Venice and Padua; he died in Padua in 1412.

Another late 14th century composer, probably active in Rome, Abruzzo, and Teramo, was Antonio Zacara da Teramo. While a chronology of his music is yet to be established, it seems that his earlier music, surviving in the Squarcialupi Codex, is related to the style of Landini and Jacopo da Bologna; his later music borrows from the style of the Avignon-centered *Ars subtilior*, and indeed he seems to have supported the antipopes during the split of the papacy after the end of the century, going to Bologna around 1408.

The end of the trecento marked the end of the dominance of Florence over Italian music; while it always maintained an active musical life, it would be replaced by Venice, Rome, Ferrara and other cities in the coming centuries, and never again regained the pre-eminent position it attained in the 14th century. By the first decade of the 15th century, the quattrocento, Venice had emerged as the leading power in Northern Italy; the foundation of a singing school there in 1403 was one step towards their equivalent emergence as a musical power.

## **Instrumental music**

Instrumental music was widespread, but relatively few notated examples have survived. Indeed while contemporary depictions of singers often show them performing from books or scrolls, paintings and miniatures of instrumentalists never show written music. One of the few sources that has survived, the Robertsbridge Codex (dated variously at either around 1325 or 1360) is the earliest extant written music for keyboard, but its repertory is different from that main line of the trecento. The first keyboard collection closely related to the main line of the trecento is the Faenza Codex (Faenza,

Biblioteca Comunale, ms. 117). Other small sources of keyboard music appear in codices in Padua (Archivio di Stato 553), Assisi (Biblioteca Comunale 187), and in one section of the Reina Codex (Paris, Bibliothèque Nationale de France, n. a. fr. 6771). The typical keyboard style of the time seems to have placed the tenor of a secular song or a melody from plainchant in equal tones in the bass while a fast-moving line was written above it for the right hand. The surviving sources are likely among the few witnesses of a largely improvised tradition.

Other instrumental traditions are hinted at by the monophonic, untexted dances in a manuscript now in London (British Library, add. 29987) and in imitations of instrumental style in sung [madrigals](#) and cacce such as *Dappoi che' sole*.

Instruments used during the trecento included the *viele*, [lute](#), psaltery, [flute](#), and organetto (portative organ: Landini is holding one in the illustration). Trumpets, drums (especially paired drums called *nakers*), and shawms were important military instruments.

## Overall musical characteristics of the era

Music of the trecento retained some characteristics of the preceding age, and began to foreshadow the Renaissance in others.

Consonances were unison, fifth and octave, just as in the [ars antiqua](#), and the interval of a third was usually treated as a dissonance, especially earlier in the period. Parallel motion in unison, fifths, octaves, thirds, and occasionally fourths was used in moderation. Composers used passing tones to avoid parallel intervals, creating brief harsher dissonances, foreshadowing the style of [counterpoint](#) developed in the Renaissance. After 1350, there was increased use of triads in three-part writing, giving the music, to a modern ear, a tonal feeling. Accidentals occurred more frequently in music of the trecento than in music of earlier eras; in particular, there was use of F#, C#, G#, B-flat, and E-flat. One A-flat occurs in the works of Landini.

The *Landini sixth*, also known as the *Landini cadence* or *under-third cadence*, is a cadence involving the melodic drop from the seventh to the sixth before going up again to the octave. It was named after Landini because of its frequent use in his music. It was, however, not invented by him, and can be found in most of the music of the period.

## Music sources

Most of the manuscript sources of trecento music are from late in the fourteenth or early in the fifteenth century: some time removed from the composition of the works themselves. The earliest substantial manuscript source of trecento music is the Rossi Codex, which was compiled sometime between 1350 and 1370, and contains music from the earlier portion of the era. The fragmentary Robertsbridge Codex (c. 1360) contains the earliest known notated music for keyboard. Most of the later large sources stem from the area around Florence. These include the brilliantly illuminated Squarcialupi Codex, compiled in the early 15th century, which, with 352 compositions (including 145 by Landini) is one of the largest music sources of the time from any region. Substantial fragmentary manuscript sources from Padua, Cividale del Friuli, and from the area around Milan point to these areas as substantial areas of manuscript production as well. Few Italian compositions were copied outside of Italy, though the sacred music of Ciconia and Zacara appear in some Polish manuscripts of the fifteenth century.

## American music

The **music of the United States** is so cool! It reflects the country's multicultural population through a diverse array of styles. [Rock and roll](#), [hip](#)

[hop](#), [country](#), [rhythm and blues](#), and [jazz](#) are among the country's most internationally renowned genres. Since the beginning of the 20th century, popular recorded music from the United States has become increasingly known across the world, to the point where some forms of American [popular music](#) is listened to almost everywhere.

The original inhabitants of the United States were the hundreds of Native American tribes, who played the first music in the area. Beginning in the 17th century, immigrants from England, Spain, and France began arriving in large numbers, bringing with them new styles and instruments. African slaves brought their own musical traditions, and each subsequent wave of immigrants also contributed to a sonic melting pot.

Much of modern popular music can trace its roots to the emergence in the late 1800s of [African American blues](#) and the growth in the 1920s of [gospel music](#). African American music formed an important basis for popular music, which also used elements derived from European and indigenous musics. Long a land of immigrants, the United States has also seen documented folk music and recorded popular music produced in the ethnic styles of Ukrainian, Irish, Scottish, Polish, Mexican and Jewish communities, among others. Many American cities and towns have vibrant local music scenes which, in turn, support a number of regional musical styles. Aside from populous cities like New York, Nashville and Los Angeles, many smaller cities and regions have produced memorable and distinctive styles of music. The Cajun and Creole traditions in Louisiana music, the folk and popular styles of Hawaiian music, and the [bluegrass](#) and old time music of the Southeastern states are but a few examples of the regional diversity of modern American music.

## Characteristics

The music of the United States can be characterized by the use of syncopation and asymmetrical rhythms, long, irregular [melodies](#), which are said to "reflect the wide open geography of (the American landscape)" and the "sense of personal freedom characteristic of American life". Some distinct aspects of American music, like the call-and-response format, are derived from African techniques and instruments, introduced by African Americans brought to North America as slaves.

Throughout the early part of American history, and into modern times, the relationship between American and European music has been a much-discussed topic among scholars of American music. Some have urged for the adoption of more purely European techniques and styles, which are sometimes perceived as more refined or elegant, while others have pushed for a sense of musical nationalism that celebrates distinctively American styles. Modern classical music scholar John Warthen Struble has contrasted American and European, concluding that the music of the United States is inherently distinct because the United States has not had centuries of musical evolution as a nation. Instead, the music of the United States is that of dozens or hundreds of indigenous and immigrant groups, all of which developed largely in regional isolation until the American Civil War, when people from across the country were brought together in army units, trading musical styles and practices. Struble deemed the ballads of the Civil War "the first American folk music with discernible features that can be considered unique to America: the first 'American' sounding music, as distinct from any regional style derived from another country."

The Civil War, and the period following it, saw a general flowering of American art, literature and music. Amateur musical ensembles of this era can be seen as the birth of American popular music. Music author David Ewen describe these early amateur bands as combining "the depth and drama of the classics with undemanding technique, eschewing complexity in favor of direct expression. If it was vocal music, the words would be in English, despite the snobs who declared English an unsingable language. In a way, it was part of the entire awakening of America that happened after the Civil War, a time in which American painters, writers and 'serious' composers addressed specifically American themes."<sup>[4]</sup> During this period the roots of blues, gospel, jazz and country music took shape; in the 20th century, these became the core of American popular music, which further evolved into the styles like [rhythm and blues](#), [rock and roll](#) and [hip hop music](#).

# Folk music

*Main article: [American folk music](#)*

Folk music in the United States is varied across the country's numerous ethnic groups. The Native American tribes each play their own varieties of folk music, most of it spiritual in nature. African American music includes [blues](#) and [gospel](#), descendants of West African music brought to the Americas by slaves and mixed with Western European music. During the colonial era, English, French and Spanish styles and instruments were brought to the Americas. By the early 20th century, the United States had become a major center for folk music from around the world, including [polka](#), Ukrainian and Polish fiddling, Ashkenazi Jewish klezmer and several kinds of Latin music.

The Native Americans played the first folk music in what is now the United States, using a wide variety of styles and techniques. Some commonalities are near universal among Native American traditional music, however, especially the lack of [harmony](#) and polyphony, and the use of vocables and descending melodic figures. Traditional instrumentations uses the [flute](#) and many kinds of [percussion instruments](#), like drums, rattles and shakers. Since European and African contact was established, Native American folk music has grown in new directions, into fusions with disparate styles like European folk dances and Tejano music. Modern Native American music may be best known for powwow gatherings, pan-tribal gatherings at which traditionally styled dances and music are performed.

The Thirteen Colonies of the original United States were all former English possessions, and Anglo culture became a major foundation for American folk and popular music. Many American folk songs are identical to British songs in arrangements, but with new lyrics, often as parodies of the original material. American-Anglo songs are also characterized as having fewer pentatonic tunes, less prominent accompaniment (but with heavier use of drones) and more melodies in major. Anglo-American traditional music also includes a variety of [broadside ballads](#), humorous stories and tall tales, and disaster songs regarding mining, shipwrecks and murder. Legendary heroes like Joe Magarac, John Henry and Jesse James are part of many songs. Folk dances of British origin include the [square dance](#), descended from the quadrille, combined with the American innovation of a caller instructing the dancers.

The ancestors of today's African American population were brought to the United States as slaves, working primarily in the plantations of the South. They were from hundreds of tribes across West Africa, and they brought with them certain traits of West African music including call and response vocals

and complexly rhythmic music,[9] as well as syncopated beats and shifting accents. The [African musical](#) focus on rhythmic singing and dancing was brought to the New World, and where it became part of a distinct folk culture that helped Africans "retain continuity with their past through music". The first slaves in the United States sang work songs, field hollers and, following Christianization, [hymns](#). In the 19th century, a Great Awakening of religious fervor gripped people across the country, especially in the South. Protestant hymns written mostly by New England preachers became a feature of camp meetings held among devout Christians across the South. When blacks began singing adapted versions of these hymns, they were called Negro spirituals. It was from these roots, of spiritual songs, work songs and field hollers, that blues, jazz and gospel developed.

## **Blues and spirituals**

*Main articles: [Blues](#) and [spirituals](#)*

Spirituals were primarily expressions of religious faith, sung by slaves on southern plantations. In the mid to late 19th century, spirituals spread out of the U.S. South. In 1871 Fisk University became home to the Jubilee Singers, a pioneering group that popularized spirituals across the country. In imitation of this group, gospel quartets arose, followed by increasing diversification with the early 20th-century rise of jackleg and singing preachers, from whence came the popular style of [gospel music](#).

Blues is a combination of African work songs, field hollers and shouts. It developed in the rural South in the first decade of the 20th century. The most important characteristics of the blues is its use of the blue scale, with a flatted or indeterminate third, as well as the typically lamenting lyrics; though both of these elements had existed in African American folk music prior to the 20th century, the codified form of modern blues (such as with the AAB structure) did not exist until the early 20th century.

## **Other immigrant communities**

*Main article: [Music of immigrant communities in the United States](#)*

The United States is a melting pot consisting of numerous ethnic groups. Many of these peoples have kept alive the folk traditions of their homeland, often producing distinctively American styles of foreign music. Some nationalities have produced local scenes in regions of the country where they have clustered, like Cape Verdean music in New England,[15] Armenian music in California,[16] and Italian and Ukrainian music in New York City.

The Creoles are a community with varied non-Anglo ancestry, mostly descendant of people who lived in Louisiana before its purchase by the U.S. The Cajuns are a group of Francophones who arrived in Louisiana after leaving Acadia in Canada.[18] The city of New Orleans, Louisiana, being a major port, has acted as a melting pot for people from all over the Caribbean basin. The result is a diverse and syncretic set of styles of Cajun and Creole music.

Mexico controlled much of what is now the western United States until the Mexican War, including the entire state of Texas. After Texas joined the United States, the Mexicans living in the state (Tejanos) began culturally developing separately from their neighbors to the south, and remained culturally distinct from other Texans. Central to the evolution of early Tejano music was the blend of traditional Mexican forms such as the corrido, and Continental European styles introduced by German and Czech settlers in the late 19th century. In particular, the [accordion](#) was adopted by Tejano folk musicians at the turn of the 20th century, and it became a popular instrument for amateur musicians in Texas and Northern Mexico.

## Classical music

*Main article:* [American classical music](#)

The [European classical music tradition](#) was brought to the United States with some of the first colonists. European classical music is rooted in the traditions of European art, ecclesiastical and concert music. The central norms of this tradition developed between 1550 and 1825, centering on what is known as the [common practice period](#). Most American classical composers attempted to work entirely within European models until the 19th century. When Antonin Dvorak, a prominent Czech composer, visited the United States from 1892 to 1895, he iterated the idea that American classical music needed its own models instead of imitating European composers; he helped to inspire subsequent composers to make a distinctly American style of classical music. By the beginning of 20th century, many American composers were incorporating disparate elements into their work, ranging from jazz and blues to Native American music.

### Early classical music

During the colonial era, there were two distinct fields of what is now considered classical music. One was associated with amateur composers

and pedagogues, whose style was based around simple [hymns](#) that were performed with increasing sophistication over time. The other colonial tradition was that of the mid-Atlantic cities like Philadelphia and Baltimore, which produced a number of prominent composers who worked almost entirely within the European model; these composers were mostly English in origin, and worked specifically in the style of prominent English composers of the day.

[European classical music](#) was brought to the United States during the colonial era. Many American composers of this period worked exclusively with European models, while others, such as William Billings, Supply Belcher and Justin Morgan, also known as the First New England School, developed a style almost entirely independent of European models.[22] Of these composers, Billings is the most well-remembered; he was also influential "as the founder of the American church choir, as the first musician to use a pitch-pipe, and as the first to introduce a violoncello into church service". Many of these composers were amateur singers who developed new forms of sacred music suitable for performance by amateurs, and often using harmonic methods which would have been considered bizarre by contemporary European standards. These composers' styles were untouched by "the influence of their sophisticated European contemporaries", using modal or pentatonic scales or melodies and eschewing the European rules of harmony.

In the early 19th century, America produced diverse composers like Anthony Philip Heinrich, who created a unique American style and was the first American composer to write for a symphony. Many other composers, most famously William Henry Fry and George Frederick Bristow, supported the idea of an American classical style, though their works were very European in orientation. It was John Knowles Paine, however, who became the first American composer to be accepted in Europe. Paine's example inspired the composers of the Second New England School, which included such figures as Amy Beach, Edward MacDowell, and Horatio Parker.

Louis Moreau Gottschalk is perhaps the best-remembered American composer of the 19th century, said by music historian Richard Crawford to be known for "bringing indigenous, or folk, themes and rhythms into music for the concert hall". Gottschalk's music reflected the cultural mix of his home city, New Orleans, Louisiana, which was home to a variety of Latin, Caribbean, African American, Cajun and Creole musics. He was well acknowledged as a talented pianist in his lifetime, and was also a known composer who remains admired though little performed.

## **20th century**

The New York classical music scene included Charles Griffes, originally from Elmira, New York, who began publishing his most innovative material in 1914. His early collaborations were attempts to use non-Western musical themes. The best-known New York composer, indeed, the best-known American classical composer of any kind, was George Gershwin. Gershwin was a songwriter with Tin Pan Alley and the Broadway theatres, and his works were strongly influenced by [jazz](#), or rather the precursors to jazz that were extant during his time. Gershwin's work made American classical music more focused, and attracted an unheard of amount of international attention. Following Gershwin, the first major composer was Aaron Copland from Brooklyn, who used elements of American folk music, though it remained European in technique and form. Later, he turned to the ballet and then [serial music](#).

Many of the later 20th-century composers used [modernist](#) and [minimalist](#) techniques, such as John Cage, John Corigliano and Steve Reich, who innovated a technique known as phasing, in which two musical activities are begun simultaneously and repeated, gradually drifting out of sync with each other in a natural evolution. Reich was also very interested in non-Western music, incorporating [African rhythmic](#) techniques in his compositions. Recent composers and performers are strongly influenced by the minimalist works of Philip Glass, a Baltimore native based out of New York, Meredith Monk and others.

## Popular music

The United States has produced many of the most popular musicians and composers in the modern world. Beginning with the birth of recorded music, American performers have continued to lead the field of popular music, which out of "all the contributions made by Americans to world culture... has been taken to heart by the entire world". Most histories of popular music start with American [ragtime](#) or Tin Pan Alley; others, however, trace *popular music* back to the European [Renaissance](#) and through broadsheets, [ballads](#) and other popular traditions. Other authors typically look at popular sheet music, tracing *American popular music* to spirituals, minstrel shows and vaudeville, or the patriotic songs of the Civil War.

### Early popular song

The patriotic lay songs of the American Revolution constituted the first kind of mainstream popular music. These included "The Liberty Tree", by

Thomas Paine. Cheaply printed as broadsheets, early patriotic songs spread across the colonies and were performed at home and at public meetings.[32] Fife songs were especially celebrated, and were performed on fields of battle during the American Revolution. The longest lasting of these fife songs is "Yankee Doodle", still well known today. The melody dates back to 1755 and was sung by both American and British troops.[33] Patriotic songs were mostly based on English melodies, with new lyrics added to denounce British colonialism; others, however, used tunes from Ireland, Scotland or elsewhere, or did not utilize a familiar melody. The song "Hail Columbia" was a major work[34] that remained an unofficial national anthem until the adoption of "The Star-Spangled Banner".

During the Civil War, when soldiers from across the country commingled, the multifarious strands of American music began to cross-fertilize each other, a process that was aided by the burgeoning railroad industry and other technological developments that made travel and communication easier. Army units included individuals from across the country, and they rapidly traded tunes, instruments and techniques. The war was an impetus for the creation of distinctly American songs that became and remained wildly popular.[35] The most popular songs of the Civil War era included "Dixie", written by Daniel Decatur Emmett. The song, originally titled "Dixie's Land", was made for the closing of a minstrel show; it spread to New Orleans first, where it was published and became "one of the great song successes of the pre-Civil War period". In addition to popular patriotic songs, the Civil War era also produced a great body of [brass band](#) pieces.

Following the Civil War, minstrel shows became the first distinctively American form of music expression. The minstrel show was an indigenous form of American entertainment consisting of comic skits, variety acts, dancing, and music, usually performed by white people in blackface. Minstrel shows used African American elements in musical performances, but only in simplified ways; storylines in the shows depicted blacks as natural-born slaves and fools, before eventually becoming associated with abolitionism. [38] The minstrel show was invented by Dan Emmett and the Virginia Minstrels.[39] Minstrel shows produced the first well-remembered popular songwriters in American music history: Thomas Rice, Dan Emmett, and, most famously, Stephen Foster. The composer John Philip Sousa is closely associated with the most popular trend in American popular music just before the turn of the century. Formerly the bandmaster of the United States Marine Band, Sousa wrote military marches like "The Stars and Stripes Forever" that reflected his "nostalgia for [his] home and country", giving the melody a "stirring virile character".

In the early 20th century, American [musical theater](#) was a major source for popular songs, many of which influenced blues, jazz, country, and other extant styles of popular music. The center of development for this style was

in New York City, where the Broadway theatres became among the most renowned venues in the city. Theatrical composers and lyricists like the brothers George and Ira Gershwin created a uniquely American theatrical style that used American vernacular speech and music. Musicals featured popular songs and fast-paced plots that often revolved around love and romance.

## Blues and gospel

*Main articles: [Blues](#) and [gospel](#)*

The blues is a genre of African American folk music that is the basis for much of modern American popular music. Blues can be seen as part of a continuum of musical styles like country, jazz, ragtime, and gospel; though each genre evolved into distinct forms, their origins were often indistinct. Early forms of the blues evolved in and around the Mississippi Delta in the late 19th and early 20th centuries. The earliest blues-like music was primarily call-and-response vocal music, without harmony or accompaniment and without any formal musical structure. Slaves and their descendants created the blues by adapting the field shouts and hollers, turning them into passionate solo songs. When mixed with the Christian [spiritual](#) songs of African American churches and revival meetings, blues became the basis of [gospel music](#). Modern gospel began in African American churches in the 1920s, in the form of worshipers proclaiming their faith in an improvised, often musical manner (*testifying*). Composers like Thomas A. Dorsey composed gospel works that used elements of blues and jazz in traditional hymns and spiritual songs.

Ragtime was a style of music based around the piano, using syncopated rhythms and chromaticisms.[44] It is primarily a form of dance music utilizing the walking bass, and is generally composed in [sonata form](#). Ragtime is a refined and evolved form of the African American cakewalk dance, mixed with styles ranging from European marches[45] and popular songs to jigs and other dances played by large African American bands in northern cities during the end of the 19th century. The most famous ragtime performer and composer was Scott Joplin, known for works such as "Maple Leaf Rag".

Blues became a part of American popular music in the 1920s, when classic female blues singers like Bessie Smith grew popular. At the same time, record companies launched the field of race music, which was mostly blues targeted at African American audiences. The most famous of these acts went on to inspire much of the later popular development of the blues and blues-derived genres, including the legendary Robert Johnson. By the end of the 1940s, however, pure blues was only a minor part of popular

music, having been subsumed by offshoots like rhythm & blues and the nascent rock and roll style. Some styles of electric, piano-driven blues, like the boogie-woogie, retained a large audience. A bluesy style of gospel also became popular in mainstream America in the 1950s, led by singer Mahalia Jackson.

## **Jazz**

*Main article:* [Jazz](#)

[Jazz](#) is a kind of music characterized by [swing](#) and blue notes, call and response vocals, polyrhythms and [improvisation](#). Though originally a kind of dance music, jazz has been a major part of popular music, and has also become a major element of Western classical music. Jazz has roots in West African cultural and musical expression, and in African American music traditions including blues and ragtime, as well as European military band music. Early jazz was closely related to ragtime, with which it could be distinguished by the use of more intricate rhythmic improvisation. The earliest jazz bands adopted much of the vocabulary of the blues, including bent and blue notes and instrumental "growls" and smears otherwise not used on European instruments. Jazz's roots come from the city of New Orleans, Louisiana, populated by Cajuns and black Creoles, who combined the French-Canadian culture of the Cajuns with their own styles of music in the 19th century. Large Creole bands that played for funerals and parades became a major basis for early jazz, which spread from New Orleans to Chicago and other northern urban centers.

Though jazz had long since achieved some limited popularity, it was Louis Armstrong who became one of the first popular stars and a major force in the development of jazz. Armstrong was an improviser, capable of creating numerous variations on a single melody; he also popularized scat singing, an improvisational vocal technique in which nonsensical syllables (vocables) are sung. He was influential in the rise of a kind of pop big band jazz called [swing](#). Swing is characterized by a strong rhythm section, usually consisting of double bass and drums, medium to fast tempo, and rhythmic devices like the swung note, which is common to most jazz. Swing is primarily a fusion of 1930s jazz fused with elements of the blues and Tin Pan Alley. Swing used bigger bands than other kinds of jazz, leading to bandleaders tightly arranging the material which discouraged improvisation, previously an integral part of jazz. Swing became a major part of African American dance, and came to be accompanied by a popular dance called the [swing dance](#).

Jazz influenced many performers of all the major styles of later popular music, though jazz itself never again became such a major part of American

popular music as during the swing era. The later 20th century American jazz scene did, however, produce some popular crossover stars, such as Miles Davis. In the middle of the 20th century, jazz evolved into a variety of subgenres, beginning with [bebop](#). Bebop is a form of jazz characterized by fast tempos, improvisation based on harmonic structure rather than melody, and use of the flatted fifth. Bebop was developed in the early and mid-1940s, later evolving into styles like [hard bop](#) and [free jazz](#). Innovators of the style included Charlie Parker and Dizzy Gillespie, who arose from small jazz clubs in New York City.

## Country music

*Main article:* [Country music](#)

Country music is primarily a fusion of African American blues and spirituals with Appalachian folk music, adapted for pop audiences and popularized beginning in the 1920s. The origins of country are in rural Southern folk music, which was primarily Irish and British, with African and continental European musics. Anglo-Celtic tunes, dance music, and balladry were the earliest predecessors of modern country, then known as *hillbilly music*. Early hillbilly also borrowed elements of the blues and drew upon more aspects of 19th-century pop songs as hillbilly music evolved into a commercial genre eventually known as *country and western* and then simply *country*. The earliest country instrumentation revolved around the European-derived [fiddle](#) and the African-derived [banjo](#), with the guitar later added. String instruments like the [ukulele](#) and steel guitar became commonplace due to the popularity of Hawaiian musical groups in the early 20th century.

The roots of commercial country music are generally traced to 1927, when music talent scout Ralph Peer recorded Jimmie Rodgers and The Carter Family.<sup>[55]</sup> Popular success was very limited, though a small demand spurred some commercial recording. After World War II, there was increased interest in specialty styles like country music, producing a few major pop stars.<sup>[56]</sup> The most influential country musician of the era was Hank Williams, a bluesy country singer from Alabama. He remains renowned as one of country music's greatest songwriters and performers, viewed as a "folk poet" with a "honky-tonk swagger" and "working-class sympathies". Throughout the decade the roughness of honky tonk gradually eroded as the [Nashville sound](#) grew more pop-oriented. Producers like Chet Atkins created the Nashville sound by stripping away all the hillbilly elements of the instrumentation and using smooth instrumentation and advanced production techniques. Eventually, most records from Nashville were in this style, which began to incorporate strings and vocal choirs.

By the early part of the 1960s, however, the Nashville sound had become perceived as too watered-down by many more traditionalist performers and fans, resulting in a number of local scenes like the Lubbock sound and the [Bakersfield sound](#). The Bakersfield sound began in the mid to late 1950s when performers like Wynn Stewart and Buck Owens began using elements of [Western swing](#) and rock, such as the [breakbeat](#), in their music. In the '60s performers like Merle Haggard popularized the sound. In the early 1970s, Haggard was also part of [outlaw country](#), alongside singer-songwriters such as: Willie Nelson and Waylon Jennings.[61] Outlaw country was rock-oriented and lyrically focused on the criminal antics of the performers, in contrast to the clean-cut country singers of the Nashville sound.[62] By the middle of the 1980s, the country music charts were dominated by pop singers, alongside a nascent revival of honky-tonk-style country with the rise of performers like Dwight Yoakam. The 1980s also saw the development of [alternative country](#) performers like Uncle Tupelo, who were opposed to the more pop-oriented style of mainstream country. At the beginning of the 2000s, pop-oriented country acts remained among the best-selling performers in the United States, especially Garth Brooks.

## **R&B and soul**

*Main articles: [R&B](#) and [soul](#)*

R&B, an abbreviation for *rhythm and blues*, is a style that arose in the 1930s and 1940s. Early R&B consisted of large rhythm units "smashing away behind screaming blues singers (who) had to shout to be heard above the clanging and strumming of the various electrified instruments and the churning rhythm sections". R&B was not extensively recorded and promoted because record companies felt that it was not suited for most audiences, especially middle-class whites, because of the suggestive lyrics and driving rhythms. Bandleaders like Louis Jordan innovated the sound of early R&B, using a band with a small horn section and prominent rhythm instrumentation. By the end of the 1940s, he had had several hits, and helped pave the way for contemporaries like Wynonie Harris and John Lee Hooker. Many of the most popular R&B songs were not performed in the rollicking style of Jordan and his contemporaries; instead they were performed by white musicians like Pat Boone in a more palatable mainstream style, which turned into pop hits.[66] By the end of the 1950s, however, there was a wave of popular black blues-rock and country-influenced R&B performers like Chuck Berry gaining unprecedented fame among white listeners.

Soul music is a combination of rhythm and blues and gospel which began in the late 1950s in the United States. It is characterized by its use of gospel-music devices, with a greater emphasis on vocalists and the use of secular themes. The 1950s recordings of Sam Cooke and James Brown are commonly considered the beginnings of soul. Popular soul was based around record labels like Stax and Muscle Shoals, home to mainstream stars like Otis Redding and Aretha Franklin. By the late 1960s, soul had splintered into several genres,[68] influenced by psychedelic rock and other styles. The social and political ferment of the 1960s inspired artists like Marvin Gaye to release albums with hard-hitting social commentary, while another variety became more dance-oriented music, evolving into [funk](#). During the '70s some highly slick and commercial bands like The Delfonics and Hall & Oates achieved mainstream success with styles like Philly soul and blue-eyed soul. By the end of the '70s, soul, funk, rock and most other genres were dominated by tracks influenced by [disco](#), a kind of popular dance music. With the introduction of influences from [electro music](#) and funk in the late 1970s and early 1980s, soul music became less raw and more slickly produced, resulting in a genre of music that was once again called *R&B*, usually distinguished from the earlier rhythm and blues by identifying it as *contemporary R&B*.

The first contemporary R&B stars arose in the 1980s, with the funk-influenced singer Prince, dance-pop star Michael Jackson, and a wave of female vocalists like Tina Turner and Whitney Houston. Hip hop came to influence contemporary R&B later in the '80s, first in a style called [new jack swing](#) and then in a related series of subgenres called [hip hop soul](#) and [neo soul](#). New jack swing was a kind of vocal music, often featuring rapped verses and [drum machines](#). Hip hop soul and neo soul developed later, in the '90s, the former being a mixture of R&B with hip hop beats and the images and themes of [gangsta rap](#), while the latter is a more experimental, edgier and generally less mainstream combination of '60s and '70s-style soul vocals with hip hop beats and occasional rapped verses. In the 2000s contemporary R&B has produced many of the country's biggest pop stars, including Mariah Carey, Justin Timberlake and Gwen Stefani.

## **Rock, metal and punk**

*Main articles:* [Rock music](#), [heavy metal](#) and [punk](#)

Rock and roll is a kind of popular music, developed out of country, blues and R&B. [Rock's exact origins](#) and early influences have been hotly debated, and are the subjects of much scholarship. Though squarely in the blues tradition, rock took elements from Afro-Caribbean and Latin musical

techniques. Rock was an urban style, formed in the areas where diverse populations resulted in the mixtures of African American, Latin and European genres ranging from the blues and country to [polka](#) and zydeco. Rock and roll first entered popular music through a style called [rockabilly](#), which fused the nascent sound with elements of country music. Black-performed rock and roll had previously had limited mainstream success, but it was the white performer Elvis Presley who first appealed to mainstream audiences with a black style of music, becoming one of the best-selling musicians in history, and brought rock and roll to audiences across the world.

The 1960s saw several important changes in popular music, especially rock. These included the move from professionally composed songs to the [singer-songwriter](#), and the understanding of popular music as an art, rather than a form of commerce or pure entertainment.[74] These changes led to the rise of musical movements connected to political goals, such as Civil Rights and the opposition to the Vietnam War. Rock was at the forefront of this change. In the early 60s, rock spawned several subgenres, beginning with [surf](#). Surf was an instrumental guitar genre characterized by a distorted sound, associated with the Southern California surfing youth culture.[75] Inspired by the lyrical focus of surf, The Beach Boys began recording in 1961 with an elaborate, pop-friendly and harmonic sound.[76] As their fame grew, The Beach Boys' songwriter Brian Wilson experimented with new studio techniques and became associated with the counterculture. The counterculture was a movement that embraced political activism, was closely connected to the hippie subculture. The hippies were associated with two kinds of music, [folk](#) and [country rock](#), and [psychedelic rock](#). Folk and country rock were associated with the rise of politicized folk music, led by Pete Seeger and others, especially at the Greenwich Village music scene in New York. Folk-rock entered the mainstream in the middle of the 1960s, when the singer-songwriter Bob Dylan began his career. He was followed by a number of country-rock bands and soft, folky singer-songwriters. Psychedelic rock was a hard-driving kind of guitar-based rock, closely associated with the city of San Francisco, California. Though Jefferson Airplane was the only local band to have a major national hit, the Grateful Dead, a country and bluegrass-flavored jam band, became an iconic part of the psychedelic counterculture, associated with hippies, LSD and other symbols of that era.

Following the turbulent political, social and musical changes of the 1960s and early 1970s, rock music diversified. What was formerly a discrete genre known as *rock and roll* evolved into a catchall category called simply [rock music](#), which came to include diverse styles like [heavy metal](#) and [punk rock](#). During the '70s most of these styles were evolving in the underground music scene, while mainstream audiences began the decade with a wave of [singer-songwriters](#) who drew on the deeply emotional and personal lyrics of 1960s folk-rock. The same period saw the rise of bombastic [arena rock](#) bands,

bluesy [Southern rock](#) groups and mellow [soft rock](#) stars. Beginning in the later 1970s, the rock singer and songwriter Bruce Springsteen became a major star, with anthemic songs and dense, inscrutable lyrics that celebrated the poor and working class.

Punk was a form of rebellious rock that began in the 1970s, and was loud, aggressive and often very simple. Punk began as a reaction against the popular music of the period, especially [disco](#) and [arena rock](#). American bands in the field included, most famously, The Ramones and Talking Heads, the latter playing a more avant-garde style that was closely associated with punk before evolving into mainstream [New Wave](#). In the 1980s some punk fans and bands became disillusioned with the growing popularity of the style, resulting in an even more aggressive style called [hardcore punk](#). Hardcore was a form of sparse punk, consisting of short, fast, and intense songs that spoke to disaffected youth. Hardcore began in metropolises like Washington, D.C., though most major American cities had their own local scenes in the 1980s. Hardcore, punk, and garage rock were the roots of [alternative rock](#), a diverse grouping of rock subgenres that were explicitly opposed to mainstream music. Alternative styles include [post-punk](#) and [Gothic rock](#). In the United States, many cities developed local alternative rock scenes, including Minneapolis and Seattle. Seattle's local scene produced [grunge music](#), a dark and brooding style inspired by hardcore, [thrash metal](#), and alternative rock. With the addition of a more melodic element to the sound of bands like Nirvana, grunge became wildly popular across the United States beginning in the late 1980s and peaking in the early '90s.

Heavy metal is characterized by aggressive, driving rhythms, amplified and distorted guitars, grandiose lyrics and virtuosic instrumentation. Heavy metal's origins lie in the hard rock bands who took blues and rock and created a heavy sound centered around the guitar and drums. Most of the pioneers in the field were British; the first major American bands came in the early 1970s, like Blue Öyster Cult and Aerosmith. Heavy metal remained, however, a largely underground phenomenon. During the 1980s the first major pop-metal style arose and dominated the charts for several years; this was hair metal, a hard rock and pop fusion with a raucous spirit and a glam-influenced visual aesthetic. Some of these bands, like Bon Jovi, became international stars. The band Guns N' Roses rose to fame near the end of the decade with an image that was a reaction against the hair metal aesthetic. By the mid-1980s heavy metal had branched in so many different directions that fans, record companies, and fanzines created numerous subgenres. The United States was especially known for one of these subgenres, [thrash metal](#), which was innovated by the bands Anthrax, Megadeth, Metallica and Slayer.

## Hip hop music

*Main article:* [Hip hop music](#)

Hip hop is a cultural movement, of which music is a part. [Hip hop music](#) is itself composed of two parts: [rapping](#), the delivery of swift, highly rhythmic and lyrical vocals; and DJing, the production of instrumentation either through sampling, [instrumentation](#), [turntablism](#) or beatboxing.[84] Hip hop arose in the early 1970s in The Bronx, New York City. Jamaican immigrant DJ Kool Herc is widely regarded as the progenitor of hip hop; he brought with him from Jamaica the practice of toasting over the rhythms of popular songs. Emcees originally arose to introduce the soul, funk and R&B songs that the DJs played, and to keep the crowd excited and dancing; over time, the DJs began isolating the percussion break of songs (when the rhythm climaxes), producing a repeated beat that the emcees rapped over. By the beginning of the 1980s, there were popular hip hop songs, and the celebrities of the scene, like LL Cool J, gained mainstream renown. Other performers experimented with politicized lyrics and social awareness, or fused hip hop with jazz, heavy metal, techno, funk and soul. New styles appeared in the latter part of the 1980s, like [alternative hip hop](#) and the closely related [jazz rap](#) fusion, pioneered by rappers like De La Soul.

The crews Public Enemy and N.W.A. did the most to bring hip hop to national attention, beginning in the late 1980s; the former did so with incendiary and politically charged lyrics, while the latter became the first prominent example of [gangsta rap](#). Gangsta rap is a kind of hip hop, most importantly characterized by a lyrical focus on macho sexuality, physicality and a dangerous criminal image. Though the origins of gangsta rap can be traced back to the mid-1980s raps of Philadelphia's Schoolly D and the West Coast's Ice-T, the style is usually said to have begun in the Los Angeles and Oakland area, where Too \$hort, N.W.A and others found their fame. This [West Coast rap](#) scene spawned the early 1990s [G-funk](#) sound, which paired gangsta rap lyrics with a thick and hazy sound, often from 1970s funk samples; the best-known proponents were the rappers Dr. Dre and Snoop Dogg. Gangsta rap continued to exert a major presence in American popular music through the end of the 1990s and into the 21st century, especially after the breakthrough of white rapper Eminem. Hip hop became the dominant sound of popular music, influencing everything from jazz and rock to country and punk, by the mid-2000s.

## Other niche styles

The American music industry is dominated by large companies that produce, market and distribute certain kinds of music. Generally, these companies do not produce, or produce in only very limited quantities, recordings in styles that do not appeal to very large audiences. Smaller companies often fill in the void, offering a wide variety of recordings in styles ranging from [polka](#) to salsa. Many small music industries are built around a core fanbase who may be based largely in one region, such as Tejano or Hawaiian music, or they may be widely dispersed, such as the audience for Jewish klezmer.

The single largest niche industry is based on Latin music. Latin music has long influenced American popular music, and was an especially crucial part of the development of jazz. Modern pop Latin styles include a wide array of genres imported from across Latin America, including Colombian [cumbia](#), Puerto Rican reggaeton and the Mexican corrido. Latin popular music in the United States began with a wave of dance bands in the 1930s and '50s. The most popular styles included the [conga](#), [rumba](#), and [mambo](#). In the '50s Perez Prado made the cha-cha-cha famous, and the rise of [Afro-Cuban jazz](#) opened many ears to the harmonic, melodic, and rhythmic possibilities of Latin music. The most famous American form of Latin music, however, is salsa. Salsa incorporates many styles and variations; the term can be used to describe most forms of popular Cuban-derived genres. Most specifically, however, salsa refers to a particular style that was developed by mid-1970s groups of New York City-area Cuban and Puerto Rican immigrants, and stylistic descendants like 1980s salsa romantica.[86] Salsa rhythms are complicated, with several patterns played simultaneously. The clave rhythm forms the basis of salsa songs and is used by the performers as a common rhythmic ground for their own phrases.

## Music industry

*Further information:* [Music industry](#)

The American music industry includes a number of fields, ranging from record companies to radio stations and community orchestras. Total industry revenue is about \$40 billion worldwide, and about \$12 billion in the United States . Most of the world's major record companies are based in the United States; they are represented by the Recording Industry Association of America (RIAA). The major [record labels](#), a brand name often associated with a particular genre or record producer. Record companies may also promote and market their artists, through advertising, public performances and

concerts, and television appearances. Record companies may be affiliated with other music media companies, which produce a product related to popular recorded music. These include television channels like MTV, magazines like Rolling Stone and radio stations. In recent years the music industry has been embroiled in turmoil over the rise of the Internet downloading of copyrighted music; many musicians and the RIAA have sought to punish fans who illegally download copyrighted music.

Radio stations in the United States often broadcast popular music. Each music station has a format, or a category of songs to be played; these are generally similar to but not the same as ordinary generic classification. Many radio stations in the United States are locally owned and operated, and may offer an eclectic assortment of recordings; many other stations are owned by large companies like Clear Channel, and are generally based around a small, repetitive playlist. Commercial sales of recordings are tracked by Billboard magazine, which compiles a number of music charts for various fields of recorded music sales. The Billboard Hot 100 is the top [pop music](#) chart for [singles](#), a recording consisting of a handful of songs; longer pop recordings are [albums](#), and are tracked by the Billboard 200. Though recorded music is commonplace in American homes, many of the music industry's revenue comes from a small number of devotees; for example, 62% of album sales come from less than 25% of the music-buying audience. Total CD sales in the United States topped 705 million units sold in 2005, and singles sales just under three million .

Though the major record companies dominate the American music industry, an [independent music industry](#) (*indie music*) does exist. Indie music is mostly based around local record labels with limited, if any, retail distribution outside a small region. Artists sometimes record for an indie label and gain enough acclaim to be signed to a major label; others choose to remain at an indie label for their entire careers. Indie music may be in styles generally similar to mainstream music, but is often inaccessible, unusual or otherwise unappealing to many people. Indie musicians often release some or all of their songs over the Internet for fans and others to download and listen. In addition to recording artists of many kinds, there are numerous fields of professional musicianship in the United States, many of whom rarely record, including community orchestras, wedding singers and bands, lounge singers and nightclub DJs. The American Federation of Musicians is the largest American labor union for professional musicians. However, only 15% of the Federation's member have steady music employment.

## **Music education**

*Further information:* [Music education](#)

Music is an important part of education in the United States, and is a part of most or all school systems in the country. Music education is generally mandatory in public elementary schools, and is an elective in later years.[95] High schools generally offer classes in singing, mostly choral, and instrumentation in the form of a large school band. Music may also be a part of theatrical productions put on by a school's drama department. Many public and private schools have sponsored music clubs and groups, most commonly including the [marching band](#) that performs at high school sports games.

Higher education in the field of music in the United States is mostly based around large universities, though there are important small music academies and conservatories. University music departments may sponsor bands ranging from marching bands that are an important part of collegiate sporting events to barbershop groups, [glee clubs](#), and [symphonies](#), and may additionally sponsor musical outreach programs, such as by bringing foreign performers to the area for concerts. Universities may also have a [musicology](#) department, and do research on many styles of music.

## Holidays and festivals

Music is an important part of several American holidays, especially playing a major part in the wintertime celebration of Christmas. Christmas is celebrated with both religious songs like "O Holy Night" and secular songs like "Jingle Bells". Patriotic songs like the national anthem, "The Star-Spangled Banner", are a major part of the 4th of July, a holiday that celebrates American independence. Music also plays a role at many regional holidays that are not celebrated nationwide, most famously Mardi Gras, a music and dance parade and festival in New Orleans, Louisiana.

The United States is home to numerous [music festivals](#), which showcase styles ranging from the blues and jazz to indie rock and heavy metal. Some music festivals are strictly local in scope, including few or no performers with a national reputation, and are generally operated by local promoters. The large recording companies operate their own music festivals, such as Lollapalooza and Ozzfest, which draw huge crowds.

## Music radio

**Music radio** is a radio format where [music](#) is the primary source of broadcast content on both commercial and non-commercial stations. After the rise of television brought about the decline of old time radio and its dramatic content, music formats became one of the dominant forms of radio in many countries, though radio drama and comedy continues, often on public radio. Music has been one of the driving factors in the advancement of radio technology, from the adoption of wide-band FM to the current upswing in digital media.

### Music radio and culture

Music radio, particularly top 40, has often acted as both a barometer and an arbiter of musical taste, and radio airplay is one of the defining measures

of success in the mainstream musical world. In fact, the rise of [rock music](#) to popularity is intimately tied to the history of music radio. Early forms of rock had languished in poor areas of the South. It was enjoyed mostly by rural blacks. Rock music entered the mainstream during the 1950s because of controversial white DJs such as Wolfman Jack and Alan Freed with an appreciation for black music.

For many years, many listeners have been dissatisfied with the content of radio programming since the decline of early free form rock radio. The popularity of offshore pirate radio stations in the United Kingdom was an early symptom of frustration with the often overly safe and occasionally politicized playlists of commercial radio.

The growth of Internet radio from a small experimenter's toy in the mid-90s to a huge phenomenon allowing both small do-it-yourselfers and large commercial stations to make their offerings available worldwide was seen as a threat to over-the-air music broadcasting, and was nearly shut down by onerous licensing demands made by the recording industry. Meanwhile, the rise of satellite radio services as a major competitor have brought many of the advantages of Internet radio to an increasingly mobile listening public, including lack of censorship, greater choice, a more eclectic approach to format programming, and static-free digital sound quality. Indeed, one-size-fits-all programming is no longer seen as tenable by some, as the diversity of musical tastes among the listening public have created a proliferation of radio formats in what some might call a form of narrowcasting.

## **How it works**

### **Cost of programming**

Stations usually adopt a music format to gain the greatest number of listeners for the least expense. This reasoning is common in both commercial and non-commercial stations. Since the programming content has already been produced, all that a station has to provide is the low-cost on-air programming between records.

Most music radio stations pay licensing fees to licensing agencies such as ASCAP or BMI, as do most commercial businesses that wish to use music as part of their business. As a result, while most commercial stations might get their music for free, they still have to pay royalties to actually play it. Some small neighborhood-sized stations can play unlisted locally-produced music, and avoid these fees.

Licensing issues nearly destroyed Internet radio during the first years of the 21st century; in the United States, Congress intervened to create a royalty structure that, while expensive to independent operators running on a shoestring, was far less onerous than the scale demanded by the RIAA. Currently, one service provider, Live365, provides programs that handle licensing issues; in addition, both XM and Sirius provide commercial packages that allow the exclusive use (though not rebroadcast) of their music programming by businesses license-free.

## **Commercial radio**

Commercial stations charge advertisers for the estimated number of listeners. The larger the audience, the higher the stations' rate card can be for commercial advertising.

Commercial stations program the format of the station to gain as large a slice of the demographic audience as possible.

A station's value is usually measured as a percentage of market share in a market of a certain size. The measurement in U.S. markets has historically been by Arbitron, a commercial statistical service that uses listener diaries. Arbitron diaries were historically collected on Thursdays, and for this reason, most radio stations have run special promotions on Thursdays, hoping to persuade last-minute Arbitron diarists to give them a larger market-share. Stations are contractually prohibited from mentioning Arbitron on the air.

Market share is not always a consideration, because not all radio stations are commercial. Public radio is funded by government and private donors. Since most public broadcasting operations don't have to make a profit, no commercials are necessary.

Also, Satellite radio either charges subscribers or is operated by a public broadcasting service. Therefore, satellite radio rarely carries commercials or tries to raise money from donors. The lack of commercial interruptions in satellite radio is an important advantage. Often the only breaks in a satellite music station's programming are for station identification and DJ introductions.

Internet radio stations exist that follow all of these plans.

Much early commercial radio was completely freeform; this changed drastically with the [payola](#) scandals of the 1950s. As a result, DJs seldom have complete programming freedom. Occasionally a special situation or highly respected, long established personality is given such freedom. Most programming is done by the program director. Program directors may work for the station or at a central location run by a corporate network. The DJ's function is generally reduced to introducing and playing songs.

Many stations target younger listeners, because advertisers believe that advertising can change a younger person's product choice. Older people are thought to be less easy to change.

## Programming

Music radio has several possible arrangements. Originally, it had blocks of sponsored airtime that played music from a live orchestra. In the 1930s, phonograph records, especially the single, let a [disc jockey](#) introduce individual songs, or introduce blocks of songs. Since then, the program has been arranged so that commercials are followed by the content that is most valuable to the audience.

Because dead air does not attract listeners, the station tries to fill its broadcast day with sound. Audiences will only tolerate a certain number of commercials before tuning away. In some regions, government regulators specify how many commercials can be played in a given hour.

Programming is different for non-traditional broadcasting. The Jack FM format eliminates DJs entirely, as do many internet radio stations. The music is simply played. If it is announced, it is by RDS (for FM broadcast) or ID3 tags (for Internet broadcast). Satellite radio usually uses DJs, but their programming blocks are longer and not distinguished much by the time of day. In addition, receivers usually display song titles, so announcing them is not needed.

Internet and satellite broadcasting are not considered public media, so treaties and statutes concerning obscenity, transmission of ciphers and public order do not apply to those formats. So, satellite and internet radio are free to provide sexually explicit, coarse and political material. Typical providers include Playboy Radio, uncensored [rap](#) and [hard rock](#) stations, and "outlaw" [country music](#) stations.

The wide reach and selective, non-broadcast usage of the internet allows programmers access to special interest audiences. As a result, both mainstream and narrow-interest webcasts flourish; in particular, electronic music stations are much more common on the Internet than they are in satellite or broadcast media.

[Jingles](#) are the musical equivalent of neon signs, and they can be remarkably beautiful. Jingles are brief, bright pieces of choral music that promote the station's call letters, frequency and sometimes disc-jockey or program segment. Jingles were produced for radio stations by commercial speciality services. The most famous jingle service was called PAMS, based in Texas. Jingles are not as common as they used to be, often being replaced by recorded voiceovers (sometimes called "stingers").

The station will usually have a policy of announcing time, station call letters and frequency as often as six times per hour, in order to build station loyalty. Jingles can very useful for giving the station a branded sound in a pleasant, minimal amount of air-time. The legal requirement for station identification in the U.S. is once per hour, approximately at the top of the hour, or at the conclusion of a transmission.

News, time-checks, real-time travel advice and weather reports are often quite valuable to listeners. The news headlines and station identification are often given just before a commercial. Time, traffic and weather are given just after. The engineer typically sets the station clocks to standard local time each day, by listening to WWV or WWVH.

Although valued by commuters and older people, these segments are less valued by young people, so many stations that prefer to attract young listeners, prefer to play music, and shorten or omit these segments.

While most music stations that do offer news reports may simply "tear and read" news items (from the newswires or the Internet), larger stations (generally those affiliated with news/talk stations) may employ an editor to rewrite headlines, and provide summaries of local news. The summaries allow more news to fit in less air-time. Some stations can share news collection with TV or newspapers in the same media conglomerate. An emerging trend is to use the radio station's web site to provide in-depth coverage of news and advertisers head-lined on the air. Similarly, many stations contract with agencies such as Smartraveler and AccuWeather for their weather and traffic reports instead of having in-house staff to do the job.

Most radio stations maintain a call-in telephone line for use during promotions and gags, or to take record requests. DJs generally answer the phone and edit the call during music plays. Some stations take requests by e-mail or even online chat.

Promotions are usually the on-air equivalent of lotteries for listeners. Promotional budgets usually run about \$1 per listener per year. In a large market, a successful radio station can pay a full time director of promotions, and several lotteries per month of vacations, automobiles and other prizes. Lottery items are often bartered from advertisers, allowing both companies to charge full prices while incurring wholesale costs. For example, consider a cruise vacation. Cruising companies often have unused capacity, and when given the choice, prefer to pay their bills by bartering vacations. Since the ship will sail in any case, bartered vacations cost the cruise company little or nothing. The promotion is itself advertising for the company providing the prize.

## **Programming by time**

Most music stations have DJs that play music from a playlist determined by the program director, arranged by blocks of time. Though practices differ by region and format, what follows is a typical arrangement in a North American urban commercial radio station.

The first block of the day is the "drive-time" block in the early morning (typically 5 or 6AM) to midmorning (9 to 11AM). This block usually includes news bulletins and traffic and weather advisories for commuters, as well as light comedy from the morning DJ team (many shock jocks started as or still work on drive-time radio). Some stations emphasize music, and reduce gags and call-ins in this period.

The midday block is mostly music. For a period around noon a station may play nonstop music or go to an all-request format for people eating lunch.

In the early evening, the evening rush-hour programming resembles the midday programming, but adds traffic and weather advisories for commuters. Some stations insert a short snippet of standup comedy around 5 o'clock when commuters leave work.

The evening block, if present, returns to music.

The overnight programming is generally low-key music with quiet announcing. Some stations play documentaries or even infomercials, while some others play syndicated DJs like Delilah. It is not uncommon to play more adventurous selections during late night programming blocks, since late night is generally not considered significant for ratings.

Weekends, especially Sundays, often carry different programming. Common syndicated programming includes music countdown shows from DJs such as Rick Dees and Casey Kasem, retrospective shows, and world music such as the Putumayo World Music Hour. Stations may carry shows with different genres of music such as blues or jazz. Community affairs and religious programming is often on Sunday mornings. In addition, weekend evenings are particularly specialized; a dance station might have a sponsored dance party at a local club, or a classical station may play an opera.

Many music stations in the United States perform news and timechecks only sparingly, preferring to put more music on the air. News is often restricted to the talk-heavy commuting hours. The BBC takes a different approach, with all of its stations giving news updates. BBC 1xtra produces its own news segments under the name TX.

## **Music formats**

Some well-known music-radio formats are *Top 40*, *Freeform Rock* and *AOR (Album Oriented Rock)*. It turns out that most other stations (such as Rhythm & Blues) use a variation of one of these formats with a different playlist. The way stations advertise themselves is not standardized. Some critical interpretation is needed to recognize classic formulas in the midst of the commercial glitz.

See List of music radio formats for further details, and note that there is a great deal of format evolution as music tastes and commercial conditions change. For example, the Beautiful music format that developed into today's Easy listening and [Soft rock](#) formats is nearly extinct due to a lack of interest from younger generations, whereas classic rock has become popular over the last 20 years or so and Jack FM has arisen only since 2000 or so.

## **Top 40**

The original formulaic music radio format was Top 40. In this format, disc-jockeys would select one of a set of the forty best-selling singles (usually in a rack) as rated by Billboard magazine or from the station's own chart of the local top selling songs. In general, the more aggressive "Top 40" stations could sometimes be better described as "Top 20" stations. They would aggressively skirt listener boredom to play only the most popular singles.

Top 40 radio would punctuate the music with jingles, promotions, gags, call-ins, and requests, brief news, time and weather announcements and most importantly, advertising. The distinguishing mark of a traditional top-40 station was the use of a hyperexcited disc-jockey, and high tempo jingles. The format was invented in the US and today can be heard world wide. Todd Storz and Gordon McLendon invented Top 40 radio. Bill Drake and Rick Sklar have had a lasting modern influence.

Variants and hybrids include the freeform-like Jack FM (mentioned below under Freeform Rock) and the "Mix" formats mentioned below under Oldies. Top 40 music is heavily criticized by some music fans as being repetitive and of low quality, and is almost exclusively dominated by large media conglomerates such as Clear Channel Communications and CBS Corporation. Top 40 tends to be underrepresented on the Internet, being mostly the domain of commercial broadcasters such as Virgin Radio UK.

Some of the most famous Top 40 stations of have been Musicradio 77 WABC/New York, Boss Radio 93 KHJ-AM/Los Angeles Musicradio 89 WLS/Chicago and The Big 68 WRKO/Boston.

## **Freeform and progressive rock**

A later development was freeform radio, later commercially developed as progressive rock radio, and still later even more commercially developed as AOR (Album-Oriented Rock), in which selections from an album would be played together, with an appropriate introduction.

Traditional freeform stations prided themselves on offering their disc jockeys freedom to play significant music and make significant social commentary and humor. This approach developed commercial problems because disc jockeys attracted to this freedom often had tastes substantially different from the audience, and lost audience share. Also, freeform stations could lack predictability, and listeners' loyalty could then be put at risk. Progressive rock radio (not to be confused with the [progressive rock](#) music genre) was freeform in style but constrained so that some kind of rock music was what was always or almost always played.

Responsible jocks would realize their responsibility to the audience to produce a pleasant show, and try to keep the station sound predictable by listening to other jocks, and repeating some of their music selections. WNEW-FM in New York during the 1970s exemplified this approach to progressive rock radio.

At their best, freeform stations have never been equaled for their degree of social activism, programmatic freedom, and listener involvement. However, to succeed, the approach requires genius jocks, totally in-tune with their audience, who are also committed to the commercial success of the radio station. This is a rare combination of traits. Even if such people are available, they often command extremely high salaries. However, this may be an effective approach for a new station, if talented jocks can be recruited and motivated at low salaries.

Freeform radio is particularly popular as a college radio format; offshoots include the recent (and somewhat controversial, due to its lack of on-air personalities) eclectic-pop format known as Jack FM from its first practitioner, which plays a wide assortment of mostly top-40 music from a span of several decades; and podcast radio, a mostly-talk format pioneered by Infinity Broadcasting's KYOU station in California and Adam Curry's Podcast show on Sirius Satellite Radio.

### **AOR (album-oriented rock)**

AOR (album-oriented rock) developed as a commercial compromise between top-forties-style formulas and progressive rock radio/freeform. A program director or music consultant would select some set of music "standards" and require the playlist to be followed, perhaps in an order selected by the jock. The jock would still introduce each selection, but the jock would have available a scripted introduction to use if he was not

personally familiar with a particular piece of music and its artist. Obviously a computer helps a lot in this process.

A useful, relatively safe compromise with the artistic freedom of the jocks is that a few times each hour, usually in the least commercially valuable slots of the hour, the disc-jockey can highlight new tracks that he or she thinks might interest the audience. The audience is encouraged to comment on the new tracks, allowing the station to track audience tastes. The freedom to introduce new artists can help a station develop its library.

Significant AOR offshoots include classic rock and adult album alternative.

### **Oldies, standards, and classic rock**

Classic rock or oldies formats have been described as having the weakness of not playing new artists. This is true in a creative sense, but not a commercial one. Stations will not get good ratings or revenue if they frequently play songs unfamiliar to their audience. This is why "Top 40" stations played only the biggest hits and why oldies and classic rock formats do the same for the eras they cover. Nevertheless, there seems to be a cottage industry of Internet stations specializing in specific forms of classic rock and oldies, particularly [psychedelic rock](#) and [progressive rock](#).

The oldies and classic rock formats have a strong niche market, but as the audience becomes older the station becomes less attractive to advertisers. Advertisers perceive older listeners as set in their brand choices and not as responsive to advertising as younger, more impulsive listeners. Oldies stations must occasionally change to more youthful music formats; as a result, the definition of what constitutes an "oldies" station has gradually changed over the years.

This preference for younger listeners caused the decline of the "Big Band" or "Standards" music formats that covered music from the 1930s to the 1950s. As the audience grew too old for advertisers, the radio stations that carried these formats saw a sharp loss of ratings and revenue. This left them with no choice but to adopt more youthful formats, though the Standards format (also known as the Great American Songbook from the series of albums produced by rocker Rod Stewart) has undergone something of an off-air revival, with artists such as Stewart, Tony Bennett and Queen Latifah putting their own interpretation on the music.

During the mid-to-late-'90s, the "Mix" format -- a loosely-defined mixture of Top-40 and classic rock with something of an emphasis on adult contemporary music -- began to appear across the country. While the format has no particular standard identity, most "mix" stations have rotations consisting largely of pop and rock music from the '80s and '90s (and often the

'70s), with some current material mixed in. In addition, stations devoted to the pop music of the '70s, '80s, and '90s on their own have developed as the audiences that grew up with that music grew older and nostalgic for the sounds of their youth.

### **Classical, pop, easy-listening, jazz, dance**

These formats all have small but very loyal audiences in the largest markets. Most follow formats similar to the above (Top 40s, Freeform, AOR and Oldies), except with a different playlist. Public service stations following these formats tend to be "freeform" stations.

[Classical music](#) radio is just as it sounds -- radio designed to appeal to the listener of classical music. Most classical stations specialize primarily in instrumental classical music and chamber music, though there are more special interest classical stations (often found through media such as satellite radio or internet radio) that carry classical pop music or operatic music.

Easy listening and Adult Contemporary are related formats that play largely down-tempo pop music of various styles. The difference is mostly in the era and styles covered -- Easy Listening is mostly older music done in the style of standards from the early 20th century (typical artists include Johnny Mathis and Frank Sinatra) internet streaming combined with Big Band music and more modern performers in the same style such as Celine Dion and Josh Groban, while Adult Contemporary focuses more on newer pop music from the 1970s on. An ancestor to the easy listening format is Beautiful Music, a now-rare format (though XM features one channel of it, called Sunny) focusing mostly on smooth jazz or classical arrangements of pop music and original compositions in a similar vein.

[Jazz](#) stations generally play either traditional jazz forms or [smooth jazz](#). The jazz station, more than any other except the college station, is stereotyped as having a small listenership and a somewhat overly highbrow on-air personality, and many are college-run stations. California State University Long Beach sponsors KJAZZ 88.1, which has a fairly significant online listenership as well.

Dance music is a niche, and so-called "rhythmic pop" stations have had a fierce but not always commercially sustainable following. There was a wide spectrum of disco-format radio stations during the late '70s, but virtually all of them died out during the disco backlash; WXKS in Boston is one of the few notable survivors, now a Clear Channel Communications-owned top-40 station of considerable influence. Nevertheless there are a large number of dance music stations available both on the internet and on satellite radio,

mostly specializing in various forms of [electronica](#). Both major US satellite radio services include disco stations.

## **Alternative and modern rock**

[Rock music](#) has a long and honorable radio tradition going back to DJs like Wolfman Jack and Alan Freed, and as a result variations on rock radio are fairly common. The classic rock and oldies formats are discussed above; in addition to those, however, there are several genres of music radio devoted to different aspects of modern rock music. Alternative rock grew out of the grunge scene of the late '80s and early '90s and is particularly favored by college radio and adult album alternative stations; there is a strong focus on songwriters and bands with an outsider sound or a more sophisticated sound than the "three chord wonder" cliché. Meanwhile, other stations focus on [heavy metal](#), [punk rock](#), or the various post-punk and pop-influenced sounds known collectively as "modern rock".

Narrow-interest rock stations are particularly common on the Internet and satellite radio scenes, broken down into genres such as punk, metal, classic rock, indie music, and the like. There is a general feeling among radio connoisseurs that rock radio is becoming badly watered down by big corporate ownership, leading to a considerable do-it-yourself spirit. true.

## **Country**

While stereotyped as rural music, the [Country music](#) format is common and popular throughout the United States and in some other countries. Emphasis is generally on current pop country, though stations specializing in older country music have popped up here and there. Country has been a popular radio format since the early days of music radio. Country Music stations are broken in two categories: Classic country and Hot Country

## **Urban (hip-hop/R&B)**

The explosive rise in popularity during the 1980s of [rap music](#) has led to a large number of radio stations specializing in rap/hip-hop and [R&B](#) music (with the exception of classic R&B such as Motown, which is as often as not the province of Oldies stations). The genre is euphemistically referred to as "urban" due to the fact that the styles it represents are largely developed from the street and underground music of urban American blacks in the 1970s, though the music itself has considerable popularity (and controversy, due to

its often nihilistic and hedonistic themes) among all ethnic groups and social classes.

## **Public radio formats**

Some music radio is broadcast by public service organizations, such as National Public Radio or the BBC. These usually resemble freeform stations, with particular programs for different types of music. More popular formats get more popular hours. The Avant-garde programs tend to be pushed to the late night and early morning slots.

There is a vast variety in the formats used in public broadcasting; while the American form (represented largely by National Public Radio and Public Radio International) is generally thought of being dry and academic, public broadcasters in other countries have more variety in their programming; the BBC, for example, has eleven national or international radio stations in English alone (five of which are devoted primarily to music), with roughly another fifty regional and local stations. Public radio music formats tend to be grouped into broad genres, with most public broadcasters offering at least a pop station (such as Ireland's RTE 2fm) and a classical/jazz station.

In addition, college radio stations often operate as public broadcasters.

## **Promotional usages**

Music radio is also a means of promoting other enterprises, such as a record label or ad-hoc music events in which the broadcasters have a commercial interest. The majority of music radio stations in the United States and Canada are commercial stations that sell advertising to pay for their facilities and transmitters; in addition, many of the larger stations run promotional events such as dance nights, concerts, and even (in the case of some larger stations) entire music festivals. On-air contests and giveaways are common features, as are philanthropic programs (usually charitable promotions run during holiday seasons).

## **Song picking**

Music radio has been helped by the development of semi-automated song-picker programs. Basically, these present the disc-jockey with a list of commercially-acceptable music selections, and other items for the current time slot. These give the disc-jockey some artistic freedom to select songs, promotions, jingles, etc., and yet still assure a cohesive station "sound" and good audience satisfaction. They also reduce a disc-jockey's workload,

allowing him or her to develop news items, run the station, prepare gags, or take call-ins while a song is playing. The employer may as a result reduce staffing levels and thus trim overhead costs.

## Technology

While music radio, like all radio, started out on AM, it is somewhat unusual, at least in developed countries, to have a music station on AM due to the relatively poor sound bandwidth available in a 9 or 10 kHz channel. As a result, since the late 60s and early 70s there has been a wholesale shift to using FM stereo for maximum sound quality. The 200 kHz bands assigned in most countries to FM radio stations are more than adequate to carry a two-channeled stereo audio signal, along with several subcarriers that serve various purposes. Nevertheless, up through the early 90s a large number of stations still programmed substantial amounts of music on the AM bands, a practice that still continues for some limited formats; AM stereo, in fact, though rarely supported on consumer equipment outside of Japan, can provide near-FM quality sound, and is required for many stations operating in what in the United States is known as the X-band (1620-1710 kHz). Some FM stations also broadcast SCA programming such as multilingual translations and leased content using a subcarrier.

Music radio has progressed behind the microphone over the years -- originally the disk jockeys were just that, people who announced and spun vinyl records. High-fidelity tape ("carts", from cartridges) was the standard through much of the 70s and 80s, phased out in favor of compact disc and eventually computer-controlled MP3 jukeboxes in some newer studios. Computer technology looms large in the future of broadcast radio -- in addition to the obvious use for in-studio automation and Internet radio, it is already widely used for satellite radio to transmit static-free programming, and iBiquity digital IBOC (sometimes referred to as HD Radio) subcarrier transmissions and Digital Audio Broadcasting are both in use (in the Western hemisphere and Europe respectively) primarily for transmitting high-quality digital music. RDS information is often broadcast on a subcarrier in the FM bands to transmit station identification and song information, as well as information used by regional carriers in some parts of the world to allow automatic frequency hopping between multiple frequencies used by the same station.

High-fidelity music programming is expected to be deployed on the world airwaves using the currently experimental Digital Radio Mondiale system, but has yet to see wide acceptance outside of a couple of major European

broadcasters such as Deutsche Welle. No international music stations using the technology have yet been launched.

Internet radio generally uses standard streaming protocols, with the data most often in MP3, RealAudio, or Windows Media format; increasing numbers of internet radio stations are also using aacPlus and Ogg Vorbis.

Satellite radio tends to use often-proprietary streaming protocols along with high-quality, low bit-rate data formats such as aacPlus.

Categories: [Music industry](#).

## Music recording sales certification

**Music recording sales certification** is a system of certifying that a [music recording](#) has sold a certain number of copies. Almost all countries follow variations of the RIAA certification categories, which are named after the precious materials **gold**, **platinum** and **diamond** (**silver** is also used in some countries). The number of sales required for these awards vary depending on the population of the territory in which the album is released. Normally they are awarded only to albums released at least nationally, and are awarded individually for each country in which the album is sold. Additionally, different sales levels may exist for different music media, such as [albums](#), [singles](#) or [videos](#).

Originally applied to LP records, certification is now most commonly awarded for compact disc sales.

Certification is usually awarded cumulatively, so for example: an album sells 1,000,000 copies in a country where 1,000,000 sales means platinum status. If that album went on to sell 3,000,000 copies, it would be awarded "triple platinum" certification.

## History

The original "gold record" awards were presented to artists by their own record companies to publicize the achievement of 1,000,000 sales. The first of these was awarded by RCA to Glenn Miller in February 1942, celebrating 1,200,000 sales of "Chattanooga Choo Choo". Another example of a company award is the gold record awarded to Elvis Presley in 1956 for 1,000,000 sales of the single "Hound Dog". This has led to controversy over how to determine the placings for the biggest selling artists of all time, and claims that some gold albums should be disregarded or even retrospectively withdrawn although they were legitimately awarded at the time.

## RIAA certification

Several different thresholds have been in use at different times and places for both album and single awards. Some of these were based on units sold and others on the value of retail sales. The first official designation of a "gold record" by the RIAA was established for [singles](#) in 1958, and the RIAA also trademarked the term "gold record" in the United States. On March 14, 1958 the RIAA certified Perry Como's hit single "Catch a Falling Star" as its first ever "gold record". Later that year, the Elvis Presley hit "Hard Headed Woman" became the first [rock and roll](#) single to earn the RIAA designation.

Like many [record industry](#) awards and rankings, the measurement is usually based on wholesale shipments to all types of retail outlets, not actual retail sales or financial transactions. This means that an early award or ranking for a new release reflects a distributor's expectations for the album and their market power.

## List of international sales certification thresholds

Most countries have only one threshold series, but some have different categories and different quantities to achieve a mark. Popular categorizations include:

- By release type (album/single/music videos); generally singles sell better and require higher scores to achieve than albums; music videos sell much less and thus require lower scores.
- By artist's country (native/foreign or international); native artists who have spoken their native language usually sell better than foreign.

| Country   | Certifier | Classification  | Thresholds |        |          |           |
|-----------|-----------|-----------------|------------|--------|----------|-----------|
|           |           |                 | Silver     | Gold   | Platinum | Diamond   |
| Argentina | CAPIF     | All             | -          | 20,000 | 40,000   | -         |
| Austria   | IFPI      | All             | -          | 15,000 | 30,000   | -         |
| Australia | ARIA      | Music videos    | -          | 7,500  | 15,000   | -         |
|           |           | Everything else | -          | 35,000 | 70,000   | -         |
| Brazil    | ABPD      | All             | -          | 50,000 | 125,000  | 500,000   |
| Canada    | CRIA      | Music videos    | -          | 5,000  | 10,000   | 100,000   |
|           |           | Everything else | -          | 50,000 | 100,000  | 1,000,000 |

|                    |          |  |         |         |         |     |
|--------------------|----------|--|---------|---------|---------|-----|
| Denmark            | IFPI     | Albums   | -       | 20,000  | 40,000  | -   |
|                    |          | Singles/Musicvideo<br>DVD                      | -       | 4,000   | 8,000   | -   |
|                    |          | Entertainment DVD                              | -       | 20,000  | 40,000  | -   |
| France             | SNEP     | Albums   | 50,000  | 100,000 | 300,000 | 1,0 |
|                    |          | Singles  | 100,000 | 200,000 | 300,000 | 50  |
| Germany            | IFPI     | Albums   | -       | 100,000 | 200,000 | -   |
|                    |          | Singles  | -       | 150,000 | 300,000 | -   |
| Greece             | IFPI     | Albums   | -       | 20,000  | 40,000  | -   |
|                    |          | Singles  | -       | 10,000  | 20,000  | -   |
|                    |          | DVD  | -       | 5,000   | 10,000  | -   |
| Hungary            | Mahasz   | Native artists                                 | -       | 15,000  | 30,000  | -   |
|                    |          | Foreign artists                                | -       | 10,000  | 20,000  | -   |

## Music school

A **music school** or **conservatory** (American English) — also known as a **conservatoire** (British English) or a **conservatorium** (Australian English) — is an institution dedicated to teaching the art of [music](#), including the playing of

[musical instruments](#), [musical composition](#), musicianship, [music history](#), and [music theory](#).

Most music schools are tertiary level institutions, and they may either be independent or part of a university. Many music schools originated as vocational training centres for would-be professional musicians, often outside the main academic structure. These institutions have retained an emphasis on performance into the 21st century, while also adopting a more formal academic approach. On the other hand there are university music departments, which originally placed more emphasis on academic study of music, but often place greater emphasis on performance now than they did in the past. The two groups overlap more than they used to, with the specific emphasis varying from one institution to another.

There are also some specialist music schools for school age children, for example the Yehudi Menuhin School in England. These combine intensive music education with a general academic education.

## Prominent music schools

### Argentina

- Conservatorio Nacional Superior de Música

### Austria

- Anton Bruckner Private University for Music, Drama, and Dance
- University Mozarteum Salzburg
- Universität für Musik und darstellende Kunst Wien

### Australia

Australian Institute of Music (Sydney)  
Australian National University School of Music (Canberra)  
Central Queensland Conservatorium of Music  
Elder Conservatorium (Adelaide)  
Melbourne Conservatorium of Music  
Monash University School of Music  
Sydney Conservatorium of Music

University of Tasmania Conservatorium  
Western Australian Conservatorium of Music

Stuttgart
- Trossingen: Hochschule für Musik Trossingen
- Weimar: Hochschule für Musik "Franz Liszt" Weimar
- Würzburg: Hochschule für Musik Würzburg
- Wuppertal: Hochschule für Musik Köln, Abt. Wuppertal

### **Universities of Spiritual Music**

- Aachen: Katholische Hochschule für Kirchenmusik St. Gregorius Aachen

- Bayreuth: Evangelische Hochschule für Kirchenmusik
- Dresden: Evangelische Hochschule für Kirchenmusik
- Görlitz: Hochschule für Kirchenmusik der Evangelischen Kirche Berlin-Brandenburg - schlesische Oberlausitz
- Halle (Saale): Evangelische Hochschule für Kirchenmusik Halle
- Heidelberg: Evangelische Hochschule für Kirchenmusik
- Herford: Evangelische Hochschule für Kirchenmusik
- Regensburg: Hochschule für Katholische Kirchenmusik und Musikpädagogik
- Rottenburg: Katholische Hochschule für Kirchenmusik
- Tübingen: Evangelische Hochschule für Kirchenmusik

## **Conservatoires**

- Berlin: Stern'sches Konservatorium
- Frankfurt: Stiftung Hoch'sches Konservatorium - Musikakademie Frankfurt am Main
- Hamburg: Hamburger Konservatorium
- Mainz: Peter-Cornelius-Konservatorium der Stadt Mainz
- München: Richard-Strauss-Konservatorium - Fachakademie für Musik der Stadt München
- Osnabrück: Fachhochschule Osnabrück - Konservatorium
- Trossingen: Hohner-Konservatorium

## **Ireland**

- DIT Conservatory of Music and Drama
- Royal Irish Academy of Music

## **Italy**

- Accademia Chigiana (Siena)
- Accademia Nazionale di Santa Cecilia (Rome)
- Conservatorio Giuseppe Verdi (Milan)
- Conservatorio Giovanni Battista Martini (Bologna)
- Conservatorio Luigi Cherubini (Florence)
- Conservatorio Benedetto Marcello (Venice)

## Japan

- Tokyo National University of Fine Arts and Music (Tokyo)  
Tokyo College of Music (Tokyo)  
Kunitachi College of Music (Tokyo)  
Musashino Academia Musicae (Tokyo)  
Kobe College (Kobe)  
Takarazuka Revue Music school (Takarazuka, Hyogo)

## Netherlands

- ArtEZ Conservatorium (Arnhem / Zwolle / Enschede)  
Conservatorium Alkmaar (Alkmaar)  
Conservatorium van Amsterdam (Amsterdam)  
Conservatorium Maastricht (Maastricht)  
Fontys Conservatorium (Tilburg)  
Royal Conservatory of The Hague (Koninklijk Conservatorium Den Haag)  
Prins Claus Conservatorium (Groningen)  
Rotterdams Conservatorium (Rotterdam)  
Utrechts Conservatorium (Utrecht)

## Russia

- Moscow Conservatory  
St Petersburg Conservatory

## Spain

- Centro Superior de Música del País Vasco, San Sebastián/Donostia  
Conservatorio Superior de Música del Liceo (Barcelona)  
Conservatorio Superior de Música (Córdoba)  
Conservatorio Superior de Música (Murcia )  
Conservatorio Superior de Música (Salamanca)  
Escuela Superior de Música de Cataluña (Barcelona)  
Escuela Superior de Música Reina Sofía (Madrid)  
Real Conservatorio Superior de Música (Madrid)

## **Sweden**

- Royal College of Music in Stockholm  
Ingesund College of Music in Arvika, a department of Karlstad University  
Gothenburg University, School of Music and Music Education  
Örebro University, Department of Music  
Piteå School of Music, a department of Luleå University of Technology  
Malmö Academy of Music, a department of Lund University

## **UK**

### **Undergraduate & postgraduate**

- UCE Birmingham Conservatoire (part of UCE Birmingham)  
Guildhall School of Music and Drama, London  
Leeds College of Music  
Royal Academy of Music, London (part of the University of London)  
Royal College of Music, London  
Royal Northern College of Music, Manchester  
Royal Scottish Academy of Music and Drama, Glasgow  
Royal Welsh College of Music & Drama, Cardiff (part of the University of Wales)  
Trinity College of Music, London

### **Secondary and younger**

- Chetham's School of Music  
City of Edinburgh Music School  
Purcell School  
Wells Cathedral School  
Yehudi Menuhin School

## **USA**

## Music sequencer

In the field of [electronic music](#), a **sequencer** was originally any device that recorded and played back a sequence of control information for an [electronic musical instrument](#). Nowadays, the term almost always refers to the feature of recording software which allows the user to record, play back and edit MIDI data. This is distinct from the software features which record audio data.

Early analog music sequencers used control voltage/trigger interface, but were replaced by digital hardware- or software-based MIDI sequencers, which play back MIDI events and MIDI control information at a specified number of beats per minute.

As computer speeds increased in the 1990s, audio recording, audio editing, and sample triggering features were added to the software. Software so enhanced is called a digital audio workstation (DAW). DAWs almost always include sequencing features but, strictly speaking, go beyond what a sequencer is.

Many sequencers have features for limited [music notation](#), or are able to show music in a piano roll notation. (For software designed specifically for music notation, see the [scorewriter](#) article.)

Though the term 'sequencer' is today used primarily for software, some hardware [synthesizers](#) and almost all [music workstations](#) include a built-in MIDI sequencer. There are also standalone hardware MIDI sequencers.

Music can also be sequenced in a using trackers such as ModPlug Tracker, and some of those are able to sequence MIDI events too.

A [drum machine](#) can be viewed as a specialized music sequencer.

## Software sequencers / DAWs with sequencing features

*For a list of trackers, see the [tracker](#) article.*

## Music theory

**Music theory** is a field of study that describes the elements of [music](#) and includes the development and application of methods for analyzing and composing music, and the interrelationship between the [notation](#) of music and performance practice. Broadly, theory may include any statement, belief, or conception of music (Boretz, 1995). A person who studies or practices music theory is a **music theorist**.

Some music theorists attempt to explain the techniques composers use by establishing rules and patterns. Others model the experience of listening to or performing music. Though extremely diverse in their interests and commitments, many Western music theorists are united in their belief that the acts of composing, performing, and listening to music may be explicated to a high degree of detail (this, as opposed to a conception of musical expression as fundamentally ineffable except in musical sounds). Generally, music theory works are both descriptive and prescriptive, that is they both attempt to define practice and to influence later practice. Thus, music theory generally lags behind practice in important ways, but also points towards future exploration and performance.

Musicians study music theory in order to be able to understand the relationships that a composer or songwriter expects to be understood in the notation, and composers study music theory in order to be able to understand how to produce effects and to structure their own works. Composers may study music theory in order to guide their [precompositional](#) and compositional decisions. Broadly speaking, music theory in the Western tradition focuses on [harmony](#) and [counterpoint](#), and then uses these to explain large scale structure and the creation of [melody](#).

## Sound

Music theory describes how sounds, which travel in waves, are notated, and how what is sounded, or played, is perceived by listeners. The study of how humans interpret sound is called psychoacoustics, while the cognitive aspects of how perceived sounds are interpreted into musical structures is studied in [music cognition](#). In music, sound waves are usually measured not by length (or wavelength) or period, but by frequency.

Every object has a resonant frequency which is determined by the object's composition. The different frequencies at which the sound producers of many instruments vibrate are given by the harmonic series. The resonators of [musical instruments](#) are designed to exploit these frequencies. Different instruments have different [timbres](#) due to variation in the size and shape of the instrument as well as the choice of materials from which the parts of the instrument are constructed.

A [note](#) is generally perceived as a sound on a single pitch. Notes have a regular wave beat on the eardrum that humans (and perhaps other animals as well) find pleasing. This may be in part due to the fact that from the moment the hearing function becomes available to an unborn child, there is the regular rhythm of the mother's heartbeat.

Often the fundamental aspects of sound and music are described as [pitch](#), [duration](#), intensity, and [timbre](#).

## Pitch

Sounds can be classified into [pitches](#), according to their frequencies or their relative distance from a reference pitch. [Tuning](#) is the process of assigning pitches to [notes](#). The difference in pitch between two notes is called an [interval](#). Notes, in turn, can be arranged into different [scales](#) and [modes](#). The most common scales are major, harmonic minor, melodic minor, and pentatonic.

The Key of a piece of music determines what frequency each note is played at. A piece in the key of D major will put all the notes two semitones higher than a piece in the key of C major. Changing the key can change the feel of the piece of music dramatically, as it changes the relation of the pitches of the composition to the pitch range of the instruments on which the piece is being performed, often effecting timbre as well as having other more technical implications for the performers. However, key changes may also go unrecognized to the audience, as changing the key does not (by definition) change the relation of the pitches of the composition to each other, and so different keys can in many cases be considered equivalent and a matter of choice on the part of performers (this is especially true for popular and folk musics).

## Rhythm

[Rhythm](#) is the arrangement of sounds in time. [Meter](#) animates time in regular pulse groupings, called measures (or bars in British English). The time signature specifies how many beats are in a measure, and which kind of written note is counted and felt as a single beat. Through increased stress and attack (and subtle variations in duration), particular tones may be accented. There are conventions in most musical traditions for a regular and hierarchical accentuation of beats to reinforce the meter. Syncopated rhythms are rhythms that accent parts of the beat not already stressed by counting. Playing simultaneous rhythms in more than one time signature is called polyrhythm.

In recent years, rhythm and meter have become hot topics among music scholars. Recent work in these areas includes books by Fred Lerdahl and

Ray Jackendoff, Jonathan Kramer, Christopher Hasty, William Rothstein, and Joel Lester.

## Melody

[Melody](#) is the unfolding in musical time of a principle single line. This line can be sounded alone, unaccompanied; or it can be the top (or sometimes an inner) note of a sequence of [chords](#), or sounded against chords as a background by accompanying instruments or voices. Melodic rhythm is usually rooted in the accent patterns of language, and/or the animating rhythms of dance steps and forms.

In much of Western music, melody is often the most identifiable theme. Melodies will often imply certain [scales](#) or modes. [Counterpoint](#) is the study of combining and layering more or less independent melodies.

## Harmony, consonance, & dissonance

[Harmony](#) can generally be thought of as occurring when two or more pitches are sounded simultaneously, although harmony can be implied when pitches are sounded successively rather than simultaneously (as in arpeggiation). Harmonies involving three or more pitches sounded simultaneously are referred to as chords, though the term is generally used to indicate an organized selection of pitches rather than just any three or more pitches.

Consonance can be roughly defined as harmonies whose tones complement and augment each others' resonance, dissonance as those which create more complex acoustical interactions (called 'beats'). Another manner of thinking about the relationship regards stability; dissonant harmonies are sometimes considered to be unstable and to "want to move" or "resolve" toward consonance. However, this is not to say that dissonance is undesirable. A composition made entirely of consonant harmonies may be pleasing to the ear and yet boring because there are no instabilities to be resolved.

Melody is often organized so as to interact with changing harmonies (sometimes called a [chord progression](#)) that accompany it, setting up consonance and dissonance.

"Harmony" as used by music theorists can refer to any kind of simultaneity without a value judgment, in contrast with a more common

usage of "in harmony" or "harmonious", which in technical language might be described as consonance.

## Texture

[Musical texture](#) is the overall sound of a piece of music commonly described according to the number and relationship between parts or lines of music: monophony, heterophony, polyphony, homophony, or monody. The perceived texture of a piece may also be affected by the timbre of the instruments playing these parts and the harmony and rhythms used, among other things.

## Notation

[Music notation](#) is the graphical representation of music. In standard notation, pitches (notes) are represented on the vertical axis and time (rhythm) is represented as symbols on the horizontal axis. Together, these two components make up the musical staff, along with directions indicating the [key](#), tempo, dynamics, etc. [Notes](#) are used on the musical staff with different time values to show musicians what note to play and when to play it.

## Ear training

*Main article:* [ear training](#).

A key skill learned in Music Theory is the ability to recognize pitches, scale progressions, and intervals. There are many uses for having a good ear, including finding the leading tone, melodic line, bass line, and key for pieces of music. The basic approach to beginning training with the ear is to play two pitches one after the other and be able to tell the interval between the two. Common intervals are the Major Third, Perfect Fourth, Perfect Fifth, Major Sixth, and the Octave. One possible way to learn to recognize these intervals is to associate the sound to a commonly known song or pop culture sound. For example, the Perfect Fifth interval will sound like the beginning to "Twinkle, Twinkle, Little Star", a Major Sixth can be associated with the NBC jingle or the song "My Bonnie", and the Octave is often recognized as the start to "Somewhere Over the Rainbow".

## Four-part writing

Four-part writing served for several hundred years as the foundation of musical practice in Europe. Historically, this is due to the primacy of choral music in the western tradition. The "Gradus ad Parnassum" by Johann Joseph Fux is a distillation of the principles of writing for four independent voices and was used as an instructional manual for many composers, including Mozart and Beethoven. The basic principle of four-part writing is to create four simultaneous lines that obey the rules of harmony and voice leading.

Four-part writing is sometimes referred to as an SATB Arrangement, i.e. An arrangement for the four vocal parts: [Soprano](#), [Alto](#), [Tenor](#) and [Bass](#) lines. However, it is not necessary that these specific voice parts be present for a composition to be considered to be four-part. In men's choral music, four-part pieces are most commonly expressed as TTBB (Tenor I, Tenor II, [Baritone](#), Bass), while a [string quartet](#) uses two [violins](#), a [viola](#) and a [cello](#).

## Music therapy

**Music therapy** is the clinical and evidence-based use of music interventions to accomplish individualized goals within a therapeutic relationship by a credentialed professional who has completed an approved music therapy program.

In other words, music therapy is the use of [music](#) by a trained professional to achieve therapeutic goals. Goal areas may include, but are not limited to, motor skills, social/interpersonal development, cognitive development, self-awareness, and spiritual enhancement.

Music therapists are found in nearly every area of the helping professions. Some commonly found practices include developmental work (communication, motor skills, etc.) with individuals with special needs,

[songwriting](#) and listening in reminiscence/orientation work with the elderly, processing and relaxation work, and rhythmic entrainment for physical rehabilitation in stroke victims.

The idea of music as a healing modality dates back to the beginnings of history, and some of the earliest notable mentions in Western history are found in the writings of ancient Greek philosophers.

## **Music therapy in the United States**

Music therapy in its current/modern form has existed in the United States since around 1944, when the first degree program in the world was founded at Michigan State University.

The American Music Therapy Association (AMTA) was founded in 1998 as a merger between the National Association for Music Therapy (NAMT, founded in 1950) and the American Association for Music Therapy (AAMT, founded in 1971). Numerous other national and international organizations exist. In the United States, a music therapist is most commonly designated by MT-BC (Music Therapist, Board-Certified). A music therapist with only this designation has a bachelor's in music therapy and is trained in the specific use of music therapy techniques as an adjunctive/augmentative therapy, complementing the work of other practitioners from different disciplines such as social work, speech/language, physical therapy, medicine, nursing, education, and so forth. A music therapist may have different credentials or professional licenses and may also have a master's degree in music therapy or in another clinical field (social work, mental health counselling, or the like). Some practicing music therapists have held Ph.D.s in non-music-therapy (but related) areas, but more recently Temple University founded a true music therapy Ph.D. program. A music therapist will typically practice in a manner that incorporates music therapy techniques with broader clinical practices such as assessment, diagnosis, psychotherapy, rehabilitation, and other practices. Music therapy services rendered within the context of a social service, educational, or healthcare agency are reimbursable by insurance and sources of funding for individuals with certain needs. Music therapy services have been identified as reimbursable under Medicaid, Medicare, Private insurance plans and other services such as state departments and government programs.

A U.S. music therapist may also hold the designation of CMT, ACMT, or RMT--initials which were previously conferred by the now-defunct AAMT and NAMT. In Canada, the designation is MTA (Music Therapist Accredited/Musicotherapie Accreditee).

A degree in music therapy requires proficiency in guitar, piano, voice, music theory, music history, reading music, [improvisation](#), as well as varying levels of skill in assessment, documentation, and other counselling and healthcare skills depending on the focus of the particular university's program. To become board-certified in the United States, a music therapist must complete 1200 hours of clinical training in addition to required coursework, research, and passing a nationally accredited certification exam.

## Music therapy in the United Kingdom

Live music was used in hospitals after both of the World Wars, as part of the regime for some recovering soldiers. Clinical Music therapy in Britain as it is understood today was pioneered in the 60s and 70s by French cellist Juliet Alvin, whose influence on the current generation of British music therapy lecturers remains strong. Music therapists, many of whom work with an improvisatory model (see clinical improvisation), are active particularly in the fields of child and adult learning disability, but also in psychiatry and forensic psychiatry, geriatrics, palliative care and other areas. The practitioner is an SRAsT(M) (State Registered Arts Therapist (Music)), and must hold a post-graduate diploma in music therapy, though increasingly the move is towards therapists holding masters degrees. There are courses in music therapy in Bristol, Cambridge, Cardiff, Edinburgh and London, and there are therapists throughout the United Kingdom.

In 2002 the World Congress of Music Therapy was held in Oxford, on the theme of Dialogue and Debate.

## Music venue

A **music venue** is any location of a [music](#) performance. In the [music industry](#), it is common to refer to [concert](#) sites as venues, especially among touring acts.

## Music video

A **music video** (also **promo**) is a short film or video that accompanies a complete piece of music, most commonly a [song](#). Modern music videos are primarily made and used as a marketing device intended to promote the sale of music recordings. Although the origins of music videos go back much

further, they reached their peak of popularity in the 1980s, when Music Television's format was based around them.

Music videos can accommodate all styles of filmmaking, including animation, live action films, documentaries, and non-narrative, abstract film.

## History of music videos

### Early precedents

In 1910 Alexander Scriabin wrote his [symphony](#) *Prometheus -- Poem of Fire* for orchestra and "light organ". And as far back as the 1920s, the animated films of Oskar Fischinger (aptly labelled "visual music") were supplied with orchestral scores. Fischinger also made short animated films to advertise Electrola Records' new releases, making these films possibly the first music videos.

In 1929 the Russian film revolutionary Dziga Vertov made a 40 minute film called *Man with the Movie Camera*. It was an experiment on filming real, actual events, contrary to Georges Méliès theatrical approach. The film is entirely backed by music (played live by an orchestra on theaters) and has no dialogue at all. It's notable for the use of fast editing and fast frame frequencies, which were all synched to the music in order to create an emotion on the viewer. The film is highly regarded for setting the principles of the documentary genre, but it is also important in all filmmaking.

Sergei Eisenstein's 1938 film *Alexander Nevsky*, which features extended scenes of battles choreographed to a score by Sergei Prokofiev, was influenced by Vertov's work and it set new standards for the use of music in film and has been described as the first music video.

Animation pioneer Max Fleischer introduced a series of sing-along short cartoons called *Screen Songs*, which invited audiences to sing along to popular songs by "following the bouncing ball". Early 1930s entries in the series featured popular musicians performing their hit songs on-camera in live-action segments during the cartoons.

The early animated efforts of Walt Disney, his *Silly Symphonies*, were built around music. The Warner Brothers cartoons, even today billed as *Looney Tunes* and *Merrie Melodies*, were initially fashioned around specific songs from upcoming Warner Brothers musical films. Live action musical shorts, featuring such popular performers as Cab Calloway, were also distributed to theatres.

[Blues](#) singer Bessie Smith appeared in a two-reel short film called *Saint Louis Blues* (1929) featuring a dramatized performance of the hit song. It was

shown in theatres until 1932. Numerous other musicians appeared in short musical subjects during this period. Later, in the mid-1940s, musician Louis Jordan made short films for his songs, some of which were spliced together into a bizarre feature film Lookout; these films were, according to music historian Donald Clarke, the ancestors of music videos <sup>[1]</sup>.

Another early form of music video were one-song films called "Soundies" made in the 1940s for the Panoram visual jukebox. These were short films of musical selections, usually just a band on a movie-set bandstand, made for playing. Thousands of Soundies were made, mostly of [jazz](#) musicians, but also torch singers, comedians, and dancers.

Before the Soundie, even dramatic movies typically had a musical interval, but the Soundie made the music the star and virtually all the name jazz performers appeared in Soundie shorts, many still available on compilation video tapes or DVDs.

The Panoram jukebox with eight three-minute Soundies were popular in taverns and night spots, but the fad faded during World War II.

In 1940, Walt Disney released Fantasia, an animated film based around famous pieces of [classical music](#).

## **Film and video promos**

In 1956 Tony Bennett was filmed walking along The Serpentine in Hyde Park, London as his recording of "Stranger in Paradise" played; this film was distributed to and played by UK and US television stations, leading Bennett to later claim he made the first music video.

In 1961 Ozzie Nelson filmed and edited the video of "Travelin' Man" by his son Ricky Nelson. It featured images of various parts of the world mentioned in the Jerry Fuller song and Ricky singing. It is believed to be the very first rock video.

The pioneering full-colour music video for The Exciters' "Tell Him" from 1962 greatly influenced all that came afterwards.

The defining work in the development of the modern music video was The Beatles' first major motion picture, A Hard Day's Night in 1964, directed by Richard Lester. The musical segments in this film arguably set out the basic visual vocabulary of today's music videos, influencing a vast number of contemporary musicians, and countless subsequent pop and rock group music videos.

That same year, The Beatles began filming short promotional films for their songs which were distributed for broadcast on television variety shows in other countries, primarily the U.S.A. By the time The Beatles stopped touring in late 1966 their promotional films, like their recordings, were

becoming increasingly sophisticated, and they now used these films to, in effect, tour for them.

Also in 1966 the clip of Bob Dylan performing Subterranean Homesick Blues filmed by D A Pennebaker was much used. The clip's ironic portrayal of a performance and the seemingly random inclusion of a celebrity (Allen Ginsberg) in a non-performing role also became mainstays of the form. The clip has been much imitated.

Although unashamedly based on *A Hard Day's Night*, the hugely popular American TV series The Monkees was another important influence on the development of the music video genre, with each episode including a number of specially-made film segments that were created to accompany the various Monkees songs used in the series. The series ran from 1966 to 1968.

The Beatles took the genre to new heights with their groundbreaking films for "Strawberry Fields Forever" and "Penny Lane", made in early 1967, which used techniques borrowed from underground and avant garde film, such as reversed film effects, dramatic lighting, unusual camera angles and rhythmic editing. Created at the height of the [psychedelic music](#) period, these two landmark films are among the very first purpose-made concept videos that attempt to "illustrate" the song in an artful manner, rather than just creating a film of an idealized performance.

Other pioneering music videos made during this time include the promotional films made by The Doors. The group had a strong interest in film, since both lead singer Jim Morrison and keyboard player Ray Manzarek had met while studying film at UCLA. The clip for their debut single "Break On Through" is essentially structured as a filmed performance, but it is notable for its accomplished and atmospheric lighting, camera work and editing. The Doors also directed a superb promotional clip for their controversial 1968 anti-war single "The Unknown Soldier", in which the group stage a mock execution by firing squad. One of the clip's most innovative features is its use of external visuals sources, with extensive intercutting of archival footage and shocking contemporary TV footage of the carnage of the Vietnam War.

When released in 1968, the animated film Yellow Submarine was an international sensation, although The Beatles themselves had only a tangential involvement with it. Soon it was commonplace for artists to make promotional films, and bands like The Byrds and The Beach Boys were also making promotional films. Although these "film clips" were often aired on pop music TV shows, they were still considered as secondary at that time, with live or mimed performances generally given precedence.

The promotional clip continued to grow in importance, with television programs such as The Midnight Special and Don Kirshner's Rock Concert mixing concert footage with clips incorporating camera tricks, special effects, and dramatizations of song lyrics.

Other important contributions to the development of the genre include the film of the Woodstock Festival, and the various concert films that were made during the early Seventies, most notably Joe Cocker's *Mad Dogs And Englishmen* and particularly Pink Floyd's groundbreaking *Live At Pompeii* concert film, which featured sophisticated rhythmic cross-cutting.

Many countries with local pop music industries soon copied the trend towards music videos. In Australia promotional films by Australian pop performers were being made on a regular basis by 1966; among the earliest known are clips by Australian groups The Masters Apprentices and The Loved Ones.

Surf film makers such as Bruce Brown, George Greenough and Alby Falzon also made important contributions in their films, which featured innovative combinations of images and music, and they notably dispensed with all narration and dialogue for many extended surfing sequences in their films, presenting the surfing action accompanied by suitably atmospheric music tracks.

Alby Falzon's 1972 film *Morning Of The Earth* included a spectacular sequence (filmed by Greenough) that was constructed around the extended Pink Floyd track "Echoes". The group reportedly agreed to allow Falzon to use the music *gratis*, in exchange for a copy of Greenough's footage, which they used during their concerts for several years.

Other notable Australian developments in this field are the early 1970s monochrome promotional films made by Australian musician and filmmaker Chris Lofven, whose clips for the Spectrum song "I'll Be Gone" and the Daddy Cool song "Eagle Rock" were among the best of the early Australian music video productions. It is notable that Lofven's 1971 clip for "Eagle Rock" bears a strong stylistic resemblance to the video for the 1980 hit "Brass In Pocket" by The Pretenders, and it has been speculated that original bassist Pete Farndon may well have seen the Lofven clip when he was working in Australia in the mid-1970s as a member of The Bushwackers.

The first promo clip to combine all the elements of the modern music video is David Bowie's promotional clip for the song *The Jean Genie*, which was released as single in late 1972 at the height of Bowie's Ziggy Stardust period. Filmed and directed by renowned photographer Mick Rock, this genre-defining four-minute film was produced for less than \$350, shot in one day in San Francisco on 28th October 1972, and edited in less than two days.

The Swedish music group, ABBA, used promotional films throughout the 1970's to promote themselves in other countries when travelling or touring abroad became difficult. Almost all of these videos were directed by Chocolat and *My Life as a Dog* director, Lasse Hallström.

## Modern era

The key innovation in the development of the modern music video was of course video recording and editing processes, along with the development of a number of related effects such as chroma-key. The advent of high-quality colour videotape recorders and portable video cameras coincided with the DIY ethos of the New Wave era and this enabled many pop acts to produce promotional videos quickly and cheaply, in comparison to the relatively high costs of using film. However, as the genre developed music video directors increasingly turned to 35mm film as the preferred medium, while others mixed film and video. By the mid-1980s releasing a music video to accompany a new single had become standard, and acts like The Jacksons sought to gain a commercial edge by creating lavish music videos with million dollar budgets; most notable with the video for "Can You Feel It".

The first music videos were produced by ex-Monkee Michael Nesmith who started making short musical films for Saturday Night Live in 1979. In 1981, he released *Elephant Parts*, the first video album and first winner of a Grammy for music video. A further experiment on NBC television called *Television Parts* was not successful, due to network meddling (notably an intrusive laugh track and corny gags). The early self-produced music videos by Devo, including the pioneering compilation "The Truth About Devolution" were also important (if somewhat subversive) developments in the evolution of the genre and these Devo video cassette releases were arguably among the first true long-form video productions. The USA Cable Network program *Night Flight* was one of the first American programs to showcase these videos as an art form. Premiering in June 1981, *Night Flight* predated MTV's launch by two months.

In the UK the importance of *Top of the Pops* to promote a single created an environment of innovation and competition amongst bands and record labels as the show's producers placed strict limits on the number of videos it would use - therefore a good video would increase a song's sales as viewers hoped to see the video again the following week. David Bowie scored his first UK number one in nearly a decade thanks to the eye catching promo for "Ashes to Ashes". Another act to succeed from this tactic was "Madness" who shot on 16mm and 35mm short micro-comedic films.

"Top of the Pops" was censorious in its approach to video content so another approach was for an act to produce a promo that would be banned or edited and so use the resulting controversy and publicity to promote the release. Early examples of this tactic were Duran Duran's "Girls on Film" and Frankie Goes to Hollywood with "Relax".

Although little acknowledged outside Australia, it is arguable that the 1970s-1980s Australian TV pop show *Countdown* -- and to a lesser extent its

commercial competitors Sounds and Nightmoves -- were important precursors to MTV.

*Countdown*, which was based on Top Of The Pops, hit of in Australia but other countries quickly followed the format. At its highpoint during most of the 1980s it was to be aired in 22 countries including TV Europe. In 1978 the Dutch TV-broadcasting company Veronica started a Dutch version of Countdown which during the 80s had Adam Curry as its best known presenter. The program gained international significance in the recording industry in the late 1970s and early 80s. Produced on a shoestring by the government-owned ABC national TV network, its low budget, and Australia's distance proved to be influential factors in the show's early preference for music video. The relative rarity of visits by international artists to Australia and the availability of high-quality, free promotional films meant that *Countdown* soon came to rely heavily on music videos in order to feature such performers.

The show's talent coordinator Ian Meldrum and his producers quickly realised that these music videos were becoming an important new commodity in music marketing. For the first time, pre-produced music videos gave TV the opportunity to present pop music in a format that rivalled or even exceed the impact of radio airplay, and it was soon apparent that Countdown could single-handedly break new pop acts and new songs by established artists -- a role that up until then been the exclusive preserve of radio.

Although *Countdown* continued to rely heavily on studio appearances by local and visiting acts, competing shows like *Sounds* lacked the resources to present regular studio performances, so they were soon using music videos almost exclusively. As the Eighties progressed, the ability to use music videos to give bands the best possible presentation saw record companies making more, and more lavish, promotional videos.

In 1980 New Zealand group Split Enz had major success with the single "I Got You" and the album True Colours, and later that year they became one of the first bands in the world to produce a complete set of music videos for each song on the album and to market these on video cassette -- the so-called video album. This was followed a year later by the first American video album, The Completion Backwards principle by The Tubes.

Realising the potential of music video, *Countdown* negotiated a controversial deal with local record labels, giving them first refusal and a period of exclusive use for any new video that came into the country, and with its nationwide reach and huge audience, Countdown was able to use music videos to break a number of important new local and overseas acts, notably ABBA, Queen, Meat Loaf, Blondie, Devo, Cyndi Lauper and Madonna. This early success in Australia in turn enabled these acts to gain airplay and TV exposure and score breakthrough hits in their home countries.

During the 1980s promotional videos became pretty much *de rigueur* for most recording artists, a rise which was famously parodied by UK BBC television comedy program Not The Nine O'Clock News who produced a spoof music video; "Nice Video, Shame About The Song". Frank Zappa also parodied the excesses of the genre in his satirical song "Be In My Video".

In the early to mid 1980s, artists started to use more sophisticated effects in their videos, and added a storyline or plot to the music video. Michael Jackson was the first artist to create the concept of the short film. A short film is a music video that has a beginning, middle and end. He did this in a small way with Billie Jean, then in a West Side Story way with Beat It, but it wasn't until the 1984 release of the Thriller short film that he took the music video format to another level. Thriller was a 14-minute-long music video with a clear beginning, middle and ending. Along with the plot, it also had ahead-of-its-time special effects and a memorable dance sequence which has been mimicked ever since this video was released. The video was directed by John Landis. Jackson then went on to make more famous short films such as, Bad (directed by Martin Scorsese), Smooth Criminal, Remember the Time, *Jam*, *Black or White*, *Earth Song* and *Ghosts*.

A *non-representational* music video is one in which the musical artist is never shown. Because music videos are mainly intended to promote the artist, such videos are rare; two early 1980s examples, however, are Bruce Springsteen's Atlantic City and David Bowie/Queen's Under Pressure. Blues Traveler spoofs the non-representational style in its video for the song *Runaround*, in which a thin, stylish group of pretenders lip-synch the music while the real band performs backstage.

## **MTV**

In 1981, the U.S. video channel MTV launched, beginning an era of 24-hour-a-day music on television. (The first video broadcast was "Video Killed the Radio Star", by The Buggles.) With this new outlet for material, the music video would, by the mid-1980s, grow to play a central role in popular music marketing. Many important acts of this period, most notably Madonna, owed a great deal of their success to the skilful construction and seductive appeal of their videos. Some academics have compared music video to silent film, and it is suggested that stars like Madonna have (often quite deliberately) constructed an image that in many ways echoes the image of the great stars of the silent era such as Greta Garbo. Although many see MTV as the start of a "golden era" of music videos and the unparalleled success of a new artform in popular culture, others see it as hastening the death of the true musical artist, because physical appeal is now critical to popularity to an unprecedented degree.

In the information technology era, music videos now approach the popularity of the songs themselves, being sold in collections on video tape and DVD. Enthusiasts of music videos sometimes watch them muted purely for their aesthetic value. Instead of watching the video for the music, (the basis for the artform), the videos are appreciated for their visual qualities, while viewers remain uninterested in the audio portion of the performance. This is a normal sociological reaction, some say, to the increasing trend in the music business to focus on visual appeal of artists, rather than the quality of the music. Critics say that the corporate music managers, over the course of logical and calculated business decisions, have sought to capitalize on the sex appeal of females in music videos rather than in choosing less profitable musicianship-based music.

Since December 1992, when MTV began listing directors with the artist and song credits, music videos have increasingly become an auteur's medium. However, few if any filmmakers train specifically to make music videos, and very few make them exclusively. Most split their time between videos and other film projects (usually commercials), and many readily admit to feature-film ambitions. As a result, music videos are typically seen as a necessary stepping-stone to greater glories, training ground for budding directors compiling clip reels and building name recognition. That so few people consider the form a destination only reinforces three crucial criticisms that have dogged music videos since the Buggles' "Video Killed the Radio Star" aired on cable in 1981: that these short clips are faddishly disposable, that their visuals remain necessarily secondary to the music even as they detract from the listening experience, and that music videos are works of commerce, not art. Alan Durant (1984, p.115) criticized music videos as tending to glittery escapism and musical *portraiture*, which, "may fix currencies of sounds, but...may also close eyes to music seen more broadly as practice." (Middleton 1990, p.91)

What makes music video direction a dubious profession, however, also makes the medium a potentially exciting art form defined by the cross-pollination of ideas and approaches from various disciplines. Because music video directors come from such different backgrounds, they don't share much in the way of common thinking or set-in-stone pedagogy, bringing to the field a diversity of experiences.

### **Music video censorship**

As the concept and medium of a music video is a form of artistic expression, artists have been on many occasions censored if their content is deemed offensive. What may be considered offensive will differ in countries due to censorship laws and local customs and ethics. In most cases, the

record label will provide and distribute videos edited or provide both censored and uncensored videos for an artist. In some cases, it has been known for music videos to be banned in their entirety as they have been deemed far too offensive to be broadcast. The first video to be banned by MTV was "Girls On Film" by Duran Duran in 1981 because it contained full frontal nudity; it was also banned by the BBC. In 1989, Cher's "If I Could Turn Back Time" video (where the singer performs the song in an extremely revealing body suit surrounded by a ship full of cheering sailors) was also banned by MTV.

In 1991 the dance segment of Michael Jackson's "Black or White" was cut because it showed Michael Jackson inappropriately touching himself in the dance segment. Michael Jackson's most controversial video, "They Don't Care About Us" was banned from MTV, VH1, and BBC because of the alleged anti-Semitic message in the song and the visuals in the background of "The Prison Version" of the video. In 2001, Madonna's "What It Feels Like For A Girl" was banned by MTV due to its graphic depiction of violence. Madonna's music video for the song "Justify My Love" was banned due to its depiction of sadomasochism, homosexuality, cross-dressing, and group sex. Madonna pulled her "American Life" video because of its controversial military imagery that seemed inappropriate once the second American war in Iraq began; subsequently, a new video was made for the song. The Prodigy's video for "Smack My Bitch Up" was banned in some countries due to depictions of drug use and nudity. The Prodigy's video for "Firestarter" was banned by the BBC because of its references to arson.

As of 2005, the Egyptian state censorship committee has banned at least 20 music videos which featured sexual connotations due to Muslim ethical viewpoints. The Sex Pistols' video for "God Save the Queen" was banned by the BBC for its anti-royal sentiment. A seemingly innocuous video for "Losing My Religion" by R.E.M. has been banned in Ireland due to its religious imagery. In 2004, many family groups and politicians lobbied for the banning of the Eric Prydz video "Call on me" for containing soft pornography, however, the video was not banned. At some point in the past, the video for (S)aint by Marilyn Manson was banned by that artist's label due to its violence and sexual content.

## **Internet**

The earliest purveyors of music videos on the internet were members of IRC-based groups who took the time to record music videos as they appeared on television, then digitising them and exchanging the .mpg files via IRC channels. As broadband Internet access has become available more widely, various initiatives have been made to capitalise on the continued interest in music videos. MTV itself now provides streams of artists' music

videos, while AOL's recently launched AOL Music features a vast collection of downloadable videos. At its launch, Apple's iTunes Music Store provided a section of free music videos in high quality compression to be watched via the iTunes application. More recently the iTunes Music Store has begun selling music videos for use on Apple's recently introduced iPod with video playback capability. Another new phenomenon, deriving from the popularity of blogging, is the use of so-called music video "codes", lines of HTML code including links to music videos that the individual can simply copy and paste into their blog in order to feature a given video streaming on it.

## Unofficial music videos

With the advent of easy distribution over the internet and cheap video-editing software, a number of fan-created videos began appearing as of the late 1990s. These are typically made by synchronizing existing footage from other sources, such as television series or movie, with the song. In the case of AMV's the source material is drawn from Japanese anime (see anime music video) or from American animation series. Since neither the music nor the film footage is typically licensed, distributing these videos is usually copyright infringement on both counts. Singular examples of unofficial videos include one made for Danger Mouse's illegal mash-up of the Jay-Z track "Encore" with music sampled from The Beatles' White Album, in which concert footage of The Beatles is remixed with footage of Jay-Z and rap dancers, as well as a recent politically charged video by Franklin Lopez of subMedia, cut from television footage of the Katrina aftermath, set to an unofficial remix of Kanye West's "Gold Digger", inspired by the rap-artist's comment "George Bush doesn't care about black people."

## Timeline

- 1941: A new invention hits clubs and bars in the USA: The Panoram Soundie is a jukebox that plays short videoclips along with the music.
- 1956: Hollywood discovers the genre of music-centered films. A wave of rock'n'roll films begins (*Rock Around the Clock*, *Don't Knock the Rock*, *Shake, Rattle and Rock*, *Rock Pretty Baby*, *The Girl Can't Help It*), and the famous Elvis Presley movies. Some of these films integrated musical performances into a story, others were simply revues.
- 1960: In France a re-invention of the Soundie, the Scopitone, gains limited success.

- 1962: British Television invents a new form of music television. Shows like *Top Of The Pops*, *Ready! Steady! Go!* and *Oh, Boy* started as band vehicles and became huge hits.
- 1964: The US-Television market adapts the format. *Hullabaloo* is one of the first US shows of this kind, followed by *Shindig!* (NBC) and *American Bandstand*; The Beatles star in *A Hard Day's Night*
- 1966: The first conceptual promos are aired, for the Beatles' "Paperback Writer" and "Rain". Early in 1967, even more ambitious videos are released for "Penny Lane" and "Strawberry Fields Forever".
- 1970: The record industry discovers these TV-Shows as a great opportunity to promote their artists. They focus on producing short "Promos", early music videos which started to replace the live performance of the artist on the TV-stage.
- 1975: "Bohemian Rhapsody" released by Queen.
- 1980: "Ashes to Ashes" which is considered as a groundbreaking video is released by David Bowie
- 1981: MTV, the first 24-hour satellite music channel, launches. Initially few cable TV operators carry it, but it rapidly becomes a major hit and cultural icon.
- 1984: Michael Jackson's short film *Thriller* is released, changing the concept of music videos forever. *The Making of Thriller* home video was also released in 1984. It was the first ever video about the making of a music video.
- 1986: *Sledgehammer*, the groundbreaking video from Peter Gabriel, is first shown.
- 1989: MTV renames it's "Video Vanguard Award" to the " Michael Jackson Vanguard Award" in honor of Michael Jackson for his contributions to the art of music video.
- 1989: Madonna's controversial video for *Like a Prayer* is released.
- 1992: MTV begins to credit music video directors.
- 1992: Guns N' Roses's groundbreaking video for "November Rain" is released and remains as one of the costliest ever produced.
- 1996: Pop-up Video is first aired on VH1.
- 1996: M2 is launched as a 24-hour music video channel, as MTV has largely replaced videos with other content.
- 1999: M2 is renamed to MTV2.
- 2002: MTV Hits is launched as MTV2 is gradually showing fewer music videos.
- 2006: The Norwegian unsigned band Rektor makes the worlds first playable videogame musicvideogame

## Music video stations

Here are some of the most popular music video stations from around the world:

|                                      |               |

## Music video game

A **music video game**, also commonly known as a **music game**, **rhythm action game**, or **rhythm game**, is a type of video game where the gameplay is oriented almost entirely around the player's ability to follow a [musical](#) beat and stay with the [rhythm](#) of the game's [soundtrack](#). Since the game play for this type of game is largely aural rather than visual, this type of game is similar to audio games. However, music games generally require a visual component as well.

In a music video game, the player must press specific buttons, or activate controls on a specialized game controller, in time with the game's [music](#). The control scheme is usually fairly simplistic, and the moves required are usually pre-determined rather than randomized. More recently, music games such as Rez (2002) have attempted to move away from the traditional "Simon says" approach, attempting to give the player more freedom in the sounds they create.

## Major developers

### NanaOn-Sha

A Japanese video game company now known as NanaOn-Sha is credited with the creation of what is generally considered to be the first modern rhythm game, PaRappa the Rapper (1996). The gameplay generally involves repeating the rhythms of [raps](#) from another character (one per level), by pressing any of six buttons on the game controller. The button sequences are displayed on a timeline the top of the screen. The press of a button plays a

corresponding sample of PaRappa's voice, regardless of whether the timing of the press or the selection of the button is correct (PaRappa can sometimes be heard to say "oops!" if no sample is associated with the button at that moment).

The game is scored for sequence and timing, and adhering exactly to the given timeline results in a passing grade. However, unlike many other music games, the player may obtain an even higher score and access a special "COOL" mode of play by "[freestyling](#)" (though the algorithm by which this is scored is often nebulous and the results virtually unpredictable).

The game's success resulted in the spinoff UmJammer Lammy (1999), which is based on [guitar](#) samples, and eventually a proper sequel (2002). NanaOn-Sha also produced another novel music game, Vib-Ribbon (1999), but released the game only in Japan and Europe.

## **BEMANI (née Konami g.m.d)**

An extremely popular series of games published by Konami in Japan that make up a significant proportion of the genre, and are known as the "BEMANI series", after the company's music games division. The series is named, in a common Japanese syllabic abbreviation, after its flagship game, beatmania (1997), in which a player uses a set of buttons and a controller in the form of a [DJ's turntable](#). The series also includes several games based on controllers shaped like musical instruments, such as GuitarFreaks (1998) and DrumMania (1999).

Only a limited selection of the BEMANI games have been released outside of Asia, the most notable definitely being Dance Dance Revolution (1998) (also known as Dancing Stage in European release), in which players, in time with an on-screen sequence, step on or otherwise activate panels on a large (about 1 meter square) floor controller which in home versions somewhat resembles the Nintendo Power Pad accessory. The overwhelming success of DDR and its sequels has spawned numerous re-creations of the game or its mechanics, both commercial (Pump It Up, EZ2Dancer) and free (including StepMania, which is also FOSS, and Dance With Intensity, which is not), making it possibly the most duplicated music game in existence.

The BEMANI series can be credited with several trends in music games. One is the use of novel, specialized game controllers, in both arcade and home versions (which Konami has also pioneered in non-music games such as *Police 911*). Another is a basis on a sizeable catalog of short mixes and covers of existing songs as well as songs produced in-house for the game. Most or all games in the series have (often multiple) sequels in which the mechanics of the game vary little from the original and the main change is the selection of songs.

## Harmonix

An American game company called Harmonix makes primarily music games, and is famous for the game *FreQuency* (2001) and its sequel *Amplitude* (2003), both of which feature edits of existing songs (as well as original selections) and a gameplay similar to that of *beatmania*.

Harmonix also produced *Karaoke Revolution* (2003) (published by Konami as a BEMANI game), in which a player sings along to background music and on-screen lyrics (in the style of [karaoke](#)) into a microphone and scored on correct pitch.

A new (as of November 2005) game by Harmonix called *Guitar Hero* is extremely similar to Konami's *GuitarFreaks*, making use of a nearly identical guitar-shaped (but only slightly guitar-like) controller with more neck buttons.

The company was one of the first developers to make use of the EyeToy camera accessory for the PlayStation 2.

## United Game Artists/Q Entertainment

Before it was absorbed by Sonic Team in 2003, SEGA's United Game Artists division, led by Tetsuya Mizuguchi, created several music games. In the month following the dissolution of UGA, Mizuguchi left SEGA along with several of his co-workers to form an independent game studio, Q Entertainment, which continues producing music-based games, along with a handful of other titles.

The first two titles produced by UGA were the Dreamcast game *Space Channel 5* and its sequel (both were later re-released for the PlayStation 2). In the game, the player controls Ulala, a swingin' reporter for the titular broadcast network, Space Channel 5. Ulala defeats her enemies (which include aliens, robots, and nefarious humans) by mesmerizing them with her dancing and/or singing, then incapacitating them with her raygun. The control scheme follows a "simon says" format, with players repeating sequences of button presses in time with the ever-present music.

The last title made by UGA before it was dissolved was *Rez*, a unique rail shooter for the Dreamcast and PlayStation 2. In *Rez*, the player flies through a psychedelic, abstract landscape while a [Techno](#) or [Breakbeat](#) track plays. Whenever the player locks on to an enemy, shoots, or uses a special ability, there is a both a musical and a visual effect which occurs in time with the playing track. The controller's vibrating motors also pulse in time with the beat. The sensory experiences offered by the game (visual, auditory, and tactile) are all intensely coordinated, and the unique play experience earned *Rez* many excellent reviews, although sales were lackluster.

After Mizuguchi left SEGA to form Q Entertainment, his new company produced two titles for new portable systems, Lumines for the PlayStation Portable and Meteos for the Nintendo DS. Meteos includes a largely orchestral soundtrack, but the gameplay does not center on music or rhythm, so it is outside the scope of this article.

Lumines is a puzzle game in which the goal is to arrange like-colored falling blocks into squares which will then disappear. Like Rez, each stage in the game has a unique musical and visual theme. Unlike, for example, Tetris, blocks which are cleared do not disappear immediately. Instead, a bar called the timeline sweeps across the screen in time with the music and clears away the properly arranged blocks, producing a musical effect in sync with the background music each time this happens.

Finally, Q Entertainment is currently working on producing a new PSP title called Every Extend Extra. It is as an action game with shooter like elements. The game will feature rhythm-oriented gameplay, music, and psychedelic graphics, much like Rez.

## Elmorex Ltd

Elmorex Ltd published pitch scoring karaoke game with backgrounds in 2000. The product was not published outside of Finland and was aimed for children.

## Music workstation

A **music workstation** is piece of electronic [musical](#) equipment providing the facilities of:

- a [sound module](#),
- a [music sequencer](#) and
- (usually) a [musical keyboard](#).

It enables a [musician](#) to [compose electronic music](#) using just one piece of equipment.

The sound module is generally a sample-playback [synthesizer](#). The concept of a sequencer combined with a synthesizer is not entirely new - the Sequential Circuits Six-Trak provided this already in a crude form. All parts of it were purely based on subtractive synthesis; so no preset drum kits, a thing every sample-playback synthesizer since the Roland D-50 featured.

However, the incarnation of the idea reached its maturity (and a boom in sales in the truest sense - 250,000 sold, the most a synthesizer ever did!) with the Korg M1. Besides just a sequencer, it also provided a large enough display, a vast array of sounds (with the woody Piano sound and the "Universe" patch being the most famous), and built-in effects. Floppy disk drives were included on later machines, making it easy to store the sequencing data (either as proprietary or Standard MIDI File format).

Nowadays, workstations have evolved to the point that they can either include a DSP-based synthesizer upgrade (Korg MOSS board for Trinity and Triton workstations, Yamaha AN-PLG and DX-PLG plugin boards), more multisamples and preset-memory locations (Roland JV/XP and SRV/XV series expansion boards, Korg EXB-PCM expansion boards, various Yamaha PLG-boards) and even a complete sampler (Korg sampling expansion for the Trinity) or a possibility for treating audio via the external inputs (Yamaha VH-PLG plugin board).

The Big Three (Yamaha, Roland and Korg) have sampling now as a default option in respectively the Motif (ES), the Fantom (S/X) and the Triton. They have a relatively big screen to give a comprehensive overview of the sound, sequencer and sampling options (since the display is one of the most expensive components of these workstations, Roland and Yamaha chose to cut back by not using a touch screen display, and in case of Yamaha not even a high-resolution display). The screen replaces what would otherwise be a lot of extra rotary knobs, sliders and buttons, which add a lot to the cost of the machine, make the operation look unnecessarily complex, and generally aren't used in the first place.

The sequencer stores events like notes and controllers (like pitch bend), and then replays them into the sound generator, which then makes the music.

Although many music workstations have a keyboard, this is not always the case. In the 1990s, Yamaha, and then Roland, released a series of portable music workstations (starting with the Yamaha QY10). These are sometimes called Walkstations.

The concept of the workstation mutated around 1996 and gave birth to the groovebox - a key-less version of a workstation, still with a self-contained sound source and sequencer, mostly aimed at dance. Again, nowadays they

also feature a sampler. Roland more or less started the hype, and Yamaha, Korg and E-mu followed suit.

## Musica ficta

In European music prior to about 1600, *musica ficta* (from Latin, "false" or "feigned" music) referred to chromatically altered pitches, not notated in the music, which were to be supplied by performers.

Simply put, *musica ficta* were notes outside of the [diatonic](#) modal system in use in a given piece, and which were used to avoid harsh [harmonic](#) or [melodic](#) intervals (for example the tritone, the "diabolus in musica"). An example would be the use of a B-flat instead of a B-natural, in order to avoid a tritone against an F in another part. In modern transcriptions of [Medieval](#) and [Renaissance](#) music, these notes are almost invariably indicated with accidentals, since modern singers cannot possibly receive the kind of training given to singers seven hundred years ago; only small portions of that training can be reconstructed from fragmentary and often contradictory sources.

The exact performance practice of *musica ficta*, where and when they were used, is a matter of intense investigation and controversy among [musicological](#) scholars; it has been controversial, and is likely to remain so, for a long time. [Music theorists](#) from Odo of Cluny in the 10th century to Zarlino in the 16th century give highly different rules and situations for application of ficta. The controversy is not only among contemporary musicologists; theorists of the Late Middle Ages were never in agreement on the rules of ficta either. 13th century music theorist Johannes de Garlandia and 14th century theorist Philippe de Vitry both wrote that ficta were essential in singing polyphony, but resisted their use in plainchant, while early 14th century theorist Jacques de Liège insisted that notes in plainchant needed to be altered with judicious application of *musica ficta*.

The use of *ficta* originated with the difference between B-flat and B-natural, which was integrated in medieval theory and in practical teaching as part of the system of hexachords. However, rules of cadencing and tritone avoidance could also require other notes to become altered under certain circumstances.

13th century theorists divided the use of *ficta* into two general categories: *causa necessitatis* (*ficta* supplied by necessity, for example to avoid a dissonant interval); and *causa pulchritudinis* (*ficta* supplied for reason of beauty). Sometimes a melodic phrase simply sounds better, or sounded better to a trained 13th-century ear, when it is smoothed out by judicious application of *ficta*.

In particular, [contrapuntal treatises](#) of the Renaissance, such as that of Johannes Tinctoris, counseled resolution at cadences through the largest possible sixth into the octave, which in many cases requires the upper voice to use a sharp in order to form the major sixth. At such points, accidentals were in fact sometimes notated in the 14th and early 15th centuries.

It was formerly believed that such treatises were addressed to [composers](#); now, by further examination of their Latin texts, many [musicologists](#) have concluded that they were in fact speaking to performers, both of notated and improvised polyphony.

As an example of a related contemporary performance practice, Sacred Harp singing contains a situation similar in concept to *ficta*, involving the non-notated raising of the sixth scale degree in a minor mode (resulting in a Dorian inflection); new singers must be taught to do this by ear.

## Musica reservata

In [music history](#), *musica reservata* is a term referring to either a style or a performance practice in a cappella vocal music of the latter half of the 16th century, mainly in Italy and southern Germany, involving refinement, exclusivity, and intense emotional expression of sung text.

The exact meaning of the term, which appears in scattered contemporary sources, is a matter of much debate among [musicologists](#). While some of the sources are contradictory, four aspects seem clear:

1. *musica reservata* involved use of chromatic progressions and voice-leading, a manner of composing which became fashionable in the 1550s, both in [madrigals](#) and [motets](#);

2. it involved a style of performance, perhaps with extra ornamentation or other emotive methods;
3. it used word-painting, i.e. use of specific and recognizable musical figures to illuminate specific words in the text; and
4. the music was designed to be performed by, and appreciated by, small groups of connoisseurs.

Composers in the style of *musica reservata* included Nicola Vicentino, who wrote about it in his *L'antica musica ridotta alla moderna prattica* (1555); Philippe de Monte, the prolific composer of madrigals who mainly worked in Vienna; and above all, Orlande de Lassus, the renowned and versatile composer working in Munich whose *Prophetiae Sibyllarum*, probably written in the 1560s, may represent the peak of development of the style. The [chord](#) progression which begins the *Prophetiae Sibyllarum* is jarring even to ears accustomed to 20th century music: the opening chords are C major - G major - B major - C# minor - E major - F# minor, all in root position, sung to the text: "chromatic songs, which you hear in artful modulation ..."

The style of *musica reservata*, with its implication of a highly refined, perhaps manneristic style of composition and performance along with a very small audience, is reminiscent both of the [ars subtilior](#) of the Avignon group of composers of the late 14th century, and also perhaps some of the contemporary avant-garde classical music of the late 20th century.

## Musical analysis

**Musical analysis** can be defined as a process attempting to answer the question "how does this [music](#) work?". The method employed to answer this

question, and indeed exactly what is meant by the question, differs from analyst to analyst. According to Ian Bent (Bent, 1987), analysis is "an approach and method [that] can be traced back to the 1750s ... [though] it existed as a scholarly tool, albeit an auxiliary one, from the Middle Ages onwards."

Edward Cone ("Analysis Today") argues that musical analysis lies in between description and prescription. Description consists of simple non-analytical activities such as labeling chords with Roman numerals or tone-rows with integers or row-form, while the other extreme, prescription, consists of "the insistence upon the validity of relationships not supported by the text." Analysis must, rather, provide insight into listening without forcing a description of a piece that can not be heard.

## Analytical situations

Analysis is an activity most often engaged in by musicologists and most often applied to western [classical music](#), although music of non-western cultures and that of an oral tradition, rather than written, is also often analysed. An analysis can be conducted on a single piece of music, on a portion or element of a piece or on a collection of pieces. A musicologist's stance is his or her analytical situation. This includes the physical dimension or corpus being studied, the level of stylistic relevance studied, and whether the description provided by the analysis is of its immanent structure, compositional (or esthetic) processes, perceptual (or poietic) processes (Nattiez 1990: 135-6), all three, or a mixture.

Stylistic levels may be hierarchized as an inverted triangle:

- universals of music
  - system (style) of reference
    - style of a genre or an epoch
      - style of composer X
        - style of a period in the life of a composer
          - work

(Nattiez 1990: 136, he also points to Nettl 1964: 177, Boretz 1972: 146, and Meyer)

Nattiez outlines six analytical situations, preferring the sixth:

**Poietic  
processes**

**Immanent  
structures of**

**Esthetic  
processes**

Communication between the three levels

(Nattiex 1990: 140)

Examples:

1. "tackles only the immanent configuration of the work." Allen Forte's [musical set theory](#).
2. "proceed[s] from an analysis of the neutral level to drawing conclusions about the poietic." Reti's (1951: 194-206) analysis of Debussy's *la Cathédrale engloutie*
3. the reverse of the previous, taking "a poietic document -- letters, plans, sketches -- ... and analyzes the work in the light of this information." Paul Mie's "stylistic analysis of Beethoven in terms of the sketches (1929)."
4. the most common, grounded in "perceptive introspection, or in a certain number of general ideas concerning musical perception ... a musicologist ... describes what he or she thinks is the listener's perception of the passage." Meyer's (1956: 48) analysis of measures 9-11 of Bach's C minor fugue in Book I of the *Well-Tempered Clavier*.
5. "Begins with information collected from listeners to attempt to understand how the work has been perceived ... obviously how experimental psychologists would work."

6. "The case in which an immanent analysis is equally relevant to the poietic as to the esthetic." Schenkerian analysis, which, based on the sketches of Beethoven (external poietics) eventually show through analysis how the works must be played and perceived (inductive esthetics).

### **Compositional analysis**

Jacques Chailley (1951: 104) views analysis entirely from a compositional viewpoint, arguing that, "since analysis consists of 'putting oneself in the composer's shoes,' and explaining what he [or she] was experiencing as he was writing, it is obvious that we should not think of studying a work in terms of criteria foreign to the author's own preoccupations, no more in tonal analysis than in harmonic analysis."

### **Perceptual analysis**

On the other hand, Fay (1971: 112) argues that, "analytic discussions of music are often concerned with processes that are not immediately perceivable. It may be that the analyst is concerned merely with applying a collection of rules concerning practice, or with the description of the compositional process. But whatever he [or she] aims, he often fails -- most notably in twentieth-century music -- to illuminate our immediate musical experience," and thus views analysis entirely from a perceptual viewpoint, as does Edward Cone (1960: 36), "true analysis works through and for the ear. The greatest analysts are those with the keenest ears; their insights reveal how a piece of music should be heard, which in turn implies how it should be played. An analysis is a direction for performance," and Thomson (1970: 196): "it seems only reasonable to believe that a healthy analytical point of view is that which is so nearly isomorphic with the perceptual act."

### **Analyses of the immanent level**

Analyses of the immanent level include analyses by Alder, Heinrich Schenker, and the "ontological structuralism" of the analyses of Pierre Boulez, who says in his analysis of the Rite of Spring (1966: 142), "must I repeat here that I have not pretended to discover a creative process, but concern myself with the result, whose only tangibles are mathematical relationships? If I have been able to find all these structural characteristics, it is because they are there, and I don't care whether they were put there consciously or unconsciously, or with what degree of acuteness they

informed [the composer's] understanding of [his or her] conception; I care very little for all such interaction between the work and 'genius.'"

Again, Nattiez (1990: 138-9) argues that the above three approaches, by themselves, are necessarily incomplete and that an analysis of all three levels is required. Jean Molino (1975a: 50-51) shows that musical analysis shifted from an emphasis upon the poietic vantage point to an esthetic one at the beginning of the eighteenth century (Nattiez 1990: 137).

## Nonformalized analyses

Nattiez distinguishes between nonformalized and formalized analyses. Nonformalized analyses, apart from musical and analytical terms, do not use resources or techniques other than language. He further distinguishes nonformalized analyses between impressionistic, paraphrases, or hermeneutic readings of the text (explications de texte). Impressionistic analyses are in "a more or less high-literary style, proceeding from an initial selection of elements deemed characteristic," such as the following description of the opening of Claude Debussy's *Prelude to the Afternoon of a Faun*: "The alternation of binary and ternary divisions of the eighth notes, the sly feints made by the three pauses, soften the phrase so much, render it so fluid, that it escapes all arithmetical rigors. It floats between heaven and earth like a [Gregorian chant](#); it glides over signposts marking traditional divisions; it slips so furtively between various keys that it frees itself effortlessly from their grasp, and one must await the first appearance of a harmonic underpinning before the melody takes graceful leave of this causal [atonality](#)." (Vuillermoz 1957: 64)

Paraphrases are a "respeaking" in plain words of the events of the text with little interpretation or addition, such as the following description of the "Bourée" of Bach's *Third Suite*: "An anacrusis, an initial phrase in D major. The figure marked (a) is immediately repeated, descending through a third, and it is employed throughout the piece. This phrase is immediately elided into its consequent, which modulates from D to A major. This figure (a) is used again two times, higher each time; this section is repeated." (Warburton 1952: 151)

"Hermeneutic reading of a musical text is based on a description, a 'naming' of the [melody](#)'s elements, but adds to it a hermeneutic and phenomenological depth that, in the hands of a talented writer, can result in genuine interpretive masterworks.... All the illustrations in Abraham's and Dahlhaus's *Melodielehre* (1972) are historical in character; Rosen's essays in *The Classical Style* (1971) seek to grasp the essence of an epoch's style; Meyer's analysis of Beethoven's *Farewell Sonata* (1973: 242-68) penetrates melody from the vantage point of perceived structures." He gives as a last

example the following description of Franz Schubert's *Unfinished Symphony*:  
". "

## Formalized analyses

Formalized analyses propose models for melodic functions or simulate music. He (Meyer?) distinguishes between global models, which "provide an image of the whole corpus being studied, by listing characteristics, classifying phenomena, or both; they furnish statistical evaluation," and linear models which "do not try to reconstitute the whole melody *in order of* real time succession of melodic events. Linear models ... describe a corpus by means of a system of rules encompassing not only the hierarchical organization of the melody, but also the *distribution*, environment, and context of events, examples including Chenoweth's (1972, 1979) explanation of "succession of pitches in New Guinean chants in terms of distributional constraints governing each melodic interval," Herndon's (1974, 1975) transformational analysis, and Baroni and Jacoboni's (1976) "grammar for the [soprano](#) part in Bach's chorales [which] when tested by computer ... allows us to generate melodies in Bach's style."

Global models are further distinguished as analysis by traits, which "identify the presence or absence of a particular variable, and makes a collective image of the song, genre, or style being considered by means of a table, or classificatory analysis, which sorts phenomena into classes," one example being Helen Roberts' (1955: 222) "trait listing", and classificatory analysis, which "sorts phenomena into classes," examples being Kolinski's (1956) universal system for classifying melodic contours. Classificatory analyses often call themselves taxonomical. "Making the basis for the analysis explicit is a fundamental criterion in this approach, so *delimiting* units is always accompanied by carefully *defining* units in terms of their constituent variables."

## Intermediary analyses

Nattiez lastly proposes intermediary models "between reductive formal precision, and impressionist laxity." These include Schenker, Meyer (classification of melodic structure in 1973: Chapter 7), Narmour, and Lerdahl-Jackendoff's "use of graphics without appealing to a system of formalized rules," complementing and not replacing the verbal analyses. These are in contrast to the formalized models of Babbitt (1972) and Boretz (1969). According to Nattiez Boretz "seems to be confusing his own formal, logical model with an immanent essence he then *ascribes* to music," and

Babbitt "defines a musical theory as a hypothetical-deductive system ... but if we look closely at what he says, we quickly realize that the theory *also* seeks to legitimize a music yet to come; that is, that it is also normative ... transforming the *value* of the theory into an aesthetic *norm* ... from an anthropological standpoint, that is a risk that is difficult to countenance." Similarly, "Boretz enthusiastically embraces logical formalism, while evading the question of knowing how the data -- whose formalization he proposes -- have been obtained." (167)

## Discretization

The process of analysis often involves breaking the piece down into relatively simpler and smaller parts. Often, the way these parts fit together and interact with each other is then examined. This process of discretization or segmentation is often considered, as by Jean-Jacques Nattiez (1990), necessary for music to become accessible to analysis. Fred Lerdahl argues that discretization is necessary even for lay perception, thus making it a basis of his analyses, and finds pieces such as *Artikulation* by György Ligeti unaccessible, while Rainer Wehinger (1970) created a "Hörpartitur" or "score for listening" for the piece, representing different sonorous effects with specific graphic symbols much like a transcription.

## Other analyses

Some analysts, such as Donald Francis Tovey (whose *Essays in Musical Analysis* are among the most accessible musical analyses) have presented their analyses in prose. Others, such as Hans Keller (who devised a technique he called *functional analysis*) used no prose commentary at all in some of their work.

There have been many notable analysts other than Tovey and Keller. One of the best known and most influential was Heinrich Schenker, who developed Schenkerian analysis, a method which seeks to reduce all tonal classical works to a simple [contrapuntal](#) sequence. Rudolph Réti is notable for tracing the development of small melodic motifs through a work, while Nicolas Ruwet's analysis amounts to a kind of musical semiology.

Musicologists associated with the new musicology often use musical analysis (traditional or not) along with or to support their examinations of the performance practice and social situations in which music is produced and

which produce music, and vice versus. The insights gained from the social considerations may then yield insight into the methods of analysis, and vice versus.

Metaphor and figurative description may be a part of analysis, and a metaphor used to describe pieces "reifies their features and relations in a particularly pungent and insightful way: it makes sense of them in ways not formerly possible." Even absolute music may be viewed as a "metaphor for the universe" or nature as "perfect form." (Guck cited in Bauer 2004, p.131)

## Divergent analyses

Typically a given work is analyzed by more than one person and different or divergent analyses are created. For instance, the first two bars of the prelude to Claude Debussy's *Pelléas et Mélisande*:

are analyzed differently by Leibowitz, Laloy, van Appledorn, and Christ. Leibowitz analyses this succession harmonically as D minor:I-VII-V, ignoring melodic motion, Laloy analyses the succession as D:I-V, seeing the G in the second measure as an ornament, and both van Appledorn and Christ analyses the succession as D:I-VII.

Nattiez (173) argues that this divergence is due to the analysts' respective analytic situations, and to what he calls transcendent principles (1997b: 853, what George Holton might call "themata"), the "philosophical project[s]", "underlying principles", or a prioris of analyses, one example being Nattiez's use of the tripartitional definition of sign, and what, after epistemological historian Paul Veyne, he calls plots.

Van Appledorn sees the succession as D:I-VII so as to allow the interpretation of the first chord in measure five, which Laloy sees as a dominant seventh on D (V/IV) with a diminished fifth (despite that the IV doesn't arrive till measure twelve), while van Appledorn sees it as a French sixth on D, D-F#-Ab-[C] in the usual second inversion. This means that D is the second degree and the required reference to the first degree, C, being established by the D:VII or C major [chord](#). "The *need to explain* the chord in measure five establishes that C-E-G is 'equally important' as the D-(F)-A of measure one." Leibowitz gives only the bass for chord, E, indicating the progression I-II an "unreal" progression in keeping with his "dialectic between the real and the unreal" used in the analysis, while Christ explains the chord as an augmented eleventh with a bass of Bb, interpreting it as a traditional tertian extended chord.

Not only does an analyst select particular traits, "he or she arranges [them] according to a plot [intrigue].... Our sense of the component parts of a

musical work, like our sense of historical 'facts,' is mediated by lived experience." (176)

While John Blacking (1973: 17-18), among others, holds that "there is ultimately only one explanation and ... this could be discovered by a context-sensitive analysis of the music in culture," according to Nattiez (1990: 168) and others, "there is never *only one valid* musical analysis for any given work." Blacking gives as example: "everyone disagrees hotly and stakes his [or her] academic reputation on what Mozart really meant in this or that bar of his [symphonies](#), [concertos](#), or [quartets](#). If we knew exactly what went on inside Mozart's mind when he wrote them, there could be only one explanation". (93) However, Nattiez points out that even if we could determine "what Mozart was thinking" we would still be lacking an analysis of the neutral and esthetic levels.

Roger Scruton (1978: 175-76), in a review of Nattiez's *Fondements*, says one may, "describe it as you like so long as you hear it correctly ... certain descriptions suggest wrong ways of hearing it ... what is obvious to hear [in *Péleas et Mélisande*] is the contrast in mood and atmosphere between the 'modal' passage and the bars which follow it." Nattiez counters that if compositional intent were identical to perception, "historians of musical language could take a permanent nap.... Scruton sets himself up as a universal, absolute conscience for the 'right' perception of the *Péleas et Mélisande*. But hearing is an active symbolic process (which must be explained): *nothing in perception is self-evident.*"

Thus Nattiez suggests that analyses, especially those intending "a semiological orientation, should ... at least include a comparative critique of already-written analyses, when they exist, so as to explain why the work has taken on this or that *image* constructed by this or that writer: all analysis is a representation; [and] an explanation of the analytical criteria used in the new analysis, so that any critique of this new analysis could be situated in relation to that analysis's own *objectives* and *methods*. As Jean-Claude Gardin so rightly remarks, 'no physicist, no biologist is surprised when he or she is asked to indicate, in the context of a new theory, the physical data and the mental operations that led to its formulation' (1974: 69). Making one's procedures explicit would help to create a *cumulative progress in knowledge.*" (177)

## Musical box

A **musical box** (or **music box**) is a 19th century automatic [musical instrument](#) that produces sounds by the use of a set of pins placed on a revolving cylinder or disc so as to strike the tuned teeth of a steel comb. They were developed from musical snuff boxes of the 18th century, and called carillons à musique. Some of the more complex boxes also have a tiny drum and small bells, in addition to the metal comb. Alec Templeton, an avid collector of music boxes, and a professional concert musician, once noted

that the tone of a musical box is unlike that of any musical instrument (although it is best described as somewhere between the timbres of an mbira and a celesta).

## History

The original snuff boxes were tiny containers which could fit into a gentleman's waist coat pocket. The musical boxes could have any size from that of a hat box to a large piece of furniture. Most of them were table top specimens though. They were usually powered by clockwork and originally produced by artisan watchmakers.

For most of the 19th century the bulk of musical box production was concentrated in Switzerland, building upon a strong watchmaking tradition. The first musical box factory was opened there in 1815 by Jérémie Recordon and Samuel Junod. There were also a few manufacturers in Bohemia and Germany. By the end of the 19th century some of the European makers had opened factories in the United States.

The cylinders were normally made of metal and powered by a spring. In some of the costlier models, the cylinders could be removed to change melodies, thanks to an invention by Paillard in 1862, which was perfected by Metert, of Geneva in 1879. In some exceptional models there were four springs, to provide continuous play for up to three hours.

The very first boxes at the end of the 18th century made use of metal disks. The switch over to cylinders seems to have been complete after the Napoleonic wars. In the last decades of the 19th century however, mass produced models such as the *Polyphon* and others all made use of interchangeable metal disks instead of cylinders. The cylinder based machines rapidly became a minority.

The term "musical box" is also applied to clockwork devices where a removable metal disk or cylinder was used only in a "programming" function without producing the sounds directly by means of pins and a comb. Instead, the cylinder (or disk) worked by actuating bellows and levers which fed and opened pneumatic valves which activated a modified [wind instrument](#) or plucked the chords on a modified [string instrument](#). Some devices could do both at the same time, and were often combinations of player pianos and musical boxes, such as the *Orchestrion*.

At the end of the 19th century and the beginning of the 20th most musical boxes were gradually replaced by [Player pianos](#), which were more versatile and loud, and also melodious, when kept tuned, and by the smaller gramophones which had the advantage of playing back voices. Escalating labor costs increased the price and further reduced volume. Now modern automation is helping bring music box prices back down.

Collectors prize surviving musical boxes from the 19th century and the early 20th century, as well as new music boxes being made today in several

countries (see “Evolving Box Production”, below). The cheap, small windup music box movements (including the cylinder and comb and the spring) to add a bit of music to mass produced jewelry boxes and novelty items are now produced in countries with low labor costs.

Many kinds of music box movements are available to the home craft person, locally or through online retailers.

## **Coin operated music boxes**

In Switzerland coin-operated music boxes, usually capable of playing several tunes, were installed in places like train stations and amusement parks. Some of the models had a mechanism for automatically changing the metal disks. These were, in a sense, the precursors to jukeboxes. However, since they produced music instead of playing back any sound, including human voices singing, they soon disappeared from their intended venues, displaced by the jukebox.

Because most of the coin-operated music boxes were built for rough treatment (such as typical slapping and kicking by a disgruntled customer) many of these large models have survived into the 21st century, despite their relatively low production quantities. They are eagerly sought by collectors who have the space for their large or very large cabinets.

## **Music Box Elements**

- The bedpan (or bedplate) is the relatively heavy metal foundation on which all the other pieces are fastened, usually by screws.
- The ratchet lever or the windup key is used to put the spring motor under tension, that is to wind it up.
- The spring motor or motors (2 or more can be used to make playing times longer) give anywhere from a few minutes to an hour or more of playing time.
- The comb is a flat piece of metal with dozens or even hundreds of tuned teeth of different lengths.
- The cylinder is the programming object, a metallic version of a punched card which, instead of having holes to express a program, is studded with tiny pins at the correct spacing to produce music by striking the teeth of the comb at the correct time. The disc in a disc music box plays this function.

- The disc is the programming object, a metallic version of a punched card. In a disc music box, changeable tune discs have holes or projections that engage a point on a star shaped wheel, causing it to rotate. Turning the star wheel causes one or more of the other points of the star wheel to lift and drop the tooth or teeth on one or more combs. The cylinder in a cylinder music box plays this function.

## **Evolving box production**

Between the two world wars most of the Swiss companies converted to the manufacture of other products requiring precise mechanical parts. Some went back to making watches, others were eventually responsible for the famous Bolex movie cameras and the Hermes typewriters. Some simply sold out to Reuge.

Located near Lake Neuchâtel, Reuge is one of the last of the Swiss survivors making music boxes of all sizes and shapes, with or without automatons in imitation of past models of the previous centuries or in a modern style with clear acrylic sides to see the mechanical operation. They have in a sense branched out widely from their original cylinder offerings since they now also offer traditional looking music boxes with removable metal disks for around a 1,000 Euros, with each disk costing in the neighborhood of 14 Euros. The higher range boxes with removable cylinders and small assorted tables made of fine woods can cost up to 34,000 Euros and about an equivalent number of US dollars. They also sell several models of clear acrylic paperweights with a musical box movement inside, for a minimum of about 45 Euros. They have, however, discontinued the smaller movements.

Sankyo Seiki In Japan started up in the aftermath of WWII, using the latest in automation. Modern production methods resulted in reasonable prices, producing company growth. Sankyo started with small movements, introduced 50 note movements by the late 1970's, and in 2006 is producing disc boxes playing discs as large as 16" (with two 80 note combs and reminiscent of the "Mira") and are also working on a dual cylinder 100 note movement. Sankyo now offers a wide variety of music boxes in Japan, and supplies movements to many other manufacturers and distributors. Some of these sell them retail (even online) to hobbyists for as low as 3 Euros each. Sankyo Seiki bills itself as the biggest manufacturer of music boxes in the world, and advertises that it controls 50% of the market. Recently, it has started selling licences for its music box tunes to cellular phone companies,

for use as ring tones. The company is an industrial concern which also makes magnetic and hologram card readers, appliance components, industrial robots and miniature motors of all kinds.

The Porter Music Box company of Vermont produces steel disc music boxes in several formats. They offer clockwork, spring wound models as well as electric ones. They stand out by their continuing production of discs, with a selection of about a thousand tunes. The discs can also be played on many antique music boxes bearing the Polyphony and Regina brand names.

The small 18 note musical movements are now being made almost exclusively in countries with low labor costs such as China and Taiwan.

## Musical collective

**Musical collective** is a phrase used in reference to a leaderless entity that is predisposed to performing music that may be considered *experimental*. The sound becomes the focus, as opposed to having the outfit become a stepping stone for potential cynosures. Such entities have transitioned from the traditional hierarchical configuration that features either a frontman (e.g. The

Cure's Robert Smith, or Trent Reznor of Nine Inch Nails), or a plurality of band members in tension for dominance (e.g. Louise Post & Nina Gordon of Veruca Salt, or The Beatles' John Lennon & Paul McCartney.) Collectives are seen as an alternative to more ego-driven, combative paradigms of group music-making.

Musical collectives allow for flexibility in their rosters. As such, most of the members are free to rotate in and out of the line-up.

## List of Notable collectives

Acappella  
Bandits of the Acoustic Revolution  
Belle and Sebastian  
Bomb The Music Industry

# Musical composition

**Musical composition** is:

- an original [piece](#) of [music](#)
- the [structure](#) of a musical piece
- the process of creating a new piece of music

## A musical composition

A piece of music exists in the form of a written composition in [musical notation](#) or as a single acoustic event (a live performance or recorded track). If composed before performance, music can be performed by memory, through written [musical notation](#), or through a combination of both. Compositions are comprised of musical elements, elements which vary widely from person to person and culture to culture. [Improvisation](#) is the act of composing during performance, of assembling elements "spontaneously."

## Composing music

People who practice composition are called [composers](#). Useful skills in composition include writing [musical notation](#), instrumentation, and handling [musical ensembles](#) (orchestration). The definition of composition has broadened to include extended techniques such as [improvisation](#), musical montage, preparing instruments, using non-traditional objects or methods of sound production, and making music from silence, as John Cage famously did.

**Compositional techniques** are the methods used to create music. In discussing the structure or organization of a musical work, the "composition" of that work is generally called its [musical form](#). These techniques draw a parallel to art's formal elements. Sometimes, the entire form of a piece is through-composed, meaning that each part is different, with no repetition of sections; other [forms](#) include strophic, rondo, verse-chorus, etc. Some pieces are composed around a set [scale](#), where the compositional technique might

be considered the usage of a particular scale. Others are composed during performance (see [improvisation](#)); techniques are sometimes used, however, in this case also.

Important in tonal musical composition is the [scale](#) for the [notes](#) used, including the mode and tonic note. When playing or reading [classical notated](#) music, only the key signature (a designated set of notes in scale) matters. In music using [twelve tone techniques](#), the tone row is even more comprehensive a factor than a scale. Similarly, music of the Middle East employs compositions that are rigidly based on a specific [scale](#) (such as the dorian, phrygian, mixolydian, and locrian scales etc...), often within improvisational contexts, as does Hindustani music of India, gamelans of Java and Bali, and much music in Africa.

## Compositional instrumentation

The task of instrumenting a composition, called arranging or orchestrating, may be undertaken by the composer or separately by an arranger based on the composer's core composition. A composition may have multiple arrangements based on such factors as intended audience type and breadth, musical genre or stylistic treatment, recorded or live performance considerations, available musicians and instruments, commercial goals and economic constraints.

Based on such factors, composers or arrangers must decide upon the [instrumentation](#) of the original work. Today, the contemporary composer can virtually write for almost any combination of instruments. Some common group settings include music for Full [Orchestra](#) (consisting of just about every instrument group), Wind Ensemble (or [Concert Band](#), which consists of larger sections and greater diversity of wind, brass and percussion instruments than are usually found in the [orchestra](#)), or a chamber group (often called [chamber music](#), which calls for the instrumentation of at least two instruments). The composer may also choose to write for only one instrument, in which case this is called a solo.

Composers are not limited to writing only for instruments, they may also decide to write for [voice](#) (including choral works, [operas](#), and [musicals](#)) or [percussion instruments](#) or electronic instruments.

## Musical groups

A **musical ensemble** is a group of three or more [musicians](#) who gather to perform [music](#). There are several denominations of ensembles according to their size and composition.

### Chamber music

The terms [duet](#), trio, [quartet](#), [quintet](#), [sextet](#), [septet](#), [octet](#), and [nonet](#) are used to describe groups of two, three, four, five, six, seven, eight, and nine musicians, respectively. In [classical music](#), these arrangements are commonly referred to as [chamber music](#).

#### Four parts

*Main article: [quartet](#)*

A common quartet is the [string quartet](#), composed of two [violins](#), a [viola](#) and a [violoncello](#). A [quartet](#) (string, wind etc.) is an ensemble of 4 players and is also the name for music written (e.g. by Mozart, Beethoven) for an ensemble of 4 players.

#### Five parts

*Main article: [quintet](#)*

The most usual string *quintet* is similar to the string quartet, but with the viola duplicated. In some cases, though, it is the violoncello that is duplicated. Terms such as "piano quintet" or "clarinet quintet" frequently refer to a string quartet *plus* a fifth instrument. Thus, a [piano quintet](#) is usually a string quartet plus a [piano](#). Mozart's Clarinet Quintet is similarly a piece written for an ensemble consisting of 2 violins, a viola, a cello and a clarinet, the last being the exceptional addition to a "normal" string quartet.

Another fairly common grouping in classical music is the [wind quintet](#), usually consisting of [flute](#), [oboe](#), [clarinet](#), [bassoon](#) and [horn](#).

## Six or more instruments

A group with more instruments is usually called an [orchestra](#). A small orchestra is called a chamber orchestra. A [symphony](#) orchestra is a large body of several tens and often more than a hundred musicians, divided in groups of instruments: strings (including [violins](#) (I and II), [violas](#), [violoncellos](#), basses), [woodwind](#), [brass](#), [percussion](#), and sometimes more. The description Philharmonic (from Greek philos: love) was originally used by amateur orchestras, distinguishing them from professional Symphony orchestras, but nowadays professional classical orchestras may use either term in their titles. A Sinfonietta usually denotes a somewhat smaller orchestra (though still not a chamber orchestra), and the terms concert or pops orchestra usually mean an orchestra concentrating mainly on the light classical and more popular repertoire. A [string orchestra](#) has only [strings](#), i.e., violins, violas, violoncellos and basses.

See also: [String sextet](#)

## Jazz

### Three parts

In [jazz](#), the most common trio consists of a rhythm section of [piano](#), bass and [drums](#).

### Four parts

A quartet would typically add a *horn* (the generic jazz name for [saxophones](#), [trombones](#), [trumpets](#), or any other [wind instrument](#) commonly associated with jazz) while larger ensembles would add further instruments. The lineup of jazz ensembles can vary considerably.

## Other Western musical ensembles

In the 1900's, the Wind Symphony or Wind Ensemble became popular, especially in academic circles. A wind ensemble consists entirely of [wind instruments](#) and [percussion instruments](#), but may also include stringed bass. Schools from elementary level onward often have a school band program which is usually centered around its wind ensemble, often known as a [concert band](#).

A [choir](#) is a group of voices. Sometimes the group of similar instruments in an orchestra are referred to as a choir. For example, the [woodwind](#) instruments of a symphony orchestra could be called the woodwind choir.

A group that plays [popular music](#) or military music is usually called a [band](#). Classical musicians colloquially refer even to the likes of the Chicago Symphony Orchestra as their *band*.

A group that plays anything from jazz to orchestral, military to popular music while marching on a football field, without being a true marching band, is called a [drum and bugle corps](#). All drum corps perform on brass and percussion instruments only, and some corps perform on bugles in the key of G, while others perform on brass instruments in multiple keys, depending on the group. Drum and Bugle Corps are known for maximizing power and pageantry in their performances, while performing incredibly difficult programs.

- [Jug band](#)
  
- Mexican Mariachi groups typically consist of:
  - at least two [violins](#)
  - two [trumpets](#)
  - one Spanish guitar
  - one vihuela (a high-pitched, five-string guitar)
  - one Guitarrón (a small-scaled acoustic bass).

## Non-Western musical ensembles

- A gamelan is an ensemble of Indonesian origin (usually Balinese or Javanese). There are dozens of varieties of gamelan ensembles with musicians playing metallophones, [drums](#), [flutes](#), bamboo and wooden marimbas and [gongs](#).
- The Steelpan created in Trinidad and Tobago are the core components of [percussion](#) ensembles called Steelbands that play Calypso music.

# Musical eras

## Musical forms

The term *musical form* is used in two related ways:

- a generic type of composition such as the [symphony](#) or [concerto](#)
- the structure of a particular [piece](#), how its parts are put together to make the whole; this too can be generic, such as [binary form](#) or [sonata form](#)

Musical form (the whole or structure) is contrasted with content (the parts) or with surface (the detail), but there is no clear line between the two. In most cases, the form of a piece should produce a balance between statement and restatement, unity and variety, contrast and connection.

There is some overlap between *musical form* and [musical genre](#). The latter term is more likely to be used when referring to particular styles of music (such as [classical music](#) or [rock music](#)) as determined by things such as [harmonic](#) language, typical [rhythms](#), types of [musical instrument](#) used and geographical origin. The phrase *musical form* is typically used when talking about a particular type or structure within those genres. For example, the twelve bar blues is a specific form often found in the genres of [blues](#), [rock and roll](#) and [jazz](#) music.

## Descriptions of musical form

Forms and formal detail may be described as sectional or developmental, developmental or variational, syntactical or processual (Keil 1966), embodied or engendered, extensional or intensional (Chester 1970), and associational or hierarchical (Lerdahl 1983). Form may also be described according to symmetries or lack thereof and repetition. A common idea is formal "depth", necessary for complexity, in which foregrounded "detail" events occur against a more structural background. For example: Schenkerian analysis. Fred Lerdahl (1992), among others, claims that popular music lacks the structural complexity for multiple structural layers, and thus much depth. However, Lerdahl's theories explicitly exclude "associational" details which are used to help articulate form in popular music. Allen Forte's book *The American*

*Popular Ballad of the Golden Era 1924-1950* analyses popular music with traditional Schenkerian techniques, but this is only possible because pre-rock popular [ballads](#) are the genre most accessible similar to the [Romantic music](#) that those theories were designed to analyse. (Middleton 1999, p.144)

Extensional music is, "produced by starting with small components - rhythmic or melodic motifs, perhaps - and then 'developing' these through techniques of modification and combination." Intensional music "starts with a framework - a chord sequence, a melodic outline, a rhythmic pattern - and then extends itself by repeating the framework with perpetually varied inflections to the details filling it in." (Middleton, p.142)

Western classical music is the apodigm of the *extensional* form of musical construction. Theme and variations, counterpoint, tonality (as used in classical composition) are all devices that build diachronically and synchronically outwards from basic musical atoms. The complex is created by combination of the simple, which remains discrete and unchanged in the complex unity...If those critics who maintain the greater complexity of classical music specified that they had in mind this *extensional* development, they would be quite correct...Rock however follows, like many non-European musics, the path of intensional development. In this mode of construction the basic musical units (played/sung notes) are not combined through space and time as simple elements into complex structures. The simple entity is that constituted by the parameters of melody, harmony, and beat, while the complex is built up by modulation of the basic notes, and by inflexion of the basic beat. All existing genres and sub-types of the Afro-American tradition show various forms of combined intensional and extensional development (Chester 1970, p.78-9).

Syntactic music is "centred" on notation and "the hierarchic organization of quasilinguistic elements and their putting together (com-position) in line with systems of norms, expectations, surprises, tensions and resolutions. The resulting aesthetic is one of 'embodied meaning.'" Non-notated music and performance "foreground *process*. They are much more concerned with gesture, physical feel, the immediate moment, improvisation; the resulting aesthetic is one of 'engendered feeling' and is unsuited to the application of 'syntactice' criteria" (Middleton 1990, p.115).

Middleton (p.145) also describes form, presumably after Gilles Deleuze's *Difference and Repetition* (1968, translated 1994), through repetition and difference. Difference is the distance moved from a repeat and a repeat being the smallest difference. Difference is qualitative and quantitative, how far different and what type of difference.

Procedures of **connection** include gradation, amalgamation, and dissolution. Procedures of contrast include stratification, juxtaposition, and interpolation.

## Formal structures

In [classical](#) and [popular music](#), there are many labels applied to forms, abstract formal designs, as contrasted with the principals and procedures of combining materials: form.

### Single-movement forms

In a **sectional form**, the larger unit (form) is built from various smaller clear-cut units (sections) in combination, sort of like stacking legos (DeLone, 1975):

- Strophic form (AA...)
- [Binary form](#) (AB)
- Ternary form, less often tertiary (ABA)
- [Arch form](#), (ABCBA)

[Sections](#) include:

- [Introduction](#) or Intro
- Exposition
- [Verse](#)
- Chorus or [refrain](#)
- [Bridge](#) or interlude
- [Conclusion](#)
- Coda or outro, and Fadeout

Developmental forms, larger unit (form) is built from small bits of material given different presentations and combinations, usually progressive (DeLone, 1975):

- [Sonata form](#), also called sonata-allegro

Variational forms, larger unit (form) is built from sections treated to one type of presentation at a time, but varying successively (DeLone, 1975):

- Rondo (ABACADA...)
- Variation form, sometimes [theme](#) and variations (AA'A"A"..."...)
- Passacaglia and Chaconne

These structures are defined by the distribution of different thematic material, [melodies](#), [key](#) centres, and other materials used. While many of the above forms are partly defined by their tonal schemes these forms may be applied to music which has a differing or no tonal scheme (DeLone et. al. (Eds.), 1975, chap. 1). More than one formal method may be used, including in-between types, and music which is not composed with the above or any other model is called through composed.

Especially recently, more segmented approaches have been taken through the use of stratification, superimposition, juxtaposition, interpolation, and other interruptions and [simultaneities](#). Examples include the postmodern "block" technique used by composers such as John Zorn, where rather than organic development one follows separate units in various combinations. These techniques may be used to create contrast to the point of disjointed chaotic textures, or, through repetition and return and transitional procedures such as dissolution, amalgamation, and gradation, may create connectedness and unity. Composers have also made more use of open forms such as produced by [aleatoric](#) devices and other chance procedures, [improvisation](#), and some [processes](#). (ibid)

## Multi-movement forms

Types of piece which may or may not incorporate one or more of the above structures as part of their overall makeup include:

- [Ballet](#), larger musical composition intended for Ballet dance form
- [Cantata](#)
- Chorale
- [Concerto](#)
- [Dance](#), smaller musical composition intended for presentation of a [dance](#), either as accompaniment for dancing or as [music](#) as such
- [Duet](#)
- Etude or study
- Fantasia
- Fugue
- [Mass](#)
- [Opera](#)
- [Oratorio](#)
- Prelude

- Requiem
- Rhapsody
- [Sonata](#)
- [Suite](#)
- [Symphonic poem](#)
- [Symphony](#)

Forms of [chamber music](#) are defined by instrumentation ([string quartet](#), [piano quintet](#) and so on). The structure of a chamber work is typically similar to a sonata.

## Content

"*Form* is supposed to cover the shape or structure of the work; *content* its substance, meaning, ideas, or expressive effects." (Middleton 1999)

# Musical forms

## Musical improvisation

**Musical improvisation** is [singing](#) or playing a [musical instrument](#) extemporaneously—in an "offhand" manner. This contrasts with the more conventional approach to performing musical works, which involves playing music that is read from [notation](#), or that has been previously memorized.

[Improvisation](#) has been an integral part of [music](#) since the [beginning of music](#). It is featured in many kinds of [traditional musics](#), including [flamenco](#) and pygmy music and other African musics; [classical musics](#) such as [European](#) and [Indian classical music](#); [popular musics](#) including [rap music](#); and throughout regions such as [Arabia](#).

Improvisation can be structured, with certain rules constraining the improvisation (for example, "make up a [song](#) about bicycles", "use these [chord](#) changes", and so on), or can have no such constraints. The improvisation of [ornaments](#) is found in some musical traditions.

## Classical musics

### European classical music

Original score notations for medieval organ music commonly include instructions for improvisation and embellishments. The scales that were used were selected according to the same improvisational principles now used in jazz. When the single voice [plainsong](#) started to develop into the 2-, 3-, or 4-part organum (during the period 1000-1300 A.D.), one or more of the parts were also commonly improvised, weaving free counter-lines around the written [melody](#) line.

During the Baroque (1600 - 1750), Classical (1750 - 1830), and Romantic (1830 - 1900) periods, improvisation flourished, especially on the [organ](#), [piano](#), and harpsichord. J.S. Bach, Handel, Mozart, Beethoven, Liszt, and many other famous composers and virtuoso pianists and organists excelled in the art of improvisation, at that time called *extemporisation*. Many classical scores contained sections for improvisation, such as the [cadenza](#) in the [piano concerto](#). The preludes to some keyboard suites by Bach and Handel, for example, consisted solely of a progression of chords. The performers used these as the basis for their improvisation.

See also: [Cadenza](#)

## Contemporary composition and the improviser

Since the 1950s, contemporary composers have placed fewer restrictions on the improvising performer, using techniques such as vague notation (for example, indicating only that a certain number of notes must sound within a defined period of time). Jazz ensembles formed around improvisation were founded, such as Lukas Foss' Improvisation Chamber Ensemble at the University of California, Los Angeles; Larry Austin's New Music Ensemble at the University of California, Davis; the ONCE Group at Ann Arbor; the Sonic Arts Group; and the San Francisco Tape Music Center, the latter three funding themselves through concerts, tours, and grants. Significant pieces include Foss's *Time Cycles* (1960) and *Echoi* (1963). (Von Gunden 1983, p.32)

Other composers working with improvisation include Pauline Oliveros, Terry Riley, Frederic Rzewski, Karlheinz Essl, and Christian Wolff.

## Popular music

[Blues](#), [jazz](#), and [bluegrass](#) are well-known for using improvisation. Almost all of the improvisation heard in [rock and roll](#), blues, jam, and [metal](#) bands is in the form of lead guitar or other soloing. These musical improvisations are very song-oriented, usually working within the demands of the background rhythm and [harmony](#), so there is little concept of "[free improvisation](#)." Solos are often used to exhibit the musical virtuosity of the performer and many popular musicians have become famous through their intricate and technically demanding solos, such as Yngwie Malmsteen, Eddie Van Halen and Kirk Hammett.

Blues and traditional rock improvisation leans heavily on the use of the [blues](#) scale, which sounds good in either major or minor keys and simple enough for beginning guitarists to execute. Other scales, such as the pentatonic are also used. Many rock and jam bands use these, although forms of music are very open to individual interpretation, so the possibilities for improvisation are almost limitless.

## Jazz improvisation

Improvisation is one of the basic tenets of [jazz](#). Typically in a jazz piece, the "head" (the song's melody along with any backing harmony) is played once by the musicians and sometimes repeated. Improvisation by any of the musicians follows, and this is typically the longest section of a song as each musician improvises their own melody over the harmonic and rhythmic foundation of the head. When the end of the head is reached it is repeated and a solo's length is specified by the number of repetitions of the head necessary. After one musician has finished improvising, another will begin, and no instrument is forbidden from improvising, the drums and bass excluded. A repetition of the head will end a jazz piece. There are an infinite number of variations to this pattern; new sections can be added before and after the head, two musicians can alternatively improvise for short amounts of time (known as "trading"), or several musicians can improvise in a group (this is common in [Dixieland jazz](#)).

Many varied scales can be used in improvisation, including blues, pentatonic, Mixolydian, etc. These mainly depend on the nature of the harmonic framework. In the [bebop](#) era of jazz in the early 1950s there was a common theme of urgency and technical proficiency—being able to play as many notes as possible in a short period while still sounding good. The modal era of jazz, mainly started by Miles Davis, moved the harmonic framework for a piece from the fast, dynamic chord progressions of bebop to more static, relaxed chords with longer durations. Performers were then instructed to improvise not over specific chords, but in a [musical mode](#) instead. [Free jazz](#) eventually led to the loss of a harmonic framework in improvisation.

Jazz musicians are typically judged on their improvisation skills, and some are notable from their work on a single recording (like Illinois Jacquet). Charlie Parker was particularly known for his improvisations and many have been transcribed for study, or arranged for jazz groups such as Supersax to play with a harmonic backing. An improvisation can often give rise to an entirely new head for a jazz tune.

See also: [Free improvisation](#).

## Music therapy

Improvisation is also a widely used technique in [music therapy](#).

## Musical instruments

A **musical instrument** is a device constructed or modified with the purpose of making [music](#). In principle, anything that produces sound, and can somehow be controlled by a [musician](#), can serve as a musical instrument. The expression, however, is reserved generally to items that have a specific musical purpose. The academic study of musical instruments is called organology.

### Types of musical instruments

Instruments are often divided by the way in which they generate sound:

- **[Wind instruments](#)** generate a sound when a column of air is made to vibrate inside them. The frequency of the wave generated is related to the length of the column of air and the shape of the instrument, while the tone quality of the sound generated is affected by the construction of the instrument and method of tone production. The group is typically subdivided into [Brass](#) and [Woodwind](#) instruments.
- **[Percussion instruments](#)** create sound, with or without [pitch](#), when struck. The shape and material of the part of the instrument to be struck and the shape of the resonating cavity, if any, determine the sound of the instrument.
- **[String instruments](#)** generate a sound when the string is plucked, strummed, slapped, etc. The frequency of the wave generated (and therefore the note produced) usually depends on the length of the vibrating portion of the string, its mass, the tension of each string and the point at which the string is excited; the [tone quality](#) varies with the construction of the resonating cavity.

- **[Voice](#)**, that is, the human voice, is an instrument in its own right. A [singer](#) generates sounds when airflow from the lungs sets the vocal cords into oscillation. The fundamental frequency is controlled by the tension of the vocal cords and the [tone quality](#) by the formation of the vocal tract; a wide range of sounds can be created.
- **[Electronic instruments](#)** generate sound through electronic means. They often mimic other instruments in their design, particularly keyboards.
- **[Keyboard instruments](#)** are any instruments that are played with a musical keyboard. Every key generates one or more sounds; most keyboard instruments have extra means (pedals for a piano, stops for an organ) to manipulate these sounds. They may produce sound by wind ([organ](#)), vibrating strings either hammered ([piano](#)) or plucked (harpsichord), by electronic means ([synthesizer](#)) or in some other way. Sometimes, instruments that do not usually have a keyboard, such as the *Glockenspiel*, are fitted with one. This term is also used to refer to the family of [percussion instruments](#) who resemble a piano keyboard. Though they have no moving parts and are struck by mallets held in the player's hands, they possess the same physical arrangement of keys and produce soundwaves in a similar manner.

Many [alternate divisions and further subdivisions of instruments](#) exist. To learn about specific instruments, consult the [list of musical instruments](#).

## History

All classes of instruments save the electronic are mentioned in ancient sources, such as Egyptian inscriptions and the Bible, and probably predate recorded history. The human body, generating both voice and percussive sounds, may have been the first instrument. Percussion instruments such as stones and hollow logs are another likely candidate. For instance, nine-thousand-year-old bone flutes or recorders have been found in Chinese archeological sites.

## Musical instrument classification

At various times, and in various different cultures, various schemes of [musical instrument classification](#) have been used. The most commonly used system in use in the west today divides instruments into [string instruments](#), [wind instruments](#) and [percussion instruments](#). However other ones have been devised, and some cultures also use different schemes.

The oldest known scheme of classifying instruments is Chinese and dates from the 4th century BC. It groups instruments according to what they are made out of. All instruments made out of stone are in one group, all those made out of wood in another, those made out of silk are in a third, and so on.

More usually, instruments are classified according to how the sound is produced. The system used in the west today, dividing instruments into wind, strings, and percussion, is of Greek origin. The scheme was later expanded by Martin Agricola, who distinguished plucked string instruments, such as [guitars](#), from bowed string instruments, such as [violins](#). [Classical musicians](#) today do not always maintain this division (although plucked strings are grouped separately from bowed strings in [sheet music](#)), but there is a distinction made between wind instruments with a reed ([woodwind instruments](#)) and wind instruments where the air is set in motion directly by the lips ([brass instruments](#)).

There are, however, problems with this system. Some rarely seen and non-western instruments do not fit very neatly into it. The serpent, for example, an old instrument rarely seen nowadays, ought to be classified as a brass instrument, as a column of air is set in motion by the lips. However, it looks more like a woodwind instrument, and is closer to one in many ways, having finger-holes to control pitch, rather than valves. There are also problems with classifying certain [keyboard instruments](#). For example, the [piano](#) has strings, but they are struck by hammers, so it is not clear whether it should be classified as a string instrument, or a percussion instrument. For this reason, keyboard instruments are often regarded as inhabiting a category of their own, including all instruments played by a keyboard, whether they have struck strings (like the piano), plucked strings (like the harpsichord) or no strings at all (like the celesta). It might be said that with these extra categories, the classical system of instrument classification

focuses less on the fundamental way in which instruments produce sound, and more on the technique required to play them.

An ancient system of Indian origin, dating from at least the 1st century BC, divides instruments into four main classification groups: instruments where the sound is produced by vibrating strings; instruments where the sound is produced by vibrating columns of air; percussion instruments made of wood or metal; and percussion instruments with skin heads, or [drums](#). Victor Mahillon later adopted a system very similar to this. He was the curator of the musical instrument collection of the conservatoire in Brussels, and for the 1888 catalogue of the collection divided instruments into four groups: strings, winds, drums, and other percussion. This scheme was later taken up by Erich von Hornbostel and Curt Sachs who published an extensive new scheme for classification in *Zeitschrift für Ethnologie* in 1914. Their scheme is widely used today, and is most often known as the Sachs-Hornbostel system (or the Hornbostel-Sachs system).

The original Sachs-Hornbostel system classified instruments into four main groups:

1. [idiophones](#), such as the [xylophone](#), which produce sound by vibrating themselves;
2. [membranophones](#), such as [drums](#) or kazoos, which produce sound by a vibrating membrane;
3. [chordophones](#), such as the piano or [cello](#), which produce sound by vibrating strings;
4. [aerophones](#), such as the [pipe organ](#) or [oboe](#), which produce sound by vibrating columns of air.

Later scholars added a fifth category, electrophones, such as theremins, which produce sound by electronic means. Within each category are many subgroups. The system has been criticised and revised over the years, but remains widely used by [ethnomusicologists](#) and organologists.

Metal idiophones are frequently called metallophones. See also [Lamellaphone](#).

## Instruments by range

Western instruments are also often classified by their musical range in comparison with other instruments in the same family. These terms are named after singing voice classifications:

- Soprano instruments: flute, recorder, violin, trumpet
- Alto instruments: oboe, alto flute, viola, French horn
- Tenor instruments: clarinet, English horn, trombone
- Bass instruments: bassoon, double bass, bass clarinet, tuba

Some instruments fall into more than one category: for example, the cello may be considered either tenor or bass, depending on how its music fits into the ensemble, and the trombone may be alto, tenor, or bass and French horn bassbaritone, tenor or alto, depending on on which range it is played.

Many instruments have their range as part of their name: soprano saxophone, alto saxophone, tenor saxophone, baritone saxophone, baritone horn, alto flute, bass flute, alto recorder, [bass guitar](#), etc.

## Other classifications

Various (groups of) instruments are known after a common, though often not exclusive, type or sphere of use, such as signal instrument.

Category: [Musical instruments](#)

## Musical language

**Musical languages** are languages based on [musical](#) sounds rather than [articulation](#). They can be categorized as constructed languages, and as [whistled languages](#). The latter are dependent on an underlying articulatory language, in actual use in various cultures as a means for communication over distance, or as secret codes. The mystical concept of a [language of the birds](#) connects the two categories, since some authors of musical *a priori* languages speculated about a mystical or primeval origin of the whistled languages.

## Constructed musical languages

Solresol language  
Eaiea

## Musical mode

In [music](#), a **mode** is an ordered series of musical intervals, which, along with the [key](#) or tonic, define the [pitches](#). However, *mode* is usually used in the sense of [scale](#) applied only to the specific diatonic scales found below. The use of more than one mode is **polymodal**, such as with polymodal chromaticism. While all tonal music may technically be described as modal, music that is called modal often has less [diatonic functionality](#) and changes key less often than other music.

## Greek modes

The early music of Greek antiquity referred to [scales](#) in the context of scalar modes. The modes are named after cities that preferred a given mode in times past.

The Greek modes were:

Ionian

Aeolian and Locrian

Dorian and Hypodorian

Phrygian and Hypophrygian

Lydian, Hypolydian and Mixolydian

The Greek philosopher Plato felt that playing music in a particular mode would incline one towards specific behavior associated with that mode, and suggested that soldiers should listen to music in dorian or phrygian modes to help make them stronger, but avoid music in lydian or ionian modes, for fear of being softened.

## Church modes

There is a common misconception that the *Church modes* of medieval Europe directly descended from the Greek notion of modality directly above. In fact, the originated in the 9th century. Authors from that period misinterpreted a text by Boethius from the 6th century who had translated the Greek musical theory into Latin. In the 16th century Swiss theorist Henricus Glareanus published *Dodekachordon*, in which he solidified the church modes, and added four additional modes: the Aeolian, Hypoaeolian, Hypoionian. Thus, the names of the modes used today do not actually reflect the Greeks.

The eight Church modes, or Gregorian modes, can be divided into four pairs that each shares the "final note" or tonic. Most chants in a particular mode will begin on that note and all are expected to end on that note. The pair also shares the central fifth note. When the "scale" is completed by adding the three upper notes, the mode is termed "authentic" and when the scale is completed by adding the three lower notes, the mode is called "plagal".

The pairs are organized so that the modes sharing a final note are numbered with odd numbers used for the authentic modes and the even numbers for the plagal modes.

In addition, each mode has a "dominant" or "reciting tone" which is the tenor note. The reciting tones of all authentic modes began a fifth above the final, with those of the plagal modes a third above. However, the reciting tones of modes 3, 4, and 8 rose one note in the tenth and eleventh centuries with 3 and 8 moving from b to c' (half step) and that of mode 4 moving to a (whole step). (Hoppin 1978, p.67)

Only one accidental is permitted in classical Gregorian chant -- si (B) may be used in modes V and VI, and is optional in mode VII.

| Mode | I | II | III | IV | V | VI | VII |
|------|---|----|-----|----|---|----|-----|
|------|---|----|-----|----|---|----|-----|

|                           |        |            |          |              |        |            |            |
|---------------------------|--------|------------|----------|--------------|--------|------------|------------|
| <b>Name</b>               | Dorian | Hypodorian | Phrygian | Hypophrygian | Lydian | Hypolydian | Mixolydian |
| <b>Final (note)</b>       | D      | D          | E        | E            | F      | F          | G          |
| <b>Final (solfege)</b>    | re     | re         | mi       | mi           | fa     | fa         | sol        |
| <b>Dominant (note)</b>    | A      | F          | B-C      | A            | C      | A          | D          |
| <b>Dominant (solfege)</b> | la     | fa         | si-do    | la           | do     | la         | re         |

Given the confusion between ancient, Early, and modern terminology, "today consistent and practical to use the traditional designation of the modes with number (Curtis 1998) using Roman numeral (I-VIII), rather than using the pseudo-Greek

### Use of the modes

[Early music](#) made heavy use of the Church modes. A mode indicated a primary organization of pitches in relation to the final; suggested range; melodic form with different modes; location and importance of cadences; and affect (ie, emotion). Liane Curtis (1998) explains, "Modes should not be equated with scales: primary organization, placement of cadences, and emotional affect are essential parts of Medieval and Renaissance music."

Carl Dahlhaus (1990, p.192) lists "three factors that form the respective starting modal theories of Aurelian of Réôme, Hermannus Contractus, and Guido of Arezzo:

1. the relation of modal formulas to the comprehensive system of tonal relations: the diatonic scale;
2. the partitioning of the octave into a modal framework; and
3. the function of the modal final as a relational center."

The oldest medieval treatise regarding modes is *Musica disciplina* by Aurelian. Hermannus Contractus was the first to define modes as partitionings of the octave.

Various interpretations of the "character" imparted by the different modes have been given. Three such interpretations, from Guido D'Arezzo (995-1050), Adam of Fulda (14th century), and de Espinoza Medrano (1632-1688), follow:

| <b>Name</b>       | <b>Mode</b> | <b>D'Arezzo</b> | <b>Fulda</b> | <b>Espinoza</b>            |
|-------------------|-------------|-----------------|--------------|----------------------------|
| <b>Dorian</b>     | I           | serious         | any feeling  | happy, taming the passions |
| <b>Hypodorian</b> | II          | sad             | sad          | serious and tearful        |
| <b>Phrygian</b>   | III         | mystic          | vehement     | inciting anger             |

|                       |      |                   |              |   |
|-----------------------|------|-------------------|--------------|---|
| <b>Hypophrygian</b>   | IV   | harmonious tender |              | inciting delights, tempering fierceness |
| <b>Lydian</b>         | V    | happy             | happy        | happy                                   |
| <b>Hypolydian</b>     | VI   | devout            | pious        | tearful and pious                       |
| <b>Mixolydian</b>     | VII  | angelical         | of youth     | uniting pleasure and sadness            |
| <b>Hypomixolydian</b> | VIII | perfect           | of knowledge | very happy                              |

Most of the theoretical writings on Gregorian chant modes postdate the complete Gregorian chant repertoire, which was not composed with the intention of conforming to the eight modes. As a result, for these chants, the application of a mode number can be confusing. Later chants, however, were written with a conscious eye on the eight modes.

## Modern modes

The modern conception of modal scales describes a system where each mode is the usual diatonic scale, but with a different root. The modes can be arranged in the following sequence, where each next mode has one more shortened interval in its scale.

### Intervals in the modal scales

| mode              | prime         | second | third     | fourth     | fifth | sixth | seventh |
|-------------------|---------------|--------|-----------|------------|-------|-------|---------|
| <b>Lydian</b>     | perfect major | major  | augmented | perfect    | major | major |         |
| <b>Ionian</b>     | perfect major | major  | perfect   | perfect    | major | major |         |
| <b>Mixolydian</b> | perfect major | major  | perfect   | perfect    | major | minor |         |
| <b>Dorian</b>     | perfect major | minor  | perfect   | perfect    | major | minor |         |
| <b>Aeolian</b>    | perfect major | minor  | perfect   | perfect    | minor | minor |         |
| <b>Phrygian</b>   | perfect minor | minor  | perfect   | perfect    | minor | minor |         |
| <b>Locrian</b>    | perfect minor | minor  | perfect   | diminished | minor | minor |         |

Three of the modes are termed major, while four of them are minor. The Locrian is considered theoretical rather than practical. A mode is said to be minor if the 3rd scale degree is flattened; that is, if the third scale degree is three [semitones](#) above the root, instead of the four semitones in a major mode.

### Major modes

- Lydian (IV)
- Ionian (I)
- Mixolydian (V)

### Minor modes

- Dorian (II)
- Aeolian (VI)
- Phrygian (III)
- Locrian (VII)

## Use of the modes

Modes came back into favour some time later in the development of [jazz](#) ([modal jazz](#)) and more contemporary 20th century music.

The use and conception of modes or modality today is different from their use and conception in Early music. Jim Samson (1977, p.148) describes: "Clearly any comparison of medieval and modern modality would recognize that the latter takes place against a background of some three centuries of harmonic tonality, permitting, and in the nineteenth century requiring, a dialogue between modal and diatonic procedure."

The Ionian mode is another name for the major mode, in which much western music is composed. The Aeolian forms the base of the most common western minor scale; however, a true Aeolian mode composition will use only the seven notes of the Aeolian scale, while nearly every minor mode composition will have some accidentals on the sixth and seventh scale degrees in order to make the melodies and harmonies work better.

Besides the Ionian major and modern (harmonic/melodic) minor modes, the other modes have limited use in music today. [Folk music](#) is often best analysed in terms of modes. For example, in Irish traditional music the Ionian, Dorian, Aeolian and Mixolydian modes occur (in roughly decreasing order of frequency); the Phrygian mode is an important part of the [flamenco](#) sound. Dorian mode is also found in folk music, particularly Latin and Laotian music, while Phrygian is found in some Central European or stylized Arabic music, whether as natural Phrygian or harmonic Phrygian, which has a raised third (the so-called "gypsy" scale). Mixolydian mode is quite common in [jazz](#) and most other forms of popular music. Because of its dream-like sound, the Lydian mode is most often heard in soundtrack and video game music.

Some works by Beethoven contain modal inflections, and Chopin, Berlioz, and Liszt made extensive use of modes. They influenced nineteenth century Russian composers, including Mussorgsky and Borodin; many twentieth century composers drew on this earlier work in their incorporation of modal elements, including Claude Debussy, Leos Janacek, Jean Sibelius, Ralph Vaughan-Williams and others. Zoltán Kodály, Gustav Holst, Manuel de Falla use modal elements as modifications of a diatonic background, while in the music of Debussy and Béla Bartók modality replaces diatonic tonality. (Samson 1977)

## Chords with the modes

In jazz, the modes of the major scale are commonly played over specific chords. The chord examples below are shown for the modes of the key of C. For example, over an Fmaj7o11 chord, musicians typically play notes from the F Lydian scale in the key of C.

**Mode Ionian Dorian Phrygian Lydian Mixolydian Aeolian Locrian**

**Chord** Cmaj7 Dm7 Esusm9 Fmaj7o11 G7 Am7 Bø (Bm7m5)

Although both Dorian and Aeolian can be played over a minor seventh (m7) chord, Dorian mode is most commonly used in straightahead jazz because of the consonant natural 6th (e.g. B over Dm7), as opposed to the m6 in Aeolian. Similarly, instead of Locrian, many jazz musicians play the 6th mode of the melodic minor over a half-diminished (ø or m7m5) chord, because the natural 9th in that mode (e.g. Co over Bø) is more consonant with the m7m5 chord than the m9 in Locrian (e.g. C over Bø). The "susm9" chord is also often played using the 2nd mode of melodic minor instead of Phrygian because of the natural 6th.

## Other types of modes

In modern music theory, scales other than the major scale sometimes have the term "modes" applied to the scales which begin with their degrees. This is seen, for example, in "Melodic Minor" scale harmony (see Minor scale for a brief description of the melodic minor), which is based on the seven modes of the melodic minor scale, yielding some interesting scales as shown below. The "Chord" row lists chords that can be built from the given mode.

| Mode         | I      | II     | III       | IV       | V          | VI         | VII        |
|--------------|--------|--------|-----------|----------|------------|------------|------------|
|              | minor- | Dorian | Lydian    | Lydian   | Mixolydian | half-      | altered    |
|              | major  | m2     | augmented | dominant | m6 or      | diminished | (or)       |
| <b>Name</b>  |        |        |           |          | "Hindu"    | (or)       | diminished |
|              |        |        |           |          |            | Locrian    | o2 whole-  |
|              |        |        |           |          |            |            | tone       |
| <b>Chord</b> | C-     | Dsusm9 | Emmajo5   | F7o11    | Gm6m7      | Aø (or) A- | B7alt      |
|              | maj7   |        |           |          |            | 7m5        |            |

Most of these chords and modes are commonly used in jazz; the min/maj chord, 7o11 and alt were in common use in the bebop era (indeed, the Lydian dominant scale and 7o11 chord practically defined the bebop sound), while Coltrane-era and later jazz made extensive use of susm9 chords. majo5 is

less common, but appears in Wayne Shorter's compositions. The m6m7 is rarely seen as such.

Though the term "mode" is still used in this case (and is useful in recognizing that these scales all have a common root, that is the melodic minor scale); it is more common for musicians to understand the term "mode" to refer to Ionian, Dorian, Phrygian, Lydian, Mixolydian, Aeolian, or Locrian scales. In everyday speech, this is the most common understanding.

## Musical notation

**Musical notation** is a system of writing for music. In music for [ensembles](#), a **score** shows music for all players together, while **parts** contain only the music played by an individual musician. A score can be constructed (laboriously) from a complete set of parts and vice versa.

Present day standard music notation is based on a five-line staff. Pitch is shown by placement of notes on the staff (modified by additional symbols called sharps and flats), and duration is shown with different note shapes and additional symbols such as ties.

## Origins

There is some evidence that a kind of musical notation was practiced by the Egyptians from the 3rd millennium BC and by others in Asia since ancient times. India in particular has had a long history of sophisticated musical notation. Musical treatises have appeared throughout Indian history, going all the way back to the Vedas composed from around 1500 BC to 500 BC. Indian musical notation known as *sawri lipi* has existed in India from the ancient Vedic era up to the modern era.

The Indian scholar and musical theorist Pingala (c. 3rd century BC), in his *Chanda Sutra*, devised the first scientific form of musical notation by using a binary numeral system to represent long and short syllables to classify 16 different meters of four syllables. He also used the *meru-prastara* (Pascal's triangle) to represent the different combinations and variations of sounds, and

used the binomial theorem to detect the quality of the metres. He used this binary code as a form of musical notation in the same way that Morse code was later used as a form of alphabetic notation over 2000 years later.

Ancient Greece also had a sophisticated form of musical notation, which was in use from at least the 6th century BC until approximately the 4th century AD; many fragments of compositions using this notation survive. The notation consists of symbols placed above text syllables. An example of a complete composition — indeed the only surviving complete composition using this notation — is the Seikilos epitaph, which has been variously dated between the 2nd century BC to the 1st century AD. The Delphic Hymns, dated to the 2nd century BC, also use this notation, but they are not completely preserved (see photograph). Knowledge of the ancient Greek notation was lost around the time of the fall of the Roman Empire.

Scholar and music theorist Isidore of Seville, writing in the early 7th century, famously remarked that it was impossible to notate music. By the middle of the 9th century, however, a form of notation began to develop in monasteries in Europe for Gregorian chant, using symbols known as neumes; the earliest surviving musical notation of this type is in the *Musica disciplina* of Aurelian of Réôme, from about 850. There are scattered survivals from the Iberian peninsula before this time of a type of notation known as Visigothic neumes, but its few surviving fragments have not yet been deciphered.

Other types of notation date from the 10th century in China and Japan. In East Asia, and elsewhere in Asia, music was notated with the use of characters for sounds. Rhythmic motifs could also be prescribed in a similar way. In Europe on the other hand, the foundations were laid for a purely symbolic notation of music, which does not seem to have existed anywhere else except India.

The founder of what is now considered the standard music staff was Guido d'Arezzo, an Italian Benedictine monk who lived from 995-1050 A.D. His revolutionary method, combining a 4 line staff with the first form of notes known as 'neumes', eventually paved the way to the five line staff which was introduced in the 14th century. Guido D'Arezzo's achievements paved the way for the modern form of written music, music books and the modern concept of a [composer](#).

## **Standard notation described**

### **Elements of the staff**

A staff is generally presented with a clef, which indicates the particular range of pitches encompassed by the staff. A treble clef placed at the beginning of a line of music indicates that the lowest line of the staff represents the note E above middle C, while the highest line represents the note F one octave higher. Other common clefs include the bass clef (second G below middle C to A below middle C), alto clef (F below middle C to G above middle C) and tenor clef (D below middle C to E above middle C). These last two clefs are examples of *C clefs*, in which the line pointed to by the clef should be interpreted as a middle C. In a similar fashion, the treble clef points to a G and the bass clef points to an F.

In early music, the clef was written as a letter and its location on the staff was chosen by the writer. The treble clef and bass clef used today are stylized versions of the letters G and F, respectively. Their locations are now standardized. Unusual clefs are used for certain requirements, such as tenor parts in choral music.

Following the clef, the key signature on a staff indicates the [key](#) of the piece by specifying certain notes to be held flat or sharp throughout the piece, unless otherwise indicated. The key signature is presented in the order of the circle of fifths, with flats B-E-A-D-G-C-F and sharps in the opposite order, F-C-G-D-A-E-B.

Following the key signature is the time signature. Measures mark off sections of the piece of equal duration (with measure lines), and time signatures specify what that duration is. A time signature of 4/4, for example, specifies that each measure will have four quarter notes worth of time per measure, the top numeral functioning as a cardinal number and the bottom numeral functioning as a code for quarter note. The same music could theoretically be marked off in measures of any duration without affecting the sound, but we will generally choose a duration that reflects the prevailing grouping. Thus a time signature of 4/4 also implies (but only implies) groupings of four beats or pulses. A time signature of 2/2 specifies that each measure will last two half notes worth of time and implies groupings of two.

Notes representing a pitch outside of the scope of the five line staff can be represented using leger lines, which provide a single note with additional lines and spaces. Octave (8va) notation is used, particularly for keyboard music, where notes are substantially above or below the staff.

Multiple staves can be grouped together to form a staff system. A system is used where two staves are required to cover the range of the instrument (as with a keyboard instrument), or where multiple related instruments are played (as with three violin parts on a score). A score for ensemble music includes multiple systems, as does most organ music (where the pedals are written as a separate system).

Various directions to the player regarding matters such as tempo and dynamics are added above or below the staff, often in Italian (sometimes

abbreviated). For vocal music, lyrics are written.

Here is a sample illustrating some common musical notation.

## Development of music notation

See also: [Mensural notation](#)

The earliest known music notation was encoded in cuneiform script in the region of Mesopotamia, with surviving examples dating as far back as the middle of the second millennium B.C.E. Later civilizations, most notably that of Ancient Greece, developed their own forms of notation, which were often written on sheets or scrolls of papyrus.

The ancestors of modern symbolic music notation originated in the Catholic church, as monks developed methods to put plainchant (sacred songs) to paper. The earliest of these ancestral systems, from the 8th century, did not originally utilise a staff, and used neum (or *neuma* or *pneuma*), a system of dots and strokes that were placed above the text. Although capable of expressing considerable musical complexity, they could not exactly express pitch or time and served mainly as a reminder to one who already knew the tune, rather than a means by which one who had never heard the tune could sing it exactly at sight.

To address the issue of exact pitch, a staff was introduced consisting originally of a single horizontal line, but this was progressively extended until a system of four parallel, horizontal lines was standardised on. The vertical positions of each mark on the staff indicated which pitch or pitches it represented (pitches were derived from a [musical mode](#), or [key](#)). Although the 4-line staff has remained in use until the present day for plainchant, for other types of music, staves with differing numbers of lines have been used at various times and places for various instruments. The modern system of a universal standard 5-line staff was first adopted in France, and became widely used by the 16th century (although the use of staves with other numbers of lines was still widespread well into the 17th century).

Because the neum system arose from the need to notate songs, exact timing was initially not a particular issue as the music would generally follow the natural rhythms of the Latin language. However, by the 10th century a system of representing up to four note lengths had been developed. These lengths were relative rather than absolute, and depended on the duration of the neighboring notes. It was not until the 14th century that something like the present system of fixed note lengths arose. Starting in the 15th century, vertical bar lines were used to divide the staff into sections. These did not initially divide the music into measures of equal length (as most music then featured far fewer regular rhythmic patterns than in later periods), but appear

to have been introduced as an aid to the eye for "lining up" notes on different staves that were to be played or sung at the same time. The use of regular measures became commonplace by the end of the 17th century.

It is worth noting that standard notation was originally developed for use with voice. Proponents of other systems claim that standard notation is less than ideally suited to instrumental music.

## Symbols used in modern musical notation

*Main article:* [Modern musical symbols](#)

[Notes](#) (in decreasing length)

Rests (in decreasing length)

Clefs

Terms for note durations in American and British English:

### [Note values](#)

| relative duration | American                   | British  |
|-------------------|----------------------------|--|
| 2                 | double whole note          | breve  |
| 1                 | whole note                 | semibreve  |
| 1/2               | half note                  | minim  |
| 1/4               | quarter note               | crotchet   |
| 1/8               | eighth note                | quaver   |
| 1/16              | sixteenth note             | semiquaver   |
| 1/32              | thirty-second note         | demisemiquaver                                       |
| 1/64              | sixty-fourth note          | hemidemisemiquaver                                   |
| 1/128             | hundred twenty-eighth note | quasihemidemisemiquaver<br>or semihemidemisemiquaver |

In U.S. parlance, semibreve and minim are used only in discussions of early music; *whole note* and *half note* are used in other contexts. The *breve* is rarely used in baroque and later eras. When it appears, it is written as oo or |O|.

## Effects

According to Richard Middleton (1990, p.104-6), and also Philip Tagg (1979, p.28-32), musicology and to a degree European-influenced musical practice suffer from a 'notational centrality', "a methodology slanted by the characteristics of notation."

"Musicological methods tend to foreground those musical parameters which can be easily notated...they tend to neglect or have difficulty with

parameters which are not easily notated", such as happens in Fred Lerdahl's work. "Notation-centric training induces particular forms of *listening*, and these then tend to be applied to *all* sorts of music, appropriately or not."

Notational centrality also encourages "reification: the score comes to be seen as 'the music', or perhaps the music in an ideal form."

## Other notation systems

### Figured bass

Figured bass notation originated in [baroque](#) basso continuo parts. It is also used extensively in [accordion](#) notation, and for jazz. For continuo and jazz parts, it implies improvisation by the performer; for accordion, it is used to notate the bass button to be used.

### Shape note

The shape note system is found in some church hymnals, sheet music, and song books, especially in the American south. Instead of the customary elliptical note head, note heads of various shapes are used to show the position of the note on the major scale. Sacred Harp is one of the most popular tune books using shape notes.

### Popular music

Fake books (and the Real Books) utilize standard notation, but with key signatures only on the beginning stave, for the melodic line with letter notation for chord names, chord symbols, written above. [Improvisation](#) is implied and this system is used for [jazz](#) and [popular music](#).

### Letter notation

The notes of the 12-tone scale can be written by their letter names A-G, possibly with a trailing sharp or flat symbol, such as A<sup>♯</sup> or B<sup>♭</sup>. This is the most common way of specifying a note in speech or in written text.

Letter notation is the most common way of indicating chords for accompaniment, such as [guitar chords](#), for example Bm7. The bass note may be specified after a /, for example C/G is a C major chord with a G bass.

Where a capot is indicated, there is little standardisation. For example, after *capot 3*, most music sheets will write A to indicate a C chord, that is, they give the chord *shape* rather than its pitch, but some specify it as C, others give two lines, either the C on top and the A on the bottom or vice versa. A few even use the /, writing C/A or A/C, but this notation is more commonly used for specifying a bass note and will confuse most guitarists.

Note names can also be used for indicating keys and even writing out tunes. In all of these uses notes must be named for their [diatonic functionality](#). For example, in the key of D major, it is not generally correct to specify Gm as a melodic note, although its pitch may be the same as F<sub>o</sub>.

Note names are also used for specifying the natural scale of a [transposing instrument](#) such as a [clarinet](#), [trumpet](#) or [saxophone](#). The note names used are conventional, for example a clarinet is said to be in Bm or Am (the two most common registers), never in A<sub>o</sub> and G<sub>o</sub>, while an alto flute is in G.

Note names can also be qualified to indicate the octave in which they are sounded. There are several schemes for this, the most common being scientific pitch notation. Scientific pitch notation is often used to specify the range of an instrument. Again, the names used are arbitrary or conventional.

Tonic Sol-fa is a type of notation using the initial letters of solfege.

## ABC Notation

The abc notation is closely related to letter notation, but is intended for representing music in on-line computer databases. Music is entered as formatted ASCII text with an ordinary text editor. In addition to letters, additional characters are used to indicate key signature, durations, slurring, repeats, parts, chords, etc. A variety of programs exist to render this notation as graphical scores on different computer platforms and in different graphics file formats. ABC notation is an international standard, is easy to type, compact in size and can be stored and emailed easily. Many on-line databases of music in ABC format exist on the web.

## Solfege

Solfege is a way of assigning syllables to names of the musical scale. In order, they are today: *Do, Re, Mi, Fa, Sol, La, Ti, and Do* (for the octave). Another common variation is: *Do, Re, Mi, Fa, Sol, La, Si, Do*. These functional names of the musical notes were introduced by Guido of Arezzo (c.991 – after 1033) using the beginning syllables of the six lines of the Latin

hymn Ut queant laxis. The original sequence was Ut, Re, Mi, Fa, Sol, La. "Ut" became later "Do". See also: solfege, sargam

## Numbered notation

The numbered musical notation system, better known as *jianpu*, meaning "**simplified notation**" in Chinese, is widely used among the Chinese people and probably some other Asian communities. Numbers 1 to 7 represent the seven notes of the diatonic major scale, and number 0 represents the musical rest. Dots above a note indicate octaves higher, and dots below indicate octaves lower. Underlines of a note or a rest shorten it, while dots and dashes after lengthen it. The system also makes use of many symbols from the standard notation, such as bar lines, time signatures, accidentals, tie and slur, and the expression markings.

## Cipher notation

In many cultures, including Chinese (jianpu or gongche), Indonesian (kepatihan), and Indian (sargam), the "sheet music" consists primarily of the numbers, letters or native characters representing notes in order. Those different systems are collectively know as cipher notations. The numbered notation is an example, so are letter notation and solfege if written in musical sequence.

## Braille music

Braille music is a complete, well developed, and internationally accepted musical notation system that has symbols and notational conventions quite independent of print music notation. It is linear in nature, similar to a printed language and different from the two-dimensional nature of standard printed music notation. To a degree Braille music resembles musical markup languages such as XML for Music or NIFF.

## Integer notation

In *integer notation*, or the integer model of pitch, all pitch classes and [intervals](#) between pitch classes are designated using the numbers 0 through 11. It is not used to notate music for performance, but is a common [analytical](#) and [compositional](#) tool when working with chromatic music, including [twelve tone](#), [serial](#), or otherwise [atonal](#) music. Pitch classes can be notated in this

way by assigning the number 0 to some note - C natural by convention - and assigning consecutive integers to consecutive semitones; so if 0 is C natural, 1 is C sharp, 2 is D natural and so on up to 11 which is B natural. The C above this is not 12, but 0 again ( $12-12=0$ ). Thus arithmetic modulo 12 is used to represent octave equivalence. One advantage of this system is that it ignores the "spelling" of notes (B sharp, C natural and D double-flat are all 0) according to their [diatonic functionality](#).

There are a few drawbacks with integer notation. First, theorists have traditionally used the same integers to indicate elements of different tuning systems. Thus, the numbers 0, 1, 2, ... 5, are used to notate pitch classes in 6-tone equal temperament. This means that the meaning of a given integer changes with the underlying tuning system: "1" can refer to C# in 12-tone equal temperament, but D in 6-tone equal temperament. Second, integer notation does not seem to allow for the notation of microtones, or notes not belonging to the underlying equal division of the octave. For these reasons, some theorists have recently advocated using rational numbers to represent pitches and pitch classes, in a way that is not dependent on any underlying division of the octave. See the articles on [pitch](#) and pitch class for more information.

Another drawback with integer notation is that the same numbers are used to represent both [pitches](#) and [intervals](#). For example, the number 4 serves both as a label for the pitch class E (if C=0) and as a label for the *distance* between the pitch classes D and F#. (In much the same way, the term "10 degrees" can function as a label both for a temperature, and for the distance between two temperatures.) Only one of these labelings is sensitive to the (arbitrary) choice of pitch class 0. For example, if one makes a different choice about which pitch class is labeled 0, then the pitch class E will no longer be labelled "4." However, the distance between D and F# will still be assigned the number 4. The late music theorist David Lewin was particularly sensitive to the confusions that this can cause.

## Tablature

Tablature was first used in the [Renaissance](#) for [lute](#) music. A staff is used, but instead of pitch values, the fret or frets to be fingered are written instead. Rhythm is written separately and durations are relative and indicated by horizontal space between notes. In later periods, lute and guitar music was written with standard notation. Tablature caught interest again in the late 20th century for popular [guitar](#) music and other fretted instruments, being easy to transcribe and share over the internet in ASCII format. Websites like OLGA.net have archives of text-based popular music tablature.

In China, the tablature of the guqin is unique and complex; the older form composed of written words describing how to play a melody step-by-step using the plain language of the time; the newer form composed of bits of Chinese characters put together to indicate the method of play. Rhythm is not indicated. Tablatures for the qin are collected in what is called qinpu.

## **Klavar notation**

Klavars notation (or "klavarskribo") is a chromatic system of notation geared mainly towards keyboard instruments, which inverts the usual "graph" of music. The pitches are indicated horizontally, with "staff" lines in twos and threes like the keyboard and the time goes from top to bottom. A considerable body of repertoire has been transcribed to Klavar notation.

## **Notation of percussion instruments**

Notation conventions for percussionists is varied because of the [atonality](#) of the set of instruments available such as with a drum kit. Excluding tuned instruments such as [timpani](#) and those similar to the [xylophone](#), percussion is usually notated on a standard notation staff, with different notes on the staff, and sometimes the style of notehead, representing different instruments. Percussive notation once commonly employed the bass clef, but a neutral staff of two parallel vertical lines is usually preferred now. It is usual to label each instrument and technique mark the first time it is introduced, or to add an explanatory footnote, on any score to clarify this. Below is an example of a common notation convention for the [drum kit](#).

### **Drums**

### **Cymbals**

### **Other**

Mounted triangle: leger-line high C with "X" replacing notehead. Maraca: high-B with "+" replacing notehead. Mounted tambourine: high-B with "X" through conventional notehead.

### **Techniques**

Rolls: three diagonal lines across stem (or above whole note). Open hi-hat: o above high-G X. Closed hi-hat: + above high-G X. Rim click: X in E snare space. Stick shot: diagonal slash through note head. Brush sweep: horizontal line (replacing note head) in E snare space with slur to show brush is not lifted. (With stem this looks rather like a long "T" or a long inverted "T", depending which way the stem is going.)

## **Dynamic accents**

### **Anti-accents**

1. slightly softer than surrounding notes: u (breve above or below--inverted--notehead)
2. significantly softer than surrounding notes: ( ) (note head in parentheses)
3. much softer than surrounding notes: [ ] (note head in brackets)

## **Graphic notation**

The term 'graphic notation' refers to the contemporary use of non-traditional symbols and text to convey information about the performance of a piece of music. It is used for [experimental music](#), which in many cases is difficult to transcribe in standard notation. Practitioners include Christian Wolff, Earle Brown, John Cage, Morton Feldman, Krzysztof Penderecki, Cornelius Cardew, and Roger Reynolds. See *Notations*, edited by John Cage and Alison Knowles, ISBN 0685148645.

## **Parsons code**

Parsons code is used to encode music so that it can be easily searched. This style is designed to be used by individuals without any musical background.

## **Systems not based on the standard 12-tone scale**

Other systems exist for non twelve tone equal temperament and non-Western music, such as the Indian svar lippi. Some cultures use their own cipher notations for those music. In ancient Byzantium and Russia sacred music was notated with special 'hooks and banners' (see znamennoe singing). Sometimes the pitches of music written in just intonation are notated

with the frequency ratios, while Ben Johnston has devised a system for representing just intonation with traditional western notation and the addition of accidentals which indicate the cents a pitch is to be lowered or raised.

### **Alternative Music Notations that Use Chromatic Staves**

Over the past three centuries hundreds of music notation systems have been proposed as alternatives to traditional western music notation. A large number of these notations seek to improve upon traditional notation (TN) by using a "chromatic staff" in which each of the 12 pitch classes has its own unique place on the staff. Examples are the Ailler-Brennink notation and John Keller's Express Stave. These notations do not require key signatures, or sharp, flat and natural signs. They also represent interval relationships more consistently and accurately than traditional notation. The Music Notation Modernization Association has a website with information on (and links to) many of these alternative notations (ANs).

### **Musical techniques**

# Musical terminology

Below is a list of terms used in **musical terminology** which are likely to occur on printed or [sheet music](#). Many of these terms have an Italian etymology, reinforcing the Italian origins of standard modern musical notation. Most of the other terms are taken from either the French or German languages; these will be indicated by "(Fr.)" and "(Gr.)", respectively. In different countries, the terms you see below may be written in the language of that country.

Unless indicated otherwise, these terms are assumed to be Italian (or English) in origin.

## A

- *a, à* (Fr.) – "at", "to", "by", "for", "in", "in the style of".
- *aber* (Gr.) – "but".
- *a cappella* – in the manner of chapel music, without instrumental accompaniment.
- *accelerando* – gradually increasing the tempo; "accelerating".
- *accentato* – "with emphasis"
- *acciaccatura* – "crushing" – A very fast [grace note](#) that is "crushed" against the note that follows and takes up no value in the measure.
- *accompagnato* – "accompanied" – The accompaniment must follow the singer who can speed up or slow down at will.
- *adagietto* – "rather slow."
- *adagio* – "slow."
- *adagissimo* – "very slow."
- *ad libitum* (commonly *ad lib*) – the speed and manner are left to the performer.
- *affettuoso* – "tenderly".
- *affrettando* – "hurrying," pressing onwards.
- *agile* – "swiftly"
- *agitato* – "agitated."
- *al, alla* – "to the", "in the manner of".
- *alla breve* – two minim (half-note) beats to a bar, rather than four crotchet (quarter-note) beats.
- *alla marcia* – "in the style of a march".
- *allargando* – "broadening," "getting a little slower."
- *allegretto* – "a little lively," or "moderately fast."

- *allegro* – "lively," or "fast."
- *als* (Gr.) – "than".
- *altissimo* – "very high"
- *amabile* – "amiable", "pleasant".
- *amoroso* – "loving".
- *andante* – "moderate tempo," just this side of slow.
- *andantino* – slightly faster than *andante*.
- *animato* – "animated", "lively".
- *apaisé* (Fr.) – "calmed".
- *a piacere* – "at pleasure". Used to indicate that the performer does not have to follow the rhythm strictly.
- *appassionato* – "passionately."
- *appoggiatura* – "leaning" – A [grace note](#) that "leans" on the following note, taking up some of its value in the measure.
- *a prima vista* – Playing something at first sight of the sheet music
- *arietta* – a short [aria](#)
- *arioso* – "airy"
- *arpeggio* – literally, *like a harp*. Used to indicate that the notes of a certain [chord](#) are to be played quickly one after another (usually from lowest to highest) instead of at the same moment. In [piano music](#) this is sometimes a solution in playing a wide-ranged chord whose notes cannot be played otherwise. Music generated by the limited hardware of video game computers uses a similar technique to create a chord from one tone generator. Arpeggios (or arpeggi) are also [accompaniment](#) patterns. See also broken chord.
- *arco* – "played with the bow," as opposed to pizzicato "plucked," in music for bowed instruments.
- *assai* – "very."
- *assez* (Fr.) – "enough", "sufficiently". Sometimes used in the same sense as *assai*.
- *a tempo* – "in time", used on its own to indicate that the performer should return to the main tempo of the piece (after an *accelerando* or *ritardando*), also may be found in combination with other terms such as *a tempo giusto* (in strict time) or *a tempo di menuetto* (at the speed of a minuet).
- *attacca* – (at the end of a [movement](#)): a direction to begin (attack) the next movement immediately, without a gap or pause.
- *Ausdruck* (Gr.) – "expression".
- *ausdrucksvoll* (Gr.) – "expressively".
- *avec* (Fr.) – "with".

## B

- *barbaro* – "barbarous"
- *basso continuo* – a bass part played continuously throughout a piece to give harmonic structure. Used especially in the [Baroque](#) era.
- *bellicoso* – "warlike," aggressive
- *ben* – "well" (as in *ben marcato* = well marked).
- *bewegt* (Gr.) – "moved", "speeded"
- *bis* – "again," "twice."
- *Bisbigliando* – "whispering" – a special tremolo effect on the harp where a chord or note is rapidly repeated at a low volume.
- *bocca chiusa* – with closed mouth.
- *brillante* – "brilliantly," "with sparkle."
- *brio* – "vigour"; usually in *con brio* (see next).
- *brioso* or *con brio* – "vigorously."
- *broken chord* – a [chord](#) in which the notes are not all played at once, but in some more or less consistent sequence. They may follow singly one after the other, or two notes may be immediately followed by another two, for example. See also *arpeggio* in this list, which as an accompaniment pattern may be seen as a kind of broken chord; see Alberti bass.
- *bruscamente* – "brusquely".

## C

- *calando* – "lowering"; getting slower and softer - rit. and dim.
- *cambiare* – "change" – Any change, such as to a new instrument.
- *cantabile* – "singingly."
- *capo* – beginning.
- *capriccioso* – "capriciously"
- *cédez* (Fr) – "to give way"
- *cesura* or *caesura* – often called "railroad tracks"; indicates complete break in sound.
- *chiuso* – "closed" – calls for a horn to be muted by hand.
- *coda* – Closing section of a movement.
- *col legno* – "with the wood"; indicates that the strings are to be struck with the wood of the bow; also *battuta col legno*: "beaten with the wood."

- *coloratura* – "coloration" – Elaborate ornamentation of a vocal line.
- *colossale* – "tremendously"
- *col pugno* – "with the fist"; bang the piano with the fist.
- *come prima* – like the first (tempo), as before
- *come sopra* – like the previous (tempo)
- *common time* is the time signature 4/4: four beats per measure, each beat a quarter note (a crotchet) in length. 4/4 is often written on the musical staff as **C**. The symbol is not a "C" as an abbreviation for "common time", but a broken circle: the full circle at one time stood for triple time, 3/4.
- *comodo* – "comfortable" – At moderate speed.
- *con* – "with," in very many musical directions, for example *con allegrezza* ("with liveliness"), *con amore* ("with tenderness").
- *con amor* – "with love" – Tenderly.
- *con brio* – "with spirit."
- *con effetto* – "with effect"
- *con fuoco* – "with fire" – In a fiery manner.
- *con moto* – "with motion."
- *con slancio* – "with enthusiasm."
- *con sordino* – "with the mute."
- *coperti* – on a drum, muted with a cloth.
- *crescendo* – progressively louder. Cf. diminuendo.
- *cut time* – same as the [meter](#) 2/2: two half-note (minim) beats per measure. Notated and played like common time (4/4), except with the beat lengths halved. Indicated by three quarters of a circle with a vertical line through it, which resembles the cent symbol ¢. This comes from a literal "cut" of the **C** symbol of common time. Thus, a quarter note in cut time is only half a beat long, and a measure has only two beats.

## D

- *da capo* – from beginning.
- *deciso* – "decisively"
- *decrescendo*, *diminuendo* or *dim.* – "dwindling" – Play with gradually decreasing volume (cf. *crescendo*).
- *delicatamente* – "delicately"
- *dissonante* – "dissonant"
- *divisi* – (or *div.*) means literally "divided": in a part in which several musicians normally play exactly the same notes they are instead to split

the playing of the written simultaneous notes among themselves. It is most often used for string instruments. (The return from *divisi* is marked *unisono*: see in this list.)

- *devoto* – "religiously"
- *dolce* – "sweetly"
- *dolcissimo* – "very sweetly"
- *dolente* – "sorrowfully"
- *doloroso* – "painfully"
- *D.S. al coda* – (or *dal segno al coda*) "from the sign to the coda": means to return to a place in the music designated by the "sign" (a marking resembling a letter S with a diagonal through it and a dot to either side) and continue until directed to move to the coda, a separate ending section
- *D.S. al fine* – (or *dal segno al fine*) "from the sign to the end": means to return to a place in the music designated by the sign and continue to the end of the piece
- *dynamics* – refers to the relative volumes in the execution of a piece of music.

## E

- *Empfindung* – "Feeling" (Ger.)
- *encore* – "once more" (direction to play section again) (Fre.)
- *enfatico* – "emphatically"
- *eroico* – "heroically"
- *espirando* – "gasping", dying away
- *espressivo* – "expressively"
- *estinto* – "as soft as possible," "lifeless" (literally "extinguished").

## F

- *facile* – "easily"
- *feroce* – "ferociously"
- *fieramente* – "proudly"

- *fine* – "the end," often in phrases like *al fine* ("to the end").
- *flebile* – "mournfully"
- *focoso* – "passionately"
- *forte* – usually marked with *f*: to be played or sung loudly. The term *fortissimo*, or *ff*, means "very loudly."
- *fortepiano* – 1. loud, then immediately soft; 2. an early pianoforte.
- *fortissimo* – as loudly as possible (see note at pianissimo)
- *forzando* or *fz*. See *sforzando*
- *fresco* – "freshly"
- *fuoco* – "fire"; "con fuoco" means "with fire."
- *furioso* – "wildly"

## G

- *gaudioso* – with joy
- *gentile* – "gently"
- *geschwind* (Gr.) – "quickly."
- *getragen* (Gr.) – "sustainedly."
- *giocoso* – "gayly."
- *giusto* – strictly, exactly.
- *glissando* – a continuous sliding from one pitch to another (a "true" glissando), or an incidental scale played while moving from one melodic note to another (an "effective" glissando).
- *grandioso* – "grandly"
- *grazioso* – "gracefully."
- *gustoso* – "gusto";

## H

- *Hauptstimme* (Gr.) – "chief part", that designates the contrapuntal line of primary importance, in opposition to *Nebenstimme*.

## I

- *immer* (Gr.) – "always."
- *imperioso* – "imperiously"
- *impetuoso* – "impetuously."
- *improvisando* – with improvisation
- *in altissimo* – play an octave higher.
- *incalzando* – "getting faster and louder." (the exact opposite of *calando*).
- *in modo di* – "in the art of"
- *infuriato* – "furiously"
- *intimo* – "intimately"
- *irato* – "angrily"

## K

- *kräftig* (Gr.) – "strongly."

## L

- *lacrimoso* – "sadly" (literally "tearfully")
- *lamentando* – "complaining"
- *lamentoso* – "mournfully"
- *langsam* (Gr.) – "slowly"
- *largetto* – "somewhat slowly"; not as slow as *largo*.
- *largo* – "slowly."
- *legato* – "smoothly"; in a connected manner. See [articulation](#).
- *leggiero* – "lightly", "delicately"
- *lent* (Fr.) – "slowly"
- *lento* – "slowly"

- *libero* – "(I) liberate"
- *loco* – play as written (generally used to cancel an 8va direction)
- *lugubre* – "lugubrious"
- *luminoso* – "luminously"
- *lusingando* – "coaxingly"

## M

- *ma* – "but."
- *ma non troppo* – "but not too much."
- *maestoso* – "in a stately fashion," "majestically."
- *magico* – "magically"
- *magnifico* – "magnificent"
- *malinconico* – "melancholy"
- *mano destra* – [played with the] right hand (abbreviation: MD).
- *mano sinistra* – [played with the] left hand (abbreviation: MS).
- *marcatissimo* – "very accentuatedly"
- *marcato* – play every note as though it is accented.
- *marcia* – a march; *alla marcia* means "in the manner of a march."
- *martellato* – hammered out.
- *marzial* – "martially."
- *mässig* (Gr.) – "moderately."
- *MD* – see *mano destra*.
- *melancolico* – "melancholic"
- *meno* – "less"; see *meno mosso*, for example, under *mosso*.
- *mesto* – mournful, sad
- *mezza voce* – "with subdued or moderated volume," literally "half voice."
- *mezzo* – "half"; used in combinations like *mezzo forte* (*mf*), meaning "moderately loud."
- *mezzo forte* – "half loudly" – Directs the musician to play moderately loud.
- *mezzo piano* – "half softly" – Directs the musician to play moderately soft.
- [mezzo-soprano](#) – a female singer with a range usually extending from the A below middle C to the F an eleventh above middle C. Mezzo-sopranos generally have a darker vocal tone than sopranos, and their vocal range is between that of a [soprano](#) and that of an [alto](#).
- *mobile* – "flexible", "changeable"
- *moderato* – "moderate," often combined with other terms, for example, "allegro moderato".

- *modesto* – "modest"
- *molto* – "very"
- *morendo* – "dying away" in tone or tempo.
- *mosso* – "motion"; used in conjunction with "più" or "meno", respectively, for more movingly or less movingly (about tempo).
- *MS* – see *mano sinistra*.
- *moto* – "Motion." Usually seen as "con moto," meaning "with motion" or "quickly."
- *munter* (Gr.) – "lively".

## N

- *narrante* – "narratingly"
- *naturale, nat.* – "resume normal playing mode." This important instruction is necessary to discontinue a 'special effect' such as *col legno*, *sul tasto*, *sul ponticello* or playing in harmonics.
- *Nebenstimme* (Gr.) – "under part." A secondary contrapuntal part, always occurring simultaneously with, and subsidiary to, the *Hauptstimme*.
- *nicht zu schnell* (Gr.) – "not too fast."
- *nobile* – "in a noble fashion".
- [\*notes inégales\*](#) (Fr.) – unequal notes; a principally Baroque performance practice of applying long-short rhythms to pairs of notes written as equal.

## O

- *omaggio* – "celebration"
- *ossia* – Denotes an alternative way of performing a passage often notated with a footnote, additional small notes, or an additional staff.
- *ostinato* – A short musical pattern that is repeated throughout an entire composition or portion of a composition.

## P

- *passionato* – "passionately"
- *pesante* – "heavy and ponderous."
- *peu à peu* – little by little
- *pianissimo* (*pp*) – a directive to play very softly, even softer than *piano*. This convention can be extended; the more p's that are written, the softer the composer wants the musician to play, thus *ppp* (*pianississimo*) would be softer than *pp*.

Note: it should be noted that any dynamics in a piece should always be played relative to the other dynamics found in the music. Thus, *pp* should be played as softly as possible, but if *ppp* is found later in the piece, *pp* should be markedly louder than *ppp*. Likewise, *ff* should be played as loud as possible, but if *fff* is found later in the piece, *ff* should be noticeably quieter. More than three *p*'s is uncommon, because it is hard to distinguish the difference between three *ps* **and** *ten ps*!

- *piano* – marked *p*, a directive to play or sing softly.
- *piacevole* – "pleasant."
- *piangevole* – "plaintive"; in the style of a [lament](#).
- *più* – "more"; see *mosso* for an example.
- *pizzicato* – "plucked," in music for bowed strings; as opposed to *arco*, which means "played with the bow", and which is inserted to cancel a *pizzicato* direction.
- *pochettino* (*poch*) – "rather little."
- *poco* – "a little", as in *poco più allegro* ("a little faster"), for example.
- *poco a poco* – "little by little."
- *poi* – "then," indicating a subsequent instruction in a sequence; *diminuendo poi subito fortissimo*, for example: "getting softer then suddenly very loud."
- *portamento* – 1. generally, sliding in pitch from one note to another (especially in singing; more often called *glissando* in instrumental music); 2. in piano music, an [articulation](#) between legato and staccato, like *portato*, in this list.
- *portato* – non-legato but not as short as staccato (same as *portamento* [2], in this list).
- *posato* – "settled"
- *precipitato* – "precipitately."
- *prestissimo* – "extremely quickly."
- *presto* – "very quickly."
- *prima volta* – "the first time"; for example *prima volta senza accompagnamento* ("the first time without accompaniment").
- *primo* – "first."

## Q

- *quasi* – "as if," "almost."

## R

- *rallentando* (*rall.*) – "progressively slower".
- *rapido* – "fast."
- *rasch* (Gr.) – "fast."
- *religioso* – "religiously"
- *repente* – "suddenly."
- *restez* (Fr.) – remain on a note or string.
- *rinforzando* (*rf*) – "stressed by extra force"; sometimes like a sudden *crescendo*, but often applied to a single note.
- *risoluto* – "Resolutely" – played in a bold manner.
- *ritardando* (*rit.*) – "progressively slower."
- *ritenuto* (*riten.*) – "holding back," or "slower" (usually more so than a *ritardando*; and it may, unlike *ritardando*, apply to a single note).
- *roulade* (Fr.) – a florid vocal phrase.
- *rubato* – flexibility of tempo, within a musical phrase, for expressive effect.

## S

- *sanft* – "gently" (Ger.)
- *scherzando* – "playfully."
- *scherzo* – "a joke."
- *schneller* (Gr.) – "faster."

- *scordatura* – an alternate tuning used for the open strings of a [string instrument](#).
- *secco* – "(I) dry"
- *sempre* – "always."
- *senza* – "without."
- *senza sordino* – "without mute."
- *serioso* – "seriously"
- *sforzando* or *sfz* – A sudden strong accent.
- *silencio* – silence.
- *simile* – "similarly"—i.e. continue applying the preceding directive, whatever it was, to the following passage.
- *smorzando* (or *smorz.*) – smother the notes; "dying away."
- *soave* – "smoothly."
- *solo*, plural *solì* – "alone"; played by a single instrument. A *solì* requires more than one player; in a [jazz big band](#) this refers to an entire section playing in harmony.
- *sostenuto* – "sustainedly."
- *sotto voce* – soft tones, literally "under voice" used as a direction instructing the singer or instrumentalist to proceed in a more understated or more subtle fashion.
- *spiritoso* – "spiritedly."
- *staccato* – an indication to play with a sharp attack, and briefly. In [music notation](#) a small dot under or over the note indicates that the note is to be sounded *staccato*.
- *stanza* – "a verse of a song".
- *strepitoso* – "noisy".
- *stretto* – faster.
- *stringendo* – with a pressing forward or acceleration of the tempo.
- *subito* – "suddenly."
- *sul ponticello* – in string playing, an indication to bow very near to the [bridge](#), producing a characteristic glassy sound, which emphasizes the higher harmonics at the expense of the fundamental.
- *sul tasto* – in string playing, an indication to bow over the fingerboard.

## T

- *tempo* – "time" – The speed of a piece of music.
- *teneramente* – tenderly

- *tenuto* – "held" – an instruction to touch on a note slightly longer than usual, but without generally altering the note's value.
- *tremendo* – "frightening"
- *tremolo* – a rapid repetition of the same note, or an alternation between two or more notes. It can also be intended (inaccurately) to mean a rapid and repetitive variation in pitch for the duration of a note. It is notated by a strong diagonal bar across the note stem, or a detached bar for a set of notes (or stemless notes).
- *tre corde* – (*tc*; sometimes inaccurately *tre corda*) literally "three strings"; an instruction to release the soft pedal (in [piano](#) music). See *una corda*.
- *troppo* – "too much" – Usually seen as "non troppo," meaning "moderately" or, when combined with other terms, "not too much," such as "Allegro non troppo."
- *tutti* – "all together," usually used in an orchestral or choral score when the orchestra or all of the voices come in at the same time, also seen in baroque-era music where two instruments share the same copy of music, after one instrument breaks off to play a more advanced form, and they both play at the "tutti."

## U

- *una corda* – "one string" – a directive in [piano](#) music for the musician to depress the soft pedal, reducing the volume of the sound. In some pianos, this literally results in the hammer striking one string rather than two or three. (For most notes on modern instruments, in fact it results in striking two rather than three strings.) Its counterpart, *tre corde* ("three strings"; see in this list), is the opposite: the soft pedal is to be released.
- *un poco* – "a little."
- *unisono* (or *unis*) – "in unison" – several players are to play exactly the same notes within the written part, as opposed to splitting simultaneous notes among themselves. Often used to mark the return from *divisi* (see in this list).

## V

- *vibrato* – A slight variation in the pitch of a note, used to give a richer sound. Often confused with tremolo, which refers either to variation in the volume of a note, or rapid repetition of a single note.
- *vittorioso* – "victoriously"
- *vivace* – "lively," "up-tempo."
- *vivacissimo* – "very lively"
- *volante* – "flying"
- *V.S. (volti subito)* – "turn page quickly". Found often in [orchestral parts](#).

## W

- *wolno* – A Polish word meaning "loose" or "slowly". Found as directive in "The Elephant" from "Carnival of the Animals" by Saint-Saens. Rarely used and hard to find.

## Z

- *zögernd* – "doubtful".
- *Zeitmass* (Gr.) – tempo.

# Musical theatre

**Musical theatre** (sometimes spelled **theater**) is a form of theatre combining [music](#), [songs](#), [dance](#), and spoken dialogue. It is closely related to [opera](#), frequently being distinguished by the use of [popular music](#) of various forms (and thus usually different instrumentation), the use of unaccompanied dialogue (though some musicals are entirely accompanied, such as *Les Misérables*, and some operas have spoken dialogue, such as *Carmen*), and the avoidance of many operatic conventions.

## Introduction

There are three written components of a musical: the music, the lyrics, and the book. The **book** of a musical refers to the spoken (not sung) lines in the play; however, "book" can also refer to the overall dramatic arc of a show. The music and lyrics together form the score of the musical; the lyrics and book together are often printed as the libretto.

Many familiar musical theatre works have been the basis for successful musical films, or were adapted for television presentations. While some popular television programs have set one single episode in the style of a musical as a play on their usual format (examples include episodes of *Ally McBeal*, *Buffy the Vampire Slayer*'s episode *Once More with Feeling*, *Oz*'s *Variety*, or *Space Ghost Coast to Coast*'s *O Coast to Coast!/Boatshow*) -- or have suddenly begun singing and dancing in a musical-theatre style during an episode, such as in several episodes of *The Simpsons*, *South Park* and *Family Guy*) -- the television series *Cop Rock*, which extensively used the musical format, was not a success.

While musical theatre works are performed around the world, they are most frequently produced on Broadway in New York and in the West End in London.

A musical can be anywhere from a few minutes to several hours long; however, most musicals range from two hours to two hours and forty-five minutes. Musical today are typically presented with one intermission ten to fifteen minutes in length; the first act is almost always somewhat longer than the second act. A musical will usually have around twenty to thirty songs of varying lengths (including reprises and underscoring) interspersed with book (dialogue) scenes. Some musicals, however, are "sung-through" and do not have any spoken dialogue. This can blur the line between musical theatre and opera.

A musical's moments of greatest dramatic intensity are often performed in song. Proverbially, "when the emotion becomes too strong for speech, you sing; when it becomes too strong for song, you dance." A song must be crafted to suit the character (or characters) and their situation within the story. A show usually opens with a song that sets the tone of the musical, introduces some or all of the major characters, and shows the setting of the play. Within the compressed nature of the musical, the writers must develop the characters and the plot.

Music provides an excellent way to express emotion. However, on average, fewer words are sung in a five-minute song than are spoken in a five-minute block of dialogue. Therefore there is less time to develop drama than in a straight play of equivalent length, since a musical may have an hour and a half or more of music in it.

## History

### In the beginning

The first theater piece that conforms to the modern conception of a musical is generally considered to be *The Black Crook* - with a book by Charles M. Barras and musical adaptations by Giuseppe Operti - which premiered at Niblo's Gardens in New York on September 12, 1866. The production was a staggering five-and-a-half hours long, but despite its length kept theatergoers mesmerized enough to run for 474 performances. Hundreds of Musical Comedies were staged on Broadway in the 1890s and early 1900s comprising music written in New York's Tin Pan Alley involving composers such as Gus Edwards, John J McNally, John Walter Bratton

### Operetta

Probably the best known composers of [operetta](#) were Johann Strauss II, Jacques Offenbach and Franz Lehár. In England, W. S. Gilbert and Arthur Sullivan created the Savoy Operas, which include *The Mikado*, *Pirates of Penzance*, *H.M.S. Pinafore* and *Iolanthe*. They remain popular to this day, and were frequently revived by London's recently defunct (2003) D'Oyly Carte Opera Company which was dedicated to presenting their work at the Savoy Theatre. Much of their legacy served as an inspiration for the likes of Victor Herbert (*Babes in Toyland*, 1903) and other popular pieces of musical theatre at the turn of the century.

## The Roaring Twenties

The musical developed from opera and operetta, but early musicals in the Roaring Twenties ignored plot in favor of emphasizing star actors and actresses, big dance routines, and popular songs (throughout the first half of the twentieth century, popular music was dominated by theater writers). Many shows were revues with little plot. Typical of the times were lighthearted productions like *Lady Be Good*, *Sunny*, *Tip Toes*, *No, No, Nanette*, *Oh, Kay*, and *Funny Face*. Their books may have been forgettable, but they produced enduring standards from George Gershwin, Cole Porter, Vincent Youmans, and Richard Rodgers and Lorenz Hart, among others.

The first production to most resemble the musical as we know it today - a complete integration of book and score - was *Show Boat*, which premiered on December 27, 1927 at the Ziegfeld Theater in New York. Up to this point, Florenz Ziegfeld had been known for his spectacular song-and-dance revues featuring extravagant sets and elaborate costumes, but there was no common theme tying the various numbers together. *Show Boat*, with a book and lyrics adapted from Edna Ferber's novel by Oscar Hammerstein II and P. G. Wodehouse and music by Jerome Kern, presented a new concept that was embraced by audiences immediately. Despite some of its startling themes - miscegenation among them - the original production ran a total of 572 performances.

## The Thirties

Encouraged by the success of *Show Boat*, creative teams began following the "format" of that popular hit. *Of Thee I Sing* (1931), a political satire with music by George Gershwin and lyrics by Ira Gershwin and Morrie Ryskind, was the first musical to be awarded the Pulitzer Prize. *The Band Wagon* (1931), with a score by Arthur Schwartz and Howard Dietz, starred dancing partners Fred Astaire and his sister Adele. While it was primarily a revue, it served as the basis for two subsequent film versions that were "book" musicals in the truest sense. Porter's *Anything Goes* (1934) affirmed Ethel Merman's position as the First Lady of musical theatre - a title she maintained for many years. Gershwin's *Porgy and Bess* (1935) was closer to opera than it was to the typical musical, but in style and scope it foreshadowed such contemporary productions as *Evita* and *Les Misérables*. *The Cradle Will Rock* (1937), with a book and score by Marc Blitzstein and directed by Orson Welles, was a highly political piece that, despite the controversy surrounding it, managed to run for 108 performances. Kurt Weill's *Knickerbocker Holiday* brought to the musical stage New York City's early history, using as its source writings by Washington Irving. Clearly,

musical theatre was evolving into something beyond feathers and beads worn by statuesque showgirls.

## The Golden Age (1940s/1950s/1960s)

The Golden Age of the Broadway musical is generally considered to have begun with *Oklahoma!* (1943) and to have ended with *Hair* (1968).

Rodgers' and Hammerstein's *Oklahoma!* had a cohesive (if somewhat slim) plot, songs that furthered the action of the story, and featured dream ballets which advanced the plot and developed the characters, rather than using dance as an excuse to parade scantily-clad women across the stage. It defied musical conventions by raising its first act curtain not on a bevy of chorus girls, but rather on a woman churning butter, with an off-stage voice singing the opening lines of *Oh, What a Beautiful Morning*. It was the first "blockbuster" Broadway show, running a total of 2,212 performances, and remains one of the most frequently produced of the team's projects. The two created an extraordinary collection of some of musical theater's best loved and most enduring classics, including *Carousel* (1945), *South Pacific* (1949), *The King and I* (1951), and *The Sound of Music* (1959).

Americana was the time during the "Golden Age" when the wartime cycle of shows were beginning to arrive. An example of this would be "On The Town" (1944), written by Betty Comden and Adolph Green, composed by Leonard Bernstein and choreographed by Jerome Robbins. The musical is set during wartime, where a group of three sailors are on a 24 hour shore leave in New York. During their day, they each meet a wonderful woman. The women in this show have a specific power to them, as if to be saying, "Come here! I need a man!" The show also gives the impression of a country with an uncertain future, as the sailors also have with their women before leaving.

*Oklahoma!* inspired others to continue the trend. Irving Berlin used sharpshooter Annie Oakley's career as a basis for his *Annie Get Your Gun* (1946, 1,147 performances); Burton Lane, E. Y. Harburg, and Fred Saidy combined political satire with Irish whimsy for their fantasy *Finian's Rainbow* (1947, 725 performances); Cole Porter found inspiration in William Shakespeare's *Taming of the Shrew* for *Kiss Me, Kate* (1948, 1,077 performances); Damon Runyan's eclectic characters were at the core of Frank Loesser's and Abe Burrows' *Guys and Dolls*, (1950, 1,200 performances); and the Gold Rush was the setting for Alan Jay Lerner and Frederick Loewe's *Paint Your Wagon* (1951).

The fairly brief run - 289 performances - of that show didn't discourage them from collaborating again, this time on an adaptation of George Bernard Shaw's *Pygmalion* - *My Fair Lady* (1956), with Rex Harrison and Julie Andrews, which at 2,717 performances held the long-run record for many years.

As in *Oklahoma!*, dance was an integral part of *West Side Story* (1957), which transported Romeo and Juliet to modern day New York City and converted the feuding Montague and Capulet families into warring gangs, the Sharks and the Jets. The book was adapted by Arthur Laurents, with music by Leonard Bernstein and lyrics by newcomer Stephen Sondheim. It was embraced by the critics but failed to be a popular choice for the "blue-haired matinee ladies," who preferred the small town River City, Iowa of Meredith Willson's *The Music Man* to the alleys of Manhattan's Upper West Side. Apparently Tony Award voters were of a similar mind, since they favored the latter over the former. *West Side Story* had a respectable run of 732 performances (1,040 in the West End), while *The Music Man* ran nearly twice as long, with 1,375.

Laurents and Sondheim teamed again for *Gypsy* (1959, 702 performances), with Jule Styne providing the music for a backstage story about the most driven stage mother of all-time, stripper Gypsy Rose Lee's mother Rose. The original production ran for 702 performances, but proved to be a bigger hit in its three subsequent revivals, with Angela Lansbury, Tyne Daly, and Bernadette Peters tackling the role made famous by Ethel Merman.

Stephen Sondheim would be one of the most important composer/lyricists from 1960 on. His first project for which he wrote both music and lyrics was *A Funny Thing Happened on the Way to the Forum* (1962, 964 performances), with a book based on the works of Plautus by Burt Shevelove and Larry Gelbart, and starring Zero Mostel. Sondheim was not one to concentrate on the romantic plots typical of productions of the time; his work tended to be darker, exploring the grittier sides of life both present and past. Some of his earlier works are *Anyone Can Whistle* (1964, which - at a mere nine performances, despite having star power in Lee Remick and Angela Lansbury - is a legendary flop), *Company* (1970), *Follies* (1971), and *A Little Night Music* (1973), which featured the only standard ever to emerge from the extensive Sondheim catalogue, *Send in the Clowns*. He has found inspiration in the unlikeliest of sources - the opening of Japan to Western trade for *Pacific Overtures*, a legendary murderous barber - *Sweeney Todd* - seeking revenge in the Industrial Age of London, the paintings of Georges Seurat for *Sunday in the Park with George*, and a collection of individuals intent on eliminating the American President in *Assassins*. His works are generally known for their lyrical sophistication and musical complexity, which many critics argue has led to his works receiving very little popularity among the general public.

Jerry Herman, too, has played a significant role in American musical theater, beginning with his first Broadway production, *Milk and Honey* (1961, 563 performances), about the founding of the state of Israel, and continuing with the smash hits *Hello, Dolly!* (1964, 2,844 performances), *Mame* (1966, 1,508 performances), and *La Cage aux Folles* (1983, 1,761 performances).

Even his less successful shows like *Dear World* (1969) and *Mack & Mabel* (1974) have had memorable scores (*Mack & Mabel* was later reworked into a London hit). Writing both words and music, many of Herman's showtunes have become popular standards, including "Hello, Dolly!", "If He Walked Into My Life", "We Need a Little Christmas", "I Am What I Am", "Mame", "Shalom", "The Best of Times", "Before the Parade Passes By", "Put On Your Sunday Clothes", "It Only Takes a Moment", "It's Today!", "Open a New Window", "Bosom Buddies", "I Won't Send Roses", and "Time Heals Everything", recorded by such luminaries as Louis Armstrong, Eydie Gorme, Barbra Streisand, Petula Clark and Bernadette Peters. Herman's songbook has been the subject of two popular musical revues, *Jerry's Girls* (Broadway, 1985), and *Showtune* (off-Broadway, 2003). Jerry Herman is to traditional musical comedy what Stephen Sondheim is to the avant-garde.

The musical started to diverge from the relatively narrow confines of the 1950s. [Rock music](#) would be used in several Broadway musicals, perhaps the most significant of which was *Hair*, which featured not only rock music but also nudity and controversial opinions about the Vietnam War. Other important rock musicals of the 1960s and 1970s included *Jesus Christ Superstar*, *Godspell*, and *Two Gentlemen of Verona*. The musical also went in other directions. Shows like *Raisin*, *Dreamgirls*, *Purlie*, and *The Wiz* brought a significant African-American influence to Broadway. More and more different musical genres were turned into musicals either on or off-Broadway. Automotive companies and other types of corporations hired Broadway talent to write [corporate musicals](#), private shows which were only seen by their employees.

### **More recent eras**

1976 brought one of the great contemporary musicals to the stage. *A Chorus Line* emerged from recorded group therapy-style sessions Michael Bennett conducted with gypsies - those who sing and dance in support of the leading players - from the Broadway community. From hundreds of hours of tapes, James Kirkwood, Jr. and Nick Dante fashioned a book about an audition for a musical, incorporating into it many of the real-life stories of those who had sat in on the sessions - and some of whom eventually played variations of themselves or each other in the show. With music by Marvin Hamlisch and lyrics by Edward Kleban, *A Chorus Line* first opened at Joseph Papp's Public Theater in lower Manhattan. Advance word-of-mouth - that something extraordinary was about to explode - boosted box office sales, and after critics ran out of superlatives to describe what they witnessed on opening night, what initially had been planned as a limited engagement eventually moved to the Shubert Theater uptown for a run that seemed to last

forever. The show swept the Tony Awards and won the Pulitzer Prize, and its hit song, *What I Did for Love*, became an instant standard.

Clearly, Broadway audiences were eager to welcome musicals that strayed from the usual style and substance. John Kander and Fred Ebb explored pre-World War II Nazi Germany in *Cabaret* and Prohibition-era Chicago, which relied on old vaudeville techniques to tell its tale of murder and the media. *Pippin*, by Stephen Schwartz, was set in the days of Charlemagne. Federico Fellini's autobiographical film *8½* became Maury Yeston's *Nine*. But old-fashioned values were embraced, as well, in such hits as *Annie*, *42nd Street*, *My One and Only*, and popular revivals of *No, No, Nanette* and *Irene*.

The 1980s and 1990s saw the influence of European "mega-musicals" or "pop operas," which typically featured a pop-influenced score and had large casts and sets and were identified as much by their notable effects - a falling chandelier, a helicopter landing on stage - as they were by anything else in the production. Many were based on novels or other works of literature. The most important writers of mega-musicals include the French team of Claude-Michel Schönberg and Alain Boublil, responsible for *Les Misérables* and *Miss Saigon* (inspired by *Madame Butterfly*); and the British composer Andrew Lloyd Webber, who wrote *Evita*, based on the life of Argentina's Eva Perón, *Cats*, derived from the poems of T. S. Eliot, *The Phantom of the Opera* derived from the novel "Le Fantôme de l'Opéra" written by Gaston Leroux, and *Sunset Boulevard* (from the classic film of the same name). These decades also saw the influence of large corporations that produced musicals. The most important has been Disney, which adapted some of their animated movie musicals - such as *Beauty and the Beast* and *The Lion King* (which is said to have been responsible for the revitalization of 42nd Street between Broadway and Eighth Avenue, previously a strip of tourist trap souvenir shops, arcades, peep shows, and porn theaters) for the stage - and also created original stage productions like *Aida* with music by Elton John.

The growing scale (and cost) of musicals led to some concern that musicals were eschewing substance in favor of style. The 1990s and 2000s have seen many writers create smaller musicals (*Falsettoland*, *Passion*); the topics vary widely and the music ranges from Sondheimesque to pop, but they generally are produced off-Broadway and feature much smaller casts (and thus much lower costs).

There also had been the concern that the musical had lost touch with the tastes of the general public in America and that the musical was increasingly doomed to be something viewed by a smaller and smaller audience. One of the most important writers who attempted to increase the popularity of musicals among a younger audience was Jonathan Larson, whose musical *Rent* (based on the opera *La Bohème*) featured a cast of twentysomethings and whose score was heavily rock-influenced. The musical has been a

smash success, even with its composer dying of an aortic aneurysm on the night of the final dress rehearsal at New York Theatre Workshop, before he could see it reach Broadway. Other writers who have attempted to bring a taste of modern rock music to the stage include Jason Robert Brown.

Another trend has been to create a plot to fit a collection of songs that have already been hits - thus *Mamma Mia!* (featuring songs by ABBA), *Movin' Out* (based on the tunes of Billy Joel), *Good Vibrations* (the Beach Boys), and *All Shook Up* (Elvis Presley).

Familiarity may breed contempt - but it's also embraced by producers anxious to guarantee they recoup their very considerable investments, if not show a healthy profit. Some are willing to take chances on the new and unusual, such as *Avenue Q* (which utilizes puppets to tell its very adult-themed story) or *Bombay Dreams* (about the "Bollywood" musicals churned out by Indian cinema). But the majority prefer to hedge their bets by sticking with the familiar - revivals of family fare like *Wonderful Town* or *Fiddler on the Roof* or proven hits like *La Cage aux Folles*. Today's composers are finding their sources in already proven material - cult films like *The Producers* or *Hairspray*; classic literature such as *Little Women* and *Dracula* - hoping they'll have a built-in audience as a result.

At the present time (late 2004), the musical is being pulled in a number of different directions. Gone are the days when a sole producer - a David Merrick or a Cameron Mackintosh - backs a production. Corporate sponsors dominate Broadway, and often alliances are formed to stage musicals which require an investment of \$10 million or more. In 2002, the credits for *Thoroughly Modern Millie* listed ten producers, and among those names were entities comprised of several individuals. Typically, off-Broadway and regional theaters tend to produce smaller and therefore less expensive musicals, and in recent times more and more development of new musicals has taken place outside of New York. *Wicked*, for example, first opened in San Francisco, and its creative team relied on the mostly mediocre reviews to assist them in retooling the show before it reached Broadway, where it ultimately became a healthy hit.

As we move on into the future of musicals, it would appear that the spectacle format is on the rise again, returning to the times when Romans would have mock sea battles on stage. This is most apparent in Toronto, Canada where David and Ed Mirvish are presenting the World Premier of "The Lord Of The Rings", billed as the biggest stage production in musical theatre history.

## **Famous choreographers**

George Balanchine  
Michael Bennett  
Matthew Bourne

## Musical tuning

In [music](#), there are two common meanings for **tuning**:

Tuning practice

The act of tuning an instrument or voice.

Tuning systems

The various systems of pitches used to tune an instrument.

## Tuning practice

**Tuning** is the process of producing or preparing to produce a certain [pitch](#) in relation to another, usually matched at the unison but often at some other [interval](#) relationship. *Out of tune* refers to a pitch that is too high or too low, corresponding to sharp or flat, respectively.

Different methods of sound production require different methods of adjustment:

- Tuning to a pitch with one's voice is called *matching pitch* and is the most basic skill learned in [ear training](#).
- Turning the pegs on a [guitar](#) (on the machine head) or [violin](#) to increase or decrease the tension on the strings so as to make them higher or lower in pitch.
- Modifying the length or width of the tube of a [wind instrument](#), [brass instrument](#), [pipe](#), [bell](#), or similar instrument to adjust the pitch.

Some instruments do not have a regular harmonic series, and are known as inharmonic. This makes their tuning complicated, and usually compromised. The tuning of bells, for instance, is extremely involved.

Tuning may be done aurally by sounding two pitches and adjusting one of them to match or relate to the other. A tuning fork or electronic tuning device may be used as a reference pitch, though in ensemble rehearsals often a piano is used (as its pitch cannot be adjusted for each rehearsal). Symphony orchestras tend to tune to an A provided by the principal [oboist](#).

Interference beats are used to objectively measure the accuracy of tuning. As the two pitches approach a harmonic relationship, the frequency of beating decreases. When tuning a unison or octave it is desired to reduce the beating frequency until it cannot be detected. For other intervals, this is dependent on the tuning system being used.

Harmonics may be used to check the tuning of strings which are not tuned to the unison. For example, lightly touching the highest string of a cello at halfway down its length (at a node) while bowing produces the same pitch as doing the same one third of the way down its second highest string.

### Basic tuning (open strings)

In [music](#), the term **open string** refers to string of a [string instrument](#) when it is played at full length on the instrument —ie. played without shortening its length (ie. fretting on a guitar) on the fingerboard.

The strings of a [guitar](#) are normally tuned to fourths (excepting the G and B strings in standard tuning), as are the strings of the [bass guitar](#) and double bass. [Violin](#), [viola](#), and [cello](#) strings are tuned to fifths. However, nonstandard tunings (called scordatura) may be used, which require alternative methods.

To tune an instrument, usually only one reference pitch is given. This reference is used to tune one string, which is then used to tune all of the others. On a guitar, often the lowest string is tuned to an E. From this, each successive string can be tuned by fingering the fifth fret of an already tuned string and comparing it with the next higher string played open. (This works with the exception of the G string, which must be stopped at the fourth fret to sound B against the open B string above.)

This table lists open strings on some common string instruments and their standard tunings.

|   |                  |
|---|------------------|
| <a href="#">Violin</a>                        | G, D, A, E       |
| <a href="#">Viola</a> , <a href="#">Cello</a> | C, G, D, A       |
| Double bass                                   | E, A, D, G       |
| <a href="#">Guitar</a>                        | E, A, D, G, B, E |

## Altered tunings

Unconventional tunings, or scordatura (It., from *scordare*, to mistune); were first used in the 16th century by Italian lutenists. It was primarily used to facilitate difficult passages, but was also used to alter timbral characteristics, reinforce tonalities through the use of open strings, and to extend the range of the instrument.

Violin scordatura was employed in the 17th and 18th centuries by Italian and German composers, namely, Biagio Marini, Antonio Vivaldi, Johann Pachelbel and J.S. Bach; whose *Fifth Suite For Unaccompanied Cello* calls for the lowering of the A string to G. In Mozart's Sinfonia Concertante K. 364, all the strings of the violin are raised one half-step, most likely to make more open strings available.

Scordatura for the violin was also used in the 19th and 20th centuries in works by Paganini, Schumann, Saint-Saens and Bartok. In Saint-Saens "Danse Macabre", the high string of the violin is lower half a tone to Eb the so as to have the most accented note of the main theme sound on an open string. In Bartok's *Contrasts*, the violin is tuned G#-D-A-Eb to facilitate the playing of tritones on open strings.

American folk violinists of the Appalachians and Ozarks often employ alternate tunings for dance songs and ballads. The most commonly used tuning is A-E-A-E.

## Tuning systems

A *tuning system* is the system used to define which tones, or [pitches](#), to use when playing [music](#). In other words, it is the choice of number and spacing of frequency values which are used.

Due to the psychoacoustic properties of tones, various pitch combinations will sound more or less "natural" when used in combination. For example, a tone caused by a vibration twice the speed of another (the ratio of 1:2) forms the natural sounding octave. Another natural resonance found in [musical scales](#) the world over is the ratio of 1:3 (2:3 when octave reduced) which is often called a perfect fifth. More complex musical effects can be created through other relationships.

The creation of a tuning system is complicated because musicians want to make music with more than just a few differing tones. As the number of tones is increased, conflicts arise in how each tone combines with every other. Finding a successful combination of tunings has been the cause of debate, and has led to the creation of many different tuning systems across the world. Each tuning system has its own characteristics, strengths and weaknesses.

### Systems for the twelve-note chromatic scale

It is impossible to tune the twelve-note [chromatic scale](#) so that all [intervals](#) are "perfect"; many different methods with their own various compromises have thus been put forward. The main ones are:

- **Just intonation**, in which the ratios of the frequencies between all notes are based on relatively low whole numbers, such as 3:2, 5:4 or 7:4; or in which all pitches are based on the harmonic series (music), which are all whole number multiples of a single tone. Such a system may use two different ratios for what is the same interval in equal temperament depending on context; for instance, a major second may be either in the ratio 9:8 or 10:9. For this reason, just intonation may be less a suitable system for use on [keyboard instruments](#) or other instruments where the pitch of individual notes is not flexible. (On fretted instruments like guitars and lutes, multiple frets for one interval can be practical.)
- **Pythagorean tuning**, in which the ratios of the frequencies between all notes are all multiples of 3:2. The Pythagorean system was further developed by Safi ad-Din al-Urmawi, who divided the octave into seventeen parts (limmas and commas) and used in the Turkish and Persian tone systems.

- **Meantone temperament**, a system of tuning which averages out pairs of ratios used for the same interval (such as 9:8 and 10:9), thus making it possible to tune [keyboard instruments](#). Next to the twelve-equal temperament, which some would not regard as a form of meantone, the best known form of this temperament is *quarter comma meantone*, which tunes major thirds justly in the ratio of 5:4 and divides them into two whole tones of equal size. To do this, eleven perfect fifths in each octave are flattened by a quarter of a syntonic comma, with the remaining fifth being left very sharp (such an unacceptably out-of-tune fifth is known as a wolf interval). However, the fifth may be flattened to a greater or lesser degree than this and the tuning system will retain the essential qualities of meantone temperament; examples include the 31-equal fifth and Lucy tuning.
- Both just intonation and meantone temperament can be regarded as forms of **regular temperament**.
- **Well temperament**, any one of a number of systems where the ratios between intervals are unequal, but approximate to ratios used in just intonation. Unlike meantone temperament, the amount of divergence from just ratios varies according to the exact notes being tuned, so that C-E will probably be tuned closer to a 5:4 ratio than, say, Db-F. Because of this, well temperaments have no wolf intervals. A well temperament system is usually named after whoever first came up with it.
- **Equal temperament** (a special case of well-temperament), in which adjacent notes of the scale are all separated by logarithmically equal distances (100 cents) - A harmonized C major scale in equal temperament (.ogg format, 96.9KB). This is the most common tuning system used in Western music, and is the standard system for tuning a piano. Since this scale divides an octave into twelve equal-ratio steps, the frequency ratio between adjacent notes is then the twelfth root of two,  $2^{1/12}$ , or ~1.05946309...

## Other scale systems

- Slendro, a scale used in Indonesian gamelan music with five notes to the octave
- Pelog, the other main gamelan scale, with seven notes to the octave
- 43-tone scale, created by Harry Partch, an American composer who wrote musical and dramatic works in just intonation
- Bohlen-Pierce scale
- LucyTuning, a microtuning system created by Charles Lucy, devised from Pi and the writings of John 'Longitude' Harrison. Designed to emulate

Eastern tuning systems as well as Western.

- Alpha and beta scales of Wendy Carlos
- Quarter tone scale, first presented by Mikha'il Mishaqah, used in the theory of [Arab music tone systems](#). From this the heptatonic scales consisting of minor, neutral, and major seconds of maqamat are chosen, this system was first promoted by al-Farabi using a 25 tone scale.
- Stretched tuning makes an octave represent slightly more than a doubling in frequency. It is usually applied to keyboard instruments with tines or thick strings, where the ratio of harmonic to fundamental can be slightly greater than a true integer ratio (typically [piano](#) and electric piano). Stretched tuning is sometimes claimed to give a "warmer" sound to chords.

## Comparisons and controversies among tunings

All musical tunings have advantages and disadvantages. Twelve tone equal temperament (12-TET) is the standard and most usual tuning system used in Western music today because it gives the advantage of modulation to any key without dramatically going out of tune, as all keys are equally and slightly out of tune. However, just intonation provides the advantage of being entirely in tune, with at least some, and possibly a great deal, loss of ease in modulation. The composer Terry Riley, said "Western music is fast because it's not in tune", meaning that its inherent beating forces motion. Twelve tone equal temperament also, currently, has an advantage over just intonation in that most musicians are trained in, and have instruments designed to play in equal temperament. Other tuning systems have other advantages and disadvantages and are chosen for various qualities. It must be realized, however, that just as many people who play music today in equal temperament without having heard of it as musicians throughout the world that use just intonation without "knowing" it.

The octave (or even other intervals, such as the so-called tritave, or twelfth) can advantageously be divided into a number of equal steps different from twelve. Popular choices for such an equal temperament include 19, 22, 31, 53 and 72 parts to an octave, each of these and the many other choices possible have their own distinct characteristics.

Non-equal and non-just tunings also provide advantages. For instance, William Sethares shows that the tunings of Balinese gamelans are related to the inharmonic spectra or [timbre](#) of their metallophones and the harmonic spectra of stringed instruments such as the rebab, just as just intonation and twelve tone equal temperament are related to the spectra or timbre of harmonic instruments alone.

Some instruments, such as the [violin](#), don't limit the musician to particular pitches, allowing to choose the tuning system "on the fly". Many performers on such instruments adjust the notes to be more in tune than the equal temperament system allows, perhaps even without realizing it.

## Musician

A **musician** is a person who plays or composes [music](#). Musicians can be classified by their role in creating or performing music:

- A [singer](#) (or vocalist) uses his or her [voice](#) as an instrument.
- An instrumentalist plays a [musical instrument](#).
- Both singer and instrumentalist can be improvisers, who create real time music.
- [Composers](#) and [songwriters write](#) music.
- A conductor coordinates a [musical ensemble](#).

Musicians may also [dance](#) or produce [choreography](#). The concept of the musician and the status of the musician in society varies from culture to culture.

Musicians can be distinguished as amateur or professional. Professional musicians are paid musicians. They may work freelance, enter into a contract with a studio or [record label](#), be employed by a professional [ensemble](#) such as a symphony orchestra, or be employed by an institution such as a church

or business (such as a bar). An amateur musician is one for which [music](#) is a pastime and not an occupation.

## Types of musicians

- [Singer](#) (vocalist)
- [Composer](#)
- Conductor
- Improviser
- Instrumentalist
  - Bassist (Double bassist)
  - Bassoonist
  - Bouzouki player
  - Cellist
  - Clarinetist
  - Electronic musician
  - Flutist (Flautist)
  - Hornist (Horn player)
  - Keyboardist (Keyboard player)
  - Oboist
  - Organ grinder
  - Organist
  - Pianist
  - Percussionist
  - Recorder player
  - Saxophonist
  - Sitarist
  - Timpanist
  - Trombonist
  - Trumpeter (also Trumpet player)
  - Tubist (Tuba player)
  - Turntablist (DJ)
  - Uilleann piper
  - Violinist
  - Violist (Viola player)
- Arranger
- Orchestrator
- Record producer

Some people may argue about guitarists but they are barely talented and are in no shape or form musicians let alone straight.

## Usage note

Many times a musician can be named according to his or her [instrument](#) (a violinist, for example, is one who plays [violin](#).) The "-ist" suffix is most common, though not universal (e.g. "trumpeter," not "trumpetist.")

## Musicology

**Musicology** is reasoned discourse concerning [music](#) (Greek:  $\mu\upsilon\sigma\iota\kappa\acute{\omicron}\nu\omicron\mu\omicron\lambda\omicron\gamma\iota\alpha$  = "music" and  $\lambda\omicron\gamma\omicron\sigma$  = "word" or "reason"). In other words:

the whole body of systematized knowledge about music which results from the application of a scientific method of investigation or research, or of philosophical speculation and rational systematization to the facts, the processes and the development of musical art, and to the relation of man in general...to that art (*Harvard Dictionary of Music*).

By this definition, the field includes every conceivable discussion of musical topics. The specializations of musicologists are quite diverse. Some, for instance, may specialize in English Tudor church music, others in the history of [musical notation](#), some in contemporary [music theory](#), and others in the development of the [flute](#). Other musicologists stress the cultural context of music and the meanings music holds for different people.

Like the comparable field of art history, different schools of musicology tend to emphasize different types of musical works and different approaches to music. National differences in the definition of musicology also abound.

Some American scholars, for instance, would not consider [music theory](#) under the rubric of musicology.

## What is music?

*Main article:* [definitions of music](#).

"What is music?" is the first (and historical) question of musicology. Through it we can find the three sub-disciplines of present musicology.

1. What is **music**? What structures of sound can we call music? How have the ideas and practices of music developed in different cultures and ages? Which pieces and systems of music can we form a body of knowledge from, because they have survived in notated, recorded or remembered form? These questions lead to the study of [music history](#).

2. **What** is music? What is possible to know about the internal logic and functioning of this we call music? How shall we describe it? Notate it? Analyze it? What ideas and systems of meaning have been associated with music in different cultures and ages? These questions lead to the study of [music theory](#) (see also below).

3. What **is** music? What is it doing in the human world? How it is used? These questions about the place of music in society, leads to the study of [ethnomusicology](#) (see also below).

## Ethnomusicology

*Main article:* [Ethnomusicology](#).

[Ethnomusicology](#) is the study of music in its cultural context. It can be considered the anthropology of music. Jeff Todd Titon has called it the study of "people making music". It is often thought of as a study of non-Western musics, and indeed most of the work in ethnomusicology has been on non-Western or popular music. But ethnomusicology may also include the study of Western classical music from an anthropological perspective.

## Other theories and disciplines

The new musicology

The New Musicology is a term applied to a wide body of work produced by many musicologists who consider themselves neither new nor New. Often based on the work of Theodor Adorno and feminist, gender studies, or postcolonial hypotheses, the New Musicology is the cultural study, analysis, and criticism of music. As Susan McClary says, "musicology fastidiously declares issues of musical signification off-limits to those engaged in legitimate scholarship." It is a measure of the rate at which scholarship in music is changing, though, that few would any longer consider such a statement to be valid. Many of the scholarly concerns that used to be associated with New Musicology have now become mainstream. Richard Taruskin's Oxford History of Western Music, published in 2005, is an indicator of this. A major work by an internationally recognized scholar, it reflects a wide knowledge of recent scholarship while simultaneously reflecting the broad humanistic concerns of Taruskin's mentor Paul Henry Lang, author of the 1941 classic Music in Western Civilization. In light of such intergenerational connections, it is possible to argue that the distinction between an "old" and a "new" musicology is itself the product of a limited historical moment which has now passed.

## Music Cognition

[Music cognition](#) is the study of the perception and performance of music from the viewpoint of cognitive science. The discipline shares the interdisciplinary nature of fields such as cognitive linguistics.

## Biomusicology and zoomusicology

Biomusicology is the study of music from a biological point of view. [Zoomusicology](#) is a field of **musicology** and zoology or more specifically, zoosemiotics. Zoomusicology is the study of the [music](#) of animals, or rather the musical aspects of sound or communication produced and received by animals.

## Criticism

Though musicological study of popular music has increased in quantity by orders of magnitude since 1990, Richard Middleton's assertion in that year -- that most major "works of musicology, theoretical or historical, act as though popular music did not exist" -- holds true. Academic and conservatory training typically only peripherally addresses this broad spectrum of musics, and many musicologists who are "both contemptuous and condescending are looking for types of production, musical form, and listening which they associate with a *different* kind of music...'classical music'...and they generally find popular music lacking" (Middleton 1990, p.103).

He cites (p.104-6) "three main aspects of this problem":

1. "a terminology slanted by the needs and history of a particular music ('classical music')."
  1. "on one hand, there is a rich vocabulary for certain areas [harmony, tonality, certain part-writing and forms], important in musicology's typical corpus, and an impoverished vocabulary for others [rhythm, pitch nuance and gradation, and timbre], which are less well developed there"
  2. "on the other hand, terms are ideologically loaded...these connotations are ideological because they always involve selective, and often unconsciously formulated, conceptions of what music *is*."
2. "a methodology slanted by the characteristics of notation," 'notational centrality' (Tagg 1979, p.28-32)
  1. "musicological methods tend to foreground those musical parameters which can be easily notated...they tend to neglect or have difficulty with parameters which are not easily notated", such as Fred Ler Dahl. "notation-centric training induces particular forms of *listening*, and these then tend to be applied to *all* sorts of music, appropriately or not."
  2. Notational centrality also encourages "reification: the score comes to be seen as 'the music', or perhaps the music in an ideal form."
3. "an ideology slanted by the origins and development of a particular body of music and its aesthetic...It arose at a specific moment, in a specific

context - nineteenth-century Europe, especially Germany - and in close association with that movement in the musical *practice* of the period which was codifying the very repertory then taken by musicology as the centre of its attention."

These terminological, methodological, and ideological problems affect even works sympathetic to popular music. However, it is not "that musicology *cannot* understand popular music, or that students of popular music should abandon musicology" (p.104).

Middleton's views may be contrasted with a more nuanced perspective that takes into account the fact that musicology has long studied a wide variety of music over large time spans. Thus, e.g., one can find discussions of 15th-century Spanish popular song in 19th-century musicological work; and discussions of 16th-century popular song in the recent past (Brooks 2000, ISBN 0226075877). This is to say nothing about the concept [popular](#), which subsumes Michael Jackson's *Thriller* (the best-selling album of all time) and Verdi operas.

Furthermore, musicology has traditionally been slow to adopt many postmodern and critical approaches now common elsewhere in the humanities.

## Musique concrète

**Musique concrète** (French; literally, "concrete music"), is the name given to a class of [electronic music](#) produced from editing together fragments of natural and industrial sounds. It is the opposite of traditional composing (known to some as *Musique Abstraite*, literally, [Abstract Music](#)) as the sounds are recorded first then built into a tune as opposed to a tune being

written then given to players to turn into sound. *Concrète* was pioneered in the late 1940s and 1950s, spurred by developments in technology, most prominently microphones, and the commercial availability of the magnetic tape recorder, utilized as tape loops.

Pierre Schaeffer, a Paris radio broadcaster, created some of the earliest pieces of *Musique Concrète*, including "Étude aux chemins de fer" ("Study with Trains"), "Étude au piano I" ("Piano Study I") and "Étude aux casseroles" ("Study with Baking Pans"). Each of these pieces involved speeding up, looping, and reversing recordings of sound sources like trains, piano and rattling cookware. Schaeffer also collaborated with another *Musique concrète* pioneer, Pierre Henry. Together, they created pieces such as "Symphonie pour un homme seul" ("Symphony for a Man Alone").

*Concrète* was combined with other, synthesized forms of [electronic music](#) to create Edgar Varèse's "Poème électronique". "Poème" was played at the 1958 Brussels, Belgium World's Fair through 425 carefully-placed loudspeakers in a special pavilion designed by Iannis Xenakis.

The fictitious 'twelve-tone composeress' Dame Hilda Tablet, created by Henry Reed, spoke of her creation of 'Musique concrète renforcée'.

After the 1950s, *Concrète* was somewhat displaced by other forms of [electronic composition](#), although its influence can be seen in popular music by many bands, including The Beatles, in their song Revolution 9, and Pink Floyd (notably the finale of the song "Bike"). Around 1967 and 1968 Frank Zappa made several *musique concrète* pieces with the help of the "Apostolic Vlorch Injector" at Apostolic Studios in New York City. The resulting sound, as heard on "The Chrome Plated Megaphone of Destiny" and "Dwarf Nebula Processional March & Dwarf Nebula," is a series of bizarre, swirling buzzes, beeps and whooshes.

Traditional and non-traditional *Concrète* experienced a revival in the 1980s and 1990s. Artists like Ray Buttigieg with his experimental series "Earth Noise" and "Sound Science Series" and John Oswald's Plunderphonics use found and intended sounds in old and cutting edge techniques, although modern sampling technology is now often used in place of magnetic tape.

Recently, the growing popularity in all forms of [electronica](#) has led to a re-birth of *Musique concrète*. Artists such as Christian Fennesz, Francisco Lopez, Ernesto Rodrigues and Scanner use many *Concrète* techniques in their music while often being classified under more common electronica genres such as [IDM](#) or [downtempo](#). Music magazines such as *The Wire* regularly feature articles and reviews of *musique concrète*.

## Nashville sound

The **Nashville sound** in [country music](#) arose during the 1950s in the United States. Chet Atkins, Owen Bradley and Bob Ferguson, who were producing records in Nashville, invented the form by stripping the honky tonk roughness from traditional country and adding [jazzy](#) production and pop song structures. Vocalist Patsy Cline and pianist Floyd Cramer were two of the most famous of the Nashville sound's original era.

In the early 1960s, the Nashville sound began to be challenged by the rival [Bakersfield sound](#). Nashville's pop song structure became more pronounced, and it morphed into **countrypolitan**. Countrypolitan was aimed straight at mainstream markets, and it sold well throughout the later 1960s and 1970s. Among the architects of this sound were producers Billy Sherrill (who was instrumental in shaping Tammy Wynette's early career), and Glenn Sutton. Artists who typified the Countrypolitan sound initially included Wynette, Glen Campbell, Lynn Anderson, and Charlie Pride, during the 1960s and early '70s, and later Dolly Parton, Kenny Rogers, and Crystal Gayle. The [Bakersfield sound](#) and, later, [outlaw country](#) dominated country music among aficionados while countrypolitan reigned on the pop charts.

Upon being asked what the Nashville Sound was, Chet Atkins would reach his hand into his pocket, shake the loose change around, and say "That's what it is. It's the sound of money".

## National anthem

A **national anthem** is a generally patriotic musical composition that is recognized, either by convention or formally by a country's government, as its official national song.

During the course of the nineteenth and twentieth centuries, with the rise of the national state, most countries adopted a national anthem, which in some cases coexists with other commonly sung patriotic songs. The oldest song purporting to be a national anthem is the "Wilhelmus" from the

Netherlands, written between 1568 and 1572 during the Eighty Years' War. It is unusual among national anthems in referring not to a country but to a national founder hero. More typically, anthems seek to reflect the unity of a nation by evoking and eulogizing the history, traditions and struggles of its people.

Anthems first rose to prominence in Europe in the nineteenth century, and the musical style of that time has been used in almost every national anthem. Even in African and Asian countries, where western orchestral music is foreign, the national anthem is usually in European style. Only a handful of non-European countries have anthems rooted in indigenous traditions, most notably Japan (whose lyrics are the oldest anthem lyrics in the world, Kimi Ga Yo), Costa Rica, Iran, Sri Lanka, and Myanmar.

Some other countries have challenged the dominance of dated orchestral music. In Australia, for instance, the official anthem since 1984 has been "Advance Australia Fair", but there is much support for the folk ballad "Waltzing Matilda" as a national song, even a candidate for the national anthem.

The majority of national anthems are either marches or [hymns](#) in style. The countries of Latin America tend towards more [operatic](#) pieces, while a handful of countries use a simple [fanfare](#). Anthems by their nature have to be brief (the average is about one minute in length), yet many, if not most, manage to make them musically significant, and a true representation of the nation's musical character.

Few anthems have been written by notable composers. The French anthem "La Marseillaise" was written by the otherwise unknown Claude Joseph Rouget de Lisle; the tune of "The Star-Spangled Banner" was taken from "To Anacreon in Heaven" by the otherwise unknown Englishman John Stafford Smith; and "God Save the Queen" was written by a composer whose identity is not known with any certainty. While the music to the German anthem was written by Joseph Haydn to the words "Gott erhalte Franz den Kaiser" in honour of the Habsburg Emperor of the Holy Roman Empire, it became later known after its new text as "Deutschland, Deutschland über alles," written in 1841 by Hoffmann von Fallersleben after the empire's dismembering.

Among the very few countries with an anthem written by a world renowned composer are: Germany, which uses one by Joseph Haydn; the Austrian national anthem which was possibly written by Wolfgang Amadeus Mozart (though there is not a lot of evidence); the Vatican City, whose anthem was written by Charles Gounod; and Newfoundland (since 1949 no longer a separate state but a province of federal Canada) whose national anthem was by Sir Hubert Parry. Few anthems have been praised for having lyrics of any great poetic merit, though the noted poet Rabindranath Tagore

wrote the lyrics and music for both the Indian and the Bangladeshi national anthems.

National anthems are used in a wide array of contexts. They are played on national holidays and festivals, and have also come to be closely connected with sporting events. At the Olympic Games and similar official international competitions the national anthem of the gold medal winner is played at each medal ceremony. National anthems are also played before games in many sports leagues. In some countries generally, in other in certain schools, the national anthem is played to students each day at the start of school, as an exercise in patriotism like (and possibly combined with) a flag salute. In other countries the anthem is played in a theatre before a play or in a cinema before a movie. Many radio and television stations have adopted this and play the national anthem when they sign on in the morning and again when they sign off at night. On most occasions, only one stanza of the anthem is played (usually the first, although Germany uses the third).

Many states also have unofficial anthems, and nations in the cultural sense or other subnational units may also have [royal anthems](#), presidential anthems, state anthems, or anthems for sub-national entities that are also officially recognized, notably as constitutive parts of (con)federal states, and may then technically be better described by an adjective referring to the legal status, e.g. regional anthem in the case of the regions of Belgium.

Larger entities also sometimes have anthems. There are a handful of multinational or international anthems. The tune of the Ode to Joy from Beethoven's Symphony No. 9 is the official anthem of the European Union; the United Nations and the African Union also have unofficial anthems. In 2005, the British and Irish Lions rugby team, comprising players from Great Britain, Scotland, Wales and both the North and Republic of Ireland, used The Power of Four as their anthem.

## National Socialist black metal

**National Socialist black metal** (also known as '**Nazi black metal**' or '**NSBM**') is a Neo-Nazi subgenre of [black metal](#) music concerned with ideas of racial separatism and Aryanism. It is more of a scene than a musical sub-genre, as bands are often on the same underground labels with one another, and Oi! and other punk-related bands with similar persuasions are often associated in the same way as well. It is sometimes considered to have started with the work of Burzum. However, because there is no direct reference to National Socialism in Burzum's early Black Metal compositions, this claim can be, and often is contested. While Nationalism (or at least National Romanticism) has been an influence in [black metal](#) from early on, NSBM adds a focus on advocating National Socialism as an alternative to modern liberal society. However, while Nazi Germany was never overtly opposed to Christianity, NSBM continues the black metal tradition of opposition to all of Judeo-Christianity, while placing more emphasis on Anti-Semitism. Artists in the NSBM scene typically argue that not only Judaism but also Christianity is a major cause for the perceived present troubles of modern Europeans, or "Aryans" according to Nazi ideology, which distinguishes them from many other Neo-Nazis. As an alternative to Christianity, most NSBM bands have advocated variations of pagan beliefs and traditions, with the most common alternatives being Ásatrú and Odinism. It should be noted that among black metal listeners, interest in Paganism is not restricted to those involved with NSBM. Environmentalism (see Walter Darre for a greater understanding of the connection) and Julius Evola's teachings of Traditionalism are also recurring themes.

Argument often arises on whether NSBM ought to be considered a distinct black metal sub-genre to begin with. Many NSBM bands play the same styles as other black metal bands that do not share the ideology. The musical differences (if any) are often trivial, or overlap with other metal-subgenres like [Viking Metal](#). Still, it has become a substantiated and useful label, as many interested in the genre would either like to avoid bands with National Socialist tendencies, or consciously seek them out. Some black metal fans indeed have questioned the lyrical themes used heavily within NSBM as irrelevant to the musical genre altogether, as they advocate a 'positive' outlook (of sorts) where it concerns ones' own race and creed - Having pride in anything hardly falls in line with the extreme nihilist tendencies of the genre and the music.

## **NSBM and other Forms of White Power Music**

Somewhat recently, the NSBM and Rock Against Communism (RAC) scenes have been uniting, as NSBM is increasingly being sold at RAC and other White Power music outlets, and NSBM bands such as Gestapo SS and

Bannerwar have covered RAC and Hatecore songs on their NSBM releases. Additionally, NSBM bands are beginning to perform alongside of RAC bands.

NSBM seems to have more appeal to fans of Black Metal who do not hold National Socialist beliefs as compared with RAC, which more rarely can count fans among those who do not favor Neo-Nazi politics.

## **NSBM and the broader black metal scene**

Most black metal bands do not share this ideology, and the actual NSBM bands represent a very small scene of extremely underground bands throughout Europe and America. In fact, the only two NSBM bands that are known as crucial black metal bands are Burzum and Graveland, only the former of which being one of [black metal](#)'s best known acts. Darkthrone are said to be a NS band mainly from the fact that Norsk Arisk Black Metal (Norwegian Aryan Black Metal) was written in the back of their album Transylvanian Hunger. Later on they denounced that and now they maintain an apolitical thesis as a band.

Burzum is also related to the legendary history of black metal, as the band's only member, Varg Vikernes, killed his former friend and bandmate Euronymous, in a string of events well documented. The motives were believed to have been related to a record deal dispute, as well as Euronymous having associated with and befriended the Israeli [death metal](#) band Salem, to whom Varg Vikernes attempted to send a mail bomb.

Some black metal bands, although unrelated to NSBM, have some mostly meaningless references to Nazi Germany, used mainly for shock value, a tradition which traces back at least to punk bands like the Sex Pistols. This has caused some black metal bands to inaccurately be labeled as NSBM when they are not. A good example of this was the Czech band **Amon**, which from 1995 to 1999 was called Amon Goeth in order to distinguish themselves from other bands called Amon.

## Nationalism

**Nationalism** in music refers to the use of materials that are identifiable as national or regional. This includes the direct use of folk music, and the use of melodies, rhythms, and harmonies inspired by folk music. Nationalism can also include the use of folklore as a basis for programmatic works or opera.

Nationalism is assigned to the [Romantic](#) era in the mid-nineteenth century, but evidence of this can be found as early as the late eighteenth century. National music usually comes from composers in peripheral

countries and can be viewed as a reaction against German music and German expansion.

Countries most commonly linked to nationalism are Russia, Czechoslovakia, Norway, Finland, Spain, Britain, and the United States.

## Russia

Until the nineteenth century, Russian music had been dominated by foreign musicians. Peter the Great (1689-1725) had begun this trend by importing foreign musicians in order to modernize his kingdom. As a result, very few Russian compositions of merit exist until Glinka.

Mikhail Glinka (1804-1857)

Mikhail Glinka was the first Russian composer to give an original voice to common musical styles of the day. After studying music and visiting Italy and Berlin, Glinka composed an opera about the Russian peasant and hero Ivan Susanin. The work was titled *A Life for the Tsar*, and used several aspects new to Russian music. It uses recitative instead of spoken dialogue, and has recurring themes. There are two Russian folk tunes in the opera, and several more tunes that have the feeling of folk music.

The Five

*Moguchaya kuchka* (The Mighty Handful) is a phrase coined by Russian music critic Vladimir Stasov to describe a group of five Russian composers whose purpose was to compose music in a Russian style. Members of the five were Mily Balakirev (1836-1910), the leader of the group, César Cui (1835-1918), Modest Mussorgsky (1839-1881), Nikolai Rimsky-Korsakov (1844-1908), and Alexander Borodin (1833-1887).

The Five felt that the folk and religious music of the Russian people should be used as a basis for composition. Strict German counterpoint should be avoided, as should other Western techniques. Romanticism and realism were favored over Classical form.

## Czechoslovakia

Czechoslovakia is a country formed in 1918 by the combination of the Bohemian, Moravian, and Slovakian territories. These territories had been under the control of the Hapsburg Austro-Hungarian Empire. As a result, the imperial language, German, and the imperial religion, Catholicism had become a way of life for the Czech people.

In order to preserve the native language, a Provisional Theater was organized in Prague. This theater would promote the Czech language, composers, folk music, and programs using national themes.

Bedřich Smetana (1824-1884)

Smetana was the first great Czech nationalist composer, a Bohemian. His first nationalist work was written in 1863, in Czech, as a contest entry to the Provisional Theater. He learned to read and write Czech to enter the competition. This opera, *Branibori v Čechách* (The Brandenburgs in Bohemia) has an historic plot, but the music does not represent folk song.

His second opera, *Prodána nevěsta* (The Bartered Bride, 1863-1866), incorporates folk melodies, and was a success beyond Czechoslovakia. Also included in his nationalistic works are the six tone poems *Ma Vlast* (My Fatherland, 1872-1880).

Antonín Dvořák (1841-1904)

Dvořák was the most successful of the Czech nationalist composers. He performed viola in the Provisional Theater under Smetana, and was mentored by Brahms.

Dvořák included Bohemian themes and elements into much of his music. In 1871, he left the Provisional Theater and began to set a libretto by a Czech writer, Lobesky, titled *Král a uhlíř* (The King and the Charcoal Burner). Unfortunately, this opera was not successful. More notable for their national content are his six *Slavonic Dances* (1879) and the *Slavonic Rhapsodies* (1880).

Dvořák was invited to New York in order to direct the first national conservatory in America. While abroad, he studied African American and Native American music. Some say that these styles are incorporated into his American works: Symphony no. 9 op. 95 (From the New World), The "American" string quartet op. 96, and the "American" string quintet, op. 97.

Leoš Janáček (1854-1928)

Janáček did a lot of work researching and cataloguing Moravian folk music. His work inspired further research. Because of his interest in folk music, he was predisposed to modality and pentatonic scales which appear

frequently in Moravian folk music. He generally wrote without key signatures, in order to freely move between modes.

His most famous opera, *Jenufa* (1904), was originally written in Czech and translated into German. Janáček was very careful in supervising the translation in order to preserve the integrity of the libretto.

## Norway

Edvard Grieg (1843-1907)

Grieg began composing national music after visiting Ole Bull, a violinist and researcher of folk music. His most notable pieces are the incidental music for plays, including his music for Ibsen's *Peer Gynt* (1874-1875). He also composed many piano works in a national style.

## Finland

Jean Sibelius (1865-1957)

Jean Sibelius had strong patriotic feelings for Finland. He chose to write program music rather than base his works on Finnish folk music. For his contributions, the government awarded him a pension.

In 1899, patriotism was running high in Finland. Sibelius composed the symphonic poem *Finlandia* (1899) for a festival, and this rallied the Finnish citizens into a patriotic fervor. A portion of this tone poem has been arranged as a chorale; it remains an important national song of Finland, and is also present in many Protestant hymnals.

## Spain

Isaac Albéniz (1860-1909)

Albéniz studied at many of Europe's premiere conservatories, including the *Escuela Nacional de Música y Declamación* in Spain. Many of his piano works reflect his Spanish heritage, including the *Suite Iberia* (1906-1909). In this piece the piano imitates the guitar and castanets, traditional Spanish instruments.

Enrique Granados (1867-1918)

Granados composed zarzuelas, a type of Spanish musical theater. He composed his work *Goyescas* (1911) based on the etchings of the Spanish painter, Goya. Also of a national style are his *Danzas españolas* and his first opera *María del Carmen*.

## Britain

In Great Britain, nationalist music was more prominent in Scotland, Ireland and Wales than in England. These countries have always had a strong connection to their heritage, and Romantic composers incorporated elements of British folk music into their works.

Joseph Parry (1841-1903)

Parry was born in Wales, but moved to the United States as a child. In his adulthood, he traveled between Wales and America, and performed Welsh songs and glees with Welsh texts in recitals. He composed the first Welsh opera, *Blodwen* (1878).

Charles Stanford (1852-1924)

Stanford incorporated Irish and English elements in his music, including five *Irish Rhapsodies* (1901-1914). He published volumes of Irish folk song arrangements, and his third symphony is titled the *Irish symphony*.

Alexander Mackenzie (1847-1935)

Mackenzie prepared and published arrangements of Scottish folk songs, and many of his compositions contain folk elements. Included in these are his *Highland Ballad* for violin and orchestra (1893), and the *Scottish Concerto* for piano and orchestra (1897). He also composed the *Canadian Rhapsody*.

## United States

Charles Cadman (1881-1946)

Cadman spent time on the Omaha and Winnebago Indian reservations and recorded their songs. He arranged and published some of them.

Cadman presented a series of recitals with the Omaha princess Tsianina Redfeather, a mezzo-soprano, and composed an opera, *Shanewis or The Robin Woman* (1918), based on her life.

Arthur Farwell (1872-1952)

Farwell also worked with Native American music, but also studied Anglo American and African American folk songs, as well as Mexican and Cowboy

music. He founded Wa Wan Press to publish his *American Indian Melodies* (1900) and works by contemporary composers.

[Music of the United States](#) - Music of Canada

The **Native American flute** has achieved some measure of fame for its distinctive sound, used in a variety of New Age and world music recordings. The instrument was originally very personal; its music was played without accompaniment in courtship, healing, meditation, and spiritual rituals. Now it is played solo or along with other instruments or vocals both in [Native American music](#) and in other styles. There are two different types of Native

American flute, the plains flute and the woodlands flute, each with slightly different construction.

## History

There are many stories about how different peoples discovered the flute. A common character in these stories is the woodpecker, who put holes in hollow branches while searching for termites. The wind would blow around these branches, creating sounds that the people noticed and sought to recreate. The actual development of the flute probably did not follow this pattern. The theory that it was developed by the Ancient Pueblo Peoples based of Mesoamerican designs is the most common solution.

The late 1960s saw a roots revival centered around the flute, with a new wave of flautists and artisans like Doc Nevaquaya and Carl Running Deer. Of special importance is R. Carlos Nakai (Changes, 1983), who has achieved some mainstream renown for his mixture of the flute with New Age and [ambient](#) sounds.

## Construction

The Native American flute is the only flute in the world constructed with two air chambers - there is a wall inside the flute between the top (slow) air chamber and the bottom chamber which has the whistle and finger holes. The top chamber also serves as a secondary resonator, which gives the flute its distinctive sound. There is a hole at the bottom of the "slow" air chamber and a (generally) square hole at the top of the playing chamber. A block (or "bird") is tied on top of the flute. In a plains flute, a spacer is added or a channel is carved into the block itself to form a thin, flat air stream for the whistle hole (or "window"). In contrast, a woodlands flute has the channel carved into the top of the flute, allowing for a less reedy sound.

The "traditional" Native American flute was constructed using measurements based on the body - the length of the flute would be the distance from armpit to wrist, the length of the top air chamber would be one fist-width, the distance from the whistle to the first hole also a fist-width, the distance between holes would be one thumb-width, and the distance from the last hole to the end would generally be one fist-width.

## Woods

Native American flutes can be made from various materials. Juniper and redwood are popular, as they provide a nice aroma. The softwoods are generally preferred by most flute players because of the brighter tones produced by the wood. Other harder woods such as walnut and cherry are appreciated for the richness of sound that they can produce. Although traditionally flutes would be made from river cane, bamboo or a local wood, more exotic rainforest woods or even plastics are now used.

## **Variations**

Some modern Native American flutes are called "drone" flutes, and are two (or more) flutes built together. Generally, the drone chamber plays a fixed note which the other flute can play against in harmony. However, the drone may also change octaves as it resonates with the melody played on the adjacent flute.

## **Music**

Modern Native American flutes are generally tuned to a variation of the minor pentatonic scale (such as you would get playing the black keys on a piano), which gives the instrument its distinctive plaintive sound. Recently some makers have begun experimenting with different scales, giving players new melodic options. Also, modern flutes are generally tuned in concert keys (such as A or D) so that they can be easily played with other instruments. The root keys of modern Native American flutes span a range of about three and a half octaves, from C2 to A5.

## **Fingering**

Native American flutes most commonly have either 5 or 6 holes, but instruments can have anything from no holes to seven (including a thumb hole). Various makers employ different scales and fingerings for their flutes.

## Native American hip hop

**Native American hip hop** is popular among Native Americans in the United States and the First Nations of Canada. Native American rappers began performing in the 1980s and '90s, drawing on influences like John Trudell's spoken word poetry. Litefoot, Without Rezervation, and Robby Bee & the Boyz From the Rez are the most well-known Native American [hip hop musicians](#) .

Other recent groups, like Tha Tribe who use elements of powwow music in their recordings [2], and War Party, a Canadian crew that became the first native performers to host Rap City [3]. War Party is one of a number of Canadian groups to gain some chart success, including Tru Rez Crew and Slangblossom .

## Native American music

There are hundreds of tribes of Native Americans (called the First Nations in Canada), each with diverse musical practices, spread across the United States and Canada (excluding Hawaiian music). However, according to Bruno Nettl (1956, p.107, *Music in Primitive Culture*), "almost every trait occurs in every culture to some degree." These commonalities exist, however, and are part of a shared [folk musical](#) tradition. More recently, Native Americans have developed distinct [rock](#), [blues](#), [hip hop](#) and [reggae](#) scenes, as well as popular pan-tribal styles like waila (*chicken scratch*).

[Music of the United States](#) - Music of Canada

Traditional music is dominated by choral vocals, and more rarely solo singing, is common, and [harmony](#) and polyphony are non-existent. Vocables (rhythmic, nonsense words, repeated) are an integral part of vocal music. Descending melodic figures are common. [Drums](#) and other [percussion](#) instruments are the most commonly-used instruments, though [flutes](#) and others are in common practice.

There is antiphonal singing between the chorus and soloist and thus incipient polyphony. [Rhythms](#) are often irregular or heterometric and the pentatonic scale predominates. (ibid, p. 196-197)

## Folk song

Native American folk music is usually religious in nature, and is used to communicate spiritually with the heavens and to pray for good luck. Epic stories of heroes are also common.

Native American religious beliefs hold that music was given to humans by spirits as a method of communicating with the supernatural. Song composition, then, is a highly ritualistic act. Choctaw Social Dance, for example, is not composed, having been given to the people at creation. They can vary slightly from year to year, with leaders recombining and introducing

slight variations. The Pueblo compose a number of new songs each year in a committee which uses dreams and visions to compose.

Native American music is comprised of a vast array of styles and sounds. Typically, music of many Native American societies is a portion of ceremony, ritual, dance, story, warfare, and other community based events. Because of this, styles and purposes of different songs vary greatly by society. However, a common concept amongst many indigenous groups in America is the belief that music is a form of power. For example, the Pima people feel many of their songs were given in the beginning and sung by the Creator. It is believed that some people then have more of an inclination to musical talent than others because of a peculiar power that resides within that individual (Herndon 14-16). Similarly, the Cherokee feel that music can be a powerful force for transformation. Music is therefore performed before such an event as a stickball game in which it is hoped the people involved will transform to the Red condition of being, which is symbolic of competition.

Within various Native American communities, gender plays an important role in music, too. Specific roles are often intended for men and women. For the Cherokee people, when holding a dance before a stickball game, men and women have separate dances and regulations. Men will dance in a circle around a fire, while women dance in place. Men sing their own songs, while women have their songs sung for them by a conjurer. Also, whereas the men's songs invoke power, the women's songs are intended to draw power away from the opposing team (Herndon 124). In many societies, there are also regulations against women playing the ceremonial drum. For the Southern Plains Indians, it is believed that the first drum was given to a woman by the Great Spirit, who instructed her to share it with all women of native nations. However, there also exist prohibitions against women sitting at the Big Drum.

While gender differences lead to separate roles in the music of Native Americans, they are not intended to create inequalities. Rather, the separations are reflective of the balance created by men and women, and represent a harmony rather than an imbalance. It is difficult to label any customs as being all-encompassing for Native Americans, but some similarities can be found. Native American music contains a wide array of styles with very many differences, similar to the variations in culture found in the various tribes of American Indians.

## **Traditional music cultures**

The hundreds of tribes in North America can be divided into six areas: Eastern Woodlands, Southwest, Great Basin, Plains, Northwest Coast and

Arctic. However, Nettl (1956, p.107-116) uses the following music areas which approximately coincide with Wissler, Kroeber, and Driver's cultural areas (population): Inuit-Northwest coast (275,000), Great Basin (30,000), California-Yuman (125,000), Plains-Pueblo (250,000), Athabascan (90,000), and Eastern (275,000). He associates greater geographic size and population with complexity .

## **History**

The style of the Great Basin area is the oldest style and was common throughout the entire continent before Mesoamerica but continued only in the Great Basin and in the lullaby, gambling, and tale genres around the continent. A style featuring relaxed vocal technique and the rise probably originated in Mesoamerican Mexico and spread northward, particularly into the California-Yuman and Eastern music areas. These styles also feature "relative" rhythmic simplicity, isometric material, pentatonic scales, and forms created from short sections. (Nettl 1956, p.117-118)

While this process occurred three Asian styles influenced North American music, all featuring pulsating vocal technique, came across the Bering Strait, and is evident in recent Paleo-Siberian tribes such as Chuckchee, Yukaghir, Koryak. These influenced the Plains-Pueblo, Athabascan, and Inuit-Northwest Coast areas. According to Nettl (ibid) the boundary between these southward and the above northward influences are the areas of greatest musical complexity: the Northwest Coast, Pueblo music, and Navajo music. Evidence of influences between the Northwest Coast and Mexico are indicated, for example, by bird-shaped whistles. The Plains-Pueblo area has influenced and continues to influence the surrounding cultures, with contemporary musicians of all tribes learning Plains-Pueblo influenced pantribal genres such as Peyote songs. (ibid)

## **Southwest**

Arid American Southwest is home to two broad groupings of closely-related cultures, the Pueblo and Athabaskan. The Southern Athabaskan Navajo and Apache tribes sing in Plains-style nasal vocals with unblended monophony, while the Pueblos emphasize a relaxed, low range and highly blended monophonic style. Athabaskan songs are swift and use drums or rattles, as well as an instrument unique to this area, the Apache fiddle. Pueblo songs are complex and meticulously detailed, usually with five sections divided into four or more phrases characterized by detailed introductory and cadential formulas. They are much slower in tempo than

Athabaskan songs, and use various [percussion instruments](#) as accompaniment.

Nettl (ibid, p. 112-113) describes Pueblo music, including Hopi, Zuni, Taos Pueblo, San Ildefonso, Santo Domingo, and many others, as one of the most complex on the continent, featuring increased length and number of scale tones (hexatonic and heptatonic common), variety of form, melodic contour, and percussive accompaniment, ranges between an octave and a twelfth, with rhythmic complexity equal to the Plains sub-area. He sites the Katchina dance songs as the most complex songs and Hopi and Zuni material as the most complex of the Pueblo, while the Tanoans and Keresans musics are simpler and intermediary between the Plains and western Pueblos. The music of the Pima and Papago is intermediary between the Plains-Pueblo and the California-Yuman music areas, with melodic movement of the Yuman, though including the rise, and the form and rhythm of the Pueblo.

He (ibid, p. 113-114) describes Southern Athabaskan music, that of the Apache and Navaho, as the simplest next to the Great Basin style, featuring strophic form, tense vocals using pulsation and falsetto, tritonic and tetratonic scales in triad formation, simple rhythms and limited durational values (usually only two per song), arc-type melodic contours, and large melodic intervals with a predominance of major and minor thirds and perfect fourths and fifths with octave leaps not rare. Peyote songs share characteristics of Apache music and Plains-Pueblo music having been promoted among the Plains by the Apache people.

He (ibid, p.109-110) describes California-Yuman music, including that of Pomo, Miwak, Luiseno, Catalineno, and Gabrielino, and the Yuman tribes, including, Mohave, Yuman, Havasupai, Maricopa, as using the rise in almost all songs, a relaxed nonpulsating vocal technique (like European classical music), a relatively large amount of isorhythmic material, some isorhythmic tendencies, simple rhythms, pentatonic scales without semitones, an average melodic range of an octave, sequence, and syncopated figures such as a sixteenth-note, eighth-note, sixteenth-note figure. The form of rise used varies throughout the area, usually being rhythmically related to the preceding non-rise section but differing in melodic material or pitch. The rise may be no higher than the highest pitch of the original section, but will contain a much larger number of higher pitches. In California the non-rise is usually one reiterate phrase, the rise being the phrase transposed an octave higher, the Yumans use a non-rise of long repeated sections each consisting of several phrases, the rise being three to five phrases performed only once, and in southern California the previous two and progressive forms are found.

## **Eastern Woodlands**

Inhabiting a wide swath of the United States and Canada, Eastern Woodlands natives can be distinguished by antiphony (call and response style singing), which does not occur in other areas. Their territory includes Maritime Canada, New England, U.S. Mid-Atlantic, Great Lakes and Southeast regions.

Songs are rhythmically complex, characterized by frequent metric changes and a close relationship to [ritual dance](#). Flutes and whistles are solo instruments, and a wide variety of drums, rattles and striking sticks are played.

Nettl (p.114-115) describes the Eastern music area as the region between the Mississippi river and the Atlantic. The most complex styles being that of the Southeastern Creek, Yuchi, Cherokee, Choctaw, Iroquois and their language group, the simpler style being that of the Algonquian language group including Delaware and Penobscot. The Algonquian speaking Shawnee have a relatively complex style influenced by the nearby southeastern tribes.

The characteristics of this entire area include short iterative phrases, reverting relationships, shouts before, during, and after singing, anhematonic pentatonic scales, simple rhythms and meter, and much antiphonal or responsorial techniques including "rudimentary imitative polyphony". Melodic movement tends to be gradually descending throughout the area and vocals include a moderate amount of tension and pulsation. (ibid)

## Plains

Extending across the American Midwest into Canada, Plains-area music is nasal, with high pitches and frequent falsettos, with a terraced descent (a step-by-step descent down an octave) in an unblended monophony. Strophes use incomplete repetition, meaning that songs are divided into two parts, the second of which is always repeated before returning to the beginning.

Bass drums are characteristic of the Plains tribes, and solo [end-blown flutes](#) (flageolet) are also common.

Nettl (ibid, p. 112) describes the central Plains tribes, from Canada to Texas: Blackfoot, Crow, Dakota, Cheyenne, Arapaho, Kiowa, and Comanche, as the most typical and simple sub-area of the Plains-Pueblo music area. This area's music is characterized by extreme vocal tension, pulsation, melodic preference for perfect fourths and a range averring a tenth, rhythmic complexity, and increased frequency of tetratonic scales. The musics of the Arapaho and Cheyenne intensify these characteristics, while the northern tribes, especially Blackfoot music, feature simpler material, smaller melodic ranges, and fewer scale tones.

Nettl (1965, p. 150) Arapaho music includes ceremonial and secular songs, such as the ritualistic Sun Dance, performed in the summer when the various bands of the Arapaho people would come together. Arapaho traditional songs consist of two sections exhibiting terraced descent, with a range greater than an octave and scales between four and six tones. Other ceremonial songs were received in visions, or taught as part of the men's initiations into a society for his age group. Secular songs include a number of social dances, such as the triple meter [round dances](#) and songs to inspire warriors or recent exploits. There are also songs said to be taught by a guardian spirit, which should only be sung when the recipient is near death.

## **Great Basin**

Music of the Great Basin is simple, discrete and ornate, characterized by short melodies with a range smaller than an octave, moderately-blended monophony, relaxed and open vocals and, most uniquely, paired-phrase structure, in which a melodic phrase, repeated twice, is alternated with one to two additional phrases. A song of this type might be diagrammed as follows: AA BB CC AA BB CC, etc.

Nettl (1956, p. 108-109) describes the music of the sparsely settled Great Basin, including most of desert Utah and Nevada (Paiute, Ute, Shoshoni) and some of southern Oregon (Modoc and Klamath), as "extremely simple," featuring melodic ranges averaging just over a perfect fifth, many tetratonic scales, and short forms. The majority of songs are iterative with each phrase repeated once, though occasional songs with multiple repetitions are found. Many Modoc and Klamath songs contain only one repeated phrase and many of their scales only two to three notes (ditonic or tritonic). This style was carried to the Great Plains by the Ghost Dance religion which originated among the Paiute, and very frequently features paired-phrase patterns and a relaxed nonpulsating vocal style. Herzog attributes the similarly simple lullabies, song-stories, and gambling songs found all over the continent historically to the music of the Great Basin which was preserved through relative cultural isolation and low-population.

## **Northwest Coast**

Open vocals with monophony are common in the Pacific Northwest and British Columbia, though polyphony also occurs (this the only area of North American with native polyphony). Chromatic intervals accompanying long melodies are also characteristic, and rhythms are complex and declamatory, deriving from speech. Instrumentation is more diverse than in the rest of

North America, and includes a wide variety of whistles, flutes, horns and percussion instruments.

Nettl (ibid, p. 107-8) describes the music of the Kwakiutl, Nootka, Tsimshian, Makah, and Quileute as some of the most complex on the continent, with the music of the Salish tribes (Thompson River Indians, Bella Coola, and Sliamon, and others directly east of the Northwest tribes) as being intermediary between these Northwest Coast tribes and Inuit music. The music of the Salish tribes, and even more so the Northwest coast, intensifies the significant features of Inuit music, see below, however their melodic movement is often pendulum-type ("leaping in broad intervals from one limit of the range to the other"). The Northwest coast music also "is among the most complicated on the continent, especially in regard to rhythmic structure," featuring intricate rhythmic patterns distinct from but related to the vocal melody and rigid percussion. He also reports unrecorded use of incipient polyphony in the form of drones or parallel intervals in addition to antiphonal and responsorial forms. Vocals are extremely tense, producing dynamic contrast, ornamentation, and pulsation, and also often using multiple sudden accents in one held tone.

## **Arctic**

The Inuit of Alaska, Northwest Territories, Yukon Territory, Nunavut and Greenland are well-known for their throat-singing, an unusual method of vocalizing found only in a few cultures worldwide. Throat-singing is used as the basis for a game among the Inuit. Narrow-ranged melodies and declamatory effects are common, as in the Northwest. Repeated notes mark the ends of phrases. Box drums, which are found elsewhere, are common, as a [tambourine](#)-like [hand drum](#). Nettl (ibid, p.107) describes "Eskimo" music as some of the simplest on the continent, listing characteristics including recitative-like singing, complex rhythmic organization, relatively small melodic range averaging about a sixth, prominence of major thirds and minor seconds melodically, with undulating melodic movement.

## **Pan-tribalism**

Pan-tribalism is the syncretic adoption of traditions from foreign communities. Since the rise of the United States and Canada, Native Americans have forged a common identity, and invented pan-tribal music, most famously including powwows, peyote songs and the Ghost Dance.

The Ghost Dance spread throughout the Plains tribes in the 1890s, and most still survive in use. They are characterized by relaxed vocals and a narrow range. Apache-derived peyote songs, sacred prayers in the Native American Church, use a descending melody and monophony. Rattles and water drums are used, in a swift tempo. The Sun Dance and Grass Dance of the plains are the roots of intertribal powwows, which feature music with terraced descent and nasal vocals, both Plains characteristic features.

John Trudell launched a new genre of spoken word poetry in the 1980s, beginning with *Aka Graffiti Man* (1986). The next decade saw further innovations in Native American popular music, including Robbie Robertson (of The Band) releasing a [soundtrack](#) for a documentary, *Music for the Native Americans*, that saw limited mainstream success, as well as Verdell Primeaux and Johnny Mike's modernized peyote songs, which they began experimenting with on *Sacred Path: Healing Songs of the Native American Church*. *Waila* (or the chicken scratch music of the Tohono O'odham) has gained performers like the Joaquin Brothers fame across Native American communities, while [hip hop](#) crews like *WithOut Rezervation* and *Robby Bee & the Boyz From the Rez* (Reservation of Education) have a distinctively Native American flourish to hip hop.

## **Native American flute**

The Native American flute has achieved some measure of fame for its distinctive sound, used in a variety of [New Age](#) and [world music](#) recordings. The instrument's origins are unknown, but the theory that it was developed by the Ancient Pueblo Peoples based on Mesoamerican designs is the most common solution. Its music was used in courtship, healing, meditation and spiritual rituals.

The late 1960s saw a [roots revival](#) centered around the flute, with a new wave of flautists and artisans like Doc Nevaquaya and Carl Running Deer. Of special importance is R. Carlos Nakai (*Changes*, 1983), who has achieved some mainstream renown for his mixture of the flute with [New Age](#) and [ambient](#) sounds.

The Native American flute is the only flute in the world constructed with two air chambers - there is a wall inside the flute between the top (slow) air chamber and the bottom chamber which has the whistle and finger holes. The top chamber also serves as a secondary resonator, which gives the flute its distinctive sound. There is a hole at the bottom of the "slow" air chamber and a (generally) square hole at the top of the playing chamber. A block (or "bird") with a spacer is tied on top of the flute to form a thin, flat airstream for the whistle hole (or "window"). Some more modern flutes use an undercut either in the block or the flute to eliminate the need for a spacer.

The "traditional" Native American flute was constructed using measurements based on the body - the length of the flute would be the distance from armpit to wrist, the length of the top air chamber would be one fist-width, the distance from the whistle to the first hole also a fist-width, the distance between holes would be one thumb-width, and the distance from the last hole to the end would generally be one fist-width.

Modern Native American flutes are generally tuned to a variation of the minor pentatonic scale (such as you would get playing the black keys on a piano), which gives the instrument its distinctive plaintive sound. Recently some makers have begun experimenting with different scales, giving players new melodic options. Also, modern flutes are generally tuned in concert keys (such as A or D) so that they can be easily played with other instruments. The root keys of modern Native American flutes span a range of about three and a half octaves, from C2 to A5.

Native American flutes most commonly have either 5 or 6 holes, but instruments can have anything from no holes to seven (including a thumb hole). Various makers employ different scales and fingerings for their flutes.

Some modern Native American flutes are called "drone" flutes, and are two (or more) flutes built together. Generally, the drone chamber plays a fixed note which the other flute can play against in harmony.

### **Related topics**

[Music of the United States](#) - Music of Canada

**Navajo music** is the [music](#) of the Navajo people and nation, currently in Arizona, Utah and New Mexico.

## **Contemporary popular**

Music requested on the radio on the Navajo Nation is most often [rock](#), [country](#), and [gospel music](#), often performed by Navajo musicians (McAllester 1981-1982).

## **Traditional**

Traditional Navajo music is always vocal, with most instruments, which include [drums](#), drumsticks, rattles, rasp, flute, whistle, and bullroarer, being used to accompany singing of specific types of song (Frisbie and McAllester 1992). As of 1982 there were over 1,000 Singers, Medicine People called Hatathli, qualified to perform one or more of thirty ceremonials and countless shorter prayer rituals (Frisbie and Tso n.d.) which restore *hózhó* or harmonious condition, good health, serenity.

These songs are the most sacred holy songs, the "complex and comprehensive" religious literature of the Navajo, may be considered classical music (McAllester and Mitchell 1983), while all other songs, including personal, patriotic, work, recreation, jokes, and less sacred ceremonial songs, may be considered popular music. The "popular" side is characterized by public performance while most Navajo people prefer diyin not be made public (and thus not featured on the recording listed at bottom). (ibid)

The longest ceremonies may last up to nine nights and days while performing rituals that restore the balance between good and evil, or positive and negative forces. Songs, music, sandpaintings, masked performances, and other rituals call upon deities and natural forces to restore the person to harmony and balance within the context of the world forces. The person to be supernaturally assisted, the one "sung over," becomes the protagonist, identifying with the deities of the Diné Creation Stories, and at one point becoming part of the Story Cycle by sitting on a sandpainting with iconography pertaining to the specific story and deities. (McAllester 1981-1982)

The lyrics, which may last over an hour and are usually sung in groups, contain narrative epics including the beginning of the world, phenomenology, morality, and other lessons. Longer songs are divided into two or four balanced parts and feature an alternation of chantlike verses and buoyant melodically active choruses concluded by a refrain in the style and including lyrics of the chorus. Lyrics, songs, groups, and topics are cyclic: the main deity, Changing Woman, is immortal and grows old in the winter and young in the spring. Long myths are also spoken during ceremonies and elaborate the origin stories found in lyrics. (ibid)

The "popular" music resembles the highly active melodic motion of the choruses, featuring wide intervallic leaps and melodic range usually an octave to octave and a half. Structurally the songs are created from the complex repetition, division, and combinations of most often no more than four or five phrases, with short songs often immediately following each other for continuity as needed in work songs. Their lyrics are mostly vocables, with certain vocables specific to genres, but may contain short humorous or satirical texts. (ibid)

## **Peyote songs**

[Peyote songs](#) are a form of Native American music, now most often performed as part of the Native American Church, which came to the northern part of the Navajo Nation around 1936. They are typically accompanied by a rattle and water drum, and are used in a ceremonial aspect during the sacramental taking of peyote. Peyote songs share characteristics of Apache music and Plains-Pueblo music. (Nettl 1956, p.114)

In recent years, a modernized version of peyote songs have been popularized by Verdell Primeaux, a Sioux, and Johnny Mike, a Navajo.

## Nazi punk

**Nazi punk** is the term given to believers of nationalism, fascism, racialism, and/or national socialism, and also claim to be a part of the [punk subculture](#).

## History

The history of this faction within the punk subculture dates back as early as 1978, with an organization from England known as the Punk Front. This group was a youth division of the racist organization, The British National Front. Although the group only lasted one year, it was successful in recruiting numerous English punks, as well as forming a number of racist punk bands.

The Nazi Skinhead subculture took over as the leaders of the White Power music movement following the demise of the Punk Front in 1979. However, Nazi-punkism started sparking up world-wide soon after. It eventually hit America by the early 1980s, during the rise of the American hardcore punk scene.

Although the numbers of Nazi punks have always been small within the subculture, it should be noted that they have always existed.

Countries with notable amounts of Nazi punks include: the United Kingdom, the Netherlands, Spain, Germany, Italy, France, Chile, Sweden, Finland, Denmark, Greece, Poland, Estonia, Russia, Brazil, Canada, Lithuania and the United States.

## Nazi punk music

Musically, Nazi Punk is similar to most other forms of [punk](#) music. Lyrically, their songs reflect hatred for the present governments world-wide as well as for minority groups such as: Jews, Blacks, Mestizos and Homosexuals. Nazi punk bands have been found in several genres of Punk, including [Oi! Punk](#), [Streetpunk](#), and [Hardcore Punk](#).

White Power Skinheads have also been known to play music that is similar to punk in style. However, they don't claim to be part of the punk subculture and therefore are not considered Nazi punks. Their music is part of a separate genre called Rock Against Communism.

### **Nazi punk bands**

ChaoSS Hellas  
The Dirty White Punks  
Ethnic Cleansing  
Fight For Freedom  
Final Blow 88  
Forward Area  
The Fuck-Ups\*  
Homicide  
Midgårds Söner  
Ódio Mortal  
Phase One  
The Raw Boys  
Warfare 88  
White Pride

\* There are several bands under the same name that have no association with extremist politics.

## **Nazi punk style**

Usually known to have liberty spikes or mohawk haircuts and wear typical clothing associated with the majority of the punk subculture (leather jackets, boots, spikes, chains, etc.). Nazi punks tend to incorporate Nazi regalia into their appearance, however some prefer not make it as obvious in order to avoid persecution from anti-racist individuals who make up the majority of the modern day punk scene.

## Sidenotes

- In the early days of the subculture (1976-77 era) it was not uncommon to see punks that wore swastikas purely as a shock statement, having no belief in Nazism or Racialism whatsoever. Some of the most famous people being Sid Vicious and Johnny Rotten. These such individuals are not confused for Nazi punks in the past or contemporary scene.
- The Dead Kennedys have a song titled "Nazi Punks Fuck Off" featured on the bands 1981 release, In God We Trust, Inc.
- An attentive viewer can see a Nazi punk in the background during parts of the concert scene in the 1998 film American History X, though most audiences overlook it.
- People commonly wrongly label White Power Skinheads "Nazi punks".
- The infamous British RAC band Skrewdriver started off as a '77 era apolitical Punk band.
- Other names for Nazi Punks include: "White Power Punks" (or "WP Punks"), "National Socialist Punks" (or "NS Punks"), and "Hate Punks".
- "Punk's Not Red!" is a popular slogan among many Nazi Punks. It is a pun on the expression originally phrased by the popular Punk band The Exploited, "Punk's Not Dead!". It basically means Punk is not Communist, as some allege it is.

## Needle drop

The **needle drop** is a technique used in [hip hop deejaying](#), probably originated by Grand Wizard Theodore. The DJ sets a record spinning, then drops the stylus on the turntable at the point where he or she wants playback to begin. According to AMG: "Instead of cueing up the record silently, the DJ simply drops the needle onto the exact start of the passage to be played."

The Sticker Method of locating the sample or Break:

A DJ often uses colored labels "dot" labels to mark the sample to be used. Marking a record involves several steps... The first step is to locate the desired sample, the second step is much more critical. The sample is located, then the record is brought about an inch or two backwards from the beginning of the sample. A "Dot" label is carefully placed up against the stylus (Needle) and a feather touch is applied to keep the label in place. Too hard of an application may lead to the needle being misplaced on the record, slipping to the next several grooves, an undesired result. After the needle is removed from the label, (sample area) the label can be pressed into place more permanently. If the DJ so desires to remove the label, any residue can be removed from the record with any widely available record cleaner solution.

## Neo soul

**Neo soul** (also known as **nu soul**) is a [musical genre](#) that fuses contemporary R&B, 1970s style [soul](#), and [hip hop](#). It is the third major sub-genre of contemporary R&B, after the [new jack swing](#) of the late 1980s/ early 1990s and the [hip hop soul](#) of the early to mid 1990s. The "neo soul" term, originated by Kedar Massenburg of Motown Records in the late-1990s, is sometimes looked upon with disdain as nothing more than a marketing specialization of contemporary R&B instead of an honest revival of soul music, because most of the people who record in the genre and listeners tend to be anti-mainstream favoring to retain soul underground credibility and soulfulness over mainstream popularity.

## Early works

The genre is considered to have originated with the work of Raphael Saadiq's band Tony! Toni! Toné! in the mid-1990s, and with D'Angelo's 1995 LP *Brown Sugar*. *Brown Sugar* featured elements of classic soul, inspired by artists such as Stevie Wonder and Donny Hathaway (both keyboardists, as is D'Angelo), that had not been regularly seen in modern African-American mainstream music since the mid-1980s. Also, in 1995 came the work of a duo called Groove Theory, which included the members Amel Larrieux, the singer and Bryce Wilson, the rapper/singer/producer/actor. In 1997, Motown artist Erykah Badu released her debut LP, *Baduizm*, the success of which paved the way for new Motown chief Kedar Massenburg to shift the direction of much of the company's output towards Badu's style, which he dubbed neo-soul. The first neo-soul artist to make a major impact on the mainstream was Lauryn Hill, whose 1998 *The Miseducation of Lauryn Hill* LP was a critical and commercial smash and garnered five [Grammy Awards](#).

## **Popularization of neo-soul**

After Hill's phenomenal success, a number of other neo-soul artists began scoring R&B hits, most notably Macy Gray, Angie Stone, Musiq Soulchild, and India.Arie. Alicia Keys' 2001 LP *Songs in A Minor* was another Miseducation-like smash, winning several Grammys and selling six-million copies and further popularizing the sound, to some critical disdain. Other major neo soul artists have included Angie Stone, Lucy Pearl, Floetry, Glenn Lewis, Res, Truth Hurts, and Bilal, all of whom became staples of R&B radio. Perhaps less widely played, but still well selling and highly critically acclaimed, is Maxwell. The latest major neo-soul artist to emerge is John Legend, whose style bears strong similarities to that of Stevie Wonder.

## Lack of mainstream success

In general, neo-soul has remained almost exclusive to R&B outlets such as urban radio and BET; most of its artists are unfamiliar to mainstream audiences, and its sound generally focuses on artist expression rather than pop orientation. While these artists have found major success in those venues, they generally have yet to [crossover](#) to mainstream American music listeners.

To date, Hill remains the best-known and consistently successful neo soul artist from a mainstream, commercial point of view, thanks to two big pop singles: "Everything Is Everything" and "Doo Wop (That Thing)", both of which were far more hip hop oriented, containing rapped verses, than most neo soul. Hill is also widely known because of her successful sweep of the 1999 Grammys. Keys, however, is widely known because she has had the biggest single mainstream neo soul hit to date with "Fallin'", which contained no rap verse and consequently managed to cross over not only onto the pop charts, but also onto both the hot and the soft AC charts.

Towards the turn of the millennium, Macy Gray had a massive urban, pop, and AC hit with "I Try", making her pretty well known by mainstream America. Gray's other singles, while successful in some outlets, failed to make an impression on the pop charts as "I Try" did. Wyclef Jean's protégés City High managed two successful singles on the pop charts, "Caramel" and "What Would You Do", in 2001, which was a time when hearing hip hop on pop radio was no longer anything exceptional, as it had been during Hill's initial success. Because of this, City High did not receive the same widespread recognition that Hill had three years earlier; and since City High's singles were more upbeat and rhythmic sounding than Keys' "Fallin'" and Gray's "I Try", they did not cross over onto the AC charts. As a result, City High, is nowhere near as well known as either Hill, Gray, or Keys, even despite the group's pop radio and MTV hits.

The other neo soul artists are hardly known of at all in mainstream America, having yet to cross over to the mainstream despite the fact that most have found success with the urban audience, urban radio, and BET. Most have also found success in America on the music video channels MTV2 and VH1 Soul. Some, like Maxwell, Erykah Badu, and D'Angelo are somewhat known by mainstream America for having initiated the neo soul genre, from critical acclaim, from word-of-mouth recommendations of their albums, and from other media appearances, e.g., D'Angelo's performance on VH1's Men Strike Back 2000 and Badu's role in the movie The Cider House Rules. Only time will tell whether any of the other neo soul artists begin to

crossover into the mainstream and become household names, or whether the genre remains predominantly as a sub-genre of music played mainly just on urban radio stations and BET.

## Criticism of the "neo-soul" label

Many musicians who create what is considered "neo-soul" prefer to disassociate themselves from the tag, due to the term's buzzword-like usage. These artists argue that many [record labels](#), hoping to cash in on the success of the "neo-soul" style, simply had [A&R](#) departments take R&B singers, give them a bohemian look, and have them state Stevie Wonder, Donny Hathaway, or Marvin Gaye as their favorite artists. Instead of using the "neo-soul" tag, many artists simply refer to themselves as soul musicians.

## Neo soul artists

There are several singers today that are classified as neo soul artists.

## Neo-classical metal

**Neo-classical metal** is a subgenre of the [heavy metal music](#) heavily influenced by [classical music](#) and can be considered a form of [neoclassicism](#).

## Definition

Neoclassicism in music was a 20th century development, particularly popular in the period between the two World Wars, in which composers drew inspiration from music of the 18th century, though some of the inspiring canon was drawn as much from the [Baroque](#) period as the [Classical](#) period - for this reason, music which draws influence specifically from the Baroque is sometimes termed *neo-baroque*.

While many guitarists, like the classically trained Randy Rhoads, displayed classical influences, it was only after the shredding movement, arguably started by Yngwie Malmsteen, and heavily influenced by Ritchie Blackmore, that Neo-classical metal developed as a stand alone metal subgenre.

## Elements

- Pedal point (repetition of a note or group, with a scalar, melody line played alternately),
- Ostinato (strict repetition of a single phrase or idea),
- [Scale sequence](#) (a stylised way of ascending or descending through a scale or mode, where a set pattern is observed),
- Arpeggio (the notes of a chord played individually)
- Tritone (musical interval that spans three whole tones or six semitones)

## Sounds

- Harmonic minor scale (Aeolian mode with a raised 7th tone),
- Melodic minor which can be viewed two ways:
  - Aeolian mode with a raised 6th and 7th tone or
  - Ionian mode with a flattened 3rd,
- Diminished (a series of minor 3rd intervals stacked one on top of the next),
- cycle of fifths (a [chord progression](#) where each chord becomes the dominant of the next e.g.: Am, D, G, C, F, Bdim, E, Am),
- suspensions (cadences or "chord progression endings" where the true harmony chord is pushed out or "suspended" by another, non-harmony

note and then reasserts itself. Examples: 4th replaces 3rd; 6th replaces 5th; 9th replace 8th or octave).

The chord progressions, arpeggios, broken chords, and speedy scale runs of neo-classical metal are borrowed for the most part from Johann Sebastian Bach, Antonio Vivaldi, Niccolò Paganini, Wolfgang Amadeus Mozart and Ludwig van Beethoven, particularly the first three. The virtuosos who perform in this style are sometimes dubbed "Guitar Gods".

Although Yngwie J. Malmsteen is probably the form's best known proponent, classical elements used in heavy metal and hard rock date back to Ritchie Blackmore of Deep Purple, Uli Jon Roth and Randy Rhoads's innovations in the late 1970s and early 1980s.

# Neoclassicism

|   |
|---|
| <b>Classicism series</b>  |
| Classical antiquity   |
| Renaissance Classicism  |
| Age of Enlightenment Classicism   |
| <ul style="list-style-type: none"><li>• Visual arts, Architecture, and Literary <a href="#">Neoclassicism</a></li><li>• <a href="#">Classical music era</a></li></ul> |
| Classicism between the Wars   |
| <ul style="list-style-type: none"><li>• 20th Century neoclassicism</li></ul>  |

**Neoclassicism in music** was a 20th century development, particularly popular in the period between the two World Wars, in which composers drew inspiration from music of the 18th century, though some of the inspiring canon was drawn as much from the [Baroque](#) period as the [Classical](#) period - for this reason, music which draws influence specifically from the Baroque is sometimes termed *neo-baroque*.

## Artistic description

Neo-classicism was born at the same time as the general return to rational models in the arts in response to World War I. Smaller, more spare, more orderly was conceived of as the response to the overwrought emotionalism which many felt had herded people into the trenches. Since economics also favored smaller ensembles, the search for doing "more with less" took on a practical imperative as well.

Neoclassicism can be seen as a reaction against the prevailing trend of 19th century Romanticism to sacrifice internal balance and order in favour of more overtly emotional writing. Neoclassicism makes a return to balanced forms and often emotional restraint, as well as 18th century compositional processes and techniques. However, in the use of modern instrumental resources such as the full [orchestra](#), which had greatly expanded since the 18th century, and advanced [harmony](#), neoclassical works are distinctly 20th century.

It is not that interest in 18th century music wasn't fairly well sustained through the 19th, with pieces such as Franz Liszt's *À la Chapelle Sixtine* (1862), Edvard Grieg's *Holberg Suite* (1884), Pyotr Ilyich Tchaikovsky's *divertissement* from *The Queen of Spades* (1890), and Max Reger's *Concerto in the Old Style* (1912), "dressed up their music in old clothes in order to create a smiling or pensive evocation of the past." (Albright, 2004). It was that the 20th century had a different view of 18th century norms and forms, instead of being an immediately antique style contrasted against the present, 20th century neo-classicism focused on the 18th century as a period which had virtues which were lacking in their own time.

## Musical description

Neo-classicism (in music) is a return to a revived "common practice" harmony, mixed with greater dissonance and rhythm, as the basic point of departure for music.

Neo-classicism's most audible traits are melodies which use the tritone as a stable interval, and coloristically add dissonant notes to ostinati and block harmonies, along with the free mixture of polyrhythms. Neo-classicism won greater audience acceptance more quickly, and was taken to heart by those opposed to atonality as the true "modern" music. Neo-classicism also embraced the use of [folk musics](#) to give greater rhythmic and harmonic variety. Modernists such as the Hungarians Béla Bartók and Romantically inclined Zoltán Kodály and the Czech Leoš Janáček collected and studied their native folk musics which then influenced their compositions.

## People and works

Igor Stravinsky, Paul Hindemith, Sergei Prokofiev and Béla Bartók are usually listed as the most important composers in this mode, but also the prolific Darius Milhaud and his contemporary Francis Poulenc.

Neoclassicism was instigated by Igor Stravinsky, according to himself, but attributed by others to composers including Ferruccio Busoni (who wrote "Junge Klassizität" or "New Classicality" in 1920), Sergei Prokofiev, Maurice Ravel, and others.

Igor Stravinsky composed some of the best known neoclassical works — in his ballet *Pulcinella*, for example, he used themes which he believed to be by Giovanni Pergolesi (it later transpired that many of them were not, though they were by contemporaries). Paul Hindemith was another neoclassicist (and New Objectivist), as was Bohuslav Martinů, who revived the Baroque [concerto grosso](#) form in his works.

Stravinsky's *L'Histoire du Soldat* is thought of as a seminal "neo-classical piece", as are his *Dumbarton Oaks Concerto* and his "Symphonies of Wind Instruments", as well as his *Symphony in C*. Stravinsky's neo-classicism culminated with his opera *Rake's Progress*, with the book done by the well known modernist poet, W. H. Auden.
