Another competition gaining much popularity is BC One, sponsored by Red Bull. This tournament invites sixteen of the best b-boys from around the world to compete one-on-one in single-elimination, thereby making the competition intense. This is somewhat unique, as most battle events pit entire crews or crew fragments of 3 or more people. Most other instances of one-on-one matchups are one-time main event attractions for entire jams, not comprising the entire event.

## **Breakdancing as a Folk Dance**

There is some academic interest in whether breakdance can be considered a folk dance. In particular, street dances are living and evolving dance forms, while folk dances are to a significant degree bound by tradition. Breakdance was in the beginning a social dance but in the later years, mostly because of media and television, its goal has become more of a performance dance.

## Music

Contrary to popular belief, b-boys do not only break to hip hop. It is very common to see b-boys breaking to [jazz](#), [funk](#), [freestyle](#), and [soul](#) tracks. Whatever genre it is, most of the songs popular for breaking are from the 1970s and 1980s. Modern mainstream hip hop, through its changes, is generally not as good for breaking as tunes from when breaking had its peak popularity. Generally, a common feature of bboy music is the presence of a break which is looped several times by the dj. In order to do so, the DJ usually acquires two copies of the record containing the break. The history credits Kool Dj Herc for the invention of this concept and technique. The resulting piece of music created by continuous looping of a musical phrase is termed a breakbeat. The most traditional understanding of what b-boy music should be like states that "b-boy break to the beat". This definition is however flexible and many b-boy classics do not follow this format. The typical b-boy tune has a beat ranging between 120 and 135 beats-per-minute with shuffled 16th and quarter beats in the percussive pattern.

Music is a very important thing to a b-boy. One could argue that the knowledge of music is almost as important as the ability to dance to it. Skilled b-boys are expected to have almost a trainspotter-esque detailed knowledge of breaking songs. They show this through hitting certain interesting focal points in each song, perhaps with a freeze, and also somewhat "narrating" with their motions, which is often humorous as well as impressive.

The concept of breakbeats was later developed in non b-boy related types of music. Also, the term [breakbeat](#) is nowadays mostly used to refer to certain genres in [electronica](#).

## Culture

Since its first inception breakdancing has provided a youth culture, originating from violent urban street gangs. Today however, breakdancing culture is remarkably constructive with a character somewhere in between those of dancers and athletes. Since acceptance and involvement centers on dance skills, breakdancing culture is unusually free of the common race, gender and age boundaries of a subculture. Social interaction centers on practice and performance, which are occasionally intertwined because of its improvisational style. While featured at dance schools, breaking is typically taught to newbies by more experienced b-boys and passed on to new generations in an informal word-of-mouth way.

In contrast to this social breakdancing culture there are *Internet b-boys*, also known as *e-boys*, or as they call them in Japan: *Otaku b-boys*. These have learned much of what they know of the dance purely from the internet and from watching videoclips, not by instruction or by the passing of knowledge from one generation to another. The reason for this might be that they do not have access to competent instructors or social circles that can provide them with teaching and inspiration. Such b-boys are by some groups looked-down upon as not having their heart in hip hop culture.

Because of its functional demands on music and clothing, breakdance culture has become largely separated from popular hip hop since the 1980s. B-Boying has made itself aware to the mainstream crowd, making popular appearances in movies like *Zoolander*.

# Fashion

For the breakdancer, fashion is an important aspect of their identity. Many breakdancers in the 1980s dressed wearing flat-soled Adidas, Puma, or Fila shoes with thick, sometimes patterned laces. Some breakdancers matched their hats, shirts, and shoes to show uniformity within a breakdancing crew, and was perceived a threat to the competitor in the form of "strength in numbers." B-boys also wore nylon tracksuits which were functional as well as fashionable. The slick, low-friction surface allowed the breakdancer to slide on the floor much more readily than if he or she had been wearing a cotton shirt. Hooded nylon jackets allowed dancers to perform head spins and windmills with relative ease. Additionally, the popular image of the original breakdancer always involved a public performance on the street, accompanied by the essential boombox.

B-boys today dress differently from b-boys in the 80s, but one constant remains, and that is dressing "fresh". Due to the spread of b-boying as an artform from the inner cities out into the suburbs and to different social groups, different senses of "fresh" have arisen. Generally the rule that one's gear needs to match has remained from the 80s, along with a certain playfulness. Kangols are still worn by some, track pants and nylons still have their place combined with fresh sneakers and hats. Trucker hats were reintroduced on the scene in the late 1990s, well before the mainstream pop culture began wearing them again in numbers.

Function is heavily intertwined with b-boy fashion. Due to the demands on the feet in b-boying, b-boys look for shoes with low weight, good grip, and durability when given pressure to the sole as well as elsewhere. Headwear can facilitate movement with the head on the ground, especially headspins. Bandanas underneath headwear can protect from the discomfort of fabric pulling on hair. And wristbands placed along the arm can lower friction at a particular place as well as provide protection. Today's breakdancing styles which emphasize fast-paced, fluid floor moves and freezes, different from that of two decades ago, requires more freedom of movement in the upper body, so less baggy upperwear is more common today (though pants remain baggy).

There are dancers and crews that now have begun to dress in a style similar to "goth" or punk rockers in order to stand out from the more traditional toned-down b-boy look.

Certain clothing brands have been associated with breaking. *Tribal* is an example. Puma is also well known in the breaking community. Both brands sponsor many b-boy events.

But aside from these generalities, many b-boys choose not to try too hard to dress for breaking, because in a certain sense one would want to be able to break anytime, anywhere, whatever the circumstances. This is related to why many would rather learn headspins without a helmet, despite it being able to facilitate.

## Media

In the 1980s, with the help of pop culture and MTV, breakdancing made its way from the suburbs to the rest of the world as a new cultural phenomenon. Musicians such as Michael Jackson popularized much of the breakdancing style in their music videos. Movies such as Flashdance, Wild Style, Beat Street, Breakin' and Breakin' 2: Electric Boogaloo also contributed to breakdancing's growing appeal. Today, many b-boys and former breakers are disappointed by the media hype that watered the dance down into money and overfocus on power moves.

## Myths

For the most part, the danger inherent in b-boying is overemphasized. One can understand wanting the deterrent of fear in the past, as b-boying was associated with gang activity. Nowadays, however, the fear of life-threatening injury is largely unfounded. Like any other "street" activity, there is a certain associated stigma which must be considered if an accurate assessment is desired. As with any other physical activity, there is of course a measured risk of physical injury.

On the history of breakdancing, it has often been presented as a dance that replaced fighting between street gangs. Many regard this as true and believe that breakdance battles were used to act out conflicts and that some gang members went from fighting to dancing. Others believe it a misconception that b-boying was originally based on mediating gang rivalry at all.

# Bridge

In [popular music](#), a **bridge** is a contrasting section which also prepares for the return of the original material section. The bridge may be the middle-eight in a thirty-two-bar form (the B in AABA), or it may be used more loosely in verse-chorus form, or, in a compound AABA form, used as a contrast to a full AABA section, as in "Every Breath You Take". Very commonly the "bridge" is in a contrasting key to the original melody. More often than not, the "bridge" is a perfect 4th higher. For examples, see Richard Rodgers' "Mountain Greenery" and Antonio Carlos Jobim's "Meditation" just to name two.

Lyrically, the bridge is typically used to pause and reflect on the earlier portions of the song or to prepare the listener for the climax.

The term may also be used to refer to the section between the verse and the chorus. Although this is more commonly referred to as the *pre-chorus*, it is not completely incorrect, as often the transition between the two themes of a [sonata form](#) in [classical music](#) is similarly referred to as a bridge. A more formal way of describing this transition between two themes (in classical music structures) is by referring to it as the "transition theme".

# Bright disco

**Bright disco** is an extension of typical [disco music](#), but with a strong 1980s touch. It lasted a few years, roughly from 1977 to 1983, in the transition between the disco culture and the 80s fashion.

Best examples of this kind of music might be "She Works Hard For The Money" (Donna Summer), "Far From Over" (Frank Stallone), "I'm So Excited" (The Pointer Sisters), "It's Raining Men" (Weather Girls), "What A Feeling" (Irene Cara), "Holding Out For a Hero" (Bonnie Tyler) and some songs from Village People's early 80s albums.

The strongest pattern of Bright Disco is that several instruments commonly used by traditional disco music, such as rhythm guitar, strings (violin, viola, cello), trumpet, saxophone, trombone, piano, and drums were electronically emulated, or replaced by keyboard's icy sounds (brightness, pad-ens, saw-wave, bells or atmosphere).

The genre is sometimes denied as being such, by those that consider it as a kind of historical prelude to the [Synth Pop](#) era, but it has sufficient personality to be considered a valuable musical movement.

# Brit Award

The **Brit Awards** are the annual United Kingdom pop music awards founded by the British Phonographic Industry. The awards began in 1977 as the BPI Awards and were renamed The Britannia Awards, or Brit Awards, in 1989. MasterCard is the long-time sponsor of this annual event.

Brit is also a backronym for British Record Industry Trust which supports youngsters in the arts and education mainly at the BRIT School in Croydon, London.

Strong music industry sponsorship and involvement mean that awards are given without much democratic process and, many suspect, for strongly commercial reasons. These are awards given by the music industry to the music industry. Robbie Williams pointed this out accepting an award a few years back. More recently, the awards have more reflected the tastes of the record-buying public, with an artist needing to prove popular and chart-topping before they are rewarded.

The Brit Awards used to be broadcast live until 1989, when Samantha Fox and Mick Fleetwood hosted a shambolic show in which just about everything went wrong - lines were fluffed, bands mis-cued, and airtime filled with embarrassing silence. After this the show was recorded, and broadcast the following night, part of a revamp by Jonathan King for 1990 whose actions also included releasing a megamix of British dance acts including S'Express and A Guy Called Gerald called Brits 1990. King subsequently went on to revamp A Song for Europe.

Pre-recording proved to be a good idea when, during a Michael Jackson performance in 1996, Jarvis Cocker from the band Pulp invaded the stage in a comedic protest at Jackson's messianic performance. There have been many such notable instances, including several UK politicians presenting awards and being heckled (and, in the case of John Prescott, having water thrown over him, at the 1998 awards, by Chumbawamba vocalist Danbert Nobacon [1]) and a remarkable performance by The KLF in 1992.

In addition, an equivalent awards ceremony for [classical music](#), called the Classical Brit Awards, is held each May.

## Main Winners for Each Year

1977: The Beatles win 3 awards  
1982: no clear winner  
1983: Paul McCartney wins 2 awards  
1984: Culture Club win 2 awards  
1985: Prince wins 2 awards  
1986: Eurythmics win 2 awards  
1987: Peter Gabriel wins 2 awards  
1988: no clear winner  
1989: Phil Collins, Michael Jackson, Fairground Attraction and Tracy Chapman win 2 awards  
1990: Neneh Cherry, Phil Collins and Fine Young Cannibals win 2 awards  
1991: no clear winner  
1992: Seal wins 3 awards  
1993: Annie Lennox and Simply Red win 2 awards  
1994: Björk, Take That and Stereo MC's win 2 awards  
1995: Blur win 4 awards  
1996: Oasis win 3 awards  
1997: Manic Street Preachers and Spice Girls win 2 awards  
1998: The Verve win 3 awards  
1999: Robbie Williams wins 3 awards  
2000: Travis, Robbie Williams and Macy Gray win 2 awards  
2001: Robbie Williams wins 3 awards  
2002: Dido and Kylie Minogue win 2 awards  
2003: Coldplay and Ms Dynamite win 2 awards  
2004: The Darkness win 3 awards  
2005: Scissor Sisters win 3 awards  
2006: Kaiser Chiefs win 3 awards

## **Selected Famous and Infamous Brit Award Incidents**

### **Ronnie Wood vs Brandon Block (2000)**

After consuming large amounts of alcohol (and allegedly drugs) dance DJ Brandon Block was told by his friends that he had won an award and had been summoned to the stage to collect it. Because of his advanced state of intoxication he believed them and walked onto the stage, eventually ending up next to a bemused Rolling Stones guitarist Ronnie Wood and actress Thora Birch who were about to present the award for best soundtrack album. Having been successfully bundled off the stage by security, Ronnie Wood aimed an insult in his direction at which Block broke free from his captors to square up to the guitarist. A series of insults were then traded between the two – both comically leaning into the microphone so that everyone could hear. Wood threw his drink into Block's face and the DJ was eventually removed from the stage. Some time after the incident, Block claimed that he had subsequently apologised to Wood for his behaviour who had merely brushed it off.

### **Robbie Williams vs Liam Gallagher (2000)**

Around the time of his departure from Take That, Robbie Williams had begun an unlikely friendship with the Gallagher brothers from Britpop band Oasis at the Glastonbury Festival. The friendship was short lived, however, and the two parties regularly traded insults in the press with Noel Gallagher once famously referring to Robbie as "the fat dancer from Take That". Having won "Best British Single" and "Best Video" for "She's The One", Williams challenged Liam to a televised fight saying, *"So, anybody like to see me fight Liam? Would you pay to come and see it? Liam, a hundred grand of your money and a hundred grand of my money. We'll get in a ring and we'll have a fight and you can all watch it on TV."* Liam did not accept the challenge.

### **Belle and Sebastian beat Steps to best newcomer award (1999)**

In 1999, indie band Belle & Sebastian were nominated for Best British Newcomers. The award was sponsored by Radio One and voted for online by their listeners. At the time, Steps were Britain's biggest boy/girl pop band and were also nominated. There was all round surprise, however, when the winners were announced as Belle & Sebastian. On the Saturday after the awards, a story appeared in the press alleging that Belle & Sebastian had rigged the vote in their favour, encouraging students from two universities to vote online. However, fans argued that the band had a predominantly student following and that band member Isobel Campbell had attended one of universities in question. The following year there was a Brit Award for Best Pop Act and Steps were presented with a special award.

Note: Belle & Sebastian were not the first act to have been accused of motivating all their fans to vote for them in a Brit's public vote, similar allegations were directed at

Depeche Mode for winning Best British single with "Enjoy the Silence".

### **Chumbawamba throw water over John Prescott (1998)**

In 1998, Danbert Nobacon of politically active band Chumbawamba threw a bucket of iced water over Labour cabinet minister John Prescott. Despite apologies on behalf of the band from EMI Europe, Chumbawamba were unrepentant claiming, *"If John Prescott has the nerve to turn up at events like the Brit Awards in a vain attempt to make Labour seem cool and trendy, then he deserves all we can throw at him"*.

### **Jarvis Cocker's stage invasion during Michael Jackson's Earth Song (1996)**

The 1996 awards witnessed a special performance of Earth Song by Michael Jackson. Some found the grandiose presentation, which presented Jackson as some kind of redeemer of mankind surrounded by adoring children (first seen in the video to his earlier single Will You Be There), inappropriate and distasteful prompting a spur of the moment decision by Cocker (of the band Pulp) to invade the stage in protest. Once onstage, Jarvis ran around lifting his shirt and pointing his (clothed) bottom in Jackson's direction. Cocker was subsequently questioned by the police but no criminal proceedings were forthcoming.

### **The KLF, a machine gun and a dead sheep (1992)**

In 1992, dance / art band The KLF were awarded Best British Group (shared with Simply Red) and were booked to open the show. In an attempt to hijack the event the duo hooked up with Extreme Noise Terror to perform a death metal version of the dance song 3am Eternal that prompted composer Sir Georg Solti to walk out[2]. The performance ended with Bill Drummond firing blanks from a vintage machine gun into the audience and announcer Scott Piering stating "Ladies and gentleman, The KLF have now left the music business". Producers of the show then refused to let a motorcycle courier collect the award on behalf of the band. Later, guests arriving for an after show party witnessed KLF dump a dead sheep outside the venue with the message *"I died for ewe – bon appetite"* tied around its waist. KLF disbanded three months later.

### **The Sam Fox and Mick Fleetwood Car Crash (1989)**

Until 1989, the BPI Awards were a spectacularly lifeless affair usually presented by Noel Edmonds and brimming with industry types and ageing Radio 1 DJs. In 1989 all that changed. In an attempt to add some excitement and appeal to the proceedings organizers decided to rename the awards to 'The Brit Awards' and came up with the idea of having Fleetwood Mac's Mick Fleetwood and former page 3 girl Sam Fox as co-hosts of the live show. The results were indeed spectacular. The inexperience of the hosts, a broken autocue and poor preparation combined to create one of the most shambolic performances ever aired on live British television. The hosts continually fluffed their lines, a pre-recorded message from Michael Jackson was never actually

broadcast and several star guests arrived late. A classic moment included the appearance of Boy George of Culture Club and was along the lines of:

Sam Fox: *(with a fixed beaming smile) ...and the winner is...*

Celebrity presenting the award: *(looking panicked) aren't you going to read out the nominations first?*

Sam Fox: *(with a determined look) ...here they are ... the FOUR TOPS...*

Boy George appears from backstage looking self-conscious.

Boy George: *(with an apologetic smile) I'm afraid I'm just the one top...*

Ironically, the Sam Fox/Mick Fleetwood show proved to be the single most important event in BPI/Brit Awards history. It was just so disastrous that the British public's interest was revived and the Brits became associated with risky live TV. The show's organisers would successfully exploit this association to publicise future shows.

# Awards

## 2006

British male solo artist: James Blunt  
British female solo artist: KT Tunstall  
British group: Kaiser Chiefs  
MasterCard British album: Coldplay - "X&Y"  
British single: Coldplay - "Speed Of Sound"  
British breakthrough act: Arctic Monkeys  
British urban act: Lemar  
British rock act: Kaiser Chiefs  
British live act: Kaiser Chiefs  
Pop act: James Blunt  
International male solo artist: Kanye West  
International female solo artist: Madonna  
International group: Green Day  
International album: Green Day - "American Idiot"  
International breakthrough act: Jack Johnson  
Outstanding Contribution to Music: Paul Weller

## 2005

British male solo artist: The Streets  
British female solo artist: Joss Stone  
British group: Franz Ferdinand,  
British album: Keane - Hopes and Fears  
British single: Will Young - "Your Game"  
British breakthrough act: Keane  
British urban act: Joss Stone  
British rock act: Franz Ferdinand  
British live act: Muse  
Pop act: McFly  
International male solo artist: Eminem  
International female solo artist: Gwen Stefani  
International breakthrough act: Scissor Sisters  
International group: Scissor Sisters  
International album: Scissor Sisters - Scissor Sisters  
Outstanding Contribution to Music: Bob Geldof

A Special BRITs 25 Award for the best single from the past 25 years was awarded to Robbie Williams *Angels*.

The producers added a fake film effect to the TV coverage of the 2005 awards show, which was criticised by some who thought ruined the immediacy of the awards show, and was dizzying when combined with fast camera movements.

## 2004

British album – The Darkness - Permission to Land  
British breakthrough act – Busted  
British dance act – Basement Jaxx  
British female solo artist – Dido  
British group – The Darkness  
British male solo artist – Daniel Bedingfield  
British rock act - The Darkness  
British single – Dido - "White Flag"  
British urban act – Lemar  
International album – Justin Timberlake - Justified  
International breakthrough act – 50 Cent  
International female solo artist - Beyoncé  
International group – White Stripes  
International male solo artist - Justin Timberlake  
Outstanding contribution – Duran Duran  
Pop act – Busted

## 2003

British album – Coldplay – A Rush of Blood to the Head  
British breakthrough act – Will Young  
British dance act – Sugababes  
British female solo artist – Ms Dynamite  
British group – Coldplay  
British male solo artist – Robbie Williams  
British single – Liberty X – "Just a Little"  
British urban act – Ms Dynamite  
International album – Eminem – The Eminem Show  
International breakthrough act – Norah Jones  
International female – Pink  
International group – Red Hot Chili Peppers  
International male – Eminem  
Outstanding contribution – Tom Jones  
Pop act – Blue

## 2002

British album – Dido – No Angel  
British breakthrough act – Blue  
British dance act – Basement Jaxx  
British female solo artist – Dido (singer)  
British group – Travis  
British male solo artist – Robbie Williams  
British single – S Club 7 – "Don't Stop Movin'"  
British video – So Solid Crew – "21 Seconds"  
International album – Kylie Minogue – Fever  
International breakthrough act – The Strokes  
International female - Kylie Minogue  
International group – Destiny's Child  
International male – Shaggy  
Outstanding contribution – Sting  
Pop act – Westlife

## 2001

Best soundtrack - American Beauty  
British album - Coldplay - Parachutes  
British breakthrough act - a1  
British dance act - Fatboy Slim  
British female solo artist - Sonique  
British group - Coldplay  
British male solo artist - Robbie Williams  
British single - Robbie Williams - "Rock DJ"  
British video - Robbie Williams - "Rock DJ"  
International breakthrough act - Kelis  
International female - Madonna  
International group - U2  
International male - Eminem  
Outstanding contribution - U2  
Pop act - Westlife

## 2000

Best selling live act – Steps  
Best soundtrack – Notting Hill  
British album – Travis – The Man Who  
British breakthrough act – S Club 7  
British dance act – The Chemical Brothers  
British female solo artist – Beth Orton  
British group – Travis  
British male solo artist – Tom Jones  
British single – Robbie Williams – "She's the One"  
British video – Robbie Williams – "She's the One"  
International breakthrough act – Macy Gray  
International female - Macy Gray  
International group – TLC  
International male – Beck  
Outstanding contribution – Spice Girls  
Pop act – Five

## 1999

Best soundtrack - Titanic  
British album – Manic Street Preachers – This Is My Truth Tell Me Yours  
British breakthrough act – Belle & Sebastian  
British dance act – Fatboy Slim  
British female solo artist – Des'ree  
British group - Manic Street Preachers  
British male solo artist - Robbie Williams  
British single – Robbie Williams – "Angels"  
British video – Robbie Williams – "Millennium"  
International breakthrough act – Natalie Imbruglia  
International female - Natalie Imbruglia  
International group – The Corrs

International male – Beck  
Outstanding contribution – Eurythmics

## 1998

Best British producer – The Verve, Chris Potter and Youth  
Best selling British album act – Spice Girls  
Best soundtrack – The Full Monty  
British album – The Verve – Urban Hymns  
British breakthrough act – Stereophonics  
British dance act – The Prodigy  
British female solo artist – Shola Ama  
British Group – The Verve  
British male solo artist – Finley Quaye  
British single – All Saints – "Never Ever"  
British Video - All Saints – "Never Ever"  
Freddie Mercury award – Sir Elton John  
International breakthrough act – Eels  
International female – Björk  
International group – U2  
International male – Jon Bon Jovi  
Outstanding contribution – Fleetwood Mac

## 1997

Best British producer – John Leckie  
Best soundtrack – Trainspotting  
British album - Manic Street Preachers – Everything Must Go  
British breakthrough act – Kula Shaker  
British dance act – The Prodigy  
British female solo artist – Gabrielle  
British Group - Manic Street Preachers  
British male solo artist – George Michael  
British single – Spice Girls – "Wannabe"  
British Video - Spice Girls – "Say You'll Be There"  
International breakthrough act – Robert Miles  
International female – Sheryl Crow  
International group – The Fugees  
International male – Beck  
Outstanding contribution – Bee Gees

## 1996

Artist of a generation – Michael Jackson  
Best British producer – Brian Eno  
Best soundtrack – Batman Forever  
British album – Oasis - (What's the Story) Morning Glory  
British breakthrough act – Supergrass  
British dance act – Massive Attack  
British female solo artist – Annie Lennox  
British group - Oasis

British male solo artist – Paul Weller  
British single – Take That – "Back for Good"  
British video - Oasis – "Wonderwall"  
Freddie Mercury award - The Help Album for the Charity Warchild  
International breakthrough act – Alanis Morissette  
International female – Björk  
International group – Bon Jovi  
International male – Artist  
Outstanding contribution – David Bowie

## 1995

Best British producer – Nellee Hooper  
Best soundtrack – Pulp Fiction  
British album – Blur - Parklife  
British breakthrough act – Oasis  
British dance act – M People  
British female solo artist – Eddi Reader  
British Group – Blur  
British male solo artist – Paul Weller  
British single – Blur - "Parklife"  
British Video - Blur - "Parklife"  
International breakthrough act – Lisa Loeb  
International female – k.d. lang  
International group – R.E.M.  
International male – (a.k.a. Prince)  
Outstanding contribution – Elton John

## 1994

Best soundtrack – The Bodyguard  
Best British producer – Brian Eno  
Best selling album & Single – Meat Loaf  
British album – Stereo MC's - Connected  
British breakthrough act – Gabrielle  
British dance act – M People  
British female solo artist – Dina Carroll  
British group – Stereo MC's  
British male solo artist – Sting  
British single – Take That - "Pray"  
British video - Take That - "Pray"  
International breakthrough act – Björk  
International female – Björk  
International group – Crowded House  
International male – Lenny Kravitz  
Outstanding contribution – Van Morrison

## 1993

Best British producer – Peter Gabriel  
Best International Solo Artist – (a.k.a. Prince)

Best soundtrack – Wayne's World  
British album – Annie Lennox - Diva  
British breakthrough act – Tasmin Archer  
British female solo artist – Annie Lennox  
British group – Simply Red  
British male solo artist – Mick Hucknall  
British single – Take That "Could it be Magic"  
British video – Shakespear's Sister "Stay"  
International breakthrough act – Nirvana  
International group – R.E.M.  
Outstanding contribution – Rod Stewart

## 1992

Best British producer – Trevor Horn  
Best classical recording - Giuseppe Verdi - (Sir Georg Solti) - Otello  
Best soundtrack – The Commitments  
British album – Seal (musician) - Seal (1991)  
British breakthrough act – Beverley Craven  
British female solo artist – Lisa Stansfield  
British group – The KLF and Simply Red (Joint Winners)  
British male solo artist – Seal  
British single – Queen "These Are The Days Of Our Lives"  
British video – Seal - "Killer"  
International breakthrough act – PM Dawn  
International group – R.E.M.  
Outstanding contribution – Freddie Mercury

## 1991

Best British producer – Chris Thomas  
Best classical recording – José Carreras, Plácido Domingo, Luciano Pavarotti  
In Concert  
Best soundtrack – Twin Peaks  
British album – George Michael - Listen Without Prejudice  
British breakthrough act – Betty Boo  
British female solo artist – Lisa Stansfield  
British group – The Cure  
British male solo artist – Elton John  
British single – Depeche Mode "Enjoy the Silence"  
British video – The Beautiful South "A Little Time"  
International breakthrough act – MC Hammer  
International female - Sinéad O'Connor  
International group – INXS  
International male – Michael Hutchence  
Outstanding contribution – Status Quo

## 1990

Best British producer – Dave Stewart  
Best classical recording – Simon Rattle - George Gershwin's - "Porgy And

Bess  
Best international artist – Neneh Cherry  
Best music video – The Cure - "Lullaby"  
Best soundtrack – Batman  
British album – Fine Young Cannibals – The Raw and the Cooked  
British breakthrough act – Lisa Stansfield  
British female solo artist – Annie Lennox  
British group – Fine Young Cannibals  
British male solo artist – Phil Collins  
British single – Phil Collins - "Another Day in Paradise"  
International breakthrough act – Neneh Cherry  
International group – U2  
Outstanding contribution – Queen

## 1989

Best classical recording – George Frideric Handel's - The Messiah  
Best Music Video - Michael Jackson - "Smooth Criminal"  
Best soundtrack – Buster  
British album – Fairground Attraction - The First of a Million Kisses  
British breakthrough act – Bros  
British female solo artist – Annie Lennox  
British group – Erasure  
British male solo artist – Phil Collins  
British single – Fairground Attraction - "Perfect"  
International breakthrough act – Tracy Chapman  
International female - Tracy Chapman  
International group – U2  
International male – Michael Jackson  
Outstanding contribution – Cliff Richard

## 1988

Best British producer – Stock Aitken Waterman  
Best classical recording – Ralph Vaughan Williams - Symphony No. 5  
Best international solo artist - Michael Jackson  
Best Music Video – New Order - "True Faith"  
Best soundtrack – The Phantom of the Opera  
British album – Sting - Nothing Like the Sun  
British breakthrough act – Wet Wet Wet  
British female solo artist – Alison Moyet  
British group – Pet Shop Boys  
British male solo artist – George Michael  
British single – Rick Astley - "Never Gonna Give You Up"  
International breakthrough act – Terence Trent D'Arby  
International group – U2  
Outstanding contribution – The Who

## 1987

Best British producer – Dave Stewart  
Best classical recording – Julian Lloyd Webber/Royal Philharmonic Orchestra  
Elgar Cello Concerto  
Best international solo artist – Paul Simon  
Best soundtrack – Top Gun  
British album – Dire Straits Brothers in Arms  
British breakthrough act – The Housemartins  
British female solo artist – Kate Bush  
British group – Five Star  
British male solo artist – Peter Gabriel  
British single – Pet Shop Boys - "West End Girls"  
British Video - Peter Gabriel - "Sledgehammer"  
International group – The Bangles  
Outstanding contribution – Eric Clapton

## 1986

Best British producer – Dave Stewart  
Best international solo artist – Bruce Springsteen  
British female solo artist – Annie Lennox  
British group – Dire Straits  
British male solo artist – Phil Collins  
British Video – Paul Young - "Every Time You Go Away"  
International group – Huey Lewis and The News  
Outstanding contribution – Wham! and Elton John (Joint Winners)

## 1985

Best British comedy recording - Neil (a.k.a. Nigel Planer) - "Hole In My Shoe"  
Best British producer – Trevor Horn  
Best classical recording – Antonio Vivaldi's - The Four Seasons  
Best international artist – Prince & The New Power Generation  
Best soundtrack – Purple Rain  
British album – Sade - Diamond Life  
British female solo artist – Alison Moyet  
British group – Wham!  
British male solo artist – Paul Young  
British single – Frankie Goes To Hollywood - "Relax"  
British Video – Duran Duran - "The Wild Boys"  
Outstanding contribution – The Police  
Special Award - Bob Geldof and Midge Ure

## 1984

Best British producer – Steve Levine  
Best classical recording – Kiri Te Kanawa - Songs of the Auvergne  
Best international artist – Michael Jackson  
British breakthrough act – Paul Young  
British female solo artist – Annie Lennox  
British group – Culture Club

British male solo artist – David Bowie  
Best Selling Single- Culture Club - "Karma Chameleon"  
Outstanding contribution – George Martin  
The Sony award for technical excellence – Spandau Ballet

## 1983

Best British producer – Trevor Horn  
Best classical recording – John Williams - Portrait  
Best international artist – Kid Creole and the Coconuts  
Best Live Act - U2  
Best selling album – Barbra Streisand - Love Songs  
British breakthrough act – Yazoo  
British female solo artist – Kim Wilde  
British group – Dire Straits  
British male solo artist – Paul McCartney  
British single – Dexy's Midnight Runners - "Come On Eileen"  
Life achievement award – Pete Townshend  
Outstanding contribution – The Beatles  
Special Award - Chris Wright  
The Sony award for technical excellence – Paul McCartney

## 1982

Best British producer – Martin Rushent  
Best classical recording – Gustav Mahler's - Symphony No. 10  
Best selling album – Adam and the Ants - Kings Of The Wild Frontier  
British breakthrough act - Human League  
British female solo artist – Randy Crawford  
British group – The Police  
British male solo artist – Cliff Richard  
Outstanding contribution – John Lennon

## 1977

n.b. these awards were to mark the Queen's Silver Jubilee and were for the previous 25 years of her reign.

Best British non-musical record - Richard Burton and cast "Under Milkwood"  
Best British producer – George Martin  
Best classical soloist album – Jacqueline du Pre - Elgar, Cello Concerto  
Best international album - Simon & Garfunkel - Bridge Over Troubled Water  
Best orchestral album – Benjamin Britten - War Requiem  
British album – The Beatles – Sgt. Pepper's Lonely Hearts Club Band  
British breakthrough act – Julie Covington  
British female solo artist – Shirley Bassey  
British group – The Beatles  
British male solo artist – Cliff Richard  
British single – Queen - "Bohemian Rhapsody" & Procol Harum - "A Whiter Shade Of Pale" (Joint Winners)  
Outstanding Contribution - L.G. Wood and The Beatles (Joint Winners)

## Most successful acts

There have been numerous acts, both groups and individuals, that have won multiple awards. The table below shows those that have won more than three awards.

| <b>Artist</b>          | <b>Number Of Awards</b>                               |
|------------------------|---|
| Robbie Williams        | 15 (4 as Take That)                                   |
| U2                     | 7   |
| Annie Lennox           | 7 (1 as The Eurythmics)                               |
| Coldplay               | 6   |
| Paul McCartney         | 6 (4 as The Beatles)                                  |
| Prince                 | 6 (1 as Artist , 3 as, 2 as Prince & The Revolutions) |
| John Lennon            | 5 (4 as the Beatles)                                  |
| Michael Jackson        | 5   |
| George Micheal         | 5 (2 as Wham)   |
| Eminem                 | 4   |
| Spice Girls            | 4   |
| Manic Street Preachers | 4   |
| Oasis                  | 4   |
| Blur                   | 4   |
| Freddie Mercury        | 4 (3 as Queen)  |
| Sting                  | 4 (2 as The Police)                                   |
| The Beatles            | 4   |

# British blues

The **British blues** is a type of [blues](#) music that originated in the late 1950s. American blues musicians like B.B. King and Howlin' Wolf were massively popular in Britain at the time. Muddy Waters is said to be the first electric blues player to perform in front of British audiences circa 1959, and others like Sonny Boy Williamson and Chuck Berry followed him. British teens began playing the blues, imitating various styles of American blues. Gradually, a new distinctly British sound arose by the mid-1960s. This form of the blues, and various derivatives, became massively popular in the US, leading to the British Invasion.

The Animals  
Long John Baldry  
Jeff Beck  
Duster Bennett  
Blues Incorporated  
Chicken Shack  
Graham Bond  
Jack Bruce  
Eric Clapton  
Cream

The Rolling Stones  
Savoy Brown  
The Small Faces  
Gordon Smith (Blues Guitarist)  
Jeremy Spencer  
Taste (Irish Blues Band)  
Ten Years After  
Them  
The Yardbirds  
Chris Youlden

# British Invasion

The **British Invasion** was an influx of [rock and roll](#) performers from the United Kingdom who became popular in the United States, Australia, Canada and elsewhere. The classic British Invasion was in 1964-1966, but the term may also be applied to later "waves" of UK artists to significantly impact entertainment markets outside of Britain.

## The British invasion

The **British Invasion** began around 1962, and peaked in 1965. Two decades following the first invasion, the UK based punk movement resulted in another influx of raw, iconoclastic UK bands and artists, such as the Sex Pistols, The Clash, and Elvis Costello and the Attractions. As in 1963, the mainstream music market of 1975 had become heavily commercialized and formulaic, and the punk movement was a strong rebellion against this trend. Punk had a huge and lasting artistic influence on the popular music scene, but it never matched the broad commercial impact of the classic British Invasion of the 1960s. But in its wake, softer UK power pop artists (sometimes referred to as "New Wave" artists) also began to appear in the US market, still dominated by heavily commercialized disco and heavy metal music. Throughout the end of the 1970s, the influence and success of these artists (such as The Police) would slowly grow to become a second invasion.

This was largely spawned by the influence of MTV, which brought various distinctly British acts to the attention of American audiences. These included The Fixx, The Cure, Depeche Mode, Eurythmics, Duran Duran, Culture Club, and others. Once again, British acts came to dominate American charts, this time to an even greater degree than in the first British Invasion. See New Wave and New Romantic.

This second invasion of the 1980s remains (to date) the only other one. The continued splintering of the music market into vastly different genres makes a follow up, mass-appeal movement such as the British Invasion currently unlikely. Some musicians today dream of making such a mark.

## Britpop

The **Britpop** movement of the mid-1990s can be seen as a direct continuation of the original British Invasion of the 1960s, mixed with music of the '70s and '80s, although unlike the Invasion, Britpop never achieved the same degree of international popularity. Most of the bands weren't as popular worldwide as they were in Britain. Nevertheless, a few like Oasis, Radiohead, Pulp and Blur have managed to break through into the American market and achieve respectable international success. The Spice Girls also had chart success abroad.

The start of the millennium saw new artists from Britain come to rise, the most popular of them being Coldplay, who have achieved success in the U.S. Other acts are following in their footsteps.

In May 2002, there were no British artists on the US singles charts, the first time this had occurred since 1963.

In 2005, James Blunt reached #1 on the Billboard Hot 100 with his single "You're Beautiful", the first British artist to do so since Elton John with "Candle In The Wind" in 1997.

# Britpop

**Stylistic origins:** British Invasion, [Glam rock](#), [Indie rock](#), Madchester, Mod movement, [New Wave](#), [Punk rock](#)  
**Cultural origins:** early 1990s, United Kingdom  
**Typical instruments:** [Guitar](#) - [Bass](#) - [Drums](#) - [Keyboards](#)  
**Mainstream popularity:** Mid 1990s, United Kingdom

New wave of new wave, Lion Pop

England - Scotland - Wales - Ireland

## [Timeline of alternative rock](#)

**Britpop** was a British [alternative rock](#) and cultural movement which gained popularity in Great Britain in the mid 1990s, characterised by the prominence of bands influenced by British guitar pop music of the 1960s and 1970s. Though these bands did not on the whole have a single unifying sound they were grouped together by the media first as a 'scene' and later as a national cultural movement. Blur and Oasis are generally considered the scene's most prominent acts, though other bands associated with Britpop at various stages included Suede, Pulp, Dodgy, Ocean Colour Scene, Supergrass, The Verve and Radiohead.

The movement developed as a reaction against various musical and cultural trends in the late 1980s and early 1990s. [Acid house](#) and the rise of [Hip hop](#) had led to an renewed interest in groove and rhythm-led songs in British [indie](#) music, leading to the Madchester sound. In the wake of this, the more "traditional" guitar music was sidelined. The [shoegazing](#) movement of the late 1980s/early 1990s also went against the trend by producing long, [psychedelic](#), repetitive songs, strongly influenced by bands like the Jesus and Mary Chain and My Bloody Valentine.

The key "anti-influence" on Britpop was [grunge](#). In the wake of the American invasion led by bands like Nirvana, Mudhoney, Pearl Jam, Soundgarden and Alice in Chains, some British acts sought to emulate the [grunge](#) sound. Others continued to emulate the Madchester sound of the late 80s as part of the baggy movement. Much of the British music press remained in thrall to more established and critically acclaimed US acts such as Dinosaur Jr and Sonic Youth.

## Roots and Influences

Britpop groups were strongly influenced by the British guitar music of the 1960s and 1970s, particularly the two Rock and Roll trends of the British Invasion: the "[rocker](#)" cornerstones like The Beatles and The Rolling Stones and their Mod contemporaries like The Who, The Kinks, and The Small Faces. Also quite influential were 1970s and 1980s glam artists such as David Bowie and T. Rex and [punk](#) and [new wave](#) artists including The Sex Pistols, The Clash, The Jam, and the Buzzcocks.

[Indie](#) acts from the 1980s and early 1990s, particularly as exemplified by the likes of The Smiths, Jesus and Mary Chain, and James were the direct ancestors of the Britpop movement. The Madchester scene was another large influence. The movement was fronted by The Stone Roses, The Happy Mondays, and Inspiral Carpets (for whom Oasis' Noel Gallagher had worked as a Roadie during the Madchester years). Perhaps an indirect influence were the C86 bands, who largely played poppy indie guitar music. Many bands that would later be grouped under the Britpop umbrella, such as Primal Scream, originally started off as C86 bands.

In spite of the professed disdain for both [shoegazing](#) and [grunge](#) among many at the time, some elements of both crept into the more enduring facets of Britpop. Noel Gallagher has since championed Ride (to the point of including Andy Bell in Oasis) while Martin Carr of the Boo Radleys has pointed out Dinosaur Jr's influence on their work.

Though the movement came to the fore around 1994, it is unclear where it actually began. Due to its influence on the later acts, The Stone Roses, released in 1989, is sometimes regarded as the first Britpop album. Noel Gallagher has put forward his belief that it was The La's self-titled debut *The La's*, released in 1990. Others claim Gallagher's own debut, *Definitely Maybe* (1994), Suede's debut album *Suede*, or Blur's breakthrough, *Modern Life Is Rubbish* (1993), deserve this distinction for helping to kick-start the movement.

## **(1990s) History**

### **(1991–1993) The Modfather and *Modern Life is Rubbish***

Paul Weller in particular is praised as an initiator of the movement. His solo records *Paul Weller* (1991) and *Wild Wood* (1993) are considered seminal forces for the movement. His influence over Britpop, coupled with association with the Mod revival, had earned him the nickname "The Modfather". As well as guiding the bands through his recordings, Weller has also performed with various Britpop bands. Simon Fowler and Damon Minchella of Ocean Colour Scene have played in his backing band and Weller played guitar on Oasis' quintessential Britpop track "Champagne Supernova".

Another key initiator of the movement was Blur. Whereas Weller brought the element of "Mod" culture to what would become Britpop, Blur brought the early media attention and chart success with their 1993 album *Modern Life Is Rubbish*. The album slowly shifted Blur's sound away from shoegazing dance music of their debut *Leisure* to a quirky pop sound influenced by the likes of the Kinks. In hindsight, the writing and sound of *Modern Life Is Rubbish* contained many of the lyrical themes, chord changes, harmonies, and decidedly British singing which would later become iconically recognised as "Britpop".

The Mod scene of the mid 1960s and early 1980s had a profound influence on a number of acts, most famously Blur, Ocean Colour Scene, Menswear and, to a lesser extent, Oasis, either in terms of musical influence (particularly The Kinks, The Who and The Small Faces) or fashion (the fortunes of Ben Sherman were revived overnight).

### **(1994–1996) Britpop and Cool Britannia**

The term "Britpop" had been used as early as 1987 (in *Sounds* magazine by journalist, Goldblade frontman and TV pundit John Robb referring to bands such as The La's, Stone Roses, Inspiral Carpets and The Bridewell Taxies). "Britpop" arose around the same time as the term "Britart" (which referred to the work of British modern artists such as Damien Hirst). However, it would not be until 1994 when the term entered the popular consciousness, being used extensively by NME, Melody Maker, Select, and Q magazine. The word subsequently entered the mainstream media. Its influence was recognised by an article in *The Guardian* in which the editors of the Oxford English Dictionary declared "Britpop" as the new word which best exemplified 1995. "Britpop" was added to the Oxford English Dictionary in 1997.

In April 1993, *Select* magazine helped spark the upswing in British pride by featuring Suede's lead singer Brett Anderson on the cover with a Union Jack in the background and the phrase "Yanks go home!" on the cover. The issue included features on Suede, The Auteurs, Denim, Saint Etienne and Pulp. In the following three years (1993 – 1995) other Britpop acts dominated the music weeklies - Mansun, Elastica, Echobelly, Sleeper, Supergrass, Primal Scream, The Auteurs, The Boo Radleys, Pulp, Cast (a band formed by John Power, former bassist for The La's), The Bluetones, Black Grape, Torrindale, Space and The Divine Comedy. Some of them were new, others such as the Boo Radleys and Dodgy already established acts who benefited from association with the movement.

After this, the first stirrings of recognition by the music press came in the form of what the NME had dubbed the New Wave of New Wave (or 'NWONW'), though this was initially applied to the more punk-derivative acts such as Elastica, S\*M\*A\*S\*H and These Animal Men. Though the latter two band quickly disappeared from the limelight altogether, the music press was initially hesitant to recognise what it regarded as lesser acts; in the first instance Oasis, Shed Seven and Whiteout, and continued to champion the more brash and punky groups. However, the release of new material by both The Charlatans and Inspiral Carpets that year (having returned to form following poorly-received "post-baggy" records) saw the more melodic acts gain prominence. Other baggy acts to slip back into mainstream acceptance during this period included Ocean Colour Scene and Shaun Ryder's post-Happy Mondays outfit Black Grape.

Fans of Britpop are divided over which album truly kick-started the movement. Oasis' breakthrough debut *Definitely Maybe* (1994), Blur's bombastic third album *Parklife* (1994) and Suede's self-titled debut *Suede* (1993) are all contenders. These albums defined the movement and paved the way for many other acts. Pulp's *His 'n' Hers* (1994) also coincided with this trio of landmark albums but they would not achieve true mainstream success until 1995's *Different Class*. Britpop hysteria then rapidly gained media and fan attention in Britain, Western Europe and some parts of the North America.

The movement was as much about British pride, media hype and imagery as it was about the particular style of music. Suede (known in America as "London Suede") was the first of the new crop of guitar-oriented bands to be completely embraced by the UK music media as Britain's answer to Seattle's grunge sound. Their self-titled first album was released in March 1993, and became the fastest-selling debut album in the history of the UK. This title was later claimed by Oasis with *Definitely Maybe*.

In 1995 the Britpop movement reached its zenith. The famous "Battle Of The Bands" found Blur and Oasis as prime contenders for the title "Kings of Britpop". Spurred on by the media, the "Battle" was headed by two groups - Oasis' brothers Noel and Liam Gallagher representing the North of England, and from Blur, Damon Albarn and Alex James representing the South. This "Battle" was epitomised when, after some back-handed marketing, Oasis' Single "Roll With It" and Blur's "Country House" were released in the same week. The event caught the public's imagination and gained mass media attention - even featuring on the BBC News. While this battle raged on Pulp took the number two spot with their most recognisable single "Common People" and Suede with their "Trash" and "Beautiful Ones".

In the end, Blur won the battle of the bands, selling 274,000 copies to Oasis' 216,000 - the songs charting at number one and number two respectively. However, in the long-run, Oasis' album (*What's the Story*) *Morning Glory* won the popular vote over Blur's *The Great Escape*, outselling it by a factor of 4 or more. In the UK, (*What's the Story*) *Morning Glory* spent a total of three years on the charts, selling over eighteen million copies and becoming the second best selling British album of all time. Oasis' second album is considered by many to be the definitive Britpop album. In Britain and Ireland it became popular for a time when asked "What's the story?" (lit. "How are you?"), to answer with "Morning glory".)

During this time the new electioneering saw the emergence of the young leader of the Labour party - Tony Blair. Blair represented the new face of the dreams and wishes of the British counterculture and many acts like Oasis and Blur admired him. Noel Gallagher also appeared on several official meetings and expressed his supports for Blair.

Along with Oasis, Blur, Pulp and Suede, 1995 saw critically and commercially acclaimed singles and albums released by other Britpop bands which, collectively, captured the essence of the attitude and the Cool Britannia movement. Such bands included Supergrass (I Should Coco), Cast (All Change) and Radiohead (The Bends). The "Cool Britannia" movement was also symbolised in by the outwardly happy, poppy sing-along summer anthems of such bands as Dodgy's "Staying Out for the Summer", Supergrass' "Alright", Sleeper's "Inbetween", The Boo Radleys' "Wake Up Boo" and

Echobelly's "Great Things". 1995 also saw The Verve release their second album, *A Northern Soul*. The album failed to make a commercial impact, despite strong critical acclaim and the band split. They would reform in time for their seminal 1997 release *Urban Hymns*.

The British media went so far as to brand the movement the "**Third British Invasion**", because of its massive popularity at the time and because acts represented particular musical influence or movement in their music, which led to more or less media-generated conflicts between the bands, as was the case with previous bands and movements.

Though the fallout from 1995 continued well into the summer of 1996, thanks in part to new releases from the likes of Ocean Colour Scene (*Moseley Shoals*), Suede (*Coming Up*) and Dodgy (*Free Peace Sweet*) and to a legendary, record-breaking two-night show at Knebworth Park from Oasis. The 1996 Brit Awards were a celebration of Britpop, with many of the nominees acknowledged as "britpop bands". The ceremony was also fuelled by the rivalry between Blur and Oasis. When Oasis defeated Blur to win the "Best British Album" Award, the Gallagher brothers taunted Blur by singing a drunken rendition of Blur's biggest hit "Parklife", with Liam Gallagher changing the lyrics to "Shite-Life". Oasis also won the "Best British Album" award for (*What's the Story*) *Morning Glory* and the "Best Video Award" for "Wonderwall". All three awards had been won by Blur the previous year. Meanwhile, Paul Weller won the "Best Male Artist" award (for the second year running) and Supergrass were acknowledged the "Best Breakthrough Act", which Oasis had won the year before. The ceremony was packed with Britpop artists, but it was Pulp frontman Jarvis Cocker who stole the show by invading the stage during a performance by Michael Jackson and flashing his rear. Cocker was arrested but released without charge.

Although the majority of the bands associated with Britpop were English, there were exceptions. Super Furry Animals, Catatonia, Gorky's Zygotic Mynci, Manic Street Preachers and Stereophonics were Welsh. Others like The Gyres, The Supernaturals, Travis and Belle and Sebastian were Scottish. This even led native media to call the rise of Welsh Bands "**Cool Cymru**" and "**Cool Caledonia**" - a pun to "Cool Britannia". In spite of accusations of Southeast bias (typified by Blur, Supergrass and the much-lamented *Menswe@r*), the movement and Britpop hysteria engulfed not just one province or city; it encompassed the entire region and established itself as a hegemonic and definitive British movement, both musically and spiritually.

The movement also exercised a brief period of cultural hegemony, with the 1996 film *Trainspotting* and its Britpop-centric soundtrack (featuring Blur, Elastica, Pulp and Sleeper), through to Ocean Colour Scene's music being used on Chris Evans' TFI Friday and the film *Lock, Stock and Two Smoking Barrels*. Some considered TFI Friday to be part of the televisual arm of Britpop. Other examples are *Shooting Stars* (which utilised large "Mod" logos as part of the set and featured many prominent Britpop musicians as guests), *The Girly Show*, *The Word*, *The Fast Show* and *Father Ted*.

## **(2000s) Legacy**

Aside from the movement's contribution to culture in general during and after the period, early line-ups of current bands in the ascendant such as The Libertines, Kaiser Chiefs (as Parva) and Hard-Fi (as Contempo), all formed during the late 1990s and early 2000s. This can be seen as a continuation of the evolution of new bands and scenes from old, and the rapid turnover of 'genres', in the British music scene. Other acts like Coldplay, Travis, Athlete, The Strokes[citation needed], Muse and Kasabian showed Britpop influences in their work.

# Broadside

Printed lyrics of popular songs were extremely popular from the 16th century until the early 20th century. They were commonly known as **broadsides** or **broadsheets**. Over time, the name came to refer to any printed matter confined to one side of a single sheet of paper, such as handbills, advertisements, posters, etc.

Broadsides were generally printed on one side of a piece of paper, and included only the lyrics and a note designating the tune. Since folk tunes were used and reused, people generally only needed to learn the words. They were written by hand before the invention of the printing press, and only grew extremely popular after they could be cheaply reproduced. Broadside ballads were sold by travelling chapmen and peddlers, at shops and stalls at markets, and were pasted on walls or other locations before being learned; after the words had been committed to memory, the broadside was replaced or pasted by another.

One of the first known broadsides was *A Lytel Geste of Robyne Hood*, printed in 1506. Their popularity grew quickly—one merchant sold 190 ballads in 1520, a remarkable sum, which may be evidence of relatively high levels of literacy at the time. After 1556, printers were required to register with the Stationers' Company in London, and had to pay four pence to register each ballad beginning in 1557 and continuing to 1709. As well as being popular in the UK, they became popular in western Europe and the United States.

Broadsides were often folded into pamphlets called chapbooks. The collection of songs and ballads in chapbooks were known as *garlands*.

Although broadsides enjoyed a brief resurgence of popularity in the late 19th century, this proved shortlived. By the beginning of the 20th century, broadsides were declining in popularity due to the influx of newspapers, and the tradition soon died out.

It is not uncommon in the 21st century, however, to find broadsides published at local cultural events, in particular poetry readings or art show openings. In this case the broadsides commemorate the event with samples of the art in question.

For more information and samples of more than 80 broadside ballads see 'Broadside Ballads' by Lucie Skeaping, published by Faber Music 2005

# Brokenbeat

**Brokenbeat** is an [electronic music genre](#) first appearing at the beginning of the 21st century. Appearing in the western parts of London, the genre is also referred to as **West London**. Regular nights which play this genre of music include Co-op at Plastic People in Shoreditch and Inspiration Information at Notting Hill Arts Club. Elsewhere, DJs from the Kyoto Jazz Massive regularly play at The Room in Tokyo. Distribution outlet Goya Music played a massive hand in establishing the early UK sound, supporting early labels such as People, Bitá Sweet, Mainsqueeze and numerous others.

Artists in this area mostly have a [drum and bass](#), [house](#), [hip hop](#), [techno](#) or [acid jazz](#) background. As a result of these various influences, brokenbeat is sometimes considered more sophisticated than regular dance music, on the scale of [jazz](#), [soul](#) or [funk](#). It can be characterized by syncopated rhythm typically in [4/4 metre](#), with staggered or punctuated snare beats and/or hand claps.

Early brokenbeat music first appeared on the drum and bass label Reinforced (Clear Vision by G-Force and Seiji), at a time when musicians tried achieving a different sound in that genre. The transition was to a more abstract form of drum and bass. Many artists that started releasing through 4 Hero's Reinforced label are now considered as the pioneers of brokenbeat (a landmark artist for the label being Sonar Circle aka Domu). Meanwhile in Detroit, established [techno](#) artists like Carl Craig and Stacey Pullen experimented with the music they were making, trying to add [jazz](#) elements and breaks to their sound. As the music is still based on classic Detroit techno and usually has a harder sound, it is sometimes referred to as *broken techno*. This eclectic mixture was picked up by the Detroit and jazz affiliated U.K. techno producers Kirk Degiorgio or As One and Ian O'Brien, who tried to form it into a more soulful variation which further influenced the development of the brokenbeat genre.

Popular London based names are Bugz in the Attic, Seiji, Kaidi Tatham, Domu, Afronaught, IG Culture, Stephane and Alex Attias, New Zealand born Mark de Clive-Lowe, or 4 Hero (Deigo and Marc Mac). Elsewhere in the UK, Brighton's Maddslinky (Zed Bias), who has a Garage background, has recently moved towards a more Brokenbeat sound. In the U.S. prominent artists are Detroit based Titonton Duvanté, John Arnold, Jeremy Ellis aka Ayro, and Reclouse (now based in New Zealand), Harlem based Spymusic, and Philadelphia based King Britt. In Europe, many musicians that are considered doing brokenbeats have their roots in late-nineties downtempo and electronic jazz (or nu-jazz), which makes it difficult to distinguish the usually harder brokenbeat sound. Across Europe, prominent Dutch artists include Dogdaze, Rednose Distrikt or the Flowriders, Hipster Wonkaz, (France), Forss (Sweden), Nuspirit Helsinki (Finland), Jazzanova, Trüby Trio, or artists on the Sonar Kollektiv, Tokyo Dawn or Compost record labels (Germany). In Japan, Jazztronik, Kyoto Jazz Massive, DJ Mitsu the Beats, or Hajime Yoshizawa are also prominent.

## Brothel creeper

**Creepers** or **brothel creepers** are a type of shoe that gained popularity in the 1950s with the rise of [rockabilly](#), and the teddy boy youth culture in the United States and the United Kingdom. They are considered a classic item of 1950's fashion, along with such trends as drainpipe trousers, draped jackets, shoe-string ties, quiff and pompadour haircuts, and velvet or electric blue clothes.

It was originally invented by a company called George Cox and initially marketed under the Hamilton brand name which derived from George (Hamilton) Cox juniors' middle name. The Brothel Creeper was a big hit throughout the 1950s and 1960s and finally went into decline at the end of the decade. It was Malcolm McLaren who gave the shoe a new lease of life in the early 1970s when he began selling the shoes from his Let it Rock shop in London's Kings Road. The shoes were snapped-up by his Teddy Boy clientele and when Malcolm and his partner Vivienne Westwood decided to change the shop and its stock into a more Roker-oriented fashion, the Brothel Creeper still proved to be popular amongst the customers. Finally it was adopted by the Punk Rockers as part of their Post Modernist attire.

Though creepers are no longer popular in the mainstream, and today are often dismissed as being "campy" or mere "retro nostalgia," they are still often sported by members of the rockabilly, [psychobilly](#), and, to a lesser extent, the [punk](#) subculture.

# Bubblegum pop

**Bubblegum pop (bubblegum rock, bubblegum music)** is a genre of [popular music](#) and [rock and roll](#). Some of the defining characteristics of bubblegum pop include catchy melodies, simple three-chord structures, simple harmonies, and repetitive riffs or "hooks." Bubblegum pop is also characterized by its lightweight lyrics, often surrounding themes of romance and courtship.

## Origins

Essentially, Bubblegum pop evolved from [rock and roll](#) and the other popular American musical forms that preceded and accompanied it, such as [rhythm and blues](#) and doo-wop. Bubblegum rock is also reminiscent of pre-rock novelty songs such as "Abba Dabba Honeymoon" and "The Hut Sut Song," which hit the charts in the late 1940s, and hipster foolishness like Slim Gaillard's "Cement Mixer (Puti Puti)".

Seminal rock and roll numbers, such as Little Richard's "Tutti Frutti" with its nonsense rhyming couplets (replacing the original vulgar lyrics), also influenced what would come later. This hybrid of R&B, garage rock, novelty songs, and nursery rhymes later surfaced in the post-Beatles era in songs like "Wooly Bully" (by Sam the Sham & the Pharaohs, 1965), which emphasized a hard-driving Tex-Mex beat and absurd lyrics.

Critics of bubblegum pop maintain that the music is void of artistic merit and that the performers are "groomed" by record labels to depend on physical appearance as opposed to musical or artistic talent. In these cases, terms such as *cheesy pop* or simply *cheese* are often used to refer to this music pejoratively. Some critics also maintain that bubblegum pop is not created out of a desire to be artistically creative, but simply to produce something that sells - a process that results in what has become termed *manufactured pop*, also used in the pejorative.

Nonetheless, it has proven a viable commercial enterprise, with record sales continuing to thrive and the consumers of the genre - primarily young, often pre-teen audiences - assuring a steady market for the evergrowing industry. Individual singles, however, often only remain on music charts for a brief period of time - thus is the transitional nature of Bubblegum pop.

## 1960s and 1970s

The first wave of "pure" bubblegum came with Jerry Kasenetz and Jeff Katz - music producers who formed Super K Productions and gave the world "A Little Bit of Soul" by The Music Explosion in 1966. However, the song was closer to R&B garage band music, and missing the element of nursery rhyme/nonsense lyrics that would be introduced by staff songwriters Joey Levine and Elliot Chiprut. About a year later, they released "Yummy Yummy Yummy" a #4 hit in June, 1968 for The Ohio Express. Although The Ohio Express was a real, touring garage band in the Midwest, under contract to Kasenetz and Katz, their hit singles were recorded by session musicians fronted by singer-songwriter Joey Levine. The band members were handicapped attempting to reproduce Levine's distinctive nasal whine for their live performances.

Other hits from Kasenetz and Katz followed, including "Indian Giver" and "Simon Says" by the 1910 Fruitgum Company, "Green Tambourine" by The Lemon Pipers and one-offs such as "Quick Joey Small" by The Kasenetz-Katz Singing Orchestral Circus, another front for the same batch of Levine-fronted studio players.

Others joined in, notably music publisher Don Kirshner and writer/producer Jeff Barry with the Archies, whose "Sugar Sugar" (written by Barry with Andy Kim), perhaps the purest distillation of bubblegum ever, was the best-selling single of 1969, and was voiced by Ron Dante and Toni Wine. Many critics describe The Monkees, with their light and cheerful rock and roll, as bubblegum, due to their producer-driven career and reliance on outside songwriters and session players. Others claim The Monkees were not pure bubblegum until 1970's "Half-Monkees" LP Changes, produced by Barry. Cartoon producers Hanna-Barbera created The Banana Splits, costumed actors miming to pre-recorded tracks for a Saturday morning cartoon show. Other animated acts included Josie and The Pussycats, The Hardy Boys (produced by Filmation), The Groovy Ghoulies and The Sugar Bears, and (in the UK) The Wombles.

The initial era of bubblegum carried on for a few more years, as LPs were released by David Cassidy, The Jackson 5, The Osmonds, Leif Garrett, The DeFranco Family and many others.

Many British acts of the first glam rock era (approximately 1971-1975) had bubblegum influences. These included Gary Glitter, Alvin Stardust, T. Rex, and such Nicky Chinn/Michael Chapman-produced acts as Sweet, Mud, and Suzi Quatro. These British acts had great success in the UK, Asia, and Europe, charting many singles. They were less successful in the US, however, due to the competition from other foreign acts such as ABBA and Olivia Newton-John, who provided a more "serious" approach to music. The last big act of the 1970s which featured obvious bubblegum elements was the Bay City Rollers, charting hits through the end of the decade.

Punk rock trailblazers The Ramones did not produce bubblegum music, but their [punk rock](#) songs were highly influenced by bubblegum pop's upbeat tempos, simple chord structures and nonsense lyrics. Joey Ramone named himself after bubblegum kingpin Joey Levine. Ramone once described his group as a "nouvea bubblegum band with teeth," and they recorded the 1910 Fruitgum Company's "Indian Giver.

## 1980s

The 1980s saw few bubblegum-esque acts in the US and UK. In late 1980's Britain, the charts were dominated by Stock Aitken Waterman produced acts such as Kylie Minogue. These were somewhere between synthesized dance music and bubblegum pop. In the U.S., the birth of the boy band came about with the successes of New Edition and New Kids on the Block. The two reigning teen queens of the decade were undoubtedly Tiffany and Debbie Gibson who saw their popularity skyrocket after touring malls, a prime outlet for their teenaged audience. In Latin America, bubblegum acts such as Menudo, Los Chicos, Las Chéris, and Los Chamos were hugely popular. In 1985, Magneto, a group that would later gain fame in the 1990s, was formed in Mexico.

## 1990s

In the early 1990s, bubblegum remained scarce, as first [grunge music](#) and then [gangsta rap](#) dominated the pop charts. In the late 1990s, bubblegum was forced back into the spotlight through the sensationalism and mass hysteria brought about by the popularity of British girl group, The Spice Girls, who revolutionized the popular music industry by operating as more than just a girl band. The Spice Girls hit the world in the form of chocolate bars, dolls, magazines, a feature length movie and even personal deodorising spray. This mass fusion of consumerism and popular music transformed the ideology of bubblegum pop as a business, rather than simply selling records. Following the Spice Girls, a series of boy bands such as the Backstreet Boys, N'SYNC, 98 Degrees, Boyzone, Westlife, Take That, and O-Town made their way onto the walls of teenagers around the world. Soon after the boy bands came the era of the pop princess, including Britney Spears, Christina Aguilera, Mandy Moore, and Jessica Simpson. The Scandinavian group Aqua also had massive "bubblegum" hits in Europe, but today are mostly remembered in the U.S. as a one-hit wonder for their controversial song "Barbie Girl". In addition to this, several of the Latin American bubblegum groups attempted comebacks in the late 1990s, with Menudo's El Reencuentro being the most successful among them.

## 2000s

Bubblegum pop then appeared to be declining at the turn of the millennium, as audiences tired of the many boy bands and pop princesses but suddenly started a new rebirth as network executives at Disney molded their female stars such as Hilary Duff, Raven-Symone, Hayden Panettiere, and Lindsay Lohan into pop princesses. Pop punkers then entered the scene, with the hardcore punk sound softened for the benefit of the teenage crowd. Acts such as Simple Plan and Good Charlotte became heartthrobs to teenage girls, but they faced stiff competition from singers such as Ryan Cabrera, Aaron Carter, and Jesse McCartney. Along with pop-punk scene, urban music started to have a bubblegum pop feel to it. In late 2004, 2005, and some parts of 2006 artists such as Frankie J, Usher, Pretty Ricky, Omarion, Chris Brown, T-Pain, and Ne-Yo started to become increasingly popular, matching even the popularity of the "Disney" artists who were prominent at that time.

When American Idol debuted in 2002, a slew of bubble-gum stars were created by the viewing (and voting) public. Kelly Clarkson, Clay Aiken, and Carrie Underwood are among the pop-influenced *Idol* contestants who have hit it big with their target audience.

Current bubblegum artists such as the dance-troupe-turned-girl-group The Pussycat Dolls, Ashlee Simpson, and Rihanna have topped the charts in 2005 and in 2006, many new bubblegum pop artists such as Aly & AJ and The Veronicas had started to appear on the charts as well. Hope Partlow, on the other hand, had decided to go on to the more singer-songwriter genre, but she is still hanging in the teen pop continuum.

In 2005, Pop and R&B artist Mariah Carey re-emerged with her ninth album *The Emancipation of Mimi* which combined her old R&B style with bubblegum pop and soul.

## Buddhist chant

A **Buddhist chant** is a form of musical verse or incantation, in some ways analogous to Hindu or Christian religious recitations. They exist in just about every part of the Buddhist world, from the Wats in Thailand to the Lamaist temples of India (re: Tibetan Government in Exile). Almost every Buddhist school has some tradition of chanting associated with it, regardless of being Theravada or Mahayana.

## Chanting

In Buddhism, chanting is the traditional means of preparing the mind for [Meditation](#); especially as part of Formal Practice (in a monastic context). It is also used as an invocative ritual in order to set one's mind on a deity, Tantric ceremony, mandala, or particular concept one wishes to further in themselves. In particular, the chant Om Mani Padme Hum is very popular around the world as both a praise of peace and the primary mantra of Avalokitesvara. Other popular chants include those of Tara, Bhaisajyaguru, and Amitabha.

## Adherents

Chanting plays a more substantial role in Mahayana and Vajrayana Buddhism than in Theravada, owing largely to the expansive and religious nature of the former pair. This does not mean chanting does not occur in Theravada practise. Rather most chanting concerns the Suttas (Skt: Sutras), while the Mahayana schools include sutras, prayers, and Tantric invocations, the latter two of which are not common (if present at all) amongst Theravadins.

There are also a number of [New Age](#) and experimental schools related to Buddhist thought which practise chanting, some with understanding of the words, others merely based on repetition. A large number of these schools tend to be syncretic and incorporate Hindu japa and other such traditions alongside the Buddhist influences.

While not strictly a variation of Buddhist chanting in itself, Japanese Shigin (i) is a form of chanted poetry that reflects several principles of Zen Buddhism. It is sung in the seiza position, and participants are encouraged to sing from the gut - the Zen locus of power. Shigin and related practices are often sung at Buddhist ceremonies and quasi-religious gatherings in Japan.

# Buddhist music

**Buddhist music** is [music](#) created for or inspired by Buddhism and part of Buddhist art.

## Honkyoku

Honkyoku are the pieces of shakuhachiyoku for enlightenment and alms as early as the 13th century. In the 18th century, a komuso named Kinko Kurosawa of the Fuke sect of Zen Buddhism was commissioned to travel throughout Japan and collect these musical pieces. The results of several years of travel and compilation were thirty-six pieces known as the Kinko-Ryu Honkyoku.

# Buddhist chant

[Buddhist chant](#) is [chant](#) used in or inspired by Buddhism, including many genres in many cultures:

- Repetition of the name of Amitabha in Pure Land Buddhism.
- Shomyo in Japanese Tendai and Shingon Buddhism.
- Throat singing in Tibetan Buddhist chant

Tibetan Buddhism is the most widespread religion in Tibet. Musical chanting, most often in Tibetan or Sanskrit, is an integral part of the religion. These chants are complex, often recitations of sacred texts or in celebration of various festivals. Yang chanting, performed without metrical timing, is accompanied by resonant drums and low, sustained syllables. Other styles include those unique to Tantric Buddhism, the classical, popular Gelugpa school, the romantic Nyingmapa and Sakyapa and Kagyupa.

# Shomyo

Shomyo (ś) is a style of Japanese [Buddhist chant](#); mainly in the Tendai and Shingon sects. There are two styles: ryokyoku and rikkyoku, described as difficult and easy to remember, respectively.

## **Buddhist music in the US**

United States composer and practicing Buddhist Philip Glass claims his religion does not influence his music directly: "The real impact of Buddhist practice affects how you live your life on a daily basis, not how you do your art." (Kostelanetz, 1992)

# Bulerias

A **bulerias** is a fast [flamenco](#) rhythm in 12 beats with emphasis in two general forms as follows:

1 2 [3] 4 5 [6] 7 [8] 9 [10] 11 [12]  
or

1 2 [3] 4 5 6 [7] [8] 9 [10] 11 [12]

It may also be broken down into a measure of 6/8 followed by a measure of 3/4 counted as such:

[1] 2 3 [4] 5 6 [1] a [2] a [3] a  
[12] 1 2 [3] 4 5 [6] 7 [8] 9 [10] 11

When performed, the buleria usually starts on beat twelve of the compas, so the accented beat is heard first.

It is played at about 240 beats per minute, most commonly in an A-phrygian mode, with a sharpened third to make A major the root chord. A typical rasgueado (a strumming pattern that sets the rhythm) involves only the A and B-flat chords as follows:

A A [Bb] - - [Bb] A [A] A [A] - [A]

It originated from Jerez, originally as a fast, upbeat ending to soleares or [alegrías](#) (which share the same rhythm and are still often ended this way). It is among the most popular and dramatic of the flamenco forms. The name **bulerias** comes from the Spanish word **burlar**, meaning "to mock".

The style and rhythms are similar to katak dancing of northern India. There were several migrations from this area in the 9th-13th centuries and Hindu dancers performed in festivals in the ancient city of Gadir (now Cadiz), established by the Phoenicians.

# Burgundian School

The **Burgundian School** is a term used to denote a group of composers active in the 15th century in what is now eastern France, Belgium, and the Netherlands, centered on the court of the Dukes of Burgundy. The main names associated with this school are Guillaume Dufay, Gilles Binchois, and Antoine Busnois. The Burgundian School was the first phase of activity of the Franco-Flemish School, the central musical practice of the [Renaissance](#) in Europe.

## Background

In late [Medieval](#) and early [Renaissance](#) Europe, cultural centers tended to move from one place to another due to changing political stability and the presence of either the spiritual or temporal power, for instance the Pope, Anti-pope or the Holy Roman Emperor. In the 14th century, the main centers of musical activity were northern France, Avignon, and Italy, as represented by Guillaume de Machaut and the *ars nova*, the *ars subtilior*, and Landini respectively; Avignon had a brief but important cultural flowering because it was the location of the Papacy during the Western Schism. When France was ravaged by the Hundred Years' War (1337 – 1453), the cultural center migrated farther east, to towns in Burgundy and the Low Countries, known then collectively as the Netherlands.

During the reign of the House of Valois, Burgundy was the most powerful and stable political division in western Europe, and added, a bit at a time, Flanders, Brabant, Holland, Luxembourg, Alsace and Lorraine. Especially during the reigns of Philip the Good (1419 – 1467) and Charles the Bold (1467 – 1477), this entire area, loosely known as Burgundy, was a center of musical creativity. The term "Burgundian School", though widely used by music historians, is geographically misleading, since most of the musical activity did not take place in what is modern-day Burgundy, which has its capital in Dijon (even though the Dukes of Burgundy maintained an administrative center there). The main centers of music-making were Brussels, Bruges, Lille, and Arras, as well as smaller towns in that same general area.

Musicians from the region came to Burgundy to study and further their own careers as the reputation of the area spread. The Burgundian rulers were not merely patrons of the arts, but took an active part: Charles the Bold himself played the [harp](#), and composed [chansons](#) and [motets](#) (although none have survived with reliable attribution). The worldly dukes also encouraged the composition of secular music to a degree seen only rarely before in European music history, a characteristic which itself defines the Burgundian epoch as a Renaissance phenomenon.

This migration of musical culture east from Paris to Burgundy also corresponds with the conventional (and by no means universally accepted) division of music history into [Medieval](#) and [Renaissance](#); while Guillaume de Machaut is often considered to be one of the last Medieval composers, Dufay is often considered to be the first significant Renaissance composer.

Charles the Bold was killed in 1477 in the Battle of Nancy, during one of his attempts to add territory to his empire. After his death, music continued to flourish in the cities and towns of Burgundy, but by the first decade of the 16th century the region was absorbed into the holdings of the Spanish Habsburgs, who were also patrons of music.

## Composers

The history of Burgundian music began with the organization of the chapel in 1384 by Philip the Bold; by the time of his death twenty years later, it rivaled the famous establishment at Avignon in splendor. Names associated with this early phase of Burgundian music include Johannes Tapissier and Nicolas Grenon, who carried the tradition across to the next phase of the chapel, when it was reorganized in 1415. Other early composers there were Hugo and Arnold de Lantins, both of whom Dufay later met in Italy.

Of all the names associated with the Burgundian School, the most famous was Guillaume Dufay, who was probably the most famous composer in Europe in the 15th century. He wrote music in many of the forms which were current, music which was melodic, singable and memorable (more than half of his sacred music consists of simple harmonizations of [plainsong](#), for example). Contemporary with Dufay were composers such as Gilles Binchois, who was at the Burgundian court between approximately 1430 and 1460, and Hayne van Ghizeghem, a composer, singer and soldier who may have been killed in the last military campaign of Charles the Bold.

After the death of Dufay in 1474, the most prominent Burgundian musician was Antoine Busnois, who was also a prolific composer of chansons, and who possibly wrote the famous L'homme armé tune.

## Musical style and forms

Burgundian composers favored secular forms, at least while they worked in Burgundian lands; much sacred music survives, especially from those composers who spent time in Italy, for example in the papal choir. The most prominent secular forms used by the Burgundians were the four *formes fixes* (rondeau, [ballade](#), [virelai](#), and *bergerette*), all generically known as [chansons](#). Of the four, the rondeau was by far the most popular; at any rate more rondeaux have survived than any other form. Most of the rondeaux were in three voices, and in French, though there are a few in other languages. In most of the rondeaux, the uppermost voice (the "superius") was texted, and the other voices were most likely played by instruments. The *bergerette* was developed by the Burgundians themselves; it was like a *virelai*, but shorter, having only one stanza.

Most of the composers also wrote sacred music in Latin; this was to remain true for the next several generations. They wrote both [masses](#) and [motets](#), as well as cycles of Magnificats. During the period, the mass transformed from a group of individual sections written by different composers, often using a head-motif technique, to unified cycles based on a *cantus firmus*. Dufay, Binchois, Busnois, Reginald Liebert and others all wrote cyclic masses. One of the favorite tunes used as a *cantus firmus* was the renowned *l'homme armé*, which was set not only by the Burgundians but by composers of subsequent centuries; indeed it was commonest tune used as a basis for mass composition in all of music history.

During the period the motet transformed from the isorhythmic model of the 14th century to the smoothly polyphonic, sectional composition seen in the work of the later Burgundians such as Busnois. In the motets, as well as the masses and other sacred music, a common musical technique employed was *fauxbourdon*, a harmonization of an existing chant in parallel 6-3 chords, occasionally ornamented to prevent monotony. Composition using *fauxbourdon* allowed sung text to be clearly understood, but yet avoided the plainness of simple chant.

Instrumental music was also cultivated at the Burgundian courts, often for dancing. A peculiarity of the Burgundian instrumental style is that the dukes preferred music for loud instruments ([trumpets](#), [tambourins](#), shawms, [bagpipes](#)) and more of this survives than for other current instruments such as the lute or the harp. In contemporary practice, the loud instruments would usually play from an elevated location, such as a balcony, while the other instruments would play closer to the dancers.

Instrumental forms included the *basse danse*, or *bassadanza*, which was a ceremonial dance of a rather dignified character, and relatively slow tempo. Typically it was in a duple meter subdivided into threes (in modern notation, 6/8), and often the dance would be immediately followed by a quick dance, the *tordion* or *pas de Brabant*.

The Burgundian School was the first generation of what is sometimes known as the Netherlands School, several generations of composers spanning 150 years who composed in the polyphonic style associated with the mainstream of Renaissance practice. Later generations, which were no longer specifically associated with either the court or the region Burgundy but were interlinked by adjacent geography and by common musical practice, included such names as Johannes Ockeghem, Jacob Obrecht, Josquin des Prez, Adrian Willaert and Orlandus Lassus.

## Manuscript sources

There are approximately 65 manuscript sources which contain music by Burgundian composers. The most prominent of these include:

- Canonici Manuscript (containing music from around 1400 to 1440). This manuscript is at the Bodleian Library in Oxford, England; it is named after a previous owner, Matteo Luigi Canonici, an 18th century Venetian Jesuit. It has 380 compositions in all, including works by 60 composers. Both sacred and secular music are well-represented in this collection.
- Laborde Chansonier (containing music mainly composed during the reign of Charles the Bold, 1467–1477). It is named after the Marquis de Laborde, and is presently at the Library of Congress in Washington, DC. It has 106 pieces of music in all.
- Mellon Chansonier (containing music from approximately 1440 to 1477). It is named after Paul Mellon, who gave it to Yale University; currently it is at the library there. It has 57 compositions, and includes some non-Burgundian music as well (for example, works by contemporary English and Italian composers)
- Dijon Chansonier (containing music from approximately 1470 to 1475). Some of the music is by composers not normally associated with the Burgundian school, such as Ockeghem, Loyset Compère, and Johannes Tinctoris. It is at the public library in Dijon, and contains 161 pieces of music in all.

## Burgundian Composers

Johannes Tapissier (c.1370–c.1410)  
Guillaume Dufay (?1397–1474)  
Hugo de Lantins (fl. c.1430)  
Arnold de Lantins (fl. c.1430)  
Reginald Liebert (fl. c.1425–1435)  
Gilles Binchois (c.1400–1460)  
Johannes Brassart (c.1400–1455)  
Hayne van Ghizeghem (c.1445–c.1480)  
Pierre Fontaine (d. c.1450)  
Nicolas Grenon (c. 1380–1456)  
Gilles Joye (1424/1425–1483)  
Robert Morton (c.1430–c.1479)  
Antoine Busnois (c.1430–1492)  
Guillaume le Rouge (fl. 1450–1465)  
Adrien Basin (fl.1457–1476)  
Jacobus Vide (fl.1405–1433)

## Byzantine music

**Byzantine music** is the music of the Byzantine Empire and by extension the music of its culture(s) as they continued in the Orthodox Christian parts of the population after the fall of the empire to the rule of the Ottoman Empire.

## The extent of Byzantine music culture vs. liturgical chant proper

The term **Byzantine music** is commonly associated with what should more correctly be termed the [medieval](#) sacred [chant](#) of Christian Churches following the Orthodox rite. The identification of "Byzantine music" with "eastern Christian liturgical chant" is a misconception due to historical cultural reasons. Its main cause is the leading role of the Church as bearer of learning and official culture in the Eastern Roman Empire (Byzantium), a phenomenon that was not always that extreme but that was exacerbated towards the end of the empire's reign (14th century onwards) as great secular scholars migrated away from a declining Constantinople to rising western cities, bringing with them much of the learning that would spur the development of the European [Renaissance](#). The shrinking of Greek-speaking official culture around a church nucleus was even more accentuated by political force when the official culture of the court changed after the capture of Constantinople by the Ottoman Empire on May 29, 1453.

Today, far too few sources and studies exist about Byzantine music on the whole. It is beyond doubt that Byzantine music included a rich tradition of instrumental court music and dance. Any other picture would be both incongruous with the historically and archaeologically documented opulence of the Eastern Roman Empire. There survive a few but explicit accounts of secular music. A characteristic example are the accounts of pneumatic organs, whose construction was most advanced in the eastern empire prior to their development in the west after the [Renaissance](#). To a certain degree we may look for remnants of Byzantine or early (Greek-speaking, Orthodox Christian) near eastern music in the music of the Ottoman Court. Examples such as that of the eminent composer and theorist Prince Kantemir of Romania learning music from the Greek musician Angelos indicate the continuing participation of Greek-speaking people in court culture. However the sources are too scarce to permit any well-founded stipulations about what cultural musical changes took place when and under which influences during the long histories of the Byzantine and the Ottoman empires. Hypotheses that Turkish (Ottoman) music was influenced by Byzantine music, or the other way around, remain on the level of more or less consciously nationalistic or romantically motivated personal views, and are far too simplistic as to be of any value considering the breadth and complexity of cultures historically involved in these geographic regions. It seems more logical to consider that these influences were probably more manifold than it is possible to reconstruct historically, considering the breadth and length of duration of these empires and the great number of ethnicities and major or minor cultures that they encompassed or came in touch with at each stage of their development (Egyptian, Persian, Jewish, Slavic, Central Asian including Avar, Moghul, Tatar and Turkic, Roman, Greek, Arabic, other Semitic and northern African, Northwestern and Central European including Franc, Gothic, Vandal, Nordic/Viking, last but importantly not least south central Asian Gypsy, etc. etc.). The rest of this article confines itself to a discussion of the musical tradition of Greek Orthodox liturgical chant, and is reproduced from Dr. Conomos' text as cited at the end of the article.

## Origins and Early Christian Period

The tradition of eastern liturgical chant, encompassing the Greek-speaking world, developed in the Byzantine Empire from the establishment of its capital, Constantinople, in 330 until its fall in 1453. It is undeniably of composite origin, drawing on the artistic and technical productions of the classical age, on Jewish music, and inspired by the monophonic vocal music that evolved in the early Christian cities of Alexandria, Antioch and Ephesus.

Byzantine chant manuscripts date from the 9th century, while lectionaries of biblical readings in Ekphonic Notation (a primitive graphic system designed to indicate the manner of reciting lessons from Scripture) begin about a century earlier and continue in use until the 12th or 13th century. Our knowledge of the older period is derived from Church service books *Typika*, patristic writings and medieval histories. Scattered examples of hymn texts from the early centuries of Greek Christianity still exist. Some of these employ the metrical schemes of classical Greek poetry; but the change of pronunciation had rendered those meters largely meaningless, and, except when classical forms were imitated, Byzantine hymns of the following centuries are prose-poetry, unrhymed verses of irregular length and accentual patterns.

The common term for a short hymn of one stanza, or one of a series of stanzas, is troparion (this may carry the further connotation of a hymn interpolated between psalm verses). A famous example, whose existence is attested as early as the 4th century, is the Easter Vespers hymn, *Phos Hilaron* ("Gladsome Light"); another, *O Monogenes Yios* ("Only Begotten Son"), ascribed to the emperor Justinian I (527-565), figures in the introductory portion of the Divine Liturgy. Perhaps the earliest set of troparia of known authorship are those of the monk Auxentios (first half of the 5th century), attested in his biography but not preserved in any later Byzantine order of service.

## Medieval Period

Two concepts must be understood to appreciate fully the function of music in Byzantine worship. The first, which retained currency in Greek theological and mystical speculation until the dissolution of the empire, was the belief in the angelic transmission of sacred chant: the assumption that the early Church united men in the prayer of the angelic choirs. This notion is certainly older than the Apocalypse account (Revelations 4:8-11), for the musical function of angels as conceived in the Old Testament is brought out dearly by Isaiah (6:1-4) and Ezekiel (3:12). Most significant in the fact, outlined in Exodus 25, that the pattern for the earthly worship of Israel was derived from heaven. The allusion is perpetuated in the writings of the early Fathers, such as Clement of Rome, Justin, Ignatius of Antioch, Athenagoras of Athens and Pseudo-Dionysius the Areopagite. It receives acknowledgement later in the liturgical treatises of Nicolas Kavalas and Symeon of Thessaloniki (Patrologia Graeca, CL, 368-492 and CLV, 536-699, respectively).

The effect that this concept had on church music was threefold: first, it bred a highly conservative attitude to musical composition; secondly, it stabilized the melodic tradition of certain hymns; and thirdly, it continued, for a time, the anonymity of the composer. For if a chant is of heavenly origin, then the acknowledgement received by man in transmitting it to posterity ought to be minimal. This is especially true when he deals with hymns which were known to have been first sung by angelic choirs - such as the Amen, Alleluia, Trisagion, Sanctus and Doxology. Consequently, until Palaeologan times, it was inconceivable for a composer to place his name beside a notated text in the manuscripts.

Ideas of originality and free invention similar to those seen in later music probably never existed in early Byzantine times. The very notion of using traditional formulas (or melody-types) as a compositional technique shows an archaic concept in liturgical chant, and is quite the opposite of free, original creation. It seems evident that the chants of the Byzantine repertory found in musical manuscripts from the tenth century to the time of the Fourth Crusade (1204-1261), represent the final and only surviving stage of an evolution, the beginnings of which go back at least to the sixth century and possibly even to the chant of the Synagogue. What exact changes took place in the music during the formative stage is difficult to say; but certain chants in use even today exhibit characteristics which may throw light on the subject. These include recitation formulas, melody-types, and standard phrases that are clearly evident in the folk music and other traditional music of various cultures of the East, including the music of the Jews.

The second, less permanent, concept was that of *koinonia* or "communion." This was less permanent because, after the fourth century, when it was analyzed and integrated into a theological system, the bond and "oneness" that united the clergy and the faithful in liturgical worship was less potent. It is, however, one of the key ideas for understanding a number of realities for which we now have different names. With regard to musical performance, this concept of *koinonia* may be applied to the primitive use of the word choros. It referred, not to a separate group within the congregation entrusted with musical responsibilities, but to the congregation as a whole. St. Ignatius wrote to the Church in Ephesus in the following way:

*"You must every man of you join in a choir so that being harmonious and in concord and taking the keynote of God in unison, you may sing with one voice"*

*through Jesus Christ to the Father, so that He may hear you and through your good deeds recognize that you are parts of His Son."*

A marked feature of liturgical ceremony was the active part taken by the people in its performance, particularly in the recitation or chanting of hymns, responses and psalms. The terms *choros*, *koinonia* and *ekklesia* were used synonymously in the early Byzantine Church. In [Psalms](#) 149 and 150, the Septuagint translated the Hebrew word *machol* (dance) by the Greek word *choros*. As a result, the early Church borrowed this word from classical antiquity as a designation for the congregation, at worship and in song in heaven and on earth both. Before long, however, a clericalizing tendency soon began to manifest itself in linguistic usage, particularly after the Council of Laodicea, whose fifteenth Canon permitted only the canonical *psaltai*, "chanters," to sing at the services. The word *choros* came to refer to the special priestly function in the liturgy - just as, architecturally speaking, the choir became a reserved area near the sanctuary - and *choros* eventually became the equivalent of the word *kleros*.

The development of large scale hymnographic forms begins in the fifth century with the rise of the *kontakion*, a long and elaborate metrical sermon, reputedly of Syriac origin, which finds its acme in the work of St. Romanos the Melodos (sixth century). This dramatic homily, which usually paraphrases a Biblical narrative, comprises some 20 to 30 stanzas and was sung during the Morning Office (*Orthros*) in a simple and direct syllabic style (one note per syllable). The earliest musical versions, however, are melismatic (that is, many notes per syllable of text), and belong to the time of the ninth century and later when *kontakia* were reduced to the *prooimion* (introductory verse) and first *oikos* (stanza). In the second half of the seventh century, the *kontakion* was supplanted by a new type of hymn, the *kanon*, initiated by St. Andrew of Crete (ca. 660-ca. 740) and developed by Saints John of Damascus and Kosmas of Jerusalem (both eighth century). Essentially, the *kanon* is an hymnodic complex comprised of nine odes which were originally attached to the nine Biblical canticles and to which they were related by means of corresponding poetic allusion or textual quotation.

The nine canticles are:

- (1) The Song of the Sea (Exodus 15:1-19);
- (2) The Song of Moses (Deuteronomy 32:1-43);
- (3)-(6) The prayers of Hannah, Habakkuk, Isaiah, Jonah (1 Kings [1 Samuel] 2:1-10; Habakkuk 3:1-19; Isaiah 26:9-20; Jonah 2:3-10);
- (7)-(8) The Prayer of Azariah and Song of the Three Holy Children (Apoc. Daniel 3:26-56 and 3:57-88);
- (9) The Magnificat and the Benedictus (Luke 1:46-55 and 68-79).

Each ode consists of an initial *troparion*, the *heirmos*, followed by three, four or more *troparia* which are the exact metrical reproductions of the *heirmos*, thereby allowing the same music to fit all *troparia* equally well.

The nine *heirmoi*, however, are metrically dissimilar; consequently, an entire *kanon* comprises nine independent melodies (eight, when the second ode is omitted), which are united musically by the same mode and textually by references to the general theme of the liturgical occasion, and sometimes by an acrostic. *Heirmoi* in syllabic style are gathered in the *Heirmologion*, a bulky volume which first appeared in the middle of the tenth century and contains over a thousand model *troparia* arranged into an *oktoechos* (the eight-[mode](#) musical system).

Another kind of hymn, important both for its number and for the variety of its liturgical use, is the *sticheron*. Festal *stichera*, accompanying both the fixed psalms at the beginning and end of Vespers and the psalmody of the [Lauds](#) (the *Ainoi*) in the Morning Office, exist for all special days of the year, the Sundays and weekdays of Lent, and for the recurrent cycle of eight weeks in the order of the modes beginning

with Easter. Their melodies preserved in the *Sticherarion*, are considerably more elaborate and varied than in the tradition of the Heirmologion.

## Later Byzantine and Post-Byzantine Periods

With the end of creative poetical composition, Byzantine chant entered its final period, devoted largely to the production of more elaborate musical settings of the traditional texts: either embellishments of the earlier simpler melodies, or original music in highly ornamental style. This was the work of the so-called *Maistores*, "masters," of whom the most celebrated was St. John Koukouzeles (active c.1300), compared in Byzantine writings to St. John of Damascus himself, as an innovator in the development of chant. The multiplication of new settings and elaborations of the old continued in the centuries following the fall of Constantinople, until by the end of the eighteenth century the original musical repertory of the medieval musical manuscripts had been quite replaced by later compositions, and even the basic model system had undergone profound modification.

Chrysanthos of Madytos (ca. 1770-46), Gregory the Protopsaltes, and Chourmouzios the Archivist were responsible for a much needed reform of the notation of Greek ecclesiastical music. Essentially, this work consisted of a simplification of the Byzantine musical symbols which, by the early 19th century, had become so complex and technical that only highly skilled chanters were able to interpret them correctly. Despite its numerous shortcomings the work of the three reformers is a landmark in the history of Greek Church music, since it introduced the system of neo-Byzantine music upon which are based the present-day chants of the Greek Orthodox Church.

# Cabaret

**Cabaret** is a form of entertainment featuring comedy, [song](#), [dance](#), and theatre, distinguished mainly by the performance venue — a restaurant or [nightclub](#) with a stage for performances and the audience sitting around the tables (often dining or drinking) watching the performance. The turn of the 20th century introduced a revolutionized cabaret culture. Performers included Josephine Baker and Brazilian drag performer João Francisco dos Santos (aka Madame Satã), both of African descent. The venue itself can also be called a "cabaret." These performances could range from political satire to light entertainment, each being introduced by a master of ceremonies, or MC.

The term is a French word for the taprooms or cafés, where this form of entertainment was born, as a more artistic type of *café-chantant*. It is derived from Middle Dutch *cabret*, through Old North French *camberette*, from Late Latin *camera*. It basically means "small room."

Cabaret also refers to a Mediterranean style brothel — a bar with tables and women who mingle with and entertain the clientele. Traditionally these establishments can also feature some form of stage entertainment: often singers & dancers — the bawdiness of which vary with the quality of the establishment. It is the more sophisticated and classier cabaret which eventually engendered the type of establishment and art-form which is the subject of the remainder of this article.

## French cabaret

The first cabaret was opened in 1881 in Montmartre, Paris; Rodolphe Salis' "cabaret artistique." Shortly after it was founded, it was renamed Le Chat Noir (The Black Cat). It became a locale in which up-and-coming cabaret artists could try their new acts in front of their peers before they were acted in front of an audience. The place was a great success, visited by important people of that time such as Alphonse Allais, Jean Richepin, Aristide Bruant, and people from all walks of life: women of high society, tourists, bankers, doctors, journalists, etc. The Chat Noir was a place where they could get away from work. In 1887, the cabaret was closed due to the bad economic situation which made amusements of this kind seem vulgar.

The Moulin Rouge, built in 1889 in the red-light district of Pigalle near Montmartre, is famous for the large red imitation windmill on its roof. Notable performers at the Moulin Rouge included La Goulue, Yvette Guilbert, Jane Avril, Mistinguett, and Le Pétomane. Henri de Toulouse-Lautrec painted numerous pictures and scenes of night life there.

The *Folies-Bergère* continued to attract a large number of people until the start of the 20th century, even though it was more expensive than other cabarets. People felt comfortable at the cabaret: they did not have to take off their hat, could talk, eat, and smoke when they wanted to, etc. They did not have to stick to the usual rules of society.

At the *Folies-Bergère*, as in many *cafés-concerts*, there were a variety of acts: singers, dancers, jugglers, clowns, and sensations such as the Birmane family, all of whom had beards. Audiences were attracted by the danger of the circus acts (sometimes tamers were killed by their lions), but what happened on stage was not the only entertainment. Often patrons watched others, strolled around, and met friends or prostitutes. At the start of the 20th century, as war approached, prices rose further and the cabaret became a place for the rich.

## German-speaking cabaret

Twenty years later, Ernst von Wolzogen founded the first German cabaret, later known as Buntes Theater (colourful theatre). All forms of public criticism were banned by a censor on theatres in the German Empire, however. This was lifted at the end of the First World War, allowing the cabaret artists to deal with social themes and political developments of the time. This meant that German cabaret really began to blossom in the 1920s and 1930s, bringing forth all kinds of new cabaret artists such as Werner Finck at the Katakombe, Karl Valentin at the Wien-München, and Cläre Waldorf. Some of their texts were written by great literary figures such as Kurt Tucholsky, Erich Kästner, and Klaus Mann.

When the Nazi party came to power in 1933, they started to repress this intellectual criticism of the times. Cabaret in Germany was hit badly: In 1935 Werner Finck was briefly imprisoned and sent to a concentration camp; at the end of that year Kurt Tucholsky committed suicide; and nearly all German-speaking cabaret artists fled into exile in Switzerland, France, Scandinavia, or the USA. What remained in Germany was a state-controlled cabaret where jokes were told or the people were encouraged to keep their chins up.

When the war ended, the occupying powers ensured that the cabarets portrayed the horrors of the Nazi regime. Soon, various cabarets were also dealing with the government, the Cold War and the Wirtschaftswunder: the Tol(l)eranten in Mainz, the Kom(m)ödchen in Düsseldorf and the Münchner Lach- und Schießgesellschaft in Munich. These were followed in the 1950s by television cabaret.

In the GDR, the first state cabaret was opened in 1953, Berlin's *Die Distel*. It was censored and did not criticise the state.

In the 1960s, West German cabaret was centred around Düsseldorf, Munich, and Berlin. At the end of the decade, the students' movement of May 1968 split opinion on the genre as some old cabaret artists were booed off the stage for being part of the old establishment. In the 1970s, new forms of cabaret developed such as the television show *Notizen aus der Provinz* (Notes from the Sticks). At the end of the 1980s, political cabaret was an important part of social criticism, with a minor boom at the time of German reunification. In eastern Germany, cabarets had been growing more and more daring in their criticism of politicians in the time leading up to 1989. After reunification, new social problems, such as mass unemployment, the privatisation of companies, and rapid changes in society, meant that cabarets rose in number. Dresden, for example, gained two new cabarets alongside the popular *Herkuleskeule*.

In the 1990s and at the start of the new millennium, the television and film comedy boom and a lessening of public interest in politics meant that television cabaret audiences in Germany dropped.

## **Dutch-speaking Cabaret**

In the Netherlands cabaret is the name for a popular comedy-form that evolved out of the earlier traditional cabaret, much like the German-speaking cabaret. Whereas interest in the German form faded in the 1990s, the Dutch Cabaret stayed strong and actually grew explosively in those years. Unlike Stand-up comedy this Dutch form usually has more of a storyline throughout the performance. Often it is a mixture of comedy with theater and like German-speaking cabaret it can be politically engaged.

## American Cabaret

In the United States, Cabaret diverged into several different and distinct styles of performance mostly due to the influence of [Jazz](#) Music. Chicago Cabaret focused intensely on the larger band ensembles and reached its zenith in the Speakeasies, and Steakhouses (Like The Palm (restaurant)) of the Prohibition Era.

New York Cabaret never developed along the darkly political lines of its European counterparts, but did feature a great deal of social commentary. When New York Cabarets featured Jazz, they tended to focus on famous vocalists like Eartha Kitt and Capucine (Germaine Lefebvre) rather than instrumental musicians.

Cabaret in the United States began to disappear in the sixties, due to the rising popularity of [rock concert](#) shows and television variety shows. Perhaps the greatest living American Cabaret performer is Eartha Kitt, famous for her role as Catwoman in the tongue in cheek television series, Batman. The Art form itself still survives vestigially in two popular entertainment formats: Stand-up comedy, and in the dark comic performances that may still be seen in the drag show and camp performances in the nations GLBT community.

Cabaret is currently undergoing a renaissance of sorts in the United States as new generations of performers reinterpret the old forms in both music (see Dark Cabaret below) and theatre.

# Cadenza

A **cadenza** is usually now taken to mean a portion of a [concerto](#) in which the [orchestra](#) stops playing, leaving the soloist to play alone in free time (without a strict, regular pulse) and can be written or improvised, depending on what the composer specifies. This normally occurs near the end of a movement, though it can be at any point in a [concerto](#); an example is Tchaikovsky's First Piano Concerto, where in the first five minutes a cadenza is used. It usually is the most elaborate part that the solo instrument plays during the whole piece. At the end of the cadenza, the orchestra re-enters, and generally finishes off the movement on their own, or less often with the solo instrument.

The cadenza was originally a vocal flourish improvised by a performer to elaborate a cadence in an [aria](#). It was later used in instrumental music, and soon became a standard part of the concerto. Originally, it was improvised in this context as well, but during the 19th century, [composers](#) began to write cadenzas out in full. Third parties also wrote cadenzas for works in which it was intended by the composer to be improvised, so the soloist could have a well formed solo that they could practice in advance. Some of these have become so widely played that they are effectively part of the standard repertoire, as is the case with Joseph Joachim's cadenza for Johannes Brahms' Violin Concerto and Beethoven's set of cadenzas for Mozart's Piano Concerto no. 20.

Concertos are not the only pieces that feature cadenzas; *Scena di Canta Gitano*, the fourth movement of Nikolai Rimsky-Korsakov's Capriccio espagnol, contains cadenzas for [violin](#), [harp](#), [clarinet](#), and [flute](#) in its beginning section.

Nowadays, very few performers improvise their cadenzas, and very few composers have written concertos within the last hundred years that include the possibility of an improvised cadenza.

A famous example of a cadenza is Rachmaninov's Third Piano Concerto, in which the first movement features a long and difficult cadenza.

Another famous cadenza appears at the end of the first movement of Grieg's Piano Concerto in A minor. It is a long and impassioned cadenza which ends with the orchestra and piano playing together in a dramatic and rousing finale.

Cadenzas are also found in instrumental solos with piano or other accompaniment, where they are placed near the beginning or near the end or sometimes in both places. (e.g. "The Maid of the Mist," cornet solo by Herbert L. Clarke, or a more modern example: the end of "Think of Me" where Christine Daaè sings a short but involved cadenza, in Andrew Lloyd Webber's The Phantom of the Opera.)

## Cajun music

**Cajun music**, an emblematic music of Louisiana, is rooted in the ballads of the French-speaking Catholics of Canada. Cajun music is often mentioned in tandem with the Creole-based, Cajun-influenced Zydeco form, both of Acadiana origin. These French Louisiana sounds have influenced [American popular music](#) for many decades, especially [country music](#), and have influenced pop culture through mass media, such as television commercials.

## Lyrics

The unaccompanied ballad was the earliest form of Cajun music. The narrative songs often had passionate themes of death, solitude or ill-fated love — a reaction to their harsh exile and rough frontier experience, as well as celebrations of love and humorous tales. Ballads were ritually sung at weddings and funerals, and sung informally for small groups of people at house parties as the food cooked and young children played.

Standard versions of songs started to emerge starting in the late 1920s with increasing sales of phonographs. Early song lyrics were entirely in old Cajun French. Though French language is still common, some Cajun music today is sung in English with younger singers and audiences.

## Instruments

In earlier years the fiddle was the predominant instrument. Usually two fiddles were common, one playing the melody while the other provided the segoner, or back-up part. Twin fiddling traditions represent the music in its purest form, as it was brought to Louisiana with the early immigrants and before popular American tunes mingled with it.

Gradually the diatonic [accordion](#) emerged to share the limelight. The introduction of the accordion can be traced back to German settlers, who are more typically identified with eastern and central Texas. Though they were concentrated in Texas, many settled as far east as New Orleans, that path taking them directly through Acadiana.

In the early 1930s, the accordion was pushed into the background by the popular string sounds of the time. Mandolins, pianos and banjos joined fiddles to create a jazzy swing beat strongly influenced by Western Swing of neighboring Texas. After World War II, the accordion regained its popularity in Cajun music.

The [acoustic guitar](#) was added, mostly as a rhythm instrument, and the triangle provided a traditional percussion. Modern groups sometimes include [drums](#), electric bass, electric guitars and amplified accordion and fiddles.

## Dance and festivals

Cajun music, born from ballads, has transformed to [dance](#) music -- with or without words. The music was essential for small get-togethers on the front porch, an all night house dance known as a "bal de maison", or a public dance in a dance hall called a fais do-dos.

There are several variations of Cajun dance: a Cajun One Step, also called a Cajun Jig, a Cajun Two Step or related Cajun Jitterbug, and a Cajun Waltz. In mild contrast, Zydeco is a syncopated two-step or jitterbug. A Cajun dancer will cover the dance floor while the Zydeco dancer will primarily dance in a smaller area.

Cajun music can be found predominately at Louisiana festivals and dance halls, in addition to weddings in Acadiana.

# Cantata

A **cantata** (Italian, 'sung') is a vocal composition [accompanied](#) by instruments and generally containing more than one [movement](#).

In the 16th century, when all serious music was vocal, the term had no reason to exist, but with the rise of instrumental music in the 17th century cantatas began to exist under that name as soon as the instrumental art was definite enough to be embodied in sonatas. From the middle of the 17th till late in the 18th century a favourite form of Italian [chamber music](#) was the cantata for one or two solo voices, with accompaniment of harpsichord and perhaps a few other solo instruments. It consisted at first of a declamatory narrative or scene in recitative, held together by a primitive [aria](#) repeated at intervals. Fine examples may be found in the church music of Carissimi; and the English vocal solos of Henry Purcell (such as Mad Tom and Mad Bess) show the utmost that can be made of this archaic form. With the rise of the Da Capo aria the cantata became a group of two or three arias joined by recitative. George Frideric Handel's numerous Italian duets and trios are examples on a rather large scale. His Latin motet *Silete Venti*, for soprano solo, shows the use of this form in church music.

The Italian solo cantata tended, when on a large scale, to become indistinguishable from a scene in an [opera](#). In the same way the church cantata, solo or choral, is indistinguishable from a small [oratorio](#) or portion of an oratorio. This is equally evident whether we examine the unparalleled church cantatas of Bach, of which nearly 200 are extant, or the Chandos Anthems of Handel. In Johann Sebastian Bach's case many of the larger cantatas are actually called oratorios; and the *Christmas Oratorio* is a collection of six church cantatas actually intended for performance on six different days, though together forming as complete an artistic whole as any classical oratorio.

The essential point, however, in Bach's church cantatas is that they formed part of a church service, and moreover of a service in which the organization of the music was far more coherent than is possible in the Anglican church. Many of Bach's greatest cantatas begin with an elaborate chorus followed by a couple of arias and recitatives, and end with a plain chorale. This has often been commented upon as an example of Bach's indifference to artistic climax in the work as a whole. But no one will maintain this who realizes the place which the church cantata occupied in the Lutheran church service. The text was carefully based upon the gospel or lessons for the day; unless the cantata was short the sermon probably took place after the first chorus or one of the arias, and the congregation joined in the final chorale. Thus the unity of the service was the unity of the music; and, in the cases where all the movements of the cantata were founded on one and the same chorale-tune, this unity has never been equalled, except by those 16th-century masses and motets which are founded upon the Gregorian tones of the festival for which they are written.

In modern times the term cantata is applied almost exclusively to choral, as distinguished from solo vocal music. There has, perhaps, been only one kind of cantata since Bach which can be recognized as an art form and not as a mere title for works otherwise impossible to classify. It is just possible to recognize as a distinct artistic type that kind of early 19th-century cantata in which the chorus is the vehicle for music more lyric and songlike than the oratorio style, though at the same time not excluding the possibility of a brilliant climax in the shape of a light order of fugue. Ludwig van Beethoven's *Glorreiche Augenblick* is a brilliant pot-boiler in this style; Carl Maria von Weber's *Jubel Cantata* is a typical specimen, and Felix Mendelssohn's *Walpurgisnacht* is the classic. Mendelssohn's *Symphony Cantata*, the *Lobgesang*, is a hybrid work, partly in the oratorio style. It is preceded by three symphonic movements, a device avowedly suggested by Beethoven's ninth symphony; but the analogy is not accurate,

as Beethoven's work is a symphony of which the fourth movement is a choral finale of essentially single design, whereas Mendelssohn's Symphony Cantata is a cantata with three symphonic preludes. The full lyric possibilities of a string of choral songs were realized at last by Johannes Brahms in his *Rinaldo*, set to a text which Goethe wrote at the same time as he wrote that of the *Walpurgisnacht*. The point of Brahms's work (his only experiment in this genre) has been lost by critics who expected in so voluminous a composition the qualities of an elaborate choral music with which it has no relationship. Brahms has probably said the last word on this subject; and the remaining types of cantata (beginning with Beethoven's *Meeres-stille*, and including most of Brahms's and many notable English small choral works) are merely so many different ways of setting to choral music a poem which is just too long to be comprised in one movement.

# Canzone

Literally "song" in Italian, a **canzone** (plural: *canzoni*) (cognate with English to [chant](#)) is an Italian or Provençal song or [ballad](#). It is also used to describe a type of lyric which resembles a [madrigal](#). Sometimes a composition which is simple and songlike is designated as a canzone, especially if it is by a non-Italian; a good example is the aria "Voi che sapete" from Mozart's *Marriage of Figaro*.

The term canzone is also used interchangeably with [canzona](#), an important Italian instrumental form of the late 16th and early 17th century. Often works designated as such are *canzoni da sonar*; these pieces are an important precursor to the [sonata](#). Terminology was lax in the late [Renaissance](#) and early [Baroque](#) music periods, and what one composer might call "canzoni da sonar" might be termed "canzona" by another, or even "fantasia". In the work of some composers, such as Paolo Quagliati, the terms seem to have had no formal implication at all.

## Canzonetta

In music, a **canzonetta** (pl. **canzonette** or **canzonettas**) was a popular Italian secular vocal composition which originated around 1560. In its earlier versions it was somewhat like a [madrigal](#) but lighter in style; but by the 18th century, especially as it moved outside of Italy, the term came to mean a song for voice and accompaniment, usually in a light secular style.

## Origins in Italy

In its earliest form, the canzonetta was closely related to a popular Neapolitan form, the [villanella](#). The songs were always secular, and generally involved pastoral, irreverent, or erotic subjects. The rhyme and stanza schemes of the poems varied but always included a final "punch line." Typically the early canzonetta was for three unaccompanied voices, moved quickly, and shunned [contrapuntal](#) complexity, though it often involved animated cross-rhythms. It was fun to sing, hugely popular, and quickly caught on throughout Italy, paralleling the madrigal, with which it later began to interact. The earliest books of canzonettas were published by Giovanni Ferretti and Girolamo Conversi in 1567 and 1572, respectively.

By the 1580s some of the major composers of secular music in Italy were writing canzonettas, including Luca Marenzio and Claudio Monteverdi, who published his first set in 1584. Monteverdi was to return to the form with his ninth and final book of madrigals (published posthumously in 1651). Orazio Vecchi was another important composer of canzonettas in the 1580s: his were widely varied, and included some which were intended for dancing, as well as some which specifically and hilariously parodied the excesses of the contemporary madrigal. Some composers, such as Roman School member Felice Anerio, adapted the form for a sacred purpose; he wrote a set of sacred canzonette. By the end of the century most canzonettas were for four to six voices, and had become more similar to the madrigal in style than had originally been the case.

Some composers who studied in Italy carried the canzonetta back to their home countries, such as Hans Leo Hassler, who brought the form to Germany.

## England

When the madrigal was imported into England in the late 16th century, the term canzonetta went along with it, anglicized to **canzonet**. Many compositions of the English Madrigal School were entitled canzonets, and although Thomas Morley referred to it specifically as a lighter form of madrigal in his writings, canzonets in England are almost indistinguishable from madrigals: they are longer than Italian canzonettas, more complex, and more [contrapuntal](#).

## Later developments

During the 17th century, composers continued to produce canzonettas, but the form gradually changed from a madrigalian, a *cappella* genre to something more akin to a monody, or even a [cantata](#). Eventually, the canzonetta became a type of song for solo voice and accompaniment. A late example of the form can be seen in the set of five by Joseph Haydn for voice and piano, on English texts (1794).

Sometimes the term canzonetta is used by composers to denote a songlike instrumental piece. A famous example is the slow movement of the Tchaikovsky Violin Concerto.

## Representative composers

Composers of canzonettas include:

Claudio Monteverdi  
Lodovico Grossi da Viadana  
Felice Anerio  
Adriano Banchieri  
Luca Marenzio  
Pietro Cerone  
Orazio Vecchi  
Giovanni Artusi  
Hans Leo Hassler  
Giovanni Maria Nanino  
Francesca Caccini  
Salamone Rossi  
Hans Leo Hassler  
Joseph Haydn

## Carnatic music

**Carnatic music**, known as *karntaka sang+tam* (•°Í©¾Ÿ• š™Í•À¤@| in Tamil, •°Í¾Ÿ• ,—À¤ in Kannada, 0M(> 8@\$ in Telugu, 0M #> 8@\$ in Malayalam, 0M#> 8M@\$ in Devanagari) is the form of Indian classical music that had its origins in Southern India.

Lyrics in Carnatic music are largely devotional; most of the songs are addressed to the Hindu deities. There are, besides, a lot of songs emphasising love and other social issues which have been composed in Carnatic music, although some of them, especially with the 'Raga' (emotion) of love, continue to be composed and are widely popular, that rest on the concept of sublimation of human emotions for union with the divine. Thus, for instance, a young woman in a modern classical composition, will be yearning for one of the deities, such as Krishna, as her 'lover' - the purpose of such musical pieces being at once to provide an outlet for human emotions and, unlike in the normal run of motion pictures, to address God rather than another human being. Carnatic music as a classical form is always thus required to be a culturally elevating medium.

As with all [Indian classical music](#), the two main components of Carnatic music are [raga](#) - a melodic pattern, and *tala* - a rhythmic pattern. (One might want to read these pages before proceeding.)

## History

Carnatic music, whose foundations go back to Vedic times, began as a spiritual ritual of early Hinduism. Hindustani music and Carnatic music were one and the same, out of the Sama Veda tradition, until the Islamic invasions of North India in the late 12<sup>th</sup> and early 13<sup>th</sup> century. From the 13<sup>th</sup> century onwards, there was a divergence in the forms of Indian music — the northern style being influenced by Persian/Arabic music.

*Carnatic music* is named after the region in southern India what is today known as Karnataka. Carnatic was the anglicized spelling of Karnataka and hence it has come to be known as Carnatic Music. The great Kannada composer Shri. Purandara Dasa is known as the *Sangitapitamaha* or 'Father of Karnatik music'. *The roots of Carnatic music was sown during the Vijayanagar Empire by the Kannada Haridasa movement of Vyasaraaja, Purandaradasa, Kanakadasa and others.*

It is said that Purandara Dasa laid out the basic learning structure and framework for imparting carnatic music. The learning structure is arranged in the increasing order of the complexity. The lessons start with Sarale varase, meaning simple patterns and is having no defined ends. Though a good authority in the 72 parent ragas and related raga, taana, and pallavi, swara prasthara, is a mark of a professional - by no measure that's an end

# Theory

**Zruti** in Indian music is the rough equivalent of a tonic (or less precisely [key](#)) in Western music; it is the note from which all the others are derived. Traditionally, there are twenty-two *frutis* in Carnatic music, but over the years several of them have converged, so that now they are but the [chromatic scale](#).

## The solfege

### Description

The solfege of Carnatic music is "sa-ri-ga-ma-pa-da-ni" (compare with the Hindustani *sargam*: sa-re-ga-ma-pa-dha-ni). These names are abbreviations of the longer names *shadjam*, *rishabham*, *gandharam*, *madhyamam*, *panchamam*, *dhaivatam* and *nishadam*. Unlike other music systems, every member of the solfege (called a **swara**) may have up to three variants. The exceptions are *shadjam* and *panchamam* (the tonic and the dominant in Western music), which have only one form, and *madhyamam*, which has only two forms (the subdominant). In one scale, or **ragam**, there is usually only one variant of each note present, except in "light" ragas, such as *Behag*, in which, for artistic effect, there may be two, one on the way up (in the **arohanam**) and another on the way down (in the **avarohan**). A raga may have five, six or seven notes on the way up, and five, six or seven notes on the way down.

### The Carnatic solfege in different scripts

In Indian languages, most of whose alphabets are abugidas (q.v.), the solfege is written with the characters for Sa, Ri, Ga, Pa, Da and Ni. Because Carnatic music is very rarely performed by people from North India, the alphabets given here are primarily those of Dravidian, i.e., South Indian, languages.

| Sound | Full Name | Devanagari | Telugu | Tamil | Kannada | Malayalam | Roman alphabet | Value and Comments  |
|-------|-----------|------------|--------|-------|---------|-----------|----------------|---|
| sa    | Shadja    | ४          | ४      | ४     | ४       | ४         | s              | Only one possible value. Sometimes referred to as the 'mother' note - all <a href="#">Ragas</a> have this note. |
| ri    | Rishaba   | ०?         | ०?     | °ః    | °ః      | 0?        | r              | Three possible values.  |
| ga    | Gndhra    |            |        | •     | —       |           | g              | Three possible  |

|     |           |    |    |   |   |   |   |
|-----|-----------|----|----|---|---|---|---|
| ma  | Madhyama  | .  | Ⓜ  | Ⓜ | . | m | values (one of which coincides with the third <i>ri</i> ).<br>Two possible values.                      |
| pa  | Panchama  | *  | a  | a | * | p | Only one possible value.<br>Sometimes referred to as the 'father', though not all ragas have this note. |
| dha | Dhaivatha | '  | &  | ♩ | ' | d | Three possible values.  |
| ni  | Nishda    | (? | (? | फ़ | फ़ | n | Three possible values (one of which coincides with the third <i>dha</i> ).                              |

## The [raga](#) system

Main article: [raga](#)

### **Melakartas**

In Carnatic music, the *sampurna ragas* (the ones that have seven notes in their scales) are classified into the melakarta system, which groups them according to the kinds of notes that they have. There are seventy-two melakarta ragas, thirty-six of whose subdominant is a perfect fourth from the tonic, thirty-six of whose subdominant is an augmented fourth from the tonic. The ragas are grouped into sets of six, called chakras ("wheels", though actually sectors in the conventional representation) grouped according to the supertonic and mediant scale degrees. This scheme can very well understood and remembered by Katapayadi sankhya

### **Classification**

*Ragas* may be divided into two classes: *janaka ragas* ("parent *ragas*") and *janya ragas* ("child *ragas*"). *Janaka raga* is synonymous with *melakarta* (because the *melakarta ragas* each have seven notes in their scale, and use each note only once). *Janya ragas* are subclassified into various categories themselves.

## The *tala* system

In carnatic music, singers keep the beat by moving their hands in specified patterns. These patterns are called **talas**. All of the which are formed with three basic movements: lowering the palm of the hand onto the thigh, lowering a specified number of fingers in sequence (starting from the little finger), and turning the hand over. These basic movements are grouped into three kinds of units: the *laghu* (lowering the palm and then the fingers, notated as 1), the *dhrutam* (lowering the palm and turning it over, notated as 0), and the *anudhrutam* (just lowering the palm, notated as >). Only these units are used.

There are seven kinds of *talas* which can be formed from the *laghu*, *dhrutam*, and *anudhrutam*:

- **Dhruva tala** 1 0 1 1
- **Matya tala** 1 0 1
- **Rupaka tala** 0 1
- **Jhampa tala** 1 > 0
- **Tripata tala** 1 0 0
- **Ata tala** 1 1 0 0
- **Eka tala** 1

How many fingers must be lowered in a *laghu* is determined by the *jathi*, a number showing how many fingers to lower. It can only be 3, 4, 5, 7, or 9. (For numbers greater than five, the "sixth finger" is the same as the little finger.) Five *jathis* times seven patterns gives thirty-five possible *talas*.

## Compositions

Composers of Carnatic music were often inspired by devotion and were usually scholars proficient in Kannada, Telugu, Tamil and Sanskrit. They would usually include a signature, called a *mudra*, in their compositions. For example, all songs by Tyagaraja have the word Tyagaraja in them, all songs by Muthuswami Dikshitar (who composed in Sanskrit) have the words *guru guha* in them, songs by Syama Sastri have the words "Syama Krishna" in them and Purandaradasa, the father of Karnatik music (who composed in Kannada), used the signature 'purandara vitala'.

## Kirtanas

Carnatic songs are varied in structure and style, but generally consist of three verses:

1. **Pallavi** (²²¹²µ¿, \*2M25?, \*2M25?). This is the equivalent of a [refrain](#) in Western music. Two lines.
2. **Anupallavi** (...²²¹²µ¿, (A\*2M25?, (A\*2M25?). The second verse. Also two lines.
3. **Charana** (š°£, 0#, 0#). The final (and longest) verse that wraps up the song. The Charanam usually borrows patterns from the Anupallavi. Usually three lines.

This kind of song is called a *keerthanam* (@0M\$()). But this is only one possible structure for a *keerthanam*. Some *keerthanas*, such as *Srasamuki sakala bhgyad* have a verse between the *anupallavi* and the *caraGam*, called the *cimmaswaram* (?M8M50). This verse consists only of notes, and has no words. Still others, such as *Rmacandram bhvaymi* have a verse at the end of the *caraGam*, called the *madhyamaklam*. It is sung immediately after the *caraGam*, but at double speed.

## Varnas

A *Varna* (µ£ī) is a special kind of song which tells you everything about a [raga](#); not just the scale, but also which notes to stress, how to approach a certain note, classical and characteristic phrases, etc. A *varna* has a *pallavi*, an *anupallavi*, a ***muktyi swara***, whose function is identical to that of the *chiTTeswara* (š¿ŸŸÆ ,Íµ°) in a *kriti*, a *charaNā*, and *chiTTeswaras*, after each of which the *charaNā* is repeated:

1. **Pallavi** (²²¹²µ¿)
2. **Anupallavi** (...²²¹²µ¿)
3. **Muktyi swara** (®Á•Í²³⁴¿ ,Íµ°)
4. **Charana** (š°£)
5. **ChiTTeswara** (š¿ŸŸÆ ,Íµ°)
  1. First
  2. Second
  3. Third
  4. *et cetera*

There are many more kinds of songs such as *geethams* and *swarajatis*, but for lack of room, they will not be explained here.

## Special compositions

Some special sets of compositions deserve to be noted here, the ***Pancaratra K+rtanas*** (*\*MO\$M(C\$?, \*O\$M( MOA\$A2A)*) of Tyagaraja, Kamalamba Navavarna Kritis and Navagraha Kritis((5M09 MOA\$A2A) **of *Muttusvami Dikshitar***.

The *Pancaratra K+rtanas* (lit. *five gems*), composed by Tyagaraja in Sanskrit and Telugu, are a set of five compositions regarded as the masterpieces of the great composer. The first one is in Sanskrit, while the rest are in Telugu. They deviate from conventional structure in that they all have between eight and twelve *caraGas*. *Sdincan L Manas*, the third of the compositions, deviates even more in that after the *anupallavi*, there is a short phrase after which the *caraGas* are sung. Also, instead of repeating the *pallavi* after each *caraGam*, the phrase between the *anupallavi* and the first *caraGam* is sung.

Dikshitar's nava-aavarana-kritis (literally, 'nine-veils compositions') are addressed to the supreme divine in its female principle according to which the male-female division, so universally observed in life forms, is essentially the manifestation of one and the same Divinity. The Navagraha kritis are respectively sung in devotion to the Sun, the Moon, and the other planets, which thus popularises in a subtle manner, that Man owes his very existence to a highly remote chance - maybe one in a billion - for living on earth in a precisely conducive environment of celestial configuration, and he must understand this fact with his rational and spiritual makeup, with Kritis of this unique type. This set of Dikshitar creations, like most of his others, are considered remarkable for recalling the sastra-ic aspects - the scriptural profundities of Hindu religious philosophy - and the lay listener either sings them with implicit faith either even without an understanding their meaning, or with some effort, gets to know by attending scholarly lecture-cum-demonstrations and/or reading books or papers (nowadays rather widely available online on the WWW.). It is said that the mature Carnatic musician sees the multidimensional charm of the special and non-special Kritis that are at once rich musically, educative philosophically, and disciplining religiously to the singer, player and the musician, provided the necessary inputs at appreciating the many charms.

Another prolific composer in Carnatic Music, King Swati Tirunal, too, has composed hundreds of songs which are particularly noted for their lyrical charm, and Swati too has to his credit a set of special compositions which are sung on the festival occasion of 'Navaratri' (lit., nine nights) in which three days each are devoted to the three deities, Durga, Lakshmi and Sarasvati.

# Improvisation

There are four main types of improvisation in Carnatic music:

- **Raga Alapana** ( 0> 2>\*( >, 0> 2>\*( ) This is usually performed before a song. It is, as you may expect, always sung in the raga of the song. It is a slow improvisation with no rhythm, and is supposed to tune the listener's mind to the appropriate raga by reminding him/her of the specific nuances, before the singer plunges into the song. Theoretically, this ought to be the easiest type of improvisation, since the rules are so few, but in fact, it takes much skill to sing a pleasing, comprehensive (in the sense of giving a "feel for the raga") and, most importantly, original raga.
- **Niraval** ( (?052M, (?052 ) This is usually performed by the more advanced concert artists and consists of singing one or two lines of a song repeatedly, but with improvised elaborations. (A similar thing used to be done in [Baroque music](#)).
- **(Kalpana)swaram** ( [2M\*(>]8M50,2M\*( 850 ) The most elementary type of improvisation, usually taught before any other form of improvisation. It consists of singing a pattern of notes which finishes on the beat and the note just before the beat and the note on which the song starts. The swara pattern should adhere to the original raga's swara pattern, which is called as "arohana-avarohana"
- **Taanam** ( \$>(, \$>( ) This form of improvisation was originally developed for the veena and consists of repeating the word *anantham* ((\$) ("endless") in an improvised tune. The name *thaanam* comes from a false splitting of *anantham* repeated. When the word *anantham* is repeated, i.e., "anantham-anantham", the laws of sandhi dictate that the consonant at the end of the first word be dropped, hence "ananthaaanantham" When the rule is applied to a long string of *ananthams*, you get "ananthaaananthaaananthaa..." which got falsely split as "thaananthaaananthaaan...", or "thaanamthaanamthaanam...".
- **(Ragam Thanam) Pallavi** ( [0>> \$>[ ] \*2M25? )

0> \$>( \*2M25?  
a2[2μζ Ž'±3/4í aα@í, 2^-@í, μζŽ3/4, @í

**Pallavi** means: words (*padam*), rhythm (*layam*) and improvisation (*viñsam*)

This is a composite form of improvisation. It consists of Ragam, Thanam, then a line sung twice, and Niraval. After Niraval, the line is sung again, twice, then sung once at half the speed, then twice at regular speed, then four times at twice the speed.

# Concerts

## Instruments

Carnatic concerts are usually performed by a small ensemble of musicians, who usually (but not always) meet only on the stage. The group usually has a vocalist, a primary instrumentalist, and a percussionist, in that order of importance. Primary instruments are usually string instruments, such as the v+G and [violin](#), although wind instruments such as the [flute](#) may also be used.

The importance given to the vocalist in performances is a reflection of Carnatic music's focus on the singer and its rooting in the poetry of the Sama Veda; any instrumental rendition is merely a transcription of the vocal line. However, in recent years, purely instrumental concerts have become popular.

## Support

The *tambura*, the most common kind of drone instrument, is traditionally used at concerts to remind the singer of the tonic, so that the singer may stay in tune throughout the performance. However, not only is the *tambura* unwieldy, it is also fragile, and is thus increasingly being replaced by the more compact *[ruti* box (also known as the "electronic *tambura*").

The usual interacting and active accompaniments are Violin [first adopted into Carnatic music by Baluswami Dikshitar brother of Muthuswami Dikshitar], Mridangam [two-sided percussion instrument played horizontally] and Ghatam [hollow mud pot] or a Khanjira. It is not so common to have a veena as an accompaniment. Other possible accompaniments that one can see are the Morsing and the Kunnakol. Besides playing along with the main vocalist, the violinist also gets the chance to take part in the improvisation. The violinist's role is a bit tough as the violinist needs to play on-the-fly anything that is chosen by the main artiste. The accompanying violinist will be expected to match skills with the Vocalist in a few places. The violinist is expected to play both the melody and the mathematical aspects of the vocalist.

The [violin](#) has also established itself as a main instrument.

The vocalist and the violinist take turns while elaborating or while exhibiting creativity in sections like Niraval, Kalpana swaram and the like.

The percussion support will play an active role on the Rhythm aspect.

## Percussion

Percussion instruments, such as the mridangam, ghatam, kanjira are used to help the singer in keeping the beat, but they may also improvise. The morsing is also seen in some concerts and it accompanies the main percussion instrument and plays almost in a contrapuntal fashion along with the beats.

## Content

Carnatic concerts, these days, last for typically no more than 3 hours. The artist may render about 10 to 15 songs. The richness and depth of artistry of the content may vary

greatly based on the artist and to an extent based on what the audience request.

## The stage

### Prayer

Concerts almost always start with a song in praise of Ganapathi, the remover of obstacles. For this, songs such as *vinyak ninnuvin brMcu aku* and *gam gaGapat*, among many, many others, are common. But it is not uncommon to find concerts that start with Varnams and then have a song on Ganapathi.

### Varnam

Most artists decide to keep the Varnam in a *sampoorna raga*. A Varnam typically lasts for about 6 to 12 minutes. Since Varnams are performed during the initial part of the concert, some people try to keep the Varnam in a *bright raga* (can be roughly translated to Major scales) like Kalyani or Dheerasankarabharanam).

### Keerthanams

In the middle are a variety of compositions, generally contrasting in emotion. Sometimes, a *rgam* is sung before each of these compositions, and *kalpanswaram* is sung after. Usually there are several keerthanams composed by the trinity and others sung during this phase.

### Thani

Almost always all Carnatic concerts nowadays have only one Thani Avarthanam. This is kept almost towards the end of the concert. The *Thani Avarthanam* begins after the violinist and the vocalist (or the main performer in case of an instrumental concert) have completed their kalpana swaras or niraval and usually the vocalist *nods* at the percussionist to start his *Thani*. In case there are two or more percussion instruments, each of the percussionists start by playing a lengthy piece of beats called an *Avarthanam*. The length of the *Avarthanam* goes on reducing in a mathematical proportion as the percussionists take turn. Towards the end of the *Thani Avarthanam* they start playing together and the song ends with the main performer singing the line that was used for Kalpana / Niraval.

### Ragam Tanam Pallavi

Some experienced artists may do a Ragam Tanam Pallavi instead of a Keerthanam as the *main piece* of the Concert. Nevertheless, a Ragam Tanam Pallavi exposition will also comprise of a *Thani*.

### Tukkada

After a heavy dose of musically complex keerthanams the artists perform short, light and usually fast numbers. The recent trend has been that some of these are based on Hindustani Ragas. tillanas and Javalis are sung during this phase. There would roughly be around 3 to 5 *tukkadas*.

### Mangalam

Almost always the very last song of a Concert is set to a raga like *Sourashtram* or *Madhyamavathi* (a happy sounding raga). The mangalam usually is 'continued' without a pause after the end of the penultimate song. Most artists thank the audience by means of a song specifically meant to thank the audience for their support.

## The audience

The typical audience in the average *South Indian* Carnatic concert is in the 50+ age group with the exception of some young students of music and some journalists who have come to write reviews about the concert. But the majority of the audience have a very decent understanding of Carnatic music and will probably be able to help you with if you have *doubts*. It is not uncommon to find some of them noting down the *name*, *tala* and *raga* of the song being sung. It is important to note that only a very few artists tell out the name, tala and raga of the song they are performing. Those popular amongst the *masses* usually tell out the *raga* and the *tala* of the song. When not told, it is up to the listener to *identify* the raga and tala.

It is also easy to see the audience *tapping out* the *tala* in sync with the artist's performance. It would be *frowned* at by the people sitting next to you to be seen tapping the wrong *tala* and some artists might even interrupt the entire concert or even get angry!<sup>[2]</sup>. For the same reason most sabhas want to play it safe by reserving the first two or three rows of seats in the auditorium to only VIPs.

As and when the artist exhibits creativity, the audience acknowledge it by clapping their hands. With experienced artists, towards the middle of the concert, requests start flowing in. The artist usually plays the request and it helps in exhibiting the artist's broad knowledge of the several thousand kritis that are in existence. However it is generally a norm for the rasika to meet the artist before hand if the rasika wishes a complex kriti (like one of the Pancharatna Kritis) or a Ragam Tanam Pallavi to be done.

It is amusing to find that some of the crowd also start leaving when the *Thani* has begun.

## The teaching of Carnatic music

Traditionally, a student of Carnatic music goes to the house of the teacher for lessons. Both student and teacher sit cross-legged on the floor (usually on a mat). The teacher either starts playing the *tambkr* or turns on the *[ruti* box. The student sings an elongated "S...P...S (upper octave)...P...S..." and the class begins. Mayamalava Gowla is traditionally the first raga taught to the student.

With the advance of telecommunications, new ways of teaching Carnatic music have arisen. It is not uncommon now for a student to receive lessons by telephone or even webcam.

Since the late 20th century, there has been some attempts to create Carnatic music grades by music conservatories, which provide standardized tests between different Carnatic teachers. Although such attempts have not met with great popularity in India, standardized exams are often used in countries, like Canada, Great Britain, and France, where there is a high concentration of South Asian expatriates. One of the most widely recognized conservatories of music, is the Toronto-based Tamil Isai Kalaamanram which was formed in 1992. In 2005, it held exams for over 2000 applicants ranging from grades 1 to 7.

# The use and disuse of notation

## History of notation in Carnatic music

Contrary to what many people think, notation is not a new concept in Indian music. In fact, even the Vedas, although orally transmitted, were written with notation. However, the idea of notation in Carnatic music was not well-received, and it continued to be transmitted orally for centuries. The disadvantage with this system was that if one wanted to learn about a k+rtanam composed, for example, by Purandara Dasa, it involved the formidable task of finding a person from Purandara Dasa's lineage of students.

Written notation of Carnatic music was revived in the late 17th century and early 18th century, which coincided with rule of Shahaji II in Tanjore. Copies of Shahaji's musical manuscripts are still available at the Saraswati Mahal Library in Tanjore and they give us an idea of the music and its form. They contain snippets of solfege to be used when performing the mentioned ragas.

## Form of modern notation

### Melody.

Unlike Western music, Carnatic music is notated almost exclusively in tonic solfa notation using either a Roman or Indic script to represent the solfa names. Past attempts to use the staff notation have mostly failed. Indian music makes use of hundreds of ragas, many more than the [church modes](#) in western music. It becomes difficult to write Carnatic music using the staff notation without the use of too many accidentals. Furthermore, the staff notation requires that the song be played in a certain [key](#). The notions of key and absolute pitch are deeply rooted in western music, whereas the carnatic notation does not specify the key and prefers to use scale degrees (relative pitch) to denote notes. The singer is free to choose actual pitch of the tonic note. In the more precise forms of Carnatic notation, there are symbols placed above the notes indicating how the notes should be played or sung; however, informally this practice is not followed.

To show the length of a note, several devices are used. If the duration of note is to be doubled, the letter is either capitalized (if using Roman script) or lengthened by a diacritic (in Indian languages). For a duration of three, the letter is capitalized (or diacriticized) and followed by a comma. For a length of four, the letter is capitalized (or diacriticized) and then followed by a semicolon. In this way any duration can be indicated using a series of semicolons and commas.

However, a simpler notation has evolved which does not use semicolons and capitalization, but rather indicates all extensions of notes using a corresponding number of commas. Thus, S quadrupled in length would be denoted as "S,,,".

### Rhythm

The notation is divided into columns, depending on the structure of the *t7aC*. The division between a *laghu* and a *dh[taC* is indicated by a d, called a **aG**, and so is the

division between two *dh[taCs* or a *dh[taC* and an *anudh[taC*. The end of a cycle is marked by a e, called a **double aG** , and looks like a caesura.

## Some Artists

One of the earliest and prominent composers in South India was the saint, and wandering devine singer of yore Purandara Dasa (1480-1564). Purandara Dasa is believed to have composed 475,000 songs in Kannada and was a source of inspiration to the later composers like Tyagaraja. He also invented the tala system of Carnatic music. Owing to his contribution to the Carnatic Music he is referred to as the Father of Carnatic Music or *Karnataka Sangeethada Pitamaha*.

## The great composers

Thyagaraja (1759?-1847), Muthuswami Dikshitar (1776-1827) and Syama Sastri (1762-1827) are regarded as the trinity of carnatic music. Prominent composers prior to the trinity include Vyasatirtha, Purandaradasa, Kanakadasa. Other prominent singers are Annamacharya, Oottukkadu Venkata Kavi, whose exact lifespan is not known, Swathi Thirunal, Narayana teertha, Mysore Sadashiva Rao, Patnam Subramania Iyer, Poochi Srinivasa Iyengar, Mysore Vasudevacharya, Muthaiah Bhagavathar and Papanasam Sivan, Veena Kuppayar, Chembai Vaidyanatha Bhagavathar, Irayimman Thanmpi, Lalgudi Jayaram and Maharajapuram Santhanam.

## Modern vocalists

Mangalampalli Balamurali Krishna and DK Pattammal are some of the art's greatest living (albeit aging) performers. M.S. Subbulakshmi, who enthralled audiences across language barriers, is usually credited with popularizing the Carnatic tradition outside South India. She died on December 11, 2004. Legendary singer belonging to the Dhanammal school of music T. Brinda was known for her gamaka laden interpretations of core carnatic ragams and also her vast repertoire. She was awarded the Sangeetha Kalanidhi in 1976. Doyens like Alathur Venkatesa Iyer, Vasanthi Narasimhan, Narayanan Iyengar, Ariyakudi Ramanuja Iyengar, Chembai Vaidyanatha Bhagavathar and Maharajapuram Viswanatha Iyer. Semmangudi Srinivasa Iyer, G.N. Balasubramaniam,. Another great singer who made his own mark with soulful rendering was M D Ramanathan, Contemporary vocalists include Madurai T.N. Seshagopalan, T.V. Sankaranarayanan, Sudha Ragunathan, Sanjay Subrahmanyam, the Priya sisters (Haripriya and Shanmukhapriya), Kiranavali Vidyasankar, Gayathri Girish, Aruna Sairam, Ranjani & Gayatri, R. Vedavalli, Kalpakam Swaminathan, and Bombay Jayashree. Large festivals of Carnatic music always include performances by such people.

To date, there is only one Westerner who became a Carnatic musician of some popularity. His name is Jon B Higgins ("Higgins bhagavatar").

## Footnotes

1. The [violin](#) of Carnatic music is the same instrument as the violin of Western music, though tuned and held differently. It was introduced to India in the 19th century, when Balusvami Dikshitar (1786–1859), brother of Muttusvami Dikshitar, learnt the violin from a European violinist, and decided to adapt it to the South Indian system of music. It is particularly well suited for Indian music because it can produce the microtones that are essential to the Indian musical tradition. In North India, however, indigenous bowed instruments such as the *srangi* continue to be used. The [flute](#) was invented independently in India and the West; Krishna is said to have been a master of it. The difference is that the Indian flute is a bamboo tube with open holes, quite unlike the modern western version.
2. The v+G stalwart, Chitti Babu, was known for his anger and short temper; he is known to have interrupted the concert temporarily or even walked away because the percussionist didn't keep the correct rhythm!

# Carol

A **carol** is a festive song, generally religious but not necessarily connected with church worship, and often with a dance-like or popular character.

Today the carol is represented almost exclusively by the [Christmas carol](#), and to a much lesser extent by the Easter carol, however despite their present association with religion, this has not always been the case.

## History

The word *carol* is thought to have been derived from the French word *caroller*, a circle dance accompanied by singers (in turn derived from the Latin *choraula*). The carol was very popular as a dance song from the 1150s to the 1350s, after which its use expanded as a processional song sung during festivals, while others were written to accompany religious mystery plays (such as the Coventry Carol, written in 1591).

Following the Protestant Reformation (and the banning of many religious festivities during the British Puritan Interregnum), the carol went into a decline due to Calvinist aversion to things "pope-ish". However, composers such as William Byrd composed [motet](#)-like works for Christmas which they termed carols; and folk-carols continued to be sung in rural areas. Nonetheless, carols did not regain their former popularity until a revival in the 19th century when many surviving non-religious carols were re-discovered and arranged for church use with new Christian lyrics.

In modern times, songs that may once have been regarded as carols are now classified as songs (especially [Christmas songs](#)), even those that retain the traditional attributes of a carol - celebrating a seasonal topic, alternating verses and chorus, and danceable music.

## Bibliography

Important anthologies of carols include:

- Christmas Carols New and Old ed. H. R. Bramley and John Stainer (1871)
- The Oxford Book of Carols ed. Percy Dearmer, Martin Shaw and Ralph Vaughan Williams (1928)
- The University Carol Book ed. Erik Routley (1961}
- Carols for Choirs ed. David Willcocks, Reginald Jacques and John Rutter (1961-1988)
- The New Oxford Book of Carols ed. Hugh Keyte and Andrew Parrott (1992)
- The Penguin Book of Carols ed. Ian Bradley (1999)

# Cartoon Punk

**Cartoon punk** is a derogatory term for a variety of English-style [punk](#) that embodied the most exaggerated version of the most stereotypical elements of the English punk subculture.

# Origins

Cartoon punk has its origins in the cultural experiments of Malcolm McLaren, but did not come into full being until the next generation of punks developed the UK82 scene. The cartoon punk had a uniform of exaggerated punk fashion, with brightly-dyed mohawks, charged hair, liberty spikes, painted leather jackets covered with spikes and studs, zips, chains, plaid bondage trousers, mohair sweaters, Dr. Martens boots and the like.

The term *cartoon punk* was largely used as an insult by people who felt that they transcended the perceived limitations of the punk subculture. The insult originated in America, where people in the punk scene would call kids who became enamored with and emulated the English punk style cartoon punk, fashion punk and glam punk. Those who were labeled cartoon punks will often times not know much about the punk genre and will often be labeled ignorant as well. Those labeled cartoon punk would often be seen as intimidating for their "punker than thou" appearance.

A number of punk variants that are pegged with the cartoon punk label are; UK82, streetpunk, Oi!, cider punk and punk pathetic.

It can be easily argued that punk was always cartoonish, starting with the Ramones whose visual style and sound was highly regimented and tongue-in-cheek. The Ramones were also portrayed as cartoons by punk cartoonist John Holmstrom to add to the whole cartoon motif. This cartoonishness continued with the Sex Pistols and every band that followed.

The uniform nature of punk made for a quite profitable punk boutique economy as found on Kings Road, which was often seen as being at odds with the anti-materialistic nature of the subculture. This was the case from the beginning however, as Malcolm McLaren was first and foremost a boutique owner. However, any sort of establishment would be at odds with punk ideology, including music venues, magazines, record labels and the like.

Category: [Punk genres](#)

# Cassette culture

**Cassette culture** was in part an offshoot of the mail art movement of the 1970s and 1980s. In both the United States and the United Kingdom it owed a lot to the DIY ethic of [punk](#). In the UK cassette culture was at its peak in what is known as the [post-punk](#) period, 1978--1984; in the US activity extended through the late 80s and into the 90s. It was largely postal-based (though there were a few retail outlets, such as Rough Trade in the UK) with the artists selling or exchanging music on compact audio cassettes via a loose network of other artists and fanzine readers.

In the UK Cassette Culture was championed by marginal musicians and performers such as Storm Bugs, the insane picnic, Instant Automaton, Stripey Zebras, What is Oil?, The APF Brigade, Blyth Power, The Peace & Freedom Band, Academy 23, Cleaners From Venus, Chumbawamba, and many of the purveyors of Industrial music, e.g. Throbbing Gristle, Cabaret Voltaire, and Clock DVA. Artists self-releasing would often copy their music in exchange for "a blank tape plus self-addressed envelope". But there also existed many small 'tape labels' such as Snatch Tapes, Falling A Records, Datenverarbeitung (in Germany), Deleted Records, Fuck Off Records, ISC Compilation Tapes, New Crimes Tapes, Rasquap Products, Sterile Records and Third Mind Records that operated in opposition to the capitalistic aim of maximizing profit. There was great diversity amongst such labels, some were entirely 'bedroom based', utilising new home tape copying technologies (see below) whilst others were more organised, functioning in a similar way to more established record labels. Some also did vinyl releases, or later developed into vinyl labels. Many compilation albums were released, presenting samples of work from various artists. It was not uncommon for artists who had a vinyl contract to release on cassette compilations, or to continue to do cassette-only album releases (of live recordings, work-in-progress material, etc.) after they had started releasing records.

Although larger operators made use of commercial copying services, anybody who had access to copying equipment (such as the portable tape to tape cassette players that first became common around the early 1980s) could release a tape, and publicise it in the network of fanzines and newsletters that existed around this scene. Therefore cassette culture was an ideal and very democratic method for making available music that was never likely to have mainstream appeal. Arguably, such freedom led to a large output of poor quality and self-indulgent material in the name of 'artistic creativity'. On the other hand, many found in cassette-culture music that was imaginative, challenging, beautiful, and ground breaking, standing up more than adequately beside much output released on vinyl. The packaging of cassette releases, whilst often amateurish, was also an aspect of the format in which a high degree of creativity and originality could be found.

Cassette culture received something of a mainstream boost when acknowledged for a short while in the early 1980s in the UK by the major music press. Both the New Musical Express (NME) and Sounds, the main weekly music papers of the time, launched their own 'cassette culture' features, in which new releases would be briefly reviewed and ordering information given. Indeed even major players such as ex-Sex Pistols manager Malcolm McLaren flirted with cassette culture when he released Bow Wow's first LP (Your Cassette Pet) in a tape-only format on the EMI label -- though this, as with the British Electronic Foundation's Music for Stowaways, was more a response to the newly introduced Sony Walkman, than a recognition of the cassette scene. (Stowaway was the original name for the Walkman.)

In the United States, Cassette Culture was associated with [Lo-fi](#) music, and blossomed most strongly in the Inland Empire (California) on labels like Shrimper, and

in Olympia, Washington on labels like K Records. Artists such as Lou Barlow, Refrigerator, Nothing Painted Blue, The Mountain Goats, and Wckr Spgt recorded numerous albums available only on cassette throughout the late 80s and well into the 90s.

In the early 90s, Riot grrrl and other activist punk rock movements, such as [Queercore](#), also spawned their own brand of anti-Capitalist tape distribution. DIY cassette labels like Pass The Buck, Octopus Head, Mindkill, and others marked a new wave of rejecting mainstream production standards and capitalist values in the music business.

Though, in the mid-'90s cassette culture seemed to decline with the appearance of new technologies and methods of distribution such as the Internet, MP3 files, file sharing, and CD recorders, in recent years it has once again seen a revival, with the rise of tape labels like American Tapes, noPROFITjustPROGRESSrecordings, Heresee and Object Tapes. Some perceive this as a direct result of the questionable quality and the "anybody can do it" nature of CD-rs. The arrival of this technology may have given everybody the ability to put out a CD-r but in the mind of the underground music collector, this very thing cheapens the CD-r's perceived value. The very easy, but sometimes unwanted transfer of music from CDs and CD-rs to a file sharing network may also be some of the motivation behind a movement back to cassette.

## Cassette single

A **cassette single** (also known as a "cassingle") is a [music single](#) in the form of a compact audio cassette. The format was introduced in the 1980s, when vinyl record album sales were declining in favour of cassette recordings; the cassette single was introduced to replace the 45 record in a similar way.

Bryan Adams' "Heat of the Night" was released as a "cassingle" on March 13, 1987, making it the first commercially released cassette single in the U.S.

Originally, cassette singles were released in a cardboard sleeve that slipped over the outside of the release. This was then shrink wrapped in plastic. As the cassette [maxi-single](#) was released, more intricate packaging was incorporated that looked similar to the packaging of a regular cassette release. These were placed in regular plastic cassette cases with a paper/cardstock insert. Unlike a full-length cassette album, these were generally only one two-sided flap instead of a fold-out.

Cassette singles never eclipsed vinyl to the same extent as cassette albums had. They were popular mainly in the 1980s, owing to the popularity of mobile devices such as the Walkman or car audio cassette players; likewise they were outmoded by the advent of the compact disc. Along with Cassette albums and Vinyl records, they have since become a staple merchandise of car boot and garage sales.

In the UK, cassette singles were at their commercial peak during the 1990s. They were typically sold alongside the compact disc version, but at a somewhat lower price, and often with fewer "bonus" tracks. Their decline there broadly corresponded with the downturn of the pre-recorded cassette market in general.

# Cast recording

A **cast recording** is a recording of a [musical](#) that is intended to document the songs as they were performed in the show and experienced by the audience. An **original cast recording**, as the name implies, features the voices of the show's original cast. A cast recording featuring the first cast to perform a musical in a particular venue is known, for example, as an "original Broadway cast recording" or an "original London cast recording".

Cast recordings are (almost always) studio recordings rather than live recordings. The recorded song lyrics and orchestrations are identical (or very similar to) those of the songs as performed in the theatre. Like any studio performance, the recording is of course an idealized rendering, more glossily perfect than any live performance could be, and without audible audience reaction. Nevertheless, the listener who has attended the live show expects it to be an accurate souvenir of the experience.

Prior to the development of original cast recordings, there had of course been recordings of songs from musicals, and collections of several such songs, and recordings of songs performed by cast members; but they were recordings of *songs*, not recordings of *a musical*. For example, Danny Kaye made a set of recordings of songs from *Lady in the Dark*. Even though Danny Kaye was a member of the cast, this was certainly not an original cast recording—not merely because the arrangements and presentation were different, but because in this recording, Danny Kaye performed Gertrude Lawrence's songs!

The first original cast recording as we know it was probably Decca's 1943 recording of *Oklahoma!*. Earlier candidates exist, such as Marc Blitzstein's 1938 recordings of songs from *The Cradle Will Rock*. The Decca album, however, was a huge commercial success and was systematically followed up by further recordings from Decca, and, soon, all the other record companies. Cast recordings were particularly well suited for the then-new Columbia Records LP and in the early 1950s Columbia, guided by Goddard Lieberson, ascended to leadership and Columbia's cast recordings came to define the genre.

A 1970 documentary by D. A. Pennebaker, *Original Cast Album—Company* gives a straightforward view of the making of a cast recording. It shows how the recording studio looks, how performers are arranged, and how the director behaves. The cast feels the pressure of delivering a definitive performance, with a degree of perfection beyond that ever required on stage, under a time limit imposed by the high cost of studio time.

Vinyl LP cast recordings were usually released as single discs, and it was not rare for compromises to be made to fit the recording within the forty-to-fifty-minute time limit. For example, obscure songs might be not be included. In the 1980s, the rise of the Compact disc with its 74-minute recording capacity (which was increased to 80 minutes in the 1990s) resulted in improvements in cast recordings, which were now usually capable of including all songs, the full overture and entracte, and, when appropriate, lead-in dialogue to the songs.

# Castanets

The **castanets** are a [percussion instrument \(idiophone\)](#), much used in Moorish music, Roma music, Spanish music and Latin American music. The instrument consists of a pair of concave shells joined on one edge by string. These are held in the hand and used to produce clicks for rhythmic accents or a ripping or rattling sound consisting of a rapid series of clicks. They are traditionally made of hardwood, although fibreglass is becoming increasingly popular.

In practice a player usually uses two pairs of castanets. One pair is held in each hand, with the string hooked over the thumb and the castanets resting on the palm with the fingers bent over to support the other side. Each pair will make a sound of a slightly different [pitch](#). The higher pair, known as *hembra* (female), is usually held in the right hand, with the larger *macho* (male) pair held in the left.

Castanets are often played by singers or dancers, and are prominently used in [flamenco](#) music. The name (Spanish: *castañuelas*) is derived from the diminutive form of *castaña*, the Spanish word for chestnut, which they resemble. In Andalusia they are usually referred to as *palillos* (little sticks) instead, and this is the name by which they are known in flamenco.

The origins of the instrument are not known. The practice of clicking hand-held sticks together to accompany dancing is ancient, and was practiced by both the Greeks and the Egyptians. In more modern times, the bones and spoons used in Minstrel show and [jug band](#) music can also be considered forms of the castanet.

When used in an [orchestral](#) setting, castanets are sometimes attached to a handle, or mounted to a base to form a pair of *machine castanets*. This makes them easier to play, but also alters the sound, particularly for the machine castanets. It is possible to produce a roll on a pair of castanets in any of the three ways in which they are held. When held in the hand, they are bounced against the fingers and palm of the hand; on sticks, bouncing between fingers and the player's thigh is one accepted method. For a machine castanet, a less satisfactory roll is obtained by rapid alternation of the two castanets with the fingers.

During the [baroque period](#) castanets are featured prominently in dances. Composers like Jean-Baptiste Lully scored them for the music of dances which included Spaniards (Ballet des Nations), Egyptians (Persée, Phaëton) , Ethiopians (Persée, Phaëton), and Korybantes (Atys). In addition, they are often scored for dances involving less pleasant characters such as demons (Alceste) and nightmares (Atys). Their association with African dances is even stated in the ballet Flore (1669) by Lully, "...les Africains inventeurs des danses de Castagnettes entrent d'un air plus gai..."

Castanets were used to evoke a Spanish atmosphere in Georges Bizet's opera, Carmen and Emmanuel Chabrier's orchestral work España. They are also found in the "Dance of the Seven Veils" from Richard Strauss' opera Salome and in Richard Wagner's Tannhäuser. An unusual variation on the standard castanets can be found in Darius Milhaud's Les Choéphores, which calls for castanets made of metal.

Categories: [Latin percussion](#)

## **Catalog numbering systems for single records**

This list presents the numbering systems used by various record companies for single (mainly 7" 33 1/3 and 45, and 10" 78 rpm) records.

## Capitol

Capitol Records began with number 100 when it started. About 1947, the series was temporarily ended and a new series, beginning with 15000, was begun. After about 400 numbers (in early 1949), the old series was resumed, a few numbers below 600. By 1950 the number series had reached the 700s, and crossed the 1000 mark in the latter part of that year. There was a separate series of 40000s for country 78s. This series continued to 5999 in late 1967, when it resumed with 2000. It then continued uninterrupted to somewhere in the 5600's (about 1987) when it was changed again to the 44000s. The 'Starline' series used the 6000s.

## Columbia (US)

*For Columbia in the UK, see "EMI" which controlled the Columbia label there.*

In the 1940s, Columbia 78s used 5-digit numbers in the 30000s. The series had reached 38600 around 1950 and continued into the 1950s, passing the number 40000 in the middle of the decade. In the late 1940s, Columbia introduced 7" 33 1/3 rpm singles, which were numbered in their own series, with a prefix 1- before a low number, not exceeding 3 digits. Columbia originally resisted issuing 45 rpm singles, as that was a speed originated by competitor RCA Victor Records. However, eventually Columbia began to issue 45s with numbers identical to the corresponding 7" 33 1/3 singles, except for the prefix 6- instead of 1-.

Early in the 1950s, the system was changed to give singles at all speeds the same numbers except that the 33 1/3 rpm records had a prefix, now 3-, and the 45 rpm records also a prefix, now 4-, added to the number of the 78.

Eventually the only speed issued was 45 rpm, and the 4- prefix was dropped. By 1960 the series reached 41000, by 1970 it reached 45000. In 1974, shortly after passing 46000, the numbering series changed, beginning again with 10000. By 1980 the numbers reached 11000.

## **Decca (UK)**

UK Decca used a system of 4-digit numbers with an F prefix.

## Decca (US)

Decca 78s were originally given 4-digit numbers, reaching 3000 about 1940. The sequence grew quickly and passed 4000 in 1941. As late as 1944, 4-digit numbers were still used, but somewhat later the series was terminated.

Overlapping with this period, some Decca singles were given 5-digit numbers as early as January 1943, starting with 18500. The sequence was jumped to 23000 in 1945.

By the start of the 1950s, numbers were still in the 20000s, with 45s given corresponding numbers with the prefix 9-. The series reached 24700 around the beginning of 1950. Just before 1960 the numbers reached 30000; Decca's issues in the 1960s apparently came much more slowly, as by 1970 the numbers had only gone to about 32600.

Another series of Decca singles was numbered in the 40000s, apparently mostly devoted to [country](#) records.

The subsidiary label Coral used numbers in the 60000s.

# EMI

In the 1950s and early 1960s, EMI issued singles in the United Kingdom under the Columbia and HMV labels. Columbia singles generally had two letter prefixes such as DB, followed by 3- or 4-digit numbers. HMV issued 78rpm singles with the prefix B and a 5-digit number in the early 1950s. HMV 45rpm singles in the popular genre generally had numbers with the prefix 7M and 3 digits until 1956, changing in that year to POP prefixes. The B 5-digit numbers and the 7M 3-digit numbers were unrelated.

For its European branches, EMI changed at the end of the sixties to a uniform numbering system. xx xxx-xxxxx.

- The first digits represent the country (eg 1C is Germany, 2C is France, 3C is Italy, etc).
- The second three digits are mostly 006, but sometimes 004 or 008 was used for repressings, while 000 is used for jukebox pressing.
- The last 5 digits are the unique single reference for the single

## London

London began about 1950 at number 500 on 78s and 30000 on 45s. There was no relationship between the two sets of numbers.

## Mercury

Mercury 78s were numbered with 4-digit numbers in the 5000s in the late 1940s and early 1950s. In 1952, 5-digit numbers in the 70000s were assigned.

A separate series in the 8900s, subsequently changed to the 89000s, was issued consisting of jazz singles. Some jazz singles were also issued with numbers in the 11000s.

45s were given the same numbers as the 78s, with a suffixed "x45" added.

## **MGM**

MGM began with the number 10000 shortly before 1950.

By 1960 the numbers had reached just over 12800. It continued to over 14800, which is where it ended in the mid-1970s.

## RCA

RCA Victor Records went in the mid-40s to a complex system, in which all records had a 2-digit prefix denoting the type of music and a 4-digit specific number. Most popular 78s had the prefix 20, but other prefixes existed.

When the 45 rpm record was originated in the late 1940s, a prefix was set up for each type of music, with 47- for the popular records whose 78 rpm version was given a 20- prefix. At first the numbers of the two versions were not similar, but in 1950 the system was changed to provide the same numbers after the hyphen for both speed versions of a single record.

As the 1950s proceeded, most prefixes other than 20- for 78s and 47- for 45s were eliminated. And of course, 78s themselves did not last long into the 1950s.

In 1969, a new prefix, 74- was introduced, starting with 74-0100. This series was primarily for rock acts. The 47- prefix series continued for easy-listening and country issues. When the 47- series reached 9999, it was changed to PB- (and sometimes GB-), starting with 10000. The 74- series was eventually combined into the PB- series.

In the mid-1980s, various series were used - 5000-5100s (1984), 8600s (1988)- and 2500s (1990). The 62000 series began in 1991.

## CD single

A **CD single** is a [music single](#) in the form of a compact disc. The format was introduced in the mid to late 1980s, but didn't gain its place in the market until the early 1990s.

CD singles soon eclipsed sales of other single formats like vinyl and the [cassette single](#), but starting in the late 1990s, record companies began to issue fewer CD singles, to the point where Billboard Magazine changed their rules to allow singles without commercial releases to chart. As a result of this rule, the production and sales of CD singles greatly dropped in the United States.

The release of CD singles in America continued into the 2000s, but 2001 saw the last major surge of CD single releases. Some record companies like Arista/BMG and the imprints of Sony Music Entertainment even tried re-releasing old singles to reboot the market, but without avail. CD [maxi singles](#), however, continue to exist in greater quantity for the [dance music](#) market.

Just as the CD single replaced the cassette single (which replaced the 7" vinyl single), CD singles are being replaced by the [digital download](#).

# Cello

The **violoncello**, almost always abbreviated to **cello** (the c is pronounced /tʃ/ as the ch in "church"), is a [stringed instrument](#) and a member of the [violin family](#). A cello player is called a **cellist**. The cello is popular in many capacities: as a solo instrument, in [chamber music](#), and also as a foundation of the modern orchestral sound.

## Description

The name *cello* is an abbreviation of the Italian *violoncello*, which means "little violone". The violone is an obsolete instrument, a large viol, similar to a modern double bass.

The cello is most closely associated with [European classical music](#). It is part of the standard [orchestra](#) and is the bass voice of the [string quartet](#), as well as being part of many other [chamber](#) groups. A large number of concertos and [sonatas](#) have been written for it. It is less common in [popular music](#), but is sometimes featured in [pop](#) and [rock](#) recordings.

Among the most famous Baroque works for the cello are J. S. Bach's *Unaccompanied Suites for Cello*, commonly known as the Bach Cello Suites). An example of a [Classical era](#) piece is Haydn's *Cello Concerto #1 in C major*. Standard Romantic era repertoire includes Dvořák's *Cello Concerto in B minor*, Elgar's *Cello Concerto in E minor*, and two sonatas by Brahms. Modern compositions from the early 20th century include unaccompanied cello sonatas by Paul Hindemith (opus 25) and Zoltán Kodály (opus 8). Recordings within the Avant Garde (cutting edge) genre have revitalized the instrument's perceived versatility. One example is *Night of the Four Moons* by George Crumb.

## Construction

The cello is larger than the [violin](#) or the [viola](#) but smaller than the double bass. Like the other members of the [violin family](#), the cello has four strings. Its strings are normally tuned to the [pitches](#) (from high to low) A, D, G, and C (A3, D3, G2, and C2 in scientific pitch notation). This is like the [viola](#) but one octave lower, and is one octave plus one fifth lower than the [violin](#) (see #Tuning and range). It is played in an upright position between the legs of a seated musician, resting on a metal spike called the endpin. The player draws the bow horizontally across the strings. The cello is a complex instrument consisting of many different parts. Although the majority of it is composed of wood, some parts can be made of steel or other metals and/or composite material. Today, the strings are most often metal but can be made of gut or nylon.

### Body

The main frame of the cello is typically made from wood, although some modern cellos are constructed from carbon fibre. A traditional cello normally has a spruce top, with maple for the back, sides, and neck. Other woods, such as poplar or willow, are sometimes used for the back and sides. Less expensive cellos frequently have a top and back made of a laminate.

The top and back are traditionally hand-carved, though less expensive cellos are often machine-produced. The sides, or ribs, are made by heating the wood and bending it around forms. The cello body has a wide top bout, narrow middle formed by two C-bouts, and wide bottom bout, with the bridge and f-holes just below the middle.

### Neck, pegbox, and scroll

Above the main body is the carved neck, which leads to a pegbox and then a scroll. The neck, pegbox, and scroll are normally carved out of a single piece of wood. Attached to the neck and extending over the body of the instrument is the fingerboard. The nut is a raised piece of wood, where the fingerboard meets the pegbox, which the strings rest on. The pegbox houses four tuning pegs, each which tunes its respective string by either tightening or loosening the string. The scroll is a traditional part of the cello and all other members of the [violin family](#). Ebony is usually used for the tuning pegs, fingerboard, and nut, but other dark woods, such as boxwood or rosewood, can be used.

### Tailpiece and endpin

The tailpiece and endpin are found at the opposite end of the body to the neck. The tailpiece is traditionally made of ebony or another dark wood, but can also be made of plastic or composite material. It attaches the strings to the tail end of the cello. The endpin, made of metal or carbon fibre, supports the cello while in playing position. Modern endpins are usually retractable and adjustable. The end of the endpin touching

the floor is usually a spiked tip that can be capped with rubber; both serve to grip the floor and prevent the cello from moving or slipping.

## **Bridge and f-holes**

The bridge elevates the strings above the cello and transfers their vibrations to the soundpost inside (see below). The bridge is not glued on; tension from the strings holds it in place. The f-holes (named for their shape) are located on either side of the bridge, and allow air to move in and out of the instrument to produce sound. Additionally, f-holes act as access points to the interior of the body when the need for repair or maintenance arises. A "dampit", sometimes used to maintain proper humidity levels, can also be inserted through the f-holes.

## **Internal features**

Internally, the cello has two important features: a bass bar, which is glued to the underside of the top of the instrument, and a round wooden sound post (also called a sound peg), which is sandwiched between the top and bottom. The bass bar, found under the bass foot of the bridge, serves to support the cello's top, making it rigid. The sound post, found under the treble side of the bridge, connects the back and front of the cello. Like the bridge, the sound post is not glued to anything, but is kept in place by the tensions of the bridge and strings. Together, the bass bar and sound post are responsible for transferring the strings' vibrations to the body of the instrument, which in turn transfers them to the air mass inside the instrument, producing sound.

## **Glue**

Cellos are constructed and repaired using hide glue, which is strong but reversible, allowing for disassembly when needed. Tops may be glued on with diluted glue, since some repairs call for the removal of the top. Theoretically, hide glue is weaker than the body's wood, so as the top or back shrinks side-to-side, the glue holding it will let go, avoiding a crack in the plate. However, in reality this does not always happen.

## **Bow**

Traditionally, bows are made from Pernambuco (high quality) or brazilwood (lower quality). Both woods come from the same species of tree (*Caesalpinia echinata*), but Pernambuco is the heartwood of the tree and is much darker (Brazilwood is stained/painted dark to compensate). Pernambuco is a heavy, resinous wood with great elasticity and high sound velocity which makes it an ideal wood for instrument bows. The hair is horsehair, though synthetic hair is also available nowadays. In addition, the bow can now be made of fiberglass or carbon fibre (or wood with a carbon fibre core). The hair is coated with rosin periodically to make it grip the strings and cause them to vibrate. Bows need to be re-haired periodically. The most common reason for rehairing is excessive hair loss through breakage. Hair that has stretched, and will not tighten enough, also calls for professional attention. Some professionals believe that eventually hair can also "lose its grip." Others disagree, saying that if the ribbon has enough hair, and will tighten properly, a proper cleaning will restore its playing quality. The hair is kept under tension while playing by a screw which pulls the

*frog/Heel* (the part of the bow one holds) back. Leaving the bow tightened for long periods of time can damage it by warping the stick. The dimensions of the cello bow are 73cm long and 3cm wide.

## Development

The cello developed from the bass violin, first used by Monteverdi, which was a three-string consort instrument. The invention of wire-wound strings (fine wire around a thin gut core), around 1660 in Bologna, allowed for a finer bass sound than was possible with purely gut strings on such a short body. Bolognese makers exploited this new technology to create the cello, a somewhat smaller instrument suitable for solo repertoire due to both the timbre of the instrument and the fact that the smaller size made it easier to play virtuosic passages. This instrument had disadvantages as well, however. The cello's light sound was not as suitable for church and ensemble playing, so it had to be doubled by basses or violones.

Around 1700 Italian players popularized the cello in northern Europe, although the bass violin continued to be used for another two decades in France and England. The sizes, names, and tunings of the cello varied widely by geography and time. The size was not standardized until around 1750.

Despite superficial similarities, the cello is not in fact related to the viola da gamba. The cello is actually part of the viola da braccio family, meaning viol of the arm, which includes, among others, the [violin](#). There are actually paintings of people playing the cello on the shoulder, like a giant violin. It was only somewhat later that the cello began to be played while being supported by the calves, and even later, by an endpin (spike).

Baroque era cellos differed from the modern instrument in several ways. The neck has a different form and angle which matches the baroque bass-bar and stringing. Modern cellos have a retractable metal (or sometimes carbon fibre) spike at the bottom to support the instrument (and transmit some of the sound through the floor), while Baroque cellos are held only by the calves of the player. Modern bows curve in and are held at the frog; Baroque bows curve out and are held closer to the bow's point of balance. Modern strings normally have a metal core, although some use a synthetic core; Baroque strings are made of gut, with the G and C strings wire-wound. Modern cellos often have fine-tuners connecting the strings to the tailpiece, which make it much easier to tune the instrument. Overall, the modern instrument has much higher string tension than the Baroque cello, resulting in a louder, more direct, tone, with fewer overtones.

No educational works specifically devoted to the cello existed before the 18th century, and those that do exist contain little value to the performer beyond simple accounts of instrumental technique. One of the earliest cello manuals is Michel Corrette's *Méthode, théorique et pratique. Pour Apprendre en peu de temps le Violoncelle dans sa Perfection* (Paris, 1741).

## Sound

The cello produces a deep, rich, and vibrant sound. The cello reaches the lowest pitch in the traditional [string quartet](#) and is capable of covering nearly the entire range of pitches produced by the human voice. In the upper register, many cellos may be said to have a "tenor-like" timbre.

# Playing technique

## Body position

The cello is played sitting, with the knees apart and the instrument between them. The scroll, or top, of the instrument is placed by the player's left ear, making the C string closest to the ear and the A string furthest from the ear. The shoulders should be square but relaxed and the arms loose and able to move freely.

In early times, when the cello was played by women it was positioned alongside the legs. It was considered improper for a lady to part her knees in public.

## Left hand technique

The left hand determines the pitch of the note when the cello is played. The hand is positioned either so the thumb is against the back of the neck and the other four fingers are available to depress the strings on the fingerboard or with all five fingers above the fingerboard, the side of the thumb being used as well as the tips of the other fingers (known as "thumb position"). The fingers are normally held curved with each knuckle bent, unless certain intervals require flat fingers (as in fifths). In fast playing, the fingers contact the strings at the tip, almost at the nail. In slower, or more expressive playing, the flat of the fingerpad is used, allowing a richer tone and fuller vibrato. If the string is depressed further down the string, closer to the bridge, the resulting pitch will be higher because the string has been shortened. If it is depressed further up the string, closer to the scroll of the instrument, the pitch will be lower.

## Additional left hand techniques

### Vibrato

Vibrato consists of oscillating the finger of the left hand up and down while playing a note. As a result, the pitch of the note will waver slightly, much as a singer's voice on a sustained note. A well developed vibrato technique is a key expressive device and an essential element of an accomplished cello player. In some styles of music, such as that of the [Romantic](#) period, vibrato is used on almost every note. However, in other styles, such as [Baroque](#) pieces, vibrato is not used, or used only rarely, as an ornament. A good vibrato comes from the arm, not the fingers or wrist, and requires a loose shoulder. Typically, the lower the pitch of the note played, the wider the vibrato used.

### Glissandi

Glissandi are notes played by sliding the finger up or down the fingerboard without releasing the string. This causes the pitch to rise and fall smoothly, without separate, discernable steps.

### Harmonics

Harmonics are produced by lightly touching, but not fully depressing, the string with the finger at certain places, and then bowing (or even plucking) the string. For example, the halfway point of the string will produce a harmonic that is one octave above the unfingered (open) string (in effect doubling the frequency of the open string). There are also artificial harmonics, in which the player depresses the string

with one finger while touching the same string lightly with another finger (at certain intervals, mostly of a perfect fourth higher). This technique produces a distinctive sound effect, resembling the flute. Artificial harmonics are performed routinely with the thumb (pressed fully) and the third finger (lightly touching the same string, a fourth higher).

## Right hand technique

In cello playing, the bow is much like the breath of a [wind instrument](#) player. Arguably, it is the major determinant in the expressiveness of the playing. The right hand holds the bow and controls the duration and character of the notes. The bow is drawn over along the strings in the area between the fingerboard and bridge, in a direction perpendicular to the strings. The bow is held with all five fingers of the right hand, the thumb opposite the fingers and closer to the cellist's body. The shape of the hand should resemble that of its relaxed state, with all fingers curved, including the thumb, and the wrist pronated. The index finger, and to a lesser degree the middle finger transmit most of the arm weight into the bow. The middle two fingers help to control the tilt of the bow.

On a "down-bow", the bow is drawn to the right of the player, moving the hand away from the bridge. On an "up-bow", the bow is drawn to the left way, bringing the hand closer to the bridge. The bow is always held perpendicular to the string being played. Each string requires a slightly different tilt of the bow on the string. The wrist is kept flexible, and cushions the movement of the bow to avoid abrupt changes, especially during the switch from up-bow to down-bow and vice versa. For very fast bow movements, the wrist is used to accomplish the horizontal movement of bow. For longer strokes, the arm is used as well as the wrist.

Tone production and volume of sound depend on a combination of several factors. The three most important ones are: bow speed, arm weight applied to the string, and point of contact of the bow hair with the string. A good player will be capable of a very even tone, and will counter the natural tendency to play with the most force with the part of the bow nearest to the frog or heel, and the least force near the tip. The closer to the bridge the string is bowed, the louder and brighter the tone, with the extreme (*sul ponticello*) producing a metallic, shimmery sound. If bowing closer to the fingerboard (*sul tasto*), the sound produced will be softer, more mellow, and less defined.

### Additional right hand techniques

#### Double stops

Double stops involve the playing of two notes at the same time. Two strings are fingered simultaneously, and the bow is drawn so as to sound them both at once.

Triple and quadruple stops may also be played (in a "broken" fashion), but are difficult to sustain.

#### Pizzicato

In pizzicato playing, the string is plucked with the right hand fingers, or very rarely those of the left hand, and the bow is simply held away from the strings by the rest of the hand or even set down. A single string can be played *pizzicato*, or double, triple, or quadruple stops can be played. Occasionally, a player must bow one string with the right hand and simultaneously pluck another with the left.

Strumming of chords is also possible, in guitar fashion.

#### Col legno

Col legno is the technique in which the player taps the wooden stick of the bow on the strings, which gives a percussive sound that is quite often used in contemporary music.

#### Spiccato

In spiccato, or "bouncy bow" playing, the strings are not "drawn" by the bow but struck by it, while still retaining some horizontal motion, to form a more percussive, crisp sound. It may be performed by using the wrist to "dip" the bow into the strings. Spiccato is usually associated with lively playing. On a violin, *spiccato* bowing comes off the string, but on a cello, the wood of the bow may rise briskly up without the hair actually leaving the string.

#### Staccato

In staccato, the player moves the bow a very short distance, and applies greater pressure to create a forced sound.

## Tuning and range

The cello has four strings referred to by their standard tuning, which is in perfect fifth intervals: the A-string (highest sounding), D-string, G-string, and C-string (lowest sounding). The A-string is tuned to the pitch A<sub>3</sub> (which is three half-steps lower than middle C), the D-string a fifth lower at D<sub>3</sub>, the G-string a fifth below that at G<sub>2</sub>, and the C-string tuned to C<sub>2</sub> (two octaves lower than middle C). Cellos are usually tuned to a reference pitch of A<sub>4</sub> at 440 Hz, though tuning to other frequencies, such as 442 Hz is also common. The actual pitch of the A-string is A<sub>220</sub> (an octave lower than A<sub>440</sub>). Some pieces, notably the 5th of Bach's 6 Suites for Unaccompanied Cello, require an altered tuning of the strings, known as scordatura; another well-known example is Zoltán Kodály's Solo Cello Sonata. Many believe that the 6th of Bach's 6 Suites for Unaccompanied Cello was actually written for a five string "violoncello piccolo", a smaller cello with a high E-string above the A-string, that is no longer commonly used. Unlike five string violins, violas and basses, five string acoustic cellos are difficult to find. Many electric cello models can have five or even six strings though.

While the lower range of the cello is limited by the tuning of the lowest string (typically C<sub>2</sub>, two octaves below middle C), the upper range of the cello varies according to the skill of the player, and length of the fingerboard. A general guideline when writing for professional cellists sets the upper limit at C<sub>6</sub> (two octaves above middle C), although even higher pitches are possible, up to one extra octave. Because of the enormous range of the instrument, written music for the cello frequently alternates between the bass clef, tenor clef, and treble clef. Some romantic composers (notably Dvořák) also wrote notes in treble clef, but intended them to be played an octave lower than written; this technique was more common during the 18th century.

## Sizes

Standard-sized cellos are referred to as "full-size". However, cellos come in smaller (fractional) sizes, from "seven-eighths" and "three-quarter" down to "one-sixteenth" sized cellos (e.g.  $7/8$ ,  $1/4$ ,  $1/16$ ). The smaller-sized cellos are identical to standard cellos in construction, range, and usage, but are simply 'scaled-down' for the benefit of children and shorter adults. A "half-size" cello is not actually half the size of a "full-size", It is just slightly smaller. The same goes for other sizes. Many smaller female cellists prefer to play a "seven-eighths" cello as the hand stretches in the lower positions are less demanding. Although rare, cellos in sizes larger than four-fourths do exist. Cellists with unusually large hands may play a slightly larger than full-sized cello. The cellos of the 17th- and 18th-century masters (e.g. Stradivarius and Guarneri) tend to be slightly smaller than what is today considered full-sized.

## Accessories

There are many accessories to the cello, (some more essential than others).

- Cases are used to protect the cello and bow when traveling, and for safe storage.
- Rosin is applied to the bow hairs to increase the effectiveness of the friction and allow proper sound production.
- Rockstops "Black Holes" or endpin straps keep the cello from sliding if the endpin does not have a rubber piece on the end (used on wood floors).
- Wolf tone eliminators are sometimes placed on cello strings between the tailpiece and the bridge in order to eliminate noises known as wolf tones or "wolfs".
- Mutes are used to change the sound of the cello by removing overtones. Practice mutes (made of metal) reduce significantly the instrument's volume (they are also referred to as "hotel mutes").
- Metronomes provide a steady tempo by sounding out a certain number of beats per minute. Many models can also produce a tuning pitch of A4 (440 Hz), among others.
- Humidifiers are used to control and stabilize the humidity around and inside the cello.
- Tuners are used to tune the instrument.

## Current use

### Orchestral

Cellos are part of the standard symphony orchestra. Usually, the orchestra includes eight to twelve cellists. The cello section, in standard orchestral seating, is located on stage left (the audience's right) in the front, opposite to the first violin section. However, some orchestras prefer secondary orchestral seating, where the cello section is placed in the middle front, between the first violins and second violins. The principal, or "first chair" cellist is the leader of the cello section who determines bowings for the section in conjunction with other string sections, and plays solos. In standard orchestra seating, he/she sits nearest to the conductor and the audience. In secondary orchestra seating, he/she sits nearest the conductor and stage left in comparison to the cellist next to him/her (the cellist sitting "second chair").

The cellos are a critical part of orchestral music; all symphonic works involve the cello section, and many pieces require cello soli or solos. Much of the time, cellos provide part of the harmony for the orchestra. On many occasions, the cello section will pick up the melody of the piece for a brief period of time, before returning to the harmony. There are also cello [concertos](#), which are orchestral pieces in which a featured, solo cellist is accompanied by an entire orchestra.

### Solo

There are numerous cello concertos, where the cello is accompanied by an [orchestra](#), for example Elgar's Cello Concerto. There are also many [sonatas](#) for cello and [piano](#). There are also several unaccompanied pieces for cello, most notably J.S. Bach's Unaccompanied Suites for Cello, and Britten's *Unaccompanied Suites for Cello*.

### Quartet/Ensembles

The cello is a member of the traditional [string quartet](#). In addition, cellos are also usually part of string [quintets](#), [sextet](#) or [trios](#). There have been several pieces written for a cello ensemble of up to twenty or more cellists. This type of ensemble is often called a 'cello choir'. The Twelve Cellists of the Berlin Philharmonic Orchestra (or "the Twelve" as they are called) are a prime example of a cello choir. They play and record pieces written especially for twelve cellos including adaptations of well-known Beatles songs.

### Pop Music

Though the cello is less common in [popular music](#) than in "[classical](#)" music, it is sometimes featured in [pop](#) and [rock](#) recordings. The cello is rarely part of a group's

standard lineup (though like its cousin the [violin](#), it is becoming more common in mainstream pop).

The Beatles pioneered the use of a solo cello in popular music, in songs such as "Eleanor Rigby". Established non-traditional cello groups include: Apocalyptica, a group of Finnish cellists best known for their versions of heavy metal songs, and Rasputina, a group of three female cellists committed to an intricate cello style intermingled with Gothic music, and Break of Reality. These groups are examples of a style that has become known as [cello rock](#). The well known Seattle grunge band Nirvana was known to have used cellos. The Nebraskan band Cursive also used a cello to make their guitar/cello harmonies in their album, "The Ugly Organ".

## Makers / Luthiers

A violin maker or luthier is someone who builds or repairs stringed instruments, ranging from guitars to violins. Some well known cello luthiers include:

Nicolo Amati  
Nicolò Gagliano  
Matteo Gofriller  
Giovanni Battista Guadagnini  
Giuseppe Guarneri  
Domenico Montagnana  
Stefano Scarpella  
Antonio Stradivari  
David Tecchler  
Carlo Giuseppe Testore  
Jean Baptiste Vuillaume

## Cellists

A person who plays the cello is called a *cellist*. For a list of notable cellists.

# Cello rock

**Cello rock** is a genre of music characterized by the use of [cellos](#) and other stringed instruments such as [violin](#) and [viola](#) to create a sound, beat, and texture similar to that of familiar [rock music](#), but distinctly reshaped by the unique timbres and more traditional genres of the cello (in particular) and other stringed instruments used. The cellos and other stringed instruments are often electronically amplified and/or electronically modified. They are often combined with other elements typical of rock music such as rock-style vocals drumming.

*Cello rock* has been developing slowly over the years, with its direct influences dating as far back as the 1930s in Russia and Germany. The popularity of Cello rock is steadily on the rise, as artists such as Metallica and Marilyn Manson lend support to the fledgling groups, though the genre still lies mostly in the dark in the United States music scene.

Examples of *Cello rock* groups are Apocalyptica, Rasputina, Break of Reality, Matson Jones, Tarantula A.D., Murder By Death, The Stiletto Formal, Cursive and Primitivity. Apocalyptica has caused a veritable musical revolution on the European continent. Pioneered by a Finnish quartet (now trio), Apocalyptica originally played cello rock covers of heavy metal songs, including ones by Metallica. They now mostly play their own compositions. Rasputina is an American band that is known for covering Led Zeppelin songs live, wearing nothing but Victorian Period Clothing such as corsets, and catering to the American [goth](#) scene. Primitivity is the project name for cellist Loren Westbrook-Fritts' cello rock. Westbrook-Fritts began by covering songs of Megadeth, and has more recently created original music and classical music converted to metal.

A subgenre pioneered by cellist Gideon Freudmann, which he coined "Cellopop" (a term he also uses personally), is essentially folk-rock cello, or more specifically and officially: "Imagine the passion of a Mozart aria or the fury of a Bartok quartet layered with an R&B sensibility."

*Cello rock* now has record labels devoted solely to the production of music in that genre, such as Vitamin Records.

# Cello sonata

A **cello sonata** usually denotes a [sonata](#) written for [cello](#) and [piano](#), though other instrumentations are used, such as solo cello. The most famous [Romantic-era](#) cellos sonatas are those written by Johannes Brahms and Ludwig van Beethoven. Some of the earliest cello sonatas were written in the 18th century by Francesco Geminiani and Antonio Vivaldi.

(The following list includes only well-known sonatas, with or without accompanying instruments. See the [See also](#) list for more comprehensive lists divided up into solo and accompanied works.)

## List of Cello Sonatas

Samuel Barber  
Cello Sonata Op. 6 in C minor (1932)

Ludwig van Beethoven  
Cello Sonata Op. 5 No. 1 in F major (1796)  
Cello Sonata Op. 5 No. 2 in G minor (1796)  
Cello Sonata Op. 69 in A (1808)  
Cello Sonata Op. 102 No. 1 in C (1815)  
Cello Sonata Op. 102 No. 2 in D (1815)

Johannes Brahms  
Cello Sonata Op. 38 in E minor (1862–5)  
Cello Sonata Op. 99 in F (1886)  
Violin Sonata "Rain" Op. 78 (1878–9) is sometimes transcribed for cello.

Frank Bridge  
Cello Sonata in d minor

Frédéric Chopin  
Cello Sonata Op. 65 in G minor (1845–6)

Claude Debussy  
Cello Sonata in D minor (1915)

Gabriel Fauré  
Cello Sonata Op. 109 in D minor (1917)  
Cello Sonata Op. 117 in G minor (1921)

Edvard Grieg  
Cello Sonata Op. 36 in A minor (1883)

Felix Mendelssohn  
Cello Sonata Op. 45 in B-flat (1838)  
Cello Sonata Op. 58 in D (1842–3) ([1])

Sergei Prokofiev  
Cello Sonata Op. 119 in C (1949)  
Sonata for Solo Cello in C# minor, Op. 134 (unfinished)

Sergei Rachmaninov  
Cello Sonata Op. 19 in G minor (1901)

Franz Schubert  
Sonata for Arpeggione D.821 in A minor is often transcribed for cello.

Dmitri Shostakovich  
Cello Sonata Op. 40 in D minor (1934)

# Celtic music

**Celtic music** is a broad grouping of [musical genres](#) that evolved out of the [folk musical](#) traditions of the Celtic peoples of Western Europe. The term *Celtic music* may refer to both orally-transmitted traditional music and recorded [popular music](#) some with only a superficial resemblance to folk styles of the Celtic peoples, some in a serious work to bring the originalities of the celtic traditions into the modern world.

**Celtic music** means two things mainly. The first: the music of the peoples calling themselves **Celts** (a non-musicologicistic definition which we can compare with French music, European music). The second: what is shared only by the musics of the Celtic Nations (a musical definition). We see further that some consider there is nothing, some others say there is (as Alan Stivell).

Often, the term *Celtic music* is applied to the music of Ireland and Scotland, because both places have produced well-known distinctive styles which actually have genuine commonality and clear mutual influences. They are famous too because of the importance of Irish and Scottish ascendants in the English speaking world. The music of Wales, Cornwall, Isle of Man, Brittany, Northumbria, Galicia and Northeastern Portugal are also frequently considered a part of Celtic music, the Celtic tradition being particularly strong in Brittany, where Celtic festivals large and small take place throughout the year and because of Alan Stivell's recordings and tours. Finally, the music of ethnically Celtic peoples abroad are also considered, especially in Canada and the United States.

## Divisions

In *Celtic Music: A Complete Guide*, June Skinner Sawyers acknowledges six Celtic nationalities divided into two groups according to their linguistic heritage. The Q-Celtic nationalities are the Irish, Scottish and Manx peoples, while the P-Celtic groups are the Cornish, Bretons and Welsh peoples. Sawyer also mentions the Celtiberian languages as part of P-Celtic.

The Breton musician Alan Stivell uses a similar dichotomy, between the Gaelic (Irish and Scottish) branch and the Brythonic (Breton and Welsh) group, which differentiate "mostly by the extended range (sometimes more than two octaves) of Irish and Scottish melodies and the closed range of Breton and Welsh melodies (often reduced to a half-octave), and by the frequent use of the pure pentatonic scale in Gaelic music."

## Definition debate

At issue is the lack of many common threads uniting the "Celtic" peoples listed above. While the ancient Celts undoubtedly had their own musical styles, these have grown and evolved to the point where considering any modern styles reminiscent of ancient Celtic music is misleading. There is also tremendous variation between Celtic regions. Ireland, Scotland, Wales, and Brittany have living traditions of language and music, whereas Cornwall and the Isle of Man have only revivalist movements that have yet to take hold. Galicia has no Celtic language (Galician is a Romance language closest to Portuguese), but Galician music is often claimed to be "Celtic." The same is true of the music of Northeastern Portugal. Thus traditionalists and most [musicological](#) scholars dispute that the "Celtic" lands have any folk connections to each other. A strong case can be made that the similarities between the various musics called "Celtic" derive more from a common origin in the vernacular music of late mediaeval and early modern Europe than from any innate Celticity.

A strong case can be made that the similarities between the various musics called "Celtic" derive more from a common origin in the vernacular music of late mediaeval and early modern Europe than from any innate Celticity. But that is giving too much importance to basic material, knowing that the originality of a music is in the subtle transformation, by a people or a group of peoples, of material shared by larger communities.

Many critics of the idea of modern Celtic music claim that the idea is the creation of modern marketing designed to stimulate regional identity in the creation of a consumer niche; June Skinner Sawyers, for example, notes that "Celtic music is a marketing term that I am using, for the purposes of this book, as a matter of convenience, knowing full well the cultural baggage that comes with it". If we look at it closer, we see that the so-called "marketing" or "show-business" creation was born in the mind of an idealistic man who first (late 60s) blent the music of all the Celtic countries with a modern touch in his recordings and concerts: the Breton Alan Stivell.

## Forms

Identifying "common characteristics" of Celtic music is problematic. Most of the popular musical forms now thought of as characteristically "Celtic" were once common in many places in Western Europe. Jigs were adapted from Italian music, for example, and [polkas](#) have their origin in Czech and Polish tradition.

On the other hand, there are musical genres and styles specific to each Celtic country, due in part to the influence of individual song traditions and the characteristics of specific languages. Strathspeys are specific to Highland Scotland, for example, and mimic the rhythms of the Scottish Gaelic language.

## Festivals

The Celtic music scene involves a large number of [music festivals](#). Some of the most prominent include Festival Internacional do Mundo Celta de Ortigueira (Ortigueira, Galicia), Celtic Colours (Cape Breton, Nova Scotia), Celtic Connections (Glasgow) and Festival Interceltique (Lorient, Brittany).

## Modern Adaptations

The first modern adaptations in the 60s were (though english) those of Jethro Tull, of Fairport Convention, and, in Ireland, Horslips, in Brittany, Alan Stivell, who made the first attempt of pan-celtic modern popular music and is still now exploring new kinds of Celtic fusion. In 1982 with The Pogues invention of Celtic folk-punk, there has been a movement to incorporate Celtic influences into other genres of music. Marxman, an Irish-Jamaican hip hop group that gained notoriety in Britain in the late 1980's and was banned from the BBC for including I.R.A. slogans in their music, sampled traditional Celtic instruments in several of their songs as well. Sinéad O'Connor has also been active in the fusion movement and incorporated a wide range of modern and traditional influences into her music. In Scotland Gaelic punk bands such as Oi Polloi and Mill a h-Uile Rud that write and perform in Scots Gaelic have recently gained popularity as well. Today there are Celtic-influenced sub genres of virtually every type of popular music, from [House](#) to [Trance](#), [hip hop](#) to [Punk Rock](#). Collectively these modern interpretations of Celtic music are sometimes referred to as Celtic Fusion.

## Celtic music in the United States

Irish and Scottish music have long been a major part of [American music](#), at least as far back as the 19th century. Beginning in the 1960s, performers like the Clancy Brothers become stars in the Irish music scene, which dates back to at least the colonial era, when numerous Irish immigrants arrived. At first, these were mostly Scots-Irish Presbyterians, whose music was most "closely related to a Lowland Scottish style" .

The most significant impact of [Celtic Music](#) on American styles, however, is undoubtedly that on the evolution of [country music](#), a style which blends Anglo-Celtic traditions with "sacred hymns and African American spirituals". Country music's roots come from "Americanized interpretations of English, Scottish, Scots and Scots-Irish traditional music, shaped by African American rhythms, and containing vestiges of (19th century) popular song, especially (minstrel songs)" . This fusion of Anglo-Celtic and African elements "usually consisted of unaccompanied solo vocals sung in a high-pitched nasal voice, the lyrics set to simple melodies (and using) [ornamentation](#) to embellish the melody"; this style bears some similarities to the traditional song form of sean-nós, which is similarly highly-ornamented and unaccompanied .

Celtic-Americans have also been influential in the creation of Celtic Fusion, a set of genres which combine traditional Celtic music with contemporary influences.

## Irish American Music

Irish emigrés created a large number of *emigrant ballads* once in the United States. These were usually "sad laments, steeped in nostalgia, and self-pity, and singing the praises... of their native soil while bitterly condemning the land of the stranger" . These songs include famous songs like "Thousands Are Sailing to America" and "By the Hush", though "Shamrock Shore" may be the most well-known in the field.

Francis O'Neill was a Chicago police chief who collected the single largest collection of Irish traditional music ever published. He was a [flautist](#), [fiddler](#) and [piper](#) who was part of a vibrant Irish community in Chicago at the time, one that included some forty thousand people, including musicians from "all thirty-two counties of Ireland", according to Nicholas Carolan, who referred to O'Neill as "the greatest individual influence on the evolution of Irish traditional dance music in the twentieth century" .

In the 1890s, Irish music entered a "golden age", centered on the vibrant scene in New York City. This produced legendary fiddlers like James Morrison and Michael Coleman, and a number of popular dance bands that played pop standards and dances like the foxtrot and quicksteps; these bands slowly grew larger, adding brass and reed instruments in a [big band](#) style . Though this golden age ended by the Great Depression, the 1950s saw a flowering of Irish music, aided by the foundation of the City Center Ballroom in New York. It was later joined by a [roots revival](#) in Ireland and the foundation of Mick Moloney's Green Fields of America, an organization that promotes Irish music .

## Censorship of music

**Censorship of music**, the practice of censoring [music](#) from the public, may take the form of partial or total censorship with the latter banning the music entirely. The music in question may be a song, or part thereof, a collection of songs (such as a particular [album](#)) or a [genre](#) of music.

While songs and albums have been banned in the past it has become less common in western countries. However, the censorship of particular words deemed as profanity is still commonplace.

# Censorship of pop music

## Airplay Censorship

An early example of censorship of music on the radio is from the 1940s. George Formby's "When I'm Cleaning Windows" was banned from BBC radio due to the "smutty lyrics", though his wife Beryl managed to change their minds. The offending lyrics were:

"The blushing bride she looks divine,  
The bridegroom he is doing fine,  
I'd rather have his job than mine,  
When I'm cleaning windows."

A classic example of partial censorship in the UK is the single "God Save the Queen", by the Sex Pistols, released by Virgin Records on 27 May 1977. The sale of this single, that coincided with the Queen's silver jubilee celebrations, was not banned. However, the track was barred for airplay on BBC's Radio 1, then the most popular radio channel in the UK. This public service broadcaster censored this single, that reached number two in the charts, because of its lyrics. It is rumoured that the single actually reached number one, but that this was suppressed in a further act of censorship. The band was harassed by police while performing the song on a boat on the Thames. See the entry for Sid Vicious and god save the queen, on the Sex pistols page.

"God save the Queen, this is a fascist regime."

Another song famously banned by Radio 1 was "Relax" by Frankie Goes to Hollywood in 1983 because the [lyrics](#) "when you're gonna come" were seen to refer to the climax of the sexual act. In a famous incident Radio 1 [disc jockey](#) Mike Read took the record off the turntable and broke it in two. After this, but without consulting Read, Radio 1 decided to ban the record. As a result the record went straight to number one, where it stayed for five weeks.

1981, the International Year of Disabled People, saw the BBC ban Ian Dury's "Spasticus Autisticus" until after dark. Dury, who himself had suffered from polio, had written the song as a positive message for people with disabilities. The chorus' refrain, "I'm spasticus, autisticus", was inspired by the response of the rebelling gladiators of Rome who (at least in the version of the story as portrayed in Stanley Kubrick's *Spartacus*), all answered to the name of their leader, "I am Spartacus", to protect him.

The Beastie Boys received mass publicity when they arrived in the UK in 1987. Headline stories of their activities in bars and hotel rooms, along with a tour containing dancers in cages and a large inflatable penis, led to massive sales of their "Fight for your Right to Party". The video, showing the three members of the band invade and trash a party, was subsequently banned by Top of the Pops due to its portrayal of "loutish behaviour".

## Word censorship

In order to allow songs to be played wherever possible it is common to censor particular words, particularly profanity. Some labels produce censored versions themselves, sometimes with alternative lyrics, to comply with the rules set by various radio and television programmes. Some channels decide to censor them themselves using one of six methods:

- Blanking; when the volume is set to zero for all or part of the word
- Bleeping; playing a noise, usually a "beep", over all or part of the word
- Resampling; using a like-sounding portion of vocals and music to override the offending word
- Resinging; removing the word or part of the word and keep the instrumental part of the song
- Backmasking; simply taking the offending word and reversing the audio. Sometimes the whole audio is reversed, most times only the vocal track is reversed.
- Skipping; Just deleting the word from the song without a time delay

The censorship of some of the less common swear words or obvious innuendo may differ between channels. The word *ho* in Gwen Stefani's "What You Waiting For" was censored by some channels (for example MTV) while not by others (such as BBC Radio 1). Also, Stefani's song *Hollaback Girl*, where the word *shit* is repeated over 30 times, got heavily censored on English-speaking countries, and surprisingly, also on the Brazilian radios (as an ironic way to criticise the censorship on English-speaking world. On most radio stations it was ok to remove the "it" part of the word and leave the "sh" part in. Likewise some channels censored the line "keep her coming every night" in Maroon 5's "This Love" because of the inference of the word *cuming*, a term for sexual climax.

The [Anarcho-punk](#) band, Crass, hit controversy when a record pressing plant refused to press the song, "Asylum", accusing them of blasphemy. Instead, they had a blank space with silence, which the band humourously dubbed "The sound of Free Speech" in protest. Their protest song against the Falklands war, *Sheep Farming in The Falkland Islands*, faced calls from a Conservative MP to be prosecuted under the Obscene Publications act 1959. The Times rock Critic said that it was "The most revolting and unnecessary record ever made", the irony being that the MP and critic were cousins.

Some words are censored not through their sexual or offensive nature but for other reasons. The 2001 release *Teenage Dirtbag* by Wheatus had the word *gun* censored by some channels – it was felt that the line "He brings a gun to school" was inappropriate. Some channels also censored 2003's *Gay Bar* by Electric Six, removing the word *war* from the sentence "Let's start a war; start a nuclear war".

Rapper Kanye West's song *Gold Digger* repeatedly says *niggasin* the line "But she ain't messin with no broke niggas" and has been censored to say "But she ain't messin wit no broke broke" repeating the word before it.

## Self-censorship

Some artists or record labels choose to censor themselves in order to avoid negative publicity. This is sometimes due to the timing of events outside of their control, such as how the September 11, 2001 attacks affected audiovisual entertainment. The release and subsequent advertising of Michael Jackson's greatest hits album was delayed until after his 2005 trial – it is not known if a guilty verdict would have further changed the timing of the release.

## **Censorship in classical music**

For many years Wagner and even Beethoven were never played in Israel, though they were not formally banned, because of their association with the Nazi era (even though both died long before the Nazis came to power), and Beethoven at least could not conceivably be considered to have held fascist or anti-semitic leanings. The conductor Sir Simon Rattle provoked controversy by performing Beethoven's Ninth Symphony in Israel. Jewish conductor Daniel Barenboim has also done a great deal to make German classical music acceptable in Israel, but caused controversy on July 7th 2001 by conducting Wagner in Jerusalem. Unlike Beethoven, Wagner was an anti-semite. After protests by holocaust survivors and pressure from the Israeli government the original programme was changed in an act of self-censorship. Barenboim agreed not to play Wagner's *Die Walküre*, replacing it with pieces by Robert Schumann and Igor Stravinsky. At the end of the concert Barenboim announced his intention to play Wagner's opera *Tristan und Isolde* as an encore, and that those who did not want to hear it should leave first. This statement was greeted with loud applause by the majority, and the disapproval of a minority. Barenboim was denounced as a fascist in the press, though some would argue that fascism was actually to be found in the act of censorship. Barenboim wanted to play the music because of the great quality of the music in itself.

### **Criticism**

The total censorship of a song is often reported in the mass media and often has the effect of drawing more attention to the song than it would have received had it not been banned. Equally, the censorship of a word can highlight it to such a degree that it makes it more obvious what the singer has said.

Categories: [Music history](#).

## Central American music

Central America is dominated by the popular Latin musical trends, including salsa, [cumbia](#), mariachi, [reggae](#), calypso and nueva canción. The countries of Central America have produced their own distinct forms of these genres, including Salvadoran calypso and Panamanian salsa. The most well-known form of Central American popular music is punta, a style innovated by the syncretic Garifunas who live across the region, especially in Honduras and Belize. The marimba, a type of [xylophone](#), is perhaps the most important folk instrument of Central America, and it is widespread throughout the region.

## **Belize**

Aside from having the most active Garifuna music scene, especially the field of punta, Belize is also known for brukdown, a popular genre that developed in the mining camps in the interior of the country.

## **Costa Rica**

The Punto Guanacaste is the official national dance of Costa Rica, a country perhaps best known for its own distinct variety of popular calypso music.

## El Salvador

El Salvador has participated in many Latin musical trends, such as [cumbia](#), a genre more closely associated with Colombia but which has a unique sound in El Salvador. The xuc was decreed the national dance in the 1950s, though it was not found throughout the country at the time.

## **Guatemala**

Guatemala, like its neighbors, is well-known for the national instrument, the marimba. Guatemalan traditions are much more closely based on the instrument, and on ancient Mayan music, than other Central American countries.

# Honduras

Honduras is known for Garifuna music as well as the well-preserved traditions of the Lenca people.

## Nicaragua

Nicaraguan music is traditionally marimba-based, and includes the well-known dance music of the Palo de Mayo festival, which is held every May.

# Panama

The meyorana, an instrument similar to a [guitar](#), is a popular instrument unique to Panama. The country is also known for the tamborito folk dance and the many international stars of Panamanian salsa and Panamanian cumbia.

# Chamber music

**Chamber music** is a form of [classical music](#), written for a small group of instruments which traditionally could be accommodated in a palace chamber. Most broadly, it includes any "art music" that is performed by a small number of performers with one performer to a part. The word "chamber" signifies that the music can be performed in a small room, often with an intimate atmosphere. However, it usually does not include, by definition, solo instrument performances.

hi instruments, but there is no theoretical upper limit to the number of instruments. In practice, chamber works for more than five instruments are unusual, and works scored for more than eight are rare. A piece composed for ten or more players, is generally considered a work for small (chamber) orchestra.

Chamber works exist for many different combinations of instruments, with the [string quartet](#) often thought of as the most important. Popular combinations other than the string quartet include the [string trio](#), the [piano trio](#), the [piano quintet](#) and the [string quintet](#). In the Baroque period, many works were written for two violins and keyboard (usually with incidental cello accompaniment). [Woodwind instruments](#) and [brass instruments](#) are used less often. Several composers have written works for mixed groups of wind and strings, and some have written for wind instruments alone, but with the exception of the [horn](#), brass instruments are very rarely used. This is probably in part due to the fact that at the time chamber music was first being written, brass instruments did not have valves, and so could only produce a limited number of notes. Note that there are important exceptions to the above with at least one splendid work composed for nine mixed instruments (Louis Spohr, Nonette, Op. 31) and another which includes a trumpet (Camille Saint-Saëns, Septet in E flat, Op. 65).

While chamber music is frequently performed in public, the performance venues tend to be halls of smaller size than those used for orchestral concerts. The more intimate acoustics of a smaller space, imitating the drawing rooms in which such music was originally played, are more suitable for a small group of instruments.

## History

While the term is most often applied to instrumental performances, the [madrigals](#) of the [Renaissance](#) period in the 16th century may be considered chamber music.

The most prominent [Baroque](#) form of this type is the trio sonata. In the [Classical](#) period, new forms were developed, most importantly the [string quartet](#). These pieces were often written for amateurs, and not intended to be played in public. Many of the string quartets of Joseph Haydn and Wolfgang Amadeus Mozart, for example, were written to be played for fun and in private, by a string quartet of which they were both members.

One of the composers responsible for bringing chamber music to the concert hall is Ludwig van Beethoven. He wrote chamber music for amateurs, such as the Septet of 1800, but his last string quartets are very complex works which amateurs would have struggled to play. They are also seen as pushing the boundaries of acceptable [harmony](#) of that time, and are regarded as some of his most profound works. Following Beethoven in the [romantic](#) period, many other composers wrote pieces for professional chamber groups.

## Resources

*Cobbett's Cyclopedic Survey of Chamber Music*, edited by Walter Willson Cobbett in 1923, and updated and reprinted in 1963, is a comprehensive guide to chamber music compositions and composers up to that time.

Sir Donald Francis Tovey, British pianist and musicologist, wrote many insightful essays on the subject of chamber music, some of them available in the volume of his *Essays in Musical Analysis* that he devotes to it.

## Performance

Many classical musicians enjoy playing chamber music. In most cases, chamber music is performed without a conductor, so each performer has greater artistic freedom. For organizing a performance, the expense is lower and the logistics simpler than that for even a modest orchestra. While the repertoire is not suitable for beginners, there are pieces within the technical and artistic capabilities of most serious amateurs.

# Ensembles

This is a partial list of the types of [ensembles](#) found in chamber music.

| Number of Musicians | Name                    | Common Ensembles   | Instrumentation                                       | Comments   |

# Change ringing

**Change ringing** (also called **tintinnaloga**) is the art of ringing a set of tuned [bells](#) in a series of mathematical patterns called "changes", without attempting to ring a conventional tune. It was systematized by Fabian Stedman and Richard Duckworth in the 17th century England; it remains most popular there today, as well as in countries around the world with British influence. On continental Europe, by contrast, a different form of campanology, carillon ringing (which does aim at recognizable melodies), is much more popular. Like carillons, change-ringing bells are often found in church towers; but the two methods are entirely different not only in their musical aims but also in their physical set-ups. A carillon consists of a large number of bells which are struck by hammers all tied in to a central framework so that one carillonneur can control them all; change ringing, by contrast, uses a smaller number of bells and typically requires a ringer for each bell.

## Mechanics of change ringing on tower bells

A bell tower in which change ringing takes place can contain any number of bells, in theory, but typically contain up to sixteen bells. Six or eight bells are more common for the average church. The bell highest in pitch is known as the treble and the bell lowest in pitch is called the tenor. For convenience, the bells are numbered, with the treble being number 1 and the other bells numbered by their pitch — 2,3,4, etc. — sequentially down the scale. (This system often seems counterintuitive to musicians, who are used to a numbering which ascends along with pitch.) The bells are usually tuned to a [diatonic](#) major [scale](#), with the tenor bell being the tonic (or key) note of the scale.

The bellringers typically stand in a circle around the ringing room, each managing the rope for his or her bell above. Each bell is suspended from a *headstock*, allowing it to rotate through just over 360 degrees; the headstock is fitted with a wooden wheel around which the rope is wrapped.

During a session of ringing the bell sits poised upside-down while it awaits its turn to ring. By pulling the rope, the ringer upsets the balance and the bell swings down then back up again on the other side, describing slightly more than a 360-degree circle. During the swing, the clapper inside the bell will have struck the soundbow, making the bell resonate once. This action constitutes the *handstroke*, at the end of which the ringer's arms are above his head and a portion of the bell-rope is wrapped around almost the entirety of the wheel. After a pause, the ringer again pulls the rope and the bell revolves in the opposite direction, returning to its original position, again sounding once. This is the *backstroke*.

Although ringing certainly involves some physical exertion, the successful ringer is one with practised skill rather than mere brute force; after all, even small bells are typically much heavier than the people ringing them, and can only be rung at all because they are well-balanced in their frames. The heaviest bell hung for full-circle ringing is in Liverpool Cathedral and weighs over four imperial tons. Despite this colossal weight, it can be safely rung by one (experienced) ringer. While heavier bells exist (for example Big Ben), they are generally only chimed, either by swinging the bell slightly or using a mechanical hammer.

## Handbells

Change ringing can also be carried out on handbells (small bells, generally weighing only a few hundred grams), with each ringer usually handling two or more bells. A few groups of tower bell-ringers use handbells to practise (in which case, just as in the tower, one ringer handles one bell).

Handbell ringing was particularly popular during the Second World War when church bells were not rung. Ringers unable to use the church bells were obliged to practice their art on handbells, often in their own homes. Although the ringers returned to the towers as soon as the war was over, for a number of years after the war handbell ringing was extremely popular, and most ringers who lived through the war were competent handbell ringers.

## Mathematics of change ringing

The simplest way to use a set of bells is ringing *rounds*, which is sounding the bells repeatedly in sequence: 1, 2, 3, etc.. Musicians will recognise this as a portion of a descending scale. Ringers typically start with rounds and then begin to vary the bells' order, moving on to a series of distinct *rows*. Each row (or *change*) is a specific permutation of the bells (for example *123456* or *531246*) — that is to say, it includes each bell rung once and only once, the difference from row to row being the order in which the bells follow one another. There are two ways to achieve this: swapping one pair of bells at a time, with one ringer (the conductor) telling everyone else which pair to swap, or swapping multiple pairs of bells to a prescribed pattern, with the conductor just calling the method. The former is known as **call change** ringing and the latter as **method** ringing.

### Call change ringing

Call change ringing is practised as a stepping stone to method ringing as many learners find it is easier to do. However, in the county of Devon, England there are many towers that practise this form of ringing exclusively. Hence call change ringing is also known as "Devon style". The bells are made to change order by the conductor calling a pair of bells to swap. Each call takes the form of two numbers corresponding to the bells which are to change. For example, if the bells start in the order *135246* and the conductor calls "5 to 2" (which is shorthand for "bell number 5 ring after bell number 2") the resulting order of the bells is *132546*. This, the accepted way of calling in Devon and many towers elsewhere, is known as *calling up* as the bell corresponding to the number called first *moves up* after the second bell. Call changes can also be called by *calling down*; in the example above the call would become "2 to 3" for the same result.

For a *peal* of call changes the bells are firstly rung up in peal (all the bells ringing together in rounds, known as the *rise*), a number of changes are rung (*at the top*) and then the bells are rung down in peal (again all the bells ringing together in rounds, known as the *lower*). All this takes anything from 10 to 30 minutes depending on the number of changes called and the number of bells being rung.

### Method ringing

Method Ringing is what most people mean by "Change Ringing". The ultimate goal of method ringing is to ring the bells in every possible order without repeating; this is called an "extent" (in the past this was sometimes referred to as a "full peal"). If a tower has  $n$  bells, they will have  $n!$  (read factorial) possible permutations, a number that becomes quite large as  $n$  grows. For example, while six bells have 720 permutations, 8 bells have 40,320; furthermore,  $10! = 3,628,800$ , and  $12! = 479,001,600$ .

Estimating two seconds for each change (a reasonable pace), we find that while an extent on 6 bells can be accomplished in half an hour, a full peal on 8 bells should take nearly twenty-two and a half hours (when in 1963 ringers in Loughborough accomplished this rarest of feats, it actually took them just under 18 hours), while an extent on 12 bells would take over thirty years!

Ringling an extent is an advanced form of method ringing and less experienced ringers will generally ring shorter touches or plain-courses. These do not ring every possible permutation but they still do not repeat any.

Various algorithms or *methods* have been developed for ringers to learn conceptually. They will dictate the bells' "movements" and, if followed correctly, will prevent them from repeating any rows. These methods follow basic patterns, but a *caller* or *conductor* will occasionally call out to tell the ringers to make a slight variation to the pattern.

## **Learning to ring**

Change Ringing is a relatively complex task and it can take many years for someone to become proficient, although this varies from person to person. Learners are almost always trained by a more experienced ringer. Ringing is also very "open-ended" and there are always more stages and skills to master.

## Striking and striking competitions

Although neither call change nor method ringing produces conventional tunes, it is still the aim of the ringers to produce a pleasant sound. The most pleasant sounds are achieved when the gaps between the bells are the same and the bells do not *clash* by sounding at the same instant. This achievement is known as *good striking*.

Striking competitions are held where various bands of ringers attempt to ring with their best striking. They are judged on their number of **faults** (striking errors); the band with the least number of faults wins.

Many regional ringing associations have annual striking competitions for bands from their region. There are also several nation-wide striking competitions, including the prestigious National Twelve-Bell competition. These competitions may have separate awards for bands ringing on 6, 8, 10 or 12 bells, or for call change and method ringing. The competition organisers may designate a *set piece* (a particular method or sequence of call changes) which all bands must ring, or else allow each band to ring their best piece.

In a Devon call change competition, all the teams that enter the competition ring the same set of call changes, usually the so called "sixty on thirds", complete with a rise and lower in not less than 15 minutes on six bells. The most prestigious of all the competitions in Devon are the two Devon Association of Ringers finals, The Devon Major Final for towers with six or fewer bells, and The Devon 8-Bell Final for towers with eight or more bells (there are no seven-bell towers). These have been held around Easter every year since the 1920s, and the most successful teams in the finals of recent years have been Eggbuckland, a tower in the city of Plymouth, in the Major Final and Kingsteignton in the 8-Bell Final. Due to the number of competitions, ringing by bands from Devon's more successful towers is reckoned to have some of the best striking in the country.

In 2000 an annual National Call Change competition was initiated with the hope of gaining more interest in call change ringing in the rest of the UK. However, attendance from teams outside Devon has been limited, largely due to the competition being held mainly in eastern Devon. In 2004 the competition was won by Eggbuckland's first team, and a team from Hampshire beat a Devon team. This was the first time a Devon team had been beaten by a team from outside the county in this competition.

## History and modern culture of change ringing

Change ringing began in England in the early part of the 17th century. The techniques used today are extremely similar to those developed at that time, with the only major innovations being the use of ball bearings to improve the ease of movement of the bells, and the introduction of Simpson tuning in the early 20th century to improve the intonation of the bells.

The first recorded true *peal* was believed to have been rung on May 2, 1715 at St Peter Mancroft, Norwich, England, in the method today known as Plain Bob Triples, though there is also some evidence for an earlier peal having been rung on January 7, 1690 at St Sepulchre-without-Newgate in the City of London by the Ancient Society of College Youths. Today change-ringing can frequently be heard from towers all over England, often before or after a church service or wedding. While on these everyday occasions the ringers must usually content themselves with shorter "touches," each lasting a few minutes, for special occasions a quarter-peal is often rung; a quarter-peal of triples will last something on the order of 45 minutes. Periodically, for a special occasion (or sometimes just for fun) a group of ringers might attempt a peal (the most concise of which will last approximately three hours); if they succeed they occasionally mark the accomplishment with a *peal board* on the wall of the ringing chamber. Over 4000 full peals are rung each year.

The longest (in terms of changes) peal ever rung was on handbells in Coventry on 2 October 2004. It consisted of 50,400 changes (10 times the changes in a standard peal) of 70 different "Treble Dodging Minor" methods, and took over 17 hours to ring. This was generally regarded as a most impressive achievement (even amongst those who questioned the performers' sanity), bearing in mind that no external aids can be used when ringing a peal. In particular, the conductor had to memorise and then recall the entire composition, in addition to ringing two of the bells.

Bell ringers may enjoy an outing, or *tower grab*, to ring the bells of various churches. The churches and variety of numbers of bells, their tone, their ease of ringing, as well as the sometimes unusual means of accessing the ringing chamber, all add to the attraction. the book (and now internet database): Dove's Bellringer's Guide to the Church Bells of Britain is the traditional means of identifying churches which have rings of bells.

The **Central Council of Church Bell Ringers** is the representative body for all those who ring bells in the traditional English style around the world, and was founded in 1891. Today the Council represents 66 affiliated societies, which cover all parts of the British Isles as well as centres of ringing in Australia, New Zealand, Canada, USA, South Africa, Zimbabwe, and Verona in Italy.

The ringing community has its own weekly newspaper, the *Ringling World*, which is also the official journal of the Central Council of Church Bell Ringers. Published weekly since 1911 it includes articles and news relating to bellringing and the bellringing community, as well as publishing records of achievements such as peals and quarter-peals. These may only be included if they meet the Central Council's definitions and rules, which therefore have widespread acceptance.

In the world of literature, Dorothy L. Sayers's mystery novel *The Nine Tailors* is famous for the central part played by change ringing. Much of the action centers on a bell tower and the peals rung in it, and to draw the reader in Sayers takes care to explain change ringing and analyze its improbable popularity; quotations from the book are popular with ringers. Moreover, the entire book is infused with an air of change

ringing to the extent that her chapter titles all employ campanalogical terminology; and indeed, one of the book's conceits is that it is a sort of multi-part peal.

# Chanson

**Chanson** is a French word for [song](#). In English language contexts, the word is often applied to any song with French words, but it can also be applied more specifically — to refer to classic, [lyric](#)-driven French songs, to refer to European songs in the [cabaret style](#), or to refer to a diverse range of songs interpreted in this style. A [singer](#) specialising in chansons is known as a chansonnier.

In a more specialised usage, the word 'chanson' refers to a polyphonic French song of the late Middle Ages and [Renaissance](#). Early chansons tended to be in one of the *formes fixes*, [ballade](#), rondeau or [virelai](#), though some composers later set popular poetry in a variety of forms.

The earliest chansons were for two, three or four voices, with first three becoming the norm, expanding to four voices by the 16th century. Sometimes, the singers were accompanied by [instruments](#).

## Early chansons

The first important composer of chansons was Guillaume de Machaut, who composed three-voice works in the formes fixes during the 14th century. Guillaume Dufay and Gilles Binchois, who wrote so-called Burgundian chansons (because they were from the area known as Burgundy, were the most important chanson composers of the next generation (c. 1420-1470). Their chansons somewhat simple in style, are also generally in three voices with a structural tenor. Later 15th- and early 16th-century figures in the genre included Johannes Ockeghem and Josquin Desprez, whose works cease to be constrained by formes fixes and begin to feature a similar pervading imitation to that found in contemporary motets and liturgical music. At mid-century, Claudin de Sermisy and Clément Janequin were composers of so-called Parisian chansons, which also abandoned the formes fixes and were in a simpler, more homophonic style, sometimes featuring music that was meant to be evocative of certain imagery. Many of these Parisian works were published by Pierre Attaignant. Composers of their generation, as well as later composers, such as Orlando de Lassus, were influenced by the Italian [madrigal](#). Many early instrumental works were ornamented variations (diminutions) on chansons, with this genre becoming the [canzone](#), a progenitor of the [sonata](#).

The first book of sheet music printed from movable type was *Harmonice Musices Odhecaton*, a collection of chansons.

## Later chansons

French solo song developed in the late 16th century, probably from the aforementioned Parisian works. During the 17th century, the air de cour, chanson pour boire, and other like genres, generally accompanied by lute or keyboard, flourished, with contributions by such composers as Antoine Boesset, Denis Gaultier, Michel Lambert, and Michel-Richard de Lalande.

During the 18th century, vocal music in France was dominated by [Opera](#), but solo song underwent a Renaissance in the 19th, first with salon [melodies](#), but by mid-century with highly sophisticated works influenced by the German [Lieder](#) which had been introduced into the country. Louis Niedermayer, under the particular spell of Schubert was a pivotal figure in this movement, followed by Eduard Lalo, Felicien David, and many others. Later 19th-century composers of French song, called either melodie or chanson, included Ernest Chausson, Emmanuel Chabrier, Gabriel Fauré, and Claude Debussy, while many 20th-century French composers have continued this strong tradition.

See also the early medieval heroic lays called *Chansons de gestes*, which were declaimed (from memory) rather than actually being sung.

# Chant

**Chant** is the [rhythmic](#) speaking or [singing](#) of words or sounds, either on a single [pitch](#) or with a simple [melody](#) involving a limited set of [notes](#) and often including a great deal of repetition or stasis. Chant may be considered speech, music, or a heightened or stylised form of speech which some people may consider more effective in conveying emotion or expressing, or, getting in touch with, one's spiritual side. In the later Middle Ages, some chants were sung, evolving into our more modern hymns. Instruments were not allowed in the Christian church until much later in the Middle Ages because they were considered tools of the devil, compelling people to dance and sing.

## Varieties of chant

Chants are used in a variety of settings from ritual to recreation. Supporters or players in sports contests may use them (see [football chant](#)). Warriors in ancient times would chant battle cries . Chants form part of many religious rituals. Some examples include chant in African and Native American tribal cultures, [Gregorian chant](#), Vedic chant, Jewish Liturgical Music (chazzanut), [Qur'an reading](#), various [Buddhist chants](#), various mantras, and the chanting of [psalms](#) and prayers especially in Roman Catholic, Eastern Orthodox, and Anglican churches (see [Anglican Chant](#)). They all also used on protests, and are widely adapted with only a few words changed between topic.

Tibetan Buddhist chant involves throat singing, where multiple pitches are produced by each performer. The concept of chanting mantras is of particular significance in many Hindu traditions and other closely related Dharmic Religions, for example the Hare Krishna movement is based almost exclusively around the chanting of Sanskrit Names of God.

Japanese *Shigin* (i), or 'chanted poetry', mirrors Zen principles, and is sung from the gut - the locus of power in Zen Buddhism.

# Character piece

**Character piece** is a literal translation of the German *Charakterstück*, a term, not very precisely defined, used for a broad range of 19th century [piano](#) music based on a single idea or [program](#). The term is less frequently applied to music for another instrument (never voice) with piano accompaniment, but very seldom for larger ensembles.

Character pieces are a staple of [Romantic music](#), and are essential to that movements interest the evocation of particular moods or moments. What distinguishes character pieces is the specificity of the idea they invoke. Many character pieces are composed in ternary form, but that form is not universal in the genre. A common feature is a titles expressive of the character intended, such as Stephen Heller's *Voyage autour de ma chambre* ("Voyage around my room"), an early example of the genre. Other character pieces have titles suggesting brevity and singularity of concept, such as Beethoven's Bagatelles or Debussy's Préludes, or casual construction: the title Impromptu is common. Many 19th century nocturnes and [intermezzi](#) are character pieces as well, including those of Chopin and Brahms, respectively.

Large sets of many individual character pieces, intended to be played as a single piece of music, were not uncommon; Schumann's many works of this form (including Kreisleriana and Carnaval) are the best known examples. In the late 19th and twentieth centuries, as piano music became ambitious and larger in scale, the scope of what a character piece could reference grew as well. The New Grove cites Smetana's "Festival of the Gypsy Peasants" and Sibelius's "The Oarsman" as examples of this later trend.

# Charity record

A **charity record** (also known as a **charity single**) is a release of a song for a specific charitable cause. Band Aid's *Do They Know It's Christmas?* began the revolution of the charity record, which would be popularised throughout the 1980s. In the United States, charity records reached their peak with *We are the World* in 1985, but then essentially died out afterwards. In the United Kingdom, however, charity singles (especially Comic Relief), have become yearly #1 hits.

# Cheironomy

**Cheironomy** is the use of hand signals to direct vocal music performance.

[Early music](#) (vocal church music), as far back as the 5th century, required some central direction from a leader in the coordination of [singers](#) in their delivery of [melodic](#) lines of mostly free [rhythm](#). Traced back to early Egyptian performances through hieroglyphic documentation (etchings in stone depicting a leader employing hand signals to indicate [pitch](#) and rhythm details for [wind instrument](#) players), this form of conducting seems to predate Guido of Arezzo's designation of joints of the fingers for indicating pitches, and seems to have offered more than limited pitch instruction. These early leaders, or cheironomers, though possessing none of the modern conducting skills developed in the 17th century, using a form of [choreographed](#) hand signals, adeptly controlled the movement of the melodic lines, producing incredibly well-synchronized performances.

Cheironomy, though not a commonly used term in today's reference to conducting, serves, as it did in early [music](#), as the model for the motions necessary to direct some modern music which require individualized direction to specific players, within less [metrically](#) structured [musical compositions](#). It is still in use the liturgy of some Middle Eastern sects and in synagogues to direct the singing of liturgical [songs](#) (Hebrews probably learned cheironomy with Egyptians), and, more rarely, in some ancient Western religions.

Jewish religious cheironomy can also be found as mnemonic signs on scrolls in Hebrew, hanging above the text to be sung, in order to guide the cantor in his rendition of religious songs.

# Chicago blues

The **Chicago blues** is a form of [blues](#) music that developed in Chicago, Illinois by adding electricity, [drums](#), [piano](#), [bass guitar](#) and sometimes [saxophone](#) to the basic [string/harmonica Delta blues](#). The music developed mainly as a result of the "Great Migration" of poor black workers from the South into the industrial cities of the North, and Chicago in particular, in the first half of the twentieth century.

Chicago blues musicians include:

Big Maceo Merriweather  
Big Walter Horton  
Billy Boy Arnold  
Billy Branch  
Blues Brothers  
Paul Butterfield  
Buddy Guy  
Champion Jack Dupree

# Chicago house

**Chicago house** is the earliest style of [house music](#). House music originated in a Chicago, Illinois nightclub called the Warehouse, which many hold to be the origin of the term "house music". DJ Frankie Knuckles originally popularized [house music](#) while working at the Warehouse.

House music grew out of the post-[disco](#) dance club culture of the early 1980s. After disco became popular, certain urban [DJs](#), particularly those in gay communities, altered the music to make it less [pop](#)-oriented. The beat became more mechanical and the bass grooves became deeper, while elements of electronic [synth pop](#), Latin [soul](#), [dub](#), [rap](#), and [jazz](#) were grafted over the music's insistent, unvarying 4/4 beat. Frequently, the music was purely instrumental and when there were vocalists, they were faceless female divas that often sang wordless melodies.

# Chicago soul

**Chicago soul** is a form of [soul music](#) that arose during the 1960s in Chicago. Along with Motown in Detroit and hard-edged, gritty performers in Memphis (see [Memphis soul](#)), Chicago soul helped spur the album-oriented soul revolution of the early 1970s.

The best known Chicago soul singer was Curtis Mayfield; Jackie Wilson, The Esquires, Major Lance, Tyrone Davis, The Chi-Lites, Barbara Acklin, and Gene Chandler, along with producers Carl Davis and Johnny Pate, are also associated with this sound.

# Chicano rap

**Chicano rap** is a subgenre of [rap music](#) that embodies aspects of West Coast and Southwest Chicano culture and is typically performed by American rappers of Mexican descent.

The first widely recognized Chicano rap artist was Kid Frost, whose 1990 debut album "Hispanic Causing Panic" driven by the hit single "La Raza" brought new attention to Chicano artists in Hip Hop.

Cuban-American artist Mellow Man Ace was the first Latino artist to have a major bilingual single attached to his 1989 debut. Although Mellow Man often used Chicano slang as a result of his East Los Angeles upbringing, Kid Frost receives the credit as the first major Chicano rapper given Mellow Man was not of Mexican descent. Mellow Man, referred to as the "Godfather of Latin Rap", brought mainstream attention to Spanglish rhyming with his platinum single "Mentiroso". Cypress Hill, of which Mellow Man Ace was a member before going solo, is sometimes considered Chicano rap due to their use of Spanish and popular Chicano slang, as well as the lead rapper's background of being part Mexican. They were the first Latino rap group to reach platinum status, with Big Pun credited as the first Latino solo artist to reach platinum sales for an LP.

During the 90's, some Chicano rappers such as Kemo the Blaxican and Sinful of the Mexicanz began using influences from Mexican music in their beats and delivery, although this subgenre of music is sometimes referred to today as "Urban Regional" and not always representative of Chicano Rap. One of the most widely recognized Chicano rappers today is Lil Rob of San Diego, whose single "Summer Nights" was considered a major crossover and received heavy rotation on radio station and video programs not directly related to Chicano rap music.

Many Chicano rappers have also been heavily influenced by Mexican history, including many themes relevant to Mexican/Chicano (Xicano) people. Chicano Rap is enjoyed by listeners in the U.S. and has a strong following in Japan, although its main audience consists of Latinos living on the West Coast, the Southwest and the Midwest. Its ability to reach large audiences without mainstream airplay or media promotion is due largely in part to nationwide lowrider car tours and their accompanying concerts headlined by Chicano rappers. This environment allows Chicano Rap artists to earn significant incomes through independent label releases while promoting directly to a target audience.

## Chicano rock

**Chicano Rock Music** is [rock music](#) performed by Mexican American groups or music with themes derived from Chicano culture. *Chicano Rock*, to a great extent, does not refer to any single style or approach. Some of these groups did not sing in Spanish at all, or use many specifically Latin instruments or sounds, at least on what little we have heard. The main unifying factor, whether or not any explicitly [Latin American music](#) is heard, is a strong [R&B](#) influence, and a rather independent and rebellious approach to making music that comes from outside the music industry.

## Overview

There are two undercurrents in Chicano rock. One is a devotion to the original [rhythm and blues](#) and [country](#) roots of Rock and roll. Ritchie Valens, Sunny and the Sunglows, The Sir Douglas Quintet, Thee Midnites, Los Lobos, War, Tierra, and El Chicano all have made music that is heavily based on 1950's R&B, even when general trends moved away from the original sound of rock as time went by.

Another characteristic is the openness to Latin American sounds and influences. Trini Lopez, Santana, Malo, and other Chicano 'Latin Rock' groups follow this approach with their fusions of R&B, Jazz, and Caribbean sounds; but all of the groups and performers have some of these influences. Los Lobos in particular alternates between R&B roots rock and the Latin rock style.

Even such songs like Sam the Sham and the Pharaohs "Wooly Bully" and ? & the Mysterians' "96 Tears", while not by definition "Latin Music", may have a Tejano influence in their whirling keyboard runs and beats.

Ozomatli had led the new wave of Latin Rock groups that fuse multiple musical genres.

## History

In places such as Los Angeles, the San Francisco Bay area, and Dallas and Houston, Texas, the African-American audience was very important to aspiring Latino musicians, and this kept their music wedded to authentic R&B. Undoubtedly, many listeners in the 1960s heard Sunny and the Sunlows "Talk to Me", or Thee Midnitters' and more famously, Cannibal and the Headhunters' "Land of a Thousand Dances" and assumed that the groups were black. The roots of Chicano rock are found in the music of Don Tosti and Lalo Guerrero ("The Father of Chicano Music") Tosti's "Pachuco Boogie," recorded in 1949 was the first Chicano million-selling record, a swing tune featuring a Spanish rap, using hipster slang called "Calo." Guerrero also adapted swing and "jump" styles to Spanish language recordings -- all this as rhythm and blues was beginning to emerge as a forerunner to rock 'n' roll. In the 60s there was an explosion of Chicano rock bands in East Los Angeles. One of the first to have a local hit, and even appear on Dick Clark, was The Premiers, with a cover of a Don and Dewey song called "Farmer John." It featured the beat from the popular hit, "Louie, Louie," which was in turn based on a Latino song, "Loco Cha Cha."

In the early to mid 1960s, the American audience was probably more open to Latin sounds than even today; because of the popularity of bossa nova, bugalú, [mambo](#), and other forms. Also musicians who didn't conform to the rather limited range of early rock could find success as folk performers.

Trini Lopez, whose music was a mixture of [folk](#), lounge pop, and R&B, was able to prosper before the Beatles came to America and Bob Dylan went electric. "Corazón de Melón" takes a Mexican folk tune, and like "Heart of my Heart", makes it into a relaxed, shuffling lounge tune. Trini mainly worked and recorded in a live setting (with a lot of audience participation), and soon the Beatles and The Beach Boys made studio recording effects dominant in rock, unfortunately making Trini's loose, breezy live-in-club style seem old fashioned all too soon.

The British Invasion challenged all American musicians, not just Chicanos. The Sir Douglas Quintet is said to have made the most 'English' sounding American music of the Beatlemania period (actually since the English were playing music that was more rooted in R&B than many white Americans of that time, the Quintet were actually sounding 'English' by keeping to an all-American R&B/Country sound). Indeed, producer Huey P. Meaux put the *Sir* in the group's name to emphasize the connection, but that was more a marketing change than a musical one.

While none of these groups challenged the Beatles and the Rolling Stones for more than a brief time, Sam the Sham and the Pharaohs, ? and the Mysterians, and Thee Midnitters made music that was more like that of the British groups than many other American bands, like The Lovin' Spoonful or The Beach Boys. Part of this was their love of pure R&B, and perhaps, in spite of being just as American as anyone else, these bands were treated as "outsiders" to some degree and their music reflects this unconventional point of view. Also, many of these groups produced music on a very low budget, often working on small labels, or even self-producing music; giving some of their work a rougher feel.

## **Chicano punk**

Chicano punk is a branch of Chicano rock with bands like Los Illegals, The Brat, The Plugz and Los Cruzados coming out of the punk scene in Los Angeles. Also Union 13, from the streets of East Los Angeles.

# Chicken scratch

**Chicken scratch** (also known as **waila music**) is a kind of [dance music](#) developed by the Tohono O'odham people. The genre evolved out of acoustic [fiddle](#) bands in southern Arizona, in the Sonoran desert. These bands began playing European and Mexican tunes, in styles that include the [polka](#), schottisch and [mazurka](#) .

Chicken scratch, however, is at its root, an interpretation of [norteño](#) music, which is itself a Mexican adaptation of polka. Many chicken scratch bands still play polka songs with a distinctive flourish, and may also play the [waltz](#) or conjunto . Chicken scratch dance is based on the "*walking two step* or the *walking polka* and the emphasis is on (a) very smooth gliding movement" ; dancers may also perform the mazurka or the chote, though no matter the style, it is always performed counterclockwise .

Chicken scratch is usually played with a band including alto [saxophone](#), [bass](#), [guitar](#), [drums](#) and [accordion](#) , though the original style used only percussion, guitar and [violin](#), with the accordion and saxophone added in the 1950s . Its home is the Tohono O'odham Reservation, Pima Salt River Reservation and Gila River Reservation.

The term *waila* comes from Spanish *bailar*, meaning *to dance* . The term *chicken scratch* comes from a description of traditional Tohono O'odham dance, which involves kicking the heels high in the air, which supposedly bears a resemblance to a chicken scratching .

The most famous performers are likely the Joaquín Brothers and Los Papagos Molinas with Virgil Molina [9]. The Annual Waila Festival in Tucson, Arizona is well-known [10], as is the Rock-A-Bye Music Fest in Casa Grande, Arizona.

# Children's music

**Children's music** provides an important and entertaining means of teaching children about their culture, other cultures, good behavior, facts and skills. Many are [folk songs](#), but there is a whole genre of [educational music](#) that has become increasingly popular.

Recordings for children were intertwined with recorded music for as long as it has existed as a medium. The first words ever recorded (in 1877 by Thomas Alva Edison) was the first verse of "Mary Had A Little Lamb". In 1888, the first recorded discs (called "plates") offered for sale included Mother Goose nursery rhymes. The earliest record catalogues of several seminal figures in the recording industry such as Edison, Berliner, and Victor all contained separate children's sections.

Throughout the 1930s, 1940s, and 1950s record companies continued to produce albums for kids. Such companies as: Walt Disney, RCA Victory, Decca Records, Capitol Records, Warner Brothers and Columbia Records (among others) published albums based on popular cartoons or nursery rhymes. Often the albums were read-alongs that contained booklets that children could follow along with. Many of the biggest names in theater, radio, and motion pictures were featured on these albums, such as: Bing Crosby, Harold Peary ("The Great Gildersleeve"), Orson Welles, Don Doolittle, Jeanette MacDonald, Roy Rogers, Fanny Brice, Bill Boyd, and Fredric March.

The mid-20th century arrival of the baby boomers provided a growing market for children's music as a separate genre. Woody Guthrie, Pete Seeger, and Ella Jenkins were among a cadre of politically progressive and socially conscious performers who aimed albums to this group.

During this time, such novelty recordings as "Rudolph, the Red-Nosed Reindeer" (a Montgomery Ward jingle that became a book and later a classic children's movie) and the fictional music group "The Chipmunks" were among the most commercially successful music ventures of the time ("The Chipmunk Song" was a #1 hit single in 1958).

In the 1960s, as the baby boomers matured and became more politically aware, they embraced both the substance and politics of folk ("the people's") music. Peter, Paul, and Mary, The Limelites, and Tom Paxton were acclaimed folk artists who wrote albums for children.

In 1969, Jim Henson's Muppets and musical sensibilities started being featured in the Sesame Street television show that he created. Now children's music had a national presence on television as well as radio. The quality of Sesame Street's children's music, much of it created by noted composer Jeff Moss was such that it has dominated the children's music landscape to this day-- for example, 11 of the 35 grammy awards given for Children's Recording or Children's Album from 1969-2004 went to Sesame Street creative efforts. The Muppets (and their music) have also been featured in several motion pictures.

In some ways, children's music reached a zenith in the 1970s when musical features such as Schoolhouse Rock! and the original Letter People were featured on network and public television, respectively. These represented an effort to make music that taught specific lessons about math, history, and english to youngsters through the high-quality, award-winning music. The classic public television children's show Mister Rogers' Neighborhood had music heavily featured as well.

In the late 1970s, Canadian artist Raffi Cavoukian (whose popularity was worthy of lampooning in an episode of The Simpsons television show) coincided with the rise of children's music as a more upper-middle class, "yuppie" affair. For one thing, now that so many different media were involved in the enculturation of our children, children's music (folk and otherwise) became a luxury for those who could afford it. Also the

music industry itself frowned on political activism. In the 1990s, Raffi Cavoukian stepped away from his children's music career to sing more politically substantive music.

During the entire second-half of the 20th century on through to the present, there are many examples of music stars in other genres crossing-over and making successful children's music albums. These are often altruistic ventures, but sometimes these efforts are derided as being vanity projects.

At least in the United States, Children's music is more commercial than ever. Most albums targeted nationally to children are soundtracks for motion pictures or symbiotic marketing projects involving mass-marketed acts such as The Wiggles or Veggie Tales.

# Children's song

**Children's songs** may be [nursery rhymes](#) set to music or modern creations intended for entertainment or use in the home or education.

## Earliest songs

There are no written records of children's songs until the 17th century. "Three Blind Mice" dates from about 1600, as does "Oranges and Lemons". In 1697 Charles Perrault published "Tales of Mother Goose" in French. In the eighteenth century the songs "Little Bo Peep" and "London Bridge is Falling Down" were written. There are some songs which might be survivals from the middle ages - "Jack and Jill" and "Who Killed Cock Robin?" but this can only be speculation. On the other hand "Bobby Shaftoe" and "Yankee Doodle" can be tied to a specific social period.

## The nineteenth century

"Twinkle Twinkle Little Star" was written in the early nineteenth century. The great collectors of folk songs and fairy tales - Sir Walter Scott (1771 - 1832) and the Brothers Grimm, also uncovered traditional children's songs. Halliwell published "Nursery Rhymes of England" in 1842 and "Popular Rhymes and Tales" in 1849. They are probably the two greatest collections of children's songs. [Christmas carols](#) are now the preserve of [choirs](#) and children, but were once sung by ordinary adults. Two notable nineteenth century collections were "Some Ancient Christmas Carols" by D Gilbert in 1822 and "Christmas Carols Old and New" by H Bramley in 1868. By the time of Sabine Baring-Gould's "A Book of Nursery Songs" (1895), folklore was an academic study, full of comments and foot-notes. A professional anthropologist, Andrew Lang (1844 - 1912) produced "The Nursery Rhyme Book" in 1897.

## The twentieth century

The early years of the twentieth century are notable for the illustrations to children's books: Caldecott's *Hey Diddle Diddle Picture Book* (1909) and Arthur Rackham's *Mother Goose* (1913). A new item for the canon was "Teddy Bears Picnic". The lyrics were written by Jimmy Kennedy in 1932 and the tune by British composer John William Bratton was from 1907. Walt Disney cartoons provided new children's favourites, especially from *The Jungle Book* and *Mary Poppins*. *The Wizard of Oz* (1939) generated several new perennials. As if to prove that children constantly adopt new songs, Iona and Peter Opie did some playground investigations, resulting in *Lore and Language of Schoolchildren* in 1960. Peggy Seeger made the best-known recordings of the classics with "American Folk Songs for Children" in 1955.

## **Selected discography**

- - Mike and Peggy Seeger - American Folk Songs for Children (1955)
- - Isla St Clair - My Generation (2003)
- - Broadside Band - Old English Nursery Rhymes
- - Tim Hart and Friends - My Very Favourite Nursery Rhyme Record (1981)

# Chiptune

**Chiptune**, or **chip music** is music written in sound formats where all the sounds are synthesized in realtime by a computer or video game console sound chip, instead of using sample-based synthesis. The "golden age" of chiptunes was the mid 1980s to early 1990s, when such sound chips were the only widely available means for creating music on computers. The medium gave composers great flexibility in creating their own "[instrument](#)" sounds, but because early computer sound chips had only simple tone generators and noise generators, it also imposed limitations on the complexity of the sound; chiptunes sometimes seem "harsh" or "squeaky" to the unaccustomed listener. Chiptunes are closely related to [video game music](#). The term is nowadays also used to denote music that uses these distinctly-sounding synthesizer instruments for their artistic value rather than due to hardware limitations.

# Technology

Historically, the "chips" used were sound chips like the analog-digital hybrid Atari POKEY on the Atari 400/800, the MOS Technology SID on the Commodore 64, the Yamaha YM2149 on the Atari ST, AY-3-8910 or 8912 on Amstrad\_CPC, MSX and ZX Spectrum, the Yamaha YM3812 on IBM PC compatibles, and the Ricoh 2A03 on the Nintendo Entertainment System or Famicom. For the MSX several sound upgrades, such as the Konami SCC, the Yamaha YM2413 (MSX-MUSIC) and Yamaha Y8950 (MSX-AUDIO, predecessor of the OPL3) and the OPL4-based Moonsound were released as well, each having its own characteristic chiptune sound.

The technique of chiptunes with samples synthesized at runtime continued to be popular even on machines with full sample playback capability; because the description of an instrument takes much less space than a raw sample, these formats created very small files, and because the parameters of synthesis could be varied over the course of a composition, they could contain deeper musical expression than a purely sample-based format. Also, even with purely sample-based formats, such as the MOD format, chip sounds created by looping very small samples still could take up much less space.

These sample-based chiptunes were often used in crack intros, since they had to be squeezed into any spare space available on the disk of the cracked software.

As newer computers stopped using dedicated synthesis chips and began to primarily use sample-based synthesis, more realistic timbres could be recreated, but often at the expense of file size (as with MODs) and potentially without the personality imbued by the limitations of the older sound chips.

The standard MIDI file format, together with the General MIDI instrument set, describes only what notes are played on what instruments. General MIDI is not considered chiptune as a MIDI file contains no information describing the synthesis of the instruments.

Many common file formats used to compose and play chiptunes are the SID, MOD, and several Adlib based file formats.

## Style

Generally chip tunes consist of basic waveforms, such as sine waves, square waves and sawtooth or triangle waves, and basic [percussion](#), often generated from white noise going through an ADSR envelope controlled [synthesizer](#).

Crack intros and demo scene intros came to feature their own particular style of chiptune music. Although *chiptune* could historically refer to any style of music, the term is mostly used today to refer to the style of music used in these intros, since other styles of music have moved on to more sophisticated technology.

More recent "oldschool"/"oldsk001" or "demostyle" MOD music, although sample-based, continues the style of the chiptunes used in these intros; new compositions in this style can still be regularly found in places such as the MOD Archive Top 10.

## Today

Modern computers can play a variety of chiptune formats through the use of emulators and platform-specific plugins for media players. Depending on the nature of hardware being emulated, 100% accuracy in software may not be available. The commonly used MOS Technology SID chip, for example, has a multi-mode filter including analog circuits whose characteristics are only mathematically estimated in emulation libraries.

The chip scene is far from dead with "Compos" being held, and groups releasing [Music disks](#). New tracker tools are making chip sounds available to less techy musicians. For example, Little Sound DJ for the Nintendo Game Boy has an interface designed for user in a live environment and features MIDI synchronization.

Contemporary interest in chipping has also led to numerous web sites dedicated to the history of music groups, artists, and antique platforms.

# Choir

A **choir** or **chorus** is a [musical ensemble](#) of [singers](#).

A vocal ensemble which sings in a church, or sings exclusively sacred music, is called a choir, whereas an ensemble which performs the non-soloist parts of an [opera](#) or [musical theatre](#) production (or sometimes an [oratorio](#)) is called a *chorus*. For most other ensembles those two words may be used interchangeably. Other equivalent terms, often used in the names of choirs to provide variety, include *chorale*. There are also terms for more specific types of choir, such as glee club, show choir, barbershop quartet, and [Madrigal](#) group.

A choir usually has eight or more singers, typically with two or more singers on each part; a chorus is typically larger still, with many singers on each part. Smaller vocal ensembles are usually called *trios*, [quartets](#), [quintets](#), etc. (e.g., barbershop quartet), or a *vocal group* or *singing group*.

## Structure of choirs

Choirs are often led by a conductor or choirmaster. Most often choirs consist of four parts but there is no limit to the number of possible parts: Thomas Tallis wrote a 40-part [motet](#) entitled *Spem in alium*, for eight choirs of five parts each; Krzysztof Penderecki's *Stabat Mater* is for three choirs of 16 voices each, a total of 48 parts. Other than four, the most common number of parts are three, five, six and eight.

Choirs can sing with or without instrumental accompaniment. Singing without accompaniment is typically called a cappella singing (although this usage of the phrase is discouraged by the American Choral Directors Association). When singing with instrumental accompaniment, the accompanying instruments can consist of practically any instruments, one, several, or a full [orchestra](#). In Anglican church music the accompanying instrument is almost always an [organ](#).

For rehearsals, a [piano](#) accompaniment is often used even if a different instrumentation is planned for performance, or for rehearsing a *cappella* music.

Choirs can be categorized by the voices they include:

- Mixed choirs (i.e., with male and female voices). This is perhaps the most common type, usually consisting of [soprano](#), [alto](#), [tenor](#) and [bass](#) voices, often abbreviated as SATB. Often one or more voices is divided into two, e.g., SSAATTBB, where each voice is divided into two parts, and SATBSATB, where the choir is divided into two semi-independent four-part choirs. Occasionally [baritone](#) voice is also used (e.g., SATBarB), often sung by the higher basses.
- Male choirs, with the same SATB voicing as mixed choirs, but with boys singing the upper part (often called treble or boy soprano) and men singing alto (in falsetto), also known as countertenor.
- Female choirs, usually consisting of soprano and alto voices, two parts in each, often abbreviated as SSAA, or as soprano, soprano II, and alto, abbreviated SSA
- Men's choirs, usually consisting of two tenors, baritone, and bass, often abbreviated as TTBB (or ATBB if the upper part sings falsetto in [alto](#) range, as is common in barbershop music).
- Children's choirs, often two-part SA or three-part SSA, sometimes more voices.

Choirs are also categorized by the institutions in which they operate:

- Church choirs
- College choirs
- School choirs
- Community choirs (of children or adults)
- Professional choirs, either independent (e.g., Chanticleer) or state-supported (e.g., Netherlands Chamber Choir)

Finally, some choirs are categorized by the type of music they perform, such as

- Symphonic choirs
- Vocal jazz choirs

- Show choirs, in which the members sing and [dance](#), often in performances somewhat like [musicals](#)

## Layout on stage

There are various schools of thought regarding how the various sections should be arranged on stage. In symphonic choirs it is common (though by no means universal) to order the choir from highest to lowest voices from left to right, corresponding to the typical string layout. In a cappella or piano-accompanied situations it is not unusual for the men to be in the back and the women in front; some conductors prefer to place the basses behind the sopranos, arguing that the outer voices need to tune to each other.

More experienced choirs often sing with the voices all mixed together. Proponents of this method argue that it makes it easier for each individual singer to hear and tune to the other parts, but it requires more independence from each singer. Opponents argue that this method loses the spatial separation of individual voice lines, an otherwise valuable feature for the audience, and that it eliminates sectional resonance, which lessens the effective volume of the chorus.

For music with double (or multiple) choirs, usually the members of each choir are together, sometimes significantly separated, especially in performances of 16th-century music. Some composers actually specify that choirs should be separated, such as in Benjamin Britten's *War Requiem*.

## Skills involved in choral singing

Choral singers vary greatly in their ability and performance. The best choral singers possess (among others) the following abilities:

- to sing precisely in tune and with a pleasing vocal [timbre](#) which blends with the other singers;
- to sing at precisely controlled levels of volume, matching the dynamics and expression marked in the score or prescribed by the conductor, and not sing so loudly as to be markedly detectable as an individual voice within the section;
- to sight-read music fluently;
- to sing solo passages when required;
- to memorize or near-memorize the music, and thus be able to keep eyes on the conductor as much as possible;
- to read and pronounce the sounds of foreign languages accurately and in the pronunciation style specified by the leader;
- to remain completely alert for long periods, monitoring closely what is going on in a rehearsal or performance;
- to monitor one's own singing and detect errors. In British choirs, it is often the custom for a singer to raise a hand to indicate awareness of having made a mistake;
- to accept direction from others for the good of the group as a whole, even when the singer disagrees esthetically with the instructions;
- to arrive at rehearsals and performances consistently on time, mentally and physically prepared to sing.

Singers who have perfect pitch require yet another skill:

- to sing music in keys other than that in which it is written, since choirs often sing music in transposed form.

## Historical overview of choral music

A great number of [composers](#) have written choral works. However, composing instrumental music is in many ways different from composing vocal music. The requirements of including text, making it intelligible, and catering to the special capabilities and limitations of the human voice makes composing vocal music in some ways more demanding than composing instrumental music. Due to this difficulty, many of the greatest composers have never composed choral music. Naturally, many composers have their favourite instruments and rarely compose for other types instruments or ensembles, and choral music is in this sense not a special case. On the other hand, many composers of all eras have specialized in choral music, and for the first thousand years of western music history choral music was one of the only types of music to have survived intact.

### Medieval music

*Main article:* [Medieval music](#)

The earliest notated music of western Europe is [Gregorian Chant](#), along with a few other types of chant which were later subsumed (or sometimes suppressed) by the Catholic Church. This tradition of a cappella choir singing lasted from sometime between the times of St. Ambrose (4th century) and Gregory the Great (6th century) up to the present. During the later Middle Ages, a new type of singing involving multiple melodic parts, called organum became predominant for certain functions, but initially this polyphony was only sung by soloists. Further developments of this technique included clausulae, [conductus](#) and the [motet](#) (most notably the isorhythmic motet), which was to become a predominant [Renaissance](#) form. The first evidence of performance with more than one singer per part comes in the Old Hall Manuscript (1420, though containing music from the late 1300s), in which there is occasional divisi (where one part divides into two different notes, something a solo singer obviously couldn't handle).

### Renaissance music

*Main article:* [Renaissance music](#)

During the [Renaissance](#), sacred choral music was the principal type of (formal or 'serious') music in Western Europe. Throughout the era, hundreds of [masses](#) and [motets](#) (as well as various other forms) were composed for a cappella choir, though there is some dispute over the role of instruments during certain periods and in certain areas. Some of the better-known composers of this time include Dufay, Josquin des Prez, Giovanni Pierluigi da Palestrina, and William Byrd; the glories of Renaissance polyphony were choral, sung by choirs of great skill and distinction all over Europe. Choral music from this period continues to be popular with many choirs throughout the world today.

[Madrigals](#) are another particularly popular form dating from this period. Although madrigals were initially dramatic settings of unrequited-love poetry or mythological stories in Italy, they were imported into England and merged with the more upbeat balletto, celebrating often silly songs of spring, or eating and drinking. To most English speakers, the word *madrigal* now refers to the latter, rather than to madrigals proper, which refers to a poetic form of lines consisting of seven and eleven syllables each.

The interaction of sung voices in Renaissance polyphony influenced Western music for centuries. Most of the secular forms of music of the [Baroque](#) period derive in some way from the flowering of music during this intensely creative time. Composers routinely studied the style of composition well into the 20th century, especially as codified by music theorist Johann Joseph Fux, and the language of music analysis (which describes instrumental parts as "voices" and their melodic motion as "voice-leading") has its roots in the Renaissance style.

Composers of the early twentieth century also endeavored to extend and develop the Renaissance styles. Herbert Howells wrote a Mass in the Dorian mode entirely in strict Renaissance style, and Ralph Vaughan Williams's Mass in G minor is an extension of this style. Anton von Webern wrote his dissertation on the Choralis Constantinus of Heinrich Isaac and his development of [serial music](#) techniques was informed by this study.

## Baroque music

The sudden developments which mark the beginning of the [Baroque period](#) around 1600 (instrumental music, opera, chords) were only introduced gradually into choral music. Madrigals continued to be written for the first few decades of the 17th century. Contrapuntal motets continued to be written for the Catholic church in the Renaissance style well into the 18th century.

One of the first innovative choral composers of the Baroque was Claudio Monteverdi (1567-1643), a master of [counterpoint](#), who extended the new techniques pioneered by the [Venetian School](#) and the Florentine Camerata. Monteverdi, together with Heinrich Schütz (1585-1672), used the new harmonic techniques to support and reinforce the meaning of the text. They both composed a large amount of music for both a cappella choir as well as choirs accompanied by different ensembles.

Independent instrumental accompaniment opened up new possibilities for choral music. [Verse anthems](#) alternated accompanied solos with choral sections; the best-known composers of this genre were Orlando Gibbons and Henry Purcell. Grand motets (such as those of Michel-Richard Delalande) separated these sections into separate movements. [Oratorios](#) extended this concept into concert-length works, usually loosely based on Biblical stories. Giacomo Carissimi was the principal early composer of oratorios, but most opera composers of the Baroque also wrote oratorios, generally in the same musical style as the operas. George Frideric Handel is the best-known composer of Baroque oratorios.

Lutheran composers wrote instrumentally-accompanied [cantatas](#), often based on chorales ([hymns](#)). While Dieterich Buxtehude was a significant composer of such works, Johann Sebastian Bach (1685-1750) made the most prominent mark in this style, writing [cantatas](#), [motets](#), passions and other music. While Bach was little-known as a composer in his time, and for almost a century after his death, composers such as Mozart and Mendelssohn assiduously studied and learned from his contrapuntal and harmonic techniques, and his music is regularly performed and admired in the present day.

## Classical and Romantic music

Composers of the late 18th century became fascinated with the new possibilities of the symphony and other instrumental music, and generally neglected choral music. Mozart's choral music generally does not represent his best work, with a few exceptions (such as the Requiem). Haydn only became interested in choral music near the end of his life, writing a series of masses beginning in 1797.

In the 19th century, sacred music escaped from the church and leaped onto the concert stage, with large sacred works unsuitable for church use, such as Beethoven's *Missa solemnis*, Berlioz's *Te Deum*, and Brahms' *Ein deutsches Requiem*. Rossini's *Stabat mater*, Schubert's masses, and Verdi's *Requiem* also exploited the grandeur offered by instrumental accompaniment.

Oratorios also continued to be written, clearly influenced by Handel's models. Berlioz's *L'Enfance du Christ* and Mendelssohn's *Elijah* and *St. Paul* are in the category. Schubert, Mendelssohn, and Brahms also wrote secular cantatas, the best known of which are Brahms' *Schicksalslied* and *Nänie*.

A few composers developed a cappella music, especially Bruckner, whose masses and motets startlingly juxtapose Renaissance counterpoint with chromatic harmony. Mendelssohn and Brahms also wrote significant a cappella motets.

The amateur chorus (beginning chiefly as a social outlet) began to receive serious consideration as a compositional venue for the part-songs of Schubert, Schumann, Mendelssohn, Brahms, and others. These 'singing clubs' were often for women or men separately, and the music was typically in four-part (hence the name "part-song") and either a cappella or with simple instrumentation. At the same time, the Cecilian movement attempted a restoration of the pure Renaissance style in Catholic churches.

## 20th and 21st centuries

As in other genres of music, choral music underwent a period of experimentation and development during the [20th century](#). While few well-known composers focused primarily on choral music, most significant composers of the early century wrote at least a small amount.

The early post-Romantic composers, such as Richard Strauss and Sergei Rachmaninoff, contributed to the genre, but it was Ralph Vaughan Williams who made the greatest contribution of this type, writing new [motets](#) in the Renaissance style with the new harmonic languages, and arranging English and Scottish folk songs. Arnold Schoenberg's *Friede auf Erden* represents the culmination of this style, a tonal kaleidoscope whose tonal centers are constantly shifting (similar to his *Verklärte Nacht* for strings from the same period).

As the century progressed, modernist techniques found their expression in choral music, including serial compositions by Schoenberg, Anton von Webern, and Stravinsky; eclectic compositions by Charles Ives; dissonant counterpoint by Olivier Messiaen (*Cinq Rechants*) and Paul Hindemith (*When Lilacs Last in the Dooryard Bloom'd*). Because of the difficulty of singing atonal music, these compositions are rarely performed today, although enjoyed by specialists. However, the primitivist movement is represented by Carl Orff's *Carmina Burana*, a composition widely performed.

Neoclassical styles found a more enduring legacy in choral music. Benjamin Britten wrote a number of well-known choral works, including *War Requiem*, *Five Flower Songs*, and *Rejoice in the Lamb*. Francis Poulenc's *Motets pour le temps de Noël*, *Gloria*, and *Mass in G* are often performed. Hugo Distler wrote a huge amount of modern music modelled on the forms of Bach. In the United States, Aaron Copland, Samuel Barber, and Randall Thompson wrote signature American pieces. In Eastern Europe, Béla Bartók and Zoltán Kodály wrote a small amount of choral music.

Post-World War II music took experimentation to its logical extreme. *Sinfonia* by Luciano Berio includes a chorus. Krzysztof Penderecki's *St. Luke Passion* includes

choral shouting, clusters, and aleatoric techniques. Richard Felciano wrote for chorus and electronic tape.

[Minimalism](#) is represented by Arvo Pärt, whose *Johannespassion* and *Magnificat* have received regular performances.

Avant-garde techniques:

- Shouting
- Fry tones (lowest possible note)
- Tone clusters
- Wordless chorus, spearheaded by Tchaikovsky's *The Nutcracker* and Holst's *The Planets*, was expanded by Schoenberg, Darius Milhaud, and others.

Black [Spirituals](#) came into greater prominence and arrangements of such spirituals became part of the standard choral repertoire. Notable composers and arrangers of choral music in this tradition include André Thomas and Moses Hogan.

During the late 20th Century, one of the major areas of growth in the choral movement has been in the areas of GLBT choruses. Starting around 1979, gay men's choruses were founded within a period of months in major U.S. cities such as New York, Los Angeles, Seattle and Dallas. Over the last quarter century the number of such groups, men's, women's and mixed, has exploded. GALA Choruses, an associative group, now has well-over 100 member choruses throughout the world.

At the turn of the century, Eric Whitacre has achieved considerable attention by combining tonal music with tone clusters and similar experimental techniques. Although it is too soon to discern trends in the 21st century, the spirit of more practical tonally-oriented music which dominated the last decades of the 20th century seems to be continuing via the works of Karl Jenkins, John Rutter, Robert Steadman, Morten Lauridsen and Kentaro Sato amongst others.

# Chopped and screwed

**Chopped and screwed**, or **screwed and chopped**, or just plain **screw**, is a term that refers to a certain technique of [remixing hip hop music](#) by slowing the tempo and applying various [DJ](#) techniques such as skipping beats, record scratching, stop-time, and sending portions of the music through stand-alone effects to make a "chopped-up" version of the original song. Though currently "Chopped and Screwed" is the most widely used term, "Screw" or "Screwed and Chopped" were also used to refer to the style.

The style was developed in and around Houston, Texas, which remains the undisputed capital of the style.

The late DJ Screw, a South Houston DJ, is credited with the creation and early experimentation of the genre. DJ Screw started making screw tapes (also known as gray tapes because Screw would always release them on gray Maxell tapes) in the early nineties, after spending a year perfecting the mixing technique. Originally, this process involved two copies of the same record, slowed down either on the [turntables](#) themselves using pitch shift or with an after-mixer device. Phasing and echo effects were originally the result of the two records being played at millisecond intervals, i.e. very close to the exact same time.

The genre was heavily associated with the use of "syrup", the abuse of prescription cough syrups containing codeine and Dextromethorphan, and marijuana, which have been credited for the genre's [psychedelic](#) style. DJ Screw went on to make countless mixes (purported to be in the thousands) that usually had a [theme](#) and often provided a significant outlet for MCs in the South-Houston area, such as Lil' Flip, E.S.G, UGK, Short Dawg, Lil' Keke and Z-Ro. Early tapes were often Screwed and Chopped versions of instrumentals over which rappers would freestyle (e.g. DJ Screw's "Who Next Wid Da Plex", Lil' Flip's "Freestyle Kings"), later tapes were mostly vocal tracks with occasional toasting or freestyle intermissions. By the end of the 90's, rivalry had developed between North and South Side DJ "Clicks". By the time of Screw's death in 2000, the genre had become widely used throughout the South.

Mississippi rapper David Banner released a Screwed and Chopped Version of his "Mississippi: The Album" in 2003, which would mark one of the first successful efforts by a major recording label to exploit the success of the genre. Other Southern recording artists had had similar success beforehand, such as Eightball and MJG, The Geto Boys, Three 6 Mafia and Chicago's Do or Die.

Currently, the style is exemplified in the music of North-Side Swishahouse DJs such as OG Ron C and Michael 5000 Watts. Arguably maintaining a stranglehold on the remixing platform, their work helped establish current rappers Paul Wall, Slim Thug, Mike Jones and cliques, Chamillitary-- Paul Wall and Chamillionaire. Their mixes saw an expansion of the usual roster of artists that are screwed and chopped, as more major recording labels embraced the genre that often sold more units than the usual version of a rapper's albums. It is rumored that Swishahouse originally labelled their tapes Chopped and Screwed to differentiate their mixes from South-Side crews that operated out of DJ Screw's style or tutelage.

Success in 2005 established Paul Wall as somewhat of a public face for the commercialization of S&C. It also popularized a production technique that moves away from [turntables](#) to the use of software programs such as Sony's ACID. Paul Wall was invited onto the digital cable channel MTV Jams during the summer of 2005 to host a block of Screwed & Chopped music videos and to talk about the remix technique that he uses. Since April 2005 Screwed and Chopped music can now be bought at the iTunes Music Store.

María Isabel is also known in her work in the field.

During the spring and summer of 2005, several popular urban music videos were released in a screwed and chopped remix form in addition to their original. These include:

- "Still Tippin'" by Mike Jones
- "You Gonna Luv Me" by Da Back Wudz
- "Na-Na-Na-Na" by Nelly
- "Wait (The Whisper Song)" by Ying Yang Twins
- "Dem Boyz" by Boyz N Da Hood
- "What U Gon' Do" by Lil' Jon
- "Some Cut" by Trillville
- "You Don't Know Me" by T.I.
- "Smile" by Scarface [originally released in 1997, but released in the summer of 2005 as a Screwed & Chopped remix video]
- "Game Over" by Lil' Flip

The genre has occasionally lended itself to music other than hip hop; Paul Wall remixed The Transplants album *Haunted Cities* in 2005, a punk group featuring Blink 182 drummer Travis Barker, and Black Eyed Peas 2005 album *Monkey Business* which is technically [pop music](#). The Saturday Club, an Australian act, screws and chops rock music tracks, posting the results to the mp3 blog *Screw Rock 'n' Roll*.

Important DJ Screw albums:

- " WHERE IT ALL BEGAN APT-100"
- "3 N' the Mornin' Pt. 2"
- "Greatest Hits"
- "As the World Turns Slow"
- "11.16.00" (the date of his death)
- "June 27th"

## Quotes

"Hip hop records are literally slowed down to a molasses-like pace, and beats and lyrics ooze lazily out of the speakers. The result is a heavy, drowsy groove that, over the last 14 years, has exerted a major influence on Southern hip hop culture." -

## Chorale cantata

In [music](#), a **chorale cantata** is a sacred composition for voices and instruments, principally from the German Baroque era, in which the organizing principle is the words and music to a chorale. Usually a chorale cantata is in multiple movements or parts. Most chorale cantatas were written between approximately 1650 and 1750; by far the most famous are by J.S. Bach.

## Description

The chorale cantata developed out of the [chorale concerto](#), an earlier form much used by Samuel Scheidt in the early 17th century, which incorporated elements of the [Venetian School](#), such as the [concertato](#) style, into the liturgical music of the Protestant Reformation. Later the chorale cantata developed into three general forms:

1. a form in which each verse (strophe) of the chorale was developed as an independent movement;
2. a form in which the chorale appeared in some of the movements, perhaps only two, and the other parts of the cantata used other texts; and
3. the version pioneered by J.S. Bach, in which the first and last movements use the first and last strophes of the chorale, but the inner movements—perhaps [aria](#) and recitative—use paraphrases of the actual chorale text. Typically the beginning and ending movements use all the instrumental and vocal forces, while the interior movements are for smaller groups.

Most compositions in this genre were never published. It was common at the time for composers to write for local performances; often the composer and the music director at a church were the same person, and the music was written, copied, and performed in short order, and remained in manuscript. Probably over 95% of all compositions of this type have been lost.

# Composers

Composers of chorale cantatas included:

## Baroque

Samuel Scheidt  
Johann Andreas Herbst  
Johann Erasmus Kindermann  
Franz Tunder  
Nicolaus Bruhns  
Dieterich Buxtehude  
Johann Krieger  
Sebastian Knüpfer  
Johann Schelle  
Johann Pachelbel  
Johann Rosenmüller  
Johannes Crüger  
Joachim Gerstenbüttel  
Georg Bronner  
Christoph Graupner  
Johann Kuhnau  
Georg Philipp Telemann

## Chorale concerto

In [music](#), a **chorale concerto** is a short sacred composition for one or more voices and instruments, principally from the very early German [Baroque](#) era. Most examples of the genre were composed between 1600 and 1650.

## Description

This use of the word [concerto](#) differs considerably from the more modern, and considerably more common usage: in the early Baroque the word meant vocal music accompanied by instruments, specifically in [concertato](#) style. The concertato style was brought north across the Alps by composers such as Hans Leo Hassler and Heinrich Schütz, who studied in Venice with the originators of the style, the [Venetian School](#) composers including Giovanni Gabrieli. Hassler, Schütz and others then applied their newly learned techniques to the German chorale to create a form roughly equivalent in expression and purpose to the Roman Catholic [motet](#) of the preceding [Renaissance](#) era. The Protestant Reformation made necessary the development of new genres of music, most of which were related in form and function to equivalent genres in Roman Catholic parts of Europe, but which avoided the use of [Gregorian Chant](#), using the chorale instead (many chorale tunes of which were derived directly from chant, but fitted with words in German).

There were two basic types of chorale concerto:

1. A simple composition for voice and basso continuo, sometimes with an obbligato solo instrument;
2. A more elaborate polychoral setting, directly related to the music of the [Venetian School](#), and often modeled after the work of Giovanni Gabrieli.

The [chorale cantata](#), culminating in the work of J.S. Bach, evolved out of the chorale concerto, and became a popular liturgical form in Germany for more than a hundred years.

## **Composers**

Composers of chorale concertos included:

Samuel Scheidt

Johann Schein

Michael Praetorius

## Chorale monodony

In [music](#), a **chorale monody** was a type of a sacred composition of the very early German [Baroque](#) era. It was for solo voice and accompanying instruments, usually basso continuo, and was closely related to the contemporary Italian style of monody. Almost all examples of chorale monodies were written in the first half of the 17th century.

A chorale monody used the text of a chorale, but rarely if ever used the chorale tune, at least not in a recognizable form. It was also related to the [concertato madrigal](#), another contemporary Italian form.

## **Composers**

Composers of chorale monodies included:

Johann Schein

Heinrich Schütz

# Chorale motet

The **chorale motet** was a type of musical composition in mostly Protestant parts of Europe, principally Germany, and mainly during the 16th century. It involved setting a chorale melody and text as a [motet](#).

Stylistically chorale motets were similar at first to motets composed in Catholic countries, and made use of the full range of techniques of Franco-Flemish polyphony. In the earlier period, the chorale was typically used as a cantus firmus, fairly easy to hear, with other lines either weaving in and out [contrapuntally](#) around it, or following along in the same rhythm in an entirely homophonic style. Later in the century, especially around 1600, the successive verses of the chorale were used to begin imitative sections in a fugal style. Shortly after 1600 the form began to disappear, overtaken by newer forms based on Italian (especially Venetian) models: the [chorale concerto](#), and later the [chorale cantata](#). The chorale cantata was to become the most substantial of the descendants of the chorale motet, and eventually culminated in the work of J.S. Bach.

Composers of early chorale motets included Johann Walter, who typically used a cantus firmus type of motet setting; Balthasar Resinarius, who wrote in the complex polyphonic style; Sixt Dietrich, who chose the simpler homophonic style; and Ludwig Senfl, Lupus Hellinck, Thomas Stoltzer, and others. Some of these composers were Roman Catholic: the Thirty Years War had not yet torn Germany apart, and composers from both branches of Christianity were still mixing freely.

Between the late 1560s and the early 1580s, the renowned composer Orlande de Lassus, who was working in Munich, contributed several volumes of chorale motets of his own: *Newe Teütsche Liedlein mit fünf Stimmen* (books 1 and 2) and *Newe teutsche Lieder*. In these motets the voices are equally balanced, as in the style of Palestrina.

Around 1600 a new group of composers, many of whom had studied in Italy, brought new ideas to the chorale motet. Some of these composers were among the most famous and talented in Europe, including Melchior Franck, Hans Leo Hassler, and the spectacularly prolific Michael Praetorius. Praetorius's *Musae Sioniae* (1605-1610), an enormous collection of approximately 1200 pieces, includes some of the finest and most advanced examples of the form; however, by this time the chorale concerto and other types of chorale settings were beginning to eclipse the chorale motet as a primary means of expression for the German chorale.

## Chorale prelude

In music, a **chorale prelude** is a short liturgical composition for [organ](#) using a chorale tune as its basis. It was a predominant form of the German [Baroque](#) era and reached its culmination in the works of J.S. Bach, who wrote 46 (with a 47th unfinished) examples of the form in his *Orgelbüchlein*.

The liturgical function of a chorale prelude was to introduce the hymn about to be sung by the congregation, usually in a Protestant, and originally in a Lutheran, church. Although it was typically a polyphonic setting, the melody would be plainly audible. There was sometimes an obbligato line above or below the melody.

As an independent genre, the chorale prelude began with the works of Dieterich Buxtehude, who wrote 30. Numerous examples also exist from the 19th and 20th centuries, including some by Johannes Brahms and Max Reger. Works in the form continue to be composed in the present day.

# Chorale setting

A **chorale setting** is any of a very wide variety of musical compositions, almost entirely of Protestant origin, which use a chorale as their basis. They are vocal, instrumental, or both. Although the bulk of them are German in origin, and predominantly [Baroque](#) in time period, chorale settings also exist from other countries and times.

The Protestant Reformation resulted in an enormous change in musical practice in northern Europe. Plainchant, associated with the Catholic church, was largely replaced with choral music sung in the vernacular language—usually German—and the corresponding musical forms from Catholic countries, such as the [motet](#), were also replaced with forms which used as their basis the chorale melodies instead of the plainsong from which much of the motet repertory was derived.

Not only the musical forms, but the individual tunes of the Catholic Church were replaced by reformers, although there was often a close relation between the original and the replacement. Composers, including Martin Luther himself, both composed new tunes for the German chorale texts, and adapted specific plainchant melodies. These chorale tunes were set musically in an extraordinary number of ways, from the time of the Protestant Reformation to the present day.

Chorale settings are of the following principal types:

- [Chorale cantata](#)
- Chorale canzona (usually called a Chorale ricercare)
- [Chorale concerto](#)
- Chorale fantasia
- Chorale fugue
- Chorale mass
- [Chorale monody](#).
- [Chorale motet](#)
- Chorale partita (usually interchangeable with chorale variations)
- [Chorale prelude](#)
- Chorale ricercare
- Chorale variations (usually interchangeable with chorale partita)

Boundaries between different items on this list can be very vague, especially in the early Baroque era. Some of these forms are exclusively instrumental (such as the chorale prelude, chorale fugue, chorale fantasia, chorale partita or variations, chorale ricercare/canzona) while the others are a cappella vocal (some chorale motets) or for voices and instruments (chorale [cantata](#), chorale [concerto](#), chorale [mass](#), chorale monody, some chorale motets). Many of the instrumental forms are almost exclusively for [organ](#), the single most important liturgical instrument in Protestant church music from the Reformation until recent times.

Some of these forms continue to be used by composers up to the present day, particularly the chorale prelude, and the chorale mass.

# Chord

In [music](#) and [music theory](#), the term **chord** is used in several different senses. In the most general sense, the term can refer to any meaningful collection of notes that can appear simultaneously, or near-simultaneously. "Chords" in this very general sense are the subject of musical [set theory](#). In more colloquial uses, the term "chord" refers to three or more different [notes](#) or [pitches](#) sounding simultaneously, or nearly simultaneously, over a period of time. The term is also used in an even more restricted sense, referring to tertian sonorities (see below), that can be constructed as stacks of thirds relative to some underlying [scale](#). Two-note sonorities are typically referred to as dyads or [intervals](#).

The word *chord* is short for *accord*, from the Middle English word *cord*. In the Middle Ages, Western harmony featured the perfect [intervals](#) of a fourth, a fifth, and an octave. In the 15th and 16th centuries, the major and minor triads (see below) became increasingly common, and were soon established as the default sonority for Western music. This norm persists to this day in many Western styles, though it is by no means universal. Four-note "seventh chords" have been accepted since the 17th century, and "chords" in [jazz](#) often feature five or more notes. Since chords are a well-established norm in Western music, single-note melodies and sonorities of two pitches are often interpreted as implying chords.

Chords are by no means a universal feature of human music, and many non-Western styles do not have "chords" as a Western musician would understand them. For that reason, this article will focus primarily on chords in traditional Western music. For information on non-Western styles, consult the articles specific to those styles.

# Constructing and naming chords

Every chord has certain characteristics, which include:

- the number of pitch classes it contains
- the general type of [intervals](#) it contains: for example seconds, thirds, or fourths.
- its precise intervallic construction: for example, if it is a triad, is it major, minor, augmented or diminished?
- the scale degree of the root note or bass note
- whether the chord is inverted in register

## Number of notes

The easiest way to name a chord is according to the number of pitch classes it contains. Chords with three pitch classes are called **trichords**. Chords with four notes are known as tetrachords. Those with five are called pentachords, and those with six are hexachords.

## Type of interval

*Main article: [Interval \(music\)](#).*

Many chords can be arranged as a series whose elements are separated by [intervals](#) that are all roughly the same size. For example, a C major triad contains the notes C, E, and G. These notes can be arranged in the series C-E-G, in which the first interval (C-E) is a major third, while the second interval (E-G) is a minor third. Any chord that can be arranged as a series of (major or minor) thirds is called a **tertian** chord. A chord such as C-D-Eb is a series of seconds, containing a major second (C-D) and a minor second (D-Eb). Such chords are called **secundal**. The chord C-F-B, which consists of a perfect fourth C-F and an augmented fourth (tritone) F-B is called **quartal**. Most Western music uses tertian chords.

On closer examination, however, the terms "secundal", "tertian" and "quartal" can become ambiguous. The terms "second," "third," and "fourth" (and so on) are often understood relative to a scale, but it is not always clear which scale they refer to. For example, consider the pentatonic scale G-A-C-D-F. Relative to the pentatonic scale, the intervals G-C and C-F are "thirds," since there is one note between them. Relative to the chromatic scale, however, the intervals G-C and C-F are "fourths" since they are five semitones wide. For this reason the chord G-C-F might be described both as "tertian" and "quartal," depending on whether one is measuring intervals relative to the pentatonic or chromatic scales.

The use of accidentals complicates the picture. The chord B<sup>#</sup>-E-Ab is notated as a series of diminished fourths (B<sup>#</sup>-E) and (E-Ab). However, the chord is enharmonically equivalent to (and sonically indistinguishable from) C-E-G<sup>#</sup>, which is a series of major thirds (C-E) and (E-G<sup>#</sup>). Notationally, then, B<sup>#</sup>-E-Ab is a "fourth chord," even though it sounds identical to the tertian chord C-E-G<sup>#</sup>. In some circumstances it is useful to talk

about how a chord is notated, while in others it is useful to talk about how it sounds. Terms such as "tertian" and "quartal" can be used in either sense, and it is important to be clear about which is intended.

## Quality and Triads

The **quality** of a tertian triad is determined by the precise arrangement of its intervals. Tertian trichords, known as **triads**, can be described as a series of three notes each of which is a third above its predecessor. The first element is called the root note of the chord, the second note is called the "third" of the chord, and the last note is called the "fifth" of the chord. Since there are two varieties of third, there are  $2 * 2 = 4$  varieties of triad. These are described below:

| Chord name              | Component intervals     | Example | Chord symbol              |
|-------------------------|-------------------------|---------|---------------------------|
| <b>major triad</b>      | major third minor third | C-E-G   | C, CM, Cma                |
| <b>minor triad</b>      | minor third major third | C-Eb-G  | Cm, Cmi                   |
| <b>augmented triad</b>  | major third major third | C-E-G#  | C+, C <sup>+</sup> , Caug |
| <b>diminished triad</b> | minor third minor third | C-Eb-Gb | C <sup>o</sup> , Cdim     |

As an example, consider an octave of the C major scale, consisting of the notes C D E F G A B C.

The major triad formed using the C note as the root would consist of C (the root note of the scale), E (the third note of the scale) and G (the fifth note of the scale). This triad is major because the interval from C to E is a major third.

Using the same scale (and thus, implicitly, the key of C major) a minor chord may be constructed using the D as the root note. This would be D (root), F (third note) A (fifth note).

Examination at the piano keyboard will reveal that there are four semitones between the root and third of the chord on C, but only 3 semitones between the root and third of the chord on D (while the outer notes are still a perfect fifth apart). Thus the C triad is major while the D triad is minor.

A triad can be constructed on any note of the C major scale. These will all be either minor or major, with the exception of the triad on B, the leading-tone (the last note of the scale before returning to a C, in this case), which is diminished. For more detail see the article on the Mathematics of the Western music scale.

## Scale degree

Chords are also distinguished and notated by the scale degree of their root note or bass note.

For example, since the first scale degree of the C major scale is the note C, a triad built on top of the note C would be called the *one* chord, which might be notated 1, I, or even C, in which case the assumption would be made that the key signature of the particular piece of music in question would indicate to the musician what function a C major triad was fulfilling, and that any special role of the chord outside of its normal diatonic function would be inferred from the context.

Roman numerals indicate the root of the chord as a scale degree within a particular [key](#), as follows:

|                      |       |            |         |             |          |            |                       |
|----------------------|-------|------------|---------|-------------|----------|------------|-----------------------|
| <b>Roman numeral</b> | I     | II         | III     | IV          | V        | VI         | VII                   |
| <b>Scale degree</b>  | tonic | supertonic | mediant | subdominant | dominant | submediant | leading tone/subtonic |

Many analysts use lower-case Roman numerals to indicate minor triads and upper-case for major ones, with degree and plus signs ( $^{\circ}$  and  $^*$ ) to indicate diminished and augmented triads, respectively. When they are not used, all the numerals are capital, and the qualities of the chords are inferred from the other scale degrees that chord contains; for example, a chord built on **VI** in C major would contain the notes A, C, and E, and would therefore be a minor triad.

The scale to whose scale degrees the Roman numerals refer may be indicated to the left (e.g. **F#:**), but may also be understood from the key signature or other contextual clues.

Unlike pop chord symbols, which are used as a guide to players, Roman numerals are used primarily as analytical tools, and so indications of inversions or added tones are sometimes omitted if they are not relevant to the analysis being performed.

## Inversion

When the bass note is not the same as the root note, the chord is said to be inverted.

The number of inversions that a chord can have is one less than the number of chord members it contains. Triads, for example, (having three chord members) can have three positions, two of which are inversions:

- Root position: The root note is in the bass, and above that are the third and the fifth. In the first scale degree this is marked 'I'
- First inversion: The third is in the bass, and above it are the fifth and the root. This creates an interval of a sixth and a third above the bass note, and so is marked in figured Roman notation as '6/3'. This is commonly abbreviated to '6' (or 'Ib') since the sixth is the characteristic interval of the inversion, and so always implies '6/3'.
- Second inversion: The fifth is in the bass, and above it are the root and the third. This creates an interval of a sixth and a fourth above the bass note, and so is marked as '6/4' or 'Ic'. Second inversion is the most unstable chord position.

# Common chords

## Seventh chords

Seventh chords may be thought of as the next natural step in composing tertian chords after triads. Seventh chords are constructed by adding a fourth note to a triad, at the interval of a third above the fifth of the chord. This creates the interval of a seventh above the root of the chord. There are various types of seventh chords depending on the quality of the original chord and the quality of the seventh added.

Five common types of seventh chords have standard symbols. The chord quality indications are sometimes superscripted and sometimes not (e.g. *Dm7*, *Dm<sup>7</sup>*, and *D<sup>m7</sup>* are all identical). The last three chords are not used commonly except in jazz.

| Chord name                     | Component notes (chord and <a href="#">interval</a> ) |                    | Chord symbol                        |
|--------------------------------|---|--------------------|-------------------------------------|
| <b>major seventh</b>           | major triad   | major seventh      | CMaj7, CMA7, CM7, C <sup>7</sup>    |
| <b>dominant seventh</b>        | major triad   | minor seventh      | C7, C <sup>7</sup>                  |
| <b>minor seventh</b>           | minor triad   | minor seventh      | Cm7, C-7                            |
| <b>diminished seventh</b>      | diminished triad                                      | diminished seventh | C <sup>o7</sup> , Cdim <sup>7</sup> |
| <b>half-diminished seventh</b> | diminished triad                                      | minor seventh      | C <sup>o7</sup> , Cm7 <sup>b5</sup> |
| <b>augmented major seventh</b> | augmented triad                                       | major seventh      | C+(Maj7), CAM7, CMaj7+5, CMaj7#5    |
| <b>augmented seventh</b>       | augmented triad                                       | minor seventh      | C+7, C7+5, C7#5                     |
| <b>minor major seventh</b>     | minor triad   | major seventh      | Cm(Maj7)                            |

When a dominant seventh chord is borrowed from another key, the Roman numeral corresponding with that key is shown after a slash. For example, **V/V** indicates the dominant of the dominant. In the key of C major, where the dominant (V) chord is G major, this secondary dominant is the chord on the fifth degree of the G major scale, i.e. D major. Note that while the chord built on D (**ii**) in the key of C major would normally be a minor chord, the **V/V** chord, also built on D, is major.

## Extended chords

Extended chords are tertian chords (built from thirds) or triads with notes extended, or added, beyond the seventh. Thus ninth, eleventh, and thirteenth chords are extended chords. After the thirteenth, any notes added in thirds duplicate notes elsewhere in the chord, so there are no fifteenth chords, seventeenth chords, and so on.

To add one note to a single **triad**, the equivalent simple intervals are used. Because an octave has seven notes, these are as follows:

| Chord name      | Component notes (chord and <a href="#">interval</a> ) |       |   | Chord symbol |
|-----------------|---|-------|---|--------------|
| <b>Add nine</b> | major triad   | ninth | - | C/9, Cadd9   |

|                            |                  |                  |            |          |
|----------------------------|------------------|------------------|------------|----------|
| <b>Major fourth</b>        | major triad      | eleventh         | -          | C4       |
| <b>Major sixth</b>         | major triad      | thirteenth       | -          | C6       |
| <b>Six-nine</b>            | major triad      | ninth            | thirteenth | C6/9, C" |
| <b>Dominant ninth</b>      | dominant seventh | major ninth      | -          | C9       |
| <b>Dominant eleventh</b>   | dominant seventh | perfect eleventh | -          | C11      |
| <b>Dominant thirteenth</b> | dominant seventh | major thirteenth | -          | C13      |

Other extended chords follow the logic of the rules shown above.

Thus *Maj9*, *Maj11* and *Maj13* chords are the extended chords shown above with major sevenths rather than dominant sevenths. Similarly, *m9*, *m11* and *m13* have minor sevenths.

Extended chords composed of triads can also have variations. Thus *madd9*, *m4* and *m6* are minor triads with extended notes.

## Sixth chords

Sixth chords are chords that contain any of the various intervals of a sixth as a defining characteristic. They can be considered as belonging to either of two separate groups:

**Group1:** Chords that contain a *sixth* chord member, i.e., a note separated by the interval of a sixth from the chord's root, such as:

1. **The major sixth chord** (also called, *sixth* or *added sixth* with chord notation: 6, e.g., 'C6')

This is by far the most common type of sixth chord of this group, and comprises a major chord plus a note forming the interval of a major sixth above the root. For example, the chord C6 contains the notes C-E-G-A.

2. **The minor sixth chord** (with chord notation: min 6 or m6, e.g., Cm6)

This is a minor chord plus a note forming the interval of a major sixth above the root. For example, the chord Cmin6 contains the notes C-Eb-G-A

In chord notation, the sixth of either chord is always assumed to be a major sixth rather than a minor sixth. Minor versions exist, and in chord notation this is indicated as, e.g., Cmin (min6). Such chords, however, are very rare, as the minor sixth chord member is considered an 'avoid tone' due to the semitone clash between it and the chord's fifth.

3. **The augmented sixth chord** (usually appearing in chord notation as an enharmonically equivalent 'seventh chord')

An augmented sixth chord is a chord which contains two notes that are separated by the interval of an augmented sixth (or, by inversion, a diminished third - though this inversion is rare in compositional practice). The augmented sixth is generally used as a dissonant interval which *resolves* by both notes moving outward to an octave.

In Western music, the most common use of augmented sixth chords is to resolve to a dominant chord in root position (that is, a dominant triad with the root doubled to create the octave to which the augmented sixth chord resolves), or to a tonic chord in second inversion (a tonic triad with the fifth doubled for the same purpose). In this case, the tonic note of the key is included in the chord, sometimes along with an optional fourth note, to create one of the following (illustrated here in the key of C major):

- Italian Augmented Sixth Chord: A flat, C, F sharp
- French Augmented Sixth Chord: A flat, C, D, F sharp
- German Augmented Sixth Chord: A flat, C, E flat, F sharp

**Group 2:** Inverted chords, in which the interval of a sixth appears above the bass note rather than the root; inversions, traditionally, being so named from their characteristic interval of a sixth from the bass.

**1. Inverted major and minor chords**

Inverted major and minor chords may be called *sixth* chords. More specifically, their first and second inversions may be called *six-three* (6/3) and *six-four* (6/4) chords respectively, to indicate the intervals that the upper notes form with the bass note. Nowadays, however, this is mostly done for purposes of academic study or analysis.

**2. The neapolitan sixth chord**

This chord is a major triad with the lowered supertonic scale degree as its root. The chord is referred to as a "sixth" because it is almost always found in first inversion. Though a technically accurate Roman numeral analysis would be mII, it is generally labelled N<sup>6</sup>. In C major, the chord is spelled (assuming root position) D flat, F, A flat.

Because it uses lowered altered tones, this chord is often grouped with the borrowed chords. However, the chord is not borrowed from the parallel major or minor, and may appear in both major and minor keys.

## Chromatic alterations

Although the third and seventh of the chord are always determined by the symbols shown above, the fifth, as well as the extended intervals 9, 11, and 13, may be altered through the use of accidentals. These are indicated along with the corresponding number of the element to be altered.

Accidentals are most often used in conjunction with dominant seventh chords. For example:

| Chord name                        | Component notes                     | Chord symbol                          |
|-----------------------------------|-------------------------------------|---------------------------------------|
| <b>Seventh augmented fifth</b>    | dominant seventh augmented fifth    | C <sup>7+5</sup> , C <sup>7o5</sup>   |
| <b>Seventh flat nine</b>          | dominant seventh minor ninth        | C <sup>7-9</sup> , C <sup>7m9</sup>   |
| <b>Seventh augmented eleventh</b> | dominant seventh augmented eleventh | C <sup>7+11</sup> , C <sup>7o11</sup> |
| <b>Seventh flat thirteenth</b>    | dominant seventh minor thirteenth   | C <sup>7-13</sup> , C <sup>7m13</sup> |
| <b>Half-diminished seventh</b>    | minor seventh diminished fifth      | C <sup>ø7</sup> , C <sup>m7m5</sup>   |

"Altered" dominant seventh chords (C<sup>7alt</sup>) have a flat ninth, a sharp ninth, a diminished fifth and an augmented fifth

When superscripted numerals are used, the different numbers may be listed horizontally (as shown), or vertically.

## Added tone chords

An added tone chord is a traditional chord with an extra "added" note, such as the commonly added sixth (above the root). This includes chords with an added second (ninth) or fourth (eleventh), or a combination of the three. These chords do not include "intervening" thirds as in an extended chord.

## Suspended chords

A **suspended chord**, or "sus chord" (sometimes improperly called *sustained chord*), is a chord in which the *third* has been displaced by either of its dissonant neighbouring notes, forming intervals of a major second or (more commonly), a perfect fourth with the root. This results in two distinct chord types: the *suspended second* (sus2) and the *suspended fourth* (sus4). The chords,  $C^{sus2}$  and  $C^{sus4}$ , for example, consist of the notes  $C D G$  and  $C F G$ , respectively. Extended versions are also possible, such as the *seventh suspended fourth*, for example, which, with root  $C$ , contains the notes  $C F G Bb$  and is notated as  $C7^{sus4}$ .

The name suspended derives from an early voice leading technique developed during the [common practice period](#) of composition, in which an anticipated stepwise melodic progression to a harmonically stable note in any particular part (voice) was often momentarily delayed or *suspended* simply by extending the duration of the previous note. The resulting unexpected dissonance could then be all the more satisfyingly resolved by the eventual appearance of the displaced note.

In modern usage, without regard to such considerations of voice leading, the term *suspended* is restricted to those chords involving the displacement of the *third* only, and the dissonant *second* or *fourth* no longer needs to be prepared from the previous chord. Neither is it now obligatory for the displaced note to make an appearance at all. However, in the vast majority of occurrences of suspended chords, the conventional stepwise resolution to the *third* is still observed.

Note that the inclusion of the *third* in either the *suspended second* or *suspended fourth* chords negates the effect of suspension, and such chords are properly called *added ninth* and *added eleventh* chords rather than *suspended* chords.

## Borrowed chords

Borrowed chords are chords borrowed from the parallel minor or major. If the root of the borrowed chord is not in the original key, then they are named by the accidental. For instance, in major, a chord built on the parallel minor's sixth degree is a "flat six chord", written  $bVI$ . Borrowed chords are an example of mode mixture.

If a chord is borrowed from the parallel key, this is usually indicated directly (e.g. **IV (minor)**) or explained in a footnote or accompanying text.

## Polychords

Polychords are two or more chords superimposed on top of one another. See also altered chord, secundal chord, Quartal and quintal harmony and Tristan chord.

## Guitar and pop chords

All pop-music chords are assumed to be in root position, with the root of the chord in the [bass](#). To indicate a different bass note, a slash is used, such as  $C/E$ , indicating a C major chord with an E in the bass. If the bass note is a chord member, the result is an inverted chord; otherwise, it is known as a slash chord. This is not to be confused with the similar-looking secondary dominants below.

The tables above include a column showing the **pop chord symbols** commonly used as an abbreviated notation using letters, numbers, and other symbols and usually written above the given [lyrics](#) or staff. Although these symbols are used occasionally in classical music as well, they are most common for lead sheets and fake books in [jazz](#) and other popular music.

## Power chords

Power chords are simple harmonies, in that they do not consist of three or more different kinds of notes, but rather two kinds. They consist of perfect fifths and fourths and lack the third scale note. Often, players double the root or fifth to create a third note, but not a third kind of note. The lack of the third scale note makes their *quality* ambiguous, which in layman's terms means that it is not clear whether they are major or minor in their *flavor*. This is due to the fact that the major or minor quality of a chord is directly produced by the third or flatted third scale note. Power chords are generally played on an [electric guitar](#) and used extensively in many kinds of [rock music](#) (especially [heavy metal music](#)) where heavy amounts of distortion are used. Distortion adds a great deal of harmonic content to an electric guitar's timbre. At high distortion levels, perfect intervals are the only intervals with enough consonance to be clearly articulated and perceived. Even the addition of a third can cause a chord to sound unstable and dissonant.

## Chord sequence

Chords are commonly played in sequence, much as notes are played in sequence to form melodies. Chord sequences can be conceptualised either in a simplistic way, in which the root notes of the chords play simple melodies while tension is created and relieved by increasing and decreasing dissonance, or full attention can be paid to each note in every chord, in which case chord sequences can be regarded as multi-part [harmony](#) of unlimited complexity.

## Nonchord tones and dissonance

A [nonchord tone](#) is a dissonant or unstable tone which is not a part of the chord that is currently playing and in most cases quickly resolves to a chord tone.

## Simultaneity

A chord is only the harmonic function of a group of notes, and it is unnecessary for all the notes to be played together (called forming a [simultaneity](#)). For example, broken chords and arpeggios are ways of playing notes in succession so that they form chords. One of the most familiar broken chord figures is Alberti bass.

Since simultaneity is not a required feature of chords, there has been some academic discussion regarding the point at which a group of notes can be called a *chord*. Jean-Jacques Nattiez (1990, p.218) explains that, "we can encounter 'pure chords' in a musical work," such as in the "Promenade" of Modest Mussorgsky's *Pictures at an Exhibition*.

However, "often, we must go from a textual given to a more *abstract* representation of the chords being used," as in Claude Debussy's *Première Arabesque*. The chords on the second stave shown here are abstracted from the notes in the actual piece, shown on the first. "For a sound configuration to be recognized as a chord, it must have a certain duration."

Goldman (1965, p.26) elaborates: "the sense of harmonic relation, change, or effect depends on *speed* (or tempo) as well as on the relative duration of single notes or triadic units. Both absolute time (measurable length and speed) and relative time (proportion and division) must at all times be taken into account in harmonic thinking or analysis."

# Chord progression

A **chord progression** (also **chord sequence** and **harmonic progression** or **sequence**), as its name implies, is a series of [chords](#) played in an order. Part and parcel of this action is the idea that the chords relate to each other in some way, whether closely or distantly, and as a whole become an entity in themselves. Chord progressions are central to most modern European-influenced [music](#) and create cyclic or sectional musical forms. Compare to a simultaneity succession.

A **chord change** is a movement from one chord to another and may be thought of as either the most basic chord progression or as a portion of longer chord progressions which involve more than two chords. Generally, successive chords in a chord progression share some notes. This provides harmonic continuity within the progression.

The most common chord progressions in Western [classical](#) and [pop](#) music are based on the first, fourth, and fifth scale degrees (tonic, subdominant and dominant); see three chord song, eight bar blues, and twelve bar blues. The chord based on the second scale degree is used in the most common chord progression in [Jazz](#), ii-V-I.

Chord progressions are usually associated with a [scale](#) and the [notes](#) of each chord are usually taken from that scale. [Melodies](#) and other parts usually comply with the chord changes in that their notes are usually taken from the chord currently playing. Notes which are not taken from the chord are called [nonchord tones](#) and usually resolve quickly to a chord tone.

The "circle progression" is generally regarded as the most common progression of the [common practice period](#). A circle progression is a progression of descending perfect fifths, and derives its name from circle of fifths. Circle progressions, in practice, often occur in their inversion, an ascending perfect fourth. Circle progressions make up many of the most commonly used progressions, such as ii, V, I in major keys, and the strong pull of a circle progression is a large part of the reason the dominant chord (V - if functioning as a dominant chord will be a major triad or a dominant seventh chord, even in minor keys) "leads" to tonic (I, or i).

In music of the common practice period, generally only certain chord progressions are used. Many of the other unused progressions are not traditionally considered tonal. It should be noted, however, that in most styles of music, chord progressions are resultant from voice leading patterns; thus the preceding observations are merely generalizations.

Table of common progressions during the [common practice period](#)

| Table of Common Progressions |   |                 |  |
|------------------------------|---|-----------------|--|
| I, i                         | May progress to any other triad. May interrupt any progression. |                 |  |
| Major keys                   |   | Minor keys      |  |
| ii                           | ii-V, ii-vii <sup>°</sup>                                       | ii <sup>°</sup> | ii <sup>°</sup> -V                                       |
|                              |   | ii*             | ii-V, ii-vii <sup>°</sup>                                |
| iii                          | iii-ii <sub>6</sub> , iii-IV, iii-V, iii-vi                     | III             | III-ii <sub>6</sub> <sup>°</sup> , III-iv, III-VI        |
| IV                           | IV-I, IV-ii, IV-V, IV-vii <sub>6</sub> <sup>°</sup>             | iv              | iv-i, iv-ii <sub>6</sub> <sup>°</sup> , iv-V, iv-VII     |
|                              |   | IV*             | IV-V, IV-vii <sub>6</sub> <sup>°</sup>                   |
| V                            | V-I, V-vi   | V               | V-i, V-VI  |
|                              |   | v*              | v-VI   |
| vi                           | vi-ii, vi-IV, vi-V, vi-iii-IV                                   | VI              | VI-ii <sub>6</sub> <sup>°</sup> , VI-iv, VI-V, VI-III-iv |

|   |  |                                 |  |
|---|--|---------------------------------|--|
| $\text{vii}_6^\circ$  | $\text{vii}_6^\circ\text{-I}, \text{VII}_6^\circ\text{-V}$ | $\text{vii}_6^\circ/\text{VII}$ | $\text{vii}_6^\circ\text{-i}/\text{VII-III}$ |
| <p>* ii and IV in minor used with an ascending #6; v in minor used with a descending 7. See the article <a href="#">chord (music)</a> and chord symbol for an explanation of the notation used in this table.</p> |  |                                 |  |

# Visual Table for the Rules for Common Chord progressions

## Rewrite rules

Steedman (1984) has proposed a set of recursive "rewrite rules" which generate all well-formed transformations of jazz, basic I-IV-I-V-I twelve bar blues chord sequences, and, slightly modified, non-twelve-bar blues I-IV-V sequences ("I Got Rhythm"). Important transformations include:

- replacement or substitution of a chord by its dominant or subdominant, example:

1 2 3 4 5 6 7 8 9 10 11 12 I/IV/I/I<sup>7</sup>//IV/VII<sup>7</sup>/III<sup>7</sup>/VI<sup>7</sup>//II<sup>7</sup>/V<sup>7</sup>/I/I//

- use of chromatic passing chords, example:

...7 8 9... ...III<sup>7</sup>/bIII<sup>7</sup>/II<sup>7</sup>...

- and chord alterations such as minor chords, diminished sevenths, etc.

Sequences by fourth, rather than fifth, include Jimi Hendrix's "Hey Joe":

1 2 3 4 5 6 7 8 9 10 11 12 bVi, bIII/bVII, IV/I/I//bVI, bIII/bVII, IV/I/I//bVI, bIII/bVII, IV/I/I//

These often result in Aeolian harmony and lack perfect cadences (V-I). Middleton (1990, p.198) suggests that both modal and fourth-oriented structures, rather than being "distortions or surface transformations of Schenker's favoured V-I kernel, it is more likely that both are branches of a deeper principle, that of tonic/not-tonic differentiation."

# Chordophone

A **chordophone** is any [musical instrument](#) which produces sound primarily by way of a vibrating string or strings stretched between two points. It is one of the four main divisions of instruments in the original [Hornbostel-Sachs](#) scheme of [musical instrument classification](#).

What most westerners would call [string instruments](#) are classified as chordophones, [violins](#), [guitars](#), [lyres](#), [harps](#), for example. However, the word also embraces instruments that many westerners would hesitate to call string instruments, such as the musical bow and the [piano](#) (which, although sometimes called a string instrument, is also called a [keyboard instrument](#) and a [percussion instrument](#)).

Hornbostel-Sachs divides chordophones into two main groups: instruments without a resonator which is an integral part of the instrument (which have the classification number 31); and instruments with such a resonator (which have the classification number 32). Most western instruments fall into the second group, but the piano and harpsichord fall into the first. Hornbostel and Sachs' criterion for determining which sub-group an instrument falls into is that if the resonator can be removed without destroying the instrument, then it is classified as 31. The idea that the piano's casing, which acts as a resonator, could be removed without destroying the instrument, may seem odd, but if the action and strings of the piano were taken out of its box, it could still be played. This is not true of the violin, because the string passes over a bridge located on the resonator box, so removing the resonator would mean the strings had no tension.

# Choreography

**Choreography** literally "dance-writing", also known as dance composition), is the art of making structures in which movement occurs, the term composition may also refer to the navigation or connection of these movement structures. The resulting movement structure may also be referred to as the Choreography. People who make choreographies are called choreographers.

Although mainly used in relation to [dance](#) the term **choreography** can be applied to various settings including:

- Stage combat (action or fight choreography)
- Gymnastics
- Ice skating
- Show Choirs
- Marching bands
- Web services
- Business processes
- cinematography

## Christian alternative rock

**Christian alternative music** is a form of [alternative rock](#) music lyrically grounded in a Christian worldview. The degree to which the faith appears in the music varies from artist to artist.

## History

Christian alternative rock has its roots in the early 1980s, as the earliest efforts at [Christian punk](#) and [new wave music](#) were recorded by artists like Daniel Amos, Andy McCarroll and Moral Support, Undercover, The 77s, Adam Again, Quickflight, Youth Choir (later renamed The Choir), Lifesavers Underground, The Altar Boys, Steve Taylor, David Edwards, and Vector. By the 1990s, many of these bands were being carried by independent labels, such as the growing Tooth & Nail Records, because their music tended to be more lyrically complex (and often more controversial) than mainstream Contemporary Christian Music.

Categories: [Alternative music](#) | [Christian rock genres](#)

# Christian hardcore

**Christian hardcore** is a form of [hardcore punk](#) music and a subgenre of [punk rock](#) played by [bands](#) where the musicians are openly Christian. The extent that their lyrics are explicitly Christian varies between bands.

Christian hardcore bands that explicitly state their beliefs and use Christian imagery in their lyrics may be considered a part of the contemporary Christian music (CCM) industry and play for a predominantly Christian market. However, given the edginess of hardcore punk, many bands have been dismissed by the Christian and CCM music market and rely on genre specific labels to promote and release their music.

Typically, Christian hardcore and metalcore bands perform music influenced by their faith and see their audience as the general public. More recently Christian hardcore bands may avoid specific mention of God or Jesus in their lyrics and from stage as well as rejecting the CCM label.

Traditionally hardcore has been antipathetic towards Christianity, much like the broader punk rock community, this has often left Christian Hardcore bands alienated on the fringes of both the hardcore scene. As many inside the scene view Christianity in a negative light, or a feel that Christian hardcore is a passing fad.

Related genres are [Christian punk](#), [Christian rock](#), Christian alternative music and [Christian metal](#).

## Criticism

Christianity and hardcore punk are often considered to be contradictory due to the conflict between punk's anti-authoritarian message and the prominence of authority figures in Christianity. This is covered in a section of the [Christian punk](#) article.

## Christian hip hop

**Christian hip hop** (originally **gospel rap**, but also known as **holy hip hop**, or **Christian rap**) is a form of [hip hop music](#) that uses Christian-themed lyrics to express the songwriter's faith. Only during the 90's did the term "Christian hip hop" become descriptive of this type of music. Many mainstream hip hop artists have made acknowledgements of faith, such as DMX, Kanye West and Will Smith, but are not typically considered Christian hip hop artists, as the themes of their lyrics do not always reflect religious faith. The audience is typically Christian, but it can be used in missions to reach those considered unsaved or lost souls. Christian hip hop and rap artists are almost always professed Christians, and use the fact that they are urban or suburban as a positive issue used to spread their religion, and like all Christian music, it can be experienced as Christian worship.

Many fans consider Christian hip hop music to be more innovative than the secular variety (thus the tagline of *Factors of the Seven* by Grits, "the most innovative hip hop in the industry"), because Christian hip hop artists generally sample other songs sparingly, and when they do they typically choose songs that aren't sampled often. John Reuben has friends who play various musical instruments, and uses their assistance as opposed to samples. He is even famous for having a live backing band. Christian hip hop is decidedly more "experimental" than secular hip hop as well, with more usage of [acoustic](#) and [electric guitars](#), [synthesizers](#) and other instruments that are somewhat uncommon in hip hop. Many artists and bands, however, sample regularly as in mainstream hip hop, and some run into copyright trouble, such as Mars ILL, whose *Pro\*Pain* album was delayed for a long amount of time by Gotee Records due to unlawful use of samples. "It's not so much that *Pro\*Pain* is any more sample-based than any other project, we were just a little laid back in how we approached it initially," says band member Dust.

## History

Stephen Wiley was the first artist with a commercially released and distributed gospel rap cassette with his 1985 tape called Bible Break (Rap on the Road video, 1991 StarSong Communications, Nashville, TN). Also, a young Christian emcee known as D-Boy was killed in 1991 in Texas for taking youth from gangs and converting them to Christianity. Some consider him the first Christian emcee martyr. dc Talk was perhaps the first wide success among Christian hip hop groups with tobyMac later rising to prominence.

## Reaction

Christian hip hop has a history of being dismissed by churches worldwide as sacrilegious, or devil music. No money, no support, and no funded albums were the experience of many artists, but similar to contemporary Christian music many see it as being on the brink of mainstream success.

One of the most notable mainstream reactions to Christian hip hop was to KJ-52 and his single "Dear Slim," which was written to Eminem in an attempt to convert the artist to Christianity. The song became famous and controversial among Eminem fans when it was featured on the hit show Total Request Live. It was then that KJ-52 began to receive hate mail (including death threats) from Eminem's followers, though the song is not a "diss" according to KJ-52. This also led to the single being panned on VH1, an issue the artist addressed in his song "Washed Up."

There has also been increased church acceptance with some congregations having hip hop-themed worship. Much like other forms of mainstream-style Christian music such as [Christian metal](#) and [punk](#), it is often accepted by youth pastors and others, as many artists and groups such as LA Symphony create music with quality widely considered to be on par with that of secular hip hop, which often attracts non-believing fans, and many times, converts such audiences to Christianity.

# Christian industrial

**Christian Industrial** can be taken as either [industrial music](#) or [industrial rock](#) that's lyrics and themes are inspired and influenced by Christianity. Just as in all other forms of [Christian rock](#), the level of spiritual involvement required in the music to be called this is heavily debated. One extreme finds people who think every single song must clearly contain reference to God and Jesus as well as be on a "christian record label." While on the opposite end, others believe that if even one of the members of a band is a self-professed christian then that is enough. However, most people's viewpoint lies somewhere in between.

The term "industrial" is also heavily debated, as the term usually represents [industrial rock](#) (a combination of hard rock/metal and electronic music) in most people's minds while actual "[industrial music](#)" generally refers to forms of electronic music that contains sounds similar to machinery or factories, not even necessarily related to rock music. While most certainly not christian, Nine Inch Nails is usually the first band people think of when they hear the word: "industrial".

There are not many christian bands who play industrial/industrial rock music, but they do exist.

**Christian metal** or **White metal** is a form of [heavy metal music](#) with explicitly Christian lyrics and themes. It is a form of [Christian alternative music](#).

## Origins

The first Christian metal band was arguably Jerusalem. Stryper was the first to popularize the genre. Christian Metal can be classified under many subgenres as well. For example, the band Horde, who have extreme [black metal](#) influences, yet are deemed [grindcore](#) and there is also Gånglîå which would be considered cybergrind . Then there is Whitecross who plays Hair Metal and As I Lay Dying and Still Remains who play metalcore. Typically, a band's style status is defined not only by the actual music, but also by theme and lyrical content.

## Controversies

Several controversies often crop up when discussing Christian metal.

First, many fans of secular heavy metal do not consider Christian metal to be a real form of metal, even though the Christian bands often sound very similar to their secular counterparts. This is partly because metal was originally supposed to contain various controversial themes, which set it apart from [Hard Rock](#).

Second, there are several general-market metal bands who do not identify themselves as a "Christian band" but who still use their lyrics to portray God in a positive light. They have various reasons for doing this. A common reason that they cite is easier access to the secular market; although more stores are now stocking Christian metal bands along with secular metal bands, oftentimes the Christian bands are given their own, much smaller, section in the back of the store. Additionally, there are some bands (for example, Virgin Black and Klank) who do have Christian members but who have had negative experiences with churches, and therefore would prefer to just identify their band as a regular band (rather than a Christian one), so as to avoid being lumped in with the same people who had rejected them before. MCM Music, founded by Eric Clayton of Saviour Machine (along with two others), is one record label that has signed several bands who have this mindset.

Third, many people who do not enjoy the genre of metal think the concept of Christianity and what they view as the evil and destructive music of metal cannot be combined. This same view is held by some conservative Christian circles (who are on the opposite side of the debate); members of the King-James-Only Movement (especially Dial-the-Truth and similar ministries) are chief among these. Much like [Christian hip hop](#), however, Christian metal is also widely accepted into holy culture because many of the bands produce music of equal quality to that of secular metal, thus attracting a secular audience and often times, converting them to Christianity due to overtly moral and spiritual lyrics.

On that note, the [nu-metal](#) band P.O.D., who have recently said numerous times that they are a Christian band, was invited to perform live at a Billy Graham crusade in San Diego, the band's hometown. The band humbly rejected the invitation, because, in lead singer Sonny Sandoval's words, "We were like, 'Hey, we just want to be there, to hang out and meet people and serve. We don't want to go up there on stage. This is not a platform for P.O.D. We don't want to use your platform to promote our band.'"

## Concerts

As is to be expected, there are not a great deal of churches that allow metal bands to perform, with more contemporary churches (and churches such as Sanctuary International and Revolution, which target their ministries at people who do not fit well at more conventional churches) being an exception to this. The typical Christian metal show, then, might take place at a community center or coffeehouse or some underground venue that might generally host a show of such high volumes and intensity. In addition, there are annual festivals that host Christian metal bands. Many Christian metal bands can be seen at the Cornerstone Festival in Illinois or Florida. For seven years, fans of Christian metal could also attend the Bobfest in Europe. (The last Bobfest took place in 2005.) There are also smaller festivals like Purple Door, a festival in Lewisberry, PA, that is mostly attended by locals. The Underground Cafe of Roseville, CA hosts a lot of underground Christian metal/[hardcore](#) bands.

## Unblack metal

**Unblack metal**, also called **Holy unblack metal** or **Christian black metal (CBM)** is a style of music derived from and similar to [black metal music](#) in nearly all ways, except that it is patently anti-satanic, usually Christian and espouses holiness, moralism, etc. It is seen by some as oxymoronic because it uses dark symbolism, affrontous stage behaviour, and the very content which was in the first place adopted by black metal for the reason that it was thought to alienate the sensibilities of such convictions held in family values and social philanthropy, etc.

Punk rock in Belgium – Brazil

[History](#) – [Cassette culture](#)

**Christian punk** is a form of [Christian alternative music](#) and a subgenre of [punk rock](#) played by [bands](#) where the musicians are openly Christian, their lyrics reflect their faith and they see their audience as the general public. This includes bands like Relient K and MxPx. The extent that their lyrics are explicitly Christian varies between bands.

Christian punk bands that target a Christian audience, explicitly state their beliefs, use Christian imagery in their lyrics may be considered a part of the contemporary Christian music (CCM) industry.

Given the edginess of punk and some of its sub-genres, such as [hardcore punk](#), many bands have been rejected by the Christian and CCM music industry. Some bands generally avoid specific mention of God or Jesus and may specifically reject the CCM label.

Related genres are [Christian hardcore and metalcore](#), [Christian rock](#), [Christian alternative music](#) and [Christian metal](#).

# History

## Origins

Christian punk's origins during the wider 1980s punk rock scene are somewhat obscure. As the Jesus Movement gave rise to cultural institutions such as Jesus People USA (JPUSA), these served as an incubator for various Christian subcultures including [punk](#). Crashdog is one characteristically punk band that was rooted in JPUSA.

In the 1980's many bands performed at Chuck Smith's Calvary Chapel in Orange County California. A particularly popular group with a cult following was Undercover (band), who proclaimed that "God Rules" with a combination of rockabilly and hardcore elements. Another early influential group were the Altar Boys.

The Cornerstone Festival provided an important venue for Christian punk bands.

See also: [Christian hardcore](#)

## Growth of an "underground" scene

During the 1990s the underground scene grew, bands such as Officer Negative greatly influenced many bands. The term "JCHC" is often used by christian punks, and it means "Jesus Christ Hard Core". Pop punk bands like MxPx and Ninety Pound Wuss being important.

## Emergence into the mainstream

In the 21st century developments in Christian punk parallels broader punk, with [pop/punk](#) bands such as Relient K and FM Static very popular with the mainstream crowd, but they started as Christian bands, playing at church groups and youth gatherings.

Other bands with Christian roots that have become very popular within their genres are Zao ([metalcore](#)), Norma Jean (newer hardcore), and mewithoutyou ([post-hardcore](#)).

Key record labels include Tooth & Nail Records and its subsidiaries Solid State Records and BEC Recordings; The Militia Group, which signs groups that straddle the boundary between Christian and secular music; Flicker Records, owned and operated by the members of Audio Adrenaline; Gotee Records, owned and operated by TobyMac of dc Talk; and up-and-comer Mono vs. Stereo.

### Contemporary christian music

**Stylistic origins:** [Gospel](#) - [Hymns](#) - [Country](#) - [Folk](#) - [Pop](#) - [Rock and roll](#) - Alternative - [Punk](#) - [Hip hop](#) - [Heavy metal](#)

**Cultural origins:** Jesus music - Jesus movement - Popular culture - Evangelicalism

## Fashion

Fashion is similar to normal [punk fashion](#), with the Christian fish symbol, the cross, a crown of thorns, the JCHC symbol, etc. Chi Rho is a popular symbol amongst more anarcho-Christian bands, such as the psalters . In Europe the most used symbol is the anarchy symbol, modified as it might become an **A** and ©. This is the Greek alphabet symbol for "Alpha" & "Omega" (the English equivalent is "A" and "Z".); meaning the first and last which in turn is to represent God and/or Jesus. Refer to the book of Revelations 1:8, 21:6, & 22:13. Rev. 1:8 says, "I am the Alpha and the Omega," says the Lord God, "who is, and who was, and who is to come, the Almighty." Basically, the symbol is a visual play on the "anarchy" symbol but with a different meaning and intent. However, it does have a resonance with Christian anarchism itself.

## Christian and Punk

Acceptance of Christian punk is at times challenged both amongst members of the [punk subculture](#) and in some Christian churches. Can a person be Christian and punk? For people active in both punk and Christianity it is not a question but a lived experience. There are strong elements of anti-authoritarianism in both. Challenging the uncritical acceptance of social norms in the church and the world.

One illustration of this is seen in the concept of "anticonformity" to the world. This can be seen in a lot of Christian punk music, including the song "Anticonformity" by Krystal Meyers. Within this perspective, the Christian's view of anticonformity is different from the punk view. The Christian's reason for anticonformity is found in the book of Romans in the Bible: "Do not conform to the patterns of this world, but be transformed..." The Bible tells Christians not to conform, and punks are also strong non-conformists.

Some may still argue that punk is anti-religious and thus in opposition to Christianity. Many Christian punks do not agree with religion either. They say that real Christianity is not a religion because it's not supposed to be about rituals and rules. They believe true Christianity's a relationship with Jesus, not a religion. Many Christian punks are against religion like other punks, yet they are strongly in support of a personal relationship with Jesus Christ separate from rules and tradition.

A significant number of Christian punks and indie kids may be involved in Christian socialism, Communism, Anarcho-christianity and some variations on queer and liberation theology.

# Christian rock

**Christian rock** is a form of [rock music](#) played by [bands](#) where the musicians are openly Christian. The extent to which their lyrics are explicitly Christian varies between bands.

In the 1970s, Larry Norman was a popular Christian rock musician who challenged a view held by some conservative Christians (predominantly fundamentalists) that rock music was anti-Christian. One of his songs, "*Why Should the Devil Have All the Good Music?*", summarized his attitude and his quest to pioneer Christian rock music.

## "Christian rock" band definitions

There are multiple definitions of what qualifies as a "Christian Rock" band. Christian rock bands that explicitly state their beliefs and use Christian imagery in their lyrics tend to be considered a part of the contemporary Christian music (CCM) industry and play for a predominantly Christian market. Other bands perform music influenced by their faith but see their audience as the general public. They may generally avoid specific mention of God or Jesus. Such bands are sometimes rejected by the CCM rock scene and may specifically reject the CCM label. Possibly the very first documented appearance of a Christian Rock band is Mind Garage in 1967, whose *Electric Liturgy*, finally recorded on RCA in 1970, gives them credibility as a cornerstone in the creation of the Christian Rock genre. Some bands such as U2, Letterkills, Anberlin, Project 86, Lifehouse, 12 Stones, Creed, King's X, Thrice, Evanescence, Kevin Max, Mute Math, Flyleaf, Coldplay, Blessid Union of Souls, One Step Back and MxPx do not claim to be "Christian bands", but include members who openly profess to be Christians and feature Christian thought, imagery, scripture or other influences in their music. There is a tendency among some Christian rock music fans to label rock music bands as Christian where their lyrics are seen as consistent with the fans' understanding of Christian belief, but this is generally not accepted by the contemporary Christian music industry. Related subgenres are [Christian alternative rock](#), [Christian metal](#), [Christian industrial](#) and [Christian punk](#).

## Critiques of Christian rock

Some critics of Christian rock complain that Christian music trends are clichéd derivative of [rock music](#) and [pop music](#) in that they copy these styles and trends without creating original sounds of their own. <sup>[1]</sup> The critics' stereotype of Christian rock is a censored or plagiarised version of whatever is popular on the radio. Others respond that all music is in some way derived from previous works, as the concepts inspired by work, and not the work itself is within the public domain. Another common response is that Christian music is the only major genre to be grouped by its content rather than its style- for example, on the online music store iTunes, Christian performers as diverse as worship artists like Steven Curtis Chapman, hip-hop groups such as Grits, pop-rockers such as Superchick and hardcore groups such as Project 86 are all grouped under the 'Inspirational' section of the store, despite the diversity of their sounds. Many of those critiques are also levied against [indie music](#).

Another critique of Christian Rock is that some critics also feel that in reaching out to the main stream listeners, Christian Rock waters down the Christian message and content into amorphous love songs. Amy Grant, for example, received criticism for her song, "Baby, Baby" because it [2] was not clear whether she was singing to God or to a good looking man in the music video. Richard Rossi was criticized for performing his gospel rock in bars and secular nightclubs. Steve Camp, Christian music critic, complains that Christian music has become "yodels of a Christ-less, watered-down, pabulum-based, positive alternative, aura-fluff, cream of wheat, mush-kind-of-syrupy, God-as-my-girlfriend kind of thing." [3]. Others respond that expressions of unconditional love reminiscent of romantic love are consistent with God's agape love and the tradition of the biblical book, Song of Solomon.

Some critics feel bands market themselves to the Christian audience because the market is easier to enter. The competition in the Christian market is not as fierce, so they can gain huge success quickly. Some bands are accused of using the CCM industry to springboard into the "mainstream" as they prove to the record labels they can sell albums. Often times these accused bands will quickly reject the Christian label they once embraced, causing controversy.

## **Evangelical Goals of Christian Rock**

Christian Rock can be used to attract both non-Christian and Christian listeners. Some rock bands try to incorporate this type of viewpoint and try to be evangelical by drawing in non-Christian listeners to their under-the-surface Christian lyrics. Among these bands include Switchfoot and Relient K. Many critics claim that these bands are only doing so in order to build fans, fame, and fortune. However, the true aims vary among different artists.

Other Christian artists such as Chris Tomlin and Kutless sing more explicit worship songs, incorporating lyrics that directly worship the Lord. Many of these songs are played at more contemporary churches and used to lead congregations in worship. These artists receive less criticism, however they also receive less praise from non-Christian listeners.

## **Christian rock festivals**

There are many Christian rock festivals held worldwide every year, including the Cornerstone Festival, Ichthus, Spirit West Coast, Purple Door, Parachute and Shout Fest. They range from single day events to four day festivals that provide camping and other activities. Christian rock can also be heard at other Christian festivals that are not exclusive to rock, such as the Creation Festival.

# Christmas carol

A **Christmas carol** (also called a **noël**) is a [carol](#) ([song](#) or [hymn](#)) whose lyrics are on the theme of Christmas, or the winter season in general. They are traditionally sung in the period before and during Christmas. The tradition of Christmas carols hails back as far as the thirteenth century, although carols were originally communal songs sung during celebrations like harvest tide as well as Christmas. It was only later that carols began to be sung in church, and to be specifically associated with Christmas. It is also a book which Charles Dickens wrote in 1843.

Traditional carols have a strong tune and consist of a verse and/or chorus for group singing. They are often based on [medieval](#) chord patterns, and it is this that gives them their uniquely characteristic musical sound. Some carols like 'Personent hodie' and 'Angels from the Realms of Glory' can be traced directly back to the Middle Ages, and are amongst the oldest musical compositions still regularly sung. Carols suffered a decline in popularity after the Reformation in the countries where Reformation settled, but survived in their rural communities until the revival of interest in Carols in the 19th century. Composers like Arthur Sullivan helped to repopularise the carol, and it is this period that gave rise to such favorites as "Good King Wenceslas" and "It Came Upon A Midnight Clear."

Today carols are regularly sung at religious services, including Carol services. Some compositions have words which are clearly not of a religious theme, but are often still referred to as carols.

Secular songs such as "White Christmas" and "Blue Christmas" are clearly not Christmas carols, though they are also popular in the period before Christmas, and should therefore be considered to be [Christmas songs](#).

Carols can be sung by individual singers, but are also often sung by larger groups, including professionally trained choirs. Most churches have special services at which carols are sung, generally combined with readings from scripture about the birth of Christ, often this is based on the famous Festival of Nine Lessons and Carols at King's College, Cambridge. Some of these services also include other music written for Christmas, such as Benjamin Britten's "Ceremony of Carols" (for choir and harp), or excerpts from Handel's "Messiah."

There is also a tradition of performances of serious music relating to Christmas in the period around Christmas, including Handel's "Messiah," the "Christmas Oratorio" by J. S. Bach, "Messe de Minuit pour Noël" by Charpentier, and "L'Enfance du Christ" by Berlioz.

In England, and some other countries (i.e. Poland (koldowanie) and Bulgaria (koledari)), there is a tradition of Christmas carolling (earlier known as wassailing), in which groups of singers travel from house to house, singing carols, for which they are often rewarded with money, mince pies, or a glass of an appropriate drink. Money collected in this way is normally given to charity.

In Australia, where it is the middle of summer at Christmas, there is a tradition of Carols by Candlelight concerts which are held outdoors at night in cities and towns during the weeks leading up to Christmas. In Melbourne, "*Carols by Candlelight*" is held each Christmas Eve. Performers at the concerts including [opera](#) singers and [musical theatre](#) performers and [popular music](#) singers. People in the audience hold lit candles and join in singing some of the carols in accompaniment with the celebrities.

Christmas carols can also be played on musical instruments, and another tradition is for [brass bands](#), such as the Salvation Army brass bands, to play carols before Christmas.

## Christmas music

A **Christmas song** is a song which is normally sung during the time period leading up to, and sometimes shortly past, Christmas day, and usually has lyrical content addressing the holiday, the winter season, or both. These songs recognizably fall into several different groupings, depending on both the content and age of the songs.

Songs which are traditional, even some without a specific religious context, are often called [Christmas carols](#). Songs with religious reference are also called Christmas [hymns](#). For example, the Christian-centered "O Come All Ye Faithful" and the totally secular "Deck the Hall(s)" could easily both be found on Christmas-based record albums by choirs and other church-sounding artists.

Some songs of more recent vintage, often introduced in films, are specifically about Christmas, but are typically not overtly religious, and are not typically classified as Christmas carols. The archetypal example is 1942's "White Christmas", although many other holiday songs have become perennial favorites, such as Gene Autry's "Rudolph the Red-Nosed Reindeer".

A significant subset of the secular songs are regarded as "Christmas" songs due to the time of year they are most often sung, despite never mentioning anything about Christmas or even about Santa Claus. These songs include traditional favorites such as "Winter Wonderland". These songs fall into the generic "winter holiday" classification, as they carry no religious connotation at all.

Another subset of the popular holiday songs, apart from the more sincere ones, are the many parodies or twists on existing songs, which are usually classified as "Novelty songs". They range from the cuteness of "The Chipmunk Song", by Alvin and the Chipmunks, to the Cold War gallows humor of "Christmas at Ground Zero" and the morbid humor of "The Night Santa Went Crazy", both by "Weird Al" Yankovic.

Some songs have little relationship to Christmas, but are hyped up over the period. Each year, record companies compete for the Christmas number one single spot, usually, but not always, with a Christmas-related song. This is parodied in the film *Love Actually*, whereby an artist records a [cover version](#) of a song and adds a Christmas twist to it, all the time admitting that it is "rubbish".

In the UK Cliff Richard is famed for his many attempts, with some success, to get the Christmas number one single.

# List of Christmas songs

## General Christmas songs

The following songs are well known for being performed by more than one different artists:

- "Blue Christmas" – Introduced by Ernest Tubb in 1949, though most famously recorded by Elvis Presley.
- "The Christmas Song (Chestnuts Roasting on an Open Fire)" (1946) (composed by Mel Tormé and first performed by Nat King Cole)
- "The First Noel"
- "Frosty the Snowman" (1950) – popularized by Gene Autry. Countless artists have recorded it in the years since.
- "Have Yourself a Merry Little Christmas" – introduced by Judy Garland in the film 'Meet Me In St. Louis; covered by Luther Vandross and then later covered by Vince Gill (1996).
- "Jingle Bells"
- "Jingle Bell Rock" – best-known version is by Bobby Helms, released in 1957.
- "Joy to the World" – covered by various artists which include Mariah Carey.
- "Let it Snow"
- "Little Drummer Boy" – The 1958 version by the Harry Simeone Chorale is the standard.
- "Mary's Boy Child" – Harry Belafonte in 1957, Boney M in 1978 and re-released in 2005 by G4/Robin Gibb as "Mary's Boy Child/First of May".
- "The Most Wonderful Time of the Year" – introduced by Andy Williams in 1963
- "Merry Christmas Darling" – Introduced by The Carpenters in 1978 (on their album, A Christmas Portrait).
- "Mistletoe and Holly" – co-written and popularised by Frank Sinatra
- "Rudolph the Red-Nosed Reindeer" (1949).
- "Santa Looked a Lot Like Daddy" – Introduced by Buck Owens in 1965; re-popularized by Garth Brooks in 1992.
- "Silent Night" – popularised by Frank Sinatra
- "Twelve Days of Christmas"
- "Up On the House Top" by Benjamin Hanby
- "We Wish You a Merry Christmas"
- "White Christmas" (first performed by Bing Crosby in the 1942 musical Holiday Inn)

## Best known by one particular artist

The following songs are best known for being created and/or performed by one particular artist:

- "50 Grand for Christmas" – Paul Holt
- "All I Want for Christmas Is You" – Mariah Carey (1994)

"All Alone On Christmas" – Darlene Love (1963)  
"Another Lonely Christmas" – Prince (1984)  
"Another Rock And Roll Christmas" – Gary Glitter (1984)  
"Candy Cane Children" – The White Stripes  
"The Chanukah Song" – Adam Sandler (1994-2002)  
"The Chipmunk Song (Christmas Don't Be Late)" – Alvin and the Chipmunks (1958)  
"Christmas" – King Diamond (2003)  
"Christmas" – The Who (1969)  
"Christmas (Baby Please Come Home)" – Darlene Love  
"Christmas Eve (Sarajevo 12/24)" (aka "Carol of the Bells") – Trans-Siberian Orchestra  
"A Christmas Kiss" – Daniel O'Donnell (1999)  
"Christmas in Dixie" – Alabama, introduced in 1982. Lead singer Randy Owen re-recorded the song with Kenny Chesney in 2003.  
"Christmas in Hollis" – Run DMC  
"Christmas in My Hometown" – Charley Pride, issued in 1970. A different song of the same name was recorded by Sonny James in the late-1960s, and covered by Travis Tritt in 1992.  
"Christmas is all around me" – Bill Mack (2003)  
"Christmas Is Now Drawing Near" – Coil (1998)  
"Christmas Round At Ours" – Girls Aloud (2005)  
"Christmas Shoes" – NewSong (2002)  
"Christmas Time (Don't Let The Bells End)" – The Darkness (2003)  
"Christmas with the Devil" – Spinal Tap (1992)  
"Christmas Wrapping" – The Waitresses (1981)  
"Christmastime" Billy Corgan  
"Cruise into Christmas" – Jane McDonald (1998)  
"December Will Be Magic Again" – Kate Bush  
"Do They Know It's Christmas?" – released three times by Band Aid (1984), Band Aid II (1989) and Band Aid 20 (2004).  
"Do You Hear What I Hear?" – Whitney Houston  
"Driving Home For Christmas" – Chris Rea  
"Fairytale of New York" – The Pogues with Kirsty MacColl (1987)  
"Father Christmas" – The Kinks (1977)  
"Feliz Navidad" – Jose Feliciano (1968)  
"Give you one for Christmas" – Hot Pantz (2005)  
"Grandma Got Run Over by a Reindeer" Elmo and Patsy (1979)  
"Happy Xmas (War Is Over)" – John Lennon & Yoko Ono (1972) and later by The Idols in 2003  
"Have a Cheeky Christmas" – The Cheeky Girls (2003)  
"Here Comes Santa Claus" – Gene Autry (1947)  
"Holly Jolly Christmas" – Burl Ives (1964)  
"I Believe in Father Christmas" – Emerson, Lake & Palmer  
"I Hope I Sell a Lot of Records at Christmastime" – Princess Superstar (2000)  
"I Only Want You For Christmas" – Alan Jackson (1991)  
"I Saw Mommy Kissing Santa Claus" – Jimmy Boyd (1952)  
"I Wish It Could Be A Wombling Merry Christmas Every Day" – The Wombles and Roy Wood (2000)  
"I Won't Be Home For Christmas" – Blink-182 (2001)  
"I Wish It Could Be Christmas Every Day" – Wizzard (1973)  
"I'll Be Home for Christmas" (1943)  
"It's Christmas All Over the World" – Sheena Easton (1987)  
"Kentucky Homemade Christmas" – Kenny Rogers (1981)  
"Last Christmas" – Wham! (1984) and later by Whigfield in 1995.  
"Leroy the Redneck Reindeer" – Joe Diffie

"Let it Snow!" – Dean Martin (1945)  
"Light of the Stable" – Emmylou Harris, introduced in 1976; includes backing vocals by Dolly Parton and Linda Ronstadt.  
"Little Drummer Boy/Peace on Earth" – David Bowie & Bing Crosby  
"Little Saint Nick" – The Beach Boys  
"Lonely This Christmas" – Mud (1974)  
"Merry Christmas Darling" – Carpenters (1978)  
"Merry Christmas Everyone" – Shakin' Stevens (1985)  
"Merry Christmas Santa Claus" – Max Headroom (1986)  
"Merry Xmas Everybody" – Slade (1973), Dexy's Midnight Runners in (1982) and then Tony Christie in (2005).  
"Mistletoe and Holly" – co-written and popularised by Frank Sinatra  
"Mistletoe & Wine" – Cliff Richard (1988)  
"Mr. Hankey the Christmas Poo" – South Park (1999)  
"My Only Wish" – Britney Spears (2004)  
"Naughty Christmas (Goblin in the Office)" – Fat Les (1998)  
"No Presents for Christmas" – King Diamond (1986)  
"Oi to the World" – The Vandals (1996)  
"An Old Christmas Card" – Jim Reeves (1963)  
"Please Come Home for Christmas" – Jon Bon Jovi (1994)  
"Proper Crimbo" – Bo' Selecta! (2003)  
"Rockin' Around the Christmas Tree" – Brenda Lee (1958).  
"Rudi the Red Nose Reindeer" – Musical Youth  
"Run Run Rudolph" – Chuck Berry (1958)  
"Santa Baby" – Eartha Kitt (1952), later covered by Kylie Minogue.  
"Santa Claus and Popcorn" – Merle Haggard, introduced in 1973.  
"Santa Claus is Coming to Town" – Jackson 5 (1970)  
"Saviour's Day" – Cliff Richard (1990)  
"Silver Bells" (1950)  
"Six White Boomers" – Rolf Harris  
"Sleigh Ride" (1950)  
"Step Into Christmas" – Elton John (1973)  
"Thank God For Kids" – The Oak Ridge Boys (1982)  
"Thank God It's Christmas" – Queen  
"The Greatest Gift Of All" – Kenny Rogers & Dolly Parton (1984)  
"The Man Who Would Be Santa - Matt Scannell, Vertical Horizon  
"The Night Before Christmas" - Carly Simon (1994)  
"The Old Man's Back In Town" – Garth Brooks (1992)  
"Til Santa's Gone (Milk and Cookies)" – Clint Black (1991)  
"Under the Tree" – The Waterbabies (2005)  
"Upon a Christmas night" – Michael Learns To Rock  
"What Christmas Means to me" – Stevie Wonder  
"Who Would Imagine A King" – Whitney Houston (1996)  
"Winter Wonderland" – Johnny Mathis (1958) and then Perry Como (1946)  
"Winter Wonderland/Sleigh Ride" – a medley of the two Christmas favorites by Dolly Parton (1984)  
"Wombling Merry Christmas" – The Wombles (1974)  
"Wonderful Christmas Time" – Paul McCartney (1979)  
"XMas Ketchup Song" – Las Ketchup  
"Yule Shoot Your Eye Out"- Fall Out Boy

**Not intended as a Christmas song**

Some songs are frequently associated with Christmas because of the time they were released rather than explicit references to the holiday. They are sometimes given a Christmas feel by adding sleigh bells or by recording a Christmas video.

"Can we Fix it?" – Bob the Builder (2000)

"If We Make it Through December," Merle Haggard (1973). The song is a lament of a father who loses his job at the factory just as the holidays are approaching. Depressed over his predicament during what normally should be a "happy time of year," he observes that his little girl "don't understand why Daddy can't afford no Christmas cheer." The song reached No. 1 on Billboard magazine's Hot Country Singles chart on December 22, 1973 ... just in time for Christmas.

"Mad World" – Michael Andrews featuring Gary Jules (2003) (this Tears for Fears cover is included on several Christmas compilation albums. It was Christmas Number One in the UK in 2003, ahead of the livelier "Christmas Time (Don't Let The Bells End)" by British rock band The Darkness.)

My Decmeber – Linkin Park

"The Power of Love" – Frankie Goes to Hollywood (1984) (was released close to Christmas 1984, and was thus given a Nativity themed video and album cover. The song could be argued to be more suited to Halloween, with its references to vampires.)

"Somethin' Stupid" – Robbie Williams and Nicole Kidman (2001) (reached no. 1 in the UK christmas charts, therefore commonly associated with christmas)

"Sound of the Underground" – Girls Aloud (2002) (reached no. 1 in the UK christmas charts, therefore commonly associated with christmas)

"Stop The Cavalry" – Jona Lewie (1980) (released in late November when the record company spotted the line "Wish I was at home for Christmas")

"Stay Another Day" – East 17 (1994) (added sleigh bells)

"Last Christmas" – Wham! (1984) (reached no. 2 in the UK christmas charts, beaten by Band Aid- Feed the World) George Michael originally wrote the song "Last Easter", the record company asked him to change it to Christmas as it would catch a larger audience

## Christmas albums

Some artists record [albums](#) dedicated to Christmas or winter. These collections often contain covers of well-known Christmas songs or carols.

8 Days of Christmas – Destiny's Child  
A Christmas Gift To You From Phil Spector  
A Very Special Christmas compilation series – Various Artists  
Ashanti's Christmas – Ashanti  
Barenaked for the Holidays – Barenaked Ladies  
The Beach Boys' Christmas Album – The Beach Boys  
A Charlie Brown Christmas - soundtrack album of the classic TV special.  
Chemistry – Girls Aloud (An special limited edition version of the album released contained a Xmas album)  
Chicago 25: The Christmas Album – Chicago  
Christmas Eve and Other Stories, The Christmas Attic, and The Lost Christmas Eve – Trans-Siberian Orchestra (containing traditional and original Christmas songs)  
Christmas Is Almost Here Again – Carly Simon (2003)  
Christmas Island (album) – Jimmy Buffett (1996)  
Christmas Peace (along with other variations) – Elvis Presley  
Cliff at Christmas – Cliff Richard  
Deck the Halls, Bruise Your Hand – Relient K  
Ding! Dong! Songs for Christmas - Vol. III – Sufjan Stevens  
Hark! Songs for Christmas - Vol. II – Sufjan Stevens  
Ho, Ho, Ho – RuPaul  
Iceland – All About Eve  
The Jethro Tull Christmas Album – Jethro Tull  
Jingle All The Way – Crash Test Dummies  
Joy - A Holiday Collection – Jewel  
Merry Christmas (album) – Mariah Carey  
My Kind of Christmas – [[Christina Aguilera  
Noel! Songs for Christmas - Vol. I – Sufjan Stevens  
One Wish: The Holiday Album – Whitney Houston  
Rejoyce: The Christmas Album – Jessica Simpson  
Strings of Christmas – Russell Sheard  
Taste Of Christmas – Various Artists

Some bands produce Christmas albums exclusively for their fan clubs, including The Beatles who first released such an album in 1963 [1]. Also popular are the Various Artists collections such as The Best Christmas Album in the World...Ever!.

## Christmas songs introduced in movies and other popular media

"Star of Bethlehem" and "Somewhere in My Memory" – John Williams from the Home Alone soundtrack.

"White Christmas" – Irving Berlin from Holiday Inn

"Happy Holidays" - also from Holiday Inn

"We Need a Little Christmas" - by Jerry Herman, from the Broadway play,  
Mame  
"Have Yourself a Merry Little Christmas" – from Meet Me in St. Louis

## French language Christmas songs

"Entre le bœuf et l'âne gris"  
"Douce nuit, sainte nuit" (Silent Night)  
"Il est né le divin enfant"  
"La Marche des rois"  
"Les Anges dans nos campagnes"  
"Minuit chrétien"  
"Noël nouvelet"  
"Venez divin Messie"  
"Peuple fidèle" (Adeste fideles)  
"Dans une étable obscure"  
"C'est le jour de la Noël"  
"Bergers, l'enfant sommeille"  
"Noël de la paix" (Ô divin enfant)

## German language Christmas songs

German language Christmas carols tend to be less blitheful and more ceremonious than English ones:

- "Es ist ein Ros entsprungen" (Lo How a Rose 'Ere Blooming)
- "Heiligste Nacht" (Dutch song!)
- "Ihr Kinderlein kommet"
- "Menschen, die ihr wart verloren"
- "O du fröhliche"
- "Stille Nacht, heilige Nacht" (Silent Night)
- "Vom Himmel hoch da komm ich her"
- "Zu Bethlehem geboren"
- "Alle Jahre wieder"
- "Kling Glöckchen"
- "Lasst uns froh und munter sein"
- "Leise rieselt der Schnee"
- "Morgen, Kinder, wird's was geben"
- "O Tannenbaum" (O Christmas Tree)
- "Süßer die Glocken nie klingen"
- "Wir sagen euch an"
- "Es wird scho glei dumper"
- "Es hat sich heut' eröffnet"

## Occitan language Christmas songs

La Cambo mi fa mau

Guihaume, Tòni, Pèire (William, Tony, Peter), tune attributed to Nicolas Saboly. Frédéric Mistral composed the provençal anthem Coupo santo (The Holy Cup) according to this Christmas carol. Lyrics, Midi file and music sheet.

Nouvé dòu pastre (Christmas carol for the shepherd). Lyrics, Midi file and music sheet.

L'Ouferta de Calèna (The Christmas' offering). Lyrics, Midi file and music sheet.

Pastre dei mountagno (Shepherd from the mountains).

## Swedish language Christmas songs

December is the darkest month of the year in Sweden, so candles are often the theme in Swedish Christmas songs. *Ljus* is the Swedish word for candle.

"Nu tändas tusen juleljus"

"När ljusen tändas därhemma"

# Chromatic scale

The **chromatic scale** is the scale that contains all twelve [pitches](#) of the Western tempered scale.

All of the other scales in traditional Western [music](#) are subsets of this scale. Each pitch is separated from its upper and lower neighbors by the [interval](#) of one half step, or semitone. In tonal and other music this scale finds little use outside of decorative runs up or down as it has no harmonic direction and is considered cliched. The term 'chromatic' is understood by musicians to refer to music which includes tones which are not members of the prevailing scale, and also as a word descriptive of those individually non-diatonic tones.

## Keyboard fingering

Here is the standard keyboard fingering for a chromatic scale; where **1** means the thumb; **2** the index finger:

## Terminology and history

The Greeks analyzed *genera* using various terms, including *diatonic*, enharmonic, and chromatic, the latter being the color between the two other types of modes which were seen as being black and white. The chromatic genus contained a minor third on top and two semitones at the bottom filling in the perfect fourth of the fixed outer strings. However, the closest term used by the Greeks to our modern usage of chromatic is *pyknon* or the density ("condensation") of chromatic or enharmonic *genera*.

# Chromaticism

David Cope (1997) describes three forms of chromaticism: modulation, borrowed chords from secondary keys, and chromatic chords such as augmented sixth chords.

List of chromatic chords:

- Dominant seventh chords of subsidiary keys, used to create modulations to those keys (V<sup>7</sup>-I cadences).
- Augmented sixth chords
- Neopolitan sixth chords as chromatic subdominants.
- Diminished seventh chords as chromatic VII<sup>7</sup>
- Altered chords
- Expanded chords
  - (Shir-Cliff, etc., 1965)

Other chromatic things:

- The minor mode in major keys (mode mixture)
  - (Shir-Cliff, etc., 1965)

As tonality began to expand during the last half of the nineteenth century, with new combinations of chords, keys and harmonies being tried, the chromatic scale and chromaticism became more widely used, especially in the works of Richard Wagner, such as the opera 'Tristan und Isolde'. Increased chromaticism is often cited as one of the main causes or signs of the "break down" of tonality, in the form of increased importance or use of:

- mode mixture
- leading tones
- tonicization of each chromatic step and other secondary key areas
- modulatory space
- hierarchical organizations of the chromatic set such as George Perle's
- the use of non-tonal chords as tonic "keys"/"scales"/"areas" such as the Tristan chord.

As tonal harmony continued to widen and even break down, the chromatic scale became the basis of modern music written using the [twelve tone technique](#), a tone row being a specific ordering or series of the chromatic scale, and later [serialism](#). Though these styles/methods continue to (re)incorporate tonality or tonal elements, often the trends which led to these methods were abandoned, such as modulation.

Susan McClary (1991) argues that chromaticism in operatic and sonata form narratives can often be understood as the "Other", racial, sexual, class or otherwise, to diatonicism's "male" self. Whether through modulation, as to the secondary key area, or other means. For instance, Clement calls the chromaticism in Wagner's *Isolde* "feminine stink" (Opera, 55-58, from McClary p.185n). However, McClary also points out that the same techniques used in opera to represent madness in women were historically the avante-garde in instrumental music, "In the nineteenth-century

symphony, Salome's chromatic daring is what distinguishes truly serious composition of the vanguard from mere cliché-ridden hack work." (p.101)

# Circle dance

**Circle dance**, is the most common name for a style of traditional dance usually done in a circle without partners to musical accompaniment. It became popular in the alternative, feminist and [new age](#) aspects of western culture in the 1980s and 1990s and continues today.

The circle is probably the oldest known dance formation. It is found in the dances of many cultures, including ancient Greece (chorea), African, Eastern European, Irish Celtic, Catalan (sardana), South American and North American Indian. Circle dance mixes traditional folk dances, mainly from European or Near-Eastern sources, with recently choreographed ones to a variety of music both ancient and modern.

Dances can be slow and meditative, or lively and energetic.

**Sacred Circle Dance** is a modern form which originated in the Findhorn Foundation community in Scotland following visits there from 1976 onwards by Professor Bernhard Wosien, a German dancer. Known first as Sacred Dance, it has changed over time as enthusiasts have made contributions, and may now be called Circle Dance, Sacred Dance, or Sacred Circle Dance (SCD). A small altar of flowers or other natural or venerated objects is usually placed at the centre of the circle.

# Clarinet

The **clarinet** is a [musical instrument](#) in the [woodwind](#) family. The name derives from adding the suffix *-et* meaning *little* to the Italian word *clarino* meaning [trumpet](#), as the first clarinets had a strident tone similar to that of a trumpet. The instrument has an approximately cylindrical bore, and uses a single reed. (See Characteristics of the instrument.)

Clarinets actually comprise a family of instruments of differing sizes and pitches. It is the largest such instrument family, with more than two dozen types. Of these many are rare or obsolete, and music written for them is usually played on one of the more common size instruments. The unmodified word *clarinet* usually refers to the soprano size.

A person who plays the clarinet is called a clarinetist, sometimes spelled "clarinettist".

# Characteristics of the instrument

## Tone

The clarinet has a distinctive [timbre](#), resulting from the shape of the cylindrical bore, whose characteristics vary between its three registers: the chalumeau (low), clarion or clarino (middle), and altissimo (high). It has a very wide compass, which is showcased in chamber, orchestral, and wind band writing. The tone quality varies greatly with the musician, the music, the style of clarinet, the reed, and humidity. The German (Oehler) clarinet generally has a fuller tone quality than the French (Boehm) system. In contrast, the French clarinet typically has a lighter, brighter tone quality. The differences in instruments and geographical isolation of players in different nations led to the development, from the last part of the 18th century on, of several different schools of clarinet playing. The most prominent of these schools were the German/Viennese traditions and the French school, centred around the clarinetists of the Conservatoire National Supérieur de Musique de Paris. Increasingly, through the proliferation of recording technology and the internet, examples of many different styles of clarinet playing are available to developing clarinetists today. This has led to decreased homogeneity of styles of clarinet playing. The modern clarinetist has an eclectic palette of "acceptable" tone qualities to choose from, especially when working with an open-minded teacher.

The A clarinet sound is a little darker, richer, and more robust than that of the more common B $\flat$  clarinet, though the difference is relatively small. The tone of the E $\flat$  clarinet is quite a bit brighter than any other member of the widely-used clarinet family and is known for its distinctive ability to cut through even loud orchestral textures; this effect was utilized by such 20th century composers such as Mahler, Copland, Shostakovich, and Stravinsky.

The **bass clarinet** has a characteristically deep, mellow sound.

## Range

The bottom of the clarinet's written range is defined by the keywork on each particular instrument; there are standard keywork schemes with some variability. The actual lowest concert pitch depends on the [transposition](#) of the instrument in question; in the case of the B $\flat$ , the concert pitch is a whole tone lower than the written pitch. Nearly all soprano and piccolo clarinets have keywork enabling them to play the E below middle C as their lowest written note. Alto and bass clarinets have an extra key to allow a low E $\flat$ . Modern professional-quality bass clarinets generally have additional keywork to low C. Among the less commonly encountered members of the clarinet family, contra-alto and contrabass clarinets may have keywork to low E $\flat$ , D, or C; the basset clarinet and basset horn generally go to low C.

Defining the top end of a clarinet's range is difficult, since many advanced players can produce notes well above the highest notes commonly found in method books. The "high G" two octaves plus a perfect fifth above middle C is routinely encountered in advanced material and in the standard literature through the nineteenth century. The

C above that is attainable by most advanced players and is shown on many fingering charts. Many professional players are able to extend the range even higher.

The range of a clarinet can be divided into three distinctive registers. The lowest notes, up to the written B<sub>m</sub> above middle C, is known as the 'chalumeau register' (named after the instrument that was the clarinet's immediate ancestor), of which the top four notes or so are known as the 'throat tones'. Producing a blended tone with the surrounding registers takes much skill and practice. The middle register is termed the 'clarion' register and spans just over an octave (from written B above middle C, to the C two octaves above middle C). The top or 'altissimo' register consists of the notes from the written C# two octaves above middle C and up.

## Construction and acoustics

Professional clarinets are usually made from African hardwood, often grenadilla, (rarely) Honduran rosewood and sometimes even cocobolo. Historically other woods, notably boxwood, were used. One major manufacturer makes professional clarinets from a composite mixture of plastic resin and wood chips — such instruments are less affected by humidity, but are heavier than the equivalent wood instrument. Student instruments are sometimes made of composite or plastic resin, commonly "resonite", an ABS resin. Metal soprano clarinets were popular in the early twentieth century, until plastic instruments supplanted them; metal construction is still used for some contra-alto and contrabass clarinets. Mouthpieces are generally made of ebonite, although some inexpensive mouthpieces may be made of plastic. The instrument uses a single reed made from the cane of arundo donax, a type of grass. Reeds may also be manufactured from synthetic materials. The ligature fastens the reed to the mouthpiece. When air is blown through the opening between the reed and the mouthpiece facing, the reed vibrates and produces the instrument's sound.

Clarinetists used to make their own reeds. Now most buy manufactured reeds, but many players make adjustments to these reeds to improve playability. Clarinet reeds come in varying "strengths" generally described from "soft" to "hard." The most common scale is a 1-5 system with most manufacturers having slight differences in their own systems. It is important to note that there is no standardized system of designating reed strength. Beginning clarinetists are often encouraged to use softer reeds, usually a 2 to 2 1/2. Jazz clarinetists often remain on softer reeds, as they are easy for bending pitch. Most classical musicians work towards harder reed strengths as their embouchures strengthen. The benefit of a harder reed is a sturdy, round tone. The major manufacturers of clarinet reeds include the Vandoren company (France), Gonzalez and Zonda (both manufactured from the same cane in Argentina), Legere, Mitchell Lurie and many others. However it should be noted that the strength of the reed is only one factor in the player's set-up; the "tip-opening" and "lay" of the mouthpiece are other critical factors.

The body is equipped with seven tone holes (six front, one back) and a complicated set of keys which allow every note of the chromatic scale to be produced. The most common system of keys was named the Boehm System by its designer Hyacinthe Klosé in honour of the flute designer Theobald Boehm, but is not the same as the Boehm System used on flutes. The other main system of keys is called the Oehler system and is used mostly in Germany and Austria (see History). Related is the Albert system used by some [jazz](#), klezmer, and eastern European folk musicians. The Albert and Oehler systems both are based on the earlier Müller system.

The hollow bore inside the instrument has a basically cylindrical shape, being roughly the same diameter for most of the length of the tube. There is a subtle hourglass shape, with its thinnest part at the junction between the upper and lower joint. This hourglass figure is not visible to the naked eye, but helps in the resonance of the sound. The diameter of the bore affects characteristics such as the stability of

the pitch of a given note, or, conversely, the ability with which a note can be 'bent' in the manner required in jazz and other styles of music. The bell is at the bottom of the instrument and flares out to improve the tone of the lowest notes.

A clarinetist moves between registers through use of the register key, or speaker key. The fixed reed and fairly uniform diameter of the clarinet give the instrument the configuration of a cylindrical stopped pipe in which the register key, when pressed, causes the clarinet to produce the note a [twelfth](#) higher, corresponding to the third harmonic. The clarinet is therefore said to overblow at the twelfth. (By contrast, nearly all other woodwind instruments overblow at the octave, or do not overblow at all; the rackets is the next most common Western instrument that overblows at the twelfth like the clarinet.) A clarinet must therefore have holes and keys for nineteen notes (an octave and a half, from bottom E to B<sub>m</sub>) in its lowest register to play a chromatic scale. This fact at once explains the clarinet's great range and its complex fingering system. The fifth and seventh harmonics are also available to skilled players, sounding a further sixth and fourth (actually a very flat diminished fifth) higher respectively.

The highest notes on a clarinet can have a piercing quality and can be difficult to tune precisely. Different individual instruments can be expected to play differently in this respect. This becomes critical if a number of instruments are required to play a high part in unison. Fortunately for audiences, disciplined players can use a variety of fingerings to introduce slight variations into the pitch of these higher notes. It is also common for high melody parts to be split into close harmony to avoid this issue.

The parts that make up a clarinet are as follows (description follows the illustration from right to left):

- The reed is attached to the mouthpiece by the ligature and the top half-inch or so of this assembly is held in the player's mouth. The formation of the mouth around the mouthpiece and reed is called the embouchure. The reed is on the underside of the mouthpiece pressing against the player's bottom lip, while the top teeth normally contact the top of the mouthpiece (some players roll the upper lip under the top teeth to form what is called a 'double-lip' embouchure). Adjustments in the strength and configuration of the embouchure change the tone and intonation (tuning).
- Next is the short *barrel*; this part of the instrument may be extended in order to fine-tune the clarinet. As the pitch of the clarinet is fairly temperature sensitive some instruments have interchangeable barrels whose lengths vary very slightly. Additional compensation for pitch variation and tuning can be made by increasing the length of the instrument by *pulling out* the barrel. Some performers employ a single, synthetic barrel with a thumbwheel that enables the barrel length to be altered on the fly.
- The main body of the clarinet is divided (in most soprano clarinets, and some harmony clarinets) into the *upper joint* whose holes and most keys are operated by the left hand, and the *lower joint* with holes and most keys operated by the right hand. The left thumb operates both a *tone hole* and the *register key*. The cluster of keys in the middle of the illustration are known as the *trill keys* and are operated by the right hand. These give the player alternative fingerings which make it easy to play ornaments and trills that would otherwise be awkward. The entire weight of the smaller clarinets is supported by the right thumb behind the lower joint on what is misleadingly called the *thumb-rest*. Alto and larger clarinets are supported with a neck strap or a floor peg.

- Finally, the flared end is known as the *bell*. Contrary to popular belief, the bell does not amplify the sound; rather, it improves the uniformity of the instrument's tone for the lowest notes in each register. For the other notes the sound is produced almost entirely at the tone holes and the bell is irrelevant. As a result, when playing to a microphone, the best tone can be recorded by placing the microphone not at the bell but a little way from the finger-holes of the instrument. This relates to the position of the instrument when playing to an audience: pointing down at the floor, except in the most vibrant parts of certain styles of music and when called for specifically by the composer in the music (for example, in the music of Gustav Mahler).

# Usage and repertoire of the clarinet

Clarinets have a very wide compass, which is showcased in chamber, orchestral, and wind band writing. Additionally, improvements made to the fingering systems of the clarinet over time have enabled the instrument to be very agile; there are few restrictions to what it is able to play.

## Classical music

In [classical music](#), clarinets are part of standard [orchestral](#) instrumentation, which frequently includes two clarinetists playing individual parts — each player usually equipped with a pair of standard clarinets in B $\flat$  and A. Clarinet sections grew larger during the 19th century, employing a third clarinetist or a bass clarinet. In the 20th century, composers such as Igor Stravinsky, Richard Strauss and Olivier Messiaen enlarged the clarinet section on occasion to up to nine players, employing many different clarinets including the E $\flat$  or D soprano clarinets, bassett horn, bass clarinet and/or contrabass clarinet. This practice of using a variety of clarinets to achieve colouristic variety was common in [20th century music](#) and continues today. However, many clarinetists and conductors prefer to play parts originally written for obscure instruments such as the C or D clarinets on B $\flat$  or E $\flat$  clarinets, which are of better quality and more prevalent and accessible.

The clarinet is widely used as a solo instrument. The relatively late evolution of the clarinet (when compared to other orchestral woodwinds) has left a considerable amount of solo repertoire from the [Classical](#), [Romantic](#) and Modern periods but few works from the [Baroque](#) era. A number of [clarinet concertos](#) have been written to showcase the instrument, with the concerti by Mozart, Copland and Weber being particularly well known.

Many works of [chamber music](#) have also been written for the clarinet. Particularly common combinations are:

- Clarinet and piano (including [clarinet sonatas](#))
- Clarinet, piano and another instrument (for example, [string instrument](#) or voice)
- Clarinet Quintet, generally made up of a clarinet plus a [string quartet](#),
- [Wind Quintet](#), consists of [flute](#), [oboe](#), **clarinet**, bassoon, and [horn](#).
- Trio d'Anches, or *Trio of Reeds* consists of [oboe](#), **clarinet**, and [bassoon](#).
- Wind Octet, consists of pairs of [oboes](#), **clarinets**, [bassoons](#), and [horns](#).
- Clarinet, violin, piano

## Concert bands

In [wind bands](#), clarinets are a particularly central part of the instrumentation, occupying the same space (and often playing the same parts) in bands that the strings do in orchestras. Bands usually include several B $\flat$  clarinets, divided into sections each consisting of 2-3 clarinetists playing the same part. There is almost always an E $\flat$  clarinet part and a bass clarinet part, usually doubled. Alto, contra-alto, and

contrabass clarinets are sometimes used as well, and very rarely a piccolo Am clarinet.

## Jazz

Clarinets are also commonly found in [jazz](#), especially in its earlier forms such as the Big Band music of the 1930s and 1940s.

The clarinet was a central instrument in early jazz starting in the 1910s and remaining popular through the [big band](#) era into the 1940s. Larry Shields, Ted Lewis, Jimmie Noone and Sidney Bechet were influential in early jazz. The Bm soprano was the most common, but a few early jazz musicians such as Louis Nelson Deslile and Alcide Nunez preferred the C soprano, and many New Orleans jazz brass bands have used Em soprano.

Swing clarinetists such as Benny Goodman, Artie Shaw, and Woody Herman led perhaps the most successful [popular music](#) groups of their era.

With the decline of big bands' popularity in the late 1940s, the clarinet faded from its prominent position in jazz, though a few players (Buddy DeFranco, Eric Dolphy, Jimmy Giuffre, Perry Robinson and others) used clarinet in [bebop](#) and [free jazz](#). However, the instrument has seen something of a resurgence since the 1980s, with Eddie Daniels, Don Byron and others playing the clarinet in more contemporary contexts. The instrument remains common in such styles as Dixieland, Pete Fountain being a notable performer in this genre. One notable enthusiast is filmmaker Woody Allen, who regularly plays New Orleans-style jazz in New York.

## Klezmer

Clarinets also feature prominently in much Klezmer music, which requires a very distinctive style of playing. This folk genre makes much use of quarter-tones, making a different embouchure (mouth position) necessary.

## Groups of clarinets

Groups of clarinets playing together have become increasingly popular among clarinet enthusiasts in recent years. Common forms are:

- clarinet choir, which features a large number of clarinets playing together, usually involving a range of different members of the clarinet family (see Extended family of clarinets). The homogeneity of tone across the different members of the clarinet family produces an effect with some similarities to a human [choir](#).
- clarinet quartet, for which three Bm sopranos and one Bm bass is a particularly common combination

Clarinets and quartets often play arrangements of both classical and popular music, in addition to a body of literature specially written for a combination of clarinets by composers such as Arnold Cooke, Alfred Uhl, Lucien Caillet and Vaclav Nehlybel.

## Extended family of clarinets

Clarinets other than the standard B $\flat$  and A clarinets are sometimes known as harmony clarinets. However, there are many differently-pitched clarinet types, some of which are very rare. They may be grouped into sub-families, but grouping and terminology vary; the following grouping is intended to reflect the most popular usage. See separate articles for additional details.

- Piccolo clarinet — Very rare. Also known as Octave clarinet or Sopranino clarinet. About an octave higher than the B $\flat$  clarinet.
  - Am piccolo clarinet
  - Shackleton (see references) lists also obsolete instruments in C, B $\flat$ , and A.
- Soprano clarinet — The most familiar type of clarinet.
  - Em clarinet — Fairly common in America and western Europe; less common in eastern Europe. Shackleton lists this and the D clarinet, along with obsolete instruments in G, F, and E as sopranino clarinets, but this terminology is not commonly used.
  - D clarinet — Rare in America and western Europe.
  - C clarinet — Moderately rare.
  - B $\flat$  clarinet — The most common type of clarinet.
  - A clarinet — Standard orchestral instrument used alongside the B $\flat$  Soprano.
  - G clarinet — Also called a "Turkish Clarinet". Primarily used in ethnic music.
  - Shackleton lists also obsolete instruments in B and Am. The latter and the clarinet in G often occurred as clarinette d'amour in the mid-18th century.
- Basset clarinet — Essentially a soprano clarinet with a range extension to low C (written).
  - A basset clarinet — Most common type.
  - Basset clarinets in C, B $\flat$ , and G also exist.
- Basset horn — Alto-to-tenor range instrument with (usually) a smaller bore than the alto clarinet, and a range extended to low (written) C.
  - F basset horn — Most common type.
  - Shackleton lists also basset horns in G and D from the 18th century.
- Alto clarinet — About half an octave lower than the B $\flat$  clarinet.
  - Em alto clarinet — Most common type.
- Bass clarinet — About an octave below the B $\flat$  clarinet.
  - B $\flat$  bass clarinet — The standard bass.
  - A bass clarinet — Obsolete.
  - C bass clarinet — Obsolete.
- Contra-alto clarinet — About an octave below the alto clarinet.
  - EEm contra-alto clarinet.
- Contrabass clarinet — About an octave below the bass clarinet.
  - BB $\flat$  contrabass clarinet.

Two larger types have been built on an experimental basis:

- EEEEm Octocontra-alto — An octave below the contra-alto clarinet. Only three have been built.

- **BBBm Octocontrabass** — An octave below the contrabass clarinet. Only one was ever built, and is in the personal collection of George Leblanc.

A **contrabasset horn in F**, an octave lower than the basset horn, has been mentioned in the literature (see Bessaraboff).

## History

The clarinet started life as a small instrument called the chalumeau. Not much is known about this instrument, but it may have evolved from the recorder. The chalumeau had a similar reed to the modern clarinet, but lacked the register key which extends the range to nearly four octaves, so it had a limited range of about one and a half octaves. It also lacked certain chromatics. Like a recorder, it had eight finger holes, and usually had one or two keys for extra notes.

In 1690, a German instrument maker named Johann Christoph Denner added a register key to the chalumeau and produced the first clarinet. This instrument played well in the middle register with a loud, strident tone, so it was given the name *clarinetto* meaning "little trumpet" (from *clarino* + *-etto*). Early clarinets did not play well in the lower register, so chalumeaus continued to be made to play the low notes and these notes became known as the *chalumeau register*. As clarinets improved, the chalumeau fell into disuse.

The original Denner clarinets had two keys, but various makers added more to get extra notes. The classical clarinet of Mozart's day would probably have had eight finger holes and five keys.

Clarinets were soon accepted into orchestras. Later models had a mellower tone than the originals. Mozart (d. 1791) liked the sound of the clarinet and wrote much music for it, and by the time of Beethoven (c. 1800-1820), the clarinet was a standard fixture in the orchestra.

The next major development in the history of clarinet was the invention of the modern pad. Early clarinets covered the tone holes with felt pads. Because these leaked air, the number of pads had to be kept to a minimum, so the clarinet was severely restricted in what notes could be played with a good tone. In 1812, Ivan Mueller, a Russian-born clarinetist and inventor, developed a new type of pad which was covered in leather or fish bladder. This was completely airtight, so the number of keys could be increased enormously. He designed a new type of clarinet with seven finger holes and thirteen keys. This allowed the clarinet to play in any key with near equal ease. Over the course of the 19th century, many enhancements were made to Mueller's clarinet, such as the Albert system and the Baermann system, all keeping the same basic design. The Mueller clarinet and its derivatives were popular throughout the world.

The final development in the modern design of the clarinet was introduced by Hyacinthe Klosé in 1839. He devised a different arrangement of keys and finger holes which allow simpler fingering. It was inspired by the Boehm system developed by Theobald Boehm, a flute maker who had invented the system for flutes. Klosé was so impressed by Boehm's invention that he named his own system for clarinets the Boehm system, although it is different from the one used on flutes. This new system was slow to catch on because it meant the player had to relearn how to play the instrument. Gradually, however, it became the standard and today the Boehm system is used everywhere in the world except Germany and Austria. These countries still use a direct descendant of the Mueller clarinet known as the Oehler system clarinet. Also, some contemporary Dixieland and Klezmer players continue to use Albert system clarinets, as the simpler fingering system can allow for easier slurring of notes. At one time the reed was held on using string, but now the practice exists primarily in Germany and Austria, where the warmer, *thicker* tone is preferred over that produced with the ligatures that are more popular in the rest of the world.

# Clarinet sonata

A **clarinet sonata** is a [sonata](#) for the [clarinet](#), often with [piano](#) accompaniment.

## Famous Clarinet Sonatas

*This list is approximately in chronological order.*

Max Reger's Clarinet Sonata No. 1, Clarinet Sonata No. 2 (both 1900) and Clarinet Sonata No. 3 (1909)  
Arnold Bax's Clarinet Sonata (1934)  
Paul Hindemith's Clarinet Sonata (1939)  
Leonard Bernstein's Sonata for Clarinet and Piano (1942)  
Johannes Brahms' Clarinet Sonata No. 1 and Clarinet Sonata No. 2 (both 1894), which can also be played by a viola  
Herbert Howells' Clarinet Sonata (1946)  
Malcolm Arnold's Clarinet Sonatina (1951).  
Francis Poulenc's Clarinet Sonata (1962)  
Robert Schumann's Fantasiestucke (18??), which can also be played on violoncello

## Clarinet-violin-piano trio

A **clarinet-violin-piano trio** is a [chamber musical ensemble](#) made up of one [clarinet](#), one [violin](#), and one [piano](#), or the name of a piece written for such a group.

The idea of a clarinet-violin-piano trio is relatively modern. Curiously, the [clarinet-violin-piano](#) trio existed several hundred years before the clarinet-violin-piano trio; Mozart composed his famous Kegelstatt Trio in the 18th century, and [Romantic](#) composer Max Bruch composed a suite of eight pieces and a double [concerto](#) for viola, clarinet, and piano. Many of these works can be (or already have been) transcribed for a clarinet-violin-piano trio. Most compositions for this arrangement were composed in the 20th century, but not all of them are atonal.

Unlike a [piano trio](#) or a [concerto](#), there is no standard form for a composition for a clarinet-violin-piano trio; a piece can have any number of movements, at any tempo, in any [key](#).

Acoustically, the choice of a [clarinet](#), [violin](#), and [piano](#) is strange. Most [chamber music](#) (and most [music](#) in general) contains high ([soprano](#)), mid-range ([alto/tenor](#)), and low ([bass/baritone](#)) parts. Both a [clarinet](#) and a [violin](#) play relatively high-pitched parts, making for a less-balanced sound than a trio that contains all sounds, such as a [violin-cello-piano trio](#).

## Composers of Clarinet-Violin-Piano Trios

(This is an incomplete list.)

Béla Bartók  
Alban Berg  
William Bolcom  
Donald Erb  
John Harbison  
Alan Hovhaness  
Charles Ives  
Aram Khachaturian  
Ernst Krenek  
Gian Carlo Menotti  
Darius Milhaud  
Rick Sowash  
Igor Stravinsky  
Johann Baptist Vanhal

## Current Clarinet-Violin-Piano Trio Groups

(This is an incomplete list.)

The Bellerive Trio

The Verdehr Trio

Categories: [Classical music](#) | [Chamber music](#) | [Musical groups](#)

The **classic female blues** spanned from 1920 to 1929 with its peak from 1923 to 1925. The most popular of these singers were Ma Rainey, Bessie Smith, Mamie Smith, Ethel Waters, Ida Cox, Victoria Spivey, Sippie Wallace, Alberta Hunter, Clara Smith, Edith Wilson, Trixie Smith, Lucille Hegamin and Bertha "Chippie" Hill. Hundreds of others recorded including Lizzie Miles, Sara Martin, Rosa Henderson, Martha Copeland, Bessie Jackson (Lucille Bogan), Edith Johnson, Katherine Baker, Margaret Johnson, Hattie Burleson, Madlyn Davis, Ivy Smith, Alberta Brown, Gladys Bentley, Billie and Ida Goodson, Fannie May Goosby, Bernice Edwards and Florence Mills.

They sang often backed behind their bands consisting of [piano](#), several [horns](#) and [drums](#). These women were pioneers in the [record industry](#), by being the first black voices recorded and also by spreading the 12-bar blues form through out the country. In terms of performing, they often wore elaborate outfits and sang of the injustices of their lives, bonding with their audience's sorrows. Their schedules were grueling, staying on the road most of the time with tent shows in the summer and theatres during the winter. With the crash of Wall Street in 1929, the popularity of the blues singers declined. Some went back home, took up jobs or moved to Hollywood. In the '60s with the blues revival, Sippie Wallace, Alberta Hunter, Edith Wilson and Victoria Spivey returned to the stage.

Gertrude "Ma" Rainey, from Georgia, was the "Mother of the Blues," and lived from 1886-1939. She was the first woman to incorporate blues into her act of show songs and comedy. In 1902, she heard a woman singing about the man she'd lost, and quickly learned the song. From then on at each performance, she used it as her closing number calling it "the blues." She recorded over 100 songs and wrote 24 of them herself. "Bessie (Smith and all the others who followed in time), wrote jazz historian Dan Morgenstern "learned their art and craft from Ma, directly or indirectly." Young women followed Ma Rainey's path in the tent show circuit, since black performers were not allowed to be in venues. Eventually most singers were booked on the T.O.B.A. (Theatre Owners Booking Association) circuit.

Mamie Smith, "America's First Lady of the Blues," was the first black woman to record the blues in 1920. Harlem [songwriter](#)/music publisher, Perry Bradford, brought Smith by the Okeh studio to get his songs heard. Sophie Tucker was ill on the day of her session and Okeh allowed Smith to record. They recorded two non-blues songs but were brought back into the studio to record a blues song six months later. All of the recording band members claimed different titles for the song that became known as "Crazy Blues." The song sold over 17,000 copies in its first month. This affected the recording industry so that hundreds of black female singers began being scouted, booked and recorded.

The most popular of these women was Tennessee-born Bessie Smith. She was known as the "Empress of the Blues." She possessed a large voice with a "T'ain't Nobody's Bizness If I Do" attitude. Bessie was a dancer before she was a singer, but was let go because her skin color was too dark. She also struggled initially with being recorded—three companies turned her down before she was signed with Columbia. She eventually became the highest-paid black artist of the '20s, but by the '30s she was making half as much as her usual salary. She died in a car crash in 1937, at the age of 41. Lionel Hampton is quoted as saying, "Had she lived, Bessie would've been right up there on top with the rest of us in the Swing Era." Mahalia Jackson and Janis Joplin both claimed to have drawn great inspiration from her singing. Her work is well documented in print as well as recording with over 160 songs currently available.

Hailing from Texas were Victoria Spivey and her cousin Sippie Wallace. Victoria Spivey was influenced after a Mamie Smith performance to become a blues singer. At 16, she became an overnight success with Okey's release of her original song, "Black Snake Blues." She also appeared in the first all-black talking film. She continued

performing through out her life with a brief hiatus in the '50s. She was the only classic blues singer to have her own [record label](#), Spivey Records. In addition to recording herself, she recorded Lucille Hegamin, Memphis Slim, Lonnie Johnson and others. As a songwriter, pianist and singer, she produced over 1,500 songs. She died in 1976 at the age of 70.

# Classic metal

**Stylistic origins:** Classic rock, [Punk rock](#)

**Cultural origins:** Early 1980s, United States

**Typical instruments:** [Electric guitar](#) - [Bass guitar](#) - [Drums](#)

**Mainstream popularity:** Medium to Large

## [Timeline of heavy metal](#)

**Classic metal** is a term used to refer to [heavy metal](#) bands from any era, playing metal similar to what is viewed by fans as the original sound of the genre from when artists broke through to major mainstream success. Bands of the classic metal era are typically characterized by thumping fast basslines, fast, but less heavy riffs, extended lead guitar solos, high pitched vocals and anthemic choruses. Its peak period was the early to mid 1980s and covered such genres as [glam metal](#), [hard rock](#) and the New Wave of British Heavy Metal.

Significant artists include AC/DC, Dokken, Iron Maiden, Judas Priest, Manowar, Motörhead, Saxon, Twisted Sister and Van Halen.

## History

Classic metal artists were heavily influenced by classic rock artists and other [metal](#) artists of the same period. Artists like Black Sabbath, Alice Cooper, KISS, Deep Purple, Van Halen, U.F.O. and Led Zeppelin were seminal influences. AC/DC are considered by some as the biggest influence to the genre, apart from being a part of Classic Metal itself, with the vocal style and guitarwork of the band considered highly influential.

Classic Metal was also influenced by 70s [Punk Rock](#) although the punk influences diminished over time. For example, Iron Maiden had many punk elements in their first two albums but then moved away from [Punk Rock](#) to embrace and define New Wave of British Heavy Metal.

Classic Metal enjoyed great worldwide success. Iron Maiden sold in excess of 58 million albums during the 80s and Dokken sold more than 16 million in the US alone. Europe's landmark album The Final Countdown sold over 7 million copies worldwide, while Scorpions and Judas Priest sold out big arenas around the world. Some Classic Metal bands like Iron Maiden and Judas Priest still release successful new albums and tour world wide to this day. This is a testament to the influence that the bands still exert and their ability to keep old fans interested and attract new ones.

Classic Metal bands influenced many Metal genres including [Glam Metal](#), [Thrash Metal](#), and [Power Metal](#). Classic Metal bands were not as heavy and had a greater sense of melody than the [Thrash Metal](#) bands such as Metallica, Anthrax and Morbid Angel that they influenced. Often considered by some fans as the 'purest' form of Metal, Classic Metal was popular for its combination of melody and aggression.

## Musicology

Classic metal as a cross-genre reference doesn't have a distinctive style. The reason why classic metal is sometimes referred to as 1980s [metal](#) or simply as [heavy metal](#) is because, its style perfectly describes [popular metal music](#) of the first half of the 1980s decade. Classic metal evolved from the earlier genres of [rock n roll](#) like [Hard rock](#) and [Glam rock](#), during the late 70s. One of the most important and innovative concepts of classic metal was the use of the double lead [guitar](#) pioneered by classic metal bands like Scorpions and Judas Priest. And although, this concept was sparingly used by earlier [hard rock](#) bands like Uriah Heep and U.F.O., it was wholly developed as a heavy metal element during the classic metal era. This concept of dual lead guitars would reach more profound heights during the late 1980s when other bands like Megadeth and Slayer would also use it. Another musical concept that evolved during the Classic metal era was that of the supposedly galloping basslines. Although, this bass style had its inception into music in the earlier Rock n roll era, it became highly evident in the Classic metal era, and was extensively used by Iron Maiden's Steve Harris, Dokken's Jeff Pilson and others.

## Lyrical theme

Classic metal is [lyrically](#) diverse, with a wide variety of lyrical [themes](#) being written by the bands without a centralised prerequisite such as [glam metal](#)'s lyrics about love, sex, girls, and metal, [thrash metal](#)'s heavy political and war themes, and [power metal](#)'s high fantasy themed imagery. The themes in classic metal include: the occult, love, fun-based party songs, fantasy, social themes, and war themes. A single band can write songs based on various themes. For instance, Judas Priest writes songs on party (*Livin' after midnight*) as well as social themes (*Victim Of Changes*). This however is attributed due to the varying genres that make up the term classical metal.

## Decline

Classic metal's position as a popular time in metal music's history withered away in the late 1980s, especially in the 1987-1989 period. At this time newer bands emerged to extend thrash metal and glam metal, with each genre taking a quite different approach to their music. Gradually, public interest drifted away from classic metal onto the newer genres. Due to the hierarchy of classic metal splitting into individual parts and drifting away from each other, many classic metal bands came to their end at this time. Some joined one of the newly founded or extended genres, (Twisted Sister, Quiet Riot, Motörhead), while some bands experimented with aspects of other genres (Skid Row, W.A.S.P., Scorpions), leaving others to carry on with typical classic metal stylings (Judas Priest, Iron Maiden, Europe, Dokken, Dio).

## **Revival and influence**

Although classic metal went into regression as a commercially viable era in the late 90s, there has been several bands who have tried to revive the feeling of the era, or alternatively have incorporated elements of classic metal into their music. Many bands, who came after the classic metal era had ended, played music akin to one genre, with heavy influence from classic metal. White Lion, Warrior Soul, Stratovarius, Warrant, and Slayer being prominent among them.

## Important artists

Accept  
AC/DC  
Black Sabbath  
Blue Oyster Cult  
Alice Cooper  
Deep Purple  
Def Leppard  
Dio  
Europe  
Fastway  
Iron Maiden  
Judas Priest  
Manowar  
Motley Crue  
Motörhead  
Quiet Riot  
Rainbow  
Ratt  
Yngwie J. Malmsteen's Rising Force  
Saxon  
Scorpions

# Classical guitar

A **classical guitar**, also called a **Spanish guitar**, is a [musical instrument](#) from the [guitar](#) family.

## Background information

The term classical guitar is a recent one, necessary only with the introduction of guitars with steel strings, electric amplification, and the slightly diverged form of the modern Flamenco guitar which led to a plethora of guitar forms.

The classical guitar is distinguished by a number of features:

- It is an acoustic instrument. The sound is made more audible by a sound box.
- It has six strings. A few classical guitars have eight or more strings to expand the bass scale, even out overtone production, and allow [lute](#) music written for lutes with more than six courses of strings to be played.
- The strings are usually made from nylon (formerly catgut, which is made from sheep intestine, despite the name), as opposed to the metal strings found in some other forms of guitar. These strings have a much lower tension than steel strings. The lower three strings ('bass strings') are wound with metal, commonly silver or nickel. Some less common stringings use a fourth wound string.
- Because of the low tension of the strings the neck can be made entirely of wood, not requiring a steel truss rod.
- Also because of the low tension of the strings, the interior bracing of the sound board can be lighter, which allows more complex tonal qualities. The spruce top or sound board of each type has a different bracing pattern. A common classical guitar bracing pattern is called fan bracing. A center spruce brace is glued on the inside of the soundboard along the center line of the guitar under the bridge. Additional braces fan out on either side of the first brace. The extreme tension of steel-strings requires stronger bracing. A common steel-string pattern is called X bracing and was first developed by C.F. Martin & Co. X bracing consists of two larger braces crossed under the sound board of a steel-string guitar. The center of the X is usually centered between the underside of the bridge and the sound hole.
- The neck tends to be broader than with steel string guitars, making more complex fingerwork easier, but which may require a more exacting left hand position. A typical modern six-string classical guitar has a width of 48-54 mm at the nut, compared to around 42mm for a modern electric guitar design. The classical fingerboard is normally flat, whereas the steel string fingerboard has a slight radius.
- The strings are usually plucked with the fingers. Most players shape their fingernails so that they contact the string in a certain way to achieve the desired tone. Strumming is an unusual technique in classical guitar, and often referred to by the Spanish term "rasgueo", or for strumming patterns "rasgueado", and utilises the backs of the fingernails. Rasgueado is integral to [Flamenco](#) guitar.
- Traditionally, the tuning pegs (or "keys") at the head the fingerboard of a classical guitar point backwards (towards the player when the guitar is in playing position; perpendicular to the plane of the fretboard). This is in contrast to a traditional steel-string guitar design, in which the tuning pegs point outward (up and down from playing position; parallel to the plane of the fretboard).
- Classical guitars are typically built without *pickguards*. A pickguard is a piece of plastic affixed just below the strings on steel-string guitars to protect the sound board of the guitar from damage by aggressive strumming with a pick. It is assumed that a classical guitar will be played only with the fingers, and that a pick-guard is unnecessary. On flamenco guitars a tapping, or golpe board is

attached to the front of the guitar, below the sound hole to allow the use of techniques that would normally damage a classical guitar.

Classical guitars are normally played without amplification of any sort but they can be equipped with an electronic pickup, which is sometimes used by performers in noisy environments. Either a piezoelectric pickup is placed under the bridge, or a microphone is suspended within the body.

# History of the classical guitar

- Luis de Milán in the Siglo de oro 1550-1650.

## The Golden Age

The first 'Golden Age' of the classical guitar repertoire was the 19th century. Some notable guitar composers from this period are:

Dionisio Aguado 1784-1849  
Julián Arcas 1832-1882  
Luigi Boccherini 1743-1805  
Jose Broca 1805-1882  
Matteo Carcassi 1792-1853  
Ferdinando Carulli 1770-1841  
Napoléon Coste 1806-1883  
Anton Diabelli 1781-1858  
Fernando Ferandiere 1771-1816  
Francois de Fossa 1775-1849  
Mauro Giuliani 1781-1829  
Luigi Legnani 1790-1877  
Antoine de Lhoyer 1768-1852  
Antonio Gimeniz Manjon 1866-1919  
Wenzeslaus Matiegka 1773-1830  
Johann Kaspar Mertz 1806-1856  
Francesco Molino 1768-1847  
Giulio Regondi 1822-1872  
Fernando Sor 1778-1839  
Francisco Tárrega 1852-1909  
Marco Aurelio Zani de Ferranti 1800-1878

## Guitarist-composers of the 20th century

Sergio Assad 1952-  
Agustín Barrios Mangoré 1885-1944  
Gilbert Biberian 1944-  
Leo Brouwer 1939-  
Kevin Callahan 1958-  
Abel Carlevaro 1918-2002  
Carlo Domeniconi 1947-  
John W Duarte 1919-2004  
Roland Dyens 1955-  
Dimitris Fampas 1921 - 1996  
Angelo Gilardino 1941-  
Brian Head 1965-  
Evan Hirschelman 1976-

Francis Kleynjans 1951-  
Nikita Koshkin 1956-  
Annette Kruisbrink 1958-  
Ian Krouse 1956-  
Antonio Lauro 1917-1986  
Miguel Llobet 1878-1938  
Jorge Morel 1931-  
Maximo Diego Pujol 1957-  
Eduardo Sainz de la Maza 1903-1982  
Teresa de Rogatis 1893-1979  
Reginald Smith Brindle 1917-2003  
Stepán Rak 1945-  
Brad Richter 1969-  
D.R. Auten 1951-  
Heitor Villa-Lobos 1887-1959  
Andrew York 1958-

## **Composers for the classical guitar**

In the 20th century, many non-guitarist composers wrote for the instrument, which previously only players of the instrument had done. These include:

Malcolm Arnold 1921-  
Vicente Asencio 1908-1979  
Milton Babbitt 1916-  
Richard Rodney Bennett 1936-  
Luciano Berio 1925-2003  
Lennox Berkeley 1903-1989  
Benjamin Britten 1913-1976  
Elliott Carter 1908-  
Mario Castelnuovo-Tedesco 1895-1968  
Peter Maxwell Davies 1934-  
Stephen Dodgson 1924-  
René Eespere 1953-  
Manuel de Falla 1876-1946  
Jean Françaix 1912-1997  
Roberto Gerhard 1896-1970  
Alberto Ginastera 1916-1983  
Hans Werner Henze 1926-  
Antonio José 1902-1936  
Ernst Krenek 1900-1991  
John Anthony Lennon 1950-  
Ester Mägi 1922-  
Joan Manen 1883-1971  
Frank Martin 1890-1974  
Ananiah McCarrell 1981-  
Darius Milhaud 1892-1974  
Frederic Mompou 1893-1987  
Federico Moreno Torroba 1891-1982  
Maurice Ohana 1914-1992  
Astor Piazzolla 1921-1992  
Manuel Ponce 1886-1948  
Francis Poulenc 1899-1963  
André Previn 1929-  
Roger Reynolds 1934-

George Rochberg 1918-2005  
Joaquín Rodrigo 1901-1999  
Albert Roussel 1869-1937  
Toru Takemitsu 1930-1996  
Alexandre Tansman 1897-1986  
Michael Tippett 1905-1998  
Joaquín Turina 1882-1949  
William Walton 1902-1983  
Mason Williams 1936-

## Modern performers

Guitarists also often play transcriptions of music originally written for other instruments. [Lute](#) transcriptions from the Renaissance and Baroque eras are common.

Some players of the classical guitar:

Laurindo Almeida 1917-1995  
Magnus Andersson 1955-  
Roberto Aussel 1954-  
Agustín Barrios Mangoré 1885-1944  
Manuel Barrueco 1952-  
Gilbert Biberian 1944-  
Liona Boyd 1949-  
Julian Bream 1933-  
Leif Christensen 1950-1988  
Alirio Diaz 1923-  
Zoran Dukic 1969-  
Roland Dyens 1955-  
Eva Fampas 1964 -  
Eliot Fisk 1958-  
Sila Godoy 1919-1949  
Slava Grigoryan 1976-  
Steve Hackett 1950-  
Adam Holzman 1960-  
Dimitri Illarionov 1979-  
Sharon Isbin 1956-  
Maria Kämmerling 1946-  
Alexandre Lagoya 1929-1999  
Roberto Legnani 1959  
Gustavo Lopez 1920-1979  
Carlo Marchione 1964-  
Erling Møldrup 1943-  
Christopher Parkening 1947-  
"Esteban", Stephen Paul 1948-  
Marco Pereira  
Alberto Ponce 1935-  
Celedonio Romero 1913-1996  
Pepé Romero 1944-  
David Russell 1953-  
Andrés Segovia 1893-1987  
Göran Söllscher 1955-  
David Starobin 1951-  
Pavel Steidl 1961-  
David Tanenbaum 1956-  
Ana Vidovi 1980-

John Williams 1941-  
Kazuhito Yamashita 1961-  
Yang Xuefei 1977-  
Andrew York

# Classical music

**Classical music** in its widest sense is held to refer to music deriving from learned traditions, taught through institutions either specifically devoted to music (e.g. modern Western or through institutions or traditions (typically religious) dedicated to transmission of specific schools of music. Classical music is thus contrasted with [popular](#) or [folk music](#).

In the English language, the term "classical music" is a homophoric reference to [European classical music](#) and its derivative styles, and is rarely used to refer to traditional musical styles of other regions. It can thus carry the meaning of **concert music** in general of Wolfgang Amadeus Mozart, Joseph Haydn, and their immediate successors (as distinct from, for example, the music of the preceding [baroque](#) and the subsequent romantic eras). It is with respect to this latter canon that the term 'classical music' was first used, in the 1820s and 1830s, denote a body of music that was compared to the classical traditions of art, sculpture and architecture of Ancient Greece and Rome.

The following genres of music may all be referred to as 'classical' in the sense of having a consensus core canon:

- [Andalusian classical music](#)
- Arab classical music
- Bengali classical music
- Burmese classical music
- [Carnatic music](#)
- Central Asian classical music
- Chinese classical music
- Charya or Nepalese classical music
- Classical Jazz
- [Classical music era](#)
- Classical rock
- [European classical music](#), classical music of Western cultures
- [Experimental music](#), a movement within 20th century classical music
- Gagaku or Japanese classical music
- Gamelan or Indonesian classical music
- Greek classical music
- [Hindustani classical music](#)
- [Indian classical music](#)
- Klasik or Afghan classical music
- Korean court music
- Laotian classical music
- Mugam or Azerbaijani classical music
- Music of Orissa
- musiqi-e assil or Iranian classical music
- Nangma or Tibetan classical music
- Orthodox Byzantine music
- Ottoman classical music
- Philippine classical music
- [Pinpeat](#) or Cambodian classical music
- Sufiana Kalam or Kashmiri classical music
- Thai court music

- Vietnamese classical music

## History of European art music

|                     |               |
|---------------------|---------------|
| <u>Medieval</u>     | (476 – 1400)  |
| <u>Renaissance</u>  | (1400 – 1600) |
| <u>Baroque</u>      | (1600 – 1760) |
| <b>Classical</b>    | (1730 – 1820) |
| <u>Romantic</u>     | (1815 – 1910) |
| <u>20th century</u> | (1900 – 2000) |

## Contemporary classical music

The **Classical period** in Western [music](#) occurred from about 1730 through 1820, despite considerable overlap at both ends with preceding and following periods, as is true for all musical eras. Although the term [classical music](#) is used as a blanket term meaning *all* kinds of music in this tradition, it can also occasionally mean this particular era within that tradition.

The Classical period falls between the [Baroque](#) and the Romantic periods. Among its [composers](#) were Muzio Clementi, Johann Ladislaus Dussek and Carl Philipp Emanuel Bach, though probably the best known composers from this period are Joseph Haydn, Wolfgang Amadeus Mozart and Ludwig van Beethoven (as they all worked in Vienna, Austria, this period is often referred to as "Viennese Classic"). Beethoven is also listed as either a Romantic composer, or a composer who was part of the transition to the Romantic.

# History of the Classical period

## The Classical style as part of a larger artistic change

In the middle of the 18th century, Europe began to move to a new style in architecture, literature, and the arts generally, known as Classicism. While still tightly linked to the court culture and absolutism, with its formality and emphasis on order and hierarchy, the new style was also a cleaner style, one that favored clearer divisions between parts, brighter contrasts and colors, and simplicity rather than complexity. The remarkable development of ideas in "natural philosophy" had established itself in the public consciousness, with Newton's physics taken as a paradigm: structures should be well-founded in axioms, and articulated and orderly. This taste for structural clarity worked its way into the world of music as well, moving away from the layered polyphony of the [Baroque](#) period, and towards a style where a melody over a subordinate harmony – a combination called homophony – was preferred. This meant that playing of chords, even if they interrupted the melodic smoothness of a single part, became a much more prevalent feature of music, and this in turn made the tonal structure of works more audible. (See also [counterpoint](#) and [harmony](#).)

The new style was also pushed forward by changes in the economic order and in social structure. As the 18th century progressed, the nobility more and more became the primary patrons of instrumental music, and there was a rise in the public taste for comic [opera](#). This led to changes in the way music was performed, the most crucial of which was the move to standard instrumental groups, and the reduction in the importance of the "continuo", the harmonic fill beneath the music, often played by several instruments. One way to trace this decline of the continuo and its figured chords is to examine the decline of the term "obbligato", meaning a mandatory instrumental part in a work of [chamber music](#). In the Baroque world, additional instruments could be optionally added to the continuo; in the Classical world, all parts were noted specifically, though not always *notated*, as a matter of course, so the word "obbligato" became redundant. By 1800, the term was virtually extinct, as was the practice of conducting a work from the keyboard.

The changes in economic situation just noted also had the effect of altering the balance of availability and quality of musicians. While in the late Baroque a major composer would have the entire musical resources of a town to draw on, the forces available at a hunting lodge were smaller, and more fixed in their level of ability. This was a spur to having primarily simple parts to play, and in the case of a resident virtuoso group, a spur to writing spectacular, idiomatic parts for certain instruments, as in the case of the Mannheim orchestra. In addition, the appetite for a continual supply of new music, carried over from the Baroque, meant that works had to be performable with, at best, one rehearsal. Indeed, even after 1790 Mozart writes about "the rehearsal", to imply that his concerts would have only one.

Since polyphonic texture was no longer the focus of music, but rather a single melodic line with accompaniment, there was greater emphasis on notating that line for dynamics and phrasing. The simplification of texture made such instrumental detail more important, and also made the use of characteristic rhythms, such as attention-getting opening fanfares, the funeral march rhythm, or the minuet genre, more important in establishing and unifying the tone of a single movement.

This led to the Classical style's gradual breaking with the Baroque habit of making each movement of music devoted to a single "affect" or emotion. Instead, it became the style to establish contrasts between sections within movements, giving each its own emotional coloring, using a range of techniques: opposition of major and minor; strident rhythmic themes in opposition to longer, more song-like themes; and especially, making movement between different harmonic areas the principal means of creating dramatic contrast and unity. Transitional episodes became more and more important, as occasions of surprise and delight. Consequently composers and musicians began to pay more attention to these, highlighting their arrival, and making the signs that pointed to them, on one hand, more audible, and on the other hand, more the subject of "play" and subversion – that is, composers more and more created false expectations, only to have the music skitter off in a different direction.

## **Beginnings of the Classical style (1730-1760)**

At first the new style took over Baroque forms – the ternary "da capo aria" and the "[sinfonia](#)" and "[concerto](#)" – and composed with simpler parts, more notated ornamentation and more emphatic division into sections. However, over time, the new aesthetic caused radical changes in how pieces were put together, and the basic layouts changed. (See [History of sonata form](#).) Composers from this period sought dramatic effects, striking melodies, and clearer textures. One important break with the past was the radical overhaul of opera by Christoph Willibald Gluck, who cut away a great deal of the layering and improvisational ornament, and focused on the points of modulation and transition. By making these moments where the harmony changes more focal, he enabled powerful dramatic shifts in the emotional color of the music. To highlight these episodes he used changes in instrumentation, melody, and mode. Among the most successful composers of his time, Gluck spawned many emulators, one of whom was Antonio Salieri. Their emphasis on accessibility was hugely successful in opera, and in vocal music more widely: songs, oratorios, and choruses. These were considered the most important kinds of music for performance, and hence enjoyed greatest success in the public estimation.

The phase between the Baroque and the rise of the Classical, with its broad mixture of competing ideas and attempts to unify the different demands of taste, economics and "worldview", goes by many names. It is sometimes called "Galant", "Rococo", or "pre-Classical", or at other times, "early Classical". It is a period where composers still working in the Baroque style are still successful, if sometimes thought of as being more of the past than the present – Bach, Handel and Telemann all compose well beyond the point at which the homophonic style is clearly in the ascendant. Musical culture was caught at a crossroads: the masters of the older style had the technique, but the public hungered for the new. This is one of the reasons C.P.E. Bach was held in such high regard: he understood the older forms quite well, and knew how to present them in new garb, with an enhanced variety of form; he went far in overhauling the older forms from the Baroque.

## **The early Classical style (1760-1775)**

By the late 1750s there are flourishing centers of the new style in Italy, Vienna, Mannheim, and Paris; dozens of symphonies are composed, and there are "bands" of players associated with theatres. Opera or other vocal music is the feature of most musical events, with concerti and "symphonies", which would over the course of the Classical develop and become independent instrumental works (see [symphony](#)), serving as instrumental interludes and introductions, for operas, and for even church

services. The norms of a body of strings supplemented by winds, and of movements of particular rhythmic character, are established by the late 1750s in Vienna. But the length and weight of pieces is still set with some Baroque characteristics: individual movements still focus on one *affect* or have only one sharply contrasting middle section, and their length is not significantly greater than Baroque movements. It should also be noted that at this time there is not yet a clearly enunciated theory of how to compose in the new style. It was a moment ripe for a breakthrough.

Many consider this breakthrough to have been made by C.P.E. Bach, Gluck, and several others. Indeed, C.P.E. Bach and Gluck are often considered to be founders of the Classical style itself.

The first great master of the style was the composer Joseph Haydn. In the late 1750s he began composing symphonies, and by 1761 he had composed a triptych ("Morning", "Noon", and "Evening") solidly in the "contemporary" mode. As a "vice-Kapellmeister" and later "Kapellmeister", his output expanded: he would compose over forty symphonies in the 1760s alone. And while his fame grew, as his orchestra was expanded and his compositions were copied and disseminated, his voice was only one among many.

While some suggest that he was overshadowed by Mozart and Beethoven, it would be difficult to overstate Haydn's centrality to the new style, and therefore to the future of Western art music as a whole. At the time, before the pre-eminence of Mozart or Beethoven, and with Johann Sebastian Bach known primarily to connoisseurs of keyboard music, Haydn reached a place in music that set him above all other composers except perhaps George Friedrich Handel. Some have pointed out that he occupied a place equivalent to the Beatles, for example, in the history of Rock and Roll. It was he who, more than any other single individual, realized that the evolving new style needed to be directed by new ideas and principles. He took existing ideas, and radically altered how they functioned – earning him the titles "father of the [symphony](#)," and "father of the [string quartet](#)". One might truly say that he was the father of the [sonata form](#) – which, in its Classical flowering, relied on dramatic contrast, tension of melody against harmony and rhythm, and required the audience to follow a dramatic curve over a larger span of time than was previously necessary.

Strangely enough, one of the forces that worked as an impetus for his pressing forward was the first stirring of what would later be called "[Romanticism](#)" – the "Sturm und Drang", or "storm and struggle" phase in the arts, a short period where obvious emotionalism was a stylistic preference: the fad of the 1770s. Haydn accordingly wanted more dramatic contrast and more emotionally appealing melodies, with sharpened character and individuality. This period faded away in music and literature: however, it would color what came afterward, and eventually be a component of aesthetic taste in coming decades.

The "Farewell" Symphony, No. 45 in F# Minor, exemplifies Haydn's integration of the differing demands of the new style, with surprising sharp turns, and a long adagio to end the work. In 1772, Haydn completed his Opus 20 set of six string quartets, in which he deploys the polyphonic techniques he gathered from the previous era to provide structural coherence capable of holding together his melodic ideas. For some this marks the beginning of the "mature" Classical style, where the period of reaction against the complexity of the late Baroque begins to be replaced with a period of integration of elements of both Baroque and Classical styles.

## **The middle Classical style (1775-1790)**

Haydn, having worked for over a decade as the music director for a prince, had far more resources and scope for composing than most, and also the ability to shape the forces that would play his music. This opportunity was not wasted, as Haydn, beginning quite early on his career, restlessly sought to press forward the technique of

building ideas in music (see development). His next important breakthrough was in the Opus 33 string quartets (1781), where the melodic and the harmonic roles segue among the instruments: it is often momentarily unclear what is melody and what is harmony. This changes the way the ensemble works its way between dramatic moments of transition and climactic sections: the music flows smoothly and without obvious interruption. He then took this integrated style and began applying it to orchestral and vocal music.

Haydn's gift to music was a way of composing, a way of structuring works, which was at the same time in accord with the governing aesthetic of the new style. It would, however, be a younger contemporary, Wolfgang Amadeus Mozart, who would bring his genius to Haydn's ideas, and apply them to two of the major genres of the day: opera, and the virtuoso concerto. Whereas Haydn spent much of his working life as a court composer, Mozart wanted public success in the concert life of cities. This meant opera, and it meant performing as a virtuoso. Haydn was not a virtuoso at the international touring level; nor was he seeking to create operatic works that could play for many nights in front of a large audience. Mozart wanted both. Moreover, Mozart also had a taste for more chromatic chords (and greater contrasts in harmonic language generally), a greater love for creating a welter of melodies in a single work, and a more Italianate sensibility in music as a whole. He found, in Haydn's music, and later in his study of the polyphony of Bach, the means to discipline and enrich his gifts.

Mozart rapidly came to the attention of Haydn, who hailed the new composer, studied his works, and considered the younger man his only true peer in music. Their letters to each other are filled with the kind of asides that only two people working at a higher plane than their contemporaries can share. In Mozart, Haydn found a greater range of instrumentation, dramatic effect and melodic resource – the learning relationship moved in two directions.

Mozart's arrival in Vienna in 1780 brought an acceleration in the development of the Classical style. There Mozart absorbed the fusion of Italianate brilliance and Germanic cohesiveness which had been brewing for the previous 20 years. His own taste for brilliances, rhythmically complex melodies and figures, long cantilena melodies, and virtuoso flourishes was merged with an appreciation for formal coherence and internal connectedness. Strangely enough, it is at this point that war and inflation halted a trend to larger and larger orchestras and forced the disbanding or reduction of many theatre orchestras. This pressed the Classical style inwards: towards seeking greater ensemble and technical challenge – for example, scattering the melody across woodwinds, or using thirds to highlight the melody taken by them. This process placed a premium on chamber music for more public performance, giving a further boost to the string quartet and other small ensemble groupings.

It was during this decade that public taste began, increasingly, to recognize that Haydn and Mozart had reached a higher standard of composition. By the time Mozart arrived at age 25, in 1781, the dominant styles of Vienna were recognizably connected to the emergence in the 1750s of the early Classical style. By the end of the 1780s, changes in performance practice, the relative standing of instrumental and vocal music, technical demands on musicians, and stylistic unity had become established in the composers who imitated Mozart and Haydn. During this decade Mozart would compose his most famous operas, his six late symphonies which would help redefine the genre, and a string of piano concerti which still stand at the pinnacle of these forms.

One composer who was influential in spreading the more serious style that Mozart and Haydn had formed is Muzio Clementi, a gifted virtuoso pianist who dueled Mozart to a draw before the Emperor, when they exhibited their compositions in performance. His own sonatas for the piano circulated widely, and he became the most successful composer in London during the 1780s. The stage was set for a generation of composers who, having absorbed the lessons of the new style earlier, and having clear examples to aim at, would take the Classical style in new directions. Also in London at this time was Johann Ladislaus Dussek, who, like Clementi, encouraged

piano makers to extend the range and other features of their instruments, and then fully exploited the newly opened possibilities. The importance of London in the Classical period is often overlooked – but it served as the home to the Broadwood's factory for piano manufacturing, and as the base for composers who, while less famous than the "Vienna School", would have a decisive influence on what came later. They were composers of a number of fine works, notable in their own right. London's taste for virtuosity may well have encouraged the complex passage work and extended statements on tonic and dominant.

## **The late Classical style (1790-1825)**

When Haydn and Mozart began composing, symphonies were played as single movements before, between, or as interludes within other works, and many of them lasted only ten or twelve minutes; instrumental groups had varying standards of playing and the "continuo" was a central part of music-making. In the intervening years, the social world of music had seen dramatic changes: international publication and touring had grown explosively, concert societies were beginning to be formed, notation had been made more specific, more descriptive, and schematics for works had been simplified (yet became more varied in their exact working out). In 1790, just before Mozart's death, with his reputation spreading rapidly, Haydn was poised for a series of successes, notably his late oratorios and "London" symphonies. Composers in Paris, Rome and all over Germany turned to Haydn and Mozart for their ideas on form.

The moment was again ripe for a dramatic shift. The decade of the 1790s saw the emergence of a new generation of composers, born around 1770, who, while they had grown up with the earlier styles, found in the recent works of Haydn and Mozart a vehicle for greater expression. In 1788 Luigi Cherubini settled in Paris, and in 1791 composed "Lodoiska", an opera that shot him to fame. Its style is clearly reflective of the mature Haydn and Mozart, and its instrumentation gave it a weight that had not yet been felt in the grand opera. His contemporary Étienne Méhul extended instrumental effects with his 1790 opera "Euphrosine et Coradin", from which followed a series of successes.

Of course, the most fateful of the new generation would be Ludwig van Beethoven, who launched his numbered works in 1794 with a set of three piano trios, which remain in the repertoire. Somewhat younger than these, though equally accomplished because of his youthful study under Mozart and his native virtuosity, was Johann Nepomuk Hummel. Hummel studied under Haydn as well; he was a friend to Beethoven and Schubert, and a teacher to Franz Liszt. He concentrated more on the piano than any other instrument, and his time in London in 1791 and 1792 saw the composition, and publication in 1793, of three piano sonatas, opus 2, which idiomatically used Mozart's techniques of avoiding the expected cadence, and Clementi's sometimes modally uncertain virtuoso figuration. Taken together, these composers can be seen now as the vanguard of a broad change in style and the center of gravity in music. They would study one another's works, copy one another's gestures in music, and on occasion behave like quarrelsome rivals.

The crucial differences with the previous wave can be seen in the downward shift in melodies, increasing durations of movements, the acceptance of Mozart and Haydn as paradigmatic, the greater and greater use of keyboard resources, the shift from "vocal" writing to "pianistic" writing, the growing pull of the minor and of modal ambiguity, and the increasing importance of varying accompanying figures to bring "texture" forward as an element in music. In short, the late Classical was seeking a music that was internally more complex. The growth of concert societies and amateur orchestras, marking the importance of music as part of middle-class life, contributed to a booming

market for pianos, piano music, and virtuosi to serve as exemplars. Hummel, Beethoven, Clementi were all renowned for their improvising.

One explanation for the shift in style has been advanced by Schoenberg and others: the increasing centrality of the idea of theme and variations in compositional thinking. Schoenberg argues that the Classical style was one of "continuing variation", where a development was, in effect, a theme and variations with greater continuity. In any event, theme and variations replaced the fugue as the standard vehicle for improvising, and was often included, directly or indirectly, as a movement in longer instrumental works.

Direct influence of the Baroque continued to fade: the figured bass grew less prominent as a means of holding performance together, the performance practices of the mid 18th century continued to die out. However, at the same time, complete editions of Baroque masters began to become available, and the influence of Baroque style, as the Classical period understood it, continued to grow, particularly in the more and more expansive use of brass. Another feature of the period is the growing number of performances where the composer was not present. This led to increased detail and specificity in notation; for example, there were fewer and fewer "optional" parts that stood separately from the main score.

The force of these shifts would be abundantly apparent with Beethoven's 3rd Symphony, given the name "Eroica", which is Italian for "heroic", by the composer. As with Stravinsky's Rite of Spring, it may not have been the first in all of its innovations, but its aggressive use of every part of the Classical style set it apart from its contemporary works: in length, ambition, and harmonic resources.

## **Classical influence on later composers**

Musical eras seldom disappear at once; instead, features are replaced over time, until the old is simply felt as "old-fashioned". The Classical style did not "die" so much as transform under the weight of changes.

One crucial change was the shift towards harmonies centering around "flatward" or subdominant keys. In the Classical style, major key was far more common than minor, chromaticism being moderated through the use of "sharpward" modulation, and sections in the minor mode were often merely for contrast. Beginning with Mozart and Clementi, there began a creeping colonization of the subdominant region. With Schubert, subdominant moves flourished after being introduced in contexts in which earlier composers would have confined themselves to dominant shifts (For a fuller discussion of these terms see Tonality.). This introduced darker colors to music, strengthened the minor mode, and made structure harder to maintain. Beethoven would contribute to this, by his increasing use of the fourth as a consonance, and modal ambiguity – for example, the opening of the D Minor Symphony.

Among this generation of "Classical Romantics" Franz Schubert, Carl Maria von Weber, and John Field are among the most prominent, along with the young Felix Mendelssohn. Their sense of form was strongly influenced by the Classical style, and they were not yet "learned" (imitating rules which were codified by others), but directly responding to works by Beethoven, Mozart, Clementi, and others, as they encountered them. The instrumental forces at their disposal were also quite "Classical" in number and variety, permitting similarity with avowedly Classical works.

However, the forces destined to end the hold of the Classical style gather strength in the works of each of these composers. The most commonly cited one is, of course, harmonic innovation. However, also important is the increasing focus on having a continuous and rhythmically uniform accompanying figuration. Beethoven's Moonlight sonata would be the model for hundreds of later pieces – where the shifting movement of a rhythmic figure provides much of the drama and interest of the work, while a melody drifts above it. As years wore on, greater knowledge of works, greater

instrumental expertise, increasing variety of instruments, the growth of concert societies, and the unstoppable domination of the piano – which created a huge audience for sophisticated music – all contributed to the shift to the "Romantic" style.

Drawing the line exactly is impossible: there are sections of Mozart's works which, taken alone, are indistinguishable in harmony and orchestration from music written 80 years later, and composers continue to write in normative Classical styles all the way into the 20th century. Even before Beethoven's death, composers such as Louis Spohr were self-described Romantics, incorporating, for example, more and more extravagant chromaticism in their works. However, generally the fall of Vienna as the most important musical center for orchestral composition is felt to be the occasion of the Classical style's final eclipse, along with its continuous organic development of one composer learning in close proximity to others. Franz Liszt and Frédéric Chopin visited Vienna when young, but they then moved on to other vistas. Composers such as Carl Czerny, while deeply influenced by Beethoven, also searched for new ideas and new forms to contain the larger world of musical expression and performance in which they lived.

# Clownstep

## Clownstep

|                               |   |
|-------------------------------|---|
| <b>Stylistic origins:</b>     | <a href="#">Drum and Bass</a> , <a href="#">Jungle</a> , Jump-Up  |
| <b>Cultural origins:</b>      | early-2000s, London   |
| <b>Typical instruments:</b>   | <a href="#">Synthesizer</a> - <a href="#">Drum machine</a> - <a href="#">Sequencer</a> - <a href="#">Keyboard</a> - <a href="#">Sampler</a><br>- Laptop |
| <b>Mainstream popularity:</b> | Small   |

**Clownstep** is a pejorative term used to describe a certain type of sound found in the [electronic music](#) genre [drum and bass](#). The sound is typified as having a 'wobbly' bassline, simple beat structure and/or a large amount of swingbeats.

The name originated from producer Dylan. Dylan created the term as a description of Shimon & Andy C's single Bodyrock, due to its swingbeat sound that inspired an image of clowns dancing. The phrase was then popularised by Dylan on the drum & bass webforum Dogs On Acid. The phrase was censored by the site's moderators, appearing in posts as "\*\*\*\*\*", due to its derogatory usage. A "clownsteppa" smiley was spawned, and now appears in DNB-related forums worldwide.

The meaning of the term is less a musical description than an insult within the world of internet drum and bass culture, particularly the dogsonacid forum, which is renowned within the scene. The term clownstep may be applied to any drum and bass artist that falls from favour - even the synonymous description of 'wobble' is almost meaningless as the deep bass sounds of many drum and bass tracks would be described in these terms by many listeners.

Despite the nebulous nature of the term, many drum and bass fans have found certain producers to be strong purveyors of the clownstep "sound". Relative newcomers to the scene (as of 2005) Pendulum have been singled out as pioneering the "bashing" style of pitch-bent bass tied to thunderous low-end kicks.

Pendulum's first major tune, "Vault" used this to some extent, but this element would not come to full fruition in the group's sound possibly until the release of the massively successful "Masochist". The aggressive wobble at the outset of the track is vaguely reminiscent of the other major strain of clownstep, produced by the controversial upstart Twisted Individual. Twisted's variation focuses highly on oblong drones of almost comically over-the-top bass squelches, while diverging from Pendulum's formula by relenting on heavy drum patterns or synth layers. This style is most aptly represented by Twisted's infamous "Bandwagon Blues", a track made in answer to the host of artists allegedly mimicking Twisted's admittedly singular sound (Distorted Minds and Clipz are alleged to be among the targets).

At this point, with the hybridization and co-optation of style that tends to overwhelm the UK JDB scene, many of the biggest names in jungle have produced tunes following or conjuring the aesthetic of either the Twisted Individual or Pendulum variant of clownstep. Scene stalwarts like Simon "Bassline" Smith, DJ SS, and Mampi Swift (all renowned in the past for having their own singular approaches) have all incorporated the pitch-bent heavy wobble and thunderous kicks that typify the bulk of the clownstep idiom. As a result, many jungle aficionados have become dismissive of what is perceived to be a very "commercial" and "generic" turn in the production styles of most of the UK headliners.

To be fair, however, such a gripe is not altogether uncommon in the world of blogs and message boards (especially the fiercely critical and notoriously scathing

DogsOnAcid forums), and it is altogether possible that the clownstep "crisis" lamented by many today is merely a rehash of the "ragga crisis" of a decade ago.

Ultimately, despite the muddiness of the term in many circles, and its persistent pejorative connotation, the sub-genre of clownstep seems to have a sound at least as distinctive and identifiable as that of Drumfunk, Neurofunk, or Hardstep.

Despite this, artists still chafe at the label. While Twisted Individual seems to have cheekily and rather ironically embraced the tag, others remain offended. On a 2003 radio broadcast, one member of Pendulum introduced one of their new tunes, exclaiming: "This isn't fucking clownstep!"

In recent days, Clownstep has come to have an entirely new meaning, one free of shame and misuse. On several select music-community websites, such as ACIDplanet, Clownstep is becoming much of what happy hardcore did to that genre in its time. This definition of Clownstep refers to happy Drum & Bass with the swing feel on the hats and/or other forms of percussion. Though this definition and style are not yet widely in use, it is becoming increasingly popular with fans of electronic music in general, not just those who like D&B. Whether or not this sub-genre can survive commercially is yet another matter entirely.

# Cock rock

**Cock rock** is a term, typically used derogatively, to describe a style of [rock music](#) that became popular in the early-1970s, remained popular throughout the 1980s, and declined in the early-1990s. The term is sometimes interchangeable with either [glam metal](#) or hair metal, and to a lesser degree, [hard rock](#). More specifically, cock rock is the subset of [glam metal](#) that deals with lyrics that often describe sexual encounters, and make frequent use of double entendres. It is so called because most of its progenitors were males writing for a largely male audience (*cock* is a synonym for penis in most dialects of English). Many consider cock rock chauvinistic.

Examples of this style include Guns N' Roses, AC/DC, KISS, Aerosmith, Mötley Crüe, Van Halen, Ratt, Whitesnake, Warrant, Winger, Skid Row, Def Leppard and Poison. It is important to note that many of these bands do have large amounts of female fans. The spoof documentary, *This is Spinal Tap*, is an acclaimed parody of the style. More recently, British band The Darkness have revived this genre.

See also [glam metal](#). See also Coq Roq, a band that revived this style with a series of Burger King commercials in 2005.

**Cock Rock** is also the original name given to a natural obelisk in Oregon, which is part of a state park and is officially known as Rooster Rock.

# Coda

**Coda** (Italian for "tail"; from the Latin *cauda*, see below), in [music](#), is a passage which brings a [movement](#) or a separate piece to a conclusion through prolongation. This developed from the simple [chords](#) of a cadence into an elaborate and independent form. In a series of variations on a theme or in a composition with a fixed order of subjects, the coda is a passage sufficiently contrasted with the conclusions of the separate variations or subjects, added to form a complete conclusion to the whole. Beethoven raised the coda to a feature of the highest importance. What is known in rock and popular music as an **outro** and in jazz and worship music as a **tag** can be considered a coda.

In [music notation](#), the **coda symbol** is used as a navigation marker, similarly to the *dal Segno* sign. It looks like a large O with a + superimposed. It is encountered mainly in transcriptions of popular music, and is used where the exit from a repeated section is within that section rather than at the end. The instruction "To Coda" indicated that the performer is to jump to the separate section headed with the symbol.

Charles Burkhart (2005, p.12) suggests that the reason codas are common, even necessary, is that in the climax of the main body of a piece a "particularly effortful passage", often an expanded phrase, is often created by the "working [of] an idea through to its structural conclusions" and that after all this momentum is created a coda is required to "look back" on the main body, allow listeners to "take it all in", and "create a sense of balance."

## Cauda

**Cauda**, the latin root of coda, is used in the study of [conductus](#) of the 12th and 13th century. The cauda refers to a long melisma on one of the last syllables of the text, repeated in each strophe. Conducti were traditionally divided into two groups, *conductus sin caudae* and *conductus cum caudae* (Latin: conductus with caude, conductus without caude), based on the presence of the melisma. The cauda thus provided a conclusionary role, similar to the modern coda.

## Codetta

**Codetta** (Italian for "little tail," the diminutive form) has a similar purpose to the coda, but on a smaller scale, concluding a section of a work instead of the work as a whole. Typically, a codetta concludes the exposition and [recapitulation](#) sections of a work in [sonata form](#), following the second (modulated) theme, or the closing theme (if there is one). Thus, in the exposition, it usually appears in the secondary key, but in the recapitulation, in the primary key. The codetta ordinary closes with a perfect cadence in the appropriate key, confirming the tonality. If the exposition is repeated, the codetta is also, but sometimes it has its ending slightly changed, depending on whether it leads back to the exposition or into the development sections.

# Comic opera

**Comic opera**, or *light opera*, is a genre of [opera](#) denoting a sung dramatic work of a light or comic nature, usually with a happy ending, and often employing spoken dialogue interspersed with detached musical numbers.

Comic opera, or [opera buffa](#), developed in 18th-century Italy as an alternative to [opera seria](#). It quickly made its way to France, where it became *opéra comique*, or *opéra bouffe*, and finally French [operetta](#), with Jacques Offenbach as its most accomplished practitioner.

Both the Italian and French forms were major artistic exports to other parts of Europe. Many countries developed their own styles of comic opera, incorporating the Italian and French models along with their own musical traditions. Examples include Viennese operetta, German [singspiel](#), Spanish zarzuela, English ballad opera and Savoy Opera.

## Italian comic opera

In 18th-century Italy, light-hearted musical plays began to be offered as an alternative to weightier *opera seria* (17th-century opera based on classical mythology) in Naples around the year 1700. The first comic opera of note was Alessandro Scarlatti's *Il Trionfo dell'onore* (1718). Early comic opera was often in Neapolitan dialect, but became "Italianized" during with the works of Pergolesi (*La Serva Padrona*), Piccinni (*La Cecchina*), Cimarosa (*Il Matrimonio Segreto*), and then to the great comic operas of Mozart and, later, Rossini.

The early comic operas were generally presented as intermezzos between acts of more serious works. Neapolitan and then Italian comic opera grew into an independent form and became the most popular form of staged entertainment in Italy from about 1750 to 1800. In 1749, thirteen years after Pergolesi's death, his *La Serva Padrona* swept Italy and France, evoking the praise of such French Enlightenment luminaries as Rousseau.

In 1760, Niccolò Piccinni wrote the music to *La Cecchina* to a text by the great Venetian playwright, Carlo Goldoni. That text was based on Samuel Richardson's popular English novel, *Pamela or Virtue Rewarded* (1740). Many years later, Verdi called *La Cecchina* the "first true Italian comic opera" – that is to say, it had everything: it was in Italian and not a dialect; it was no longer simply an intermezzo, but rather an independent piece; it had a real story that people liked; it had dramatic variety; and, musically, it had strong melodies and even strong supporting orchestral parts, including a strong "stand-alone" overture (i.e., you could even enjoy the overture as an independent orchestral piece). Verdi was also enthusiastic because the music was by a southern Italian and the text by a northerner, which appealed to Verdi's pan-Italian vision.

## French comic opera

French composers eagerly seized upon the Italian model and made it their own, calling it *opéra comique*. Early proponents included François-Adrien Boïeldieu (1775–1834), Daniel François Auber (1782–1871) and Adolphe Adam (1803–1856). Although originally reserved for less serious works, the term *opéra comique* came to refer to any opera that included spoken dialogue, including works such as Bizet's *Carmen* that are not "comic" in any sense of the word.

Florimond Hervé (1825–1892) is credited as the inventor of French *opéra bouffe*, or *opérette*. [1]. Working on the same model, Jacques Offenbach (1819–1880) quickly surpassed him, writing over ninety [operettas](#). Whereas earlier French comic operas had a mixture of sentiment and humour, Offenbach's works were intended solely to amuse. Though generally well crafted, plots and characters in his works were often interchangeable. Given the frenetic pace at which he worked, Offenbach sometimes used the same material in more than one opera.

## German *singspiel* and Viennese operetta

The [singspiel](#) developed in 18th-century Vienna and spread throughout Austria and Germany. As in the French *opéra comique*, the *singspiel* was an opera with spoken dialogue, and usually a comic subject, such as Mozart's *The Abduction from the Seraglio* (1782). Later singspiels, such as Beethoven's *Fidelio* and Weber's *Der Freischütz*, retained the form, but explored more serious subjects

19th-century Viennese [operetta](#) was built on both the *singspiel* and the French model. Franz von Suppé (1819–1895) is remembered mainly for his overtures. Johann Strauss II (1825–1899), the "waltz king," contributed *Die Fledermaus* and *The Gypsy Baron*; Franz Lehár (1870–1948) wrote *The Merry Widow*; and Oscar Straus (1870–1954) supplied *Ein Walzertraum* (*A Waltz Dream*) and *The Chocolate Soldier*.

## English light opera

England traces its light opera tradition to the ballad opera, typically a comic play that incorporated songs set to popular tunes. John Gay's *The Beggar's Opera* was the earliest and most popular of these. Richard Brinsley Sheridan's *La Duenna* (1775), with a score by Thomas Linley, was expressly described as "A comic opera."

By the 19th century, the London musical stage was dominated by pantomime and burlesque. An 1867 production of Offenbach's *The Grand Duchess of Gerolstein* (seven months after its French première) ignited the English appetite for light operas with more carefully crafted librettos and scores.

In 1875, Richard D'Oyly Carte commissioned W. S. Gilbert and Arthur Sullivan to write a short one-act opera that would serve as an afterpiece to Offenbach's *La Périchole*. The result was *Trial by Jury*; its success launched the Gilbert and Sullivan partnership. "Mr. R. D'Oyly Carte's Opera Bouffe Company" took *Trial* on tour, playing it alongside French works by Offenbach and Lecocq.

Eager to liberate the English stage from French influences, Carte formed a syndicate in 1877 to perform "light opera of a legitimate kind." [3] Gilbert and Sullivan were commissioned to write a new comic opera, *The Sorcerer*, starting the series that came to be known as the Savoy Operas (after the Savoy Theatre, which Carte built for them). The D'Oyly Carte Opera Company continued to perform Gilbert and Sullivan more-or-less continuously until it closed in 1982.

The Gilbert and Sullivan style was widely imitated by their contemporaries, and the creators themselves wrote works in this style with other collaborators. Those other works, however, eventually fell out of favor, leaving the Savoy Operas as practically the sole surviving representatives of the genre.

## American operetta

In America, Victor Herbert (1859–1924) was one of the first to pick up the style that Gilbert and Sullivan had made popular. His earliest pieces, starting with *Prince Ananias* in 1894, were styled "comic operas." Later works were described as "musical extravaganza," "musical comedy," "musical play," "musical farce," and even "opera comique." His two most successful pieces were *Babes in Toyland* (1903) and *Naughty Marietta* (1910)

Others who wrote in a similar style included Reginald de Koven (1859–1920) and the march king, John Philip Sousa (1854–1932). From these beginnings, the American musical comedy developed, with works like *Showboat* that explored more serious subjects, and featured a tighter integration between book and lyrics.

# Commercium song

**Commercium songs** are traditional academic songs that are usually being sung during commerciums and tablerounds.

Some very old commercium songs are in Latin, like Meum est propositum or Gaudeamus igitur.

In some countries, hundreds of commercium songs are compiled in commercium books.

# Common practice period

## Eras of European art music

[Ancient music](#) 1500 BCE - 476 CE

[Early music](#) 476 - 1600

**Common practice period** 1600 - 1900

[20th century classical music](#) 1900 - 2000

In [music](#) the **common practice period** is a long period in western musical history spanning from well before the [classical era](#) (as identified in much modern history of music), dated, on the outside, as 1600-1900. It is most often contrasted with contemporary music. Most common practice music shares many traits, and is tonal as opposed to [modal](#) or atonal. It includes most of so-called "classical" and [popular music](#). Despite the emergence of many [new styles](#) and [techniques](#) common practice music may still be the dominant European-influenced music.

Walter Piston, among others, uses the term in his book *Harmony* (ISBN 0393954803) to refer to the bulk of the material with which he dealt.

[Rhythmically](#), common practice music metric structures generally include:

1. Clearly enunciated or implied pulse at all levels, with the fastest levels rarely being extreme.
2. [Meters](#), or pulse groups, in two-pulse or three-pulse groups, most often two.
3. Once established the meter and pulse groups rarely change throughout a [section](#) or [composition](#).
4. Synchronous pulse groups on all levels: all pulses on slower levels coincide with strong pulses on faster levels.
5. Consistent tempo throughout a composition or section.
6. Tempo, beat length, and measure length chosen to allow one time signature throughout piece.

(DeLone et al. (Eds.), 1975, chap. 3)

Durational patterns typically include:

1. Small or moderate duration complement and range, with one duration (or pulse) predominating the duration hierarchy, being heard as the basic unit throughout a composition. Exceptions are most frequently extremely long, such as pedal tones, or if short generally occurring as the rapidly alternating or transient components of trills, tremolos, or other [ornaments](#).
2. Rhythmic units based on [metric](#) or intrametric patterns, though specific contrametric or extrametric patterns are signatures of certain styles or composers. Triplets and other extrametric patterns are usually heard on levels higher than the basic durational unit or pulse.
3. Rhythmic gestures of a limited number of rhythmic units, sometimes based on a single or alternating pair.
4. Thetic, anacrusic, and initial rest rhythmic gestures are used, with anacrusic beginnings and strong endings possibly most frequent and upbeat endings most rare.
5. Rhythmic gestures repeated exactly or in variation after contrasting gestures. There may be one rhythmic gesture almost exclusively throughout an entire

composition; but complete avoidance of repetition is rare.

6. Composite rhythms which confirm the meter, often in metric or even note patterns identical to the pulse on specific metric level.

(DeLone et al. (Eds.), 1975, chap. 3)

Patterns of [pitch](#) and [duration](#) are of primary importance in common practice [melody](#), while quality is of secondary importance. Durations recur and are often periodic; pitches are generally diatonic. (DeLone et al. (Eds.), 1975, chap. 4)

Many people have proposed that a "new" common practice period is now discernible in 20th century classical music. George Perle (1990) has labeled this "Tradition in 20th Century Music", the most significant of which he considers the "shared premise of the harmonic equivalence of inversionally symmetrical pitch-class relations," among composers such as Edgard Varèse, Alban Berg, Béla Bartók, Arnold Schoenberg, Alexander Scriabin, Igor Stravinsky, Anton Webern, and himself. John Harbison refers to symmetry as the "'new tonality'."

## Community band

A **community band** is a [concert band](#) ensemble, generally sponsored by the town or city in which it is located and consisting of amateur performers. Bowen defines a community band as "a community-based ensemble of wind and percussion players, comprised primarily of adults who do not receive the majority of their livelihood from participation in the ensemble, which regularly holds rehearsals and performs at least one time per year". Some bands are also [marching bands](#), participating in parades or other outdoor events. Community bands are also referred to as 'town', 'citizen' or 'civic' bands. Other names include 'wind orchestra', 'wind symphony' and 'wind ensemble'. The name is usually preceded by the name of the community or organization that sponsors the band, the town or county where they are based, or preceded by the name of a local geographical landmark or regional term. Sometimes the name just contains a place name followed by the word 'band'.

## Community bands in the United States

In the United States, community band concerts are most frequently given during holidays and patriotic events, such as the Fourth of July, Memorial Day, Father's Day, and the lighting of community Christmas trees. During the summer, most community band concerts are given outdoors. The size of a community band varies from tens of musicians to over one hundred. During the United States Bicentennial, having a community band was one of the criteria for being designated a Bicentennial City. There are about 2,500 community bands across the United States.

The modern American community band is rooted in European tradition. Immigrants, like the German Moravians who settled in Pennsylvania and North Carolina, brought the band tradition with them to the United States. The Moravians organized bands in towns where they settled, and they offered both secular and religious music selections. The Moravian bands are still playing in Moravian communities, such as in Winston-Salem, North Carolina.

Community bands in the United States often emerged from militia or [military bands](#). The earliest amateur bands in the United States did occasionally include [woodwind](#) instruments but band and band music emphasized primarily the [brass instruments](#). The popularity of early community bands can be attributed to the participation of thousands of ordinary citizens in these ensembles and the patriotic appeal of the music and performance.

The Allentown Band (Allentown, Pennsylvania) is reported to be the oldest civilian concert band in the United States. The roots of this band have been traced back to a military band. The Allentown Band has played a continuously active role in the musical life and cultural fabric of the community since its first documented performance on July 4, 1828. While it is clear that the band has been in continuous existence since 1828, there is good evidence to indicate that the inception of the band occurred before that time. An early newspaper, "The Republican," published a story that the "Allentown Military Band" performed as a fife and drum corps as early as 1822. In the same article, the band is referred to as the "Northampton Military Band." Confusion is further prevalent because both the band and the town were referred to by different names throughout the early nineteenth century. Prior to 1838, the community now known as Allentown was officially Northampton.

While Allentown's band is the top example of a band that has survived with professional players in its ranks, there are also many community bands staffed entirely by volunteer musicians. One such example is the Franklin Silver Cornet Band of Franklin, Pennsylvania. Founded in 1856, the band is one of several surviving from that era. In a city of just 8,000 people, the band continues to present summer concerts in the park, performed by a group containing everything from students to retirees. A handful of bands have retained terms such as 'cornet', 'brass', 'village' and 'city' which were common in the naming of such bands in the 19th century.

Popularity of the bands of Patrick Gilmore, Patrick Conway, and John Philip Sousa in the late 1800s and early 1900s led to an increase in the number of community bands. There is one estimate that there were 10,000 bands in the United States in 1889. Of those, close to 100 are still active. Wartime patriotism, such as the War of 1812, the Civil War, World War I and II, and even the recent war with Iraq have added to the popularity of community bands.

Community bands experienced a great dying out after the end of World War I, victims of the automobile, new mass media, and a large cultural shift. This actually led

to a rise in school music programs-- the death of community bands left instrument manufacturers without a market for their product, so they marketed heavily to schools.

The increased number of musicians that learned to play an instrument in high school or college bands but did not pursue music as a career has also provided a rich pool of amateur talent seeking an outlet for their musical abilities. An increased availability of music written for concert band has also benefitted the community band after World War II to the present. The Chatfield Brass Band in Chatfield, Minnesota maintains a free lending library of concert band music that is used by community bands in the United States and around the world.

# Compilation album

A **compilation album** is a musical [album](#) featuring songs or tunes with some common characteristics. They may all be by the same artist, or by several (often credited to "Various Artists"). Some common types of compilation are

- **Single-artist "best of", "singles collection" or "greatest hits"** LPs, gathering together an artist's best-known songs. These often outsell an artist's regular albums. If the artist or group is still recording, it is common practice to include one or more previously unreleased tracks as an incentive for fans of the artist to buy the album, even if they already have the other material on the compilation. See [Greatest hits](#) article for more details.
- **Other single-artist compilations**, such as rarities or [B-side](#) collections, or albums compiled from radio sessions. These are generally aimed at existing fans of the artist and have little mainstream appeal.
- **Various artist themed compilations**, e.g. love songs, Christmas songs, songs featuring a particular instrument (such as [saxophone](#) or [piano](#)), and countless other variations.
- **Various artist genre compilations**, e.g. [jazz](#), [synthpop](#), [rock](#), etc. These may be from the same time period (Year, decade or era, for example), or may incorporate a common theme. An example is a [soundtrack](#).
- **Various artist hit compilations**. This has been a very successful part of the album market since the early 1970s. Recent hit [singles](#) are gathered together in one place. In the 1970s, these were often single vinyl LPs with ten tracks on each side, and correspondingly low sound quality. In the 1980s, a double album with 7 or 8 tracks on each side became the norm. Now that CDs are the dominant format, these compilations are usually released on one, two, or three CDs with a running time of over 70 minutes each.

## Famous compilation series (UK)

The Best Album in the World... Ever! (Virgin Records, 1993-present)-  
genre & themed (e.g. The Best Christmas...)

music)  
Defected In The House (Defected Records, 2003-present) - genre (dance  
music)

# Composer

A **composer** is a person who writes [music](#). The term refers particularly to someone who writes music in some type of [musical notation](#), thus allowing others to perform the music. This distinguishes the composer from a [musician](#) who [improvises](#). However, a person may be called a composer without creating music in documentary form, since not all [musical genres](#) rely on written notation. In this context, the composer is the originator of the music, and usually its first performer. Later performers then repeat the [musical composition](#) they have heard.

The level of distinction between composers and other musicians also varies, which affects issues such as copyright and the deference given to individual interpretations of a particular piece of music. For example, in the development of [classical music](#) in Europe, the function of composing music initially had no greater importance than the function of performing music. The preservation of individual compositions received little attention, and musicians generally had no qualms about modifying compositions for performance. Over time, however, the written notation of the composer has come to be treated as strict instructions, from which performers should not deviate without good reason. This notion is often seen as a purist one.

The term "composer" is often used specifically to mean a composer in the Western tradition of classical music. In [popular](#) and [folk](#) music, the composer is typically called a [songwriter](#) (since the music generally takes the form of a [song](#).)

Categories: [Classical music](#)

## Compositions by instrument

[Piano sonata](#)

[Piano trio](#)

# Computer music

**Computer music** is [music](#) generated or composed with the aid of computers. It also refers to a field of study that examines both the theory and application of new and existing technologies in the areas of music, sound design and diffusion, acoustics, sound synthesis, digital signal processing, and psychoacoustics. The field of computer music can trace its roots back to the origin of [electronic music](#), and the very first experiments and innovations with electronic instruments at the turn of the 20th century.

Much of the work on computer music has drawn on the relationship between [music theory](#) and mathematics. The world's first computer music was generated in Australia by programmer Geoff Hill on the CSIRAC computer which was designed and built by Trevor Pearcey and Maston Beard. Subsequently, Lejaren Hiller (e.g., the Illiac Suite) used a computer in the 1950s to compose works that were then played by conventional musicians. Later developments included the work of Max Mathews at Bell Laboratories, who developed the influential MUSIC I program. Vocoder technology was also a major development in this early era. More recently, MIDI technology has allowed personal computers to interact with synthesizers through a standardized interface, which has widened the use of computer technology.

Throughout the world there are many organizations and institutions dedicated to the area of computer and electronic music study and research, including the ICMC (International Computer Music Association), IRCAM, SEAMUS (Society for Electro Acoustic Music in the United States), and a great number of institutions of higher learning around the world.

Categories: [Musical techniques](#)

# Concept album

In [popular music](#), a **concept album** is an [album](#) which is "unified by a theme, which can be instrumental, compositional, narrative, or lyrical" (Shuker 2002, p.5). They are most often pre-planned (conceived) and with all songs contributing to a single overall theme or unified story, this plan or story being the concept. This is in contrast to the standard practice of an artist or group releasing an album consisting of a number of unconnected songs that the members of the group or the artist have written, or have been chosen to perform or cover. Given that the suggestion of something as vague as an overall mood often tags a work as being a concept album, a precise definition of the term proves highly problematic.

In the meaning attributed to the words "concept album" in the contemporary rock era (from 1966 onwards - the point at which critics started to differentiate between "pop music" and "rock music" as a more serious form) - there were broadly speaking two genres of concept album: those that were essentially thematically-linked song cycles such as The Beatles' Sgt. Pepper's Lonely Hearts Club Band which did not claim a storyline, and those that presented a narrative story that threaded the songs - such as The Who's Tommy. Music critics of that era did not usually distinguish between the two genres of concept album. An album that met either criterion was commonly referred to as a concept album. However, the distinction between the two types of concept album is instructive to note in respect of claims that are made as to which album may have been the "first" concept album in the rock era. Given this legitimate distinction - there are probably several contenders in each genre.

## Early examples

What could very loosely be considered the first concept albums were released in the late 1930s by singer Lee Wiley on the Liberty Records label, featuring eight songs on four 78s by great showtunes composers of the day, such as Harold Arlen and Cole Porter, anticipating more comprehensive efforts by Verve Records impresario Norman Granz with Ella Fitzgerald by almost two decades. In [folk music](#), Woody Guthrie's 1940 debut album *Dust Bowl Ballads* is also an early possibility. In 1973 country and pop music icon Bobby Bare recorded "Lullabys, Legends and Lies" which was written by Shel Silverstein. The record was arguably the first Concept Album for country music.

Frank Sinatra, both with early albums originally released as 78s for Columbia Records such as *The Voice of Frank Sinatra* from 1945, and continuing through his thematically programmed albums of the 1950s for Capitol Records starting with the ten-inch 33s *Songs for Young Lovers* and *Swing Easy*, is generally credited with both popularizing and developing the concept album, and it was at this time that the specific term was first used. Perhaps the first full Sinatra concept album example is *In the Wee Small Hours* from 1955, where the songs – all ballads – were specifically recorded for the album, and organized around a central mood of late-night isolation and aching lost love, and the album cover strikingly reinforced that theme.

However, notion of a concept album did not really gel at that point, and was not widely imitated, aside from occasional examples such as [country](#) singer Marty Robbins' *Gunfighter Ballads and Trail Songs* from 1959, or, as the first example from rock, *Little Deuce Coupe* from 1963 by The Beach Boys, each of whose 12 songs were about America's car culture.

## 60s rock

In 1966, several rock releases were arguably concept albums in the sense that they presented a set of thematically-linked songs - and they also instigated other rock artists to consider using the album format in a similar fashion: *Pet Sounds*, again by the Beach Boys, a masterful musical portrayal of Brian Wilson's would-be state of mind (and a huge inspiration to Paul McCartney); the Mothers of Invention's sardonic farce about rock music and America as a whole, *Freak Out!*; and *Face to Face* by The Kinks, the first collection of Ray Davies's idiosyncratic character studies of ordinary people. However, none of these attracted a wide commercial audience.

This all changed with The Beatles' celebrated 1967 album *Sgt. Pepper's Lonely Hearts Club Band*. With this release in June of 1967, the notion of the concept album came to the forefront of the popular and critical mind, with the earlier prototypes and examples from classic pop and other genres sometimes forgotten. The phrase entered the popular lexicon. And a "concept album" - the term became imbued with the notion of artistic purpose - was inherently considered to be somehow more creative or worthy of attention than a mere collection of new songs. This perception of course related to the **intent** of the artist rather than the specific content.

In fact, as pointed out by many critics since its original reception, *Sgt. Pepper* is a concept album only by some definitions of the term. There was, at some stage during the making of the album an attempt to relate the material to an obscure radio play about the life of an ex-army bandsman and his shortcomings but this concept was lost in the final production. On it, the Beatles supposedly adopt fictionalized personae, and the title song, styled as the theme song of the fictional "Lonely Hearts Club Band", wraps around the rest of the album like bookends. However, most of the songs on the album are narratively unrelated to the theme, and the fictional characters have little life beyond the introduction of Ringo Starr as "Billy Shears" in the segue between the first two tracks. On the other hand, the slice-of-life character miniatures and short story structure of many of the songs, especially those penned primarily by Paul McCartney, echo elements commonly found in other thematic works such as [musicals](#) and [opera](#). This feeling was reinforced by the album's device use of running musical tracks one after the other (without a pause) or linked with transitions rather than the customary silent space between tracks. Even more striking was the album's opulent cover, packaged inserts, and full lyrics printed on the back, all of which suggested a unified work more than just a collection of songs. In any case, while debate exists over the extent to which *Sgt. Pepper* qualifies as a true concept album, there is no doubt that its reputation as such helped inspire other artists to produce concept albums of their own, and inspired the public to anticipate them. The Beatles themselves were very proud of *Sgt. Pepper* for its artistic achievements but both Lennon and McCartney distanced themselves from the "concept album" tag as applied to that album.

In the wake of the *Sgt. Pepper* triumph, concept albums became the rage among serious rock artists, with mixed results. The Rolling Stones attempted to duplicate *Sgt. Pepper* with more explicitly drug and occult-inspired overtones with *Their Satanic Majesties Request*, but it proved to be a commercial and artistic failure, one that the Stones quickly learned from and moved on. The album made no attempt to fashion a concept around the disparate songs on the album. The unifying nature of the album (such as it was) came primarily from the musical atmosphere and the subject matter

of the lyrics. And the psychedelic cover art. The Stones themselves never identified the album as a concept album.

The album *S.F. Sorrow* (released in December 1968) by British group The Pretty Things is generally considered to be among the first creatively successful rock concept albums - in that each song is part of an overarching unified concept -- the life story of the main character, Sebastian Sorrow. Despite its effective production qualities and strong material, and although it received almost unanimously glowing reviews on release, the album was not a major commercial success. However, the fact that the album format had now been effectively used to present a threaded storyline was noted by other artists such as Pete Townshend of The Who and Ray Davies of The Kinks - both of whom were already working on their own projects in this genre. In this respect, the Pretty Things album did have an impact on some influential artists and on rock culture itself. Prior to this release - the band had been considered an R&B ([rhythm and blues](#)) band - but their venture into producing a concept album did at least result in the band being re-cast in general perception as a [progressive rock](#) band - an important and valuable transition at that time.

Released just five months later in April 1969, was the "rock opera" *Tommy* composed by Pete Townshend and performed by The Who. This acclaimed work was presented over two discs (still unusual in those days) and it took the idea of thematically based albums to a much higher appreciation by both critics and the public. It was also the first story-based concept album of the rock era (as distinct from the song-cycle style album) to enjoy commercial success. The Who went on to further explorations of the concept album format with their follow-up project *Lifehouse* - which was abandoned before completion and with their 1973 rock opera *Quadrophenia*.

Five months after the release of *Tommy* The Kinks released their own rock opera *Arthur (Or the Decline and Fall of the British Empire)* (September 1969) written by Ray Davies - the first of several concept albums released by the band through the first few years of the 1970s. These were: *Lola versus Powerman and the Moneygoround, Part One* (1970), *Preservation Act 1* (1973), *Preservation Act 2* (1974), *Soap Opera* (1975) and *Schoolboys in Disgrace* (1976)

Two albums released in the autumn of 1967 were also concept albums - though they did not get the same media attention later accorded to The Who's *Tommy*.

*Days of Future Passed* (1967) by the Moody Blues, alternated songs by the group with orchestral interludes to document a typical "everyman's day". Though music critics did not accord the album or the band the same respect given to bands deemed to have more street credibility such as The Who and The Kinks - the album was very successful commercially.

*The Story of Simon Simopath* by Nirvana produced by Island Records' founder Chris Blackwell was issued in October 1967 in a "gatefold cover" (most unusual packaging for a debut album) which presented a text giving the storyline of the album - described as a "science fiction pantomime". The album attracted positive critical attention but did not enjoy big sales in the UK.

## 70s prog

Concept albums are especially common in the [progressive rock](#) genre of the 1970s, although rarely did that equal a lasting commercial or critical legacy for the band or artist involved. Most notably, Pink Floyd recast itself from its 1960s guise as a quirky, intermittently successful psychedelic band into a cash-generating monster with its classic series of concept albums, beginning with *Dark Side of the Moon* from 1973. Ian Anderson of Jethro Tull wrote a number of successful concept albums, notably "Thick as a Brick" which was long song around 43 minutes in length and which included material intended to "spoon" the concept album genre. But in the mid to late 1970's, concept albums grew to be plagued by the suffocating nature of ever more pretentious, self-conscious themes. These themes tended to drive the songwriters, and the quality of the individual songs suffered. A prime example of this was Styx' overblown and unintentionally humorous 1983 album *Kilroy Was Here*, a late and poorly received entry into the genre that effectively marked the end of the 1970's-style theatrical rock operas. (although Queensrÿche's *Operation: Mindcrime* (released May 3rd, 1988) was able to find critical and commercial success.)

## **Musicals in Concept**

Many musicals make their first appearance as a concept album, because of the lowered cost of recording an album over mounting an entire stage production. Notable examples of this are *Evita*, *Jesus Christ Superstar* (Tim Rice and Andrew Lloyd Webber) and *Chess* (Rice and Björn Ulvaeus and Benny Andersson). Albums recorded in this form are used to prove profitability - both to attract investors and to raise capital through album sales. This also allows the composer to tweak the final musical production, such as when the sympathetic portrayal of Eva Peron in *Evita* was changed as a result of public reactions in 1977.

## Later examples

Within the [progressive metal](#) genre, Dream Theater ended the 20th Century with *Metropolis Part 2: Scenes from a Memory* in 1999. This concept album was a sequel to their original song from their 1992 album *Images and Words*, about a present day man's nightmares of his death in his previous life in 1928. Again, in 2005, Dream Theater released *Octavarium*, however this album's concept is based around a musical octave. Another band known for their concept albums in this genre is Pain Of Salvation, who recently released their sixth studio-album *BE*.

In the intervening decades, concept albums have often been out of vogue, but Radiohead duplicated that kind of acceptance both from the critics and in the marketplace with *OK Computer* from 1997, and the related *Kid A* and *Amnesiac* albums of 2000 and 2001. The Mars Volta have created two highly complex concept albums. The first of which, *De-Loused in the Comatorium*, chronicles the morphine-induced coma of the character Cerpin Taxt. The *Streets* album, "A Grand Don't Come for Free," is a concept album as well. It chronicles a portion of the life of Mike Skinner as he loses £1,000 and finds love. In 2004, the punk rock band Green Day released the concept album *American Idiot* to rave reviews and commercial success; the album features through the songs the story of an outcast young man that leaves his hometown and goes to the city while dealing with emotional problems.

Since the 1980s, concept albums have been frequent in the [power metal](#) and [epic metal](#) genres. One of the most notable power metal bands to use the concept album is Kamelot. Kamelot's last two releases, *Epica* and *The Black Halo*, are two parts of a tale following the protagonist Ariel and his interactions with the many different forms and experiences with the evil Mephisto. The two album story is based on Goethe's *Faust*.

Except for George Clinton's P-Funk albums from the 1970's, the first recent [R&B](#) concept album is *TP.3 Reloaded*, by R. Kelly released in 2005, which features 5 chapters of the "Trapped... in the Closet" soap opera. The album received a great deal of press for being ground breaking in the R&B genre. Kelly subsequently released a *Trapped... in the Closet* DVD of music videos containing chapters 1-12, completing the rambling tale of unfaithful lovers.

An example for a [Techno](#) concept album is *Metropolis* by Jeff Mills (2001), yet another alternative score for the movie of the same name.

## Similar plans

An emerging subset is the [historical album](#), which is more closely tied with specific historically accurate references to persons or places.

An ambitious extension of the concept album idea could be realized in a series of albums which all contribute to a single effect or unified story. Contemporary examples include Coheed and Cambria's in-progress tetralogy of records and mind.in.a.box's Lost Alone and Dreamweb albums which describe an on-going sci-fi themed story in a Matrix-like universe. Brave Saint Saturn has planned a trilogy to tell the story of mankind's first mission to the planet Saturn. Arguably the most ambitious of these is Sufjan Stevens' Fifty-States project, in which he plans to write a series of albums encompassing the concept of the entire United States of America, one for each state, totalling fifty records.

The concept album genre overlaps with rock opera, of which the most famous early example is The Who's aforementioned Tommy (1969). Like Sgt. Pepper, Tommy greatly boosted the visibility of the concept album idea, and the genre also overlaps to a lesser extent with rock musical, of which the most famous early example is Hair (1967).

This style of album has made its way into the rap genre, namely Cage Kennylz & Camu Tao's 2001 release of Are The Nighthawks (album) and Cage Kennylz & Tame One's 2004 release of Waterworld (album). The Nighthawk's album was a trip into the darkside of being a cop, while Waterworld was a blast of PCP induced rhymes, being referred to as a drug related themepark. Rapper Nas had also planned for his third release in 1998 to be a double-album entitled I Am... that would detail the birth, death, and resurrection of a Jesus-like character known as Nastradamus, but heavy bootlegging forced him to change plans and release two separate albums with many new songs, abandoning the concept he had earlier. Many of the songs that did not appear on either album were subsequently released on 2002's The Lost Tapes.

# Concept rap

The first **concept raps** were [rapped](#) verses which told a story, as opposed to being used as a form of a battle rap, bragging, or nonsense. Such verses have been popular in [hip hop music](#) since the early days of hip hop culture, and several verses of the 1979 recording by The Sugarhill Gang, "Rapper's Delight" are concept raps.

When a concept rap becomes adopted and popularized by the majority of rappers, it is no longer a concept rap. Telling a story was an original concept rap in the early days of [old school hip hop](#). However, since most rappers have now adopted this motif in their lyrics, it is no longer considered a concept rap when a rapper raps out a story in his or her lyrics. New concepts are constantly emerging in the lyrics of rap. Some are adopted, and other are not.

# Concert

A **concert** is a live performance, usually of [music](#), before an audience. The music may be performed by a single [musician](#), sometimes then called a recital, or by a [musical ensemble](#), such as an [orchestra](#), a [choir](#), or a [musical band](#). More informal names for a concert include "show" and "gig". Concerts are held in a wide variety of settings or venues, including pubs, [nightclubs](#), [houses](#), barns, dedicated concert halls, large multipurpose buildings, and even sports stadiums. A concert held in a very large venue is sometimes called an **arena concert**. Regardless of the venue, musicians usually perform on a stage. Before the dominance of recorded music, concerts would be the only opportunity one would generally have to hear musicians play.

There is normally a charge to attend a concert, though many are free. Proceeds benefit the musical group, the owners of the venue, and others involved in putting on the concert, or in some cases to [benefit](#) a cause or charity.

A **concert tour** is a series of concerts by a musician, musical group, or some number of either in different cities or locations.

While the principal reason for a concert is the opportunity for the musicians to perform in front of an audience, even the most purely artistic of endeavors will see gains. Concerts provide the musicians exposure to the public. An attendee will probably see the musicians perform again if the concert was worthwhile. Recording artists usually go on tours to promote record sales and introduce their fans to new [musical compositions](#). Some musicians and musical groups are known for consistently touring and performing live, others rarely so.

The nature of a concert will vary by [musical genre](#) and individual groups in those genres. Concerts by a small [jazz](#) combo and a small [bluegrass](#) band may have the same order of program, mood, and volume, but vary in music and dress.

Musical groups with large expected audiences can put on very elaborate and expensive affairs. In order to create a memorable and exciting atmosphere and increase the spectacle, the musicians will frequently include additional entertainment devices within their concerts. These tend to include changeable stage lighting effects and various special effect visuals, which include anything from large video screens, inflatables, smoke or dry ice, pyrotechnics, artwork, pre-recorded video, and unusual attire. Some [singers](#), especially in genres of popular music, augment the sound of their concerts with pre-recorded [accompaniment](#) and even broadcast vocal tracks of the singer's own voice. Activities which may take place during large-scale concerts including dancing, sing-alongs, [moshing](#) or head-banging, and crowd-surfing.

Larger concerts involving a greater number of musical groups, especially those that last for multiple days, are known as festivals. Examples include the Woodstock Music and Art Festival, Bonnaroo, the Newport Jazz Festival, Cambridge Folk Festival and Glastonbury\_Festival.

# Concert band

A **wind band**, also called **concert band**, **symphonic band**, **symphonic winds**, **wind orchestra**, **wind symphony**, or **wind ensemble**, is a performing ensemble consisting of several members of the [woodwind](#) instrument family, [brass instrument](#) family and [percussion instrument](#) family. Its various repertoire include original wind compositions, arranged classical items, light music, and popular tunes. Though the instrumentation is similar, it is distinguished from the [marching band](#) in that its primary function is as a concert ensemble. The repertoire for a concert band may, however, contain marches.

## Terminology

The group known generically as a mixed wind band can go by a variety of names: wind band, wind symphony, wind ensemble, chamber winds, symphonic band, symphonic winds, wind orchestra, concert band.

There is little standardization in the usage of these names, save that wind ensembles and chamber winds nearly always refer to an ensemble with one player per part (around 45 players), while a symphonic band or wind symphony will often be on the larger end of the spectrum.

# History

The earliest days of the mixed wind band date back to the 13th century, with ensembles of shawms, [trumpets](#), and [drums](#) forming in Europe; a century or two later the [trombone](#) was added, making it the ensemble of choice for dances and festive occasions.

With the development of [string instruments](#) in the 16th century, the ensemble began to fall out of favor, being replaced by what would become the modern [orchestra](#). However, stringed instruments were unsuitable for outdoor use, and so the wind band was kept alive by its use as a military ensemble. Military bands were largely responsible for adopting new instruments as they were developed and augmenting or replacing the previous instrumentations; these new instruments and practices would spread through international contact.

Royal army bands by the 18th century would consist of varying collections of winds: four each of oboes, clarinets, horns, and bassoons in Switzerland, while Frederick the Great declared that Prussian bands should have only two of each. The English sound would be dominated by trumpet and kettledrums, though they soon imported the oboe and horn as well.

Contact with the music of the Turkish Janissaries would further spur the expansion of the Western wind band. The splendor and dramatic effect of their percussion would give rise to the adoption of bass drum, [cymbals](#), and triangle, as well as [piccolo](#) to cut through the noise of the percussion. But this increase in percussion needed an increase in winds to go along with it: more clarinets were added, more brass developed. By 1810 the wind band had reached its current size, though the instrumentation differed.

In the 18th century, these military ensembles were doing double-duty as entertainment at the royal courts, either alone or combined with orchestral strings. Composers such as Mozart were writing [chamber music](#) for these groups, called *Harmonie* bands, which evolved to a standard instrumentation of two oboes, two clarinets, two horns, and two bassoons. In addition to original compositions, these groups also played transcriptions of [opera](#) music. Most of these groups dissolved by the end of the century.

During the 19th century large ensembles of wind and percussion instruments in the English and American traditions existed mainly in the form of the [Military band](#) for ceremonial and festive occasions, and the works performed consisted mostly of marches. The only time wind bands were used in a concert setting comparable to that of a [symphony orchestra](#) was when transcriptions of orchestral or operatic pieces were arranged and performed, as there was no substantial precedent for composers to write concert music for winds. The first notable and influential symphonic work for band was Gustav Holst's First Suite in E Flat, written in 1909. To this day the piece is considered the classic work of symphonic band, and beginning with Holst a variety of British, American, and Australian composers wrote for the medium, including notably Percy Grainger and Ralph Vaughan-Williams.

The works of the British band masters, in conjunction with the aspirations of college band directors, lead to the belief that the wind band could compete with the symphony orchestra as a vehicle of artistic expression at the highest level. This led to the formation of the College Band Directors' National Association, and spawned the commissioning of works from a wide variety of composers.

## Wind ensemble

The modern wind ensemble was established by Frederick Fennell at Eastman School of Music as the Eastman Wind Ensemble in 1952 after the model of the [orchestra](#): a pool of players from which a composer can select in order to create different sonorities. The wind ensemble is generally modeled on the wind section of a "Wagner" orchestra. While many people consider the wind ensemble to be one player on a part, this is only practical in true chamber music. Full band pieces usually require doubling or tripling of the clarinet parts, and six trumpeters is typical in a wind ensemble. According to Fennell, the wind ensemble was not revolutionary, but developed naturally out of the music that led him to the concept. However, the concept was in stark contrast to the large symphony bands of the time, particularly the 100 member band of the University of Michigan, conducted by William Revelli.

H. Robert Reynolds and others of his school of thought extended the Eastman model for wind ensembles, declaring that the wind ensemble should play only original wind ensemble works -- no transcriptions, and no band pieces such as the Sousa marches or concert music intended for larger symphonic winds. This music should be of a serious and worthwhile nature, or the highest quality. Time and practicality have moderated this position, and today even Reynolds has produced quality arrangements for the modern wind band.

The driving force behind the improved quality of the repertoire was the quest for artistic legitimacy desired by college band directors. This quest continues today, stronger than ever.

## Performing groups

While the wind band is not yet as established a performing group as the symphony [orchestra](#), there are many ensembles currently performing.

## Military bands

There is a long history of the [Military band](#) in the United States and other countries. Some of the most highly-regarded [Military bands](#) performing today are the principal U.S. Service bands that are headquartered mainly in the Washington, D.C area. They include:

- The premier U.S. Marine Band, which is the oldest of the Service bands, known as "The President's Own" (founded in 1798, Marine Barracks 8th & I, Washington, D.C.)

- The United States Army Band (founded in 1922, Fort Myer, VA)

- The United States Navy Band (founded in 1925, Washington Navy Yard, Washington, D.C.)

- The Coast Guard Band (founded in 1925, New London, Connecticut)

- The United States Air Force Band (founded in 1941, Bolling Air Force Base, Washington, D.C.)

### Other U.S. Military Bands

- The United States Army Field Band (founded in 1946, Fort Meade, MD)

- USAF Heritage of America Band (founded in 1941 as the Army Air Corps Band, Langley Air Force Base, VA)

- U.S. Military Academy Band (founded 1817, West Point, NY)

- Naval Academy Band (founded in 1845, Annapolis, MD)

- Air Force Academy Band (inception in 1942 as the "Flying Yanks", reactivated for the United States Air Force Academy in 1955, Colorado Springs, CO)

## Collegiate bands

Nearly every college or university with a music program has a performing wind band; most give concerts that are open to the general public as well as the university community, and often tour other locations as well as perform at conferences. Some of the foremost collegiate band directors in the United States today include:

- Eugene Corporon (University of North Texas)

- Gary Green (University of Miami)

- Michael Haithcock (University of Michigan)

- Gary Hill (Arizona State University)

- Jerry Junkin (University of Texas-Austin), also conducts the Dallas Wind Symphony

- James F. Keene (University of Illinois)

- Craig Kirchoff (University of Minnesota)

- Timothy Mahr (St. Olaf College)

Anthony Maiello (George Mason University)  
Allan McMurray (University of Colorado)  
Mark Scatterday (Eastman School of Music)  
Jack Stamp (Indiana University of Pennsylvania)  
Mallory Thompson (Northwestern University)  
John Whitwell (Michigan State University)  
Frank B. Wickes (Louisiana State University)  
Michael Votta, Jr. (University of North Carolina at Chapel Hill)  
John Randal Guptill, Jr. (Duke University)

Some famous recently retired band directors include:

Frank Battisti (New England Conservatory)  
Frederick Fennell (deceased) (Eastman School of Music and the Tokyo Kosei Wind Orchestra)  
Donald Hunsberger (Eastman School of Music)  
H. Robert Reynolds (University of Michigan)  
Ray Cramer (Indiana University)  
Joseph Scagnoli (Ball State University)

These collegiate ensembles often play at a professional or near-professional standard, and the availability of these highly skilled groups and their openness to new music is attractive to composers. Over the last forty years, many of today's leading composers have written major new works for wind ensemble, including Samuel Adler, Leslie Bassett, William Bolcom, Michael Colgrass, John Corigliano, David del Tredici, Karel Husa, Gunther Schuller, Joseph Schwantner, and Frank Zappa, to name but a few. The Klavier Wind Recording Project, begun by Eugene Corporon in 1989 while he was director of bands at the Cincinnati College-Conservatory of Music, has been invaluable in providing extremely high-quality recordings of many of the most important pieces in the wind band literature, as well as the most contemporary.

## Professional bands

Professional concert bands not associated with the military are few and far between. Among the few ensembles in this category that exist today are the Dallas Wind Symphony [1], led by Jerry Junkin, and the Tokyo Kosei Wind Orchestra [2], led for many years by Frederick Fennell. Others include the Keystone Winds, conducted by Dr. Jack Stamp, the Tara Winds, conducted by Dr. David Gregory and the Knoxville Wind Symphony, conducted by Dr. Marshall Forrester.

## Community bands

Most adult bands outside of colleges and military institutions are [community bands](#). A community band is a concert band ensemble, generally sponsored by the town or city in which it is located and consisting of amateur performers. A community band is a community-based ensemble of wind and percussion players, comprised primarily of adults who do not receive the majority of their livelihood from participation in the ensemble, which regularly holds rehearsals and performs at least one to three times per year.

## School Bands

School bands vary in size and instrumentation, depending on the number of students that are in the band, and the versatility and virtuosity of the players. Some school bands follow a set educational program which dictates particular styles of pieces that are standard to the music curriculum. Such curricula usually include a concert overture, a march, and a miscellaneous band piece, often one in the pop music genre. The director may also slightly bypass the curriculum, choosing the music of whatever he pleases, especially if the band is small.

Most school bands start at the 5th or 6th grade, and they go up to upper high school. The high school band resembles a community band in ability and repertoire, with considerations for the increased rehearsal time available to high school students.

Almost every public school district has a band, and some schools have a school orchestra as well. Some private and public schools have both, especially if the district is very large.

## Modern instrumentation

Instrumentation for the wind band is not standardized; composers will frequently add and/or omit parts. Indented entries are frequently-used doublings for each instrument family; instruments in parentheses are less common but still often used.

- [Flutes](#) 1,2,(3)
  - [Piccolo](#)
  - (Alto Flute, Bass Flute)
- [Oboes](#) 1,2
  - English Horn
- [Bassoons](#) 1,2
  - (Contrabassoon)
- [Clarinets](#) 1,2,3 in B flat
  - E flat Clarinet, Bass Clarinet
  - (Alto Clarinet, Contra-Alto Clarinet, Contrabass Clarinet)
- [Saxophone](#): Altos 1,2, Tenor, Baritone
  - Soprano Saxophone
  - (Bass Saxophone)
- [Trumpets/Cornets](#) 1,2,3,(4)<sup>1</sup>
  - (Flugelhorn)
- [Horns](#) 1,2,3,4
- [Trombones](#) 1,2,3
  - Bass Trombone
- Euphonium
- [Tuba](#)
- [Percussion instruments](#) (may include snare drum, bass drum, [cymbal](#), [timpani](#), [tambourine](#), [triangle](#), tam-tam, wood blocks, tom-toms, etc.)
- Mallet percussion (may include glockenspiel, [xylophone](#), marimba, crotales, [vibraphone](#), chimes, etc.)

Sometimes:

- [Piano/Keyboard](#)
- [Harp](#)
- String Bass

<sup>1</sup>Trumpet and cornet parts are sometimes interchangeable and sometimes separated into 3 or 4 cornet parts and two trumpet parts, but usually only on older or transcribed works.

It should be noted that instrumentation differs depending on the type of ensemble. Middle and high school bands frequently have more limited instrumentation and fewer parts (for example, no contrabassoons, or only two horn parts instead of four). This is both to limit the difficulty for inexperienced players and because schools frequently do not have access to the less common instruments.

The standard concert band will have several players on each part, depending on available personnel and the preference of the conductor. The wind ensemble will have very little doubling, if any; commonly, clarinets and/or flutes may be doubled,

especially to handle any *divisi* passages, and others will have one player per part, as dictated by the requirements of a specific composition.

Contemporary compositions often call on players to use unusual instruments or effects. For example, several pieces call on the use of a [siren](#) while others will ask players to play recorders, a glass harmonica, or to sing. The wind band's diverse instrumentation and large number of players makes it a very flexible ensemble, capable of producing a variety of sonic effects.

## Repertoire

Until early in the 20th century, there was little music written specifically for the wind band, which led to an extensive repertoire of pieces transcribed from orchestral works, or arranged from other sources. However, as the wind band moved out of the sole domain of the military marching ensemble and into the concert hall, it has gained favor with composers, and now many works are being written specifically for the concert band and the wind ensemble. While today there are composers who write exclusively for band, it is worth noting that many composers famous for their work in other genres have given their talents to composition for wind bands as well, as the list of names below shows.

## Original works

The following works are some of the most universally respected and established cornerstones of the band repertoire. All have "stood the test of time" through decades of regular performance, and many, either through an innovative use of the medium or by the fame of their composer, helped establish the wind band as a legitimate, serious performing ensemble.

Samuel Barber: Commando March (1943)  
Robert Russell Bennett: Suite of Old American Dances (1947)  
John Barnes Chance: Incantation and Dance (1962) and Variations on a Korean Folk Song (1966)  
Aaron Copland: Emblems (1964)  
Paul Creston: Celebration Overture (1954/5)  
Ingolf Dahl: Sinfonietta (1961)  
Percy Grainger: Children's March (Over the Hills and Far Away) (1919), Irish Tune from County Derry (1918), Lincolnshire Posy (1937), Molly on the Shore (1921) and Shepherd's Hey (1918)  
Paul Hindemith: Symphony in B-flat (1951)  
Gustav Holst: First Suite in E-flat (1909), Second Suite in F (1911) and Hammersmith: Prelude and Scherzo (1930)  
Karel Husa: Music for Prague 1968 (1968)  
Gordon Jacob: An Original Suite (1928)  
Peter Mennin: Canzona (1951)  
Darius Milhaud: Suite Francaise (1944)  
Ron Nelson: Rocky Point Holiday (1969)  
Vincent Persichetti: Divertimento (1950), Masquerade (1965) and Symphony no. 6 (1956)  
Walter Piston: Tunbridge Fair (1950)  
Alfred Reed: Armenian Dances (Part I) (1972) and Russian Christmas Music (1944)  
H. Owen Reed: La Fiesta Mexicana (1949)  
Florent Schmitt: Dionysiaques (1913)  
Arnold Schoenberg: Theme and Variations, Op. 43a (1943)  
William Schumann: George Washington Bridge (1950) and the New England Tryptich (1956)

Igor Stravinsky: Concerto for Piano and Wind Instruments (1924) and Symphonies of Wind Instruments (1920/rev. 1947)  
Ralph Vaughan Williams: English Folk Song Suite (1923), Flourish for Wind Band (1939) and Toccata Marziale (1924)

These pieces may not necessarily be quite as universally acknowledged as the above list, but occupy an extremely important place in the repertoire nonetheless. Like the previous works, they have proven themselves through many performances, most over a span of decades.

Warren Benson: The Leaves Are Falling (1963), The Passing Bell (1974) and The Solitary Dancer (1966)  
Michael Colgrass: Winds of Nagual (1985)  
Norman Dello Joio: Scenes from the Louvre (1966) and Fantasies on a Theme by Haydn (1968)  
Morton Gould: Jericho, Symphony no. 4 (West Point)  
Percy Grainger: Colonial Song (1928), Country Gardens (1928) and The "Gumsuckers" March (1928)  
Howard Hanson: Chorale and Alleluia (1954)  
Karel Husa: Apotheosis of this Earth (1971)  
Robert Jager: Diamond Variations (1967) and Esprit De Corps  
Joseph Wilcox Jenkins: American Overture for Band (1956)  
Boris Kozhevnikov: Symphony no. 3: Slavyanskaya  
Ronald Lo Presti: Elegy for a Young American (1964)  
David Maslanka: A Child's Garden of Dreams (1981)  
Vaclav Nelhybel: Antiphonale (1972) and Trittico (1965)  
Roger Nixon: Fiesta del Pacifico (1960/66)  
Vincent Persichetti: Pageant (1953), Psalm (1952)  
Sergei Prokofiev: March, Op. 99 (1943/44)  
Joseph Schwantner: ...and the mountains rising nowhere (1977) and From a Dark Millennium (1981)  
Claude T. Smith: Flight, Incidental Suite (1966)  
Fisher Tull: Sketches on a Tudor Psalm (1971)  
Clifton Williams: Festival, Dedicatory Overture (1964) and Symphonic Dance no. 3: Fiesta (1967)  
Haydn Wood: Mannin Veen (1938)  
Guy Woolfenden: Illyrian Dances (1986)

Finally, here are some more recent works that are rapidly gaining acceptance as standard repertoire. Note that most of these pieces are still ten to twenty years old; it takes a while before a piece can be said to have entered the accepted repertoire, as many new works quickly become extremely popular but then fade from performance.

Mark Camphouse: A Movement for Rosa (1992)  
Michael Colgrass: Urban Requiem (1996)  
Michael Daugherty: Niagara Falls (1997)  
Johan de Meij: Symphony no. 1: Lord of the Rings (1987)  
David Gillingham: Heroes Lost and Fallen (1990), Apocalyptic Dreams (1997), and Galactic Empires (1998)  
Adam Gorb: Awayday (1996/rev. 1999)  
Donald Grantham: Southern Harmony (1998) and J'ai ete au bal  
Edward Gregson: Festivo (1985)  
Martin Mailman: for precious friends hid in death's dateless night (1988)  
David Maslanka: Symphony no. 2 (1986) and Symphony no. 4 (1994)  
Ron Nelson: Passacaglia on BACH (1993) and Aspen Jubilee (1988)  
Philip Sparke: Dance Movements (1997)  
Jack Stamp: Gavorkna Fanfare (1990/1)  
Frank Ticheli: Amazing Grace (1994), Blue Shades (1996) and Vesuvius (1997)  
Eric Whitacre: October (2000)

Jan van der Roost: Puszta (1987) and Suite Provençale  
Dan Welcher: Zion (1996)  
Charles Rochester Young: Tempered Steel (1997)  
Gregory Youtz: Fireworks (1988)

## Transcriptions

There are thousands of transcriptions of pieces from other media (mostly orchestra) available for the concert band; however, some transcriptions are performed so often that they can be said to have achieved a place of their own in the concert band repertoire. Here are some of the most commonly performed:

(NB there are a few pieces, such as the Schuman *New England Tryptich*, that the composer himself transcribed for band. This list deals only with transcriptions made by others.)

Malcolm Arnold: Four Scottish Dances and Prelude, Siciliano, and Rondo  
J. S. Bach: Fantasia in G Major and Toccata and Fugue in D Minor  
Samuel Barber: "First Symphony"  
Leonard Bernstein: Overture to Candide, Symphonic Dances from West Side Story  
Aaron Copland: Lincoln Portrait  
Edward Elgar: Enigma Variations  
Girolamo Frescobaldi: Toccata  
Paul Hindemith: Symphonic Metamorphoses on Themes by Carl Maria von Weber  
Gustav Holst: "Mars" and "Jupiter" from The Planets  
Charles Ives: Old Home Days, Country Band March and Variations on "America"  
Modest Mussorgsky: Pictures at an Exhibition, Night on Bald Mountain  
Nikolai Rimsky-Korsakov: Procession of the Nobles from Mlada  
Ottorino Respighi: The Pines of Rome  
Gioacchino Rossini: Italian in Algiers overture  
Dmitri Shostakovich: Festive Overture  
Jean Sibelius: Finlandia  
Franz von Suppe: Overture to Light Cavalry  
Richard Wagner: Elsa's Procession to the Cathedral

# Concert march

A **concert march** is a march specifically composed for a [concert band](#) or [brass band](#) (to be played at a formal [concert](#) or other audience event).

Concert marches are mostly similar to regular military marches or field marches except for these differences:

- Usually contains more difficult [rhythms](#) which in other cases, such as marching, would be awkward to play.
- More intricate [harmonies](#)
- Although most concert marches follow the standard march form, some do not. William Latham's "Brighton Beach" for example, follows a IAABABATITCoda form.
- Concert marches tend to have codas.
- Concert marches may be played slower (100-120 b/m)
- Concert marches tend to be longer.
- Concert marches tend to have longer [introductions](#).

As with every single type of march (from Military to Concert to Screamer and contest marches), they usually have an introduction, at least three [melodies](#), and a trio.

The most-performed concert march composers are J.J Richards, William Latham, James Swearingen, C.L. Barnhouse, and youth band composer Ken Harris.

# Concertato

**Concertato** (sometimes called "stile concertato") is a term in early [Baroque music](#) referring to either a *genre* or a *style* of music in which groups of instruments or voices share a melody, usually in alternation, and almost always over a basso continuo. The term derives from Italian *concerto* which means "playing together" —hence *concertato* means "in the style of a concerto." In contemporary usage, the term is almost always used as an adjective, for example "three pieces from the set are in *concertato* style."

A somewhat oversimplified, but useful distinction between **concertato** and **concerto** can be made: the *concertato* style involves contrast between opposing groups of voices and groups of instruments: the *concerto* style, especially as it developed into the [concerto grosso](#) later in the Baroque, involves contrast between large and small groups of similar composition (later called "ripieno" and "concertino").

The style developed in Venice in the late 16th century, mainly through the work of Andrea and Giovanni Gabrieli, who were working in the unique acoustical space of St. Mark's Cathedral. Different choirs or instrumental groupings occupied positions across the cathedral from each other: because of the sound delay from one side to the other in the large and acoustically "live" space, a perfect unison was difficult, and composers found that a fantastically effective music could be composed with the choirs singing across to each other, in stereo as it were; all accompanied by organ or other groups of instruments placed in such a way that they could hear each group equally well. Music written there was quickly performed elsewhere, and compositions in the new "concertato" style quickly became popular elsewhere in Europe (first in northern Italy, then in Germany and the rest of Italy, and then gradually in other parts of the continent). Another term sometimes used for this antiphonal use of the choirs in St. Mark's was *cori spezzati*. See also [Venetian polychoral style](#) and [Venetian School](#).

In the early 17th century, almost all music with voices and basso continuo was called a [concerto](#), though this use of the term is considerably different from the more modern meaning (a solo instrument or instruments accompanied by an orchestra). Often, sacred music in the concertato style in the early 17th century was descended from the [motet](#): the texts that a hundred years earlier would have been set for a cappella voices singing in smooth polyphony, would now be set for voices and instruments in a concertato style. These pieces, no longer always called motets, were given a variety of names including [concerto](#), [Psalm](#) (if a psalm setting), [sinfonia](#), or *symphoniae* (for example in Heinrich Schütz's collections of *Symphoniae Sacrae*).

The concertato style made possible the composition of extremely dramatic music, one of the characteristic innovations of the early [Baroque](#).

## **Composers of music in concertato style**

Andrea Gabrieli  
Giovanni Gabrieli  
Alessandro Grandi  
Johann Kaspar Kerll  
Claudio Monteverdi  
Johann Pachelbel  
Michael Praetorius  
Samuel Scheidt  
Johann Schein  
Heinrich Schütz  
Lodovico Viadana

# Concertina

A **concertina**, like the various [accordions](#), is a member of the free-reed family of instruments. It was first invented in 1844 by Sir Charles Wheatstone. Concertinas typically have buttons on both ends and are distinguished from an [accordion](#) (piano or button) by the direction of their button travel when pushed. Concertina buttons travel *in the same direction as the bellows* whereas accordion buttons travel *perpendicular to the direction of the bellows*.

## Concertina Types (Systems)

The name **Concertina** refers to a family of hand-held bellows-drive free reed instruments constructed according to various *systems*. The systems differ from one another:

- in the notes and ranges available;
- in the positioning of the **keys** (buttons);
- in the sonority of the notes provided by the keys:
  - the keys of the **bisonoric** instruments produce differing notes on the press and on the draw;
  - the keys of the **unisonoric** instruments produce the same note on the press and on the draw;
- in the ability to produce sound in both bellows directions:
  - **single action**, producing sound only in one bellows direction (usually found only on bass instruments);
  - **double action**, producing sound in both bellows directions;
- in size and shape of the instrument and the technique required to hold the instrument.

To a player proficient in one of these systems, a concertina constructed according to a different system may be quite unfamiliar.

The most common concertina systems are listed below. The list is not exhaustive, as the concertina is not only a venerable and widespread instrument, but also an evolving instrument: modern experiments in concertina construction include chromatic scales offering more than 12 steps per octave, and instruments which allow the pitch of the notes to be sharpened or flatted by the performer.

### Anglo concertina

The **Anglo concertina** (from "Anglo-German") has buttons in curved rows following the fingertips. It is bisonoric: that, is pushing and pulling the bellows (**press** and **draw**) give two different notes from the same button, just as a [harmonica](#) (which the Anglo layout resembles quite closely) produces different notes on blow and draw.

The heart of the Anglo system consist of two ten-button rows, each of which produces a [diatonic](#) major scale, much like the layout of notes on a harmonica. Five buttons of each row are on each side. The two rows are musically a fourth apart, e.g., if the row closest to the player's wrist is in the key of G, the next outer row will be in C. In modern times, a third row of helper notes has been added, consisting in part of accidentals omitted by the diatonic rows, and in part of notes which do exist in the diatonic rows, but in opposite bisonoric orientation to make certain chords possible and certain melodic passages easier. There is some small variation between makers and models in the layout of the notes in the core diatonic rows, and even more variation in the number and layout of the helper notes.

The Anglo concertina is typically held by placing the fingers of each hand through a leather strap, with the thumbs outside of the strap and the palms resting on wooden bars. This arrangement leaves four fingers of each hand free for noting and

the thumbs free to operate an air valve (for expanding or contracting the bellows without sounding a note) or a drone. The Anglo concertina is often associated with the music of Ireland, although it is used in other musical contexts as well, particularly in music for the English Morris dance.

George Jones is often credited as the inventor of the Anglo concertina. British builders active in the late nineteenth and early twentieth centuries include C. Jeffries (who built primarily Anglo-style concertinas) and Louis Lachenal (who built concertinas in both English and Anglo styles and was the most prolific manufacturer of the period).

## English concertina

The **English concertina** is a fully chromatic instrument having buttons in a rectangular arrangement of four staggered rows, with the short side of the rectangle addressing the wrist. The instrument is **unisonoric**, that is, press and draw on each button yield the same note. The two innermost rows of the layout constitute a diatonic C major scale, distributed alternately between the two sides of the instrument. (I.e., in a given range, C-E-G-B-d will be on one side, D-F-A-c-e on the other.) The two outer rows consist of the sharps and flats required to complete the chromatic scale. This distribution of scale notes between sides facilitates rapid melodic play (Rimsky-Korsakov's "Flight of the Bumblebee" was transcribed for English concertina early in the instrument's history), while to some extent rendering chording difficult.

The English concertina is typically held by placing the thumbs through thumb straps and the little fingers on metal finger rests, leaving three fingers free for noting; alternately, both the ring and pinkie fingers support the metal finger rest, leaving two fingers for noting.

## Duet concertinas

Instruments built according to various **duet** systems are less common than Anglo and English concertinas. Characteristics that all duet concertina systems have in common are:

1. Duet systems feature button layouts that provide the lower (bass) notes in the left hand and the higher (treble) notes in the right, with some overlap (like a two-manual organ).
2. Duet system concertinas are **unisonoric** (each key produces the same note on press and draw).
3. Duet system concertinas are fully chromatic.

The two most often seen duet systems for concertina nowadays are the newer Hayden System conceived in the 20th century and the older Maccan System conceived in the 19th century.

## Chemnitzer concertina and other German concertinas

There are various German concertina systems which share common construction features and core button layout. In the United States, particularly in the Midwest, the term "Concertina" often refers to the **Chemnitzer concertina**. Chemnitzer

Concertinas are **bisonoric** (see above) and are closely related to the bandoneón, but with a somewhat different keyboard layout and decorative style, with some mechanical innovations pioneered by German-American instrument builder and inventor Otto Schlicht.

### **Bandonion or bandoneón**

Of special note is the bandonion or bandoneón, a German concertina system the **bisonoric** layout of which was devised by Heinrich Band.

# Concertino

A **concertino** (or **Konzertstück**) is a short [concerto](#). It normally takes the form of a one-[movement musical composition](#) for solo instrument and [orchestra](#), though some concertinos are written in several movements played without a pause.

# Concertos

In [classical music](#), the word **concerto** (pl. *concerti*; from the Italian *concerto*, which means *concert*) is a label for a piece in which a small musical group and a large musical group are given distinct roles, with the smaller group to the fore. The most common kind of concerto pairs a solo instrument with a full [orchestra](#). The term also implies the form of a piece, as most pieces called "concerto" have three [movements](#), in which the first movement is typically a [sonata form](#) and the last a rondo.

The term apparently arose in the beginning of the 17th century, and as its etymology suggests, came to describe chiefly compositions which bring unequal instrumental or vocal forces into opposition.

## Early usage

Early in the 17th century, and persisting in some cases into the mid-18th, the term "concerto" was applied as one of several indiscriminate choices for any piece that featured opposing or contrasting sonic groups, particularly voices with continuo (see also [concertato](#)). The first major influences on the concerto were made by Antonio Vivaldi who established the ritornello form used in the movements. He wrote the famous group of violin concerti titled The Four Seasons. By Johann Sebastian Bach's time the concerto as a polyphonic instrumental form was thoroughly established. The term frequently appears in the autograph title-pages of his church [cantatas](#), even when the cantata contains no instrumental prelude. Indeed, so entirely does the actual concerto form, as Bach understands it, depend upon the opposition of masses of tone unequal in volume with a compensating inequality in power of commanding attention, that Bach is able to rewrite an instrumental movement as a chorus without the least incongruity of style.

A splendid example of this is the first chorus of a university festival cantata, "*Vereinigte Zwietracht der wechselnden Saiten*", the very title of which ("united contest of changing strings") is a perfect definition of the earlier form of [concerto grosso](#), in which the chief mass of the orchestra was opposed, not to a mere solo instrument, but to a small group called the [concertino](#) or else the whole work was for a large orchestral mass in which tutti passages alternate with passages in which the whole orchestra is dispersed in every possible kind of grouping.

But the special significance of this particular chorus is that it is arranged from the second movement of the first Brandenburg concerto and that while the orchestral material is unaltered except for transposition of key, enlargement of force and substitution of trumpets and drums for the original horns, the whole chorus has been evolved from the solo part for a kit violin (*violino piccolo*).

This admirably illustrates Bach's grasp of the true idea of a concerto, namely, that whatever the relations may be between the forces in respect of volume or sound, the whole treatment of the form must depend upon the healthy relation of function between that force which commands more and that which commands less attention. *Ceteris paribus*: the individual, suitably placed, will command more attention than the crowd, whether in real life, drama or instrumental music. And in music the human voice, with human words, will thrust any orchestral force into the background, the moment it can make itself heard at all.

Hence it is not surprising that the earlier concerto forms should show the closest affinity (not only in general aesthetic principle, but in many technical details) with the form of the vocal [aria](#), as matured by Alessandro Scarlatti. And the treatment of the orchestra is, *mutatis mutandis*, exactly the same in both.

## Concerto in music

The orchestra is entrusted with a highly pregnant and short summary of the main contents of the movement, and the solo, or the groups corresponding thereto, will either take up this material or first introduce new themes to be combined with it, and, in short, enter into relations with the orchestra very like those between the actors and the chorus in Greek drama. This relation is often more complex according to the composer's judgment rather than any strict rule, with the orchestral section that precedes the solo entry - the "tutti" - often containing material whose reappearance must wait until some dramatic point much later in the movement, or may, as in some of Mozart's piano concerti, never be heard again at all.

## Evolution of the form

If the [aria](#) before Mozart may be regarded as a single large [melody](#) expanded by the device of the ritornello so as to give full expression to the power of a singer against an instrumental accompaniment, so the polyphonic concerto form may be regarded as an expansion of the aria form to a scale worthy of the larger and purely instrumental forces employed, and so rendered capable of absorbing large polyphonic and other types of structure incompatible with the lyric idea of the aria.

The *da capo* form, by which the aria had attained its full dimensions through the addition of a second strain in foreign keys followed by the original strain *da capo*, was absorbed by the polyphonic concerto on an enormous scale, both in first movements and finales (see Bach's Clavier concerto in E, Violin concerto in E, first movement), while for slow movements the ground bass diversified by changes of key (cavieo concerto in D minor), the more melodic types of [binary form](#), sometimes with the repeats ornamentally varied or inverted (Concerto for 3 klaviers in D minor, Concerto for clavier, flute and violin in A minor), and in finales the rondo form (Violin concerto in E major, Clavier concerto in F minor) and the binary form (3rd Brandenburg concerto) may be found.

When conceptions of musical form changed and the modern [sonata](#) style arose (see also [sonata form](#)), the peculiar conditions of the concerto gave rise to problems the difficulty of which only the highest classical intellects could appreciate or solve. The number and contrast of the themes necessary to work out a first movement of a sonata are far too great to be contained within the single musical sentence of Bach's and George Frideric Handel's ritornello, even when it is as long as the thirty bars of Bach's Italian Concerto (a work in which every essential of the polyphonic concerto is reproduced on the harpsichord by means of the contrasts between its full register on the lower of its two keyboards and its solo stops on both).

Bach's sons had taken shrewd steps in forming the new style; and Mozart, as a boy, modelled himself closely on Johann Christian Bach, and by the time he was twenty was able to write concerto ritornellos that gave the orchestra admirable opportunity for asserting its character and resource in the statement in charmingly epigrammatic style of some five or six sharply contrasted themes, afterwards to be worked out with additions by the solo with the orchestra's co-operation and intervention.

## Solo and tutti passages

As the scale of the works increases the problem becomes very difficult, because the alternation between solo and tutti easily produces a sectional type of structure incompatible with the high degree of organization required in first movements; yet frequent alternation is evidently necessary, as the solo is audible only above a very subdued orchestral accompaniment, and it would be highly inartistic to use the orchestra for no other purpose. Hence in the classical concerto the ritornello is never abandoned, in spite of the enormous dimensions to which the sonata style expanded it.

And though from the time of Mendelssohn onwards most composers have seemed to regard it as a conventional impediment easily abandoned, it may be doubted whether any modern concerto, except the four magnificent examples of Johannes Brahms, and Dr Joachim's Hungarian concerto, possesses first movements in which the orchestra seems to enjoy breathing space. And certainly in the classical concerto the entry of the solo instrument, after the long opening tutti, is always dramatic in direct proportion to its delay.

The great danger in handling so long an orchestral prelude is that the work may for some minutes be indistinguishable from a symphony and thus the entry of the solo may be unexpected without being inevitable. This is especially the case if the composer has treated his opening tutti like the exposition of a sonata movement, and made a deliberate transition from his first group of themes to a second group in a complementary key, even if the transition is only temporary, as in Ludwig van Beethoven's C minor concerto.

### Balance in the classical concerto

Mozart keeps his whole tutti in the tonic, relieved only by his mastery of sudden subsidiary modulation; and so perfect is his marshalling of his resources that in his hands a tutti a hundred bars long passes by with the effect of a splendid pageant, of which the meaning is evidently about to be revealed by the solo. After the C minor concerto, Beethoven grasped the true function of the opening tutti and enlarged it to his new purposes. With an interesting experiment of Mozart's before him, he, in his G major concerto, Op. 58, allowed the solo player to state the opening theme, making the orchestra enter pianissimo in a foreign key, a wonderful incident which has led to the absurd statement that he abolished the opening tutti, and that Mendelssohn in so doing has followed his example.

In his C minor concerto, Beethoven also gave considerable variety of key to the opening tutti by the use of an important theme which executes a considerable series of modulations, an entirely different thing from a deliberate modulation from material in one key to material in another. His fifth and last piano concerto, in E flat, commonly called the Emperor, begins with a rhapsodical introduction of extreme brilliance for the solo player, followed by a tutti of unusual length which is confined to the tonic major and minor with a strictness explained by the gorgeous modulations with which the solo subsequently treats the second subject.

In this concerto, Beethoven also dispenses with the only really conventional feature of the form, namely, the [cadenza](#), a custom elaborated from the operatic aria, in which the singer was allowed to extemporize a flourish on a pause near the end. A similar pause was made in the final ritornello of a concerto, and the soloist was supposed to extemporize what should be equivalent to a symphonic coda, with results which could not but be deplorable unless the player (or cadenza writer) were either the composer himself, or capable of entering into his intentions, like Joachim, who has written the finest extant cadenza of classical violin concerti.

### Contrast and the romantic concerto

Brahms's first piano concerto in D minor, Op. 15, was the result of an immense amount of work, and, though on a mass of material originally intended for a symphony, was nevertheless so perfectly assimilated into the true concerto form that in his next concerto, the violin concerto, Op. 77, he had no more to learn, and was free to make true innovations. He succeeds in presenting the contrasts even of remote keys so immediately that they are serviceable in the opening tutti and give the form a wider range in definitely functional key than any other instrumental music. Thus in the opening tutti of the D minor concerto the second subject is announced in B-flat minor.

In the B-flat piano concerto, Op. 83, it appears in D minor, and in the double concerto, Op. 102, for violin and violoncello in A minor it appears in F major. In none of these cases is it in the key in which the solo develops it, and it is reached with a directness sharply contrasted with the symphonic deliberation with which it is approached in the solo. In the violin concerto, Brahms develops a counterplot in the opposition between solo and orchestra, inasmuch as after the solo has worked out its second subject the orchestra bursts in, not with the opening ritornello, but with its own version of the material with which the solo originally entered.

In other words we have now not only the development by the solo of material stated by the orchestra but also a counter-development by the orchestra of material stated by the solo. This concerto is, on the other hand, remarkable as being the last in which a blank space is left for a cadenza, Brahms having in his friend Joachim a kindred spirit worthy of such trust. In the piano concerto in B-flat, and in the double concerto, the idea of an introductory statement in which the solo takes part before the opening tutti is carried out on a large scale, and in the double concerto both first and second subjects are thus suggested.

## **Structure of movements**

It is unnecessary to speak of the other movements of concerto form, as the sectional structure that so easily results from the opposition between solo and orchestra is not of great disadvantage to slow movements and finales, which accordingly do not show important differences from the ordinary types of symphonic and chamber music. The scherzo, on the other hand, is normally of too small a range of contrast for successful adaptation to concerto form, and the solitary great example of its use is the second movement of Brahms's B-flat piano concerto.

Nothing is more easy to handle with inartistic or pseudoclassic effectiveness than the opposition between a brilliant solo player and an orchestra; and, as the inevitable tendency of even the most artistic concerto has been to exhaust the resources of the solo instrument in the increased difficulty of making a proper contrast between solo and orchestra, so the technical difficulty of concerti has steadily increased until even in classical times it was so great that the orthodox definition of a concerto is that it is an instrumental composition designed to show the skill of an executant, and one which is almost invariably accompanied by orchestra.

This idea is in flat violation of the whole history and aesthetics of the form, which can never be understood by means of a study of averages. In art the average is always false, and the individual organization of the greatest classical works is the only sound basis for generalizations, historic or aesthetic.

# Concerto for Orchestra

Although a [concerto](#) is usually a piece of [music](#) for one or more solo [instruments](#) pitted against an [orchestra](#), several [composers](#) have written works with the apparently contradictory title **Concerto for Orchestra**. This title is usually chosen to emphasise soloistic and virtuosic treatment of the instruments of the orchestra.

For the distinction between the **Concerto for Orchestra** and the **Sinfonia Concertante** genres (or: [forms](#)): see [sinfonia concertante](#)

The best known *Concerto for Orchestra* is the one by Béla Bartók (1943), although the title had been used several times before.

## ***Concertos for Orchestra (in chronological order)***

Concerto for Orchestra, Opus 38 by Paul Hindemith (1925)  
Concerto for Orchestra by Walter Piston (1933), which is based in part on Hindemith's work  
Concerto for Orchestra by Zoltán Kodály (1939)  
Concerto for Orchestra by Béla Bartók (1943)  
Concerto for String Orchestra by Alan Rawsthorne (1949)  
Concerto for Orchestra by Witold LutosBawski (1950-54)  
Concerto for Orchestra by Michael Tippett (1962-63)  
Concerto for Orchestra by Roberto Gerhard (1965)  
Concerto for Orchestra by Elliott Carter (1969)  
Concerto for Orchestra by Roger Sessions (1979-81), which won him the Pulitzer Prize for Music in 1982  
Concerto for Orchestra by Leonard Bernstein (1986-89), which is also known as "Jubilee Games" for orchestra and baritone  
Boston Concerto by Elliott Carter (2002)  
Concerto for Orchestra by Jennifer Higdon (2002).  
Concerto for Orchestra by Magnus Lindberg (2003).

Goffredo Petrassi made the concerto for orchestra something of a speciality, writing eight of them since the 1930s.

# Concerto grosso

The **concerto grosso** (plural *concerti grossi*) (Italian for *big concert*) was a popular form of [baroque music](#) using an [ensemble](#) and usually having four to six movements in which the musical material is passed between a small group of soloists (the [concertino](#)) and full orchestra (the *ripieno*).

The form was probably developed around 1680 by Alessandro Stradella, who seems to have written the first music in which a "concertino" and "ripieno" are combined in the characteristic way, though he did not use the term "concerto grosso". The first major composer of named concerti grossi was Stradella's friend Arcangelo Corelli. After Corelli's death, a collection of twelve such pieces he composed was published (presumably, the movements were selected individually from a larger oeuvre) and soon spread across Europe, finding many admirers and imitators. Composers such as Francesco Geminiani and Giuseppe Torelli wrote concerti in the style of Corelli, and he also had a strong influence on Antonio Vivaldi.

In Corelli's day, two distinct forms of the *concerto grosso* were distinguished: the *concerto da chiesa* (church concert) and the *concerto da camera* (chamber concert). The former was more formal and generally just alternated largo or adagio (slow) movements with allegro (fast) movements, whereas the latter had more the character of a [suite](#), being introduced by a prelude and incorporating many dance forms popular in the day. These distinctions later became blurred.

The most famous concerto by Corelli is arguably No. 8 in G minor, the so-called *Christmas Concerto*, which ends with a furious allegro and then has an optional pastoral tacked on which should, in theory, only be played on Christmas Eve and must, in practice, often be played twice even when it isn't, due to its great popularity.

Corelli's *concertino* consisted of two violins and a cello, with a string orchestra serving as *ripieno*, both accompanied by a *basso continuo*. The latter was believed to be often realized on the organ in Corelli's day, especially in the case of the *concerti da chiesa*, but in modern recordings harpsichord realizations are almost exclusive.

Other major composers of *concerti grossi* were Georg Friedrich Händel, who expanded the *ripieno* to include wind instruments. Several of the Brandenburg Concerti of Johann Sebastian Bach also loosely follow the *concerto grosso* form, notably the 2nd Concerto, which has a *concertino* of recorder, oboe, trumpet, and solo violin.

The *concerto grosso* form has also experienced limited use by baroque-influenced composers of the 20th century, such as Ernest Bloch, Bohuslav Martino and Alfred Schnittke, and Philip Glass.

# Conclusion

In [music](#), the conclusion may take the form of a coda or outro. Often, there are "altogether unexpected digressions just as a work is drawing to its close, followed by a return...to a consequently more emphatic confirmation of the structural relations implied in the body of the work." (Perle 1990)

## Examples

- The slow movement of Bach's Brandeburg Concerto No. 2, where a "diminished-7th chord progression interrupts the final cadence.
- The slow movement of Beethoven's Fifth Symphony, where "echoing afterthoughts" follow the initial statements of the first theme and only return expanded in the coda.
- Varese's *Density 21.5*, where partitioning of the chromatic scale into (two) whole tone scales provides the missing tritone of b implied in the previously exclusive partitioning by (three) diminished seventh chords.

# Conductus

In [medieval music](#), **conductus** (plural: **conducti**) is a type of liturgical vocal composition for one or more voices. The word derives from Latin *conducere* (to escort), and the conductus was most likely sung while the lectionary was carried from its place of safekeeping to the place from which it was to be read. The conductus was one of the principal types of vocal composition of the [ars antiqua](#) period of medieval [music history](#).

The form most likely originated in the south of France around 1150, and reached its peak development during the activity of the Notre Dame School in the early 13th century. Most of the conductus compositions of the large mid-13th century manuscript collection from Notre Dame are for two or three voices. Conductus are also unique in the Notre Dame repertory in admitting secular melodies as source material, though sacred melodies were also commonly used. Common subjects for the songs were lives of the saints, feasts of the Lord, the Nativity, as well as more current subjects such as exemplary behavior of contemporary witnesses to the faith, such as Thomas à Becket. A significant and interesting repertory of conductus from late in the period consists of songs which criticize abuses by the clergy, including some which are quite outraged. While it might be difficult to imagine them being sung in church, it is possible that the repertory may have had an existence beyond its documented liturgical use.

Almost all composers of conductus are anonymous. Some of the poems, all of which are in Latin, are attributed to poets such as Philip the Chancellor and John of Howden.

The style of the conductus was usually rhythmic, as befitting music accompanying a procession, and almost always note-against-note. Stylistically it was utterly different from the other principal liturgical polyphonic form of the time, organum, in which the voices usually moved at different speeds; in conductus, the voices sang together, in a style also known as discant.

[Music theorists](#) who wrote about the conductus include Franco of Cologne, who advocated having a beautiful melody in the tenor, Johannes de Garlandia, and Anonymous IV. Early 14th century theorist Jacques of Liège, a vigorous defender of the *ars antiqua* style against the new "immoral and lascivious" *ars nova* style, lamented the disinterest of contemporary composers in the conductus. The conductus lasted longest in Germany, where it was documented into the 14th century.

English conducti of the late thirteenth and early fourteenth centuries often use the technique of rondellus.

# Conga

The conga is not only a type of drum, but in fact, a Afro-Cuban dance. The famous Afro-Cuban dance entitled the Conga is a “mixer” type dance. The Conga can be danced solo, in a group, or as a couple, but it is most common for it to be danced facing each other falling into a single file line (boy, girl, boy, girl).

The **conga** is a tall narrow single-headed Cuban drum of African origin, probably derived from the Congolese Makuta drums. Although ultimately derived from African drums made from hollowed logs, in its Cuban incarnation, the conga is staved, like a barrel, and they probably were originally made from salvaged barrels. It was used both in Afro-Caribbean religious music and as the principal instrument in [Rumba](#).

The name "conga" was coined in New York, USA in the 1950's, when Cuban Son music and New York jazz fused together to create salsa.

Modern congas have a staved wooden shell, or fiberglass shell, and a screw-tensioned drumhead. They are usually played in sets of two to four with the fingers and palms of the hand. From smallest to largest diameter, the drums are the nino (25 cm), the quinto (28 cm), the conga, seguidor or tres golpes (30 cm), and the tumbadora or salidor (33 cm). Modern congas stand approximately 75 cm. from the bottom of the shell to the head, and the player either plays seated, or the drums are mounted on a rack or stand to permit the player to stand. Congas are now very common in Afro-Latin music, including salsa music, as well as many other forms of American popular music.

Conga players are called rumberos, while conguero refers to those who dance following the path of the players.

In Cuba, the congas are known as "tumbadoras", and two sizes are used: the "macho" (male) and the "hembra" (female). When more than two drums are used, it is usually one macho and several hembras tuned to different pitches. At the same time, the first conga is called "tumba" and it is followed by the quinto or **repicador** and the tres or **marcador**.

Popular history in Cuba claims that the name “conga” first came to light during the processions cabildos held dancing and chanting on the streets during orishas celebrations. The popular commentaries referred to them as the congos and from there the name conga.

There are five basic strokes:

- Open tone: played with the four fingers near the rim of the head, producing a clear resonant tone with a distinct pitch.
- Muffled tone: like the open tone, is made by striking the drum with the four fingers, but holding the fingers against the head to muffle the tone (which combined with the first is called the tumbao, played in must salsa and rumbas today).
- Bass tone: played with the full palm on the head. It produces a low muted sound.
- Slap: most difficult technique producing a loud clear "popping" sound (when played at fast and short intervals is called floreo, played to instill emotions on the dancer).
- Touch: as implied by the name, this tone is produced by just touching the fingers or heel of the palm to the drum head.

Historically, the drum was the connection between the deities and the human body, where the player stimulated the spirits to enter the dancer's body.

## Conscious hip hop

**Conscious hip hop** (sometimes called **positive hip hop**) is a term used to refer to [hip hop](#) that focuses on social issues. It differs from [political hip hop](#) in that it is not necessarily overtly political. The main themes of conscious hip hop include religion, aversion to violence, feminism, and the economy. Grandmaster Flash's "The Message" was the first political and conscious hip hop track, decrying the poverty, violence, and dead-end lives of the black youth of the time.

## Terminology

Some conscious artists have criticized the name. Mos Def criticizes the label, saying:

"They keep trying to slip the 'conscious rapper' thing on me...I come from Roosevelt Projects, man. The ghetto. I drank the same sugar water, ate hard candy. And they try to get me because I'm supposed to be more articulate, I'm supposed to be not like the other Negroes, to get me to say something against my brothers. I'm not going out like that, man."

## **Contemporary classical music**

In the broadest sense, **contemporary music** is any music being written in the present day. In the context of classical music the term applies to music written in the last half century or so, particularly works post-1960. The argument over whether the term applies to music in any style, or whether it applies only to composers writing avant-garde music, or "modernist" music is a subject of hot debate. There is some use of "Contemporary" as a synonym for "Modern", particularly in academic settings, whereas others are more restrictive and apply the term only to presently living composers and their works. Since it is a word that describes a time frame, rather than a particular style or unifying idea, there are no universally agreed on criteria for making these distinctions.

## History

In the early part of the 20th century contemporary music included [modernism](#), the [twelve tone technique](#), [atonality](#), unresolved and greater amounts of dissonance, [rhythmic](#) complexity and [neoclassicism](#). In the '50s contemporary music generally meant [serialism](#), in the '60s serialism, indeterminacy, electronic music including [computer music](#), mixed media, performance art, and fluxus, and since then [minimal music](#), [post-minimalism](#), and all of the above.

Since the 1970s there has been increasing stylistic variety, with far too many schools to name or label. However, in general, there are three broad trends. The first is the continuation of modern avant-garde traditions, including musical experimentalism. The second are schools which sought to revitalize a tonal style based on previous common practice. The third focuses on non-functional triadic harmony, exemplified by composers working in the [minimalist](#) and related traditions.

Contemporary music composition has been altered with growing force by computers in composition, which allow for composers to listen to renderings of their scores before performance, compose by layering performed parts over each other and to disseminate scores over the internet. It is far too soon to tell what the final result of this wave of computerization will have as an effect on music.

All history is provisional, and contemporary history even more so, because of the well known problems of dissemination and social power. Who is "in" and who is "out" is often more important to who is known than the music itself. In an era with perhaps has many as 40,000 composers of concert music in the United States alone, first performances are difficult, and second performances even more so. The lesson of obscure composers in the past becoming important later applies doubly so to contemporary music, where it is likely that there are "firsts" before the officially listed first, and works which will be later admired as exemplars of style, which are as yet, unheralded in their own time.

# Movements in contemporary music

## Modernism

*Main article:* [Modernism \(music\)](#)

Many of the key figures of the high modern movement are alive, or only recently deceased and there is also still an extremely active core of composers, performers and listeners who continue to advance the ideas and forms of Modernism. Elliot Carter is still active, for example, as is Lukas Foss. While high modernist schools of composing, such as [serialism](#) are no longer as rhetorically central, the contemporary period is beginning the process of sorting through the modern corpus, looking for works which will have repertory value.

Modernism is also present as surface or trope in works of a large range of composers, as atonality has lost much of its ability to terrorize listeners, and even film scores use sections of music clearly rooted in modernist musical language. Active modernist composers include Harrison Birtwistle, Alexander Goehr, Judith Weir, Thomas Adès, Magnus Lindberg and Gunther Schuller.

## Post-modernism

*Main article:* [Postmodern music](#)

[Post-modernism](#) is, naturally, a strong influence in contemporary classical music. One critic remarked that the easiest way to find "post-modernism" is to find the word "new" or the prefix "post-" attached to the name of a movement. However, in an era where media, systematic presentation, and power relationships remain the dominant reality for most people born in to the core industrialized nations, post-modernism is likely to remain the most common mode for artistic expression.

## Polystylism

**Polystylism** is the use of multiple styles or techniques of music, and is seen as a [postmodern](#) characteristic. Polystylist composers include Lera Auerbach, George Rochberg, Dmitri Silnitsky, Alfred Schnittke, and John Zorn. See: [postmodern music](#).

## Conceptualism

When Duchamp displayed a urinal in an art museum, he struck the most visible blow for artistic conceptualism. Music conceptualism found a champion in John Cage. A conceptualist work is an act whose musical importance draws from the frame, rather than the content of the work. An example would be Alvin Singleton's 56 Blows, a work that has the distinction of being mentioned in debate on the floor of the Senate.

## Minimalism and post-minimalism

*Main articles:* [Minimalist music](#), [Post-minimalism](#)

The minimalist generation still has a prominent role in new composition. Philip Glass has been expanding his symphony cycle, while John Adams's *On the Transmigration of Souls*, a choral work commemorating the victims of the September 11, 2001 attacks won a Pulitzer Prize. Steve Reich has explored electronic opera (most notably in *Three Tales*) and Terry Riley has been active in composing instrumental music and music theatre. But beyond the minimalists themselves, the tropes of non-functional triadic harmony are now commonplace, even among composers who are not regarded as minimalists per se.

Many composers are expanding the resources of minimalist music to include rock and world instrumentation and rhythms, serialism, and many other techniques. Kyle Gann considers William Duckworth's *Time Curve Preludes* as the first "post-minimalism" piece, and labels John Adams as a "post-minimalist" composer, rather than as a minimalist. Gann defines "post-minimalism" as the search for greater harmonic and rhythmic complexity by composers such as Mikel Rouse and Glenn Branca. Another notable characteristic is storytelling and emotional expression taking precedence over technique. Post-minimalism is also a movement in painting and sculpture which began in the late 1960s.

### **Post classic tonality**

Other aspects of post-modernity can be seen in a "post-classic" tonality that has advocates such as Michael Daugherty, Elena Kats-Chernin and Tan Dun.

### **Eclecticism**

With a wide range of styles in performance, many contemporary composers work by combining styles, a technique known as *polystylism*, or even multiple genres of music. One influential composer in this vein is John Zorn.

### **World music**

*Main article:* [World music](#)

An increasing number of composers mix western and non-western instruments, including gamelan from Indonesia, Chinese traditional instruments, [ragas](#) from Indian Classical music. There is also an exploration of non-Western tonalities, even in relatively traditionally structured works. This can be in the context of post-minimalist works, such as Janice Giteck's Balinese influenced works, or in the context of post-classic tonality, such as in the music of Bright Sheng, or in the context of thoroughly modernist styled works.

### **Experimentalism**

*Main article:* [Experimental music](#)

One important movement in contemporary music involves expanding the range of gestures available to instrumentalists, for example the work of George Crumb. The Kronos Quartet has been among the most active ensembles in promoting contemporary works for string quartet, and they take delight in music which stretches the manner in which sound can be drawn out of instruments.

### **Electronic music**

*Main article:* [Electronic music](#)

Electronics are now part of mainstream music creation. Performances of regular works often use midi synthesizers to back or replace regular musicians. Looping, sampling, and (rarely) drum machines may also be used. However the older idea of electronic music - as a search for pure sound and an interaction with the hardware itself - continues to find a place in composition, from commercially successful pieces to works targeted at very narrow audiences.

## **Neo-Romanticism**

*Main article:* [Neoromanticism \(music\)](#)

The resurgence of the vocabulary of extended tonality which flourished in the first years of the 20th century continues in the contemporary period, though it is no longer considered shocking or controversial as such. Composers working in the neoromantic vein include John Corigliano, George Rochberg, and David Del Tredici.

## **"New Complexity"**

"New Complexity" is a current within today's European contemporary avant-garde music scene. Among this diverse group are Richard Barrett, Brian Ferneyhough, James Dillon and Michael Finnissy.

## **Spectral Music**

*Main article:* [Spectral music](#)

Epitomized by the works of Tristan Murail, Gérard Grisey, and Claude Vivier.

## **Contemporary music festivals**

There are a number of festivals dedicated to contemporary music, among them the Gaudeamus Foundation Music Week in Amsterdam, Salzburg Aspekte, the Donaueschingen Festival of Contemporary Music and the Huddersfield Contemporary Music Festival.

## Contemporary music and cinema

Contemporary classical music can be heard in [film scores](#) such as Tan Dun's original score for Crouching Tiger, Hidden Dragon, Philip Glass's score for The Hours and Kundun, Michael Nyman's scores for Peter Greenaway's films and Shigeru Kan-no's score for Der Rosarote Elefant. Other directors have used contemporary music as source music as Stanley Kubrick did in 2001: A Space Odyssey and The Shining with music by György Ligeti and Krzysztof Penderecki.

# Cool jazz

**Cool jazz** is a type of [jazz](#) that is understated and subtle and often encompasses *West coast jazz* or *West coast cool*, which originated primarily from California. The Claude Thornhill Orchestra and Lennie Tristano recorded cool jazz as early as the late 1940s. Thornhill's most popular song "Snowfall" is still played today.

Along with the bebop movement developed during the 1940s, the 1950s ushered in a lighter, more romantic style of jazz called "cool." The roots of cool jazz can be traced back to various earlier styles.

**Some other cool jazz artists:**

- Dave Brubeck with Paul Desmond
- Stan Getz
- Modern Jazz Quartet
- Gerry Mulligan with Chet Baker
- Miles Davis with Gil Evans
- Lee Konitz
- Chico Hamilton
- George Shearing
- Shelly Manne

Categories: [Jazz genres](#)

**Copy Control** is the name of a copy protection system used on recent EMI digital audio disc releases in some regions. While basically intended as a means of copy-protecting compact discs, Copy Control discs cannot properly be referred to as CDs as the system introduces intentionally corrupted data, making the discs incompliant with the Red Book standard for audio CDs. The system is intended to prevent digital audio extraction ("ripping") from the protected discs, and thus limit the file sharing of ripped music. The techniques used are:

- Multisession (Blue Book) information is included which effectively hides the audio tracks from most CD-ROM drives;
- Error-correction codes for the audio data are corrupted, which may introduce audible errors to ripped copies.
- The data area of the disc usually includes DRM-restricted copies of the audio content, which are compatible with some major operating systems such as Microsoft Windows.

## Background

The Copy Control system was devised in response to the file sharing and casual CD copying that has become commonplace in recent years, allegedly causing the music industry significant lost revenues. Neither issue was particularly relevant when the CD standard was introduced in the early 1980s, and thus, unlike the more recent DVDs, the CD standard specifies no inherent form of copy protection or other digital rights management. Copy Control is one of a number of attempts to apply copy protection on top of the CD standard, but since it is merely a modification of the already unrestricted standard which must still yield usable results in most CD players, the efficiency of the system varies significantly.

As the Copy Control discs do not conform to the requirements of the CD standard, they are not labelled with the CDDA logo, which is trademarked by Philips and Sony. A Copy Control "CD" which would not play in a woman's car CD player, was deemed "defective" in a French 2003 lawsuit, and any recent Copy Control releases carry visible Copy Control notices stating merely compatibility with CDs and the possibility of playback problems "on some equipment, for example car CD players". Nevertheless, the discs are frequently incorrectly referred to as CDs or "copy-protected CDs" in music stores and in colloquial language.

## Circumvention

A Copy Control disc will appear as a mixed-mode disc, with audio and data content. Under Windows, inserting the disc will usually autorun an audio player utility, which plays the DRM-protected audio files provided. (This should be temporarily disabled by holding down the shift key while inserting the disc, or by disabling autorun altogether.)

The ability to extract the CD-Audio tracks is otherwise largely dependent on the disc drive used. The first obstacle is the 'fake' Table of Contents (ToC), which is intended to mask the audio tracks from CD-ROM drives. On the other hand, CD-R/RW drives, and similar, can usually access all session data on a disc, and thus can properly read the audio segment. (It has been reported that the fake ToC may also be bypassed by obscuring the outer 2-4mm of the disc with a temporary felt-tip marker. This method, however, may no longer be effective due to advances in Copy Control technology.)

The other major obstacle is the corrupted error-correction data. Again, the effect of this is dependent on the disc drive; some drives will be able to read the data without problems, but others will produce audio files with loud pops every few seconds. (A related problem is that copy-controlled discs will probably not be as resistant to scratching.)

Copy Control also does not prevent copying a disc by recording it as audio through a computer's sound card, which only causes a slight degradation in audio quality, or none in the case where a digital link is used. More substantial is the loss in recording speed. This poses a major problem to the music industry, due to the fact that many "pirates" illegally rip protected CD audio in this way.

Usually a CD-R/RW drive will play the disc but with occasional stops (about every 10 seconds) and DVD-R/RW drives will be able to read the data without problems and can be ripped straight to the PC. CD-ROM or DVD-ROM drives in a computer will usually refuse to play the data except in the provided player.

Systems other than Windows, however, can easily play Copy Control discs, with the disc appearing as two entities, "Audio CD" and whatever the data portion of the disc was named in manufacture. As the bundled players are usually Windows Proprietary, and, similarly, the auto-launchers are designed for Windows, there is little that can be done to stop a non-Windows user from ripping a Copy Control disc (though, arguably, the process may take longer).

In Mac OS X, Copy Control discs are easily accessed through iTunes and Quicktime (When a CDDA track is dragged to a folder other than the CD, Quicktime automatically converts it to AIFF, which is a lossless PCM format). Though some Copy Control discs do have Mac OS software, this is becoming less common.

## **Content on the CD extra**

### **CDS-100 or CDS-200**

A player and a media file database(A copy of the audio contents in Windows Media). The player will only play the audio contents in the media file database.

### **CDS-300**

A player and the anti-copy program only. The player can ignore the anti-copy program to read the audio tracks. The player allow users to play the tracks, rip the audio tracks as DRM WMA files and burn CD for 3 times(The player will rip the CD as 320kbps WMA files, then burn the audio on a CD-R, notice that the volume is lower and the quality is worse on the burned CD)

## Methods to remove protection

### **CDS-100**

It is the most simple one to remove. You can see that there is a visible empty track on the CD. You just need an ink pen or sticker to cover some part of the track outside the empty track.

### **CDS-300**

When you put in this kind of CD, there is a small program installed automatically by the autorun, no matter you click "Accept or Decline". In order to avoid the protection, you need to put the CD before you go into Windows System. For those whom may have installed can use the "uninstall.exe" to remove the program.

Step by Step:

1. Put the CD into the CD drive
2. Close the Autorun program
3. Browse the CD drive, run the "uninstall.exe"
4. Reboot the computer (Don't take out the CD)
5. Finished!

Notice that now the CD in the drive is no different with "CD extra". You still can't rip the music by Windows Media Player or iTunes. You may take the following actions:

a. Use CD Burning Software(Nero Burning Rom, WinOnCD...) to remake a normal CD

or

b. Use some CD Ripper(Goldwave, Exact Audio Copy...) that support CD extra  
Author's Notes:

For CDS-100, you can only ignore the second TOC in order to rip the audio tracks but you can never duplicate the whole disc including the second session.

For CDS-300, you may just use any CD copying program to duplicate the whole disc with every details on the CD. The CD ripped is also a "Copy Control CD" which its Autorun program is still functional.

# Copyist

A **copyist** is a person who makes written copies. The term's modern use is almost entirely confined to music copyists, who are employed by the music industry to produce parts for individual musicians from an [orchestral score](#) or [composer's](#) manuscript. In the past, copyists worked by hand, though today the work is generally done using one of a number of proprietary specialist software packages (one of which is called *Copyist*); each approach requires a significant understanding of [musical notation](#), [music theory](#), and strong attention to detail.

# Cornet

The **cornet** is a [brass instrument](#) that closely resembles the [trumpet](#). It is not to be confused with the Medieval instrument, the [cornett](#).

The cornet is a standard [brass band](#) instrument, which was derived from the bugle family. However, lately it has been gradually replaced by the trumpet in the United States. The trumpet is also used more often than the cornet in [orchestral](#), small ensemble, and solo performances. The cornet is the main high voice of the [brass band](#) in the UK and other countries that have British-style brass bands.

## Relationship to trumpet

Cornets were invented by adding valves to the post horn in the 1820s. The valves allowed for melodic playing throughout the register of the cornet. Trumpets were slower to adopt the new valve technology, so composers for the next 100 years or more, often wrote separate parts for trumpet and cornet. The trumpet would play fanfare-like passages, while the cornet played more melodic passages. The modern trumpet has valves (or a similar mechanism) that allow it to play the same notes and fingerings as the cornet.

Cornets and trumpets made in a given [key](#) (usually the key of B♭) play at the same pitch, and the technique for playing the instruments is very similar. However, cornets and trumpets are not entirely interchangeable because the [timbre](#) (or tone quality) of their sound differs. Also available, but usually seen only in the brass band, is an E♭ soprano model (often shortened to just "sop"), pitched a fourth above the standard B♭. This instrument, with usually just one in a band, adds an extreme high register to the brass band sound and can be most effective in cutting through even the biggest climax.

Unlike the trumpet, most of the tubing of which has a cylindrical bore, the tubing of the cornet has a mostly conical bore, starting very narrow at the mouthpiece and gradually widening towards the bell. The conical bore of the cornet is primarily responsible for its characteristic warm, mellow tone, which can be distinguished from the more penetrating sound of the trumpet. The conical bore of the cornet also makes it more agile than the trumpet when playing fast passages. The cornet is often preferred for young beginners as it is easier to hold, with its centre of gravity much closer to the player.

The cornet in the illustration is a short model traditional cornet, also known as a "*Shepherd's crook*" shaped model. There also exists a long-model cornet which looks about half-way between the short instrument and a trumpet. This instrument is frowned upon by cornet traditionalists and it is not clear what its intended role is. However the common opinion is that it has a more musical sound than the short model or trumpet.

## **Playing/technique**

Like the trumpet and all other modern brasswind instruments, the cornet makes a sound when the player vibrates ("buzzes") his lips in the mouthpiece, creating a vibrating column of air in the tubing of the cornet that generates a musical sound. When the column of air is lengthened, the pitch of the note is lowered.

From the basic length tube of the cornet the player can produce a series of notes, like those played by the bugle, which has gaps in so that true melodic playing is impossible except in the extreme high register. So, to change the length of the vibrating column and provide the cornet with the ability to play chromatic scales, the cornet is equipped with three (or very rarely, four) valves. The action of each valve is to add a length of tubing (and thus vibrating air column) between mouthpiece and bell. As the player presses the valves, they lower the pitch of the cornet and can thus play complete chromatic scales.

## Lists of important players

### Today's premiere players

These are some of the most universally respected and influential cornet players in the world today.

- Richard Marshall, current Principal Cornet player of Black Dyke Band.
- Roger Webster, current Principal Cornet player of Grimethorpe Colliery Band and formerly Black Dyke Band.
- David Daws, a Salvation Army cornet player who is renowned for his lyrical style of playing and effortless technique.
- Alan Morrison, current Principal Cornet player of Brighouse and Rastrick Band.
- Kevin Ashman, current Principal Cornet player of The International Staff Band of The Salvation Army.
- Philip Cobb, current Principal Cornet player of Hendon Salvation Army band, second solo cornet of The International Staff Band of The Salvation Army, ex-Principal Cornet player of the National Youth Brass Band of Great Britain.

The cornet was also often played as an alternate instrument by many [jazz](#) trumpet soloists. Notable performances on cornet by players generally associated with the trumpet include Freddie Hubbard's on Emyrean Isles by Herbie Hancock, and Don Cherry's on The Shape of Jazz to Come by Ornette Coleman.

Category: [Brass instruments](#)

# Cornett

The **cornett** or **cornetto** is an early wind instrument, dating from the [Renaissance](#) period. It was used in what are now called alta capellas or wind ensembles. It is not to be confused with the [cornet](#).

## Construction

The cornett takes the form of a tube, typically about 60 cm. long, made of ivory, wood, or, in the case of some modern reconstructions of historical instruments, ebony resin, with [woodwind](#)-style fingerholes. Usually the cornett is octagonal in cross-section, and it is wrapped in leather or parchment, with the fingerholes penetrating this cover. The cornett is slightly curved, normally to the right, so that the player's left hand, playing the upper holes, and her right hand, playing the lower holes, can more comfortably reach their proper locations. At the top of the cornett there is a small mouthpiece of the kind used in [brass instruments](#); that is, it is vibrated with the lips.

The cornett is thus an unusual specimen among wind instruments, with a body constructed like a woodwind but its mouthpiece (and thus mechanism of tone production) being that of a brass instrument. Scholars evidently agree that the latter criterion is more important, and so the cornett should be counted as brass. In particular, the [Hornbostel-Sachs](#) system of [musical instrument classification](#) places it alongside instruments such as the [trumpet](#).

Purist cornett players tend to use a smaller mouthpiece, whereas those needing to make a compromise--often with the need to go on playing modern brass instruments--may use a much larger mouthpiece, sometimes a trumpet mouthpiece turned down on a lathe so that only the cup and a minimal stub which fits the cornett's mouthpiece receiver are left.

## Music for the cornett

Historically, the cornett was frequently used in consort with sackbutts (2 cornetts, 3 sackbutts), often to double a church choir. This was particularly popular in Venetian churches such as the Basilica San Marco, where extensive instrumental accompaniment was encouraged, particularly in use with antiphonal choirs. Giovanni Bassano was an example of a virtuoso early player of the cornett, and Giovanni Gabrieli wrote much of his resplendent polychoral music with him in mind. Heinrich Schütz also used the instrument extensively, especially in his earlier work; he had studied in Venice with Gabrieli and was acquainted with Bassano's playing.

The cornett was, like almost all Renaissance instruments, made in a complete family; the different sizes being the high cornettino, the cornetto, the tenor cornett (or lizzard) and the rare bass cornett (the serpent was preferred to the bass cornett). Other versions include the mute cornett, which is a straight narrow-bore instrument with no mouthpiece, quiet enough to be used in a consort of viols or even recorders.

The cornett was also used as a virtuoso solo instrument, and a relatively large amount of solo music for the cornetto (and/or violin) survives. The use of the instrument had declined by 1700, although the instrument was still common in Europe until the late 18th century. Johann Sebastian Bach, Georg Philipp Telemann and their German contemporaries used both the cornett and cornettino in cantatas to play in unison with the soprano voices of the choir. Occasionally, these composers allocated a solo part to the cornetto (see Bach's cantata BWV 118). Alessandro Scarlatti used the cornetto or pairs of cornetti in a number of his operas. Johann Joseph Fux used a pair of mute cornetts in a Requiem. It was last scored for by Gluck, in his opera *Orfeo ed Euridice* (he suggested the soprano [trombone](#) as an alternative). As a point of interest, Gluck was also the last person to score for the recorder, in the same opera.

## Playing the cornett

The cornett is generally agreed to be a difficult instrument to play. It embodies a design that survives in no modern instrument; that is, the main tube has only the length of a typical woodwind, but the mouthpiece is of the brass type, relying on the player's lips to form the musical sound. Most modern brass instruments are considerably longer than the cornett, which permits the tube resonances to be used more effectively in controlling pitch.

The [Baroque](#) era was relatively tolerant of bright or extroverted tonal quality, as the surviving [organs](#) of the time attest. Thus the Baroque theorist Marin Mersenne described the sound of the cornett as "a ray of sunshine piercing the shadows". Yet there is also evidence that the cornett was often badly played. Its upper register sounded somewhat like a [trumpet](#) or modern cornet, the lower register resembling the sackbutts that often accompanied it, whereas the middle register gave an indistinct wailing sound that was not attractive when played in isolation. Cornett intonation also tended to be insecure.

As a result of its design, the cornett requires a specialized embouchure that is very tiring to play for any length of time. It was inevitable that the finest players of the instrument would ultimately turn their attention to the developing [oboe](#).

## The cornett and authentic performance

As a result of the recent [early music](#) renaissance, the cornett has been rediscovered, and as before attracts the finest players. In many pieces (particularly those of early to mid Baroque composers such as Claudio Monteverdi, Giovanni Gabrieli, Francesco Cavalli, Girolamo Frescobaldi, Giovanni Battista Riccio, Dario Castello, Antonio Bertali, Pavel Josef Vejvanovský, Jan KYitel Tolar, Michael Praetorius, Johann Hermann Schein, Samuel Scheidt, Sebastian Knüpfer, Johann Schelle, Johann Andreas Pachelbel, Giovanni Felice Sances, Johann Joseph Fux, Johann Heinrich Schmelzer, Heinrich Ignaz Franz von Biber, Andreas Hofer, Alessandro Stradella, Matthew Locke, John Adson and Heinrich Schütz) the cornett is indispensable in performance, and the music suffers if other instruments substitute for them. The violin was the usual substitute for the cornetto in historical music. The recorder, modern Bb trumpet, oboe and soprano saxophone have all been used as substitutes for the cornetto in modern performances.

## Nomenclature

To avoid confusion between this instrument and the [cornet](#) (with one *t*), the cornett is often referred to by its Italian name, *cornetto*. Occasionally it is called by its German name, which is *zink*. The instrument was known as the "cornet à bouquin" in France and the "corneta" in Spain.

# Corporate rock

**Corporate rock** is a term used primarily by critics to describe [rock music](#) which they feel to be derivative, redundant, and lacking in creativity. According to these critics, the primary goal of the corporate rock artist or band in making music is profit rather than artistic creativity. As a result, corporate rock is typified by catchy, mainstream radio-friendly, formulaic songs following a [pop music](#) model. The term was first used in the late 1970s and early 1980s. Despite the negative opinions of critics, many corporate rock bands attained a high degree of commercial success, and some still have loyal followings today.

## **Origins of Corporate Rock**

Corporate rock is somewhat unique among musical genres in that it is a term used almost exclusively by critics and musical purists. It is used primarily in a condescending and dismissive way by those who feel that corporate rock has little to add to music. The exact origins of the term are uncertain, but by the early 1980s, it was being applied with frequency to bands such as Journey, Foreigner, Styx, and Boston. Although the term has faded from common usage, some people use it to describe contemporary bands who they feel live up to its definition.

## Corporate Rock Bands

As no rock groups identify their music as being "corporate rock," it is obviously difficult to definitively label bands as being a part of this genre. However, one can quite easily list some of the bands which have been vilified by critics (fairly or unfairly) as exemplifying the worst of this genre.

- As mentioned above, Styx is often given as a prime example of corporate rock. Fans of the band argue that Styx was musically innovative in bringing an operatic style to rock music; critics charge that their melodic hooks and over-the-top style were uncreative and derivative.
- Journey has often been labelled as corporate rock, especially after their 1981 nine-times platinum album *Escape* and its three Top 10 singles. The album was obviously a hit with the public, but critics derided the aggressive, repetitive "[power ballads](#)".
- Bon Jovi has also been labelled as corporate rock, for many of the same reasons as Journey. Critics disliked what they felt were trite, empty power ballads with little to say.

Groups or artists which have been labelled "corporate rock" include:

Asia  
Bon Jovi  
Boston  
Bryan Adams  
Def Leppard  
Eddie Money  
Foreigner  
Journey  
Kansas  
Loverboy  
Night Ranger  
Peter Frampton  
REO Speedwagon  
Styx  
Survivor  
Toto

## Contemporary Corporate Rock

Although use of the term "corporate rock" as a criticism declined through the 1990s, it is applied to a few contemporary bands such as Nickelback, Creed and 3 Doors Down. Many critics believe that entire genres such as [Post-Grunge](#) and [Nu-Metal](#) were created by corporate executives. The same criticisms as before apply: the music is derivative, radio-friendly, and profit-motivated. Critics are constantly frustrated that these bands, despite their perceived lack of originality, continue to be successful. The criticism has also been applied to some [hard rock](#) bands such as Puddle of Mudd, Staind, and Limp Bizkit.

# Counterpoint

**Counterpoint** is a [musical](#) technique involving the simultaneous sounding of separate musical lines. It is especially prominent in Western music. In all eras, writing of counterpoint has been subject to rules, sometimes strict. Counterpoint written before approximately 1600 is usually known as polyphony.

The term comes from the Latin *punctus contra punctum* ("note against note"). The adjectival form *contrapuntal* shows this Latin source more transparently.

By definition, [chords](#) occur when multiple notes sound simultaneously; however, chordal, harmonic, "vertical" features are considered secondary and almost incidental when counterpoint is the predominant textural element. Counterpoint focuses on melodic interaction rather than harmonic effects generated when melodic strands sound together:

- "It is hard to write a beautiful song. It is harder to write several individually beautiful songs that, when sung simultaneously, sound as a more beautiful polyphonic whole. The internal structures that create each of the voices, separately must contribute to the emergent structure of the polyphony, which in turn must reinforce and comment on the structures of the individual voices. The way that is accomplished in detail is... 'counterpoint'." <sup>[1]</sup>

It was elaborated extensively in the [Renaissance](#) period, but composers of the [Baroque](#) period brought counterpoint to a kind of culmination, and it may be said that, broadly speaking, [harmony](#) then took over as the predominant organising principle in musical composition. The late Baroque composer Johann Sebastian Bach wrote most of his music incorporating counterpoint, and explicitly and systematically explored the full range of contrapuntal possibilities in such works as *The Art of Fugue*.

Given the way terminology in music history has evolved, such music created from the [Baroque](#) period on is described as contrapuntal, while music from before Baroque times is called polyphonic. Hence, the earlier composer Josquin Des Prez is said to have written polyphonic music.

Homophony, by contrast with polyphony, features music in which [chords](#) or vertical [intervals](#) work with a single melody without much consideration of the melodic character of the added *accompanying* elements, or of their melodic interactions with the melody they accompany. As suggested above, most popular music written today is predominantly homophonic — governed by considerations of chord and harmony. But these are only strong general tendencies, and there are many qualifications one could add.

The form or compositional genre known as fugue is perhaps the most complex contrapuntal convention. Other examples include the [round](#) (familiar in folk traditions) and the canon.

In musical composition, counterpoint is an essential means for the generation of musical *ironies*; a melodic fragment, heard alone, may make a particular impression, but when it is heard simultaneously with other melodic ideas, or combined in unexpected ways with itself, as in a canon or fugue, surprising new facets of meaning are revealed. This is a means for bringing about *development* of a musical idea, revealing it to the listener as conceptually more profound than a merely pleasing melody.

Excellent examples of counterpoint in jazz include Gerry Mulligan's Young Blood and Bill Holman's Invention for Guitar and Trumpet and his Theme and Variations as well as recordings by Stan Getz, Bob Brookmeyer, Johnny Richards and Jimmy Giuffre. [2]

## Species counterpoint

Species counterpoint is a type of strict counterpoint, developed as a pedagogical tool, in which a student progresses through several "species" of increasing complexity, gradually attaining the ability to write free counterpoint according to the rules at the given time. The idea is at least as old as 1532, when Giovanni Maria Lanfranco described a similar concept in his *Scintille di musica*. The late 16th century Venetian theorist Zarlino elaborated on the idea in his influential *Le institutioni harmoniche*, and it was first presented in a codified form in 1619 by Lodovico Zacconi in his *Prattica di musica*. Zacconi, unlike later theorists, included a few extra contrapuntal techniques as species, for example invertible counterpoint.

By far the most famous pedagogue to use the term, and the one who made it famous, was Johann Fux. In 1725 he published *Gradus ad Parnassum* (*Step by Step Up Mount Parnassus*) a work intended to help teach students how to compose, using counterpoint — specifically, the contrapuntal style as practiced by Palestrina in the late 16th century — as the principal technique. Fux described five *species*:

1. Note against note;
2. Two notes against one;
3. Four notes against one;
4. Notes offset against each other (as suspensions);
5. All the first four species together, as "florid" counterpoint.

## Considerations for all species

Students of species counterpoint usually practice writing counterpoint in all the modes (Ionian, Dorian, Phrygian, Lydian, Mixolydian and Aeolian). The following rules apply to melodic writing in each species, for each part:

1. The final must be approached by step. If the final is approached from below, the leading tone must be raised, except in the case of the Phrygian mode. Thus, in the Dorian mode on D, a C# is necessary at the cadence.
2. Permitted melodic intervals are the perfect fourth, fifth, and octave, as well as the major and minor second, major and minor third, and ascending minor sixth. When the ascending minor sixth is used it must be immediately followed by motion downwards.
3. If writing two skips in the same direction—something which must be done only rarely—the second must be smaller than the first, and the interval between the first and the third note may not be dissonant.
4. If writing a skip in one direction, it is best to proceed after the skip with motion in the other direction.
5. The interval of a tritone in three notes is to be avoided (for example, an ascending melodic motion F - A - B natural), as is the interval of a seventh in three notes.

And, in all species, the following rules apply concerning the combination of the parts:

1. The counterpoint must begin and end on a perfect consonance.
2. Contrary motion should predominate.
3. The interval of a tenth should not be exceeded between two adjacent parts, unless by necessity.

## First species

In *first species* counterpoint, each note in an added part\* (or parts) sounds against one note in the cantus firmus. Notes in all parts are sounded simultaneously, and move against each other simultaneously. The species is said to be *expanded* if any of the added notes is broken up (simply repeated).

In counterpoint, a "step" is a melodic interval of a half or whole step. A "skip" is an interval of a third or fourth. An interval of a fifth or larger is referred to as a "leap".

A few further rules given by Fux, by study of the Palestrina style, and usually given in the works of later counterpoint pedagogues, are as follows. Some are vague, and since good judgement and taste have been regarded by contrapuntists as more important than strict observance of mechanical rules, there are many more cautions than prohibitions. But some are closer to being mandatory, and are accepted by most authorities.

1. Begin and end on either the unison, octave, or fifth, unless the added part is underneath, in which case begin and end only on unison or octave.
2. Use no unisons except at the beginning or end.
3. Avoid parallel fifths or octaves between any two parts; and avoid "hidden" parallel fifths or octaves (that is, movement by similar motion to a perfect fifth or octave, unless the higher of the parts moves by step).
4. Attempt to keep two adjacent parts within a tenth of each other, unless an exceptionally pleasing line can be written outside of that range.
5. Avoid moving in parallel thirds or sixths for too long.
6. Avoid having both parts move in the same direction by skip.
7. Attempt to have as much contrary motion as possible.

In the following examples, all in two voices, the cantus firmus — the given part — is in the lower voice. The same cantus firmus is used for each, and each is in the Dorian mode.

## Second species

In *second species* counterpoint, two notes in the added part (or parts) work against each longer note in the given part. The species is said to be expanded if one of the two shorter notes differs in length from the other.

Additional considerations in second species counterpoint are as follows, and are in addition to the considerations for first species:

1. It is permissible to begin on an upbeat, leaving a half-rest in the added voice.
2. The accented beat must have only consonance (perfect or imperfect). The unaccented beat may have dissonance, but only as a passing tone, i.e. it must

- be approached and left by step in the same direction.
3. Avoid the interval of the unison except at the beginning or end of the example, except that it may occur on the unaccented portion of the bar.
  4. Use caution with successive accented perfect fifths or octaves. They must not be used as part of a sequential pattern.

## Third species

In *third species* counterpoint, four (or three) notes move against each longer note in the given part. As with second species, it is expanded if the shorter notes vary in length among themselves.

## Fourth species

In *fourth species* counterpoint, a note is sustained or *suspended* in an added part while notes move against it in the given part, creating a dissonance, followed by the suspended note then changing (and "catching up") to create a subsequent consonance with the note in the given part as it continues to sound. Fourth species counterpoint is said to be expanded when the added-part notes vary in length from each other. The technique requires chains of notes sustained across the boundaries determined by beat, and so creates syncopation.

## Florid counterpoint

In *fifth species* counterpoint, sometimes called *florid counterpoint*, the other four species of counterpoint are combined within the added part (or added parts). In the example, the first and second bars are second species, the third bar is third species, and the fourth and fifth bars are third and embellished fourth species.

## General notes

It is a common and pedantic misconception that counterpoint is *defined* by these five species, and therefore anything that does not follow the strict rules of the five species is not counterpoint. This is not true; although much contrapuntal music of the [common practice period](#) indeed adheres to the rules, there are exceptions. Fux's book and its concept of "species" was purely a method of teaching counterpoint, not a definitive or rigidly prescriptive set of rules for it. He arrived at his method of teaching (or so he believed, at least) by examining the works of Giovanni Pierluigi da Palestrina, an important late 16th-century composer who in Fux's time was held in the highest esteem as a contrapuntalist. Works in the contrapuntal style of the 16th century—the "[prima pratica](#)" or "stile antico," it was called by modernist composers then—were often said by Fux's contemporaries to be in "Palestrina style." Indeed, Fux's treatise is a rather accurate compendium of Palestrina's techniques.

\* (Note: in counterpoint, the parts or individual melodic strands are often called *voices*, even if the music is thought of as instrumental.)

## Contrapuntal derivations

Since the [Renaissance](#) period in European music, much music which is considered contrapuntal has been written in imitative counterpoint. In imitative counterpoint, two or more voices enter at different times, and (especially when entering) each voice repeats some version of the same melodic element. The fantasia, the ricercar, and later, the fugue (the contrapuntal form *par excellence*) all feature imitative counterpoint, which also frequently appears in [choral](#) works such as [motets](#) and [madrigals](#). Imitative counterpoint has spawned a number of devices that composers have turned to in order to give their works both mathematical rigor and expressive range. Some of these devices include:

- **Inversion:** The inverse of a given fragment of melody is the fragment turned upside down – so if the original fragment has a rising major third (see [interval](#)), the inverted fragment has a falling major (or perhaps minor) third. (Compare, in [twelve tone technique](#), the inversion of the tone row, which is the so-called prime series turned upside down.) In a completely separate sense, a contrapuntal inversion of melodies being simultaneously sounded by voices is the subsequent switching of the melodies between voices, so that for example an upper-voice melody is now sounded in some lower voice, and vice versa.
- **Retrograde** refers to the contrapuntal device whereby notes in an imitative voice sound backwards in relation to their order in the original.
- **Retrograde inversion** is where the imitative voice sounds notes both backwards and upside down.
- **Augmentation** is when in one of the parts in imitative counterpoint the notes are extended in duration compared to the rate at which they were sounded when introduced.
- **Diminution** is when in one of the parts in imitative counterpoint the notes are reduced in duration compared to the rate at which they were sounded when introduced.

## Dissonant counterpoint

**Dissonant counterpoint** was first theorized by Charles Seeger as "at first purely a school-room discipline," consisting of species counterpoint but with all the traditional rules reversed. First species counterpoint is required to be all dissonances, establishing "dissonance, rather than consonance, as the rule," and consonances are "resolved" through a skip, not step. He wrote that "the effect of this discipline" was "one of purification." Other aspects of composition, such as rhythm, could be "dissonated" by applying the same principle (Charles Seeger, "On Dissonant Counterpoint," *Modern Music* 7, no. 4 (June-July 1930): 25-26).

Seeger was not the first to employ dissonant counterpoint, but was the first to theorize and promote it. Other composers who have used dissonant counterpoint, if not in the exact manner prescribed by Charles Seeger, include Ruth Crawford-Seeger, Carl Ruggles, Dane Rudhyar, and Arnold Schoenberg.

# Country blues

**Country blues** (also **folk blues**, **rural blues**, or **downhome blues**) refers to all the acoustic, [guitar](#)-driven forms of the [blues](#). After blues' birth in the southern United States, it quickly spread throughout the country (and elsewhere), giving birth to a host of regional styles. These include Memphis, Detroit, Chicago, Texas, Piedmont, Louisiana, Western, Atlanta, St. Louis, East Coast, Swamp, New Orleans, Delta and Kansas City blues.

According to Richard Middleton (1990, p.142) folk blues "was constructed as a distinct discursive category in the early decades of this century [20th], mostly as the result of the activities of record companies, marketing 'old-fashioned' music to rural Southern 'folk' and newly arrived urban dwellers." Also contributing to the documentation of the genre were John and Alan Lomax, Samuel Charters, Paul Oliver, David Evans, Jeff Todd Titon, and William Ferris (all bourgeois, as pointed out by Middleton).

Country blues were constructed from "a much more heterogeneous, fluid musical field" participated in by black and some white people including [ragtime](#), early [jazz](#), religious song, Tin Pan Alley, minstrel, and other theater songs (Oliver 1984 and Russell 1970). Blues was "defined...functionally - it was 'good time music' - or experientially - blues was a feeling - rather than by reference to any formal characteristics or stereotypes," though, "at the same time, many of those characteristics (pentatonic melody, blue tonality, typical chord progression and stanza patterns, call and response) could be found in *other* forms and contexts too: in hillbilly and Country music, gospel song, ragtime, jazz and Tin Pan Alley hits."

Titon (1977, p.xvi) points out, however, that "downhome blues songs...do not sound like the folk songs of singers like Leadbelly...yet...early downhome blues is best regarded as folk music...despite the dangers of the implication that if downhome blues is folk music, then downhome black Americans must constitute a folk group." (Middleton 1990, p.144)

Countering the idea of country blues as [folk music](#) is the blues individualism. Abbey Niles wrote that the blues have to do with "the element of pure 'self'." W.C. Handy wrote that they are able to "express...personal feeling in a sort of musical soliloquy" (both quoted in Levine 1977, p.222), and Robert Palmer (1981, p.75) states that the singer's "involvement becomes both the subject and substance of the work."

"The blues was the most highly personalized, indeed the first almost completely personalized music that Afro-Americans developed. It was the first important form of African-American music in the United States to lack the kind of antiphony that had marked other black musical forms. The call and response form remained, but in blues it was the singer who responded to himself either verbally or on an accompanying instrument. In all these respects blues was the most typically American music Afro-Americans had yet created and represented a major degree of acculturation to the individualized ethos of the larger society." (Levine 1977, p.221)

Middleton describes the rural blues artist as a wanderer and social outsider whose lyrical themes not surprisingly include loneliness, alienation, and travel. He and Keil (1966, p.76) suggests that blues artists may have served as "licensed" critics containing "unflinching subjectivity...in the context of its time and place...was positively heroic. Only a man who understands his worth and believes in his freedom sings as if nothing else matters" (Palmer 1981, p.75).

Szwed (1969, p.118-9) argues that the "Blues arose as a popular music form in the early 1900s, the period of the first great Negro migration north to the cities...The formal and stylistic elements of the blues seem to symbolise newly emerging social patterns during the crisis period of urbanisation...By replacing the functions served by sacred music, the blues eased a transition from land-based agrarian society to one based on mobile wage-labor urbanism."

## **Notable country blues musicians**

Son House  
Charley Patton  
Tommy Johnson  
Robert Johnson  
Blind Lemon Jefferson  
Blind Willie McTell  
Sleepy John Estes  
Fred McDowell  
Robert Pete Williams  
Skip James  
Bukka White  
Barbecue Bob  
Kokomo Arnold

# Country music

**Stylistic origins:** Appalachian folk music, [blues](#), [spirituals](#) and Anglo-[Celtic music](#)

**Cultural origins:** early 20th century Appalachia, esp. Tennessee, Virginia, and Kentucky

**Typical instruments:** [Guitar](#) - Steel guitar - Dobro - [Harmonica](#) - [Bass](#) - Fiddle - [Drums](#) - [Mandolin](#) - [Banjo](#)

**Mainstream popularity:** Much, worldwide, especially the [Nashville Sound](#)

**Derivative forms:** [Bluegrass](#)

[Bakersfield Sound](#) - [Bluegrass](#) - Close harmony - Country folk - [Jug band](#) - Lubbock Sound - [Nashville Sound](#) - Neotraditional Country - [Outlaw country](#) - [Red Dirt](#) - Texas Country - Chippy Goth

[Alternative country](#) - [Country rock](#) - [Psychobilly](#) - [Deathcountry](#) - [Rockabilly](#) - [Country-rap](#) - Country pop

In [popular music](#), **country music**, also called **country and western music** or **country-western**, is an amalgam of popular musical forms developed in the Southern United States, with roots in traditional [folk music](#), [Celtic Music](#), [Blues](#), [Gospel music](#), and Old-time music that began to develop rapidly in the 1920s. The term *country music* began to be widely applied to the music in the 1940s and was fully embraced in the 1970s while *country and western* declined in use .

However, country music is actually a catch-all category that embraces several different genres of music: [Nashville sound](#) (the pop-like music very popular in the 1960s); [bluegrass](#), a fast mandolin, banjo and fiddle-based music popularized by Bill Monroe and by the Foggy Mountain Boys; Western which encompasses traditional Western ballads and Hollywood Cowboy Music, [Western swing](#), a sophisticated dance music popularized by Bob Wills; [Bakersfield sound](#) (popularized by Buck Owens and Merle Haggard); [Outlaw country](#); Cajun; Zydeco; [gospel](#); oldtime (generally pre-1930 folk music); honky tonk; Appalachian; [rockabilly](#); neotraditional country and [jug band](#).

Each style is unique in its execution, its use of rhythms, and its chord structures, though many songs have been adapted to the different country styles. One example is the tune "Milk Cow Blues", an early blues tune by Kokomo Arnold that has been performed in a wide variety of country styles by everyone from Aerosmith to Bob Wills to Willie Nelson, George Strait to Ricky Nelson and Elvis Presley.

## History

Vernon Dalhart was the first country singer to have a nationwide hit (May 1924, with "The Wreck of Old '97") (see External Links below). Other important early recording artists were Riley Puckett, Don Richardson, Fiddling John Carson, Ernest Stoneman, Charlie Poole and the North Carolina Ramblers, and The Skillet Lickers.

The origins of modern country music can be traced to two seminal influences and a remarkable coincidence. Jimmie Rodgers and the Carter Family are widely considered to be the founders of country music, and their songs were first captured at an historic recording session in Bristol, Tennessee on August 1, 1927, where Ralph Peer was the talent scout and sound recordist. It is possible to categorize many country singers as being either from the Jimmie Rodgers strand or the Carter Family strand of country music:

### Jimmie Rodgers' influence

Jimmie Rodgers' gift to country music was country folk. Building on the traditional ballads and musical influences of the South, Rodgers wrote and sang songs that ordinary people could relate to. He took the experiences of his own life in the Meridian, Mississippi, area and those of the people he met on the railroad, in bars and on the streets to create his lyrics. He used the musical influences of the traditional ballads and the [folk](#) to create his tunes. Since 1953, Meridian's Jimmie Rodgers Memorial Festival has been held annually during May to honor the anniversary of Rodger's death. The first festival was on May 26, 1953.

Pathos, humor, women, whiskey, murder, death, disease and destitution are all present in his lyrics and these themes have been carried forward and developed by his followers. People like Hank Williams, Merle Haggard, Waylon Jennings, George Jones, Townes van Zandt, Kris Kristofferson and Johnny Cash have also suffered, and shared their suffering, bringing added dimensions to those themes. It would be fair to say that Jimmie Rodgers sang about life and death from a male perspective, and this viewpoint has dominated some areas of country music. It would also be fair to credit his influence for the development of honky tonk, [rockabilly](#), and the [Bakersfield sound](#).

### Hank Williams

Jimmie Rodgers is a major foundation stone in the structure of country music, but the most influential artist from the Jimmie Rodgers strand is undoubtedly Hank Williams, Sr. In his short career (he was only 29 when he died), he dominated the country scene and his songs have been covered by practically every other country artist, male and female. Some have even included him in their compositions (for example, Waylon Jennings and Alan Jackson). Hank had two personas: as Hank Williams he was a [singer-songwriter](#) and entertainer; as "Luke the Drifter", he was a songwriting crusader. The complexity of his character was reflected in the introspective songs he wrote about heartbreak, happiness and love (e.g., "I'm So Lonesome I Could Cry"), and the more upbeat numbers about Cajun food

("Jambalaya") or cigar store Indians ("Kaw-Liga"). He took the music to a different level and a wider audience.

Both Hank Williams, Jr. and his son Hank Williams III have been innovators within country music as well, Hank Jr. leading towards rock fusion and "[outlaw country](#)", and Hank III going much further in reaching out to [death metal](#) and [psychobilly](#) soul.

## The Carter Family's influence

The other Ralph Peer discovery, the Carter family, consisted of A.P. Carter, his wife Sara and their sister-in-law Maybelle. They built a long recording career based on the sonorous bass of A.P., the beautiful singing of Sara and the unique guitar playing of Maybelle. A.P.'s main contribution was the collection of songs and ballads that he picked up in his expeditions into the hill country around their home in Maces Springs, Virginia. In addition, being a man, he made it possible for Sara and Maybelle to perform without stigma at that time. Sara and Maybelle arranged the songs that A.P. collected and wrote their own songs. They were the precursors of a line of talented female country singers like Kitty Wells, Patsy Cline, Loretta Lynn, Skeeter Davis, Tammy Wynette, Dolly Parton and June Carter Cash, the daughter of Maybelle and the wife of Johnny Cash.

## Bluegrass

[Bluegrass](#) carries on the tradition of the old String Band Music and was invented, in its pure form, by Bill Monroe. The name "Bluegrass" was simply taken from Monroe's band, the "Blue Grass Boys". The first recording in the classic line-up was made in 1945: Bill Monroe on [mandolin](#) and vocals, Lester Flatt on [guitar](#) and vocals, Earl Scruggs on 5-String [banjo](#), Chubby Wise on [fiddle](#) and Cedric Rainwater on upright bass. This band set the standard for all bluegrass bands to follow, most of the famous early Bluegrass musicians were one-time band members of the Bluegrass Boys, like Lester Flatt & Earl Scruggs, Jimmy Martin and Del McCoury, or played with Monroe occasionally, like Sonny Osborne, The Stanley Brothers and Don Reno. Monroe also influenced people like Ricky Skaggs, Alison Krauss and Rhonda Vincent, who carry on the folk and ballad tradition in the bluegrass style.

## The Nashville sound

During the 1960s, country music became a multimillion-dollar industry centered on Nashville, Tennessee. Under the direction of producers such as Chet Atkins, Owen Bradley, and later Billy Sherrill, the [Nashville sound](#) brought country music to a diverse audience. This sound was notable for borrowing from 1950s pop stylings: a prominent and 'smooth' vocal, backed by a string section and vocal chorus. Instrumental soloing was de-emphasised in favor of trademark 'licks'. Leading artists in this genre included Patsy Cline, Jim Reeves, and later Tammy Wynette and Charlie Rich. Although country music has great stylistic diversity, some critics say this diversity was strangled by the formulaic approach of the Nashville Sound producers. Others point to the commercial need to re-invent country in the face of the dominance of '50s [rock'n'roll](#) and subsequent British Invasion. Even today the variety of country music is not usually well reflected in commercial radio airplay and the popular perception of country music is fraught with stereotypes of hillbillies and maudlin ballads.

## Reaction to the Nashville sound

The supposedly "vanilla"-flavored sounds that emanated from Nashville led to a reaction among musicians outside Nashville, who saw that there was more to the genre than "the same old tunes, fiddle and guitar..." (Waylon Jennings).

California produced the [Bakersfield sound](#), promoted by Buck Owens and Merle Haggard and based on the work of the legendary Maddox Brothers and Rose, whose wild eclectic mix of old time country, hillbilly swing and gospel in the 1940s and 1950s was a feature of honky-tonks and dance halls in the state.

Within Nashville in the 1980s, Randy Travis, Ricky Skaggs and others brought a return to the traditional values. Their musicianship, songwriting and producing skills helped to revive the genre momentarily. However, even they, and such long-time greats as Jones, Cash, and Haggard, fell from popularity as the record companies again imposed their formulas and refused to promote established artists. Capitol Records made an almost wholesale clearance of their country artists in the 1960s.

## Other developments

The two strands of country music have continued to develop since 1990s. The Jimmie Rodgers influence can be seen in a pronounced "working man" image promoted by singers like Brooks & Dunn and Garth Brooks. On the Carter Family side, singers like Iris Dement and Nanci Griffith have written on more traditional "folk" themes, albeit with a contemporary point of view.

In the 1990s a new form of country music emerged, called by some [alternative country](#), neotraditional, or "insurgent country". Performed by generally younger musicians and inspired by traditional country performers and the country reactionaries, it shunned the Nashville-dominated sound of mainstream country and borrowed more from [punk](#) and [rock](#) groups than the watered-down, pop-oriented sound of Nashville.

There are at least three U. S. cable networks devoted to the genre: CMT (owned by Viacom), VH-1 Country (also owned by Viacom), and GAC (owned by The E. W. Scripps Company).

## **African-American country**

Country music has had only a handful of Black stars Charley Pride and DeFord Bailey being the most notable. Pride endured much open racism early in his career. Many TV audiences were shocked to realize that the songs they enjoyed were performed by a black man. Pride became the second black member of the Grand Ole Opry in 1993 (he had declined an invitation to join in 1968). He is considered a major influence on traditionalists today. Country music has also influenced the work of many black musicians such as Ray Charles, Keb' Mo' and Cowboy Troy.

African-American influences in Country Music can be documented at least as far back as the 1920s. Harmonica ace, DeFord Bailey, appeared on the Grand Ole Opry stage in 1926. Whites and blacks in rural communities in the South played in stringbands.

The Black Country Music Association, headed by Frankie Staton, and located in Nashville, provides a forum for and gives visibility to credible black artists. By assembling a network and building an infrastructure previously lacking, it gives African-American performers a place to turn to for advice and education in the music business.

"The Black Experience: From Where I Stand," is an album that presents 52 black artists' contributions to country music and includes not only African-American artists primarily known for their contributions to the blues, but those such as Charlie Pride and Cleve Francis, who identified themselves solely as country artists.

## Reception

Though "its primary audience is the children and grandchildren of the poor rural Southerners that gave commercial country music its birth (Ellison 1995; Peterson and Kern 1995)", "country music is widely enjoyed by people in all walks of North American society and around the world" and it is an often controversial, much loved and much hated, music. Race issues play a large part in country music reception and the music has been praised for diversity and universality as well as criticised for its lack of those qualities and supposed racism. However, "country music is [also] widely disparaged in racialized terms, and assertions of its essential 'badness' are frequently framed in specifically racial terms" such as "white trash" .

President George H. W. Bush celebrated country music by declaring October, 1990 "Country Music Month". The proclamation read:

"Encompassing a wide range of musical genres, from folk songs and religious hymns to rhythm and blues, country music reflects our Nation's cultural diversity as well as the aspirations and ideals that unite us. It springs from the heart of America and speaks eloquently of our history, our faith in God, our devotion to family, and our appreciation for the value of freedom and hard work. With its simple melodies and timeless, universal themes, country music appeals to listeners of all ages and from all walks of life."

Contrastingly, the Lyndon LaRouche founded Schiller Institute represents an extreme though familiar view when it criticises country music for those same populist values. They write that country music represents:

"the 'musical culture' of the pessimistic American populist, wallowing in nostalgia for the Good Old Days and the glorious Lost Cause of Confederacy..."

However, the institute describes country's origins dubiously and contradictorily as elitist:

"Where did Country and Western come from? You guessed it, again: not from the hills and hollers of rural America, but from testtubes [sic] of such cultural warfare centers as Theodore Adorno's [sic] Princeton Radio Research Project."

While country music is not a benevolent conspiracy as described by the Schiller Institute neither is it the ideal representation of positive values and inclusion described by President Bush. For both the Institute and the President "whiteness, racism, poverty, and alienated labor are, it seems quite as irrelevant as country music's obvious failure to appeal to listeners from at least *some* walks of life."

These contrasting and contradicting views highlight that country may be celebrated or criticised by different listeners for the exact same and directly opposite reasons. One listener may value country as an expression of their rural roots, values, and culture, while another dislikes country because they feel excluded from or do not wish to participate in that expression. Yet another listener may value country for the providing an ability to feel included or participate in its values without sharing its roots and culture. This is a complicated phenomena as evidenced by Richard Peterson's question:

"How is it that country music has retained in its lyrics and in the images of its leading exponents the dualistic, populist, individualist, fatalistic, antiurbane zeitgeist of poor and working-class Southern whites, although most of its fans do not have these characteristics? In a word, how has it maintained its distinctive sense of authenticity?"

Discomfort with country music and accusations of racism may stem from listeners' discomfort with their own racism, including a projection of that racism onto country musicians and fans:

"...For many cosmopolitan Americans, especially, country is 'bad' music precisely because it is widely understood to signify an explicit claim to *whiteness*, not as an unmarked, neutral condition of lacking (or trying to shed) race, but as a marked, foregrounded claim of cultural identity - a bad whiteness...unredeemed by ethnicity, folkloric authenticity, progressive politics, or the *noblesse oblige* of elite musical culture."

While mainstream country may contain no examples of overt or even covert racism:

"those who suspect country music is racist, for example, might find their opinion strengthened by the underground race-baiting, hate-filled music of country singer/songwriter 'Johnny Rebel' (Clifford 'Pee Wee' Trahan) whose records have circulated widely, since his commercial heyday in the 1960s. Among his most popular songs: 'Nigger Hatin' Me.'"

It must be noted that Rebel is an extreme and not at all representative example:

"Of all the misapprehensions at loose in the world about country music, perhaps the most persistent is that it's the music of racist, redneck Republicans."

# Country rock

**Country rock** is a [musical genre](#) formed from the fusion of [rock and roll](#) with [country music](#).

While such cross-pollination has occurred throughout the history of both genres, the term is usually used to refer to the wave of groups of the late 1960s and early 1970s who began to record country flavored records, including Neil Young, The Byrds, Gram Parsons and Bob Dylan with The Band.

The term is also used for those who came after them, such as Lynyrd Skynyrd and The Eagles, and the many bands they influenced, such as the [alternative country](#) movement.

Bands that could be considered country rock include:

- The Allman Brothers Band, a jam band with bluegrass influences

- The Band

- Blue Rodeo

- The Byrds

- The Eagles

- Flying Burrito Brothers

- Kinky Friedman

- Grateful Dead, a psychedelic band with bluegrass influences

- Lynyrd Skynyrd

- Michael Nesmith

- Neil Young, a diverse artist whose music spans many other genres as well

- Gram Parsons

- Poco

- Linda Ronstadt as produced by Peter Asher and John David Souther

- Sir Douglas Quintet

# Country-rap

**Country-rap** is the fusion of [country music](#) with [hip hop music](#). Perhaps to avoid the unfortunate abbreviation "c-rap," the style is known by several other names, such as "**hick hop**," "**hill hop**," "**hip hopry**," and "**country hip hop**". Cowboy Troy is the best-known performer known primarily as a country-rap artist.

Artists known primarily as rappers with noted country influences include Bubba Sparxxx (especially since his second album, Deliverance) and Buck 65, and the country-rap label can also include country-influenced rap rock artists such as Kid Rock and Everlast.

Other examples of country-rap include:

- "Country Rock & Rap", 1982 single by the Disco Four.
- "Country Rap", 1987 single and album by the Bellamy Brothers.
- "Hillbilly Rap," 1996 album track by Neal McCoy. The lyrics to "The Ballad of Jed Clampett" (The Beverly Hillbillies theme song) performed in the style of Tone Loc.
- "Wayfarin Stranger", 1997 track by Spearhead

and more recently, artists that perform exclusively country rap, rather than just one song in their repertoire

- Battlestar America
- Kuntry Killaz
- Chance (like Cowboy Troy, a member of the MuzikMafia).
- Eminemmylou (a cross between Eminem and Emmylou Harris).

# Cover band

A **cover band** (or **covers band**) is a [band](#) that plays only [cover songs](#). Most (but not all) wedding bands can be considered cover bands. Another term for cover band is 'party band'.

Cover bands typically play a mix of songs from different decades and different styles. Some cover bands play material from particular decades (for example, a 1980s cover band); others (called [tribute bands](#)) focus exclusively on a single group. It is not uncommon to find a Led Zeppelin cover band, a Pink Floyd cover band, or a U2 cover band.

Cover bands are very popular for weddings and corporate events, as well as in bars and clubs. Because they play songs people know and love, cover bands can be a real crowd pleaser.

## Examples

Some examples are:

- Björn Again
- The Chee-Weez
- Detroit Cobras
- Hell's Belles
- Me First and the Gimme Gimmes
- Unauthorized Rolling Stones

Some cover bands, such as Richard Cheese and Lounge Against the Machine and Gregorian perform covers that are of a different [music genre](#) to the sound of the originals.

- [Cover version](#)
- [Tribute band](#)

Category: [Musical groups](#)

## Cover version

In [popular music](#) a **cover version** is a new rendition (performance or recording) of a previously recorded [song](#). Popular musicians may play covers as a tribute to the original performer or group, to win audiences who like to hear a familiar song, or to increase their chance of success by using a proven hit or to gain credibility by its comparison with the original song. Covering material is an important method in learning various styles of music. Bands may also perform covers for the simple pleasure of playing a familiar song. A [cover band](#) plays cover versions exclusively. [Electronic music](#) cover songs are called [remixes](#).

## Early cover versions and the origin of the term

From early in the 20th century it was common practice among phonograph [record labels](#) that if any company had a record that was a significant commercial success, other record companies would have singers or musicians "cover" the tune by recording a version for their own label in hopes of cashing in on the tune's success. Since there was little promotion or advertising involved, when the average record buyer went out to purchase a new record, they usually asked for the song, not the artist; additionally, distribution of records was highly localized so a quickly-recorded version of a hit song from another area could hit the streets before the original was available, and the highly-competitive record companies were quick to take advantage of these facts.

This began to change in the later 1930s, when the average age of the record-buying public began to drop. During the [Swing Era](#), when the bobby soxer went looking for "In the Mood", she wanted the popular Glenn Miller version, not someone else's. However, record companies still continued to record different versions of songs that sold well.

In the early days of [rock and roll](#), many songs originally recorded by musicians were re-recorded by other artists in a more toned-down style that lacked both the earthiness of the originals and the social stigma of the original rock music. These bowdlerized cover versions were considered by some to be more palatable to parents, and these artists were more acceptable to programmers at particular radio stations. Songs by the original artists which were then successful are called [crossovers](#) as they "crossed over" from the original audience. Also, many songs originally recorded by male artists were rerecorded by female artists, and vice versa. Such a cover version is sometimes called a *cross cover version*.

While it is all but impossible to trace the actual history of the term "cover version," it is likely the term began to be used by record collectors once the early rock'n'roll records had become collectible. The actual term "cover" may have its origins in the fact that the artist who recorded the newer version of the song would have his records literally "cover" the original version in the sales racks.

## ***Cover version versus remake***

"Cover version" is now routinely used to mean any recording of a song previously recorded by another artist (see, for example, the emergence of such websites as The Covers Project and Coverversionen.de).

Some collectors and researchers, though, distinguish between a "cover version" and a "remake". In this usage, "cover version" is reserved strictly for those cases where the cover appears more or less at the same time as the original, in order to cash in on the popularity of the original. For a recording that is made some time after the original release, the term "remake" is preferred.

In this view, the 1956 versions of "Why Do Fools Fall In Love" by The Diamonds and by Gale Storm would be genuine cover versions of Frankie Lymon's original, but Diana Ross's 1981 version would be called a remake.

There are some, especially on Usenet, who have strong opinions on this: see, for example this discussion at [rec.music.rock-pop-r+b.1960s](http://rec.music.rock-pop-r+b.1960s): .

## Modern cover versions

Over the years, cover versions of many popular songs have been recorded, sometimes with a radically different style, sometimes virtually indistinguishable from the original. For example, Jose Feliciano's version of "Light My Fire" was utterly distinct from the The Doors' version, but Carl Carlton's 1974 cover of Robert Knight's 1967 hit single "Everlasting Love" sounds almost identical to the original (the main difference being the horn fills added to Carlton's version).

Cover versions can also cross language barriers. For example, Falco's 1982 German-language hit "Der Kommissar" was covered in English by After the Fire, although the German title was retained. The English version, which was not a direct translation of Falco's original but retained much of its spirit, reached the Top 5 on the US charts. Many of singer Laura Branigan's 1980s hits were English-language remakes of songs already successful in Europe, for the American record market.

Although modern cover versions are often produced for artistic reasons, some aspects of the disingenuous spirit of early cover versions remain. In the album-buying heyday of the 1970s albums of sound-alike covers were created, commonly released to fill bargain bins in the music section of supermarkets and even specialized music stores, where uninformed customers might easily confuse them with original recordings (especially since the packaging of such discs was often intentionally confusing, combining the name of the original artist in large letters with a tiny disclaimer like as originally sung by or as made popular by). More recently, albums such as the Kidz Bop series of Compact discs, which feature occasionally "cleaned up" versions of contemporary songs sung by children, have been sales successes.

## Contemporising older songs

Cover versions are often used to make familiar songs contemporary. For example "Singin' In The Rain" was originally introduced in the film *The Hollywood Revue of 1929*. The famous Gene Kelly version was a revision that brought it up to date for a 1950s Hollywood musical, and was used in the 1952 film *Singin' In The Rain*. In 1978 it was covered by French singer Sheila accompanied by the B. Devotion group, as a [disco](#) song, once more updating it to suit the musical taste of the era. During the disco era there was a brief trend of taking well known songs and recording them in the disco style.

Director Baz Luhrmann has contemporised and stylised older songs for use in his films. New or cover versions such as John Paul Young's "Love Is In The Air" occur in *Strictly Ballroom*, Candi Staton's "Young Hearts Run Free" appear in *Romeo and Juliet*, and adaptations of artists such as Nat King Cole, Nirvana, Kiss, Thelma Houston, Marilyn Monroe, Madonna and T. Rex are used in *Moulin Rouge!* The covers are carefully designed to fit into the structure of each film and suit the taste of the intended audience.

## Introduction of new artists

New artists are often introduced to the record buying public with performances of well known, "safe" songs as evidenced in *Pop Idol* and its international counterparts. It is also a means by which the public can more easily concentrate upon the new performer without the need to judge the quality of the songwriting skills.

However, some new artists have chosen to radically rework a popular song to exemplify their approach and philosophy to music, the prime example being the band Devo's radical reconstruction of *(I Can't Get No) Satisfaction*, or to create publicity as in Sid Vicious' notorious rendition of *My Way*.

## Tributes, tribute albums and cover albums

Established artists often pay homage to artists or songs that inspired them before they started their careers by recording cover versions, or perform unrecorded cover versions in their live performances for variety. For example U2 has performed ABBA's "Dancing Queen" live, and Kylie Minogue has performed The Clash's "Should I Stay Or Should I Go" - songs that would be completely out of character for them to record, but which allow them artistic freedom when performing live. These performances are often released as part of authorised "live recordings" and thus become legitimate cover versions.

In recent years unrelated contemporary artists have contributed individual cover versions to [tribute albums](#) for well established artists who are considered to be influential and inspiring. This trend was spawned by Hal Willner's Amacord Nino Rota in 1981. Typically, each project has resulted in a collection of the particular artist's best recognised or most highly regarded songs reworked by more current performers. Among the artists to receive this form of recognition are Joy Division, Faith No More, Tom Waits, Oingo Boingo, The Bee Gees, ABBA, Fleetwood Mac, Bob Dylan, The Carpenters, Dolly Parton, Leonard Cohen, Elton John, Duran Duran, Carole King, Led Zeppelin, Queen, and Sublime.

The soundtrack to the film I Am Sam is an example of this: it consisted of Beatles songs redone by various modern artists. Three more notable examples are Conception: The Interpretation of Stevie Wonder Songs; Common Thread an album of contemporary country artists performing hit singles by The Eagles, and the *Rhythm, Country and Blues* album where a [country](#) artist duets with a [Rhythm and blues](#) artist on a standard of either genre.

In some cases this proves to be popular enough to spawn a series of cover albums being released for a band, either under a consistent branding such as the two Black Sabbath "Nativity in Black" cover albums and the Industrial themed "Blackest Album" cover albums of Metallica songs, or in the form of releases from a number of different companies cashing in on the trend such as the slew of Metallica cover albums released in the late 1990s and early 2000s.

Metallica itself is known for doing covers; their original album Kill Em All included a couple of covers (Diamond Head's Am I Evil and Blitzkrieg's Blitzkrieg), the original Garage Days Re-Revisited was a collection of covers paying homage to a number of mostly obscure bands, which were later combined with additional new covers on the 2 disc Garage Inc., which among other things included covers of Black Sabbath, Bob Seger, Blue Öyster Cult, Mercyful Fate, and numerous Motörhead tracks. In an interesting turn around there were even a couple of releases of The Metallic-Era cd's collecting tracks from bands that Metallica had covered, both the original versions of the covered songs, and some additional songs by the same artist.

A different type of all-covers album occurs when one artist creates a release of covers of songs originally by many other artists, as a way to recognize their influences or simply as a change of pace or direction. An early example of this was David Bowie's album "Pin Ups", featuring songs from groups with which he had shared venues with in the 1960s. Since these bands included The Who and The Kinks many of the tracks would have been at least familiar with his audience. Other more recent examples of this type of album include Renegades by Rage Against The Machine featuring covers of songs originally performed by diverse artists including Bruce Springsteen, Bob Dylan, the Rolling Stones, Afrikaa Bambaataa,

and Erik B and Rakim, as well as the EP Feedback by Canadian rock band Rush. More rarely, bands will do an entire album of cover songs originally by a particular artist, such as The The's Hanky Panky, which consists entirely of Hank Williams songs.

There are also bands who create entire albums out of covers, but unlike Tin Pan Alley-style [traditional pop](#) singers, they often perform the songs in a genre completely unlike the original songs. Examples include the Moog Cookbook (alternative and classic rock songs done on [Moog synthesizers](#)), Richard Cheese and Lounge Against the Machine (top 40, including [punk](#), [heavy metal](#), teen pop and [indie rock](#) performed in a Vegas lounge lizard style), and Hayseed Dixie (a play on the name AC/DC, they started covering AC/DC songs and progressed to other classic rock, playing them as [bluegrass](#) songs, similar to The Gourds' version of "Gin and Juice.") Also notable are Nine Inch Elvis, who take Elvis Presley songs and rework them in an industrial fashion similar to Nine Inch Nails; Beatallica, who perform tracks by The Beatles in the style of Metallica.

Some cover albums take the unusual tact of doing classical versions of rock and metal songs. The unusual band Apocalyptica which is comprised of four classical celloists started out performing classical arrangements of Metallica songs. In a similar vein, there have also been several "String" tributes to popular rock and metal bands, most notably two albums of Tool songs, as well as Black Sabbath, Radiohead, the Beatles, and even Coldplay among others.

## Most covered songs

The Beatles have been covered more than any other band; "Yesterday" has been covered over three thousand times since its original release in 1965, "Come Together" has also been covered numerous times. George Gershwin's "Summertime" (from Porgy and Bess) has had an estimated 2,500 versions recorded. Other songs which have been released many times as cover versions include the infamous "Louie Louie" by Richard Berry, "By The Time I Get To Phoenix" by Jimmy Webb, "We Will Rock You" (Queen), "Free Bird" (Lynyrd Skynyrd), "No Woman No Cry" (Bob Marley & the Wailers), "I Fought the Law" (Bobby Fuller), "How Deep Is Your Love" The Bee Gees and many of the less recent works of Bob Dylan and Leonard Cohen (as of December 5, 2004, there were at least 940 **published** cover versions of Cohen songs ).

## Covers in particular genres

### Metal

Many upcoming bands in the [metal](#) genre cover songs by their predecessors to gain public interest, although more established bands have also recorded covers. Some bands have taken this to an extreme, such as Iced Earth and Entombed, who have released entire albums of covers. In specific subgenres of metal, covers generally reflect the genre the band is in. The Norwegian black metal band Mayhem have recorded several Venom covers, while Mayhem themselves have been covered many times, their song Deathcrush has been covered around 80 times, according to Encyclopedia Metallum.

### Punk

[Punk music](#) is known for deconstructing classic rock or pop songs by reinterpreting them in punk form. Bands like Me First and the Gimme Gimmes, Rancid, NOFX, and Goldfinger are especially known for doing so.

An extreme example of punk cover versions is the punk tribute band Gabba, who mix the songs of ABBA and The Ramones.

### Hip-hop

In recent years, several jam bands and related groups have begun covering [hip hop](#) songs, most frequently only live in concert. Perhaps the most famous such-cover recorded in a studio and released commercially is a [bluegrass](#) version of "Gin and Juice" by Snoop Doggy Dogg, as performed by the Gourds. Other artists like Phish and Keller Williams have covered "Rappers Delight" (The Sugarhill Gang), "Baby Got Back" (Sir Mix-A-Lot) and other hip hop songs.

### Swamp pop

A type of cover version that existed from the early 1950s to the late 1970s in Louisiana was known as swamp pop. Contemporary and classic rock, R&B, and country songs were re-recorded with Cajun audiences in mind. Some lyrics were translated to French, and some were recorded with traditional Cajun instrumentation. Several swamp pop songs charted nationally, but it was mostly a regional niche market.

# Cowpunk

**Cowpunk** or **Country Punk** is a subgenre of [punk rock](#) that began in southern California in the 1980s, especially Los Angeles. It tended to downplay the fashion elements associated with the musically similar British [psychobilly](#) movement, and grew directly out of the influence of bands like the Cramps and The Gun Club with few direct ties to the British movement. Bands associated with cowpunk include Blood On The Saddle, The Lazy Cowgirls, The Screamin' Sirens, Frank Black and the Catholics, Tex and the Horseheads, and others. Social Distortion, while initially a melodic [hardcore punk](#) band, had moved in a cowpunk direction in the late 1980s.

k.d. lang's earliest albums can also be characterized as cowpunk, although she gradually evolved toward a more traditional country style.

The influence of cowpunk today is most apparent in the work of Throw Rag, Reverend Horton Heat and The Supersuckers, and traces of its influence can be detected in some of the work of The White Stripes.

# Cprog

**Cprog** is a sub-genre of music that links [progressive](#) music styles with [Christian music](#) themes and lyrics.

## Background

Up until fairly recently, many of the players in the world of progressive music have come from one of two basic philosophical schools. The first is secular humanism, with little or no religious content or message. The second is the loosely understood "new age" movement. While these themes have been common in progressive rock music, explicitly Christian themes have been rare (with Rick Wakeman being a notable exception).

In the late 1990's, Bill Hammell started several email lists (including the christianprog list) which served as a point where many of the Christian progressive rock artists could network and help develop into a sub-genre. One of the results of the email list discussions was the CPR anthologies. As more musicians have blended the Christian faith with working as progressive musicians, the term *Cprog* has been coined to describe and promote the sub genre.

## **Moves for industry recognition**

The Dove Awards have a history of rewarding Christian musicians for their spiritual and musical offerings. Christian progressive rock (CProg) fans and artists are asking the Gospel Music Association to launch a new Dove Award for Progressive Rock Album of the Year.

## **Musicians considered Cprog**

Presently, one of the foremost exponents of the sub-genre is Nashville-based multi-instrumentalist Neal Morse. Others who are sometimes categorized this way are Glass Hammer, Ajalon, Proto-Kaw, and Salem Hill.

## Artist list

After the Fire – UK based band founded in the 1970s (initially 'Cprog')

Ajalon

Atomic Opera

Dave Bainbridge – guitarist with Iona

Glass Hammer

Iona – UK based band with Celtic flavour

Kerry Livgren – songwriter famous for work with Kansas (band)

Neal Morse – Nashville based using progressive and other styles

Narnia – band from Sweden

Proto-Kaw – heavy progressive style - regrouping of previous Kansas (band) members

Salem Hill

Tourniquet - progressive speed metal / heavy metal

Rick Wakeman – Yes keyboardist and solo artist

## Notable albums

## Criticism and sonata form

This article describes the history of **musical criticism as applied to [sonata form](#)**. For the history of sonata form as such, see [History of sonata form](#). The form itself is defined and described in [sonata form](#).

In the late 1700s as the form began to emerge, the emphasis was on a regular layout of works for performers and listeners. Since most works received, at most, one rehearsal, and seldom more than a few performances, this accessibility of layout was considered important. Emphasis was on effects within the course of a strongly framed work.

A curious aspect of sonata form during the [Classical era](#) was that the leading contributors to its development, Haydn, Mozart, and Beethoven all seemed to have had very little to say about it. One might imagine, for instance, that during all of his various experiments and innovations with sonata form, Beethoven might have remarked to a colleague at least once about what he was doing, but if so it was never recorded.

It was only well after the form had been firmly established by the Classical composers that it became a central topic of musical criticism. Sonata form was originally described by an Italian theorist as "a two part form" where each part was repeated. By the early 19th century, Carl Czerny, a student of Beethoven's, described it in terms of themes, which is how it is generally still described today. The description now most commonly applied to sonata form today was outlined by Antonin Reicha in 1826, and codified by A.B. Marx in 1845 and by Czerny in 1848. Each of them elaborated rules for composing, and intended the outline to be as much prescriptive as descriptive.

In the 1800s the sonata form assumed a place next to the fugue as a cardinal musical structure, and works were laid out in increasingly complex ways to utilize the sectional nature of the sonata form. In this period ETA Hoffman and Robert Schumann proselytized for the use of the sonata form as the poetic means of expressing pure music, unallied with words or other arts.

The late 19th century was the pinnacle of the idea of the sonata form as the means of containing the huge number of influences in music. Hanslick argued that formal comprehensibility rested on the use of the sonata form. He criticized what he regarded as radical innovations by Richard Wagner and by needless extension. The critical dialog between explosive trends in Wagner and Liszt, and implosive trends in Brahms, reached outward into politics, art and science for metaphors. There was a great deal of internal tension, even among composers, between the formal rules and the desire for expression. Tchaikovsky berated himself for not being able to produce highly structured symphonies.

The early 20th century saw an attack on the extended sonata form, and a search by many composers for more organic and more compressed sonata forms. Critics such as Olin Downes proclaimed the idea that the sonata form's vigor was an analogy for social and artistic vigor, and a defense against empty works. At the same time, adherence to established structures took on a different meaning in Soviet Russia, where composers who failed to compose along established lines were accused of "formalism", as opposed to the established sonata forms which were called "natural" and "realistic". At various times even prominent composers such as Shostakovich and Sergei Prokofiev were denounced for their music.

## Charles Rosen

In his influential books *The Classical Style* and *Sonata Forms*, Charles Rosen has understood why the particular arrangements of keys and themes used in classical sonata form have held such importance for classical composers and their listeners. Rosen conceives the classical era's sonata form movement as a kind of dramatic journey through the system of musical keys. Modulations that move upward in the circle of fifths (in the direction of the sharp keys) increase musical tension, and modulations that move downward reduce it. Sonata form first increases tension through the move to the dominant (the crucial musical event of the exposition), then increases tension further in the development through the exploration of remote keys. The recapitulation resolves all this tension by returning everything to the tonic. He also argues that, over time, this idea would become the basis for all musical movements, regardless of their formal plan.

The use of the circle of fifths makes sense of a number of observations about the deployment of keys in the classical sonata form:

- Use of keys other than the dominant for the second subject group generally go still higher than the dominant in the circle of fifths; see [sonata form](#) for details.
- Occasionally, the reappearance of the opening material at the beginning of the recapitulation is in the subdominant key (a famous example is Mozart's Piano Sonata K. 545), which serves the same resolving function as the tonic.
- Secondary developments often also reach the subdominant key, with equivalent resolving function.

## Susan McClary

The later 20th century saw the rise of [postmodern](#) and literary criticism, critical theory, narratology, feminism and other identity politics, and film theory, all which was applied to sonata forms. One particularly controversial work is 1991's *Feminine Endings*, by Susan McClary. Her book describes how sonata form may be interpreted as sexist or misogynistic and imperialistic, and that, "tonality itself - with its process of instilling expectations and subsequently withholding promised fulfillment until climax - is the principal musical means during the period from 1600 to 1900 for arousing and channeling desire." She analyzes the sonata procedure for its constructions of gender and sexual identity. The primary, once "masculine", key (or first subject group) represents the, always in narrative, male, self, while the secondary, "feminine" key (or second subject group) represents the Other: female, foreigner, difference, a territory to be explored and conquered, assimilated into the self and stated in the tonic home key. This reading is based in the work of Lacan and Derrida.

## Robert Kaye

These Twelve positions are the Major building blocks of the "Classical Method". They are the essential part of this study. They give in return a technique unlike any other. I can only theorize what I know from facts. Facts from hearing, Playing and facts from the obvious numbers that one can see and reveal into if desired. Because the 5th is on the bottom. then the door will always be open to play in all the keys with ease. And circle eternally from one key to the other automatically. This 5-1-3 folding technique (sonata Form) will enable you to play, not only with, out of tune instruments, but instruments that date back to where the dissidents cannot be heard. Or they will not sound like today's pianos. Therefore a blessing if you own a cheap piano. It will give you a whole new perspective in playing modern day synthesizers or string machines. It is the classical element of the orchestra sound of Strings. One can technically play symphonies with string machines of today's date. The folding sonata elements of the 5-1-3's are a technique that will be your friend for life. And enrich your playing ability. These are the basic elements for Baroque, Classical, Romantic, Classical Improvisation & Compositional piano. Rag piano, Jazz piano, Cocktail piano, needless to say. Rock piano also, in which hardly anyone uses. Bop, straight Jazz ect..

# Crossover

In [music](#), **crossover** is a term used to describe material borrowed from a different style or genre and whose popularity crosses the considered boundaries of styles or genres.

For example, in the early years of [rock and roll](#), many songs originally recorded by African-American musicians were re-recorded by white artists (such as Pat Boone) in a more toned-down style (often with changed lyrics) that lacked the hard edge of the original versions. These [covers](#) were popular with a much broader audience. White artists were also more likely to be included in the playlists of radio stations. Songs that become successful with a new audience are called crossovers, as they "cross over" from one audience to another.

## Crossover as appreciation of music not normally listened to by a given audience

One way of defining crossover is a work from one genre of music becoming popular among listeners who ordinarily listen to another, more popular genre. For example, particular works of [classical music](#) sometimes become popular among individuals who mostly listen to [popular music](#). Some classical works that achieved crossover status in the twentieth century include the Canon in D by Johann Pachelbel, the Symphony No. 3 by Henryk Górecki, and the second movement of Mozart's Piano Concerto No. 21, K. 467 (from its appearance in the 1967 film *Elvira Madigan*).

Often crossover results from the appearance of the music in question in a film [score](#). For instance, Sacred Harp music experienced a spurt of crossover popularity as a result of its appearance in the 2003 film *Cold Mountain*, and bluegrass music experienced a revival due to the reception of 2000's *O Brother, Where Art Thou?*. Even [atonal music](#), which tends to be less popular among classical enthusiasts, has a kind of crossover niche, since (as Charles Rosen has noted) it is widely used in film and television scores "to depict an approaching menace."

Crossover is highly prized by executives of the music industry, since the profits of a recording that achieves crossover status can be high.

## Crossover as music of mixed genres

In [popular music](#), the term *crossover* (together with the more appropriate *crossover rock*) was used in the 1980's to describe a style of aggressive rock and roll. Bands who appreciated the fast [hardcore punk](#) stylings of bands like Minor Threat and Negative Approach, and equally appreciated the fast [heavy metal](#) stylings of Slayer and Metallica, began combining elements of both styles for a new musical style that became generally known as [crossover thrash](#) but is sometimes called punk metal. The first notable band of this style was New York City's Stormtroopers Of Death. The two hotbeds of the style were located in New York City and Southern California, home to Suicidal Tendencies. Other notable bands of the era were the Crumbsuckers, Hiram Gribble, Leeway, Cryptic Slaughter, The Cro-Mags, Method Of Destruction, and Dirty Rotten Imbeciles (aka DRI).

Crossover can also refer to another very popular style that appeared in the early 1990's, when bands would mix together a multitude of pop styles such as [funk](#), [hip hop](#), [punk rock](#), and some [heavy metal](#). This style was initially referred to as [funk metal](#). Some well-known crossover artists are Faith No More, Red Hot Chili Peppers and Rage Against The Machine.

However, crossover as mixing of genres in one piece has a longer tradition than that. Deep Purple's Concerto for Group and Orchestra (1969) and Gemini Suite Live (1970) are the earliest examples of this, wherein pop music crosses the border with classical music. Around the 1970s several pop music artists produced such classical/pop crossover music. For example, Frank Zappa composed pieces for performance by a classical orchestra. As soon as 1970, Alan Stivell began to systematically create a music from an interceltic cross-over to a universal cross-over, mixing it with a maximum of styles and cultures.

This is also called fusion, especially [jazz fusion](#) and celtic fusion, which mix [jazz](#) and [celtic music](#) with other styles.

# Crossover thrash

**Crossover Thrash** was a term used in the 1980s to describe the first wave of bands that mixed [hardcore punk](#) (or more specifically the part of it called [thrashcore](#)) and [thrash metal](#). Today the term "punk metal" is used to describe the genre of music that fuses elements of [Punk Rock](#) and [heavy metal](#) as well.

One of the first bands to be cited of having mixed predominant elements of [hardcore punk](#) and [metal](#) could be considered to be Suicidal Tendencies, whose debut album, released in 1983, blurred a line between the two genres. Some of the earliest bands are noted as being D.R.I. (with their albums Dealing With it and Crossover), Corrosion of Conformity (Animosity) and Stormtroopers of Death (Speak English Or Die).

The style went on to include several other bands in the late 1980s, some include Cryptic Slaughter, The Accused, Wehrmacht, Attitude Adjustment, Crumbsuckers, Ludichrist, Nuclear Assault and Hirax. Suicidal Tendencies' second album, Join The Army, also has a much stronger Motörhead influence. No Mercy was another band fronted by Suicidal Tendencies' frontman Mike Muir, No Mercy have a very metal-influenced edge, the band would later break up and its line-up would merge with Suicidal Tendencies. Their release How Will I Laugh Tomorrow If I Can't Even Smile Today? almost fully transformed the band into a thrash metal band. Another transformation was that of California punk band TSOL who, due to vast line up changes, started to resemble that of a hair metal band.

By the early to mid 1990s, several of the bands had broken up. Corrosion of Conformity vastly changed their style and D.R.I. have not released any new material since 1995. In recent years though, there has been somewhat of a comeback in the style, with bands such as Municipal Waste, Holier Than Thou, Destruction's End, What Happens Next, DFA, Bones Brigade, and the now broken up Crucial Unit. As well as the reformation of The Accused, Hirax, and Nuclear Assault.

An interesting note is that several key thrash bands have made songs which may be considered crossover thrash. A few examples of this are:

- Megadeth - "The Disintegrators", from their Cryptic Writings album
- Metallica - "Motorbreath", from their Kill 'Em All album

# Crunk

**Crunk** music is a specific type of [hip-hop music](#), based out of the Southern United States, particularly on the eastern side of Atlanta, Georgia; Charleston, South Carolina; and Memphis, Tennessee. Crunk is classified as a subdivision of Dirty South or [Southern rap](#) and is an outgrowth of Atlanta-based [Miami Bass](#) and perhaps more directly, New Orleans' Bounce music.

## Overview

The Crunk genre originated in the early 1990s but did not become mainstream until the early 2000s. The first notable Crunk single was "Get Crunked Up" by Iconz which appeared in 2000 and was on BET's 106 and Park Countdown for a short period. In the year 2003, the Crunk genre had surprise hit singles with "Never Scared" by Bone Crusher, featuring Killer Mike and T.I., "Salt Shaker" by Ying Yang Twins, featuring Lil Jon & The East Side Boyz, "Damn!" by Youngbloodz (and produced by Lil Jon), and most notably "Get Low" by Lil Jon and the East Side Boyz featuring the Ying Yang Twins, which reached #2 on the Billboard Hot 100 singles chart. By 2004, Crunk and especially Lil Jon were in such high demand that superstar R&B singer Usher enlisted Lil Jon to produce his single "Yeah!" which went on to be the biggest hit of 2004, according to Billboard magazine. Lil Jon produced another #1 hit in 2004 with "Goodies" by R&B singer Ciara, featuring Petey Pablo. By 2005, however, it was widely perceived that Crunk was on the wane, with its appeal primarily confined to its birthplace of Memphis and in places in Atlanta.

Unlike the [East Coast](#) style of hip hop, Crunk has a high-energy and club-oriented feel. While other hip hop styles might involve a more conversational vocal delivery, Crunk usually involves hoarse chants and repetitive, simple refrains, similar to the style of late 20th Century [minimalism](#) which has the same repeating elements. Lyrics are based on a rhythmic bounce, which is very effective in a club environment. In fact, several crunk songs have been banned in venues due to how wild the crowds can get.

Looped [drum machine](#) rhythms are usually in the forefront of the mix, with the Roland TR-808 being especially popular. Many of the drum machines and the rhythms they produce were previously well known in specialty genres of dance music. Crunk also employs non-melodic sound effects such as whistles and synth blips.

Lil Jon & the East Side Boyz often claim to be the "Kings of Crunk", while Lil' Scrappy is referred to as the "Prince of Crunk" and Ciara is often referred to as the "Princess of Crunk". While these artists have embodied the term in the hip hop industry, the term was more widely exposed when Lil Jon named his albums Kings of Crunk and Crunk Juice. Serious, the founder of the Crunk Incorporated record label, is known as the "Lord of Crunk". Serious discovered both Lil' Scrappy and Crime Mob.

In the hip hop world, Crunk rappers have been criticized for lacking lyrical content and using essentially the same beats and styles. While agreeing that the subject of the lyrics are all more or less identical, others say that the music is specifically designed for the rowdy clubs in which this style thrives, and that it serves its purpose well for that scene. In any case, Crunk has established itself and will likely enjoy greater success due to the increased number of Crunk albums being released.

In early 2005, rapper Kanye West amusingly coined the term white crunk to describe the gritty drum sounds of the all Caucasian Scottish alternative dance-rock group Franz Ferdinand. West and the band met at the 2005 MTV Europe Music Awards, where they sat down together to share praise and advice. West feels that the white crunk vibe has affected his new work and is best exemplified on his 2005 single "Diamonds from Sierra Leone" from the album Late Registration.

# Etymology

## First known use of the word

During the first two seasons of his television program *Late Night with Conan O'Brien*, Conan O'Brien used the term "krunk" (an apparently invented nonsense word) as a multipurpose expletive, used as a replacement for the infamous "seven dirty words", explaining that it was the most profane expletive of all time. (In this sense, the word was very similar to "smeg" in the *Red Dwarf* universe.) O'Brien encouraged the guests on his show to insert the word into their conversations. The reason given was that the word was so new, television censors wouldn't know about it, thus allowing a curse word to go out over the airwaves. The show exhibited video clips of various people using the word, including one of Ice T (notorious in his rap persona for his use of expletive-laced language) sitting in the show's guest chair saying, "Wow, that's krunked up, man." Viewers at home were also encouraged to use "krunk" in conversation, so as to bring the word into common use. According to *Late Night* writer Robert Smigel, the word was invented by fellow writer Dino Stamatopoulos.

The next popular figures to use the word were Outkast, who in their 1998, song "Rosa Parks" said, "We the type of folks that make the club get Crunk".

## Unclear relationship between origins

The exact relationship between "crunk" and "krunk" is unclear. When American Idol judge Randy Jackson appeared on O'Brien's show on 30 April 2004 (nine years after O'Brien's endorsements of krunk), he used the word "krunked", but O'Brien seemed to have no recollection of the word. However, Urban Dictionary (where slang word definitions are submitted by users) attributes the word "crunk" to O'Brien.

## Misconception of word origin

Contrary to popular misconception, there is no evidence at all to suggest that *crunk* derives from *krank* (ill) in Yiddish or German. Similarly, there is no evidence to suggest that Jewish shopkeepers introduced the word to black communities in the southern United States.

## Other Meaning

Crunk is also thought to be derived from a combination of the words "crazy" and "drunk", or a combination of "chronic" and "drunk", referring to when someone is both drunk from alcohol and high on marijuana, at the same time.

Rap Artist Li'l John defines Crunk as a "state of heightened excitement".

Additionally, "crunk" is an onomatopoeic description of the noise a crane makes (as in, "the crunk of a crane").

## **instruments:**

**Mainstream popularity:** Chart-topping in the UK, less success elsewhere. Some success for [pop punk](#), especially [ska punk](#) and [Two Tone](#)

**Derivative forms:** [Alternative rock](#) – [Emo](#) – [Gothic rock](#) – [Grunge](#) – [Math rock](#) – [New Wave](#) – [Post-punk](#) – [post-punk revival](#)

[Anarcho-punk](#) – [Christian punk](#) – **Crust punk** – [Garage punk](#) – [Hardcore](#) – [Horror punk](#) – [Oi!](#) – [Pop punk](#)

[Anti-folk](#) – Chicano punk – [Death rock](#) – [Funkcore](#) – Jazz punk – [Psychobilly](#) – [Queercore](#) – [Ska punk](#) – [Two Tone](#)

Punk rock in Belgium – Brazil

[History](#) – [Cassette culture](#)

**Crust** is the extreme evolution of [hardcore punk](#). The genre might be considered hard to listen to and very abrasive, using elements of [anarcho-punk](#) and [grindcore](#) to create a unique sound that can either be fast and leaning to grindcore, or slow and mopey and/or melodic. Some have called this subgenre **stENCHcore**, after the Deviated Instinct 1987 DEMO, "Terminal Filth StENCHcore". Although not the same genre, crust is closely related to [d-beat](#), [anarcho-punk](#), [thrashcore](#) and [grindcore](#).

Lyrics to crust songs tend to be dark, and based around politics and current events and even some human emotion; topics such as nuclear destruction, environmentalism, racial equality, squatting, non-conformity, apocalypse, abolishing sexism, animal rights, veganism/vegetarianism, religious control, death (and/or escaping life) and anarchism are common. Crust is one of the darkest subgenres of punk, and also is one of the least recognizable as punk, in terms of sound. Elements of the crust sound can be heard in many Anarcho-punk bands, such as those signed to Profane Existence, Mortarhate Records, Havoc Records, & Life is Abuse Records.

Many consider the band Amebix to be the godfathers of crust punk, and consider the *Arise!* LP to be the first known defining crust punk album. The band Hellbastard, who actually coined the term "crust", (after their 1986 "RIPPER CRUST" DEMO) was one of the first bands to play the genre as it commonly recognized today.

Listeners of crust music are often referred to as "crusties".

# Crystallophones

A **crystallophone** is a [musical instrument](#) that produces sound from glass.

One of the most well known crystallophones is the glass harmonica, a set of rotating glass bowls which produce eerie, clear tones when rubbed with a wet finger.

The glasschord (or glasscord) resembles the celesta but uses [keyboard](#)-driven hammers to strike glass bars instead of metal bars.

The glass marimba is similar to the marimba, but has bars of glass instead of wood. The bars, which the performer strikes with padded sticks, are perched on a glass box to provide the necessary resonance.

A rare Thai instrument called ranat kaeo (literally "glass xylophone") has been used by the Thai music ensemble Fong Naam; it appears on their 1992 CD *The Sleeping Angel: Thai Classical Music*.

## Cult band

A **cult band** is a term often used to describe a [rock and roll](#) band with a dedicated base of fans whose appreciation of the band goes beyond merely enjoying their [music](#).

Some of these bands may also be, or may have been at one time, mainstream commercial successes (examples: Nirvana, the Grateful Dead, and The Doors).

Many other cult bands have not been commercially successful in the mainstream sense, but have acquired a strong, albeit small, fan base (examples: Captain Beefheart, X, Hawkwind, Atticus, and John's Children.)

Some cult bands may be known as [one-hit wonders](#) within the broader [popular music](#) scene, but have a following which appreciates all their music, not just their hit (examples: Bloodrock, Devo, and The Pursuit of Happiness.)

Cult bands often have a unique conception or musical style which has led to their cult status. It is this uniqueness which sets the band apart from others and which fans find attractive. This also has prevented some cult bands from achieving wider success, as some cult bands are known for experimentation or musical styles outside of mainstream tastes. Often, cult bands are no longer performing and recording, but continue to have a following. Indeed, the following today can be larger than when the band was still together.

Specific musical styles may also have a cult following of the entire subgenre, including [ambient music](#), garage bands, [grunge](#), [heavy metal](#), [new wave](#), [progressive rock](#), [psychedelic music](#), [punk rock](#), [ska](#), [southern rock](#), [techno](#), and [surf music](#).

# Cumbia

## Cumbia

**Stylistic origins:** African music, possibly Guinean cumbe

**Cultural origins:** African and Amerindian slaves in Colombia.

**Typical instruments:** [Percussion](#) and [woodwind](#); [drums](#), claves, güiro, [flutes](#) and maracas. Other: [Saxophone](#), [Trumpets](#), [Keyboards](#), [Trombone](#), [guitar](#), [accordion](#), Timbales with cowbell.

**Mainstream popularity:** Beginning in the 1950s, across Latin America, especially Colombia, spreading into other countries; El Salvador, Peru, Argentina and Mexico

## Subgenres

[Cumbia villera](#), [Mexican cumbia](#), Peruvian cumbia

## Fusion genres

[Cumbia rap](#)

## Regional scenes

Colombia - [Argentina](#) - [Mexico](#) - El Salvador - Bolivia - Peru

**Cumbia** is originally a Colombian [folk dance](#) and [dance music](#) and is Colombia's representative national dance and music along with vallenato. Cumbia is very popular, widely known in the Latin music mainstream (except Brazil); South America, as well as Central America and Mexico, with lots of regional variations and tendencies. The traditional instruments of cumbia were mainly percussion; different types of [drums](#), claves and a güiro, and [woodwinds](#); [flutes](#).

Modern cumbia includes instrumental mixing; [guitars](#), [accordions](#), [bass guitar](#), modern [flutes](#) and modern deep-toned drums and other [percussions](#). The basic [rhythm](#) structure is 4/4. Cumbia is the net intersection of two cultures that settled in the region of what is now northern Colombia at different times; the Amerindians and African slaves. Cumbia began as a courtship dance practiced among the slave population that was later mixed with the European instruments and influence.

## Origins

Cumbia is believed to be a variant of the African Guinean cumbe music. Cumbia started in the northern region of Colombia, mainly in or around Cartagena during the period of Spanish colonization. Spain used its ports to import African slaves, who tried to preserve their musical traditions and also turned the drums and dances into a courtship ritual. Cumbia was mainly interpreted with just drums and claves.

The slaves were later influenced by the sounds of Amerindian instruments from the Kogui and Kuna tribes settled between the Sierra Nevada de Santa Marta and the Montes de María; like the millo flutes, gaita flutes and güiros. Africans and Amerindians working together as slaves created a mixture from which the gaitero (cumbia interpreter) appeared, with a defined identity by the 1800s. (These gaiteros are not to be associated with the Venezuelan Zulian *gaiteros*.) The European guitars and accordions were added later, through Spanish influence.

## **Cumbia as a courtship ritual**

The danced courtship ritual was rhythmically performed with music played by groups of men and women couples; women playfully waving with their long skirts and holding a candle, while the men danced behind the women, with one hand on his back and the other one holding his hat, putting it on and off and waving it. Men also carried a red type of handkerchief which they either wrapped around their necks, waved in circles in the air or handheld together with women. Until mid-20th century, cumbia was considered a vulgar dance, practised only by the lower classes.

## Musical instruments

Traditional instruments used in cumbia:

- Drums: Cumbia drums were of African origin and were brought along with slaves to the Americas by the Spanish conquerors. Africans used wood, ropes made out of sisal (*Agave sisalana*), and animal dry skins to make their drums. They either played the drum by hitting it with their hands or with sticks. Sometimes they wrapped the tip of the sticks with dry skin to prevent wearing off the drum. Cumbia interpreters produce variations of the sound emitted by the drum by hitting it on almost every area of the wooden base and dry skin.
- Claves: claves are a couple of hard thick sticks, usually used to set the beat through out the song.

## Cumbia in Latin America

- **Colombia:** Today traditional cumbia is preserved and considered representative of the Colombian identity, but especially in the Northern Caribbean coast. It is also associated to Barranquilla's Carnival and the Vallenato Legend Festival. Modern forms of Cumbia are only preferred by the lower classes, but widely accepted when fusioned with other genres such as vallenato or [rock](#); similar to Carlos Vives signature.
- **Argentina:** Tends to be appreciated more by the lower social classes, and is often scorned by the upper classes. In Argentina, for example, this social divide is exemplified by the [cumbia villera](#) phenomenon, that intends to represent and resonate with the poor and marginalized dwellers of villas miseria (shanty towns and slums), with lyrics glorifying theft and drug abuse, much like Northern American [hip hop](#). However, it must be noted that a lighter form of cumbia enjoyed widespread popularity in Argentina during the 1990s (see [Argentine cumbia](#)).
- **Chile:** Popular with the lower social classes, it is often made fun of by the middle and upper classes. Nevertheless, it is widely danced at parties and gathering.
- **Mexico:** (see [Mexican cumbia](#)),

## Cumbia rap

**Cumbia rap** is a fairly new spin off of the original [cumbia](#) genre. It consists of a more traditional Colombian rhythm, as well as some [hip hop](#) and [reggae](#) type additions. Pioneers of cumbia rap include Crooked Stilo from Los Angeles, Tropa Estrella, and Chicos de Barrio from Coahuila, Mexico, as well as the Kumbia Kings from Texas.

## Cumbia villera

**Cumbia villera** ("shantytown cumbia", [Èkumbja ²iÈfe~a]) is a typically Argentine form of [cumbia](#) music born in the villas miseria (shantytowns) around Buenos Aires and then popularized in other large urban settlements.

## Origins

Ever since the 1930s there has been a strong migration from the provinces (as well as from neighboring Uruguay, Paraguay and Bolivia) to the Greater Buenos Aires area, with migrants bringing along their dance styles. The musical mix and the dynamics of big-city life eventually gave birth to new styles. Notably, chamamé from Corrientes was cross-pollinated with Brazilian and Andean rhythms and cuartetazo from Córdoba. Tropical was a popular catch-all term for this hybrid during the 1970s and 1980s.

Partly due to the popularity of Peruvian and Bolivian cumbia bands, the focus of *tropical* shifted towards cumbia just as middle-class *porteños* started attending upscale *bailantas* (*tropical* dance parties) in the late 1980s.

In the 1990s, commercial interests started promoting local cumbia numbers such as Amar Azul and Ráfaga, but their emphasis on attracting wider audiences caused traditional cumbia lovers to search for bands that could claim authenticity, and some did so by delving ever deeper into themes of crime and drug abuse. Foremost among those was Los Pibes Chorros ("The Thieving Kids"). Other bands in this vein are Yerba Brava ("Tough Weed", a play on words referring both to yerba mate and marijuana) and Damas Gratis ("Ladies' Night", literally "Ladies for Free").

The pauperization of vast segments of the population due to the economic slowdown that started in 1998 provided a social substrate for the genre. The term cumbia villera took hold in the media, and many bands were propelled into fame when emerging football stars from the shantytowns (such as Carlos Tévez) proclaimed their allegiance.

## Present outlook

Radio and TV have incorporated *cumbia villera* into their offerings, notably on weekend *omnibus* variety shows, where music runs the gamut from folklore to *tropical*. The *villeros* are immediately recognizable by their long hair and bad-boy attitude, even though the more provocative lyrics are seldom broadcast.

An example of such lyrics, from *Los Pibes Chorros* (note that much of the meaning cannot be accurately translated):

*Aunque no nos quieran somos delincuentes*  
*Vamos de caño, con antecedentes*  
*Robamos blindados, locutorios y mercados*  
*No nos cabe una, estamos re jugados*  
*Vendemos sustancia y autos nos choreamos*

"Though nobody loves us we are mobsters"

"We are armed and have criminal records"

"We rob armored trucks, cybercafés and supermarkets"

"We're up for anything and have nothing to lose"

"We sell drugs and we steal cars"

In recent years, due to pressure from broadcasters and (allegedly) influence from Evangelical preachers active in the shantytowns, some bands have shifted back to love songs instead of, for example, commenting on the purity of the cocaine sold in the *villa*.

## Influences and parallels

Whilst the arrangements of Colombian or Bolivian cumbia can be quite complex (even traditionalists like Pastor López use a full [brass](#) section), cumbia villera recordings are often made at the lowest possible expense. As this invariably entails the use of [synthesizers](#), Argentine cumbia can be described, like Algerian raï, as a "low fidelity, high tech" genre.

Other than raï, cumbia villera also has obvious parallels with [gangsta rap](#) in the United States, the rhythms of the favelas of Rio de Janeiro, the explosion of [punk rock](#) and [ska](#) in the UK during the 1970s and 1980s, and the emergence of bad-boy [reggae](#) in 1960s Jamaica.

Puerto Rican import reggaeton has made inroads into cumbia villera audiences, partly due to thematic similarities.

For years, Argentine [rock and roll](#) has had many working-class and shantytown heroes (notably Pappo and cult bands like Los Redonditos and Bersuit Vergarabat). This strain of rock is intertwined with cumbia villera in many people's preferences.

## Curse of the ninth

The **curse of the ninth** is the superstition that a composer of symphonies, from Beethoven onwards, will die soon after writing his Ninth Symphony.

This superstition is thought to have begun with Gustav Mahler, who after writing his Eighth Symphony wrote *Das Lied von der Erde: Eine Symphonie für Tenor-Stimme, Contralt -Stimme und große Orchester* (nach Hans Bethges "Die chinesische Flöte"). Then he wrote his Symphony No. 9 and thought he had beaten the curse, but died with his Tenth Symphony incomplete.

From Mahler's point of view, the only two victims of this curse had been Beethoven and Bruckner, and possibly Louis Spohr. Franz Schubert's Great C major Symphony would've been called No. 7 in Mahler's time, and Dvořák considered the score of his early C minor Symphony lost. Bruckner was superstitious about his own Ninth Symphony, not because of the curse of the ninth, but because it was in the same key as Beethoven's Ninth. (Bruckner considered his F minor Symphony just a school exercise, and the D minor Symphony nowadays known as No. 0 he declared invalid).

In an essay about Mahler, Arnold Schoenberg wrote: "It seems that the ninth is a limit. He who wants to go beyond it must pass away. It seems as if something might be imparted to us in the Tenth which we ought not yet to know, for which we are not ready. Those who have written a Ninth stood too close to the hereafter."

After Mahler, some composers used as examples of the curse include: Kurt Atterberg, Alfred Schnittke, Roger Sessions, Ralph Vaughan Williams, Egon Wellesz. Alexander Glazunov completed the first movement of his Ninth but worked on it no further for the 26 more years he lived.

Some counterexamples are: Glenn Branca and Hans Werner Henze (10 each), Edmund Rubbra and Robert Simpson (11 each), Allan Pettersson and Dmitri Shostakovich (15 each), Heitor Villa-Lobos (16), Nikolai Myaskovsky (27), Havergal Brian (32), Alan Hovhaness (63). Henze and Rubbra both wrote choral Ninths.

# Cutting

In hip hop music, **cutting** is a disc jockey technique used to loop records. Originated by DJ Grandmaster Flash the technique consists of "manually queueing up duplicate copies of the same record in order to play the same passage, cutting back and forth between them." (Ankeny) This is necessary to isolate and extend breaks into breakbeats.

Also a term from the days of vinyl records. To "cut a record" was to record a record because the grooves in the original acetate were physically cut according to the music.

# Cyclic form

**Cyclic form** is a technique of [musical construction](#), involving multiple [sections](#) or [movements](#), in which a [theme](#), [melody](#), or thematic material occurs in more than one movement as a unifying device. Sometimes a theme may occur at the beginning and end (for example, in the Brahms Symphony No. 3); other times a theme occurs in a different guise in every part (Berlioz, *Symphonie Fantastique*).

Examples can be found throughout music history. The [Renaissance](#) cyclic mass, which incorporates a usually well-known portion of [plainson](#) as a cantus firmus in each of its sections, is an early use of this principle of unity in a multiple-section form. Examples can also be found in seventeenth century instrumental music, for instance in the suites of dances by Samuel Scheidt in which a ground bass recurs in each movement. When the movements are short enough and begin to be heard as a single entity rather than many, the boundaries begin to blur between cyclic form and variation form.

Typically the term applies to music of the nineteenth century and later, though, most famously including the Cesar Franck Symphony in D Minor, the *Symphonie Fantastique*, and numerous works by Franz Liszt. By late in the century, cyclic form had become an extremely common principle of construction, most likely because the increasing length and complexity of multiple-movement works demanded a unifying method stronger than mere key relation.

The term is more debatable in cases where the resemblance is less clear, particularly in the works of Beethoven, who used very basic fragments. The argument over whether the occurrence of the triplet figure in the third movement of the Beethoven Symphony No. 5 is an example of cyclic form has had significant proponents on both sides.

# Cymbal

**Cymbals** (Fr. cymbales; Ger. Becken; Ital. piatti or cinelli), are a modern [percussion instrument](#). Cymbals consist of thin, normally round plates of various cymbal alloys; see cymbal making for a discussion of their manufacture. Most modern cymbals are of indefinite pitch (tuned sets have been manufactured but are rare), whereas small cup-shaped cymbals based on ancient designs sound a definite note.

Cymbals are used in modern [orchestras](#) and many military, marching, concert and other [bands](#). They are one of the two instrument types that form the modern [drum kit](#), the other of course being the [drum](#), and as such are a basic part of much contemporary music. Even the most basic drum kit normally contains at least one suspended cymbal and a pair of hi-hat cymbals.

## Orchestral cymbals

Although cymbals are not often required they form part of every [orchestra](#); their chief use is for marking the rhythm and for producing weird, fantastic effects or adding military colour, and their shrill notes hold their own against a full orchestra playing fortissimo. Cymbals are specially suited for suggesting frenzy, fury or bacchanalian revels, as in the Venus music in Wagner's *Tannhäuser* and Grieg's Peer Gynt suite.

### Crash cymbals

Orchestral crash cymbals are traditionally used in pairs, each one having a strap set in the bell of the cymbal by which they are held. Such a pair is known technically as a pair of **clash cymbals**, although this term is rarely used, see *clash cymbals*. They are confusingly sometimes referred to simply as crash cymbals, although this term properly applies also to some suspended cymbals.

The sound is obtained by rubbing their edges together in a sliding movement rather than by clashing them against each other as laymen often suppose. A skilled player can obtain an enormous dynamic range from such a pair of cymbals. For example, in Beethoven's ninth symphony, one of their first appearances in an orchestral work, they make their entry pianissimo, adding a touch of colour rather than an almighty crash.

Clash cymbals are usually damped by pressing them against the player's body. A composer may write *laissez vibrer*, "Let them vibrate" (usually l.v.), *sec* (dry), or equivalent indications on the score; more usually, the player must judge exactly when to damp the cymbals based on the written duration of crash and the context in which it occurs.

Clash cymbals have traditionally been accompanied by the bass drum playing an identical part. This combination, played loudly, is an effective way to accentuate a note since the two instruments together contribute to both very low and very high frequency ranges and provide a satisfying "crash-bang-wallop". In older music the composer sometimes provided just one part for this pair of instruments, writing *senza piatti*, or *piatti soli* if the bass drum is to remain silent. However, the modern convention is for the instruments to have independent parts.

Clash cymbals evolved into the low-sock and from this to the modern hi-hat. Even in a modern drum kit, they remain paired with the bass drum as the two instruments which are played with the player's feet. However, hi-hat cymbals tend to be heavy with little taper, more similar to a ride cymbal than to a crash cymbal as found in a drum kit, and perform a ride rather than a crash function.

### Suspended cymbals

The second main orchestral use of cymbals is the **suspended cymbal**. This instrument takes its name from the traditional method of suspending the cymbal by means of a leather strap or rope, thus allowing the cymbal to vibrate as freely as

possible for maximum musical effect. Early jazz drumming pioneers borrowed this style of cymbal mounting during the early 1900's and later drummers further developed this instrument into the mounted horizontal or nearly horizontally mounted "crash" cymbals of a modern [drum kit](#).

Suspended cymbals are most often played with yarn wrapped mallets. However, some composers request other types of mallets like felt mallets or [timpani](#) beaters for different attack and sustain qualities. Suspended cymbals can produce bright and slicing tones when forcefully struck, and give an eerie transparent "windy" sound when played quietly. A tremolo, or roll (played with two mallets alternately striking on opposing sides of the cymbal) can build in volume from almost inaudible to an overwhelming climax in a satisfyingly smooth manner (as in Humperdink's Mother Goose Suite).

Furthermore, the edge of a suspended cymbal may be hit with shoulder of a drum stick to obtain a sound somewhat akin to that of a pair of clash cymbals. Other methods of playing include scraping a coin or a [triangle](#) beater rapidly across the ridges on the top of the cymbal, giving a "zing" sound (as in the fourth movement of Dvořák's Symphony No. 9). Other effects that can be used include drawing a cello or bass bow across the edge of the cymbal for a sound not unlike squealing car brakes.

Cymbals may also be dropped, intentionally or otherwise, causing a range of sounds depending on whether it hits the floor full on or spins before coming to a rest. This is not particularly good for the cymbal, however.

## Ancient cymbals

**Ancient cymbals** or **tuned cymbals** are much more rarely called for. Their timbre is entirely different, more like that of small hand-bells or of the notes of the keyed harmonica. They are not struck full against each other, but by one of their edges, and the note given out by them is higher in proportion as they are thicker and smaller. Berlioz's *Romeo and Juliet* calls for two pairs of cymbals, modelled on some ancient Pompeian instruments no larger than the hand (some are no larger than a crown piece), and tuned to F and B flat. The modern instruments descended from this line are the crotales.

## Origins

The origins of cymbals can be traced back to prehistoric times. The ancient Egyptian cymbals closely resembled our own. The British Museum possesses two pairs, 13cm in diameter, one of which was found in the coffin of the mummy of Ankhape, a sacred musician. Those used by the Assyrians were both plate- and cup-shaped. The Greek cymbals were cup or bell-shaped, and may be seen in the hands of innumerable fauns and satyrs in sculptures and on painted vases. The word cymbal is derived from the Latin **cymbalum** which itself derives from the Greek word **kumbalom**, meaning a small bowl.

## Terminology

During the middle ages the word cymbal was applied to the Glockenspiel, or peal of small bells, and later to the dulcimer, perhaps on account of the clear bell-like tone produced by the hammers striking the wire strings. After the introduction of the keyed dulcimer or clavichord the spinet, the word clavicymbal was used in the Romance languages to denote the varieties of spinet and harpsichord. Ancient cymbals are among the instruments played by King David and his musicians in the 9th century BC illuminated manuscript known as the Bible of Charles the Bald in the Bibliothèque Nationale, Paris.

## **Types of cymbals**

Particular types of cymbals include:

- Crash cymbals
- Clash cymbals
- Hi-hat cymbals
- Ride cymbals
- Sizzle cymbals
- Splash cymbals
- Suspended cymbals
- China cymbals
- Swish and pang cymbals
- Finger cymbals

# Cymbalum

## Overview

The **cymbalum**, **cymbalom**, **cimbalom** (most common spelling), **cambal**, **tsymbaly**, **tsimbl** or **santouri** is a [musical instrument](#) found mainly in the music of Hungary, Romania, Moldova, Greece and Ukraine. In Czechoslovakia it was also known as a **Cimbal**. It is related to the hammered dulcimer of Western Europe.

## History

The small cymbalum developed from the Persian santur, which entered Europe during the Middle Ages. The instrument became popular with Romanian Roma musicians (lutari) around the 19th century; by the end of the century was quite widespread, taking over from the cobza. [1] In Wallachia and Muntenia it is used almost as a percussion instrument. In Transylvania and Banat, the style of play is more tonal, heavy with arpeggios.

The santur (also called santoor in India) spread throughout the world. It was not only modified by nomadic Roma people and brought to Eastern Europe and The Balkans, but it also appeared in many other cultures:

- America: the Hammered Dulcimer
- China: **The Yangqin**
- Thai: **The Kim**
- Germany: **The Hackbrett**

## Types

The small cymbalum is usually carried by the musician, using a strap around the player's neck and leaning one edge of the instrument against the player's waist. The cymbalum is played by striking two beaters against the [strings](#).

In Hungary, the larger concert **cimbalom**, comparable in pitch range (and weight) to a small [piano](#)—but still played in the normal way with beaters—was first developed by József Schunda in the 1870s. It stands on four legs, has many more strings, and the later models had a damping pedal. (Prior to this, the player damped the strings by using his coat sleeves). This instrument eventually found its way to districts of Romania because these were all part of the Austro-Hungarian empire. In Romania, this large cymbalum is known as the *cambal mare* (literally "great cymbalum"). These instruments are fully chromatic and have a range of four full octaves.

A small cymbalum was also later produced in Ukraine during the 1950's that came with attachable legs and dampers but could be carried more easily than a concert instrument. These instruments were produced by the Chernihiv factory which produced many types of folk instruments.

## Players and places

One [composer](#) to make use of the cymbalum was Zoltán Kodály. His orchestral suite, Háry János, made extensive use of the instrument and helped make the cymbalum well known outside Eastern Europe. Igor Stravinsky was also an enthusiast, and he owned one, and made use of it in his ballet, Renard. Other composers like Pierre Boulez, Peter Eötvös, György Kurtág have made a great use of cymbalum in their works. Film composer Howard Shore used the cymbalum as well to express Gollum's sneaky nature in Peter Jackson's film The Lord of the Rings: The Two Towers (2002).

The instrument is known by different names in different countries and when played in different styles, roughly:

- Hungary: **cimbalom**
- Slovakia: **cimbál**
- Poland: **cymbaBy**
- Romania: **cambal** (the large cimbalom is called **cambal mare**)
- Belarus: **tsymbaly** (FK10;K)
- Ukraine: **tsymbaly** (F810;8)
- Russia: **tsymbaly** (F810;K)
- Greece: **sandouri**
- Slovenia: **embale**
- Klezmer & Jewish music: **tsimbl**

Some well known cymbalum players:

Joseph Moskowitz: The father of klezmer "tsimbl". One of the first to be recorded doing so.

Toni Iordache: An admired Romanian cambal player.

Kálmán Balogh: A modern Hungarian cimbalom virtuoso.

Michael Masley: A modern American, who plays the instrument with ten self-designed "bowhammers."

Blue Man Group: An American performance art group that plays the cymbalum with drumsticks to give the instrument an edgier sound.

## Trivia

- Cimbalom was used in the film score for the movie In the Heat of the Night (1967).

Categories: [String instruments](#) | [Chordophones](#)

## Czech bluegrass

**Czech Bluegrass** is a term that describes Czech interpretations of the [bluegrass](#) genre of music that emerged during the middle of the twentieth century in the southeastern United States.

The music's history and performance in the Czech lands, however, make it more than simple example of mimesis. The American genre and style have been absorbed and transformed in the Czech context to produce a spectrum of uniquely local phenomena. These musical compositions still bear enough relation to their inspiration to merit the "bluegrass" name--and are also quite compelling as musical art. Czech Bluegrass can be fruitfully considered with respect to ideas of transculturation, appropriation, traditionalism, and ["world" music](#).

## Background

Czech interest in things American dates to the nineteenth century, and is suffused with luminous conceptions of the Old West, Cowboys, Native Americans and other iconic images. Czech Tramping emerged as its main vector after 1918 in the newly formed Czechoslovak Republic. Tramping in this sense is a Czech-specific blend of ideas taken from Scouting, the German wandervogels, and Americanist romanticism. The music that accompanied the movement (tramp music) was a blend of Czech folklore, early [jazz](#) and other "syncopated music", such as barbershop, harmony singing, and popular songs from the U.S., France, and elsewhere. Czech tramping enthusiasts quickly incorporated the sounds and "style" of Bluegrass when they first heard this music in the late 1940s.

## The First Generation

Many Czech bluegrass "old-timers" date their involvement with something specifically bluegrass-like to the post-war years, a lean time for the music, but one that contains important developments. Information and inspiration for the music reached Czechs through unlikely means. When Czechs tuned in to Armed Forces Network radio programs from US military installations in Munich, they were flooded with a wealth of American music that they were able to freely use for their own ends. Tramping's song repertory was soon augmented with tunes learned from the likes of Bill Monroe, Johnny Cash, Jimmy Rodgers and others.

Instruments were often an obstacle, especially the still largely unknown [banjo](#). The few musicians who tried to get by on tenor banjo and guitar banjo had little to inform their attempts at emulating what they heard on the radio, until Pete Seeger's 1964 Prague concert. Banjoist Marko ermak was able to build the first Czech five-string [banjo](#) from photographs taken at this event. Soon after he started presenting this new style and instrument in performances with the group Greenhorns (Zelená i).

This first generation of players (which also includes Rangers and Taxmeni) inspired many Czechs to take up distinctly bluegrass-like music, necessitating cottage industries and then actual businesses to support this community with written materials, recordings, and of course, instruments.

Czechs were in many ways isolated from sources of American bluegrass, but still were able to stay informed, though not without some difficulty. Paradoxically the 1968 Soviet invasion helped Bluegrass in the Czech lands. It scattered many Czechs into exile, whence they were able to send books, recordings, and other materials back home. The first (and now longest-running) Bluegrass festival in Europe began its history in 1972 in Kopidlno, only seven years after Carlton Haney introduced the concept with his Roanoke (VA) Bluegrass Festival of 1965.

## Second Generation: The Progressive Impulse

When recordings by the band New Grass Revival started spreading through the Czech bluegrass community in the 1970s-80s, interest was sparked in the progressive possibilities of this music. The band Poutníci are a Brno-based group that included in their repertory bluegrass standards translated into Czech, newly composed and more [folk](#)-like songs, as well as classical instrumentals adapted for bluegrass instrumentation. They also sing almost entirely in the Czech language, making their music more accessible to wider audiences in their own country. This group continues to play today, with almost entirely new personnel. Lead singer and songwriter Robert KYesean has become one of the most well-regarded Czech "[folk](#)" singer-songwriters, and has continued his trajectory away from the core of bluegrass with his band Druhá Tráva, who are best known in the U.S. for their collaboration with former Bluegrass Boy Peter Rowan.

Mandolinist/Fiddler JiYí Plocek left Poutníci to found the band Teagrass and has created an exciting performance idiom that includes elements of more traditionalist bluegrass, [jazz](#), klezmer, Moravian folk music, and other regional traditionalist genres.

Petr Kos is another notable composer/bandleader known more for the poetics of his texts than for his solid but sometimes unimaginative [mandolin](#) chops. Like KYesean, he moved from emulative beginnings to a style that is less musically indebted to Bluegrass, though his band has always maintained the traditional bluegrass instrumental lineup.

## **(Neo-)Traditionalism**

The bluegrass boom in the years following the 1989 velvet revolution was an expansion that attempted to fill the realm of possibilities Czechs enjoyed after being freed from the constrictions of state socialism. Druhá Tráva toured the U.S., and American artists were more able to perform in the newly forged (as of 1993) Czech Republic and its counterpart, Slovakia. This bubble didn't last, however. Druhá Tráva and Poutníci as well as some other hybridizing groups still perform successfully, but are not part of active musical development.

In the last decade enthusiasts in the Czech Republic--following trends in the U.S. community--have nurtured a strong interest in the traditionalist forms of the music. Groups like Reliéf, Bluegrass Cwrkot, Petr Brandejs Band, The Bucket, Roll's Boys, Dessert, and many more fit into this category. They all perform aspects of bluegrass drawn from work by American musicians of the early days of the genre, including Bill Monroe, Flatt and Scruggs, Jimmy Martin, and all the usual suspects.

## Current Scene

The range of "bluegrass" expressions in the Czech Republic is wide. All the streams of emulation and innovation persist, serving different needs and sub-communities. An interesting current phenomenon is the growing streams of bluegrass music and materials that are exported from the country. Czech bluegrass bands of the more traditionalist variety tour to some degree in the U.S., but find it more practical to limit their travel to Europe, where they are known for their masterful instrumental and vocal performance. Czech luthiers have built a reputation for their fine craftsmanship and quality instruments. Makers such as JiYi Lebeda, Jirka Holoubek, and Eduard Kristofek produce guitars, mandolins, and dobros that are known and purchased world-wide. Most significantly, perhaps, are the metal parts produced by banjo-makers Jarda Procha, LÁa Ptá ek, and Eduard Kriřtofek, which are used throughout the world, most notably by Gibson and other established U.S. makers.

# Dances

**Dance** (from Old French *dancier*, perhaps from Frankish) generally refers to human [movement](#) either used as a form of expression or presented in a social, spiritual or performance setting.

**Dance** is also used to describe methods of non-verbal communication (see body language) between humans or animals (bee dance, mating dance), motion in inanimate objects (the leaves danced in the wind), and certain [musical forms](#) or [genres](#).

People who dance are called **dancers** and the act of dance is known as **dancing**. An event where dancing takes place may be called **a dance**. [Choreography](#) is the art of making dances, and the person who does this is called a choreographer.

Definitions of what constitutes dance are dependent on social, cultural, aesthetic artistic and moral constraints and range from functional movement (such as [Folk dance](#)) to codified, virtuoso techniques such as [ballet](#). In sports, gymnastics, figure skating and synchronized swimming are dance disciplines while Martial arts 'kata' are often compared to dances.

## Origins of dance

Unlike other early human activities such as the production of stone tools, hunting, cave painting, etc., dance does not leave behind physical artifacts or evidence. Thus, it is impossible to say with any certainty when dance became part of human culture. However, dance has certainly been an important part of ceremony, rituals, celebrations and entertainment since the birth of the earliest human civilizations. The origins of dance are traceable through archeological evidence from prehistoric times such as Egyptian tomb paintings depicting dancing figures from circa 3300 BC to the first examples of written documentation from circa 200 BC.

One of the earliest structured uses of dance may have been in the performative retelling of mythological stories--Indeed, before the introduction of written languages, dance was one of the primary methods of passing these stories down from generation to generation. <sup>[1]</sup>

Another early use of dance may have been as a precursor to ecstatic trance states in healing rituals. Dance is still used for this purpose by cultures from the Brazilian rainforest to the Kalahari Desert. <sup>[2]</sup>

Rock-shelter drawings in India reveal the earliest examples of dance. Figure E-19 at the Bhim-Betka rock-shelters, drawing of 'urddhakeshin' Shiva at Nawda Todo, forms of monkeys at Gupteshvara and a number of human figures at Pahadgarh, Tikla and Abachand present evidence of dance being in prevalence those days. These drawings belong to the period from 5000 to 2000 B. C. As reveal the stone statuette of male dancer from Harappa and the bronze figurine of dancing girl from Mohenjodaro, the Indus Valley civilization had a well-evolved dance culture stretching in all probabilities from its real life to its artefacts.

Many contemporary dance forms can be traced back to historical, traditional, ceremonial, and ethnic dances.

## Dancing and music

Although dance and [music](#) can be traced back to [prehistoric](#) times it is unclear which artform came *first*. However, as [rhythm](#) and sound are the result of movement, and music can inspire movement, the relationship between the two forms has always been symbiotic.

Many early forms of music and dance were created and performed together. This paired development has continued through the ages with dance/music forms such as: Jig, [Waltz](#), [Tango](#), [Disco](#), Salsa, [Electronica](#) and [Hip-Hop](#). Some [musical genre](#) also have a parallel dance form such as [Baroque music](#) and Baroque dance where as others developed separately: [Classical music](#), Classical ballet.

Although dance is often accompanied by [music](#), it can also be presented alone (Postmodern dance) or provide its own accompaniment (tap dance). Dance presented with music may or may not be performed *in time* to the music depending on the style of dance. Dance performed without music is said to be *danced to its own rhythm*.

## Dance in Indian Canonical Literature

The first millennium B. C. in India has been the era of canonical texts seeking to set the rules of social management, private life, linguistic discipline, public finance, state policy, poetics, dramatics. In the matter of dance, Bharata Muni's 'Natyashastra' is the earliest available text.

Though its main theme was drama, it dealt with dance also at a considerable length. On one hand, it elaborated various gestures of hands, which a dance comprised, and on the other, classified such gestures and movements as graceful and more vigorous; the former, defining the 'lalita' form of dance - 'lasya'; and the latter, its vigorous form 'tandava'. Dance has been classified under four categories and into four regional varieties. It named these categories as secular; ritual; abstract; and, interpretive. Bharata's regional geography has completely changed and is hardly identifiable, and so has regional varieties except one - 'Odra Magadhi', which after decades long debate, has been identified as present day Mithila-Orissa region and the dance form, as Odissi.

Dance-styles many times died and as many times revived and so did Bharata's perception. But, despite, in his interpretive dance the distant roots of the present day 'Kathak' might be traced; so those of 'Bharatanatyam' and Odissi, in his ritual dance; and, of 'Mohini Attam' and 'Kuchipudi', in his secular dance. Abstractness is now the feature of almost all classical Indian dance forms.

## Dance as an art form in Europe

As European culture became more cosmopolitan, dances from various areas were practiced outside of those areas, on the one hand, and new dances began to be invented, especially in Italy. As dances began to be performed outside of their cultural context, instruction manuals were now required.

The first dance academy was the Académie Royale de Danse (Royal Dance Academy), opened in Paris in 1661. Shortly thereafter, the first institutionalized ballet troupe, associated with the Academy, was formed; this troupe began as an all-male ensemble but by 1681 opened to include women as well.<sup>[1]</sup>

At the beginning of the 20th century, there was an explosion of innovation in dance style characterized by an exploration of freer technique. Early pioneers of what became known as modern dance include Loie Fuller, Isadora Duncan, Mary Wigman and Ruth St. Denis. The relationship of music to dance serves as the basis for Eurhythmics, devised by Emile Jaques-Dalcroze, which was influential to the development of Modern dance and modern ballet through artists such as Marie Rambert.

Eurythmy, developed by Rudolf Steiner and Lori Maier-Smiths, combines formal elements reminiscent of traditional dance with the new freer style, and introduced a complex new vocabulary to dance. In the 1920s, important founders of the new style such as Martha Graham and Doris Humphrey began their work. Since this time, a wide variety of dance styles have been developed.

## Dance studies

In the early 1920s dance studies (dance practice, critical theory, analysis and history) began to be considered a serious academic discipline. Today these studies are an integral part of many universities' arts and humanities programs. By the late 20th century the recognition of practical knowledge as equal to academic knowledge lead to the emergence of *practice-based research* and *practice as research*. A large range of dance courses are available including:

- Professional practice: performance and technical skills
- Practice-based research: choreography and performance
- Ethnochoreology, encompassing the dance-related aspects of Anthropology, Cultural Studies, Gender Studies, Area studies, Postcolonial theory, Ethnography, etc.
- Dance-Movement Therapy.
- Dance and technology: new media and performance technologies.
- Laban Movement Analysis and Somatic studies
- Community Dance.

A full range of Academic degrees are available from BA (Hons) to PhD and other postdoctoral fellowships, with many dance scholars taking up their studies as mature students after a professional dance career.

## Categories of dance

Dance can be divided into two main categories that each have several subcategories into which most dance styles can be placed. They are:

- **Concert dance / Performance dance**
  - 20th century concert dance
  - Competitive dance
  
- **[Social dance](#) / Participation dance**
  - Ceremonial dance
  - Traditional dance

These categories are not mutually exclusive and are context-dependent; a particular dance style may belong to several categories.

## **Dance as an occupation**

In the U.S. many professional dancers are members of unions such as the American Guild of Musical Artists, the Screen Actors Guild and Actors' Equity Association. The unions help determine working conditions and minimum salaries for their members.

The median earnings of U.S. dancers is about \$21,000 per year with the top 10% making over \$50,000 per year. Dancers may receive other benefits from their jobs such as room and board (for touring production). Professional dancers often have the opportunity to teach as well.

## **Classical Indian Dance in Modern Times**

During the reign of the last Mughals and Nawabs of Oudh dance fell down to the status of 'nautch', an unethical sensuous thing of courtesans.

Later, linking dance with immoral trafficking and prostitution, British rule prohibited public performance of dance. Many disapproved it. In 1947, India won her freedom and for dance an ambience where it could regain its past glory. Classical forms and regional distinctions were re-discovered, ethnic specialties were honored and by synthesizing them with the individual talents of the masters in the line and fresh innovations emerged dance with a new face but with classicism of the past.

# Latin dance

Latin America thrives on its culture. Its [dance](#) and [music](#) is known to be very sexy and promiscuous, and is recognizable by anyone familiar with dance. Salsa and the more popular Latin dances were created and embraced into the culture in the early and middle 1900s. Latin American music has had a large influence on the form the dances have today. It was the mariachi bands of Mexico that stirred up the quick paced rhythms and playful movements at the same time that Cuba was embracing similar musical and dance styles. Traditional dance was blended with new, modern ways of moving, and became a whole new dance rage. The dances from those days evolved and were influenced by modern music as the sexy style and hip gestures became more accepted.

There are stories claiming that when Elvis performed live on television, broadcasters could only show him from the waist up. Considering this, a Latin ballroom competition would have had significant difficulties being broadcast in the United States. Contemporary America is very accepting of these dances. You can find Latino night in most dance clubs. Ballroom studios teach lessons on many Latin American dances. One can even find the cha-cha being done in honky-tonk country bars. Miami has been a large contributor of the United States' involvement in Latin dancing. With such a huge Puerto Rican and Cuban population one can find Latin dancing and music in the streets at any time of day or night.

The dances of Latin America are derived from and named for the type of music they are danced to. For example, [Mambo](#), Salsa, Cha-cha-cha, [Rumba](#), Merengue, Samba, [Flamenco](#), Bachata, and, probably most recognizable, the [Tango](#) are among the most popular. Each of the types of music has specific steps that go with the music, the counts, the rhythms, and the style.

The style of Latin American dancing is very risqué. These dances for the most part are done with a partner as a [social dance](#), but there is never a reason not to dance by oneself. The music is so inviting one would be hard pressed to hear a Latin beat and not see everyone feeling the rhythm. However, there are many conservatives that are offended by the extreme hip movement and the connection between partners. Many of the dances are done in a close embrace while others are more traditional to ballroom dancing and hold a stronger frame.

All dancing evolves, and Latin dancing has made many contributions to other types of dances we have today. The music is still popular as well. Many popular artists are modernizing the music while there are others who hold true to their traditional roots. Either way there will be more Latin dancing to come, but luckily the traditional dances are being embraced and conserved just as strongly.

## Dance music

**Dance music** is [music](#) composed, played, or both, specifically to accompany [dancing](#). It can be either the whole musical piece or part of a larger musical arrangement.

## Genres

Dance music works usually bear the name of the corresponding dance, e.g. [waltzes](#), the [tango](#), the bolero, the can-can, minuets, salsa, various kinds of jigs and the breakdown. Other dance forms include contradance, the merengue, the cha-cha-cha. Often it is difficult to know whether the name of the music came first or the name of the dance. See [Category:Music genres](#) for more.

## Folk dance music

Dance music includes a huge variety of music, including traditional dance music such as Irish traditional music, [waltzes](#), [rock and roll](#), [country music](#) and [tangos](#). An example of traditional dance music in the United States is the old-time music played at [square dances](#) and contra dances.

## Historical dance music

Very early music contains many dance forms like the Branles or Estampie.

In the [Baroque](#) period, the major dance styles were noble court dances, which were often derived from folk dances. Examples include the allemande, courante, sarabande, and gigue.

In the [Classical music era](#), the minuet gained dominance, usually as a third [movement](#) in four-movement non-vocal works such as [sonatas](#), [string quartets](#), and [symphonies](#). The [waltz](#) also arose later in the Classical era, as the minuet evolved into the scherzo (literally, "joke"; a faster-paced minuet).

Both remained part of the [Romantic music](#) period, which also saw the rise of various other nationalistic dance forms like the [barcarolle](#), [mazurka](#), and polonaise. Also in the Romantic music era, the growth and development of [ballet](#) extended the composition of dance music to a new height. Frequently dance music was a part of [Opera](#).

## Modern Dance

The 20th century saw the rise of Modern Dance and also other popular dance forms, sometimes [jazz](#)-based or -related, such as the [ragtime](#). As 20th century classical music headed toward more dissonant and non-traditional directions with tonality, frequently dance music provided a cutting edge path for these changes, like Stravinsky's ballet, the Rite of Spring or the work of John Cage for modern dance. Popular genres began to take up the need for social dance music, and produced numerous duple and quadruple dance forms.

## Nightclubs and raves

From the late 1970s, the term *dance music* has come to also refer (in the context of [nightclubs](#)) more specifically to [electronic music](#) offshoots of [rock and roll](#), such as [disco](#), [house](#), [techno](#) and [trance](#). Generally, the difference between a disco, or any dance song, and a rock or general popular song is that in dance music the bass hits "four to the floor" at least once a beat (which in 4/4 time is 4 beats per measure), while in rock the bass hits on one and three and lets the snare take the lead on two and four (Michaels, 1990).

## Nomenclature criticism

Even though dance music is upbeat, people often slow dance to love ballads which are not referred to as dance music upon popular belief.

[Electronic music](#) | **Genres**

[Ambient](#) | [Breakbeat](#) | [Drum and bass](#) | [Electronica](#) | [Electronic art music](#) | [Hard dance](#) | Hardcore | [House](#) | [Techno](#) | [Trance](#) | [Industrial](#) | [Synthpop](#)

# Dance-pop

**Dance-pop** is a style of [dance music](#) that grew out of [disco](#) in the mid-1980s. Complete with pounding, dance-club beats, the songs of this music are more fully-formed when it comes to the structure of the lyrics compared to pure dance music. It's a producer's medium first and foremost, since he or she writes the music and builds the tracks, then chooses the right vocalist to sing the song. There have been a few exceptions naturally, since several dance-pop artists such as Janet Jackson and Madonna took control of the direction and sound of their records. But even when divas like those become stars, the artistic vision is still the producer's. Dance-pop is music that's about image more importantly than it is about substance. In other words, the lyrics don't matter as much as the rhythms.

Category: [Dance music](#)

# Dance-punk

**Dance-punk**, also known as **disco-punk** and **dance rock**, is a musical genre that combines the rhythms of danceable [electronic music](#) with [punk rock](#) aesthetics and instrumentation.

## Origins

The origin of style dates back to the late 1970s in New York and England, where guitar-based bands started to experiment with more dance-friendly rhythms. During this time, disco and funk also crossed over into many rock clubs—for example, it seems that some of the funky guitar work and solid basslines from the CHIC records made it to the rock scene. At the time, this musical style was most closely associated with the [post-punk](#) and no wave movements: famous progenitors of this sound include Gang of Four from Leeds, Liquid Liquid from New York, and Medium Medium from Nottingham. German punk chanteuse Nina Hagen had a massive underground dance hit in 1983 with "New York New York," which mixed her searing punk (and opera) vocals with disco, funk, and hip hop beats.

As hip-hop, techno, and other forms of dance music emerged during the 1980s, the "punk-funk" style faded away. The extended 12" mix, synthesizers, drum machines, and other new technologies also pushed the jagged guitar-based dance sound out of the spotlight during the later part of the 1980s and much of the 1990s.

## Modern dance-punk

The genre reemerged as "dance-punk" at the turn of the century. The style was championed by rock- and punk-oriented groups such as Liars and Radio 4, as well as dance-oriented acts such as Out Hud, with others such as The Rapture falling somewhere in the middle. There has since been a crystalization of musical forms within dance-punk, as with LCD Soundsystem's strongly dance- and production-obsessed soundcraft or Q and Not U's creation of new kinds of rock-based yet danceable rhythms within the scope of lyrical punk and [post-hardcore](#).

At the same time, however, the concept of the dance-punk genre has become somewhat diluted, partly merging with the more straightforwardly disco-influenced [post-punk](#)/garage rock revival sounds from the late 1990s to the present. As with most musical genres, dance-punk began as a fluid extension of several other genres and is in the process of both being defined from within and at the same time being co-opted by other musical forms.

# Dark ambient

## Dark ambient

**Stylistic origins:** [Ambient industrial](#), [Ambient music](#), [Gothic rock](#) (particularly Ethereal Wave)

**Cultural origins:** 1980s and 1990s, Europe and United States

**Typical instruments:** [Electronic musical instruments](#), field recordings

**Mainstream popularity:** **Low**

## Fusion genres

[Illbient](#)

**Dark ambient** is a subgenre of [ambient music](#) which emerged in the 1980s and 1990s with the introduction of new [synthesizer](#) and sampling technology in the electronic music genre and other technical advances in music. Dark ambient is a very diverse genre It is often closely linked with [industrial music](#), [noise](#), [gothic rock](#), and sometimes even [black metal](#), yet can be free from any derivatives and connections to other genres or styles. The term is generally used as a catch-all for any form of ambient music that has dark or discordant overtones.

## Overview

The genre did not have a single pioneering musician or persons who invented the term or genre, it somewhat evolved on its own, similar to that of the IDM genre. The roots of dark ambient can be seen in several of Brian Eno's early collaborations that had a distinctly dark or discordant edge, notably "Swastika Girls" (from No Pussyfooting (1973)), a collaboration with Robert Fripp that incorporated harsh guitar feedback, the ambient pieces on the second half of David Bowie's Low (1977), and Fourth World, Vol. 1: Possible Musics (1980), a collaboration with Jon Hassell.

[Ambient industrial](#) projects like Coil, Lustmord, Zoviet France, and Nocturnal Emissions evolved out of industrial music during the 1980s, and were some of the earliest artists to create consistently "dark" ambient music. In the late 1980s and early 1990s, a "[darkwave](#)" and ethereal wave trend emerged within [gothic rock](#), that tended toward moody atmospheric pieces rather than jangly minor-key rock. Darkwave was particularly associated with the Projekt record label, with bands like black tape for a blue girl doing music that ranged into moody ambient soundscapes.

By the mid-1990s, a large number of artists were working in ambient industrial, ambient noise, ethereal wave, [illbient](#), isolationism, and other emerging "dark ambient" styles. Among these artists were Autopsia, Vidna Obmana, Daniel Menche, Lull, Raison d'etre, and Shinjuku Thief.

Generally the music tends to evoke a feeling of solitude, melancholy, confinement, and isolation. However, while the theme in the music tends to be "dark" in nature, some artists create organic soundscapes which don't prey on misanthropic tendencies. Examples of such productions are that of Oöphoi, Tau Ceti, Klaus Wiese, and Robert Rich.

## Controversy

Many people debate whether dark ambient should be considered a subgenre or style of its own, due to the fact there is no solid basis on which the genre can be described. This is especially true given the diverse genres described as "dark ambient"; projects such as Coil, Daniel Menche, and black tape for a blue girl, are working in very different areas of music, united only by the fact that they create soundscapes or atmospheric work that happens to sound "dark".

It is argued that it should all simply be considered ambient, as there is no set "rules" as to what makes it dark. Fans of the music argue that dark ambient is a genre of its own, as when compared to artists like Pete Namlook, it is anti-social in nature, and less organic and more mechanized, hence the relation to industrial and noise. Whether or not it is considered a true genre, the majority consider dark ambient to be something on its own due to the obvious differences between other forms of ambient.

## Related styles

### Ambient industrial

*Main article: [Ambient industrial](#)*

While dark ambient is primarily a descendant of [ambient music](#) itself, it is closely related to industrial music. Dark ambient gets the term dark from the dark theme often portrayed in industrial. Feelings of an industrial nature are present. Old abandoned factories, primitive machines, and noise. The dark 'non musical' and realistic feel gives some dark ambient its feel of solitude and isolation.

### Ambient noise

*Main article: [Ambient industrial](#)*

Noise music is often regarded as a 'relative' or 'sister' genre to dark ambient, or vice-versa. Noise is considered unpleasant and dark, as is dark ambient. Some noise artists create almost ambient soundscapes, such as Aube, Junkielover, Daniel Menche, Kiyoshi Mizutani, Iszoloscope, and some Merzbow. Some, for example Iszoloscope, also compose ambient on the side, such as his Les Gorges Des Limbes album. While the two genres can't really compare sound wise, many labels, such as Ant-Zen, release both ambient and noise, as well as combinations of both, taking both avant-garde genres further.

### Musique concrete

*Main article: [Musique concrete](#)*

Some consider dark ambient to be more related to musique concrete, in the sense that it frequently utilizes natural sounds gathered through field recordings.

### Black ambient

*Main article: [Black metal](#)*

While black metal and ambient are nothing alike (other than utilizing minimalism to different extents), a lot of metal bands, specifically black metal, have side-projects in which they produce dark ambient, noise, or other experimental types of music. Many bands mix ambient in their albums, creating something unique and original, similar to that of Ulver and other [avant-garde metal](#) acts. Some people have spawned a new subgenre, black ambient, in relation to black metal, as it is often related to the ideology in some black metal, as well as linked to various forms of satanism.

Related to this style are artists such as: MZ. 412, Aghast, Abruptum, Burzum, Dapnom, Nommam Erytz, Orkhestre Khaotique, Karna, Wongraven and Pazuzu.

# Dark cabaret

**Dark cabaret** is a [music genre](#) that has influences from German [cabaret](#), burlesque, vaudeville, [folk](#), [punk](#), [deathrock](#), [gothic rock](#) and [darkwave](#) music styles, as well as Film noir.

Dark cabaret is characterized by driving [piano](#) and by deep female or male vocals influenced by the style of Kurt Weill, Marlene Dietrich, Alexander Vertinsky, Cole Porter, Danny Elfman, Nina Hagen, PJ Harvey, Tom Waits, Tom Lehrer, Nick Cave, and even Roxy Music/Brian Eno. Alternatively, the music may center around another instrument such as the [cello](#) or [accordion](#), or even the voice.

## History

Perhaps the earliest stage of the modern dark cabaret genre dates back to 1974, when Nico released her album, *The End*. Her songs, "You Forgot To Answer" and "Secret Side" were much ahead of the Dark Cabaret sound which was to come. Marc Almond also was an early contributor to this direction. The Virgin Prunes bordered the sound at times, and Nina Hagen's punk opera style closed in on it further; but it was Rozz Williams, the former lead singer of Christian Death, who took the style in a more fully cabaret and darker direction a decade later. His release with Gitane Demone, *Dream Home Heartache* in 1995 on Triple X Records (an allusion to a song by Roxy Music) was perhaps the foundation for a new sound in the [goth](#) movement. The songs "Christian Circus Joe" and the jazzier "Psychic Sarah" also appeared by the Sex Gang Children in 1997, demonstrating the cabaret-style infusion into a slowly evolving post-punk art goth sound. Lydia Lunch also regularly produces work which falls into this category, most notably on her 1980 album, *Queen of Siam*.

San Francisco-based chanteuse Jill Tracy released *Diabolical Streak* in 1999 which quickly garnered two California Music Award nominations, as well as the SIBL international Grand Prize for songwriting. *Diabolical Streak* was hailed by Canada's Shift Magazine as one of the "Top 10 Neo-Cabaret albums of all time."

Also San Francisco-formed band Rosin Coven create their own style of theatrical cabaret with macabre tunes of goth-appeal atmosphere and make bizarre performances with Jill Tracy and other musicians on Edwardian Ball - show in memory of Edward Gorey.

Nicki Jaine (album "Of Pigeons and Other Curiosities" and single *Revue Noir*, her collaboration with chief of Projekt label, Sam Rosenthal) and Amoree Lovell (especially demo songs "Dark Town Sally" and "High Maintenance/Low Tolerance") are also striking examples of the genre. Katzenjammer Kabarett once referred to themselves as "deathrock cabaret", to which Two Ton Boa might also belong, but have recently changed their self-description to "[post-punk](#) cabaret" in recognition of their wideley varying incorporations.

Danny Elfman's dark cabaret influence is especially noted in his scores and character voices in the films *The Nightmare Before Christmas*, *Chicago*, and Tim Burton's *Corpse Bride*.

London cabaret act, the Tiger Lillies, have implemented dark themes and imagery, but do not typically convey a dark sound. Nonetheless, *A Gorey End*, their 2003 release featuring the Kronos Quartet and posthumous lyrical contributions from Edward Gorey, helped to create a greater awareness of the uprising genre by earning a Grammy nomination.

The most recent act to surface and solidify this style are The Dresden Dolls. In September 2005, Projekt Records released a compilation called *A Dark Cabaret* [1] featuring 'Coin-Operated Boy' by The Dresden Dolls, 'Evil Night Together' by Jill Tracy and 'Flowers' by the late Rozz Williams.

- Projekt Records

## Dark electro

**Dark Electro** was a term used mainly in central Europe to describe the sinister sounds of electronic music groups like YelworC, Tri-state, Mortal Constraint, Arcana Obscura, Trial or Placebo Effect.

These bands were mainly inspired by electronic/industrial acts like The Klinik and Skinny Puppy. The compositions were mostly complex arranged and mingled with horror soundscapes, and grunts or distorted vocals. A notable artist was YelworC, a group from Munich, formed in 1988. They laid the foundations of the *Dark Electro* movement in the early '90s and represented the first act on the well-known german label *Celtic Circle Productions*.

In following years, *Dark Electro* was displaced by [Techno](#)-influenced styles like Hellektro or Aggrotech.

## Notable Artists

- AmGod
- Arcana Obscura
- Disharmony
- Evils Toy (*the early years*)
- Ice Ages
- Mortal Constraint
- Placebo Effect
- Polygon (*first album*)
- Pulse Legion
- Putrefy Factor 7
- Seven Trees
- Splatter Squall
- Trial
- Tri-state
- YelworC

### Industrial

[Aggrotech](#) - Coldwave - **Dark electro** - [Electronic body music](#) - [Futurepop](#) - [Industrial metal](#) - [Industrial rock](#) - Industrial techno - [Noise](#) - [Power noise](#)

### Other **electronic music genres**

[Ambient](#) | [Breakbeat](#) | [Drum and bass](#) | [Electronica](#) | [Electronic art music](#) | [Hard dance](#) | Hardcore | [House](#) | [Techno](#) | [Trance](#) | [Industrial](#) | [Synthpop](#)

# Dark house

**Dark-house** is a type of electronic dance music. It is very similar to progressive house, and may feature a slight tinge of Detroit [techno](#), but the beats are much slower compare to other sub-genres of [House music](#). The name "dark" comes from the lowtempo beats and the words which give the image of being somewhere not pleasant.

People are often confused as to what dark-house is, and what makes it different to progressive house. Many house connoisseurs deny the existence of this sub-genre or condemn the creating of new sub-genres in house music, and just refer to this type of music as progressive house. The reason for this may be because the dark-house sound at its peak was rather short-lived (between 1998 and 2001) in clubs and amongst artists. However, dark-house has a very distinct sound.

## Structure

Dark-house is usually trippy and minimalistic. It often features echoed trance-like claps (as opposed to progressive house snare drums), and low pitched, driving basslines. The tone is almost always melancholic and somewhat dreamy. Probably a good way of expressing the sound is as follows:

- Where Detroit techno may feature raw basses usually looped between 4 beats, dark-house usually has intricate basslines with a possible pitch change looped over 8 or more beats.
- Where progressive house is 'housey', dark-house is 'trancy'.
- Where tribal house is very percussive, dark-house is very minimalistic (although it may exhibit some features of tribal house as well).

Often, dark house consists of sophisticated sound elements and moods that can only be noticed with conscious, fully attentive listening.

## Examples

Some excellent examples of dark house are the following tracks:

Tijuana - Groove Is In The Air

Jamez Presents Tatoine - Music (16b Remix)

Satoshi Tomiie & Kelly Ali - Love In Traffic (John Creamer & Stephane K Remix)

Dirty Harry - Musica

Moshic & Landa - Faza

Angel - Powerplant (Hamel & Medway Remix)

Filur - You And I (Trentemoller Free Dub)

# Darkcore

**Darkcore** is a [music genre](#) that became popular in the United Kingdom hardcore rave scene in 1993. It is recognized as being one of the direct precursors of the modern [electronic music](#) genre known as [drum and bass](#). Darkcore was a counter movement to the [happy](#) alternative that occurred at the same time - both styles evolving from [breakbeat hardcore](#).

## Qualities

Darkcore is characterized by layered [breakbeats](#) at around 150 to 160 bpm combined with very low frequency bass lines. In addition to these basic traits, dark themed samples such as horror movie theme music or cries for help were commonly included. As the style evolved, the almost gratuitous use of horror elements was dropped as producers relied more on simple effects such as reverb, delay, pitch shifting and time stretching to create a chaotic and sinister mood.

## DJs

Many of the British hardcore and junglist [DJs](#) of the day dabbled in Darkcore for a time, mostly around its heyday in 1993, but some of the more notable DJ/producers of the darkcore include:

- Tango
- Bizzy B
- Lewi Cifer
- Hyper-on-Experience
- Doc Scott
- International Rude Boyz
- Metalheadz productions

## **Darkcore today**

Today, darkcore is used to describe the entire array of breakbeat producers and DJs who work within the 160-190+ BPM tempo range. This includes darkcore, though its current configuration is notably different in quality and process availability as well as the fact that modern drum and bass elements are included.

- [Hardcore techno](#)

**Darkstep**

## Description

**Darkstep** is a sub genre of [Drum and Bass](#) which became popular in the late 1990s. It is the result of a combination of the dark elements of [Darkcore](#) with highly energetic breaks like the [amen break](#) and the firefight break.

A typical tune from this genre is characterized by intense drums, odd ambient noises, as well as the very notable "reese" bass sound. It generally does not follow any scales tending to throw in many [chromatic scale](#) elements to get a very "dark" feeling.

## **Darkstep Artists**

- Dylan
- Loxy
- Technical Itch
- Ink
- Twisted Anger

# Darkwave

**Stylistic origins:** [New wave](#), [Gothic rock](#), [Synthpop](#), [Neofolk](#), Neo-[Classical](#), Industrial

**Cultural origins:** Late 1970s / early 1980s Europe (most notably, England, Germany, France and Italy).

**Typical instruments:** [Guitar](#), [Bass](#), [Drums](#), [Synthesizers](#), [Flutes](#)

**Mainstream popularity:** Small to medium

**Derivative forms:** Death pop, Ethereal

none

**Darkwave** is a generic term which refers to an 1980s movement that coincided with the popularity of [new wave](#). Building upon the basic principles of new wave, darkwave evolved through the addition of dark, thoughtful lyrics and an undertone of sorrow.

## In the 1980s

The first usage of the term appears to have been in the 1980s, to describe the dark variant of New wave music (dark [synthpop](#), [gothic rock](#) or the French coldwave) and refers to the dark/moody electronic music of bands like Anne Clark, Gary Numan, Fad Gadget, Psyche and Depeche Mode or the early gothic rock and guitar bands like Bauhaus, Joy Division, The Cure, Cocteau Twins and Clan Of Xymox.

## In the 1990s

In the early 1990s, Darkwave was used to describe the music of bands like Das Ich, Deine Lakaien, Lacrimosa, Diary of Dreams, The Frozen Autumn and others. These Bands were inspired by the Wave music from the 1980s.

Shortly after, in the United States the term "darkwave" became associated with the late Wave music produced on the Projekt records label because it was used as the name of their printed catalog.

The Projekt label carried bands such as Lycia, black tape for a blue girl and Love Spirals Downwards, all characterized by slow, moody ethereal female vocals, with a strong Cocteau Twins influence (something like the neo-classical music of Dead Can Dance). This sense of the term Darkwave would also apply to similar music (e.g. [neofolk](#)) from other labels carrying similar work (e.g. World Serpent and Middle Pillar).

## Essentials

Joy Division - Closer (1980)  
The Cure - Pornography (1982)  
Depeche Mode - Black Celebration (1986)  
Clan Of Xymox - Medusa (1986)  
Pink Turns Blue - If Two Worlds Kiss (1987)  
Psyche - The Influence (1989)  
Comsat Angels (Dream Command) - Fire On The Moon (1990)

## Dates of classical music eras

It is difficult to pick particular years for the beginning and end points of **eras in [European classical music](#)**. There are several reasons for this. First, these eras began and ended at different times in different locations. Second, works of particular styles can be found that were composed after the style was no longer popular or important. Third, the styles themselves overlap and absolute categorization is not possible in all cases. For example, a "late [Renaissance](#)" piece would likely be very similar to an "early [Baroque](#)" piece.

Date ranges of classical music eras are therefore somewhat arbitrary, and are only intended as approximate guides. Scholars of music history do not agree on the start and end dates, and in many cases disagree whether particular years should be chosen at all.

The following graph depicts commonly accepted dates for major movements in classical music.

Additionally:

- [Ancient music](#) extended from approximately 1500 B.C. until the fall of Rome in 476 A.D.
- [Prehistoric music](#) encompasses that music which existed prior to any historical record.

Categories: [Music history](#).

## D-beat

**D-beat** is a drum beat, specifically a fast rock beat unique to [Hardcore Punk](#), especially in its UK and European variants. Its name is derived from the British band Discharge, as the best-known use of this style can be attributed to their drummer Terry/Tezz. All over the world, D-beat has a cult following and has developed most heavily in Scandinavia, Japan, and Brazil. It is a contemporary term most common outside North America. D-beat bands almost exclusively have anti-war, anarchist messages and closely follow the bleak nuclear-war imagery of 1980s [Crust punk](#) bands, often to the point that you can tell a D-beat record by its exact imitation of Discharge album covers.

Example of a D-Beat drum tab: H:|x-x-x-x-x-x-x-x-:| S:|--o---o---o---o-:|  
K:|o--o-o--o--o-o--:| 1 & 2 & 3 & 4 & :

## Scandinavian D-beat

Early Scandinavian D-beat bands, such as Anti-cimex, are associated with very noisy and distorted [guitar](#) and have a very maxed out sound. This wave of D-beat hardcore punk emerged in the early 1980s, particularly in 1983 with the release of Anticimex's 2nd 7", the genre-defining "Raped Ass" EP, notable for its raw recording and prominent Discharge influence. Even some of the more distinctly American sounding Swedish bands whose range of influence is classified as "thrash" (such as Mob 47) essentially employ a very fast D-beat.

Scandinavian bands remain some of the most well-known D-beat bands, although their sound has become faster, much heavier and more metal-inspired.

## Japanese D-beat

Japanese D-beat bands, however they fit into the wide range of Discharge influenced punk, are usually notable for either their faithful emulation of the European Discharge-influenced punk aesthetic (something at which bands like Disclose excel) or for their technically advanced playing, employing a D-beat in the context of a more transcendent and original whole. Bands such as Bastard and Deathside are notable for their strong sense of melody and their subtly metallic playing, drawing influence from other aspects of Discharge's playing as well as North American Discharge-influenced bands such as Poison Idea.

## Resurgence of interest

While bands have played in this style since the early 1980s, hardcore punk is currently experiencing a resurgence of interest in Discharge and Scandinavian/Japanese influenced hardcore in the new millennium. Groups from around the world such as Wolfbrigade and Tragedy are largely responsible for the movement towards the fusing of the driving Discharge sound with dark, melodic elements reminiscent of Amebix, while other bands such as Portland's Warcry or Canada's Decontrol exemplify a kind of punk nostalgia, playing pure D-beat hardcore and proudly wearing their influences on their sleeves. In a Maximum RocknRoll column, hardcore-punk critic and former Destroy singer Felix von Havoc predicted that the strongest new trend in hardcore would be a fusion of the energy and vitality of Straight edge Youth crew hardcore with the heaviness and ideals of d-beat punk.

## Examples of D-beat bands

Avskum  
Bastard  
Decontrol  
Discharge  
Disclose  
Disfear  
Ratos de Porão  
Skitsystem  
Uncurbed  
Wolfpack/Wolfbrigade

# Death grunt

The **death grunt** (also referred to as **death growl**, **death vocal**, **vokills** or (jokingly) **cookie monster vocal**) is a singing style usually employed by vocalists of the [death metal](#) musical genres, but also can be heard in a variety of [heavy metal](#) subgenres. Stylistic similarities in vocals can be heard in [grindcore](#) and [hardcore punk](#) bands, among others. [Melodic death metal](#), [doom metal](#) and [gothic metal](#) bands tend to modify the technique substantially.

Death grunts are guttural and difficult to decipher, particularly to listeners unfamiliar with the style. Most vocalists who employ the technique choose to sing indecipherably, such as Sylvain Houde from Kataklysm or Lord Worm from Cryptopsy. However, some vocalists sing such that their lyrics remain intelligible; Karl Willetts from Bolt Thrower being an example. Few female singers make use of the technique, Lori Bravo (Nuclear Death) and Angela Gossow (Arch Enemy) being two exceptions.

Death grunts can be obtained with various voice effects. However, many singers are able to produce them with their bare voice. It requires proper training, as it can harm the vocal cords.

It is difficult to pinpoint a specific individual as the inventor of the technique; the assumption that different musicians developed it gradually over time is, in a general manner, considered more plausible. The band Death (and its precursor Mantas) with its two vocalists — initially Kam Lee and subsequently Chuck Schuldiner — have been cited as influential (although Schuldiner would eventually switch to a more high pitched screeching style). Moreover, the singing featured on Venom's 1981 album *Welcome to Hell* has influenced the development of the style, even though the album does not exhibit the death grunt itself. *Possessed* is considered by some to be one of the earliest bands to employ death growls, as are *Necrophagia* and *Master*.

The vocalists from the British [grindcore](#) band Napalm Death — consecutively Nic Bullen, Lee Dorrian and Mark "Barney" Greenway — further developed the style in the late 1980s, adding more aggression and deeper guttural elements to it, while also speeding up delivery of the lyrics. Around the same time, in the United States, Chris Reifert (from Autopsy) began combining shrieks with his deep grunts. Also, Chris Barnes (from Cannibal Corpse) is notable for having deepened his grunts to tones lower than those which had been recorded at the time. Some death metal bands such as Carcass and Dying Fetus, have experimented using two vocalists, alternating singing duties between lighter and heavier death growls on their songs. The now-defunct Swedish grindcore band Nasum also utilised a similar arrangement, with two vocalists alternating between deep growls and high screeches. Vocalists of doom metal bands tend to put more emphasis on adding atmospheric and emotional overtones to their death grunts. Nick Holmes (from Paradise Lost), Darren White (from Anathema) and Aaron Stainthorpe (from My Dying Bride) were the main developers of grunts within this context, in the early 1990s. Stainthorpe was one of the first to combine grunts and clean singing, a technique which was developed further in large part by Opeth's Mikael Åkerfeldt.

Funeral doom metal bands have taken a different approach to death grunts. Deep guttural vocals are often replaced by hoarser, almost whispered grunts. Examples of vocalists which make use of the technique are "Matti" (from *Skepticism*) and John Paradiso (from *Evoken*)

## Key death grunt vocalists

Vocalists essential to the development of the death grunt and the bands they represent are:

- Chris Barnes (Cannibal Corpse, Six Feet Under, Torture Killer)
- Nic Bullen (Napalm Death)
- Lee Dorrian (Napalm Death)
- Martin van Drunen (Pestilence, Asphyx)
- Mark "Barney" Greenway (Benediction, Napalm Death)
- Nick Holmes (pre-1995 Paradise Lost)
- Sylvain Houde (Kataklysm)
- Dave Ingram (Benediction)
- Kam Lee (Massacre, Mantas/Death)
- Darren Moore (Mourning Beloveth)
- Frank Mullen (Suffocation)
- Chris Reifert (Autopsy)
- Chuck Schuldiner (Death)
- Aaron Stainthorpe (My Dying Bride)
- Bill Steer (Carcass)
- John Tardy (Obituary)
- Jeffrey Walker (Carcass)
- Darren White (Anathema)
- Karl Willetts (Bolt Thrower)
- Lord Worm (Cryptopsy)
- Mikael Åkerfeldt (Opeth, Bloodbath)

Categories: [Singing](#) | [Hardcore punk](#) | [Heavy metal](#)

# Death metal

**Death metal** is a sub-genre of [heavy metal](#) that evolved out of [thrash metal](#) during the early 1980s. Commonly recognized characteristics include lyrics praising death, chromatic progressions and a narrative or "story telling" song structure such that there is not a verse-chorus cycle as much as an ongoing development of themes and motifs. Aesthetically, it is usually identified by violent rhythm guitar, fast percussion and dynamic intensity. "Blast beats" are frequently used to add to the ferocity of the modern music. The vocals are commonly low gurgles named growl, death growl, or death grunt. This kind of vocalising is distorted by use of the throat, unlike traditional singing technique which discourages it. Music journalist Chad Bowar notes that, due to the similarity of the vocals to "unintelligible yelling", the style is sometimes described as "Cookie monster vocals".

Death metal's subject matter usually addresses more nihilistic themes than any other genre (except maybe [black metal](#)), usually using metaphors of a gruesome nature to represent a larger concept. The focus on mortality along with the extreme nature of the music (as well as the name of Death, one of the genre's pioneers) likely inspired the naming of this genre as "death" metal.

Death metal is commonly known for abrupt tempo and count/time signature changes, and extremely fast and complex guitar and [drumwork](#), although this is not always the case. Bands of this genre frequently utilize downtuned and distorted [guitars](#), a downtuned, sometimes distorted [bass guitar](#), a drum set (almost universally using two bass drums). Although this is the standard setup, bands have been known to incorporate other instruments such as [keyboards](#). Death metal is very physically demanding of its musicians, especially in its more "technical" forms.

There is some dispute about the origin of the name. Often cited as inventors are Americans Possessed who recorded a song titled "Death Metal" in 1985. Also in 1985, the Brits of Onslaught also recorded a song of the same name. Often cited as the origin of the name is the band Death, because of their band name, which was established in 1984.

## Early history (up to 1991)

Death metal is a subgenre of [heavy metal](#). [Growling vocals](#) are the primary identifier for death metal for the newer generation. But this by itself also includes works such as *Welcome to Hell* from 1981 by British metal group Venom where the vocals may be mostly "growling", but the music is not what is generally meant by "death metal" today. Venom never labelled what they did, but their album *Black Metal* became the basis for labelling music with 'Satanic' lyrics, and growling vocals as "[black metal](#)".

Genres are not usually identified solely by aesthetic form, and black or death metal labels are not easy to apply to some bands. One example of this is the American band Slayer, a pioneering [thrash metal](#) band. This genre (one that predates death metal), is also characterized by complex rhythmic and heavy guitar riffing. Slayer is not usually classified as a death metal band, and have never labelled themselves as such. Even so, with what is considered *the* thrash-metal milestone *Reign in Blood* from 1986, and subsequent works, they certainly influenced many of the creators of death metal, just like Venom did.

There is no shortage of bands that can be said to have influenced death metal. So, when did death metal emerge as a genre of its own? The actual sequence of events is fairly well documented and agreed upon (see external links below), but the question "Who created death metal and when?" is, of course, a matter of defining precisely what one calls death metal. One useful way to classify movements would be to speak of "early death metal" and "modern death metal", as will be outlined below, keeping in mind that some observers do not consider the "early" form to be death metal at all.

Around 1983, aggressive U.S. bands such as Florida's Death, California's Possessed, and Chicago's Master began to form. If one would call this diffuse genre "early death metal", the first recorded examples of this would be Possessed's album *Seven Churches* from 1985 and early demotapes by Death, followed by Death's album *Scream Bloody Gore* from 1987. To their credit, these "early death metal" bands did push the format forward, something that would ultimately pay off in a new form of music that was substantially different from their closest forefather, [thrash metal](#).

However, other death metal historians maintain that the 1985 brand of "early death metal" is more aptly summarised by the moniker "[post-thrash](#)" and that the band Death receives inflated credit partly because of its name. In particular, the music flora around 1985, although fitting the above description of "extreme brutality and speed" for its time, did not create anything significantly new compared to their immediate predecessors, and one would be hard pressed to identify strong and specific musical differences between, say Death's debut album from 1987 and same-period work by [thrash metal](#) bands such as the Brazilian Sepultura or even the aforementioned Venom, except perhaps slightly "growlier" vocals.

The alternative standpoint is that the modern concept of "death metal"—the point when it clearly decouples from the origins in heavy metal and thrash metal—can be set to 1989 or 1990. Just as in the original creation of NWOBHM (New Wave of British Heavy Metal) by Iron Maiden and other bands was sparked by the youthful energy of [punk rock](#) in the late 1970s, so did cross-fertilisation between metal and punk once more create something new in the late 1980s. The chaotic and often confusing development that took place around this time is well illustrated by the

British band Napalm Death, often characterised as a "[grindcore](#)" band (see below). This band was simultaneously always part of the [hardcore punk](#) scene. However, Napalm Death themselves changed drastically around or before 1990, leaving [grindcore](#) (and most of the band members) behind. Concise proof of this merger of [thrash metal](#) and [hardcore punk](#) is the project band Terrorizer's album, World Downfall (1989), where members from Napalm Death and the American band Morbid Angel, part of the "early death metal " scene, compose together. Few observers would disagree that many bands, including the early US death metal bands but now also bands from many other scenes and other countries, drove a major shift in musical emphasis around 1990-1991.

In particular, on 1990's Harmony Corruption, Napalm Death can be heard playing something most fans would call death metal today, i.e. "modern death metal" by the above characterization. This album clearly displays aggressive and fairly technical guitar riffing, complex rhythmic, a sophisticated growling vocal delivery by Mark "Barney" Greenway, and thoughtful lyrics. Other bands contributing significantly to this early movement include Britain's Bolt Thrower and Carcass, Sweden's Entombed, New York's Suffocation, and Florida's Morbid Angel.

To close the circle, the band Death put out the album Human in 1991, certainly an example of modern death metal. The band Death's founder Chuck Schuldiner helped push the boundaries of uncompromising speed and technical virtuosity, mixing in highly technical and intricate rhythm guitar work with complex arrangements and emotive guitar solos. Other examples of this are Carcass's Necroticism: Descanting the Insalubrious from 1991, Suffocation's debut Human Waste from the same year and Entombed's Clandestine from 1992. At this point, all the above characteristics are clearly present: abrupt tempo and count changes, on occasion extremely fast [drumming](#), morbid lyrics and growling delivery.

## Later history (1991-)

During the 1990s, death metal grew in many directions, spawning a rich variety of subgenres, including the following:

- [Melodic death metal](#), where harmonies and melodies are much more present in the guitarwork. Although more melodic, it can sound more raw than the more precise sounding American variety. This subgenre is mostly associated with Sweden, especially in Gothenburg, as well as Norway and Finland (see Scandinavian death metal). The genre finds its best representation in At the Gates, In Flames, Dark Tranquillity, and Arch Enemy. The Iron Maiden-esque techniques employed by these "Gothenburg" bands formed a riff-lexicon frequently used by many metalcore bands that have risen in popularity since 2001. Because of this style's origin, these bands are (often mockingly) called Gothencore (See: [metalcore](#)). Many metal fans consider this genre to be separate from true death metal.
- Scandinavian death metal, which could be called the forerunner of Melodic death metal with bands like Entombed, Dismember, Unleashed and the before mentioned At the Gates. Entombed (ex-Nihilist) was the band, which started to combine punk and death/thrash riffs and set a trademark "Sunlight studios" guitar sound - formed by linking together two distortion boxes to create a raw mechanical, electric buzz, which a lot of bands of this genre later tried to reproduce. This sound was nevertheless inspired by British grindcore band Unseen Terror on their debut album *Human Error*.
- Florida death metal, which includes some of the most notable bands. They are more rigid and percussive than the Swedish variant, more precise, refined and traditional, yet more direct and brutal than the Technical variety. Bands include Deicide, Malevolent Creation, Monstrosity, Obituary, Brutality and Death (some albums are technical as well).
- [Technical death metal](#), a narrow, but influential subgenre where musical complexity and skill is the main focus. It is represented by bands like Gorguts, Necrophagist, Cynic, Atheist, Pestilence, Cryptopsy, Nile, and Death.
- Brutal death metal, developed by combining certain aspects of the song structures of goregrind with death metal. Brutal Death Metal is associated with bands like Disgorge, Devourment, Vomit Remnants, Wormed. One main characteristic of Brutal Death is the vocal style, often called "Cookie Monster" vocals, or "bullfrog" vocals, or most commonly known "Guttural" vocals. The Lyrics are mostly gore related, sung in a slow and choppy manner, and usually following the guitar riffs. Secondly, the guitar riffs are usually chunky grooves or hyper fast, down-tuned, with pinch harmonics, with high gain outputs. Drumming is usually all over the place, from slow churning chunk, to blasting speed. Suffocation is probably one of the main influences for this style.
- Death/Doom, or early [Gothic Metal](#) which is a slowed down, melancholic subgenre, inspired by classic [doom metal](#). It was created by the likes of Asphyx, Disembowelment, My Dying Bride, Anathema, and Paradise Lost.
- Slam death metal, characterised by frequent Hardcore-like breakdowns and low grunting vocals. Internal Bleeding and Dying Fetus are slam death metal bands. "proto-[Deathcore](#)"

- [Blackened death metal](#), which is death metal mixed with [black metal](#) stylistic influences, notable in the vocals and riffing style. Dissection is a prime example of this genre, as is Emperor on their IX Equilibrium album, and Zyklon (featuring former members of Emperor).
- Death thrash (also called Deathrash), which is Thrash with elements of death metal including speed, guitar picking techniques and vocals. In the earliest incarnation this style was the progression from thrash metal to death metal. Some bands are Benediction, Epidemic, Cancer, Konkhra and Criminal. Some Sepultura and the first two Sinister albums could also be classified in this way. An early "Hardcore-Metal" style.
- Vedic metal, based on Indian or Hindu themes, with elements of death metal, black metal, thrash and classical Indian music. The term was coined by the band Rudra, and has gone on to influence regional Indian death metal acts.
- Death/Grind, This death metal's subgenre is a mixing of styles Brutal death metal and [Grindcore](#). British death metal band Bolt Thrower created this genre. Death/Grind bands: Aborted, Bolt Thrower, Cannibal Corpse, Decapitated, Dying Fetus, Hate Eternal

[Grindcore](#) is considered by some to be an even more extreme variant of death metal. However, many fans of grindcore and music historians would place it in a genre by itself, since the genre historically developed in parallel to death metal (both developed in the 1980s, death metal from [thrash metal](#) and grindcore from [hardcore punk](#)), each influencing the development of the other, but with early [grindcore](#) having a much more obvious [hardcore punk](#) and [peace punk](#) influence. Some early grind bands: Napalm Death, Electro Hippies, Fear Of God and Extreme Noise Terror. Grindcore eventually increased in speed and harshness, with many bands incorporating death metal into their sound, such as Brutal Truth, Narcosis, Pigsty, and Pig Destroyer.

There are also other heavy metal sub-genres that have come from fusions between death metal and other non-metal genres, such as the fusion of death metal and [Jazz](#) played by Pestilence on their *Spheres* album, or the work of Florida bands Atheist and Cynic, the former of which sometimes went as far as to include [jazz](#)-style drum solos on albums, and the latter of which incorporated notable influences from fusion. Nile have also incorporated Egyptian music and Middle Eastern themes into their style.

## **Key artists**

Key death metal bands include Atheist, Autopsy, Bolt Thrower, Cannibal Corpse, Carcass, Dismember, Death, Deicide, Entombed, Immolation, Morbid Angel, Napalm Death, Nile, Obituary, Possessed, and Suffocation.

# Deathcore

**Deathcore** is an amalgamation of the two musical styles: [hardcore](#) and [heavy metal/death metal](#). While similar to slam [death metal](#), Deathcore typically has a more muted drumwork as well as a variation on its speed and heaviness. Deathcore receives its speed, with minimal complexity, from death metal and its breakdowns are attributed to a [hardcore](#) influence. An important characteristic of Deathcore bands, which is also attributed to a [Hardcore](#) influence, is their raw, political, and socially focused lyrics.

"Deathcore" is also known for its extreme style. Bands like Suicide Silence and See You Next Tuesday, have mixed a number of genres, including, most notably, death metal and grindcore, but also have strong influences of hardcore and other types of metal, as well. Pig Vocals, or 'BREE' are commonly used in this style of music. BREE is commonly used to describe the pig squeals because that is the only decipherable word used in most deathcore acts.

# Deathcountry

**Deathcountry** is a [country music](#) genre, best described as traditional country music with a morbid anarchist [Punk rock](#) and [Psychobilly](#) attitude. Since the late 1990s, deathcountry is a well-known term in the music scene, first used by Hank Ray (Raymen), the "Father of Deathcountry." Big influences include Hank Williams III and Johnny Cash's "American Recordings."

Important artists include Hank Ray, CoffinShakers, Undead Syncopators, Those Poor Bastards, Zeno Tornado, and Sons of Perdition. Recording labels includes Suzy Q Records, Gravewax Records, and One Million \$ Records.

The music style is reminiscent of traditional [Country/Hillbilly/Folk music](#) from the 30's and 40's in the United States, in the way of Jimmy Rogers or Hank Williams. It's a counterpart to pop and radio Country and the reactionary [Nashville Sound](#). They use the classic instruments of country music: [guitar](#), upright bass, [banjo](#), [fiddle](#) and steel guitar. The lyrics are about social misfits and [outlaws](#), morbid and bizzare topics as well as death and rebellion .

The Deathcountry scene has deep roots in Punk and [Rockabilly](#) circles.

# Deathrock

**Stylistic origins:** [Punk](#), pre-[Hardcore Punk](#), [Post-Punk](#), [Glam rock](#), Horror film scores,

**Cultural origins:** Late 1970s, United States, United Kingdom, Australia, Ireland, Germany

**Typical instruments:** Vocals, [Guitar](#), [Bass](#), [Drums](#), [Keyboard](#)

**Mainstream popularity:** Generally low although in the 1980s a few bands closely identified with Deathrock music did have top 40 hits.

None

**Deathrock** (also spelled **death rock**) is a term used to identify a subgenre of [punk rock](#) and/or [gothic rock](#), which incorporated elements of horror and first emerged most prominently in the West Coast of the United States during the late 1970s and early 1980s. The music and the scene of "modern" (post-1990) Deathrock bands have a stronger [post-punk](#) influence than the earlier Deathrock bands. Additionally, the term "deathrock" can be used as a synonym for first generation [gothic rock](#) and is sometimes written as Deathrock/Batcave.

## Characteristics of deathrock

Deathrock emphasizes a creepy atmosphere and an introspective mood within a characteristically punk or post-punk music structure. Songs typically use simple chords, echoing guitars, a prominent bass, creative drumming, and repetitive or tribal beats, all within a 4/4 time signature. To create atmosphere, scratchy guitars and/or keyboards are used and experimentation with other instruments to produce unusual sounds is encouraged. Lyrics are typically introspective and angsty; they deal with the dark themes of isolation, irony, disillusionment, loss, death, etc. all of which are designed to strike an emotional chord with the listener. However, this places a great demand on the lead vocalist to convey complex emotions, so the lead vocalists are typically charismatic and have strong, distinctive or unusual voices in order to stand out from the heavily atmospheric and rhythmic music.

The heavy emphasis on mood means that Deathrock DJs spin their music to match moods instead of matching beats as [Techno](#) and [EBM](#) DJs typically do .

# History of deathrock

## Etymology of 'deathrock'

The origin of the term 'deathrock' can be traced back to the 1950s when it was used to describe a genre of [rock and roll](#) called "death rock", beginning in 1958 with Jody Reynold's "Endless Sleep" and ending in 1964 with J. Frank Wilson's *The Last Kiss*. In these songs, teenagers sang about the tragic deaths of their boyfriends or girlfriends from accidents, suicides, illnesses, etc. The Shangri-Las' *Leader Of The Pack* is arguably the best known example of 1950s style "death rock", but other well known songs from this era would include Mark Dinning's *Teen Angel* and Ray Peterson's *Tell Laura I Love Her*. These early "death rock" songs were generally more serious, introspective and romantic in nature than the novelty songs of this era which humorously dealt with encounters with vampires, monsters, werewolves, etc.

The term deathrock re-emerged as early as 1979 to describe the sound of various bands which would later become associated with the deathrock scene. Mark Splatter of deathrock.com attributes it to Rozz Williams, although some attribute it to the lyrics from the 1982 Misfits' song All Hell Breaks Loose ("And broken bodies in a death rock dance hall"), while still others attribute the term to a label applied by the media to describe Los Angeles based [punk](#) bands obsessed with spooky imagery and death, in much the same manner as positive punk was used by the media to describe the early Batcave sound in the U.K. In any event, the term deathrock appears to have first caught hold in the West Coast of the United States then spread outward from there.

Deathrock was used interchangeably with [gothic rock](#) until sometime during the mid 1990s when eventually deathrock as a label fell out of vogue and was seldom used except in reference to the Los Angeles bands 45 Grave and Christian Death.

## Origins of deathrock

While the aforementioned "death rock" songs of the Shangri-Las, Mark Dinning, Ray Peterson, etc. helped to initially establish some of the themes (death, grief, loss, tragedy, etc.) which would become associated with Deathrock, both the sound and visuals of Deathrock were perhaps more influenced by the less serious late 1950s/early 1960s novelty music acts such as Bobby "Boris" Pickett with the Monster Mash and Screamin' Jay Hawkins with I Put a Spell on You in the United States, and Screaming Lord Sutch & the Savages with *Murder in the Graveyard* in Great Britain. These songs used sound effects to create a humorously creepy atmosphere while dealing with taboo subjects. Screamin' Jay Hawkins had elaborate an stage act which would include coffins, skulls, shrunken heads, fireworks. These novelty songs are still occasionally played at deathrock clubs.

Other influences from the 1950s include the darker themes and often campy visuals from B-movie horror films and the atmospheric and mood setting sound of horror film scores all of which were eventually incorporated into Deathrock. These types of influences continued through the 1960s with TV shows such as the

Addams Family, the Munsters, the Twilight Zone, and Dark Shadows as well as the frequent TV showings of Universal Horror films, Hammer horror films, B-movie horror films. However, The dark side of American pop culture was not the only influence on Deathrock. According to Dinah Cancer, Italian horror movies were a very big influence on 45 Grave's visual style [15]. Both Deathrock bands and fashion were influenced by spookily clad horror movie hosts on TV such as Vampira [16] in Los Angeles, John Zacherle in Philadelphia and New York, Elvira in Los Angeles (then later nationally), and Ghoulardi in Cleveland.

Well known rock bands from the 1960s and early 1970s such as The Doors, the Velvet Underground, Iggy Pop and The Stooges, Black Sabbath, Alice Cooper, KISS, etc, explored darker themes and sounds, and in some cases by presenting horror themed visuals with their shows which would later influence Deathrock artists. For example, Rozz Williams specifically credits Alice Cooper and KISS as two of his biggest influences .

(For a more complete listing of the early musical influences on Deathrock, see Gothic Rock predecessors.)

## Emergence of deathrock

Deathrock first emerged in America in the late 1970s and early 1980s as a horror movie influenced offshoot from the pre-existing [punk rock](#) and pre-[hardcore](#) L.A. music scene. .

The most active and best documented deathrock music scene was in Los Angeles which centered around the bands The Flesh Eaters (1977), Kommunity FK (1979), 45 Grave (1979), Christian Death (1979), Gun Club (1981), Voodoo Church (1982), Burning Image (1983), etc. However, other cities in the United States also had bands which would later be described as Deathrock such as Theatre of Ice (1978) in Fallon, Nevada (and later Salt Lake City, Utah and Phoenix, Arizona), Gargoyle Sox (1985) in Detroit, Michigan, Shadow of Fear (1985) in Cleveland, Ohio, and Holy Cow in Boston, Massachusetts (and later Providence, Rhode Island). The New York scene featured Scarecrow (1984), Of a Mesh (1984), and The Naked and the Dead (1985) .

Many of these deathrock bands were at least partially influenced by the more theatrical glam acts such as David Bowie, Alice Cooper, T. Rex, The New York Dolls, etc, as well as punk progenitors MC5, The Stooges, Richard Hell & the Voidoids, etc. The older Los Angeles bands were not yet influenced by the more post-punk sounding first generation Gothic Rock bands Bauhaus, Siouxsie and the Banshees, Joy Division, etc, from Europe.

These early Deathrock bands took the pre-existing base of punk rock and added dark yet playful and themes borrowed horror. And in some cases blending hardcore punk with a gothic sound; a prime example of this would be TSOL ; and Burning Image . During this time, however, these early Deathrock bands were not immediately identified as part of a new subgenre of punk; they were simply considered a darker flavor of punk or maybe even [horror punk](#). During this time, these bands would play at the same venues as punk, hardcore and [New Wave](#) bands and were not yet considered part of a separate music scene .

A 1981 review of the Veil, a Los Angeles club catering to a gothic clientele, indicates that "downtown art types" may have also been an indirect influence on the deathrock scene by supporting clubs where Deathrock and gothic rock were played . Unlike some of the sub-genres of punk, many Deathrock songs have a strong strong dance beat. The lyrics of the Dead Milkmen's 1987 satirical song "Instant Club Hit (You'll Dance to Anything)" supports the notion that art school students continued to be some of the more enthusiastic supporters of the Deathrock and gothic rock club scenes through the 1980s.

## Merger with gothic rock

Around the same time as deathrock was emerging as a distinctive horror and glam influenced subgenre of punk rock in the United States, another extremely similar horror and glam influenced subgenre of punk and [post-punk](#) was developing independently in the UK . The main focal point for this emerging UK scene was a London club called the Batcave .

Initially, the Batcave was envisioned as a club which would specialize in darker glam and post-punk musical acts . However Specimen, Alien Sex Fiend and Sex Gang Children [30], three bands which debuted and performed frequently at the Batcave, were also strongly influenced by horror in British pop culture. These bands developed their own horror influenced sound which set them apart from the rest of the glam and post-punk scenes in Britain . Initially, this new Batcave inspired sound was referred to as positive punk, but this term positive punk quickly gave way to [gothic rock](#) .

In early 1983, the Batcave scene in the UK had acquired the label "positive punk", but in less than a year it had changed to "goth" and "gothic" . In 1983, The Gun Club began touring in Europe as did Christian Death which meant the European Batcave and American Deathrock scenes were now able to directly influence one another. Two years later in 1985, deathrock band Kommunity FK began touring with the Batcave band Alien Sex Fiend which continued this trend. Around this point in time, deathrock and Batcave began to merge with one another and evolve into gothic rock . Eventually, the term 'gothic rock' replaced Deathrock, which Rozz Williams attributes to the influence of the Sisters of Mercy .

The mid 1980s also marked the second wave of gothic rock which is when the influence of Post-Punk began to wane and be replaced with a more serious and more rock oriented approach . The tempo of the gothic rock gradually slowed down and become more mechanical from the widespread use of drum machines instead of live drummers . Also, the growing influence of atonal lead vocals would replace the more Punk and Post-Punk styled vocals. This shift in sound was largely due to the influence of The Sisters of Mercy .

During the third wave of gothic rock in the mid 1990s, the music would begin to incorporate many elements of the harsher, factory inspired sound of [industrial music](#) and the more repetitive and electronic sounds of [EBM](#) and electro-industrial while losing some of the remaining introspection and romanticism inherent in first and second waves gothic rock. Some goth clubs even dropped gothic rock from their setlists and instead focused on alternative electronic music (EBM, [futurepop](#), [darkwave](#), [power noise](#), etc.) to appeal to a [crossover](#) crowd . These changes alienated many in the goth scene who preferred the livelier, punkier Deathrock and Batcave sound . Their growing dissatisfaction with the new direction of gothic rock and the [club scene](#) led some to seek out their earlier Deathrock/Batcave roots .

(For a more complete description of 2nd and 3rd generation Goth, see the [gothic rock](#) article.)

## Re-emergence of deathrock

Nearly 20 years after deathrock appeared on the music scene in Southern California, the deathrock revival began in Southern California.

In 1998 in Long Beach, California, Dave and Jen Skott (AKA Dave and Jenn Bats) were asked by the owner of the Que Sera, a local bar, to throw a one night 'old school' Gothic Halloween party. After the success of the one night party, the event quickly evolved into a regular Deathrock club called Release the Bats [46]

and the focal point in California for re-emerging deathrock scene. (The club is named after a song by the Australian Deathrock band the Birthday Party.)

The current Deathrock scene is similar to the original deathrock scene in Los Angeles and the Batcave scene in London . In addition to clubs, the current scene is centered around concerts, special events, parties, and horror movie screenings. The internet is playing a major role in the Deathrock revival. There are websites devoted to the discussion deathrock [music](#), bands and fashions as well as horror movies, such as deathrock.com and post-punk.com, plus mailing lists for Deathrockers on Yahoo! and on-line virtual communities on LiveJournal and MySpace.

In contrast to the early Deathrock scene, the current scene has four additional influences which didn't exist in the late 1970s or early 1980s.

First, there is the influence of post-punk and glam which came from Batcave bands such as Specimen, Sex Gang Children, Alien Sex Fiend, etc. Their influence on modern Deathrock has caused a shift in sound away from early hardcore punk towards a more post-punk sound. Some of the darker sounding songs from modern post-punk revival bands are also occasionally played in Deathrock clubs.

Second, there is the influence of [psychobilly](#) (another music fusion genre of horror and punk) which is noted for being strongly apolitical. This influence has discouraged political debates which have the potential to fragment the scene. And the Drop Dead Festival, featuring several days of about 60 bands with psychobilly, horror punk and Deathrock bands, is similar to psychobilly's Hootenanny, which emphasizes fun and gives bands with smaller fan bases an opportunity to play before larger crowds .

Third, there is a more serious horror movie influence on Deathrock, based in part on fewer unintentionally campy horror movies being made, plus the increasing availability of horror movie film scores through CDs and legal online music download. Deathrockers also frequently participate on internet discussion forums and mailing lists for horror fans, and many deathrock discussion forums have separate sections specifically for horror movies.)

Fourth, and perhaps most importantly, there now exists the influence of older Deathrockers still active in the scene on a new generation of Deathrockers. A significant percentage of modern Deathrockers were part of the deathrock scene in the 1980s and are now in their 30s or 40s. Members of the original Deathrock scene did not have the benefit of a group of 'elders' to pass on the oral history of music and the traditions of the scene.

As the modern goth scene continues to drift further away from its horror and punk roots under the influences of more melodic [EBM](#) and [futurepop](#), more deathrock bands and clubs are appearing as a reaction against this trend . Cinema Strange, Bloody Dead and Sexy, The Brides, The Deep Eynde, The Vanishing, Bella Morte and Devilish Presley are popular modern Deathrock bands, while Release the Bats in Long Beach, CA; Funeral in Pomona, CA; the Asylum in San Francisco, CA; Wake the Dead in Sydney, Australia; Kiss Kiss Bang Bang in Melbourne, Australia; Dead and Buried in London, UK; Pagan Love Songs in Bochum, Germany; Onderstroom in Nijmegen, Netherlands and The Wake in Nottingham, UK remain popular deathrock clubs.

# Influential deathrock artists

## Rozz Williams

Christian Death's 1982 debut album, *Only Theatre Of Pain* is widely held by many as the first purely Deathrock album which could not be easily classified as either a darker flavor of punk (as with T.S.O.L or the Damned), horror punk (as with 45 Grave or Voodoo Church), or post-punk (as with Bauhaus or Joy Division). As a result, Rozz Williams, the lead singer of Christian Death, Shadow Project, Daurus Karota and Premature Ejaculation, to name a few, is considered by many as one of the single most influential musicians in the deathrock scene.

## Dinah Cancer

In the 1980s, Dinah Cancer has been referred to as the Queen of Deathrock, the Goddess of Deathrock and the High Priestess of Deathrock for her role as the front woman for 45 Grave during a time when female lead singers were still considered somewhat of a rarity. She eschewed the more "pretty" gothic look for one more horror inspired, and emphasized the more fun side of death as opposed to the more serious and sensual gothic side.

## Other artists

However, this is not to imply that Los Angeles were solely responsible for the formation of the deathrock sound; many bands in the United States released EPs and LPs prior to 1982 which would now be considered deathrock. Also British bands made major contributions to the sound by adding a strong post-punk influence, including Joy Division, Bauhaus, Siouxsie & the Banshees, etc. Other bands from around the world added their own unique contribution to the deathrock sound, including Xmal Deutschland in Germany, the Virgin Prunes from Ireland, and The Birthday Party, etc.

Sisters of Mercy, which is frequently played at Deathrock clubs, is generally not considered a major influence because Sisters of Mercy's sound which has more in common with second wave gothic rock bands (As they were the second wave's prime influence) than the punkier sound of first wave gothic rock bands .

# Deathrock compared to other subgenres

## Deathrock synonyms

Deathrock probably has more synonyms than any of the other subgenres of punk, and they help illustrate its similarities and differences to these other punk related subgenres. These synonyms include the 1980s terms death punk, gothic punk, goth punk, horror rock, splatter rock, spooky rock and roll, positive punk, Batcave, PIB (Person in Black), and monochromatic punk; the 1990s terms punky-goth, gothic punk, old school goth, '80s goth and new grave; as well as the 2000s terms dark post-punk and dark dance punk.

[Horror Punk](#) is sometimes used as a synonym for Deathrock although it is a different subgenre of Punk.

## Other punk and horror fusion genres

The subgenres of punk most closely related to Deathrock are [horror punk](#) and [psychobilly](#). While Deathrock is a fusion of pre-hardcore punk, post-punk and horror, horror punk is a fusion of punk and horror, and psychobilly is a fusion of punk, rockabilly and horror. Because of the strong influence of horror on these three subgenres, there exists considerable overlap between their sense of fashion, musical preferences and bands.

Generally speaking, horror punk sounds louder, faster and closer to its Misfits inspired hardcore punk roots. Conversely, Deathrock sounds more introspective, serious, and romantic than horror punk. Keyboards are another differentiating point: deathrock bands frequently use keyboards (mainly for atmosphere) whereas horror punk and psychobilly bands do not. (From a more humorous perspective, deathrock bands do not use "whoas" in their choruses, frequently use the word spooky to describe their music, and prefer Deathhawks over Devillocks .)

Psychobilly, however, is easier to distinguish from horror punk and Deathrock because psychobilly bands normally use an upright bass whereas horror punk and Deathrock bands do not.

Post-punk, especially when dealing with darker themes, sounds very similar to modern deathrock; however post-punk seldom includes horror related themes and images which are important components of Deathrock. Additionally, post-punk bands generally do not put on highly theatrical shows emphasizing spooky imagery.

## What deathrock is not

Despite the similar sounding names deathrock (which is a subgenre of punk) has no connection to the similarly named [death metal](#), which is a subgenre of [heavy metal](#).

Additionally, Deathrock should not be confused with shock rock. Deathrockers and Deathrock bands do not deliberately seek to shock others or cause

controversy; their fashion choices are generally done in a playful, tongue in cheek manner. However, as it has been previously noted, Deathrock was influenced by earlier shock rockers such as Screamin' Jay Hawkins and Alice Cooper.

## Debut album

A **debut album** is the first released music [album](#) by an artist or a band.

The 29 best-selling debut albums (as of the end of 2003):

| Position | Artist                | Album                                  | Sales      |
|----------|-----------------------|--|------------|
| 1        | Boston                | <i>Boston</i>                          | 17 million |
| 2        | Hootie & the Blowfish | <i>Cracked Rear View</i>               | 16 million |
|          | Alanis Morissette     | <i>Jagged Little Pill</i>              | 16 million |
| 4        | Guns N' Roses         | <i>Appetite for Destruction</i>        | 15 million |
| 5        | Backstreet Boys       | <i>Backstreet Boys</i>                 | 14 million |
|          | Meat Loaf             | <i>Bat Out of Hell</i>                 | 14 million |
| 7        | Britney Spears        | <i>...Baby One More Time</i>           | 13 million |
|          | Whitney Houston       | <i>Whitney Houston</i>                 | 13 million |
| 9        | Pearl Jam             | <i>Ten</i>                             | 12 million |
|          | matchbox twenty       | <i>yourself or someone like you</i>    | 12 million |
| 11       | Jewel                 | <i>Pieces of You</i>                   | 11 million |

# Deep house

**Deep house** is a style of [house music](#). It is loosely defined by the following characteristics that distinguish it from most other forms of house music:

- relatively slow tempo (110–125 bpm);
- de-emphasized percussion, including:
  - simpler [drum machine](#) programming;
  - gentle transitions and fewer "build-ups";
  - less "thumpy" bass drum sound;
  - less pronounced hi-hats on the off-beat;
- sustained chords or other tonal elements that span multiple bars;
- increased use of reverb, delay, and filter effects;

Modern deep house artists and DJs include: Son Dexter, Larry Heard, Joaquin 'Joe' Clausell, Antonio Ocasio, 'Little Louie' Vega, King Britt, dj Yannick, Lars 'LB' Behrenroth, jojoflores, Julius 'the Mad Thinker', Osunlade, Nadirah Shakoor, Miguel Migs, Lisa Shaw, Ian Pooley, Gaelle, Latrice Barnett and more.

Popular Record Labels of the genre include: Alleviated Records, Yoruba People's Music, Sacred Rhythm Music, NEEDS, Gotsoul Recordings, MAW Records, deep4life, Restricted Access, Tribal Winds Records, Giant Step Records, King Street Sounds, Naked Music, Salted Music, & OM Records.

Deep House music is often synonymous with 'Lounge Music' and popular niche compilations such as Hotel Costes, House of OM, Café del Mar and Lost On Arrival have blurred the two genres with influences of [ambient](#) or [electro-downtempo](#) music.

During the 90s in the UK, progressive house was an evolution of deep house. It was essentially the same as deep house, but with each phrase the complexity of the melody was built up. Notable early pioneers of this genre include Slam (Positive Education) and K Chandler, along with Blake Baxter.

## Definition of music

This article discusses the **definition of music**. [Music](#) is an art, entertainment, or other human activity which involves organized and audible sound, though definitions may vary.

Defining music is as difficult as defining art or any other subjective phenomenon. It is a problem that has been tackled at various times by philosophers, lexicographers, [composers](#), teachers, semioticians or semiologists, linguists and other scientists, students, and various other [musicians](#).

The elements of music often have an implicit concept of time, pitch, and energy. The presence or lack of these elements can be used to classify music. They can be organized into units with interrelated rhythm, harmony, and melody. Organizing musical sound is part of [composition](#) and [improvisation](#). Music can invoke or convey a sense of motion in time.

## Etymology

The word itself comes from the Greek *mousikê* (*tekhnê*) by way of the Latin *musica*. It is ultimately derived from *mousa*, the Greek word for muse. In ancient Greece, the word *mousike* was used to mean any of the arts or sciences governed by the Muses.

Later, in Rome, *ars musica* embraced poetry as well as what we now think of as music. Our current understanding of music as being something which is abstract and has nothing to do with language (but something which may be combined with it in song) is relatively modern.

In the European Middle Ages, *musica* was part of the mathematical quadrivium - arithmetics, geometry, astronomy and *musica*. The concept of *musica* was split into three major kinds: *musica universalis*, *musica mundana*, *musica instrumentalis*. Of those, only the last - *musica instrumentalis* - referred to music as performed sound.

*Musica universalis* referred to the order of the universe, as god had created it in "measure, number and weight". The proportions of the spheres of the planets and stars (which at the time were still thought to revolve around the earth) were perceived as a form of music, without necessarily implying that any sound would be heard - music refers strictly to the mathematical proportions. From this concept later resulted the romantic idea of a music of the spheres.

*Musica mundana* designated the proportions of the human body. These were thought to reflect the proportions of the Heavens and as such, to be an expression of god's greatness. To Medieval thinking, all things were connected with each other - a mode of thought that finds its traces today in the occult sciences or esoteric thought - ranging from astrology to believing certain minerals have certain beneficiary effects.

*Musica instrumentalis*, finally, was the lowliest of the three disciplines and referred to the manifestation of those same mathematical proportions in sound - be it sung or played on instruments. The polyphonic organization of different melodies to sound at the same time was still a relatively new invention then, and it is understandable that the mathematical or physical relationships in frequency that give rise to the musical intervals as we hear them, should be foremost among the preoccupations of Medieval musicians.

## Music in other languages

The languages of many cultures do not include a word for or that would be translated as *music*. Inuit and most North American Indian languages do not have a general term for music, and in Africa there is no term for music in Tiv, Yoruba, Igbo, Efik, Birom, Hausa, Idoma, Eggon or Jarawa. Many other languages have terms which only partly cover what Europeans mean by the term music (Schafer). The Mapuche of Argentina do not have a word for *music*, but they do have words for instrumental versus improvised forms (*kantun*), European and non-Mapuche music (*kantun winka*), ceremonial songs (*öl*), and *tayil* (Robertson 1976: 39).

In Czech, *hudba* is instrumental music and only by implication vocal music. Some languages in West Africa have no term for music but the speakers do have the concept (Nettl, 1989).

*Musiqi* is the Persian word for the science and art of music, *muzik* being the sound and performance of music (Sakata 1983), though some things European influenced listeners would include, such as Koran chanting, are excluded. Actually, there are varying degrees of "musicness"; Koran chanting and Adhan is not considered music, but classical improvised song, classical instrumental metric composition, and popular dance music are. However, from a European influenced musicological analysis, or from the standpoint of an untrained European influenced listener, Koran chanting is structurally similar to classical singing (Nettl, 1989).

## Music as organized sound

An oft cited definition of music, made by Wynton Marsalis among others, is that it is "sound organized in time." Apart from objections that "organization" is not required, this definition is seen by many as being too broad. The fifteenth edition of the *Encyclopaedia Britannica* pinpoints the problem by saying that "while there are no sounds that can be described as inherently unmusical, musicians in each culture have tended to restrict the range of sounds they will admit." Organization would seem to be a crucial restricting criterion in this context, after all.

"Organization" also seems necessary because it implies *human* organization. This human organizing element seems crucial to the common understanding of music. Sounds produced by non-human agents, such as waterfalls or birds, are often described as "musical", but rarely as "music".

This definition determines music according to the poetic and the neutral levels (it must be composed sonorities), or more aesthetically, 'the artful or pleasing organization of sound and silence', which determines music according to the esthetic. This definition is widely held to from the late 19th century forward, which began to scientifically analyze the relationship between sound and perception.

Additionally, Schaeffer (1968: 284) describes that the sound of classical music "has decays; it is granular; it has attacks; it fluctuates, swollen with impurities—and all this creates a musicality that comes before any 'cultural' musicality." Yet the definition according to the esthetic level does not allow that the sounds of classical music are complex, are noises, rather they are regular, periodic, even, musical sounds. Nattiez (1990, p.47-8): "My own position can be summarized in the following terms: *just as music is whatever people choose to recognize as such, noise is whatever is recognized as disturbing, unpleasant, or both.*" (see "music as social construct" below)

## Music as subjective experience

Another commonly held definition of music holds that music must be 'pleasant' (determined by the esthetic level) or 'melodic' (determined by the neutral and/or esthetic levels). This view is often used to argue that some kinds of organized sound 'are not music', while others are, based on type of organization or its aesthetic effect. Since the range of what is accepted as music varies from culture to culture and from time to time, more elaborate versions of this definition admit some kind of cultural or social evolution of music, granting that definitions may vary but universals hold. This definition was the predominant one in the 18th century, where, for example, Mozart stated that "music must never forget itself, it must never cease to be music." One example of shifts in the music/noise dichotomy, what organization is considered musical, is the emancipation of the dissonance, while Luciano Berio (1976) describes how the Tristan chord was noise in 1859 since it was a sonority unexplainable by contemporary harmonic conventions.

This view of music is most heavily criticized by proponents of the view that music is a social construction (directly below), defined in opposition to "unpleasant" "noise", though this view may be subsumed in the one below in that a listener's idea of pleasant sounds may be considered socially constructed.

A subjective definition of music need not, however, be limited to traditional ideas of music as pleasant or melodious. Luciano Berio defined music as, "everything one listens to with the intention of listening to music." This approach to the definition focuses not on the *construction* but on the *experience* of music. Thus, music could include "found" sound structures--produced by natural phenomena or algorithms--as long as they are interpreted by means of the aesthetic cognitive processes involved in music appreciation. This approach permits the boundary between music and noise to change over time as the conventions of musical interpretation evolve within a culture, to be different in different cultures at any given moment, and to vary from person to person according to their experience and proclivities. It is further consistent with the subjective reality that even what would commonly be considered music is experienced as noise if the mind is concentrating on other matters and thus not consuming the sound *as music*.

## Music as social construct

[Post-modern](#) and other theories argue that, like all art, music is defined primarily by social context. According to this view, music is what people call music, whether it is a period of silence, found sounds, or performance. Famously John Cage's work 4'33" is rooted in this conception of music. According to Nattiez, Cage, Kagel, Schnebel, and others, "now perceive them[certain of their pieces] (even if they do not say so publicly) as a way of "speaking" in music about music, in the second degree, as it were, to expose or denounce the institutional aspect of music's functioning." (p.43)

Cultural background factors in determining music from noise or unpleasant experiences. The experience of only being exposed to a particular type of music influences perception of any music. Cultures of European descent are largely influenced by music making use of the Diatonic scale. Most modern music still uses this scale and due to constant exposure, the music of other cultures is not held with the same regard. What would be accepted as music in Indonesia may be dismissed by many westerners as just "a din."

It might be added that as well as cultural background, historical era is also a determining factor in what is regarded as music. What would today be accepted as music in the west without the blinking of an eye, would have been ridiculed in the 17th century. And what would be music to The Sex Pistols' Sid Vicious, who is said to have commented, "you just pick a chord, go twang, and you've got music," would almost certainly not have been music to William Congreve, who wrote that, "Musick has charms to sooth a savage breast" (*The Mourning Bride*, 1697). All of which is to say that there can be no absolute definition of music that will be accepted by everybody.

Many people do, however, share a general idea of music. The Webster's definition of music is a typical example: "the science or art of ordering tones or sounds in succession, in combination, and in temporal relationships to produce a composition having unity and continuity" (*Webster's Collegiate Dictionary*, online edition). There are a number of potential objections to such a definition.

While some may find this definition too restrictive, arguing that "unity" and "continuity" are unnecessary, it is likely that more will find it too broad, thinking of music as being made of pitched sounds, and containing [melody](#), [harmony](#), and [rhythm](#). The idea that music must contain these elements is widespread, but there are several examples of what would be widely regarded as music, which lack one or more of them. [Plainsong](#) for instance, or monophonic music in general, has no harmony. Much [percussion](#) music lacks both harmony and melody; it is true that [drums](#) are tuned, but their pitches are indefinite, and they cannot be said to produce a melody in the traditional sense. If one takes rhythm to mean a regular pulse underpinning music, then many kinds of modern [electronic music](#) can be said to lack rhythm.

Some attempts to define music concentrate on the method of producing it. Even though some of the first "instruments" in prehistory must have been rocks and bits of wood, it is only in the past one hundred years or so that the idea that music could only be produced by a singer or a traditional musical instrument (such as a [violin](#) in Europe, a [sitar](#) in India or a koto in Japan) has been challenged. Erik Satie challenged what constituted a musical instrument, and therefore a musical sound, when he wrote the ballet Parade which included a part for a typewriter. His

justification was that since the typewriter made a noise, it was a musical instrument. In a lighter vein, Leroy Anderson also wrote music that included a manual typewriter, played with strict rhythm.

The composer John Cage challenged traditional ideas about music in his 4' 33", which is notated as three movements, each marked *Tacet* (that is, "do not play"). The implication, as expanded upon by Cage himself, is that the background noises which are normally a distraction from the music (the humming of the lights, the shuffling of the audience, the sound of traffic outside) are to be regarded as the actual music in this case. Some also consider to be part of the music the potential differences in the collection of sounds present if the piece had been only four minutes, or if it had been five, although Cage may have never intended this interpretation.

This is contrary to the usual view that music is, if nothing else, deliberate. Furthermore, Cage does not state the length of the piece - the duration of the first performance (given by David Tudor seated at a [piano](#)) was arrived at by consulting the *I Ching*, but it is not stated in the score (although whenever the piece is performed nowadays, the original duration is usually maintained). The total time of silence is 273 seconds, which has a parallel in the temperature -273 degrees Celsius, absolute zero. This is pure coincidence, however.

Some people deal with the challenges posed by 4' 33" by simply refusing to consider it as music.

Of course, even in conventional music, the "silent" gaps between notes are part of the music. The pianist Artur Schnabel, when asked what made him a great pianist, said "The notes I handle no better than many pianists. But the pauses between the notes? Ah, that is where the art resides!" In Joseph Haydn's Symphony No. 45, *Farewell*, the entire composition anticipates the silence at the end as the musicians one by one stop playing and walk from the stage.

The American composer La Monte Young took this line of thought to an extreme by suggesting that even sound itself was not necessary for a piece of music to exist. In Composition 1960 #5, one of a series of similar pieces, he instructed the performer to "Turn a butterfly (or any number of butterflies) loose in the performance area," the piece being considered complete when the butterflies have flown away. The choice of a butterfly is significant in that it is perceived as a silent animal. During the performance, there will be background noises, just as there are in a performance of 4' 33", but this is not the thrust of the piece. Rather, Young is interested in the theatrical element of music.

Young's point in this instance is that when one goes to a performance of a piece of music, seeing the musicians perform is as much a part of the music as hearing them, so why not remove the hearing element altogether? In this sense, his interest is similar to that of Mauricio Kagel, who carefully notates the theatrical element of performance in his works (although he usually maintains a significant sonic element also).

## Music as a category of perception

Less commonly held is the cognitive definition of music, which argues that music is not merely the sound, or the perception of sound, but a means by which perception, action and memory are organized. This definition is influential in the cognitive sciences, which search to locate the regions of the brain responsible for parsing or remembering different aspects of musical experience. This definition would include [dance](#). The Boulangers established a school of thought centered around this concept which included the idea of eurhythmics, which is gesture guided by music.

## Music as language

Many definitions of music implicitly hold that music is a communicative activity which conveys to the listener moods, emotions, thoughts, impressions, or philosophical, sexual, or political concepts or positions. "Musical language" may be used to mean style or genre, while music may be treated as language without being called such, as in Fred Lerdahl or others' analysis of musical grammar. Levi R. Bryant defines music not as a language, but as a marked-based, problem-solving method such as mathematics (Ashby 2004, p.4).

Because of its ability to communicate, music is sometimes described as the "universal language". Yet the "meaning" of music is obviously culturally mediated. For example, in Western society, minor chords are often perceived as "sad", an understanding other cultures rarely share.

There is significant complexity in the structural elements of music which warrant the perception of music as a language. For example, genres of music can be characterized by the manner in which sound and silence are articulated, organized, and disseminated. The composition of these elements gives rise to a system which is on par with the complexities and subtleties of 'language'.

## Change

Musical change, stylistically, is thought of both as inevitable and necessary, or at least beneficiary in European influenced classical music and much popular music, while in classical Iranian culture music is thought to be complete, new creations are variations and rearrangements of old ones or parts of. Some classical composers seek to create innovative works in preexisting genres and forms, while other seek to break the mold. Indian classical is thought to change little and valued for that quality, while great changes between different improvised performances are equally valued. In folk, jazz, and some popular music variation and reinterpretation of traditional or received materials is valued, while in some popular music, such as progressive rock, for example, inspired individual or group innovation is sought for. The European classical canon is valued for its unchanging timeless, ahistorical, nature.(Nettl, 1989)

## Tripartite definition

"Music, often an art/entertainment, is a total social fact whose definitions vary according to era and culture," according to Jean Molino.<sup>1</sup> It is often contrasted with noise. According to musicologist Jean-Jacques Nattiez: "The border between music and noise is always culturally defined—which implies that, even within a single society, this border does not always pass through the same place; in short, there is rarely a consensus.... By all accounts there is no *single* and *intercultural* universal concept defining what music might be."<sup>2</sup>

Given the above demonstration that "there is no limit to the number or the genre of variables that might intervene in a definition of the musical,"<sup>3</sup> an organization of definitions and elements is necessary.

Nattiez<sup>4</sup> describes definitions according to a tripartite semiological scheme similar to the following:

|                                     |                     |
|-------------------------------------|---------------------|
| Poietic Process                     | Esthetic Process    |
| Composer (Producer) ' Sound (Trace) | Listener (Receiver) |

There are three levels of description, the poietic, the neutral, and the esthetic:

- " By 'poietic' I understand describing the *link* among the composer's intentions, his creative procedures, his mental schemas, and the *result* of this collection of strategies; that is, the components that go into the work's material embodiment. Poietic description thus also deals with a quite special form of hearing (Varese called it 'the interior ear'): what the composer hears while imagining the work's sonorous results, or while experimenting at the piano, or with tape."
- "By 'esthetic' I understand not merely the artificially attentive hearing of a musicologist, but the description of perceptive behaviors within a given population of listeners; that is how this or that aspect of sonorous reality is captured by their perceptive strategies." (Nattiez 1990:90)
- The neutral level is that of the physical "trace", (Saussure's sound-image, a sonority, a score), created and interpreted by the esthetic level (which corresponds to a perceptive definition; the perceptive and/or "social" construction definitions below) and the poietic level (which corresponds to a creative, as in compositional, definition; the organizational and social construction definitions below).

Table describing types of definitions of music:

|                 | <b>poietic level<br/>(choice of the<br/>composer)</b> | <b>neutral level<br/>(physical<br/>definition)</b> | <b>esthetic level<br/>(perceptive<br/>judgment)</b> |
|-----------------|---|--|---|
| <b>music</b>    | musical sound   | sound of the<br>harmonic<br>spectrum               | agreeable sound                                     |
| <b>nonmusic</b> | noise<br>(nonmusical)                                 | noise<br>(complex sound)                           | disagreeable<br>noise                               |

(Nattiez 1990, p.46)

Because of this range of definitions, the study of music comes in a wide variety of forms. There is the study of sound and vibration or acoustics, the cognitive study of music, the study of [music theory](#), and performance practice or music theory and [ethnomusicology](#), and the study of the reception and history of music, generally called [musicology](#).

# Delta blues

The **Delta blues** is one of the earliest styles of [blues music](#). It originated in the Mississippi Delta, a region of the United States that stretches from Memphis, Tennessee in the north to Vicksburg, Mississippi in the south, the Mississippi River on the west to the Yazoo River on the east. Slide guitar and [harmonica](#) dominate the instruments used. The vocals range from introspective and soulful to passionate and fiery.

Delta blues music was first recorded in the late 1920s. The early recordings consist mostly of one person singing and playing an instrument, though the use of a band was more common during live performances. The recording of early Delta blues (as well as other genres) owes much to John Lomax, who criss-crossed the Southern US recording music played and sung by ordinary people. His recordings number in the thousands, and now reside in the Smithsonian Institution.

"Delta blues" is a style as much as a geographical appellation: Skip James and Elmore James, who were not born in the Delta, were considered Delta blues musicians. Performers traveled throughout the Mississippi Delta Arkansas, Louisiana, Texas, and Tennessee. Eventually, Delta blues spread out across the country, giving rise to a host of regional variations, including [Chicago](#) and [Detroit blues](#).

Scholars disagree as to whether there is a substantial, musicological difference between blues that originated in this region and in other parts of the country. The defining characteristic of Delta blues would seem to be instrumentation and an emphasis on rhythm; the basic harmonic structure is not substantially different from that of blues performed elsewhere.

Because the Mississippi Delta was essentially feudal in the 1920s and earlier, and the plantation system was oppressive, there existed a subculture of blues artists who were refugees from that system.

The Mississippi State Penitentiary at Parchman Farm was an important influence on several blues musicians who were imprisoned there, and was referenced in songs such as Bukka White's 'Parchman Farm Blues' and Leadbelly's 'Midnight Special'. Thus Delta blues can refer to one of the first pop-music subcultures as well as to a performing style.

## List of artists

Ishman Bracey  
Willie Brown  
R. L. Burnside  
Sam Chatmon  
James Cotton  
Mike Cross  
Arthur Crudup  
David Honeyboy Edwards (1915- ) Delta blues singer and guitarist, a friend of Robert Johnson  
T-Model Ford  
Earl Hooker  
Son House (1902-1988) Highly influential blues singer and guitarist from Mississippi.  
John Lee Hooker (1917-2001) Blues singer and guitarist, known as a pioneer of Detroit blues  
Mississippi John Hurt (1892-1966)  
Skip James (1902-1969) American blues singer, guitarist, pianist and songwriter  
Robert Johnson (1911-1938) Likely the most famous and influential Delta blues singer and guitarist  
Tommy Johnson  
Paul Jones  
Robert Lockwood Jr.  
Tommy McClennan  
Mississippi Fred McDowell  
Charley Patton (1891-1934) One of the first "stars" of Delta blues  
Paul Pena  
Johnny Shines  
Henry Sloan Mentor to Patton  
Sunnyland Slim  
Geechie Temple  
Hound Dog Taylor  
Muddy Waters (McKinley Morganfield (1915-1983) Legendary blues artist, better known as a pioneer of Chicago blues  
Bukka White  
Big Joe Williams  
Elmo Williams

# Demo

A **demo version** or **demo** of a song (shortened from the word "demonstration") is one recorded for reference rather than for release. A demo is a way for musicians to approximate their ideas on tape or disc, and provide an example of those ideas to record labels, producers or other artists. Musicians often use demos as quick sketches to share with bandmates or arrangers; in other cases a [songwriter](#) might make a demo to send to artists in hopes of having the song professionally recorded, or a music publisher may need a simple recording for publishing or copyright purposes.

Many unsigned bands and artists record demos in order to obtain a [recording contract](#). These demos are usually sent to [record labels](#) in hopes that the artist will be signed onto the label's roster and allowed to record a full-length album in a professional recording studio. However, large record labels usually ignore unsolicited demos that are sent to them by mail; artists generally must be more creative about getting the demos into the hands of the people who make decisions for the record company.

Songwriter's and publisher's demos are recorded with minimal instrumentation - usually just an acoustic [guitar](#) or [piano](#), and the vocalist. Both Elton John and Donovan gained studio experience early in their careers by recording publisher's demos for other artists, since their managers also handled music publishing.

Many signed bands and artists record demos of new songs before recording an [album](#). The demos may allow the artist to provide sketches for sharing ideas with bandmates, or to explore several alternate versions of a [song](#), or to quickly record many proto-songs before deciding which ones merit further development.

Demos are typically recorded on relatively crude equipment such as "boom box" cassette recorders, or small four-track or eight-track machines, but sometimes they capture the feeling or intent of the artist better than the final version of the song, after the input of managers, producers and sound engineers. Lou Reed sought out a studio in the late 1980s to record his New York album, where the polished sound would satisfy him as much as that of the rough cassettes he'd been making at home. (The B-side to the album's single was actually a transferred home tape.)

Demo recordings are seldom heard by the public, although some artists do eventually release rough demos in rarities [compilation albums](#) or [box sets](#). Other demo versions have been unofficially released as [bootleg recordings](#), such as The Beatles' Kinfauns Demos. Several artists have eventually made official releases of demo versions of their songs as [albums](#) or companion pieces to albums.

Notable officially-released demo versions include:

- Sarah MacLachlan, The Freedom Sessions
- Pete Townshend, several collections titled Scoop
- PJ Harvey, 4-Track Demos
- Bruce Springsteen's demos for Nebraska were released as the final album after band arrangements proved unworkable
- Jimi Hendrix's song "The Wind Cries Mary", on his Are You Experienced? album and various best-ofs
- The Beatles' Anthology releases included many demo versions
- John Lennon's Milk and Honey album with Yoko Ono contains two unfinished song demos; Lennon's "Grow Old With Me", unable to be finished due to Lennon's death (and the last recording he completed), and Ono's "Let Me Count The Ways", which was purposely left unfinished.

(Both songs were inspired by poets Robert Browning and Elizabeth Barrett Browning, whom Lennon and Ono admired, and were special to the couple.)

## [Music of the United States](#) - **Music of Canada**

The Dene live in northern Canada. Their music includes modern rock and country songs, jigs and reels, work songs, community dances, numerous kinds of religious songs and lullabies.

Dene folk music uses melodies similar to European scales with the coloration of blues notes. Syncopation is common, as are pulsating vocal styles. Melodies generally follow a descending pattern. Many songs, especially Drum Dances, ended with a vocal glissando and percussion break, along with a spoken thank you (mahsi). Vocables are very common.

Songs are typically composed anonymously, though there are no taboos on anyone writing most songs. Only two composers are well remember, Chief Victor (Fort Franklin on Bear Lake) and Yatsule (born at Fort Norman in 1879).

## Detroit blues

**Detroit blues** is [blues](#) music played by musicians resident in Detroit, Michigan, particularly that played in the 1940s and 50s. Detroit blues originated when [Delta blues](#) performers migrated north from the Mississippi Delta and Memphis, Tennessee to work in Detroit's industrial plants in the 1920s and 30s. Typical Detroit blues was very similar to [Chicago blues](#) in style. The sound was distinguished from Delta blues by its use of electric amplified instruments and a more eclectic assortment of instruments, including the [bass guitar](#) and [piano](#).

The only Detroit blues performer to achieve national fame is John Lee Hooker, as record companies and promoters have tended to ignore the Detroit scene in favor of the larger, more influential Chicago blues. The Detroit scene was centered on Black Bottom, a Detroit neighborhood.

# Detroit techno

## Detroit techno

**Stylistic origins:** [Electro](#), [Synthpop](#), [Chicago house](#)

**Cultural origins:** Detroit, Michigan, USA

**Typical instruments:** Analog synthesizer, [Drum machine](#)

**Mainstream popularity:** Large underground following, low mainstream popularity

**Derivative forms:** [Acid house](#)

## [Subgenres](#)

[Acid techno](#)

## Fusion genres

[Minimal techno](#)

## Other topics

[Electronic music](#)

**Detroit techno** is an early style of [techno music](#) originating from Detroit, Michigan, USA in the mid-1980s. A distinguishing trait of Detroit techno is the use of analog synthesizers and early [drum machines](#), notably the roland TR-909 for its production or, in later releases, the use of digital emulation to create the characteristic sounds of those machines.

# History

## Origins

The three individuals most closely associated with the birth of Detroit techno as a genre are the "Belleville Three"; Juan Atkins, Kevin Saunderson and Derrick May. These three high school friends from a Detroit suburb would soon find their basement tracks in dancefloor demand, thanks in part to seminal Detroit radio personality The Electrifying Mojo. Mojo not only played the early homegrown techno tracks, but also influenced the new sound by playing electronic music from techno and [electronic music](#) pioneers like Kraftwerk, Philip Glass, New Order and Afrika Bambaataa.

Influences also came from Chicago's early style of [house](#) music . Although producers in both cities used the same hardware and even collaborated on projects and remixes together, Detroiters traded the choir-friendly vocals of House with metallic clicks, robotic voices and repetitive hooks reminiscent of an automotive assembly line. Many of the early techno tracks had futuristic or robotic themes, although a notable exception to this trend was a single by Derrick May under his pseudonym Rhythim is Rhythim, called "Strings of Life." This vibrant dancefloor anthem was filled with rich synthetic string arrangements and took the underground music scene by storm in May of 1987. With subtle differences between the genres, clubs in both cities included Detroit techno and Chicago house tracks in their playlists without objection (or much notice by non-audiophiles) from patrons.

## Second wave

Once Detroit Techno became a full-fledged musical genre, a second generation of regional artists developed into techno icons themselves; Jeff Mills, Richie Hawtin (aka Plastikman) and Carl Craig to name just a few. Mills began his career as "The Wizard" on Mojo's nightly broadcast, showcasing his turntablist skills with quick cuts of the latest underground tracks and unreleased music from local labels.

In the mid-to-late 1990s, Detroit Techno producers experimented with extended aural soundscapes featuring sparse, ambient underscores punctuated with sporadic, cyclical periods of percussion. Extended length vinyl projects like those under Hawtin's Plastikman facade are particularly clear examples of this period. Atkins "Sonic Sunset" CD in 1994 also delivered this new tradition of Detroit techno.

On Memorial Day weekend of 2000, electronic music fans from around the globe made a pilgrimage to Hart Plaza on the banks of the Detroit River and experienced the first Detroit Electronic Music Festival. In 2003 the festival management changed the name to Movement, then Fuse-In (2005), and most recently, Movement: Detroit's Electronic Music Festival (2006). The festival is a showcase for DJs and performers across all genres of electronic music.

## Quotes

Derrick May once described Detroit techno music as being a "complete mistake ... like George Clinton and Kraftwerk stuck in an elevator."

# Development

In a [sonata form](#) movement, the development is the middle section where material in the exposition is developed. It is followed by the [recapitulation](#).

## Devotional song

A **devotional song** is a [hymn](#) which accompanies religious rituals.

Each major religion has its own tradition with devotional hymns. In the West, the devotional has been a part of the liturgy in Roman Catholicism, the Greek Orthodox Church, the Russian Orthodox Church, and others since their earliest days. A devotional is a part of the prayer service proper and are not, in these contexts, ornamentation. During the Protestant Reformation, church music in general was hotly debated. Some Puritans objected to all ornament and sought to abolish choirs, hymns, and, inasmuch as liturgy itself was rejected, devotionals.

In eastern and near-eastern religions, devotionals can function as communion prayer and meditation. These are sung in particular [rhythms](#) which are sustained over a prolonged period of time to give practitioners a mystical experience.

# Diatonic function

A **diatonic function**, in tonal [music theory](#), is the specific, recognized roles of [notes](#) or [chords](#) in relation to the [key](#).

Three general and inseparable essential features of **harmonic function** in tonal music are that:

1. Position within a gamut (the available collection) of notes determines a note's function
2. Each note within the gamut is a generator and collector of other notes in the gamut, in other words both the root and its chord exercise function, and
3. Exercise and identification of function depends on musical behaviour or [structure](#). (Wilson 1992, p.33)

A fourth feature is the ambiguity that arises from the use of the same terms to describe functions across all temporal spans of a hierarchical structure from the surface to the deepest level, and that the longer term or deeper functions act as a center for shorter higher level ones and that the functions of each tend to counteract each other (ibid).

Pandiatonic music is [diatonic](#) music without the use of diatonic functions.

## Diatonic functions of notes and chords

Each degree of a [scale](#), as well as many chromatically-altered notes, has a different diatonic function as does each [chord](#) built upon those notes. A [pitch](#) or pitch class and its enharmonic equivalents have different meanings. For example, a Co cannot substitute for a Dm, even though in equal temperament they are identical pitches, because the Dm can serve as the third of a Bm minor chord while a Co cannot, and the Co can serve as the fifth degree of an Fo major scale while a Dm cannot.

In theory as commonly taught in the US, there are seven different functions, while in Germany, from the theories of Hugo Riemann, there are only three, and functions besides the tonic, subdominant and dominant are named as "parallels" (US: relatives) to those functions. For instance in C major an A minor is the Tonic parallel or Tp. German musicians use only upper case note letter and Roman numeral abbreviations, while in the US often upper and lower-case are used to designate major and augmented, and minor and diminished, respectively. (Gjerdingen, 1990)

As d'Indy summarizes: "(1) There is only *one chord*, a *perfect* chord; it alone is consonant because it alone generates a feeling of repose and balance; (2) this chord has two *different forms*, *major and minor*, depending whether the chord is composed of a minor third over a major third, or a major third over a minor; (3) this chord is able to take on *three different tonal functions*, *tonic, dominant, or subdominant*." (1903, p.116)

In the United States, Germany, and other places the diatonic functions are:

| Function         | Roman Numeral | German                      | German abbreviation               |
|------------------|---------------|-----------------------------|-----------------------------------|
| Tonic            | I             | Tonic                       | T                                 |
| Supertonic       | ii            | Subdominant parallel        | Sp                                |
| Mediant          | iii           | Dominant parallel           | Dp                                |
| Sub-Dominant     | IV            | Subdominant                 | S                                 |
| Dominant         | V             | Dominant                    | D                                 |
| Sub-Mediant      | vi            | Tonic parallel              | Tp                                |
| Leading/Subtonic | vii           | incomplete Dominant seventh | diagonally slashed D <sup>7</sup> |

Note that the ii, iii, vi, and vii are lowercase; this is because in relation to the key, they are minor scales. Without accidentals, the vii is a diminished vii°.

The degrees listed according to function, in hierarchical order according to importance or centeredness (related to the tonic): I, V, IV, vi, iii, ii, vii°. The first three chords are major, the next minor, and the last diminished.

The tonic, subdominant, and dominant chords, in root position, each followed by its parallel. The parallel is formed by raising the fifth a whole tone; the root position of the parallel chords is indicated by the small noteheads.

## Functions in the minor mode

In the US the minor mode or scale is considered a variant of the major, while in German theory it is often considered, per Riemann, the inversion of the major. In the late eighteenth-early nineteenth centuries a large amount of symmetrical chords and relations were known as "dualistic" harmony. The root of a major chord is its bass note in first inversion or normal form at the bottom of a third and fifth, but, symmetrically, the root of a major chord is the US fifth of a first inversion minor chord, and the US root is the "fifth". The plus and degree symbols, + and ° are used to denote that the lower tone of the fifth is the root, as in major, +d, or the higher, as in minor, °d. Thus, if the major tonic parallel is the tonic, with the fifth raised a whole tone, then the minor tonic is the tonic with the US root/German fifth lowered a whole tone. (Gjerdingen, 1990)

| <b>Major</b>                             |         |            | <b>Minor</b>                             |          |            |
|--|---------|------------|--|----------|------------|
| <i>Parallel Note letter in C US name</i> |         |            | <i>Parallel Note letter in C US name</i> |          |            |
| Tp                                       | A minor | Submediant | tP                                       | E♭ major | Mediant    |
| Sp                                       | D minor | Supertonic | sP                                       | A♭ major | Submediant |
| Dp                                       | E minor | Mediant    | dP                                       | B♭ major | Subtonic   |

The minor tonic, subdominant, dominant, and their parallels, created by lowering the fifth (German)/root (US) a whole tone.

If chords may be formed by raising (major) or lowering (minor) the fifth a whole step, they may also be formed by lowering (major) or raising (minor) the root a half-step to *wechsel*, the leading tone or *leitton*. These chords are *Leittonwechselklänge*, sometimes called *gegenklang* or "contrast chord". (Gjerdingen, 1990)

| <b>Major</b> |         |         | <b>Minor</b> |          |          |
|--------------|---------|---------|--------------|----------|----------|
| TI           | SI      | DI      | tL           | sL       | dL       |
| E minor      | A minor | B minor | A♭ major     | D♭ major | E♭ major |

Major Leittonwechselklänge, formed by lowering the root a half step.

Minor Leittonwechselklänge, formed by raising the root (US)/fifth (German) a half step.

## Quotes

- Three categories can appear in any one of three chordal guises in either of two modes, eighteen positions in all: T, Tp, TI, t, tP, tL, S, Sp, SI, s, sP, sL, D, Dp, DI, d, dP, dL. Why all this complexity? Perhaps the central reason is that this ingenious, occasionally convoluted system enabled Riemann to achieve a grand and masterful synthesis of both the old and the new in late 19-century music. Ostensibly remote triads could be interpreted through the traditional terms of the I-IV-V-I, or now T-S-D-T, cadential schema. A sequence of A♭-major, B♭-major, and C-major chords, for example, could be neatly interpreted as a subdominant (sP) to dominant (dP) to tonic (T) progression in C-major, a reading of these chords not without support in certain late-Romantic cadences. And a chord that often perplexes harmony students, the Neapolitan chord D♭ major in a C-major context, could be shown to be nothing more than a minor-mode subdominant *Leittonwechselklang* (sL). — (Gjerdingen, 1990, p.xiii-xiv)

- Some may at first be put off by the overt theorizing apparent in German harmony, wishing perhaps that a choice be made once and for all between Riemann's *Funktionstheorie* and the older *Stufentheorie*, or possibly believing that so-called linear theories have settled all earlier disputes. Yet this ongoing conflict between antithetical theories, with its attendant uncertainties and complexities, has special merits. In particular, whereas an English-speaking student may falsely believe that he or she is learning harmony "as it really is," the German student encounters what are obviously theoretical constructs and must deal with them accordingly. — (Gjerdingen, 1990, p.xv)

## Circle of fifths

Another theory regarding harmonic functionality is that "functional succession is explained by the circle of fifths (in which, therefore, scale degree II is closer to the dominant than scale degree IV)." According to Goldman's *Harmony in Western Music*, "the IV chord is actually, in the simplest mechanisms of diatonic relationships, at the greatest distance from I. In terms of the circle of fifths, it leads away from I, rather than toward it." (1965, p.68) Thus the progression I-ii-V-I would comply more with tonal logic. However, Goldman (*ibid.*, chapter 3), as well as Jean-Jacques Nattiez, points out that "the chord on the fourth degree appears long before the chord on II, and the subsequent final I, in the progression I-IV-vii<sup>o</sup>-iii-vi-ii-V-I." (Nattiez 1990, p. 226) Goldman also points out that, "historically the use of the IV chord in harmonic design, and especially in cadences, exhibits some curious features. By and large, one can say that the use of IV in final cadences becomes more common in the nineteenth century than it was in the eighteenth, but that it may also be understood as a substitute for the ii chord when it precedes V. It may also be quite logically construed as an incomplete ii<sup>7</sup> chord (lacking root)." (1968, p.68) However, Nattiez calls this, "a narrow escape: only the theory of a ii chord without a root allows Goldman to maintain that the circle of fifths is completely valid from Bach to Wagner." (1990, p.226)

## Tonicization and modulation

Functions during or after modulations and especially tonicizations are often notated in relation to the function, in the original key, which the tonicization was to. Sometimes called "function of function", for example, in C major, a D major chord root, is notated as II, but during a tonicization on G major, it would be notated, as in G major, V, as it is the dominant of (in C major) the dominant, it is notated V/V (five of five). For example, the twelve bar blues turnaround, I-V-IV-I, considered tonally inadmissible, may be interpreted as a doubled plagal cadence, IV/V-V-IV-I (IV/V-I/V, IV/I-I/I).

## Functional behaviours

From the viewpoint of musical behaviour or structure there are five functions:

1. Tonic: I
2. Dominant: V and vii
3. Subdominant: IV
4. Dominant preparation
5. Tonic substitution or extension

The dominant, dominant preparation and the tonic substitution all involve more than one scale degree with only the tonic and subdominant containing only one scale degree. Several scale degrees exercise more than one function. (Wilson 1992, p.35)

The tonic includes four separate activities or roles as the:

1. Principal goal tone or event
2. Initiating event
3. Generator of other tones, and the
4. Stable center neutralizing the tension between dominant and subdominant,

while the dominant has only the role of creating instability that requires the tonic or goal-tone for release. The subdominant also acts as a dominant preparation. A tonic extension is an elaboration of an initiating event while substitution is an alteration of a cadential point or goal tone. Many of these functions may still be found in post-tonal music. (ibid, p.37-39)

## Diatonic set theory

**Diatonic set theory** is a subdivision or application of [musical set theory](#) which applies the techniques and insights of discrete mathematics to properties of the diatonic collection such as maximal evenness, Myhill's property, well formedness, the deep scale property, cardinality equals variety, and structure implies multiplicity.

Music theorists working in diatonic set theory include Eytan Agmon, Gerald J. Balzano, Norman Carey, David Clampitt, John Clough, Jay Rahn, and mathematician Jack Douthett.

# Digital download

A **digital download** (also known as a **digital single** or a **paid digital download**) is an official legally released music [single](#) released by artists to the public. Popular legal online music store that sell digital singles and [albums](#) include Apple's iTunes and Napster. Many people are also using LimeWire to illegally download music.

Digital downloads can usually be available as an album track and sometimes, if released as a radio single, a separate digital set will be released. The term "digital download" is a buzzword often used by record companies and the media when describing legal music-download sites.

Although digital downloads seem like a new idea, they have actually been around since around 2000. They were first compiled by Billboard in 2003, but they didn't gain mainstream acceptance until around February 2005, when digital sales for singles started to be included in the Billboard Hot 100 and other Billboard charts. In the year before, the Hot 100 chart was very similar to the Hot 100 Airplay chart, because there were only minor CD-single sales affecting the chart. The inclusion of digital singles has immensely helped many songs chart and peak higher, including Jessica Simpson's "These Boots Are Made for Walkin'" which became her second-highest peaking Hot 100 single thanks to digital sales. Another example is Britney Spears's "Do Somethin'" which wasn't released as a radio single, but charted in 2005 due to top-fifty (number forty-nine) digital sales. Modern pop-punk has also benefited from digital downloads, with Fall Out Boy's "Sugar We're Goin' Down" and My Chemical Romance's "Helena" peaking at numbers eight and thirty-three respectively on the Hot 100, with almost no radio airplay.

Single certifications were introduced in February 2005. Songs that sell a certain number of copies are often certified by the RIAA with the permission of the artist and the record company.

- 100,000 copies: gold
- 200,000 copies: platinum
- 400,000 copies: 2x platinum
- 600,000 copies: 3x platinum
- 800,000 copies: 4x platinum
- 1,000,000 copies: 5x platinum; diamond

In November 2005, the record for the bestselling digital single was held by Gwen Stefani's "Hollaback Girl", which has sold over one million downloads, making it the first song to achieve diamond download status. The highest week sales was held by "Gold Digger" by hip-hop star Kanye West. The single beat the previous record holder, Gwen Stefani, in the week of September 8, 2005, and has sold enough copies to be certified quadruple platinum (though it hasn't been certified yet). The song also is responsible for ending Mariah Carey's fourteen week run of her comeback single, "We Belong Together". The underground dance music scene has not been left out either with the digital download network Beatport.com hitting it's one million download mark in 2005.

The digital download is quickly becoming a top medium for music, with media devices such as the iPod leading a revolution in music playback and storage potential.

The term has also been used outside the music industry, with MMORPG Star Wars: Galaxies offering expansion packs without purchasing a retail version as a

'digital download'.

# Digital hardcore

**Digital hardcore** is a [music genre](#) or style that was first defined by Alec Empire. Digital Hardcore Recordings is also the name of the record company that Alec Empire set up in Germany in the early 1990s. Digital hardcore reached the peak of its popularity in the mid-1990s and spawned a rapid growth in labels specializing in the genre, but has since regressed to "underground" status.

Digital hardcore is an abrasive and typically electronic music, created with [samplers](#) and [drum machines](#). The music is a combination of [hardcore punk](#), [hardcore techno](#), [drum and bass](#) and other similar styles. It also has close ties to [industrial](#) and [noise music](#). Most of the time, lyrics are anarchist slogan

Some of the most popular digital hardcore acts include Atari Teenage Riot (Alec Empire's own band), EC8OR, The Shizit, Bomb 20, Cobra Killer, Panic DHH, Ambassador 21, Tuareg Geeks, Schizoid, Christoph de Babalon, Mad Capsule Markets and Shizuo.

## Record labels

# Digital synthesizer

A **digital synthesizer** is a [synthesizer](#) that uses digital signal processing (DSP) techniques to make musical sounds.

The very earliest digital synthesis experiments were made with general-purpose computers, as part of academic research into sound generation.

Early commercial digital synthesizers used simple hard-wired digital circuitry to implement techniques such as additive synthesis and FM synthesis. Other techniques, such as wavetable synthesis and physical modeling, only became possible with the advent of high-speed microprocessor and digital signal processing technology. One of the earliest commercial digital synthesizers was the Synclavier.

Some digital synthesizers now exist in the form of "[softsynth](#)" software that synthesizes sound using conventional PC hardware, though they require careful programming and a fast CPU to get the same latency response as their dedicated equivalents. In order to reduce latency, some professional sound card manufacturers have developed specialized digital signal processing hardware. Dedicated digital synthesizers frequently have the advantage of onboard accessibility, with switchable front panel controls to peruse their functions, whereas software synthesizers trump their dedicated counterparts with their additional functionality, against the handicap of a mouse-driven control system.

Digital synthesizers are generally more flexible than analog synthesizers, though aficionados claim that an analog synthesizer develops a personal sonic character as it ages.

# Dirty South

**Dirty South** is a style of [rap](#) music that popped up in the latter half of the 1990s and is based in southern cities such as Memphis, New Orleans, Charleston, Atlanta, Miami, and Houston. Dirty South descended from southern rap: its inspirations drew from Dr. Dre's Chronic album as well as Luther Campbell's 2 Live Crew's (possibly the first southern rap group) nasty traditions in equivalent measure, arriving at a stoned, violent, sex-obsessed and profanity-oriented brand of modern [hip-hop](#).

Dirty South got its name from a song by Goodie Mob. Some of the Dirty South music is characterized by its bouncy, club-friendly beats and lyrics generally concerning flashy jewelry, luxury automobiles, women, and occasionally gangster lyrics. An offshoot of Dirty South music is [Crunk](#), featuring beats with loud, pounding bass.

Rapper/producer Lil Jon is generally considered the main pioneer of [Crunk](#) music.

Dirty South artists:

- 8 Ball & MJG
- Beelow
- B.G. (rapper)
- Big Tymers

# Disc jockey

A **disc jockey** (also called **DJ**, or **dee'jay**) is an individual who selects and plays [prerecorded music](#) for an intended audience.

## Origin of term

The term was first used to describe radio announcers who would introduce and play popular gramophone records. These records, also called discs by those in the industry were jockeyed by the radio announcers, hence the name *disc jockey* and soon to be known as *DJs* or *deejays*. Today there are a number of factors, including the selected music, the intended audience, the performance setting, the preferred medium, and the development of sound manipulation, that have led to different types of deejays.

## Job description

The physical act of selecting and playing sound recordings is called **deejaying**, or **DJing**, and ranges in sophistication from simply playing a series of recordings (referred to as programming, or composing a playlist), to the manipulating of recordings, using techniques such as audio mixing, cueing, phrasing, cutting, scratching, and beatmatching, often to the point of creating original [musical compositions](#). It should be noted that the term "DJ" in Jamaican dancehall culture refers to the performer (elsewhere known as MC) who inserts live ad lib raps or "toasts" over dub instrumental recordings played by the "selector", here described as a "DJ".

## Equipment

The most basic equipment that is necessary for a standard disc jockey to perform consists of the following: 1. sound recordings in preferred medium (eg. vinyl records, compact discs, mp3s) 2. at least two devices for playback of sound recordings, for the purpose of alternating back and forth to create continuous playback (eg. record players, compact disc players, mp3 players) 3. a sound system for amplification of the recordings (eg. portable audio system, radio wave broadcaster)

The addition of a DJ mixer (used to mix the sound of the two playback devices), a microphone (used to amplify the human voice), and headphones (used to listen to one recording while the other is playing, without outputting the sound to the audience) is strongly recommended, but not required. Other types of equipment can also be added, including [samplers](#), [drum machines](#), effects processors, and Computerized Performance Systems.

## **Techniques**

There are several techniques that can be applied by the disc jockey as a means to manipulate the prerecorded music. These include audio mixing, cueing, slip-cueing, phrasing, cutting, beat juggling, scratching, beatmatching, needle drops, phase shifting, and more.

## **DJ control and economics**

Throughout the 1950s, payola was an ongoing problem. Part of the fallout from that payola scandal was tighter control of the music by station management. The Top 40 format also emerged, where popular songs are played repeatedly.

Today, very few radio DJs in the United States have any control over what is played on the air. Playlists are very tightly regulated, and the DJ is often not allowed to make any changes or additions. The songs to be played are usually determined by computerized algorithms, and automation techniques such as voice tracking have allowed single DJs to send announcements across many stations. Even song requests are sometimes co-opted into this system — a song might be announced as a request by a DJ even though it was already set to appear in the playlist.

Economically, this formula has been successful across the country. However, music aficionados look upon such practices with disgust and either seek out freeform stations that put the DJs back in control, or end up dumping terrestrial radio in favor of satellite radio services or portable music players like iPods. College radio stations and other public radio outlets are the most common places for freeform playlists in the U.S.

## Types of disc jockeys

By definition, the role of selecting and playing [prerecorded music](#) for an intended audience is the same for every disc jockey. The selected music, the audience, the setting, the preferred medium, and the level of sophistication of sound manipulation are factors that create a number of different types of deejays.

The following is a list of the most common types of disc jockeys, along with notable examples of each, listed in chronological order by birth.

### Radio DJs

A radio disc jockey is one that selects and plays music that is broadcast across radio waves.

#### Notable Radio DJs

Christopher Stone (1882–1965), became the first disc jockey in the United Kingdom in 1927.

Martin Block (1901-1967), the first radio disc jockey to become a star, inspired the term "disc jockey".

Alan Freed (1922-1965), became internationally known for promoting African-American Rhythm and Blues music in the United States and Europe under the name of Rock and Roll.

Murray "The K" Kaufman (1922-1982), influential rock and roll disc jockey, for a time was billed as the "Fifth Beatle".

Jimmy Savile (born 1926), British DJ and television personality, best known for his BBC television show Jim'll Fix It where he made the wishes of members of the public (mainly children) come true. In 1947 he was the first ever DJ to use twin turntables for continuous play after he paid a local metal worker to weld two domestic record decks together.

Dick Clark (born 1929), host of American Bandstand, television's longest-running music/variety program, as well as a number of nationally syndicated radio shows.

Casey Kasem (born 1932), disc jockey and music historian, host of the long-running radio series American Top 40. Also the voice of Shaggy in the Scooby-Doo cartoon series.

"The Real Don Steele" (1936-1997), Los Angeles' pre-eminent "afternoon drive" personality and the Bosses of the "Boss Jocks" of LA's Top 40 powerhouse KHJ-AM - "Boss Radio" - during the 1960s.

Wolfman Jack (1938-1995), drew upon his love of horror movies and rock and roll to create his raspy-voiced, howling persona, one of radio's most distinctive voices.

John Peel (1939-2004), one of the original DJs of UK's Radio 1 in 1967, known for the extraordinary range of his taste in music, and for championing unknown musical artists.

Colin Davies (born 1946), known as The Professor of Rock, broadcasts a weekly show from Fairfax, Virginia that is carried on the website

www.theprofessorrocks.com. The Professor's specialty is early rock'n'roll - Jerry Lee Lewis, Little Richard, Buddy Holly, Gene Vincent, Fats Domino - and his show receives emailed requests from rock'n'roll fans from all over the world.

Jim Ladd (born 1948), the last remaining freeform rock DJ in United States commercial radio.

Pete Tong (born 1960). First club DJ to get a regular show on Radio 1 in 1991, called The Essential Mix.

## Bedroom DJs

A person who owns DJing equipment (ie. turntables, mixer, CDJ, etc.) and has a passion for music, but doesn't play out to crowds at bars or special events (ie. raves). Instead, they opt to play their music at home for their friends, record mixtapes or over the internet via audio broadcasting software, such as SHOUTcast.

## Club/Rave DJs

A club/rave disc jockey is one that selects and plays music in a club setting. The setting can range anywhere from a small club, a neighborhood party, a disco, a rave, or even a stadium.

### Notable Club/Rave DJs

David Mancuso (born 1944), founder of New York City's first underground party called The Loft.

Francis Grasso (1948-2001), popularized several new disc jockey techniques, including beatmatching and slip-cueing.

Larry Levan (1954-1992), an early and prolific re-mixer and the DJ at The Paradise Garage

Frankie Knuckles (born 1955), the godfather of house music.

DJ Starscream aka Sid Wilson, the DJ for Slipknot.

Paul Oakenfold (born 1963), British record producer, remixer, and one of the best-known DJs worldwide, referred to as a Superstar DJ.

Tiesto (born 1969), one of world's leading trance music DJs, voted DJ Magazine's 'No. 1 DJ in the World' for the third consecutive year in 2004.

Keoki (born 1969), famous techno musician, portrayed in the 2003 film Party Monster.

Paul van Dyk (born 1971) a famous trance DJ who earned "DJ Magazine"'s 2005 No. 1 DJ award.

Armin van Buuren (born 1976), a popular trance DJ who placed 3rd place on the "DJ Mag Top 100" ranking three times in a row; also known for his radio show A State of Trance

## Hip Hop DJs

*Main article: [Turntablism](#)*

A hip hop disc jockey is one that selects, plays and creates music as a hip hop artist and/or performer, often backing up one or more MCs.

## Notable Hip Hop DJs

The X-Ecutioners, a turntablist band with several collaborations with groups and artists, including Linkin Park and Xzibit.

DJ Kool Herc (born 1955), inventor of breakbeat technique, "the father of hip hop culture".

Grandmaster Flash (born 1958), one of the early pioneers of hip hop DJing, cutting, and scratching. Created the Quick Mix Technique which allowed a DJ to precisely extend a break using two copies of the same record; essentially invented modern turntablism.

Afrika Bambaataa (born 1960), instrumental in the development of hip hop from its birth in the South Bronx to its international success. Created first hip hop track to feature synthesizers; "The godfather of hip hop"

DJ Jazzy Jeff (born 1965), of DJ Jazzy Jeff and the Fresh Prince (also backed Will Smith on his solo efforts)

Jam Master Jay (1965-2002), founder and DJ of Run-DMC, one of the most innovative hip hop groups of all time.

DJ Clue (born Ernesto Shaw on January 8, 1975 in Queens, New York City) is a mix DJ known for his involvement in the mixtape circuit. He is signed as an artist on Roc-A-Fella Records

Eric B. (born 1965), one half of duo Eric B. & Rakim, popularized the James Brown-sampled funky hip hop of the late 1980s.

Terminator X (born 1966), DJ of the highly influential hip hop group Public Enemy.

DJ Qbert (born 1969), founding member of the turntablism group the Invisibl Skratch Piklz and three-time winner of the International DMC Award.

Mix Master Mike (born 1970), skilled DJ of hip hop group Beastie Boys, three-time winner of the International DMC Turntablism Award.

## Reggae DJs

In [reggae](#) terms, the DJ is traditionally a vocalist who would rap, toast, or chat with an instrumental record.

## Mobile DJs

Mobile disc jockeys are an extension of the original radio disc jockeys. Unlike their radio counterparts, mobile DJing is primarily seen as a part-time or second career. Although it is often perceived this way, there are many mobile DJs around the world that use this as their primary career.

Mobile DJs travel or tour with their own sound systems and play from an extensive collection of pre-recorded music, on various media, for a targeted audience. Mobile DJs tend to work for hire at private functions such as wedding receptions, bar and bat mitzvah receptions, school dances, and so on, but they can occasionally be seen in bars, nightclubs, or even block parties. Unlike many club/rave DJs, mobile DJs often play more mainstream selections of music from multiple genres and they often take requests.

The definition and responsibilities of a mobile disc jockey have changed since Bob Casey's first two-turntable system for continuous playback was utilized for sock-hops in 1955. Bands had long dominated the wedding entertainment industry, but with the advent of the less expensive mobile DJ, the demand for live

performers dwindled. Even so, in the early years, the mobile DJ industry was seen as a last-resort choice for entertainment, as the DJs were reputed to frequently be unreliable and unprofessional. Mobile DJs companies came and went. However, a few companies of this era did establish themselves as competent businesses and thrived; some even still exist today.

During the Disco era of the 1970s, demand for mobile DJs (called mobile discos in the UK) soared. Top mobile DJs in this era would have hundreds of vinyl records and/or cassette tapes to play from. The equipment used in this era was enormous and usually required roadies (similar to those who work for bands) to set up. Because of the high demand for mobile DJs, many people from all facets of life jumped into the industry, hoping to make a few extra dollars on the weekends. These "Weekend Warriors", as they are called by many, helped enhance the negative stereotype of the mobile DJ; many of the same complaints from the earlier era continued.

Some tried to improve this image by forming professional associations. The Canadian Disc Jockey Association (CDJA) was one of the original associations formed in 1976 as a not-for-profit trade association for disc jockeys across Canada. It was joined by a much broader online association called the Canadian Online Disc Jockey Association (CODJA), founded by Canadian mobile DJs Glenn Miller (not the famous bandleader) and Dennis Hampson.

United States Disc Jockeys were reluctant to form anything similar until 1992 when the American Disc Jockey Association (ADJA) was incorporated. The original Board of Directors were Bruce Keslar, Maureen Keslar, John Roberts, and Lori Jesse. In 1996, after being removed from the ADJA Board from a financial dispute, Keslar then went on to form the for-profit National Association of Mobile Entertainers (NAME), based in the Philadelphia area. Both associations thrive today, with an estimated 5,000 members combined as of November 2005.

As the late 1980s turned into the 1990s, new technologies emerged. Compact disc collections were becoming the standard to play music from. Many equipment manufacturers realized the potential market that existed for mobile DJs and raced to make equipment that was smaller, easier to use, and of better quality. Dedicated mobile disc jockey trade publications such as DJ Times magazine and Mobile Beat magazine were founded in this era. These publications helped to spread the word about the emerging technologies and published informational articles that were helpful to the mobile disc jockey. This is also the era when mobile disc jockeys became the top entertainment choice for most private parties including wedding receptions.

In the mid-1990s, computers and the Internet had a profound impact on the mobile DJ industry. Professor Jam, a Tampa Bay, Florida disc jockey already known in the industry for having performed for many celebrities and television networks, became one of the first mobile DJs in the United States to regularly use computer technology to play music at his shows, and was the first professionally endorsed computer disc jockey internationally. CODJA cofounder Glenn Miller became the first licensed MP3 DJ under new music licensing agreement that was introduced to Canada in 2000 by the AVLA, and had already pioneered online networking for mobile disc jockeys by starting the first bulletin board system for mobile DJs from all over North America (and eventually the world).

In the 21st Century, the role of the mobile disc jockey has expanded. While there are still many conventional, "human jukebox" mobile DJs, many others have assumed more responsibilities to ensure the success of the events where they perform. These responsibilities include emceeing, event coordination, lighting direction, and sound engineering.

The number of resources available for mobile DJs has also expanded. Aside from the many online community forums, there are now annual conventions, regional conferences, and many local seminars for mobile disc jockeys to attend.

### **Notable Mobile DJs**

- In 1955, Bob Casey (born 1941), a well-known sock hop DJ, introduced the first two-turntable system for the purpose of alternating back and forth between records, creating continuous playback.
- UK MPs Michael Fabricant (aka Micky Fabb) and Richard Younger-Ross (aka Ricky Ross).

## Timeline of events related to the disc jockey

1857 - Leon Scott invents the phonoautograph, the first device to record arbitrary sound, in France.

1877 - Thomas Alva Edison invents the phonograph cylinder, the first device to playback recorded sound, in the United States.

1887 - German-American Emile Berliner invents the gramophone, a lateral disc device to record and playback sound.

1889 - Coin-slot phonograph machines, the general public's first encounter with recorded sound, begin to be mass produced. The earliest versions played only a single record, but multiple record devices, called jukeboxes, were soon developed.

1892 - Emile Berliner begins commercial production of his gramophone records, the first disc record to be offered to the public.

mid-1890s to early 1920s - Cylinder and disc recordings, and the machines to play them on, are widely mass marketed and sold. The disc system gradually becomes more popular due to its cheaper price and better marketing.

1906 - Reginald Fessenden transmits the first audio radio broadcast in history when he plays Christmas music from Brant Rock, Massachusetts.

1910s - Regular radio broadcasting begins, using "live" as well as prerecorded sound. In the early radio age, content typically includes comedy, drama, news, music, and sports reporting. The on-air announcers and programmers would later be known as disc jockeys.

1920s - "Juke-joints" become popular as a place for dancing and drinking to jukebox music.

1927 - Christopher Stone becomes the first radio announcer and programmer in the United Kingdom, on the BBC radio station.

1929 - Thomas Edison ceases phonograph cylinder manufacture, ending the disc and cylinder rivalry.

1934 - American commentator Walter Winchell coins the term "disc jockey" (the combination of "disc", referring to the disc records, and "jockey", which is an operator of a machine) as a description of radio announcer Martin Block, the first announcer to become a star in his own right. While his audience was awaiting developments in the Lindbergh kidnapping, Block played records and created the illusion that he was broadcasting from a ballroom, with the nation's top dance bands performing live. The show, which he called Make Believe Ballroom, was an instant hit.

1940s - Musique concrète composers utilize portions of sound recordings to create new compositions. This is the first occurrence of sampling.

1943 - Jimmy Savile launches the world's first DJ dance party by playing jazz records in the upstairs function room of the Loyal Order of Ancient Shepherd's in Otley, England. In 1947 he paid a local metal worker to weld two domestic record decks together and became the first DJ to use twin turntables for continuous play.

1947 - The "Whiskey-A-Go-Go" nightclub opens in Paris, France, considered to be the world's first discothèque, or disco (deriving its name from the French word, meaning a nightclub where the featured

entertainment is recorded music rather than an on-stage band). Discos began appearing across Europe and the United States.

late 1940s to early 1950s - The introduction of television erodes the popularity of radio's early format, causing it to take on the general form it has today, with a strong focus on music, news and sports.

1950s - American radio DJs would appear live at "sock hops" and "platter parties" and assume the role of a human jukebox. They would usually play 45-rpm records featuring hit singles on one turntable, while talking between songs. In some cases, a live drummer was hired to play beats between songs to maintain the dance floor.

1955 - Bob Casey, a well-known sock hop DJ, introduces the first two-turntable system for the purpose of alternating back and forth between records, creating continuous playback.

late 1950s - Jamaican sound systems, a new form of public entertainment, are developed in the ghettos of Kingston, Jamaica. Promoters, who called themselves DJs, would throw large parties in the streets that centered around the disc jockey, called the "selector". These parties quickly became profitable for the promoters, who would sell admission, food and alcohol, leading to fierce competition between DJs for the biggest sound systems and newest records.

mid-1960s - Nightclubs and discotheques continue to grow in Europe and the United States. However, by 1968, the number of dance clubs started to decline.

1969 - American club DJ Francis Grasso popularizes beatmatching at New York's Sanctuary nightclub. Beatmatching is the technique of creating seamless transitions between back-to-back records with matching beats, or tempos. Grasso also perfected slip-cueing, the technique of holding a record still while the turntable is revolving underneath, releasing it at the desired moment to create a sudden transition from the previous record.

late 1960s - Most American discos either closed or were transformed into clubs featuring live bands. Neighborhood block parties that are modeled after Jamaican sound systems gain popularity in Europe and in the boroughs of New York City.

early 1970s - The Vietnam War, oil crisis, and economic recession has a negative impact on dance clubs and disc jockeys. The total number of clubs and DJs dropped substantially, and most of the dance clubs were underground gay discos. It should also be noted that electronics company Technics released a series of direct-drive DJ turntables during this period.

1973 - Jamaican-born DJ Kool Herc, widely regarded as the "godfather of hip hop culture", performs at block parties in his Bronx neighborhood and develops a technique of mixing back and forth between two identical records to extend the rhythmic instrumental segment, or break.

Turntablism, the art of using turntables not only to play music, but to manipulate sound and create original music, is considered to begin at this time.

1974 - Technics releases the first SL-1200 turntable, which evolves into the SL-1200 MK2 in 1979, currently the industry standard for deejaying.

1974 - German electronic music band Kraftwerk releases the 22-minute song "Autobahn", which takes up the entire first side of that LP. Years later, Kraftwerk would become a significant influence on hip hop artists such as Afrika Bambaataa and house music pioneer Frankie Knuckles.

mid 1970s - Hip hop music and culture begins to emerge, originating among urban African Americans and Latinos in New York City. The four main elements of hip hop culture are MCing (rapping), DJing, graffiti, and breakdancing.

1975 - Disco music takes off in the mainstream pop charts in the United States and Europe, causing discotheques to experience a rebirth.

1975 - Record pools begin, enabling disc jockeys access to newer music from the industry in an efficient method.

1976 - American DJ, editor, and producer Walter Gibbons remixes "Ten Percent" by Double Exposure, one of the earliest commercially released 12" singles (aka "maxi-single").

1977 - Hip hop DJ Grand Wizard Theodore invents the scratching technique by accident.

1977 - New York's Studio 54 nightclub grosses \$7 million in its first year of business (which is roughly \$21 million in today's dollars after adjusting for inflation). In the same year, the motion picture Saturday Night Fever popularizes discotheques and becomes one of the top-10 grossing films in history (at the time).

1979 - The Sugar Hill Gang release "Rapper's Delight", the first hip hop record to become a hit. It was also the first real breakthrough for sampling, as the bassline of CHIC's "Good Times" laid the foundation for the song.

1979 - An anti-disco protest in Chicago's Comiskey Park marks the major backlash against disco amongst rock music fans. This is considered by some to be the year that disco "died", although the music remained popular for several more years, particularly in underground clubs and in Europe, where the subgenres Euro Disco and Italo Disco emerged.

1981 - Cable television network MTV is launched, originally devoted to music videos, especially popular rock music. The term "video jockey", or VJ, was used to describe the fresh faced youth who introduced the music videos.

1982 - The demise of disco in the mainstream by the summer of 1982 forces many nightclubs to either close or to change entertainment styles, such as by providing MTV style video dancing or live bands.

1982 - "Planet Rock" by DJ Afrika Bambaataa is the first hip hop song to feature synthesizers. The song melded electronic hip hop beats with the melody from Kraftwerk's "Trans-Europe Express".

1982 - The compact disc reached the public market in Asia and early the following year in other markets. This event is often seen as the "Big Bang" of the digital audio revolution.

1983 - House music emerges. The name was derived from the Warehouse club in Chicago, where the resident DJ, Frankie Knuckles, mixed old disco classics and Eurosynth pop. House music is essentially disco music with electronic beats. The common element of most house music is a 4/4 beat generated by a drum machine or other electronic means (such as a sampler), together with a solid (usually also electronically generated) bassline.

1983 - Jesse Saunders releases the first house music track, "On & On".

mid-1980s - New York Garage emerges at DJ Larry Levan's Paradise Garage nightclub in New York. The style was a result of the club DJs who would unsuccessfully try to duplicate the Chicago house sound, for example, leaving out the accentuated high-hats.

mid-1980s - Techno music emerges from the Detroit club scene. Being geographically located between Chicago and New York, Detroit techno combined elements of Chicago house and New York garage along with European imports. Techno distanced itself from disco's roots by becoming almost purely electronic with synthesized beats.

1985 - The Winter Music Conference starts in Fort Lauderdale Florida and becomes the premier electronic music conference for dance music disc jockeys.

1986 - "Walk This Way", a rap-rock collaboration by Run DMC and Aerosmith, becomes the first hip hop song to reach the Top 10 on the Billboard Hot 100. This song is the first exposure of hip hop music, as well as the concept of the disc jockey as band member and artist, to many mainstream audiences.

1988 - The acid house scene emerges in the UK. Originally called "acid parties" for a select few, the events grew in size and popularity, eventually spreading throughout England, Europe, the United States, and the rest of the world.

early 1990s - The rave scene grows out of the acid-house scene. Many elements of the rave scene, such as baggy pants and breakdancing, appear to be inherited from the Northern Soul scene of the UK approximately 15 years earlier. The notion of "trainspotting," for example, derives from Northern Soul's emphasis on researching and collecting rare & obscure records; while preventing other DJs from stealing titles via "white labels". The rave scene forever changed dance music, the image of DJs, and the nature of promoting. The innovative marketing surrounding the rave scene created the first superstar DJs.

early 1990s - The compact disc surpasses the gramophone record in popularity, but gramophone records continue to be made (although in very limited quantities) into the 21st century, particularly for club DJs and for local acts recording on small regional labels.

mid-1990s - Trance music emerges as a result of producers who wanted to transform repetitive, instrumental rave music into commercially accessible pop songs with vocals. Trance was central to the success of commercial dance music and superstar DJs such as Paul Oakenfold.

1992 - MPEG which stands for the Moving Picture Experts Group, releases The MPEG-1 standard, designed to produce reasonable sound at low bit rates. MPEG-1 Layer-3 popularly known as MP3 (a Lossy format) will revolutionize the digital music domain.

1992 - Promo Only, a popular music service for disc jockeys is launched.

1993 - The first Internet "radio station", Internet Talk Radio, was developed by Carl Malamud. Because the radio signal is relayed over the Internet, it is possible to access internet radio stations from anywhere in the world. This makes it a popular service for both amateur and professional disc jockeys operating from a personal computer.

1995 - The first full-time, Internet-only radio station, Radio HK, begins broadcasting the music of independent bands.

late 1990s - Nu metal bands such as Ko/n, Limp Bizkit, and Linkin Park reach the height of popularity. This new subgenre of alternative rock bears some influence from hip hop, because rhythmic innovation and syncopation are primary, often featuring DJs as bandmembers.

late 1990s - Various DJ and VJ software programs are developed, allowing personal computer users to deejay or veejay using his or her personal music or video files.

1998 - The first MP3 digital audio player is released, the Eiger Labs MPMan F10.

1998 - Final Scratch is announced by Amsterdam based N2IT. This program "mapped" digital music files onto timecoded vinyl records that were then played on a traditional DJ setup. This was the first product of its kind, and later spawned a slew of competing products (including Serato Scratch Live, Ms. Pinky, and Mixvibes). Final Scratch was later bought by Stanton Magnetics, and its software development is now handled by Native Instruments.

1999 - Shawn Fanning releases Napster, the first of the massively popular peer-to-peer file sharing systems.

1999 - late 1999 - AVLA (Audio Video Licensing Agency) of Canada announces MP3 DJing license. Administered by the Canadian Recording Industry Association. DJs can now apply for a license giving them the right to burn their own compilation CDs of "useable tracks," instead of having to cart their whole CD collections around to their gigs.

2001 - Apple Computer's iPod is introduced and quickly becomes the highest selling brand of portable digital mp3 audio player. The convenience and popularity of the iPod spawns a new type of DJ, the self-penned "MP3J". First appearing in certain East London clubs, and spreading to other music scenes, including New York City, this new DJ scene allows the average music fan to bring two iPods to an "iPod Night", plug in to the mixer, and program a playlist without the skill and equipment demanded by a more traditional DJ setup.

2001 - late 2001 - Atlanta, Georgia, The first Computerized Performance System Disc Jockey gathering was scheduled and organized during the small DJ3 convention. CPS mixing culture begins to emerge and organize.

2005 - Computerized Performance System Disc Jockey Summit is launched. Hosted by Professor Jam and originally developed as a social gathering in 2001, it was the first dedicated computer disc jockey industry event.

## Disco

**Stylistic origins:** [Funk](#) and [soul music](#)

**Cultural origins:** United States, Early 1970s

**Typical instruments:** [Guitar](#), [Bass](#), [Piano](#), [Keyboard](#) [Drums](#), [Drum machine](#)

**Mainstream popularity:** Large, 1970s and early 1980s

**Derivative forms:** [Hi-NRG](#), [House](#), [Euro](#), [Italo](#)

## Subgenres

[Bright](#)

## Fusion genres

Disco-punk

## Other topics

[Discothèque](#), [Nightclubs](#), [Orchestration](#)

**Disco** is a genre of music that originated in [discothèques](#). Generally the term refers to a specific style of music that has influences from [funk](#), [soul music](#), and salsa and the Latin or Hispanic musics which influenced salsa.

## Origins

Elements of disco music appear on records from the early 1970s such as the 1971 theme from the film Shaft by Isaac Hayes (Jones and Kantonen, 1999). In general it can be said that first disco songs were released in 1973, however many consider Manu Dibango's 1972 Soul Makossa the first disco record (Jones and Kantonen, 1999). Initially, most disco songs catered to a nightclub/dancing audience only, rather than general audiences such as radio listeners, but there are many aspects proving opposite tendencies as well; popular radio-hits were being played in discothèques, as long as they had an easy to follow rhythmic base-pattern close to 120 BPM (beats per minute). Most 70's Disco genre songs had a distinctive four/four bass beat.

Soul and funk records that influenced disco include:

- Sly and the Family Stone - "Dance to the Music" (1968), "Everyday People" (1968) (Jones and Kantonen, 1999), "Family Affair" (1971)
- Hugh Masekela - "Grazing in the Grass" (1968)
- The Honey Cone - "Want Ads" (1971), "Stick Up" (1971)
- Isaac Hayes - "Shaft" (1971)
- Incredible Bongo Band - "Bongo Rock" (1973) (ibid)
- Eumir Deodato - "Also Sprach Zarathustra" (1973)
- Average White Band - "Pick Up the Pieces" (1974), "Cut the Cake" (1975) (ibid)
- James Brown - "Get Up (I Feel Like Being A) Sex Machine" (1970), "Get Up, Get Into It, Get Involved" (1971), "Get Up Off of That Thing" (1976) (ibid)

The Motown Sound also featured many elements that would be associated with the disco sound:

- Martha & The Vandellas "Dancing In The Street" (1963)
- The Supremes - "You Keep Me Hangin' On" (1966), "Reflections" (1967)
- Jackson 5 - "I Want You Back", "ABC", "The Love You Save", "Mama's Pearl" (1969-71)
- Stevie Wonder - "Yester-Me, Yester-You, Yesterday" (1969), "Signed, Sealed, Delivered, I'm Yours" (1970), "Superstition" (1972), "Higher Ground" (1973) (ibid)
- Diana Ross - "Ain't No Mountain High Enough" (1970)

Philadelphia International Records defined Philly soul and helped define disco (ibid) with records such as:

- The Three Degrees - "When Will I See You Again" (1973) (ibid)
- The Intruders - "I'll Always Love My Mama" (1973) (ibid)
- The O'Jays - "Love Train" (1972), "For the Love of Money" (1974), "I Love Music" (1975) (ibid)
- MFSB - "TSOP (The Sound of Philadelphia)" (1973), "Love is the Message" (1973) (ibid)

Pre-/Early-disco TK Records tracks:

- Betty Wright - "Clean Up Woman" (1972) (ibid)
- George McCrae- "Rock Your Baby" (1974) (ibid)
- KC and the Sunshine Band - "Queen of Clubs" (1974), "Get Down Tonight" (1975), "That's the Way (I Like It)" (1975), (ibid)

Early-disco hits include:

Nelson James - "I Have An Afro" (1972) (ibid)  
Harold Melvin & the Blue Notes - "The Love I Lost" (1973) (ibid)  
Love Unlimited Orchestra - "Love's Theme" (1973) (ibid)  
The Jackson 5- "Dancing Machine" (1974) (ibid)  
Barry White - "I'm Gonna Love You Just a Little More, Baby" (1973),  
"Can't Get Enough of Your Love, Babe" (1974), "You're the First, the Last,  
My Everything" (1975) (ibid)  
Shirley and Co. - "Shame, Shame, Shame" (1975) (ibid)  
The Hues Corporation - "Rock the Boat" (1974) (ibid)  
The Commodores - "Machine Gun" (1974) (ibid)  
Frankie Valli - "Swearin' To God" (1975)  
Dalida- "J'Attendrai" (the first French disco song and first hit in Europe)  
(1975) (ibid)  
LaBelle - "Lady Marmalade" (1975) (ibid)  
The Four Seasons - "Who Loves You" and "December '63 (Oh What A  
Night!)" (1976) (ibid)  
Silver Convention - "Fly Robin Fly" (1975), "Get Up and Boogie" (1976)  
(ibid)  
The Bee Gees- "Jive Talkin' " (1975), "You Should Be Dancing" (1976)  
(ibid)  
Andrea True Connection- "More More More" (1976) (ibid)

## Popularity

CRAIG IS REALLY COOL!!! jelly beans!

1975 was the year when disco really took off, with hit songs like Van McCoy's "The Hustle" and Donna Summer's "Love To Love You Baby" reaching the mainstream. 1975 also marked the release of the first disco mix on album, the A side of Gloria Gaynor's remake of The Jackson 5's "Never Can Say Goodbye". Disco's popularity peaked between 1977 - 1979, driven in part by films such as 1977's classic Saturday Night Fever and 1978's Thank God It's Friday. Disco also gave rise to an increased popularity of line dancing and other partly pre-choreographed dances; many line dances can be seen in films such as Saturday Night Fever, which also features the Hustle.

Internationally, the pop star Dalida was the first to make disco music in France with 1975's "J'attendrai" which was a big hit there as well as in Canada and Japan in 1976. She also released many other disco hits between 1975 and 1981, including "Monday, Tuesday... Laissez-moi danser" in 1979, translated the same year as "Let Me Dance Tonight" for the USA, where she was their "French diva" since her late-1978 performance at the Carnegie Hall). Soon after Dalida's pioneering French disco work, other French artists recorded disco: Claude François, in 1976 with his song "Cette année-là" (a cover of The Four Seasons' disco hit "December, 1963 (Oh, What a Night)"), then the famous "yé-yé" French pop singer Sheila, with her group B. Devotion, who even had a hit in the USA (a rarity for French artists) with the song "Spacer" in 1979. Many other European artists also recorded disco music; in Germany, Frank Farian formed a disco band by the name Boney M around 1975. They had a string of number one hits in a few European countries which continued into the early 1980s, with songs such as *Daddy Cool*, *Brown Girl in the Ring* and *By the Rivers of Babylon*. Still today, the trademark sound of Boney M is seen as emblematic for late 70's German disco music.

Disco fever reached a peak in South Asia after the release of the Bollywood film Disco Dancer in 1982. It stars Mithun Chakraborty as an Indian disco champion who is out to get revenge on P. N. Oberoi (Om Shivpuri), a rich industrialist who once slapped and insulted his mother.

## Popular disco artists

The most popular disco artists of the 1970s included:

The Bee Gees  
A Taste of Honey  
Cerrone  
Dalida  
ABBA  
CHIC  
Sister Sledge  
The Jacksons  
Claudja Barry  
Linda Clifford  
Donna Summer  
Grace Jones  
Stephanie Mills  
Sylvester  
Gloria Gaynor  
Boney M  
Village People  
K.C. and the Sunshine Band  
Vicki Sue Robinson  
MFSB  
Loleatta Holloway  
France Joli  
Evelyn 'Champagne' King  
Yvonne Elliman  
Tavares  
Salsoul Orchestra  
Phyllis Hyman  
The Emotions  
Thelma Houston  
Cheryl Lynn  
The Trammps  
Love and Kisses  
Barry White  
Silver Convention  
Shalamar  
and  
Kool & the Gang.

## Popular non-disco acts who made disco songs

Many non-disco artists recorded disco songs at the height of its popularity, most often due to demand from the record companies who needed a surefire hit. These acts included:

The Eagles  
The Rolling Stones  
KISS  
The Grateful Dead  
Dolly Parton  
Cher  
Marvin Gaye  
Barry Manilow  
Aretha Franklin  
Isaac Hayes  
Leif Garrett  
Toto  
Chaka Khan  
Michael Jackson  
The Beach Boys  
Billy Preston  
Chicago  
Electric Light Orchestra  
The Pointer Sisters  
Teddy Pendergrass  
Elton John  
James Brown  
Bette Midler  
Prince  
Helen Reddy  
Frankie Valli & The Four Seasons  
Carly Simon  
Diana Ross  
Earth, Wind and Fire  
Rod Stewart  
Queen (with the bass guitar riffs emulating those of Chic in their hit  
Another One Bites The Dust)  
and  
Blondie.

Even adult contemporary vocalists were sucked into the disco machine. Those artists included:

Johnny Mathis  
Paul Anka  
Ann-Margret  
Charo  
Frankie Avalon  
Engelbert Humperdinck

Ethel Merman  
Wayne Newton  
Barbra Streisand  
Eartha Kitt  
Andy Williams  
and  
Frank Sinatra

Many disco novelty songs sold well and were popular. Rick Dees, at the time a radio DJ in Memphis, Tennessee, recorded what is considered to be one of the most popular parodies of all time, Disco Duck.

## DJs and producers

Disco music diverged from the [rock](#) of the 1960s, elevating music from the raw sound of 4-piece garage bands to refined music composed by producers who contracted local [symphony](#) and philharmonic [orchestras](#) and session musicians. For the first time in three decades, orchestral music became the preeminent sound in the popular-music scene. Top disco music producers included Giorgio Moroder, Patrick Adams, Biddu, Cerrone, Alec R. Costandinos, John Davis, Gregg Diamond, Kenneth Gamble & Leon Huff, Norman Harris, Sylvester Levay, Ian Levine, Mike Lewis, Van McCoy, Meco Monardo, Tom Moulton, Boris Midney, Vincent Montana Jr, Randy Muller, Freddie Perren, Laurin Rinder, Richie Rome, Warren Schatz, Harold Wheeler, and Michael Zager, whose roles involved every aspect of production, from composing the arrangements to conducting the 50- to 100-member orchestras from Los Angeles to New York, from Chicago to Philadelphia, from Detroit to Miami, from London to Berlin, from Vancouver to Montreal, from to Paris to Milan.

With as many as 64 [tracks](#) of vocals and instruments to be compiled into a fluid composition of verses, bridges, and refrains, complete with orchestral builds and breaks, the mixing engineers became an important fixture in the production process, and, as a result, were most influential in developing the "sound" of the recording through the disco mix. Record sales were often dependent on, though not guaranteed by, floor play in clubs. Notable DJs include Jim Burgess, Walter Gibbons, John "Jellybean" Benitez, Rick Gianatos, Francis Grasso (Sanctuary), Larry Levan, Ian Levine, John Luongo, and David Mancuso.

## Instrumentation

Instruments commonly used by disco musicians included the rhythm [guitar](#) (most often played in "chicken-scratch" style, usually through a wah-wah or phaser), [bass](#), [piano](#) and electroacoustic keyboards (most important: the Fender-Rhodes and Wurlitzer electric pianos and the Hohner Clavinet), harp, string synth, violin, viola, cello, trumpet, saxophone, trombone, clarinet, flugelhorn, French horn, tuba, English horn, oboe, flute, piccolo, and drums, African/Latin percussion, timpani, as well as a drum kit. Electronic drums were making a debut during this era, with Simmons and Roland drum modules appearing as pioneers in electronic percussion. Most disco songs have a steady four-on-the-floor beat (sometimes using a 16-beat pattern on the hi-hat cymbal, or an eight-beat pattern with an open hi-hat on the "off" beat) and a heavy, syncopated bassline.

In general, the difference between a disco, or any dance song, and a rock or popular song is that in dance music the bass hits "four to the floor", at least once a beat (which in 4/4 time is 4 beats per measure), whereas in rock the bass hits on one and three and lets the snare take the lead on two and four. (Michaels, 1990) Disco is further characterized by a sixteenth note division of the quarter notes established by the bass as shown in the second drum pattern below, after a typical rock drum pattern:

This sixteenth note pattern is often supported by other instruments such as the rhythm guitar (lead guitar parts are rare), and may be implied rather than explicitly present, often involving syncopation. As a simpler example, bass lines often use the following rhythm:

The orchestral sound usually known as "disco sound" relies heavily on strings and horns playing linear phrases, in unison with the soaring, often reverberated vocals or playing instrumental fills, while electric pianos and chicken-scratch guitars create the background "pad" sound defining the harmony progression. Typically, a "wall of sound" results. There are however more minimalistic flavors of disco with reduced, transparent instrumentation, pioneered by Chic.

## Format

At first, [singles](#) were released on 7-inch 45-rpm records, 45s, which were shorter in length and of poorer sound quality than 12-inch singles. Motown Records was the first to market these through their "Eye-Cue" label, but these and other 12-inch singles were the length of the original 45s until Scepter/Wand released the first 12-inch extended-version single in 1976: Jesse Green's "Nice and Slow" b/w Sweet Music's "I Get Lifted" (engineered by Tom Moulton). The single was packaged in collectible picture sleeves, a relatively new concept at the time. 12-Inch singles became commercially available after the first crossover, Tavares' "Heaven Must Be Missing an Angel." 12-Inch singles allowed longer dance time and formal possibilities. (Jones and Kantonen, 1999)

## Backlash in U.S. and UK

The popularity of the film *Saturday Night Fever* prompted the major record labels to mass-produce hits, however, as some perceived, turning the genre from something vital and edgy into a safe "product" homogenized for the mass audience. Though disco music had several years of popularity, an American anti-disco sentiment was festering, marked by an impatient return to rock (loudly encouraged by worried rock radio stations). Disco music and dancing fads were depicted as not only silly (witness Frank Zappa's satirical song "Dancin' Fool"), but effeminate. Others objected to the perceived wanton sex and drugs that became associated with music while others were put off by the exclusivity of the disco scene symbolized by doormen who kept people out of discos that did not look or dress correctly while still others objected to the then new idea of centering music around a computerized beat instead of people.

In Britain, however, during the same year as the first American anti-disco demonstration (see below), *The Young Nationalist* publication of the far-right British National Party reported that "disco and its melting pot pseudo-philosophy must be fought or Britain's streets will be full of black-worshipping soul boys," though this had been true for twenty years with many white male English teens considering themselves "soul freaks". The emergence of the [punk](#) and [goth](#) scenes contributed to disco's decline.

### Rock versus disco

Strong disapproval of disco among some rock fans existed throughout the disco era, growing as disco's influence grew, such that the expression "Disco Sucks" was common by the late-1970s among these fans.

In 1979, deejays Steve Dahl and Garry Meier along with Michael Veeck (son of legendary sports marketer Bill Veeck) staged a promotional event with an anti-disco theme, Disco Demolition Night, between games at a White Sox doubleheader. The event involved exploding disco records, and ended in a near-riot. The second game of the doubleheader had to be forfeited.

White male rock fans who spoke out against the music were sometimes accused of prejudice for objecting to a musical idiom that was strongly associated with both black and homosexual audiences. To further complicate matters, several prominent, popular rock artists recorded songs with audible debts to disco, sometimes to strong critical and commercial response. David Bowie's "Golden Years," and The Rolling Stones' "Miss You" and "Emotional Rescue," are distinguished examples of these disco-rock fusions, and artists such as The Who, Rod Stewart, and to a lesser extent Queen and The Clash also recorded disco-informed songs. Many of these artists were accused of selling out and received hate mail. Since the advent of disco and dance music in general, many have argued that more and more rock music has absorbed the rhythmic sensibilities of dance.

The most troubling aspect of disco for white working class males may have been its association with dancing, which tends to become a site of emotional conflict under modernization, as in Norman Mailer's catchphrase "tough guys don't dance".

Disco, by being so clearly an invitation to the dance, is associated under modernization with an abandonment of self which threatens dissolution and depersonalization. Steve Dahl, Garry Meier and Mike Veeck were as impresarios rather innocent, in 1979, about a growing working-class anger, and, in trying to channel this anger into safe targets such as gay men and people of color, found that it overflowed these artificial limits.

## **Disco in Germany**

Disco clubs became popular in Germany in the 1970's and continued into the 1980's. Unlike its counterparts in America, however, the word "Disko" in German nowadays usually refers to any dance club, and not just ones that include disco. It is starting to be phased out in favor of "Klub" as of late in normal speech and in titles, but it still remains.

## Time of transition

The gradual change that occurred in the late-1970s pop-disco sound can be evidenced in such titles as:

Foxy's Get Off and Sex Symbol (1978)  
Donna Summer's Bad Girls and Hot Stuff (1979)  
Rod Stewart's Do You Think I'm Sexy (1979)  
Amii Stewart's Knock On Wood (1979)  
The Bee Gees' Tragedy (1979)  
Blondie's Heart of Glass (1979)

The aforementioned songs foreboded the events of the next decade, as the year 1980 was a transitional time for music, especially dance music. As the "disco sound" was phased out, faster tempos and synthesized affects during the early-1980s dance sound, accompanied by simplified backgrounds and rock guitars, directed *dance music* toward the *pop-rock* genre such as:

The Brothers Johnson's Stomp! (1980)  
Olivia Newton-John's Xanadu (1980)  
George Benson's Give Me The Night and Love X Love (1980)  
Boz Scaggs' Miss Sun (1980)  
Teena Marie's Behind The Groove and I Need Your Lovin' (1980)  
Patrice Rushen's Haven't You Heard (1980) and Forget Me Nots (1982)  
Yarborough & Peoples' "Don't Stop the Music" (1981)  
Kool & the Gang's Celebration (1981), Let's Go Dancin' (Oooh La La La) and Get Down On It (1982)  
The Commodores' Lady (You Bring Me Up) (1981)  
Rick James' Give It To Me and Superfreak (1981)  
Grace Jones' Pull Up to the Bumper (1981)  
Boystown Gang's Can't Take My Eyes Off You (1981)  
Roni Griffith's (The Best Part of) Breaking Up (1981)  
Sylvester's Do Ya Wanna Funk (1982)  
Michael Jackson's Billie Jean, Baby Be Mine, P.Y.T. and Thriller (1982)  
The Weather Girls' It's Raining Men (1982)  
Prince's 1999 (1983)  
Miquel Brown's So Many Men, So Little Time (1983)  
Madonna's Everybody (1982) and Holiday (1983)

Those aforementioned exemplified the emerging dance-music form that dropped the complicated melodic structures of the *disco style*, as woodwinds, horns, and strings were replaced by synthesizers, which mimicked their sound. Here, one can readily experience the drastic changes, from the musical arrangements - missing all signs of [symphony](#)-orchestration, including orchestral builds and [breaks](#) - to the [melody](#) - missing all signs of the complicated structures of the typical disco sound, including multiple [bridges](#) and fanciful [refrains](#).

## Regional styles of disco

Main article: [disco orchestration](#)

As with many forms of art, music contains many *types*, of which there are distinct genres, and within which there are various styles. The sound of a disco song, as with the sound of a song of any genre of music, depended on the particular tastes of the artists, and the arrangers, producers, and even the orchestra conductors and concertmasters dictating the type of stylized playing method of each [section](#) of the [orchestra](#), down to the engineers and mixers who assembled all the elements to make a fluid, cohesive *sculpture of sound* through melodic continuity. Even without a very knowledgeable *ear* for music, one can distinguish the stylings of Van McCoy's *The Hustle* (1975) from those of Silver Convention's *Get Up and Boogie* (1976), and from those of Chic's *Good Times*(1979), and Sister Sledge's *We Are Family*(1979).

As such, many *regional sounds of disco* developed during the mid-1970s, as a result of collaborative efforts of many individuals with a legacy of formal education and training in music theory and orchestration, whose educational backgrounds laid the foundation for the musical genre that was to burst forth onto the *dance-music scene* into what would come to be regarded as *designer music*. It can be noted that many of the conductors and [players](#) of the large city symphony and philharmonic orchestras responsible for the grand productions of *disco* were seasoned veterans of orchestras throughout the country, some even going back to the [big-band era](#).

Some of the different regional sounds include:

- The Philadelphia Symphony Orchestra as heard by groups such as MFSB, The O'Jays, The Three Degrees, and The Ritchie Family.
- The New York Philharmonic Orchestra was the foundation of the **New York Sound**, which included
  - Van McCoy *The Hustle*,
  - Odyssey's *Native New Yorker* (1977),
  - Gerri Granger's *Can't Take My Eyes off of You* (1976)
  - Vicki Sue Robinson's *Turn the Beat Around* (1976),
  - Roberta Flack's *Back Together Again* (1979),
- The Los Angeles Symphony Orchestra was the foundation of the **Los Angeles Sound**, which included:
  - Carrie Lucas's *Dance with Me* (1979),
  - Love Unlimited Orchestra's *My Sweet Summer Suite* (1976),
  - Tavares' *Heaven Must Be Missing an Angel* (1976)
  - Phyllis Hyman's *You Know How to Love Me* (1979),
  - High Inergy's *Shoulda Gone Dancing* (1979)

## **Transition from the *disco sound* of the 1970s to the *dance sound* of the 1980s**

The transition from the late-1970s disco styles to the early-1980s dance styles can be illustrated best by analysis of the work of specific artists, arrangers, and producers within each region, respective to the timeperiods. Complex musical structures basically gave way to a "one-man-band" sound produced on synthesizer keyboards. Also, the increased addition of a slightly different harmonic structure, with elements borrowed from Blues and Jazz, (such as more prominent chords created with acoustic or electric pianos) created a different style of "dance music" in the 1981-83 period. But by this time, the word "disco" became associated with anything danceable, that played in discothèques, so the music continued for a time to be called "disco" by many. Examples include D. Train, Kashif, and Patrice Rushen. Both changes was influenced by some of the great R & B and jazz musicians of the 70's, such as Stevie Wonder and Herbie Hancock, who had pioneered and perfected "one-man-band" type keyboard techniques.

## Disco "spinoffs": rap and "house" music

Finally, disco was largely succeeded for younger listeners by rap, which had started, by rapping over disco tracks. The first commercially popular rap hits were "Rapper's Delight" (which borrowed the bass line from Chic's "Good Times") and Kurtis Blow's "The Breaks". The two styles existed side by side for a few years, with rap sometimes being used in disco songs such as Blondie's **"Rapture"**, Teena Marie's **"Square Biz"**, and In Deep's **"Last Night A DJ Saved My Life"**. The two styles together also sparked off "House Music" with such legendary innovators such as Larry Levan in New York, and Frankie Knuckles in Chicago in the early 1980's. Legendary clubs associated with the birth of house included New York's 'Paradise Garage' and Chicago's "Warehouse" and "The Music Box". Mixes incorporated here included various disco loops overlapped with a strong bassbeat, usually computer driven, and with longer segments intended for mixing. Afrika Bambaataa released the 1982 single **"Planet Rock"**, which drew several elements from Kraftwerk's "Trans-Europe Express" and the previous year's "Numbers". Electronic sounds in rap were eventually discarded in favor of a more "raw" hip-hop sound in songs such as **"The Message"** by Grandmaster Flash & the Furious Five. However, the "Planet Rock" sound also spawned a non-"hip-hop" electronic dance trend, with such follow-ups as Planet Patrol's **"Play At Your Own Risk"**, the same year, followed by **"One More Shot"** by C-Bank; and the following year, its popularity skyrocketed with Shannon's **"Let The Music Play"** Freeze's **"I.O.U."**, Gwen Guthrie's **"Ain't Nothin' Goin' On But The Rent"**, Chaka Khan's **"I Feel For You"**, and Midnight Star's **"Freakazoid"**. Electronic Dance music or [House Music](#) (later called "techno") had now emerged as its own genre, and this became the new "disco", even though it was not addressed as such.

## Did it really "die"?

By the year 1983, disco was said to be pretty much "dead". It did not really have a distinctive "death", but simply blended back into other popular styles, while spawning some new styles. It was the synthesizer, and resulting change in the sounds, that basically ended disco as it was known in the pre-electronic 70's, moreso than the reaction from the competing rock genre. The danceable rhythms would live on in pop-rock, rap, Techno/House Music and regular R & B; and the dance club continued to thrive with these styles.

## **"Retro" revival**

In the 1990s, a revival of the original disco style began and is exemplified by such songs as "Lemon" by U2 (1993), "Spend Some Time" by Brand New Heavies (1994), "Cosmic Girl" by Jamiroquai (1996), "Never Give Up on the Good Times" by The Spice Girls (1997), and "Strong Enough" by Cher (1998) (who had also released disco songs in the seventies).

During the first half of the 2000s, there were releases by a number of artists including "Spinning Around" and "Love at First Sight" by Kylie Minogue (2001), "I Don't Understand It" by Ultra Nate (2001), "Crying at the Discoteque" by Alcazar (2001), "Love Foolosophy" by Jamiroquai (2001), "Murder on the Dancefloor" by Sophie Ellis-Bextor (2001), and "Love Invincible" by Michael Franti and Spearhead (2003) that channeled classic disco music.

In (2004) former Three Degress lead singer, Sheila Ferguson hired Burning Vision Entertainment to create the ultimate disco music video to accompany the release of 'A New Kind Of Medicine' with mesmerising effect.

Most recently, Madonna has used disco themes in her latest album, Confessions on a Dance Floor (2005). Her single "Hung Up", notably samples ABBA's "Gimme! Gimme! Gimme! (A Man After Midnight)".

## Radio

Currently, most radio stations that play dance music or '70s-era music will play this music and related forms such as [funk](#) and Philadelphia soul at some point in their playlists; both major satellite radio companies also have disco music stations in their lineup. However, dance music stations in general are not known for having high ratings.

# Disco orchestration

**Disco orchestration** illustrates the richness of [musical](#) production techniques that went into the production of classic [disco](#) music.

The sound of a disco song, as with the sound of a song of any genre of music, depended on the particular tastes of the artists, and - if relevant to the genre - the arrangers, producers, and even the orchestra conductors, and even still the concertmasters dictating the type of stylized playing method of each [section](#) of the [orchestra](#), down to the engineers and mixers who assembled all the elements to make a fluid, cohesive sculpture of sound through melodic continuity. Even without a very knowledgeable ear for music, one can distinguish the stylings of Van McCoy's *The Hustle* (1975) from those of Silver Convention's *Get Up and Boogie* (1976), the former written, arranged, and produced by Van McCoy, who also conducted the New York Philharmonic Orchestra, fashioned even further with the specific stylings of the orchestral elements by concertmaster Gene Orloff; the latter was written, arranged, and produced by Michael Kunze and Sylvester Levay, who conducted the Munich Symphony Orchestra, and which was fashioned even further with the specific stylings of the orchestral elements by concertmaster Fritz Sonnleitner. Here, one can only imagine the *New York* sound, as produced by Van McCoy, on Silver Convention's *Get Up and Boogie*, and the funky *Munich* sound, as produced by Kunze and Levay, on Van McCoy's *The Hustle*.

As such, many *regional sounds* of *disco* developed during the mid-1970s, as a result of collaborative efforts of many individuals with a legacy of formal education and training in music theory and orchestration, whose educational backgrounds laid the foundation for the musical genre that was to burst forth onto the *dance-music scene* into what would come to be regarded as *designer music*. It can be noted that many of the conductors and [players](#) of the large city symphony and philharmonic orchestras responsible for the grand productions of *disco* were seasoned veterans of orchestras throughout the country, some even going back to the [big-band era](#).

- The Philadelphia Symphony Orchestra was the foundation of the **Philly Sound**, which represented an *ebullient* mid-tempo style that retained the funky characteristics of the sound of the streets of inner-city Philadelphia, however, elevated to a polished form with interwoven arrangements of lead and background singers in triple-harmonies with lush arrangements of woodwinds, horns, and strings, as heard by groups such as MFSB, The Three Degrees, The Ritchie Family.

Principle arrangers, producers, and orchestra conductors that derived from Philadelphia included Kenneth Gamble, Leon Huff, John Davis, Richie Rome, Norman Harris, John McFadden, Gene Whitehead, Victor Carstarphen, Jack Faith, Bunny Sigler, Dexter Wansel, John Usry, Bobby Martin.

- The New York Philharmonic Orchestra was the foundation of the **New York Sound**, which branched into four main arms:
  - One characterized by the mid-tempo, richly-hued stylings and *bubbly* beat of *The Hustle*, as in songs such as

- Odyssey's *Native New Yorker* (1977), arranged, produced, and conducted by Charlie Calello, with Gene Orloff, concertmaster
- Gerri Granger's *Can't Take My Eyes off of You* (1976), arranged, produced, and conducted by Bob Crewe, with Gene Orloff, concertmaster
- Vicki Sue Robinson's *Turn the Beat Around* (1976), arranged, produced, and conducted by Warren Schatz and George Andrews, with Gene Orloff, concertmaster
- One characterized by the mid-tempo operatic orchestrations of
  - Maynard Ferguson's *Pagliacci* (1975), arranged, produced, and conducted by Jay Chattaway and Bob James, with David Nadien, concertmaster
- One characterized by the mid-tempo, funky baselines and orchestrations of
  - Roberta Flack's *Back Together Again* (1979), arranged, produced, and conducted by Eric Mercury and Arif Mardin, with Gene Orloff, concertmaster (the style providing the music bed for [rap](#))
- One characterized by the up-tempo, latin-infused, extravagantly-orchestrated stylings of
  - Wing and a Prayer Fife & Drum Corps.'s *Baby Face* (1975), arranged, produced, and conducted by Stephen Schaeffer and David Horowitz, with David Nadien, concertmaster
  - Samantha Sang's *From Dance to Love* (1979), arranged, produced, and conducted by Meco Monardo, Tony Bongiovi, and Harold Wheeler, with Irving Spice, concertmaster.

Principle arrangers, producers, and orchestra conductors that derived from New York included Van McCoy, Brad Baker, Charlie Calello, Harold Wheeler, Warren Schatz, Tony Bongiovi, Meco Monardo, Michael Zager, Dennis King, Randy Muller, Jeff Lane, Michael DeLugg, Tony Camillo.

- The Los Angeles Symphony Orchestra was the foundation of the **Los Angeles Sound**, which branched into four main arms:
  - One characterized by the mid-tempo funky orchestrations of
    - Carrie Lucas's *Dance with Me* (1979), arranged, produced, and conducted by Don Cornelius, Dick Griffey, and Leon Sylvers, with Janice Gower, concertmaster
  - One characterized by the "New York-style" mid-tempo, extravagantly-orchestrated rhythms of
    - Love Unlimited Orchestra's *My Sweet Summer Suite* (1976), arranged, produced, and conducted by Barry White and Gene Page, with Jack Shulman, concertmaster
    - Tavares' *Heaven Must Be Missing an Angel* (1976), arranged, produced, and conducted by Freddie Perren and David Blumberg, with Paul Shure, concertmaster
  - One characterized by the *New York-style* mid-tempo *bubbly* beat and spicy orchestrations of
    - Phyllis Hyman's *You Know How to Love Me* (1979), arranged, produced, and conducted by James Mtume and Reggie Lucas, with Gerald Vinci, concertmaster
  - One characterized by the *New York-style* uptempo beat with multi-dimensional orchestrations of
    - High Inergy's *Shoulda Gone Dancing* (1979), arranged, produced, and conducted by Donnell Jones and Gerald Lee, with Assa Drori, concertmaster.

Principle arrangers, producers, and orchestra conductors that derived from Los Angeles included Gene Page, Barry White, Dave Crawford, Bruce Miller, Freddie Perren, Paul Riser, Hal Davis, Skip Scarborough, Jerry Peters, Laurin Rinder, Mike Lewis, Carl Davis, Sonny Sanders, Simon Soussan, Don Cornelius, Dick Griffey.

- The Miami Symphony Orchestra was the foundation of the **Miami Sound**, which was an *effervescent* mid- to uptempo style that represented the colorful Latin heritage of Miami, as in songs such as
  - Rice & Beans Orchestra's You've Got Magic (1977), arranged, produced, and conducted by Pepe Luis Soto, Tato Rossi and Hector Garrido, with David Chappell, concertmaster
  - Miami Sound Machine's You've Broken My Heart (1978), arranged, produced, and conducted by Thomas Fundora and Carlos Oliva, with Bogdan Chruzcsz, concertmaster.

Principle arrangers, producers, and orchestra conductor that derived from Miami included Cory Wade, Bert Dovo, Clarence Reid, Willie Clark, Freddy Stonewall.

Other large symphony and philharmonic orchestras in cities across the United States, Canada, and Europe were the foundations of a vast number of disco productions, including:

The Detroit Symphony Orchestra, whose principle arrangers, producers, and orchestra conductors included: Brad Shapiro, David Van De Pitte, Mike Theodore, Lawrence Payton, Dennis Coffey

The Chicago Symphony Orchestra, whose principle arrangers, producers, and orchestra conductors included: Donald Burnside, Edmund Lee Bauer, Danny Raye Leake, Curtis Mayfield, Gil Askey, John Dubiel, Chuck Jackson, Marvin Yancy, Dr. Cecil Hale, Richard Evans

The Nashville Symphony Orchestra, whose principle arrangers, producers, and orchestra conductors included: Moses Dillard, Jesse Boyce, Lloyd Barry

The Atlanta Symphony Orchestra, whose principle arrangers, producers, and orchestra conductors included: Isaac Hayes, Johnny Allen

The Memphis Symphony Orchestra, whose principle arrangers, producers, and orchestra conductors included: Lester Snell

The Boston Symphony Orchestra, whose principle arrangers, producers, and orchestra conductors included: Jonathan Klein, D.B. Shrier

The San Francisco Symphony Orchestra

The Montreal Symphony Orchestra, whose principle arrangers, producers, and orchestra conductors included: Tony Green, Denis Lepage

The Quebec Symphony Orchestra, whose principle arrangers, producers, and orchestra conductors included: Dominic Sciscente, Michel Daigle, Jacques Lafleche, Lee Gagnon, Pete Tessier, André Gagnon

The Toronto Symphony Orchestra, whose principle arrangers, producers, and orchestra conductors included: Ian Guenther, Willi Morrison, Eric Robertson, Pete Pedersen, Harry Hinde

The Vancouver Symphony Orchestra

The London Symphony Orchestra, whose principle arrangers, producers, and orchestra conductors included: Biddu, Gerry Shury, Pip Williams, Ian Levine, Fiachra Trench, Peter Yellowstone, Larry Page

The Paris Symphony Orchestra, whose principle arrangers, producers, and orchestra conductors included: Cerrone, Don Ray, Alec Costandinos, Raymond Khenetsky, Alan Hawkshaw, Claude Carrere, Alain Wisniak, Charly Ricanek, Daniel Vangarde, Michaele Lana, Guy Delo, Paul Sebastian, Jean-Luc Drion, Jean Kluger, Ralph Benetar, Biram Benelux, Jacques Morali

The Munich Symphony Orchestra, whose principle arrangers, producers, and orchestra conductors included: Thor Baldursson, Frank Farian, Michael Kunze, Sylvester Levay, Juergen Kordulech, Mats Bjoerklund, Stefan Klinkhammer, Anthony Monn, J.-C. Friederich, Tony Lester  
The Berlin Symphony Orchestra, whose principle arrangers, producers, and orchestra conductors included: Werner Drexler, Eric Thoner, Joaquim Heider, Uli Roever, Karl Schmitz, Ralf Novi, Charles Orioux, Ingo Cramer  
The Milan Symphony Orchestra.

## The decreasing use of orchestras in the Post-Disco period

The transition from the late-1970s disco styles to the early-1980s dance styles can be illustrated best by analysis of the work of specific artists, arrangers, and producers within each region, respective to the timeperiods. For example, Patrice Rushen, whose major works - *Haven't You Heard* from **1979** and *Forget-Me-Nots* from **1982** - contrast sharply to demonstrate emphatically the changes from the **1970s** to the **1980s**. The orchestral elements of *Haven't You Heard*, from rhythms and woodwinds to horns and strings, were co-arranged by Patrice Rushen, who also arranged the near-minute-long extravagant string arrangements for the introduction of the song, whose 100-piece Los Angeles Symphony Orchestra was conducted by Charles Mimms, Jr. and Reggie Andrews, with Charles Veal, Jr., concertmaster. In stark contrast, however, the number of names involved in the symphony orchestra and the orchestral composition of *Forget-Me-Nots* totals **zero**. The [break](#) in *Forget-Me-Nots* serves virtually no purpose except to make the song longer, for, with neither orchestration nor orchestral build to bring listeners back to the melody, the excitement of the song, like the amount of planning in its melodic structure and harmonic composition, is zero. The synthesized arrangement mimicking a type of string arrangement of *Forget-Me-Nots* involved the arduous task of striking a solitary note on an electronic keyboard, from a recording artist, no less, with the talent of having produced *Haven't You Heard* just a couple of years before.

Thousands of examples illustrate the change from the luxuriant *disco sound* to the generic *dance sound* occurring from 1979 to 1980, just a few of which are:

Madleen Kane

Forbidden Love/Thunder in My Heart (1979); orchestrations arranged, produced, and conducted by Thor Baldursson and Michael Lana, with Fritz Sonnleitner, concertmaster of the Munich Symphony Orchestra  
Cherchez Pas (1980); orchestrations: none

Grace Jones

Don't Mess with the Messer (1979); orchestrations arranged, produced, and conducted by Tom Moulton and John Davis, with Don Renaldo, concertmaster of the Philadelphia Symphony Orchestra

Pull up to the Bumper (1981); orchestrations: none

Kleer

Winners (1979); orchestrations arranged, produced, and conducted by Dennis King and Woody Cunningham, with Gene Orloff, concertmaster of the New York Philharmonic Orchestra

Get Tough (1981); orchestrations: none

Aretha Franklin

Ladies Only (1979); orchestrations arranged, produced, and conducted by Van McCoy, with Gene Orloff, concertmaster of the New York Philharmonic Orchestra

Jump, Jump, Jump to It (1981); orchestrations: none

The Whispers

And the Beat Goes On (1979); orchestrations arranged, produced, and conducted by Dick Griffey and Leon Sylvers III, with Janice Gower,

concertmaster of the Los Angeles Symphony Orchestra

It's a Love Thing (1980); orchestrations: none

Evelyn Thomas

My Head's in the Stars (1979); orchestrations arranged, produced, and conducted by Ian Levine and Fiachra Trench, with David Katz of the London Symphony Orchestra

High Energy (1981); orchestrations: none

Stacy Lattisaw

When You're Young and in Love (1979); orchestrations arranged, produced, and conducted by Van McCoy, with Gene Orloff, concertmaster of the New York Philharmonic Orchestra

Jump to the Beat (1980); orchestrations: none

Miquel Brown

Symphony of Love (1979); orchestrations arranged, produced, and conducted by Alan Hawkshaw and Don Ray, with David Katz, concertmaster of the London Symphony Orchestra, and Albert Spiegel, concertmaster of the Paris Symphony Orchestra

So Many Men, So Little Time (1982); orchestrations: none

Vicki Sue Robinson

What's Happening in My Life (1979); orchestrations arranged, produced, and conducted by Warren Schatz, T. Life, George Andrews, and Sam Peake, with Gene Orloff, concertmaster of the New York Philharmonic Orchestra

Hot Summer Night (1981); orchestrations: none

Billy Ocean

American Hearts (1979); orchestrations arranged, produced, and conducted by Ken Gold and Lynton Naiff, with Harry Bluestone, concertmaster of the Los Angeles Symphony Orchestra

One of Those Nights (Feel Like Gettin' Down) (1981); orchestrations: none

Angela Bofill

Angel of the Night (1979); orchestrations arranged, produced, and conducted by David Grusin and Larry Rosen, with David Nadien, concertmaster of the New York Philharmonic Orchestra

Too Tough (1982); orchestrations: none

Earth, Wind and Fire

Boogie Wonderland (1979); orchestrations arranged, produced, and conducted by Maurice White and Al McKay, with Janice Gower, concertmaster of the Los Angeles Symphony Orchestra

Let's Groove (1981); orchestrations: none.

## The revival of orchestration in the 1990s and 2000s

Many producers during the 1990s and 2000s attempted to make their disco music as authentic to the 1970s sound as possible. The following examples illustrate the revival of orchestration:

- *Mude o Baile* (2002) and *Superpoderosa* (2002) by BsB Disco Club: violins by Igor Macarini and Luiz Carlos, cello by Guto Guerra, trumpet by Moisés Alves, tenor and alto saxophones by Anderson Pessoa, trombone by Lucas Borges, arranged by Marcos Tani and Ricardo Boy
- *Last Days of Disco* (2003) by Alcazar: orchestration by the Stockholm Session Strings, arranged by Jesper Nordenström
- *Cosmic Girl* (1996) by Jamiroquai: strings scored and conducted by Simon Hale, arranged by Simon Hale and Jay Kay
- *Spend Some Time* (1994) by The Brand New Heavies: string arrangements by Aaron Zigman and Andrew Levy, flute by Mike Smith
- *Should I Let Him Go?* (2000) and *You Turn My World Around* (2000) by The Company: violins by Aaron Meyer and Adam LaMotte, viola by Leslie Hirsch, cello by Lori Presthus, all from the Portland Philharmonic, arranged by Bradley Swanson and (for the latter) Bryan Everett

# Discography

**Discography** is the study and listing of [sound recordings](#). This portmanteau word stems from:

1. the gramophone record, often called a "disc", the dominant commercial medium of sound recording for most of the 20th century
2. the *-graph* suffix signifying something written (see also autobiography, graphology and so on).

A listing of all recordings which a [musician](#) or [singer](#) is on can be called their "discography". Additionally, discographies may be compiled based on a particular [musical genre](#) or [record label](#), etc.

The term "discography" was popularized in the 1930s by collectors of [jazz](#) records. Jazz fans did research and self published discographies about when jazz records were made and what musicians were on the records, as record companies did not commonly include that information on/with the records at that time.

# Discothèque

A **discothèque** is an entertainment venue or club with recorded music, played by "Discaires" ([Disk jockeys](#)), rather than an on-stage [band](#). The word derives from the French word *discothèque* (a type of [nightclub](#)). *Discothèque* is a portmanteau coined around 1941 from disc and bibliothèque (library) by La Discothèque, then located on the Rue de la Huchette street in Paris (Jones + Kantonen, 1999). Previously, most paid entertainment in public venues used live bands.

Today the term discothèque is usually synonymous with [nightclub](#). The term "[Disco](#)" was originally a 60s US abbreviation of *discothèque*, a place where "disco music" was played.

## Some historical discothèques

La Discothèque in Paris (on rue Huchette), opened 1941 (German troops shut down Paris' dance halls)

Whisky à Go-Go, in Paris, opened in 1947 by Paul Pacine

Chez Regine in Paris' Latin Quarter, opened by Regine Zylberberg in 1957

La Discothèque in London opened in 1960

Ad Lib in London, opened in 1963 by Nicholas Luard and Lord Timothy Willoughby

Le Club in NYC, opened in 1960 by Olivier Coquelin, a French expatriate

Peppermint Lounge in NYC, 1961

Whisky A Go-Go in West Hollywood, California, opened in 1964. One of the centers of the 1966 Sunset Strip police riots. (The Miracles recorded the song Going to a Go-Go in 1966).

Arthur in NYC, opened by Sybil Burton in 1965 at the site of the defunct El Morocco

Electric Circus on St. Mark's Place, a hippie discothèque opened in 1967

L'Interdit in NYC

Il Mio (an Italian discoteca) in NYC

Shepherd's in NYC

The Loft in NYC, opened in 1970 by David Mancuso

Studio 54 in NYC, operated by Steve Rubell; depicted in the 1998 film 54; parodied in the 2002 movie Austin Powers in Goldmember as Studio 69.

Cheetah in NYC at Broadway and 53rd St.

Whisky a Go Go in Chicago

La Dom, downstairs from Electric Circus, run by Andy Warhol

Aux Puces in NYC, one of the first gay discos

The Sanctuary in NYC, the most famous early 1970s gay disco (part of the movie Kluge was filmed there)

Down The Street in Asbury Park, New Jersey, open until 1999

# Disco

*Main article:* [Disco](#)

The term disco is derived from discothèque. It generally refers to a specific style of music and [dance](#) that coincided with this cultural landmark.

## Diss song

In the [hip-hop](#) genre, a **diss song** is a song which has the sole purpose of verbally assaulting and insulting a person or a group of people. Diss songs are more often than not the by-product of heated rivalries between two or more rap artists(e.g. Jay-Z and Nas, Ja Rule and 50 Cent). One of the earliest examples of this particular type of song is "The Bridge is Over" by Boogie Down Productions.

In some cases, the diss song may be a parody of another song. One example of this is "No Pigeons" by Sporty Thievz, which parodied the TLC hit, "No Scrubs".

## Examples of diss songs

"Hit 'Em Up - Tupac (dissing Biggie, Puff Daddy, Bad Boy Records, Lil' Kim, Mobb Deep, Chino XL, and Junior M.A.F.I.A.)  
"Against All Odds"- Tupac (dissing Nas, Mobb Deep, and others  
"Bomb First"- Tupac dissing Biggie, Puff Daddy, Bad Boy Records, Mobb Deep, Nas, and Jay-Z  
"No Vaseline" - Ice Cube (dissing N.W.A)  
"Fuck Wit' Dre Day (and Everybody's Celebratin')" - Dr. Dre feat. Snoop Dogg (dissing Eazy-E, Tim Dog and Luther Campbell)  
"Ether"- Nas (dissing Jay-Z)  
"Loose Change"- Ja Rule (dissing 50 Cent)  
"You Gotta Love It" - Cam'Ron (dissing Jay-Z)  
"Real Muthaphuckkin G's"- Eazy-E (dissing Dr. Dre, and Snoop Dogg)

## Dixieland

**Dixieland music** is a style of [jazz](#). Dixieland developed in New Orleans, Louisiana at the start of the 20th century, and spread to Chicago, Illinois and New York City, New York by New Orleans bands in the 1910s, and was, for a period, quite popular among the general public. It is often considered the first true type of [jazz](#), and was the first music referred to by the term *jazz* (before 1917 often spelled *jass*).

## History

The style combined earlier brass band marches, French Quadrilles, [ragtime](#) and [blues](#) with collective, polyphonic [improvisation](#) by [trumpet](#), [trombone](#), and [clarinet](#).

The term *Dixieland* became widely used after the advent of the first million-selling hit records of the Original Dixieland Jass Band in 1917. The music has been played continuously since the early part of the 20th century. Louis Armstrong's All-Stars was the band most popularly identified with Dixieland, although Armstrong's own influence runs through all of jazz.

Many Dixieland groups consciously imitated the recordings and bands of decades earlier. Other musicians continued to create innovative performances and new tunes. Some fans of post [bebop](#) jazz consider Dixieland to no longer be a vital part of jazz, while some adherents consider music in the traditional style, when well and creatively played, every bit as modern as any other jazz style.

Dixieland combos usually have a [rhythm section](#) with a combination of [drum kit](#), upright bass, piano, and [banjo](#) or [guitar](#). The lead instruments are usually restricted to the [trombone](#), [trumpet](#), and [clarinet](#). The definitive Dixieland sound is the simultaneous playing of the three lead instruments.

With the advent of [bebop](#) in the 1940s, the earlier group-improvisation style fell out of favor with the majority of younger black players, while some older players of both races continued on in the older style. Though younger musicians developed new forms, many [beboppers](#) revered Armstrong, and quoted fragments of his recorded music in their own improvisations.

There was a revival of Dixieland in the 1950s, which brought many semi-retired musicians a measure of fame late in their lives. This period is sometimes seen as a fad.

There was also in the 1950s a style called "Progressive Dixieland" which sought to blend traditional Dixieland [melody](#) with [bebop](#)-style [rhythm](#). Steve Lacy played with several such bands early in his career.

## Etymology

While the term *Dixieland* is still in wide use, the term's appropriateness is a hotly debated topic in some circles. For some it is the preferred label (especially bands on the USA's West coast and those influenced by the 1940s revival bands), while others (especially New Orleans musicians, and those influenced by the African-American bands of the 1920s) would rather use terms like *Classic Jazz* or *Traditional Jazz*. Some of the latter consider *Dixieland* a derogatory term implying superficial hokum played without passion or deep understanding of the music.

According to jazz writer Gary Giddins, the term *Dixieland* was widely understood in the early 20th century as a code for "black music." Frequent references to Dixieland were made in the lyrics of popular songs of this era, often written by songwriters of both races who had never been south of New Jersey. Other composers of the "Dixieland" standards, such as Clarence Williams and Jelly Roll Morton, were native New Orleanians.

*Dixieland* is often today applied to white bands playing in a traditional style. Some critics regard this labeling as incorrect. From the late 1930s on, black and mixed-race bands playing in a more traditional group-improvising style were referred to in the jazz press as playing "small-band Swing," while white and mixed-race bands such as those of Eddie Condon and Muggsy Spanier were tagged with the *Dixieland* label.

This brings us back to the fundamentally problematic character of the term *Dixieland* as a musical category. There are black musicians today, young as well as old, who play New Orleans jazz, traditional jazz or small band swing, that musically could also be called *Dixieland*, although black musicians would not usually accept that term. Thus it makes sense to say only white musicians play *Dixieland*. In the early 20th century, *Dixieland* may have been understood as a code for black music in the northern US. However, in New Orleans the distinction was as clear then as now. It is sometimes said that only white bands were called *Dixieland* bands, like the *Original Dixieland Jazz Band*. While there is some evidence for this generalization, there are numerous counter examples of African American New Orleans musicians calling their music "Dixieland" or including the word "Dixieland" in the name of their band from the 1920s through the 1960s. Younger generations of African American New Orleans musicians generally strongly reject the "Dixieland" label. A number of early black bands used the term Creole (as with *King Oliver's Creole Jazz Band*), including some that were not actually ethnic Creoles.

Younger generations of primarily white players continued to find inspiration in the spirited, highly rhythmic traditional style of playing, with the result that the ranks of African-Americans today playing in the *Dixieland* style of jazz are very few. However, this has to be understood with the recognition that *Dixieland* jazz is as much a social/racial category as it is a musical one, unlike the more specifically musical *New Orleans jazz* or *Traditional jazz*. In these latter categories there are plenty of active young black musicians. The upshot of this is that although *Dixieland* is a term used to mean "traditional jazz" outside of jazz, within jazz it is a white subset of traditional jazz.

## Modern Dixieland

Today there are three main active streams of Dixieland jazz:

1. **Chicago style** is often applied to the sound of Chicagoans such as Eddie Condon, Muggsy Spanier, and Bud Freeman. The rhythm sections of these bands substitute the string bass for the [tuba](#) and the [guitar](#) for the [banjo](#). Musically, the Chicagoans play in more of a swing-style 4-to-the-bar manner with emphasis on the backbeat (ie. beats two and four). The New Orleanian preference for an ensemble sound is deemphasized in favor of solos. Chicago-style dixieland also differs from its southern origin by being faster paced, resembling the hustle-bustle of city life. Chicago-style bands play a wide variety of tunes, including most of those of the more traditional bands plus many of the Great American Songbook selections from the 1930s by George Gershwin, Jerome Kern, Cole Porter, and Irving Berlin. Non-Chicagoans such as Pee Wee Russell and Bobby Hackett are often thought of as playing in this style. This modernized style came to be called **Nicksieland**, after Nick's Greenwich Village night club, where it was popular. though the term was not limited to that club. Eventually, this music came to be called **Mainstream jazz**, a term popularized by British critic Stanley Dance.

2. The **West Coast revival** is a movement begun in the late 1930s by the Lu Watters Yerba Buena Jazz Band of San Francisco and extended by trombonist Turk Murphy. It started out as a backlash to the **Chicago style**, which is closer in development towards [swing](#). The repertoire of these bands is based on the music of Joe "King" Oliver, Jelly Roll Morton, Louis Armstrong, and W.C. Handy. Bands playing in the West Coast style use banjo and tuba in the rhythm sections, which play in a 2-to-the-bar rhythmic style. The sound of San Fransican good time music is added. Watters was fixated on reproducing the recorded sound of King Oliver's band with Armstrong on second trumpet. Since the Oliver recordings were acoustic, they had no drums, so Watters omitted the drums as well, even though Oliver had drums when he played live.

3. The **New Orleans Traditional** revival movement began with the rediscovery of Bunk Johnson in 1942 and was extended by the founding of Preservation Hall in the French Quarter during the 1960s. Bands playing in this style use string bass and banjo in the rhythm section playing 4-to-the-bar and feature popular tunes and Gospel Hymns that were played in New Orleans since the early 20th century such as "Ice Cream," "You Tell Me Your Dream," "Just a Closer Walk With Thee" and some tunes from the New Orleans brass band literature.

There are also active traditionalist scenes around the world, especially in Britain and Australia.

Famous traditional Dixieland tunes include: "When The Saints Go Marching In," "Muskrat Ramble," "Struttin' With Some Barbecue," "Tiger Rag," "Dippermouth Blues," "Milenburg Joys," "Basin Street Blues," "Tin Roof Blues," "Madame Beccasine", and many others. All of these tunes were widely played by jazz bands of both races of the pre-WWII era, especially Louis Armstrong. They came to be grouped as Dixieland standards beginning in the 1950s.

## Partial List of Dixieland Musicians

Some of the best-selling and famous Dixieland artists of the post-WWII era:

- Tony Almerico, trumpeter, played Dixieland live on clear channel WWL radio in New Orleans, as well as at many downtown hotels, and was a tireless promoter of the music.
- The Dukes of Dixieland, the Assunto family band of New Orleans. A successor band continues on in New Orleans today.
- Eddie Condon, guitarist who led bands and ran a series of nightclubs in New York City and had a popular radio series. Successor bands played until the 1970s, and their mainstream style is still heard.
- Turk Murphy, a trombonist who led a band at Earthquake McGoons and other San Francisco venues from the late 1940s through the 1970s.
- Al Hirt, trumpeter who had a string of top-40 hits in the 1960s, led bands in New Orleans until his death.
- Pete Fountain, clarinetist who led popular bands in New Orleans, retired recently.
- Kenny Ball, had a top-40 hit with "Midnight in Moscow" in the late 1960s. From Britain.
- Jim Cullum, cornetist based in San Antonio, TX. With his late father, led bands in San Antonio since 1963, originally known as the Happy Jazz Band. Today leads the Jim Cullum Jazz Band featured on the long-running USA public radio series, Riverwalk, Live From The Landing.
- Tim Laughlin, clarinetist, protege of Pete Fountain, who has led many popular bands in New Orleans, and often tours in Europe during the summer

## Festivals

- In Dresden, Germany, Dixieland is the name of Europe's biggest international jazz festival. 500,000 visitors celebrate it mainly on the river. A smaller festival, called "Riverboat Jazz Festival" is held annually in the picturesque Danish town, Silkeborg.
- In the US, the largest traditional jazz festival, the Sacramento Jazz Jubilee, is held in Sacramento, CA annually on Memorial Day weekend, with about 100,000 visitors and about 150 bands from all over the world. Other smaller festivals and jazz parties arose in the late 1960s as the [rock](#) revolution displaced many of the jazz nightclubs.

## Periodicals

There are a few active periodicals devoted to traditional jazz: The Mississippi Rag and the *American Rag* published in the US, and *Jazz Journal International* in Europe.

## DJ mixer

A **DJ mixer** is a type of audio mixing console used by [disc jockeys](#). The key features that differentiate a DJ mixer from other types of audio mixers are the ability to redirect (*cue*) a non-playing source to headphones and the presence of a crossfader, which allows for an easier transition between two sources.

## Structure

A typical modern DJ mixer generally has between two and six stereo **channels** for connecting and mixing audio sources. Each channel usually has a phono input with RIAA equalization for turntables and one or two line level inputs for sources such as CD players. Controls for individual channels are arranged in vertical columns (*channel strips*), starting with a switch or a knob selecting between the inputs.

Below the input selector is a gain (or trim) control, used to match signal levels between channels. Next follows an equalizer section, used to fade parts of tracks in and out; a common basic technique is to kill the bass on one channel while mixing so the basslines of two tracks don't clash. Some more controls may follow, such as a balance knob, built-in sound effects and *inserts* for external [effects units](#). Below there's normally a *cue* switch sending the signal to the headphones, letting the DJ to preview and [beatmatch](#) a track without sending it to the master output, but on some mixers there's a different way to select the cued source. Channel strip ends with a fader which sets the channel's signal volume in the final mix.

The signal may pass through a **crossfader**. On simple mixers there are normally two channels assigned opposite ends of the crossfader, sometimes with a button to reverse the crossfader's direction. More advanced mixers have *assignable crossfaders* in which each channel can be assigned to either end of the crossfader or to bypass the crossfader entirely. Many *scratch mixers* have a *crossfader curve* control that effectively change the distance the crossfader needs to travel to open the channel fully, letting to shorten it to a millimetre or two, which is useful for speedy scratching (see [turntablism](#)).

Additionally, one or two microphone inputs may be present to accommodate MCs. Microphone channels are similar in structure, but normally have fewer controls and are often monaural.

Most DJ mixers feature peak meters to aid matching levels between channels and monitor the signal for clipping. Usually there are peak meters for master mix and cued mix, though sometimes per-channel meters are present.

A DJ mixer has one or two **headphone** jack plugs and a headphone volume control. Headphones are normally used to monitor a cued channel, but on some mixers other variants are possible, such as *split cue* where cued channels are sent to the left headphone channel and master mix to the right, or a way to select between cued channels and master mix.

Normally there are two or more **outputs** for the master mix, used to send the signal to an amplifier or another mixer for the public address system, to a loudspeaker in the DJ booth for monitoring the mix, or to a tape recorder or a computer for recording. There may be one volume control for all outputs or separate controls for each outputs. Sometimes a recording output doesn't have a volume control.

## Doom metal

**Doom metal** is a form of [heavy metal](#) that emerged as a recognised subgenre in the mid-1980s. It is slow and heavy and intended to evoke an atmosphere of darkness, despair and melancholy. It is strongly influenced by the early work of Black Sabbath, and a number of early Black Sabbath tracks, such as "Black Sabbath", are often considered embryonic or prototypical doom metal songs.

## History of doom metal

Although in the beginning of the 1970s both Black Sabbath and the American Pentagram performed a kind of music that can be considered proto-doom, neither band is generally considered as an actual doom metal band. From the late 1970s to mid 1980s, bands such as Trouble, Saint Vitus and Witchfinder General contributed much to the formation of doom metal as a distinct genre. The form of music played by these artists can be described as being rooted in both the music of Black Sabbath and, especially in the case of Witchfinder General, the New Wave of British Heavy Metal. The slowness of their music is often also seen as a reaction to the constantly increasing speed of contemporary [thrash metal](#) and [speed metal](#). Doom metal first became widely popular with Sweden's Candlemass, who are hailed in the mainstream metal press as one of the most important and influential doom metal bands; their 1986 album *Epicus Doomicus Metallicus* is considered a genre-defining release (at least within the epic subgenre of doom metal). According to the proponents of the classic doom metal style, the most prototypical doom metal band would be Saint Vitus, who released their self-titled debut album in 1984 - two years before doom metal as a genre was recognised in the mainstream metal press.

Doom metal developed further in the early 1990s, when a number of bands started combining the slow, melancholic, doom metal style that was pioneered in the 1980s with influences from [death metal](#) and other forms of extreme metal, including growled vocals. The first band to combine these styles may have been the heavily Celtic Frost-influenced Winter, although this style is generally associated with and made popular within mainstream heavy metal by three British bands: Paradise Lost, My Dying Bride and Anathema. Nowadays, the original brand of doom metal with clean vocals is usually labelled "classic doom", whereas the later developed styles which involve growled vocals are commonly called "doomdeath" or "death/doom".

During the 1990s the doom metal genre developed further styles, although classic doom and death/doom have remained central to the present. A number of bands, such as The Gathering and Theatre of Tragedy took the music of Paradise Lost, got rid of some of the slowness and started experimenting with female vocals<sup>[1]</sup>, thereby helping to create the generally more accessible genre of [gothic metal](#). Although this genre is generally considered to be influenced by doom metal, it is not usually considered a subgenre of doom metal: certain elements, such as the slowness and the emphasis on heavy riffing, are often absent. Other bands took the opposite road and ventured into much more extreme and inaccessible territories, which led to the formation of subgenres such as funeral doom and drone doom, pioneered by Thergothon and Earth respectively.

It has been argued that a nexus exists between doom metal, stoner metal and [psychedelic music](#), although each of these genres have developed on their own. The stoner metal of bands like Kyuss, Monster Magnet and Queens of the Stone Age shares with doom metal a heavy sound and a strong Black Sabbath influence, but generally has a different objective: whereas doom metal aims for dark atmospheres, stoner metal aims for a groovy and psychedelic sound. A number of doom metal bands, however, such as (later) Cathedral and Electric Wizard, have combined doom metal with psychedelic influences, thereby creating a style which can be considered a hybrid form of doom metal and [psychedelic rock](#).

It should be noted, however, that Paradise Lost themselves made some use of female vocals on their second album, *Gothic*, in 1991.

## **Instrumentation**

Like most kinds of metal, doom metal is typically based upon an instrumentation of vocals, guitar, bass guitar and drums, and heavy guitar riffing is considered an important feature within almost all of its subgenres. Some doom metal bands, especially newer bands, also use keyboards. In classic doom, however, keyboards still are relatively uncommon. Although more commonly associated with gothic metal, a number of doom metal bands, such as My Dying Bride or Funeral, have also made use of violins in their music. On the whole, however, doom metal remains by and large a genre of guitar-oriented music.

# Stylistic divisions within doom metal

## Traditional doom

Slow, melancholic, riff-based metal influenced by Black Sabbath as well as the NWOBHM movement. Typical examples: Saint Vitus, Pentagram, Candlemass, Solitude Aeternus, Solstice, Reverend Bizarre. Four "waves" have so far been recognised in the history of traditional doom: the first one started with the originators of the entire genre, the proto-doom bands Black Sabbath and Pentagram; the second one has been located in the mid-1980s, especially in the work of Saint Vitus and Candlemass; the third one started with the success of Cathedral's debut album Forest of Equilibrium; the fourth one has recently been affiliated with Reverend Bizarre.

## Epic doom

A similar form to traditional doom with a stronger medieval and/or fantasy influence. Epic doom traces its roots through more traditional metal such as Manowar and Iron Maiden in addition to emulating the concepts of pre-doom bands such as Black Sabbath. A number of bands who embraced this style emerged from the West Yorkshire region of England in the mid/late 1980s, such as Solstice, and Mourn.

## Death/doom

A mixture of doom metal with a number of elements from [death metal](#), most notably [growled vocals](#). Typical examples: Winter, early Paradise Lost, My Dying Bride, Anathema, Katatonia, Swallow the Sun.

## Funeral doom

Funeral Doom is a style that takes the slowness of doom metal to further extremes, and that puts a strong emphasis on an atmosphere of despair and emptiness. The style can be seen as a departure from death/doom, slowing down the music even further, and frequently incorporating influences from [ambient music](#), creating a sound which is distorted and gloomy, but often dreamy at the same time. Vocals are usually [growled](#), but are often much less in the foreground than in other styles of music, and are rather used to provide an additional texture to the music. The style was originally pioneered by Thergothon, and later also by Skepticism and Funeral; modern examples include Bloody Panda, Shape of Despair, Stabat Mater, and Until Death Overtakes Me.

## Drone doom

Also known as drone metal, drone doom is a style which is even more minimalistic and inaccessible than funeral doom. Generally influenced by [noise](#) and [ambient music](#), the music often mainly consists of distorted downtuned guitars and bass, usually with lots of reverb applied to the final mix, with clear (melodic) themes being a rarity. Drone doom tracks are generally long, with typical drone tracks lasting between ten and thirty minutes; some drone doom releases even consist of only one album-long track. Vocals and even drums are often absent, and the music often lacks any beat or rhythm in the traditional sense. Like funeral doom, drone doom typically emphasizes despair and emptiness, although apocalyptic and cryptic themes are also common. Innovator Stephen O'Malley, heavily influenced by Earth, can be largely credited with the creation of drone doom as a recognised subgenre, being or having been involved with seminal acts such as Burning Witch and Sunn O))), Sunn O))) and their predecessor Earth can be considered the two most influential bands of the genre.

## Stoner doom

A hybrid form of doom metal and stoner rock. Typical examples: (late) Cathedral, Sleep, Acrimony, Eternal Elysium, Spiritual Beggars. A significant borderline case are Electric Wizard, whose music can be seen as a mixture of traditional doom, stoner doom, and sludge doom. Australian doom/stoner band Pod People, have coined the term "stoom" (an portmanteau of 'stoner' and 'doom') to describe this style of music.

## Sludge doom

*Main article: [Sludge metal](#)*

Combining the thick, riffing sound of stoner doom with the raw abrasiveness and shrieked vocals of hardcore, [sludge](#) is at the outer limits of doom metal and is an acquired taste (although a couple of bands, such as Eyehategod and Crowbar, are fairly well known within the metal community). Even though many sludge bands sport the "booze 'n' bongos" image synonymous with stoner rock, they lack the stoner rockers' positive outlook on life, with lyrical themes typically centered around misery and hatred. Typical examples: Eyehategod, Crowbar, Grief.

# Doo-wop

**Doo-wop** is a style of vocal-based [rhythm and blues](#) music popular in the mid-1950s to the early 1960s in the United States. The term was coined by a [disc jockey](#), Gus Gossert, in the 1970s referring to (mostly) white [Rock & Roll](#) groups of the late '50s and early '60s. It became the fashion in the 1990s to keep expanding the definition backward to take in Rhythm & Blues groups from the mid-1950s and then further back to include groups from the early 1950s and even the 1940s. There is no consensus as to what constitutes a Doo-wop song, and many aficionados of R&B music dislike the term intensely.

The style was at first characterized by upbeat harmony vocals that used nonsense syllables from which the name of the style is derived. The name was later extended to group harmony ballads. Examples "Count Every Star" (1950), as though imitating the plucking of a double bass, created a template for later groups.

1951 was perhaps the year doo-wop broke into the mainstream in a consistent manner. Hit songs included "My Reverie" by The Larks, "I Couldn't Sleep a Wink Last Night" by The Mello-Moods, "Glory of Love" by The Five Keys, "Shouldn't I Know" by The Cardinals and "It Ain't the Meat" by The Swallows.

By 1953, doo-wop was extremely popular, and disc jockey Alan Freed began introducing black groups' music to his white audiences, with great success. Groups included The Spaniels, The Moonglows and The Flamingos, whose "Golden Teardrops" is a classic of the genre. Other groups, like The Castelles and The Penguins, innovated new styles, most famously uptempo doo wop, established by The Crows 1953 "Gee" and Clefones' 1956 "Little Girl of Mine". That same year, Frankie Lymon & the Teenagers became a teen pop sensation with songs like "Why Do Fools Fall in Love?". Some consider a 1956 hit by The Five Satins, "In the Still of the Night," to be the quintessential doo-wop record.

Doo-wop remained popular until the [British Invasion](#) in the early to mid 1960s. Dion & the Belmonts' "I Wonder Why" (1958) was a major hit that is sometimes regarded as the anthem for doo wop, while The Five Discs added a wide range of sounds and pitched vocals.

1961 may be the peak of doo-wop, with hits that include The Marceles', an interracial group, "Blue Moon". There was a revival of the nonsense-syllable form of doo-wop in the early 1960s, with popular records by The Marceles, The Rivingtons, and Vito & the Salutations. A few years later, the genre had reached the self-referential stage, with songs about the singers ("Mr. Bass Man") and the songwriters ("Who Put the Bomp?")

The genre has seen mild surges throughout the years, with many radio shows dedicated to doo-wop. It has its roots in 1930s and 40s music, like songs by the Ink Spots and Mills Brothers. Its main artists are concentrated in urban areas (New York Metro Area, Chicago, Philadelphia, Los Angeles etc), with a few exceptions. Revival shows on TV and boxed CD sets have kept interest in the music. Groups have done remakes of doo-wops with great success over the years. Part of the regional beach music or shag music scene, centered in the Carolinas and surrounding states, includes both the original classic recordings and numerous remakes over the years. Other artists have had doo-wop or doo-wop-influenced hits in later years, such as Billy Joel's 1983 hit, Longest Time, Frank Zappa's 1981 hit, Fine Girl, or Electric Light Orchestra's 1976 hit Telephone Line.

It has been noted that doo-wop groups tend to be named after birds. These include The Ravens, The Cardinals, The Crows, The Wrens, The Robins, The

Swallows, The Larks, The Flamingos, The Penguins and The Feathers.

Doo-wop is popular among collegiate a capella groups due to its easy adaptation to an all-vocal form.

Also, Japanese doo-wop musical group Chanel (afterward, it was renamed Rats & Star), including famous sex offender Masashi Tashiro, came out in 80's Japan.

The musical Little Shop of Horrors used doo-wop (and similar styles) as a pastiche, especially by the three narrator girls in songs such as Da-Doo and Some Fun Now. Stephen Sondheim also makes use of this style in his musical Company with the song You Could Drive a Person Crazy.

Categories: [R&B music genres](#)

# Double album

A **double album** is an audio album of sufficient length that two units of the medium in which it is sold (especially records and compact discs) are necessary to contain the entirety of it.

The double album was a much more common format during the vinyl LP era than during the CD era. A single LP had two sides, each of which could be no longer than half an hour (and sound quality was better when less music was crammed onto each side.) Most LPs were between 30 and 45 minutes in length. A single CD can be as long as 70 minutes (or even a little more.) Hence, most old 2-LP albums can be re-released as a single CD.

Recording artists often think of double albums as a single piece artistically; however, there are exceptions such as Pink Floyd's *Ummagumma*, one [live album](#) and one studio record packaged together, and OutKast's *Speakerboxxx/The Love Below*, consisting of one practical solo album by each member of the [hip-hop](#) duo. Particularly in the compact disc era, artists sometimes will release albums with bonus discs, featuring studio out-takes, alternate mixes, or other material that would not typically be suitable album material but which would be of interest to fans (e.g., The Beatles' *Let It Be... Naked*, which featured a bonus disc of studio chatter and jamming entitled *Fly on the Wall*).

The first ever double album was Dave Brubeck's *At Carnegie Hall*. The first rock double album, and first studio double album, ever released is believed to have been Bob Dylan's *Blonde on Blonde* in 1966, although at the same time Dylan was recording the album, Frank Zappa and the Mothers of Invention were at work on the double album *Freak Out!*, released two months after *Blonde on Blonde*. The first rap double album was 2pac's *All Eyez On Me*.

Since then, the double album format has been more often used for [live albums](#) for which material is often plentiful. The format is also frequently used for [concept albums](#).

There were only a few examples during the vinyl-LP era of a **sesquialbum**, i.e., a one-and-a-half album. Johnny Winter released a three-sided album on two 12-inch discs, with the flip side of the second disc being blank. The Monty Python album *Matching Tie and Handkerchief* was originally issued with two concentric grooves with different programs on side B. Elvis Costello and The Clash (amongst other 1980s acts) would sometimes release early pressings of their albums with extra material on a 45 rpm single. Leonard Cohen wanted to do the same with his album *Recent Songs* but Columbia rejected the idea.

The **triple album** contains three units of the medium; the first one of note in the rock era was George Harrison's *All Things Must Pass*. Packages with more units than that are generally called [boxed sets](#).

In the late 1980s, the compact disc, which can carry more music than a typical vinyl long play record, became the most common format on which to sell music. Albums which were originally packaged as double records are often sold on a single compact disc, such as the aforementioned *Blonde on Blonde*, The Who's *Tommy*, The Rolling Stones' *Exile on Main Street*, and Prince's *1999* (though not in all cases, such as the Beatles' *White Album*). Also, albums of the compact disc era are often longer than those of previous decades, and are sometimes packaged on two records if vinyl copies are produced. In general, an album is usually referred to as a double album when its audio content requires two units of the prominent

format of its time period. Thus, double albums are less prominent in the compact disc era than in previous decades.

The concept of a double album is one that sparks much critical debate. Some see them as a testament to a band's creativity although they are also seen as self-indulgent and bloated. It is frequent that double albums come at a time in a band's career when they have achieved much success and possibly believe that what everything they do will be "Gold" and fans will buy it. Many double albums are released to much divide in critical opinion and in hindsight the question "would this be better as a single album" is asked. Despite this criticism, many double albums are met with praise or seen as classics some time after their release.

# Downtempo

**Downtempo** (sometimes **DownTempo**, **down tempo** or **downbeat**) is an umbrella term for a laid-back [electronic music](#) style slower than [house music](#) (less than 118 beats per minute) but separate from [ambient music](#). This can encompass specific genres such as [lounge music](#), chill out, [trip-hop](#), or [acid jazz](#). It is usually intended more for relaxing and socializing than dancing, though some releases are produced for the dance floor.

The downtempo genre draws heavily on [dub](#), [hip hop](#), [jazz](#), [funk](#), [soul](#), [drum 'n' bass](#), [ambient music](#), and [pop](#) and is often confused and/or mated with closely-related styles like [IDM](#), [trip hop](#), and [acid jazz](#).

## Artists and record labels

Kruder & Dorfmeister from Austria, Thievery Corporation from the United States and Zero 7 from the UK are amongst the most well-known bands of the genre. They have founded their own influential labels: G-stone, Eighteenth Street Lounge and TRL Music. Other important labels/producers promoting downtempo music are Boards of Canada (UK), Stereo Deluxe (Germany), Grand Central (UK), Tru Thoughts (UK), Switchstance Recordings (Germany), and Couch Records (Austria).

Other significant acts include Lemon Jelly, Fila Brazillia, Funki Porcini, Amon Tobin, Lendi Vexer, Glideascope, EckAFX, Blue Stone, Nicola Conte, Peace Orchestra, Dreamlin, Cities Of Foam and Bent. Related acts include the likes of Daedelus, edIT, Tipper, Eskmo, Four Tet, Wally, and DJ Olive.

# Downtown music

**Downtown music** is a subdivision of American music. The scene the term describes began in 1960, when Yoko Ono — one of the Fluxus artists, at that time still seven years away from meeting John Lennon — opened her Soho loft to be used as a performance space for a series curated by La Monte Young and Richard Maxfield. Prior to this, most classical music performances in New York City occurred "uptown" around the area Lincoln Center would soon occupy. Ono's gesture led to a new performance tradition of informal performances in nontraditional venues such as lofts and converted industrial spaces, involving music much more experimental than that of the more conventional modern classical series' Uptown.

Downtown music is not distinguished by any particular principle, but rather by what it does not do: it does not confine itself to the ensembles, performance tradition, and musical rhetoric of European classical music, nor to the commercially defined conventions of pop music. More than a continuous scene, Downtown music has resembled a battlefield on which, from time to time, various groups have reigned ascendant. In chronological order of dominance, the following movements have been prominent Downtown:

- Conceptualism — starting with the Fluxus artists, who made pieces from brief instructions ("the short form") or concepts. For instance, La Monte Young's "Draw a straight line and follow it"; Robert Watts's Trace, in which the musicians set fire to the music on their music stands; Yoko Ono's Wall Piece, in which performers bang their heads against the wall; or Nam June Paik's classic "Creep into the vagina of a living whale."
- [Minimalism](#) — a style of music that began with the repetition of short motifs, sometimes going out of phase due to slight differences of speed, and crescendoed into a movement of simple diatonic music of clearly defined linear processes. Steve Reich and Philip Glass became the public face of the movement, but the original minimalists (La Monte Young, Tony Conrad, John Cale, Charlemagne Palestine, Phill Niblock) were less characterized by their music's prettiness and accessibility than by its tremendous length, volume, and attention-challenging stasis.
- Performance art — starting with the enigmatic solo text/music pieces of Laurie Anderson, which often made innovative (even subversive) use of electronic technology, many Downtown artists developed an often humorous or thought-provoking style of solo performance with conceptualist overtones. This scene coexisted with minimalism, and due to the dearth of funding opportunities for Downtown composers, many of them still pursue genres of solo performance.
- [Art rock](#) — this is a term with several different meanings, depending on one's milieu, but two are most relevant to Downtown music: 1. originally, music made by visual artists, presumably musical amateurs, often tending toward surreal theater, as in the early performances of Glenn Branca and Jeffrey Lohn; and 2. subsequent to Rhys Chatham's influence, a transferral of [minimalism](#) to the instruments of rock music, resulting in static pieces played on electric guitars, generally with a backbeat. Groups like DNA, Sonic Youth and the Swans arose from this (and the No Wave) movement.

- [Free improvisation](#) — originating with Terry Riley and Pauline Oliveros, this scene took over Downtown in the early 1980s, under the leadership of John Zorn and Elliott Sharp. This music, celebrating extemporaneity, flourished in a city in which rehearsal space was expensive and difficult to come by, and provided an outlet for many jazz-trained/-centered musicians tired of jazz performance conventions.
- [Postminimalism](#) — a style of music based on a steady beat and diatonic harmony, less linear or obvious than minimalism but taking over its ensemble concept of amplified chamber groups. Postminimalism was more a far-flung national movement than anything specific to Manhattan, but William Duckworth and Elodie Lauten are examples of New York-based postminimalists.
- [Totalism](#) — another style emerging from minimalism but taking it in the direction of rhythmic complexity and rock-inspired beat momentum. Postminimalism and totalism were both bolstered by the emergence, starting in 1987, of the Bang on a Can festival, curated by Julia Wolfe, David Lang, and Michael Gordon.

The above list of movements and idioms is far from exhaustive — in particular, it omits the continuous history of [electronics](#) in Downtown music, which have tended toward process-oriented and interactive music rather than fixed compositions. The history of sound installations should be taken into account, along with the more recent advent of DJ-ing as an artform. Likewise, despite its origin in New York musical politics, "Downtown" music is not solely specific to Manhattan; many major cities such as Chicago, San Francisco, even Birmingham, Alabama have alternative, Downtown music scenes. The only thing that all Downtown music might be said to have in common is that, at least at the time of its original appearance, it was too outré - by dint of excessive length, stasis, simplicity, extemporaneity, consonance, noisiness, pop influence, vernacular reference, or other purported infraction - to have been considered "serious" modern music by the people who play modern music at Juilliard, Columbia University, and Lincoln Center. Another generalization one could point to is an embrace of the creative attitudes of John Cage, though this is not universal; Zorn in particular has downplayed his influence. Some Downtown music, particularly that of Glass, Reich, Zorn, and Morton Feldman, has subsequently become widely acknowledged within the more mainstream history of music.

## Dream ballet

A **dream ballet**, in [musical theater](#), is an all-[dance](#), no-[singing](#) production number that reflects the [themes](#) of the production. The plot, themes, and characters are typically the same--although the people playing the characters may be different, as the roles of the dream ballet are usually filled by well trained dancers rather than actual actors.

Dream ballet sequences exist mainly for clarification, foreshadowing, and symbolism, and occur outside the continuity of the production. They also provide the opportunity to impress the audience with advanced dancing techniques and elaborate staging that would otherwise be impossible or dramatically inappropriate.

The dream ballet is thought to have originated in Rodgers and Hammerstein's 1943 musical Oklahoma!, which includes a 15-minute first-act dream ballet finale. The technique has since become a routine (although by no means universal) theatrical practice.

# Dream pop

**Stylistic origins:** [New wave](#), [Post-punk](#)

**Cultural origins:** Early '80s Europe

**Typical instruments:** [Guitar](#), [Synthesizers](#)

**Mainstream popularity:** Small to medium

**Derivative forms:** [Space rock](#) - [Shoegazing](#)

**Dream pop** is a type of [alternative rock](#) that originated in the early 1980s when bands like the Cocteau Twins began twisting [New Wave](#) melodies into sonic, echoing textures and mumbled vocals. The term was mostly used in the United States. In the late 1980s, several varieties of dream pop emerged, primarily in Britain. These included [shoegazing](#) and [space rock](#). More recently bands like the Dandy Warhols have had the label attributed to them.

## Drill 'n bass

**Drill 'n bass** is the popular name for a type of [electronic music](#) that emerged from [drum 'n bass](#) in the mid-1990s. Artists like Luke Vibert, Squarepusher, and most famously, Aphex Twin created the sound in 1995 (see 1995 in music).

The genre is characterized by extremely complex and detailed [drum programming](#), often [sampled](#) from the famous "[amen](#)" [breakbeat](#). The complexity and attention to measure-by-measure detail found in drill 'n bass distanced it from the dancefloor mentality of early drum 'n bass.

In 1998 and 1999, Aphex Twin released his "Come to Daddy" and "Windowlicker" singles, both mainly in the style of drill and bass, and which were both commercially successful worldwide.

By 1999, the popularity of this name for the genre had declined. New, successful artists of the complex drum and bass style such as Venetian Snares and Doormouse took the name "[breakcore](#)" instead.

## **Key early releases (1995)**

Hangable Auto Bulb series of EPs by Aphex Twin (as AFX)  
Conumber, Alroy Road Trax EPs by Squarepusher  
Plug series of EPs by Luke Vibert (as Plug)

## **Notable later releases**

Feed Me Weird Things - Squarepusher (1996).  
Richard D. James Album - Aphex Twin (1996).  
Come to Daddy - Aphex Twin EP (1997).  
Big Loada - Squarepusher (1997).  
Boku Mo Wakaran - Bogdan Raczynski (1998).  
Lunatic Harness - μ-ziq (1997)

## Drinking song

A **drinking song** is a song sung while drinking, that is, consuming alcohol. Some drinking songs are about drink, but some are not. Groups which currently still have a drinking song tradition include rugby players, hash house harriers, air force fighter pilots and fraternities. Many of the drinking songs are undocumented because of the bawdy nature of the material. Most of the songs are folksongs and show variation from person to person and region to region in both the lyrics and in the tune used for the lyrics.

## Some Drinking Songs

Common drinking songs include The Lady in Red, The Goddamned Dutch, I Used to Work in Chicago, In Mobile, The S&M Man, Seven Drunken Nights and My Name is Jack.

The spiritual "Swing Low Sweet Chariot" is used as a drinking song among hash harriers and rugby players with obscene gestures associated with the lyrics. This song is heightened to a drinking game by air force fighter pilots. The first person to fail to correctly make the gestures has to buy the next round of drinks.

# Dronology

**Dronology**, also known as **drone music** or **drone-based music**, **drone ambient** or **ambient drone**, and sometimes simply **dronescape** or **drone** is a music genre that has an emphasis on the use of sustained sounds, notes, or tones – called drones. It often features lengthy audio compositions with only slight variations in tone, pitch, or style throughout.

While not being considered as music per se by some, it has been explored at some point by pioneers as notable as La Monte Young and John Cale's Theater of Eternal Music (aka The Dream Syndicate), Charlemagne Palestine, Eliane Radigue, Kraftwerk, Klaus Schulze, Tangerine Dream, Robert Fripp & Brian Eno, Coil, Aphex Twin, Autechre's side-project Gescom, or Biosphere.

## Overview

Music which contain drones and are rhythmically still or very slow can be found in many parts of the world, including the Japanese gagaku classical tradition, Scottish pibroch piping, didgeridoo music in Australia, Hindustani classical music (which is accompanied almost invariably by the tambura, a four-string instrument which is only capable of playing a drone) and pre-polyphonic organum vocal music of late medieval Europe. Stillness and long tones also occur in [classical](#) compositions during Adagio movements or slow airs, including, for instance, the third movement of Anton Webern's Five Small Pieces for Orchestra.

The modern genre term "dronology" is most often applied to artists who have allied themselves closely with underground music and the [post-rock](#), [experimental music](#), or post-classical genres.

Many of these musicians utilize instruments such as electric guitars, keyboards, and pianos, coupled with electronics to produce lengthy audio compositions with dense and unmoving harmonies and a stilled or "hovering" sense of time.

Music from dronology artists can also fit into the genres of [new age](#), found sound, [minimal music](#), [dark ambient](#), and drone doom/drone metal, [noise music](#). Thus, while the hallmarks of the dronology genre are easy to recognize, the backgrounds and goals of the artists are actually quite varied.

## Examples

Some tracks or records from notable artists include, chronologically:

La Monte Young's 1960s drone-based pieces, solo and with John Cale in the Theater of Eternal Music (aka The Dream Syndicate)

Kraftwerk's experimental/drone self-titled first album Kraftwerk (1970): the 4-minute intro to "Stratovarius", the organ drone on most of "Megahertz", the first half of "Vom Himmel Hoch".

Klaus Schulze's early "organ drone" albums Irrlicht (1972), and Cyborg (1973).

Tangerine Dream's ambient drone albums Zeit (1972), and to a lesser degree Phaedra (1974).

Fripp and Eno: the 21-minute drone ambient of "The Heavenly Music Corporation" on No Pussyfooting (1973), the 28-minute drone ambient of "An Index of Metals" on Evening Star (1975).

On Miles Davis' Agharta (1975): the last 6 minutes of the last track, especially the last 2 minutes.

On Pink Floyd's Wish You Were Here (1975): the 4-minute intro of "Shine on You Crazy Diamond, Pt.1"

Coil's drone music albums such as How to Destroy Angels EP (1984) and LP (1992), Time Machines (1998), or ANS (2003). Plus many tracks on non-drone albums, such as "Tenderness of Wolves" on Scatology (1984), "Wrim Wram Wrom" on Stolen and Contaminated Songs (1992), "Cold Dream Of An Earth Star" and "Die Wolfe Kommen Zuruck" on Black Light District: A Thousand Lights In A Darkened Room (1996), "North" on Moon's Milk (1998). (Plus many semi-drone tracks such as "Her Friends The Wolves...", "Moon's Milk Or Under An Unquiet Skull Part 1", "Bee Stings", "Refusal Of Leave To Land", "Magnetic North", etc.)

On Aphex Twin's Selected Ambient Works Volume II (1994): especially "[spots]" and "[tassels]", and to a lesser degree tracks such as "[tree]", "[parallel stripes]", "[grey stripe]", and "[white blur 2]".

Gescom (a side-project of Autechre): the experimental album Minidisc (1998) is half drone ambient (tracks "Cranusberg [1-3]", "Fully [1-2]", "Shoegazer", "Polarized Beam Splitter [1-5]", "Dan Dan Dan [1-4]", "A Newer Beginning [1-2]", "Go On", and to a lesser degree "Interchangeable World [1-3]", "Yo! DMX Crew", "New Contact Lense", "1D Shapethrower", "Inter", "Of Our Time", or the drone techno of "Pricks [1-4]").

Biosphere : half of his ambient/drone album Shenzhou (2002), and his drone album Autour de la Lune (2004).

Boards of Canada : the drone ambient of "Corsair" on Geogaddi (2002). modern drone composers Jliat, Ian Nagoski, Leif Elggren, Eliane Radigue, etc.

Modern bands representative of this genre include Maeror Tri, Stars of the Lid, Children of the Drone, Windy & Carl, Troum, House of Low Culture, Cisfinitum, Kloud, Melek-Tha, Alp, Controlled Bleeding, and Laminar. Some important hearths for bands in the genre include Soleilmoon or Drone Records

# Drum

A **drum** is a [musical instrument](#) in the [percussion](#) family , technically classified as a [membranophone](#). Drums consist of at least one membrane, called a drumhead or drumskin, that is stretched over a shell and struck, either directly with parts of a player's body, or with some sort of implement such as a drumstick, to produce sound. Drums are among the world's oldest and most ubiquitous musical instruments, and the basic design has been virtually unchanged for hundreds of years.

The shell almost invariably has a circular opening over which the drumhead is stretched, but the shape of the remainder of the shell varies widely. In the western musical tradition, the most usual shape is a cylinder, although [timpani](#) for example use bowl-shaped shells. Other shapes include a frame design (tar (drum)), truncated cones (bongo drums), and joined truncated cones (talking drum).

Drums with cylindrical shells can be open at one end (as in the timbales) or can have two drum heads. Single headed drums normally consist of a skin or other membrane, called a head, which is stretched over an enclosed space or over one of the ends of a hollow vessel. Drums with two heads covering both ends of a tubular shell often have a small hole halfway between the two drumheads; the shell forms a resonating chamber for the resulting sound. Exceptions include the African slit drum, made from a hollowed-out tree trunk, and the Caribbean steel drum, made from a metal barrel. Drums are usually played by the hands or by one or two sticks. In some non-Western cultures drums have a symbolic function and are often used in religious ceremonies. The sound of a drum depends on several variables including shell shape, size, thickness of shell, materials of the shell, type of drumhead, tension of the drumhead, position of the drum, location, and how it is struck.

In [popular music](#) and [jazz](#), *drums* usually refers to a [drum kit](#) or set of drums, and drummer to the band member or person who plays them. Drums are played by percussionists whose skills can be called for in all areas of music from Classical to Heavy Rock & all areas in between. Many drummers are also adapt to playing the drum set for some songs, and switching to a set of hand drums for an added musical variety.

In the past, drums were used as a means of communication and not just for their musical qualities. They are sometimes used in sending signals. The talking drums of Africa can imitate the inflections and pitch variations of a spoken language and are used for communicating over great distances.

[Breakcore](#) - Breakstep - [Dubstep](#) - Hipstep - Techbreaks - Jazzstep

**Drum and bass** (commonly abbreviated **dnb** or **d'n'b**) is a type of electronic dance music also known as **jungle**.

It began as an offshoot of the United Kingdom [breakbeat hardcore](#) and [rave](#) scene and came into existence in the early 1990s. Over the first decade of its existence, drum and bass saw many permutations in style, incorporating everything from [reggae](#) and [jazz](#) to [techno](#) and [trance](#). Today it is usually heard in [nightclubs](#) and its most recognizable features include a heavy emphasis on fast tempo drums in addition to loud intricate basslines.

# History

## Pre-jungle / drum & bass notables

Before the start of drum & bass proper, or even the scenes preceding it, special mention needs to be given to a few scenes and individuals.

The first is the US breakbeat scene which emerged in the 1980s, the most famous artist being NYC's Frankie Bones whose infamous 'Bones Breaks' series from the late '80's onwards helped push the house-tempoed breakbeat sound (especially in the UK) and can be said to be a direct precursor to the UK breakbeat / hardcore scene.

The second is Kevin Saunderson, who released a series of bass-heavy, minimal techno cuts as Reese / The Reese Project in the late '80s which were hugely influential in d&b terms. One of his more infamous basslines was indeed sampled on Renegade's 'Terrorist' and countless others since, being known simply as the 'Reese' bassline. He followed these up with equally influential (and bassline heavy) tracks in the UK hardcore style as Tronik House in 1991 / 1992. Another Detroit artist who was important for the scene is Carl Craig. The sampled up jazz break on Carl Craig's "Bug in the Bassbin" was also influential on the newly emerging sound, DJs at Rage used to play it pitched up as far as the Technics would go.

The third precursor worth mentioning here is the Miami, USA Booty Bass / [Miami Bass](#) scene, first popularised by 2 Live Crew in the mid to late '80's. There are clear sonic parallels with drum bass here in the use of uptempo synths and drum machines in producing bass-heavy party music. However, this movement had absolutely no connection with either the US house scene or the UK acid house / rave scene, and to that extent is not classifiable as 'rave' music in the same way as the above examples possibly are.

## Beginnings in the UK

*Main article: [Oldschool jungle](#)*

Several key tracks and acts from the acid house period, in late 1980s Britain, laid the foundations for both hardcore and jungle/drum & bass. Renegade Soundwave's 'The Phantom' and 'Ozone Breakdown' (both 1988), Meat Beat Manifesto's 'Radio Babylon' (1989), 808 State's 'Cubik' (1990) and Humanoid's 'Stakker Humanoid' (1988) are such examples of acid-era experimentation with breaks and bass. In addition, the bleep techno (or Yorkshire Bleeps and Bass) sound of 1989 - 1991 would prove hugely influential, featuring bass-heavy cuts by acts such as Unique 3, Nexus 21, Nightmares on Wax and LFO, and spearheaded by Sheffield's Warp Records. The third immediate and direct influence on drum & bass' existence was the 'Belgian Techno' sound, actually an internationally-created fusion of hardcore, house and techno, pioneered by Joey Beltram, LA Style, Frank De Wulf, CJ Bolland, Richie Hawtin and others. This scene existed briefly from approximately 1989-1990 to 1992 at the very latest, during which period there was much cross-pollination with the UK hardcore sound. This sound did survive in

various forms in its mother countries - primarily Belgium, Holland and Germany - beyond 1992, but the general scenes in these countries had shifted over to trance, house, industrial techno or gabba (or happy hardcore / hard house, in UK terms).

Drum and bass has its origins in breakbeat hardcore, a part of the UK rave scene. Hardcore DJs typically played their records at fast tempos, and breakbeat hardcore emphasised breakbeats over the 4-to-the-floor beat structure common to [house music](#). Breakbeat hardcore records (commonly called 'tunes' within the community) Lennie De Ice's "We are I.E" (1991), Rebel MC's 'Wickedest Sound' (1990) and 'Tribal Bass' (1991), the Ragga Twins' 'Spliffhead' (1990), Genaside II's 'Narramine' (1991), Nightmares On Wax's 'Aftermath' (1990) and LTJ Bukem's Demon's Theme (1991) are generally credited [1] as being among the first to have a recognizable drum and bass sound. Although this title arguably belongs to Meat Beat Manifesto's 'Radio Babylon', recorded in 1989, and still recognisably 'drum & bass' in sound today.

It is worth mentioning that, as with today's drum & bass and with pop music in general, pieces were recorded, promoted (or recorded onto dub plate) and played in public, often with a delay of 6 months or more before any official release. It is fair to say there was a proliferation of 'jungle techno'-style tracks being produced played in nightclubs and raves from 1990 onwards (although without a separate scene at that particular moment). The term also gained popularity with hardcore MCs (such as Mann Parris, 5-0 and Mad P of Top Buzz) at around the same time.

Some hardcore tracks at the time were extremely light and upbeat; the most extreme example of this were the so called "toy-town" tracks such as Smart E's' *Sesame's Treat* which features the children's show Sesame Street theme song. This style of hardcore would many years later be known as [happy hardcore](#).

In response to these lighter tracks, some producers started focusing on darker, more aggressive sounds; this style became known as darkside hardcore, or [darkcore](#). Strange noises and effects, syncopated rhythms made from rearranged funk [breaks](#) and loud bass lines defined the genre. Examples of darkcore include Goldie's **Terminator** (1992), Rufige Kru's 'Darkrider' (1992), Top Buzz's 'Living In Darkness' (1992) and Nasty Habits' (aka Doc Scott) Here Comes the Drumz (1992). These took their cue from the darker sounds of 'Belgian Techno', as found in tracks such as Beltram's 'Mentasm' and 'Energy Flash' (1991), as well as the dark breaks of 4 Hero 's 'Mr Kirks Nightmare' (1990) and The Psychopaths' 'Nightmare' (1991) among other examples. The legendary hardcore / techno label Rising High deserves a mention here, for pushing the darker sound a good 12 months or so before the rest of the scene (as well as pioneering jungle, in the shape of Project One).

This darker, more aggressive sound appealed to many in the dancehall and ragga communities. Both darkcore and dancehall shared an emphasis on rhythm and bass, and the tempos were well suited to be mixed together. Soon many elements of dancehall ragga were being incorporated into the hardcore sound.

Whilst it has been suggested that it was the dancehall-aware black youth of Britain who fueled the drum and bass scene in the early days, this is not entirely true as there was substantial white following in northern British cities. The drum and bass subculture today has retained this racial diversity.

The influence of Jamaican sound-system culture can be found in the use of basslines and remixing techniques derived from [Dub](#) and [Reggae](#) music, alongside the fast breakbeats and samples derived from urban musics such as [hip hop](#), [Funk](#), [jazz](#), and [r&b](#) alongside many production techniques borrowed from early electronic music such as [house](#), and [techno](#).

As the genre aged, the use of sampled funk breakbeats became increasingly complex (most notably and wide spread is the [Amen break](#) taken from a b-side funk track "Amen, My Brother" by the Winston Brothers) producers began cutting apart loops and using the component drum sounds to create new rhythms. To match the complex drum lines, basslines which had less in common with the

simple patterns of house and techno music than with the complex phrasings of dub and hip hop began to be used. Gradually, the bass and drum elements began to dominate the music and -- combined with the liberal use of 32nd notes and abstract time signatures -- drum and bass became incompatible with house and techno and began to develop its own separate identity. This sonic identity became highly-distinctive for both the depth of its bass and the increasingly-complex, rapid-fire breakbeat percussion. Vastly different rhythmic patterns were distinctively being used, as well as new types of sampling, synthesis and effects processing techniques, resulting in a greater focus on the intricacies of sampling/synthesis production and rhythm. This notably included early use of the Time stretching effect which was often used on percussion or vocal samples. As the influences of reggae and dub became more prominent, the sound of drum and bass began to take on an urban sound which was heavily influenced by ragga and dancehall music as well as hip hop, often incorporating the distinctive vocal styles of these musical genres. This ragga/dancehall influenced sound is most commonly associated with the term jungle.

Particular tracks from the 1992 - 1993 period that demonstrated some of the beat and sampling progression within drum and bass include: Kaotik Kemistry 'Illegal Subs' (1992), DJ Crystl 'Warpdrive' (1993), Foul Play 'Open Your Mind' (Remix) (1993), Bizzy B 'Ecstasy is a Science' (1993) and Danny Breaks / Droppin Science 'Droppin Science vol 1' (1993). This was an ongoing process however and can be demonstrated as a gradual progression over dozens of tracks in this period.

However, as the early nineties saw drum and bass break out from its underground roots and begin to win popularity with the general British public, many producers attempted to expand the influences of the music beyond the domination of ragga-based sounds. By 1995, a counter movement to the ragga style was emerging, dubbed "[intelligent](#)" drum and bass by the music press, and embodied by producers such as LTJ Bukem and his Good Looking label. Some say that the move to intelligent drum and bass was a conscious and concerted reaction by top DJs and producers against a culture that was becoming tinged with "gangsta" and violent elements, and stereotyped with the recognizable production techniques of the ragga-influenced producers. Intelligent drum and bass maintained the uptempo breakbeat percussion, but focused on more atmospheric sounds and warm, deep basslines over vocals or samples which often originated from [Soul](#) or [Jazz](#) music. From this period on, drum and bass would maintain the unity of a relatively-small musical culture, but one characterised by a competing group of stylistic influences. Although many DJs have specialised in distinctive sub-genres within jungle and drum and bass, the majority of artists within the genre remain connected via record labels, events and radio shows.

Jungle being a specific musical culture, has also resulted in the appearance of junglist subculture, which, while not nearly as distinctive, alienated, ideological or obvious as other youth subcultures, and having many similarities with hip hop styles and behaviour, does function distinctively within the drum & bass listening community.

### **Early pioneers**

Pioneers such as Rebel MC, Danny Breaks, Bizzy B, Remarc, Krome & Time, Fabio, DJ Hype, Grooverider, L Double, Andy C, Roni Size, DJ SS, Brockie, Aphrodite, Ray Keith, Kenny Ken, Goldie, Jonny Waines, LTJ Bukem, Omni Trio and other DJs quickly became the stars of the genre. Other early artists include A Guy Called Gerald (seminal track "28 Gun Bad Boy") and 4hero ("Mr Kirk's Nightmare") who later developed their own styles, leaving the drum and bass mainstream. However, many of the early producers and DJs still produce and play in today's scene, forming something of a jungle 'old guard'.

## North American Beginnings

In the US, New York and in Canada, Toronto's rave scenes first imported the UK produced records and DJ's Happy(AKA Ani)of Dee Lite, Odi, Dieselboy, Darkstar, Soulslinger, Freaky Flow and Beau embraced the transition of Hardcore to Darkside Jungle around 1994. America's longest running party, Koncrete Jungle also born in NYC, discovered the first US DnB MC's Blaise(Naughty Ride), Panic and Johnny Z. Outside of NYC, it was largely Dieselboy in Pittsburgh, Karl K & Kaos with MC Dub2 in Philadelphia and DJ Slant and the 2Tuff Crew in Washington, DC that kicked things for the Stateside drum and bass massive. This small handful of US pioneers spent a years in the underground playing "back rooms" before the sound caught on throughout America. Many of the US pioneers have remained faithful, though most have not gained the fame of their UK successors. Unlike Great Britain, Drum and Bass is not played on US radio, but it is often heard on television commercials and on cable networks like MTV and E!

## Jungle to drum and bass

The phrase "drum and bass" had been used for years previously in the London soul and funk pirate radio scenes (and was even a bit of a catchphrase for UK Radio 1's R&B Guru Trevor Nelson in his pirate days, who used it to describe the deeper, rougher funk and "rare groove" sound that was popular in London at the time. A formal station ID jingle used on legendary London pirate Kiss FM from the late 1980s would proclaim "Drum and Bass style on Kiss").

Since the term jungle was so closely related to the raggae influenced sound, DJs and producers who did not incorporate raggae elements began to adopt the term "drum and bass" to differentiate themselves and their musical styles. The mid 1990s also saw a large splintering of the scene. Each sub-genre would tend to be known by its name as opposed to either jungle or drum and bass, though today all sub-genres are usually grouped by the umbrella term *drum and bass*.

As intelligent drum and bass gained in popularity, the ragga jungle sound became more stripped-down; The complex chopped beats were dropped in favor of simplified rhythms featuring loud, aggressive-sounding snare drums. This hard percussive style eventually became known as hardstep. Simultaneously, certain producers developed a more hip hop and funk influenced style known as [jump-up](#), which was exemplified by artists like Mickey Finn and Aphrodite (with their Urban Takeover label), and the releases on the Ganja Kru's True Playaz label. Outside these genres, which became the most popular styles, other artists pushed a smoother, dubby style of music which had more in common with the jazzy and soulful interests of intelligent drum and bass. Records in this style were often referred to as *rollers*.

Through 1996, hardstep and jump-up sounds were very popular in clubs and at raves, whereas intelligent drum and bass was pushing a sound which was considered more accessible to the home listener. This resulted in the popularity of the style with mainstream music magazines, as CD album releases by 4 Hero and Goldie were more readily-available than the underground dubplates which characterised the club-based styles. Stylistically, drum and bass began to adopt an ever more diverse range of influences, crossbreeding with many other forms of dance music to produce a series of hybrid sounds. In 1997, a sound which was influenced by the double-bass work of jazz musicians came to the forefront, producing a funky, accessible style which achieved mainstream success for artists such as Roni Size and Reprazent (having been instigated by the huge success of Adam F's 1995 double-bassline powered track, 'Circles'). The group's New Forms

album won the UK's Mercury Prize, and their innovative live band helped drum and bass to break out of the DJ circuit, winning acclaim for performances at music festivals and on television shows.

Around this time, drum and bass also sealed its popularity by winning a Friday night slot on Radio One, the BBC's flagship radio station. Initially presented by a revolving groups of jungle luminaries, hosted by MC Navigator, the station eventually secured the presenting services of Fabio and Grooverider, two of the oldest and most-respected DJs in the scene.

## The birth of techstep

As a lighter sound of drum and bass began to win over the musical mainstream, many producers continued to work on the other end of the spectrum, resulting in a series of releases which highlighted a dark, technical sound which drew more influence from [Techno](#) and the soundscapes of science fiction and anime films. This style was championed by the labels Emotif and No U-Turn, and artists like Doc Scott, Trace, Ed Rush and Optical, and Dom and Roland, and is commonly referred to as techstep. Techstep focused intensely on studio production and applied new techniques of sound generation and processing to older jungle approaches. Self-consciously underground, and lacking the accessible influences of much other drum and bass, techstep is deeply atmospheric, often characterized by sinister or science-fiction themes, cold and complex percussion, and dark, distorted basslines. The sound was a conscious move back towards the darker sounds of Belgian techno and darkside hardcore ('darkcore'), albeit with a greater electro / techno emphasis than darkcore.

As the 1990s drew to a close, drum and bass withdrew from mainstream popularity and concentrated on sounds which were popular in clubs, rather than on mainstream radio. Techstep came to dominate the drum and bass genre, with artists like Konflikt and Bad Company amongst the most visible. As time went on, techstep was becoming more minimal, and increasingly dark in tone, and the funky, commercial appeal represented by Roni Size back in 1997 was waning. However, 2000 saw an increasing movement to "bring the fun back into drum and bass", heralded by the chart success enjoyed by singles from Andy C and Shimon (Bodyrock) and Shy FX and T Power (*Shake UR Body*). In the clubs there was a new revival of rave-oriented sounds, as well as remixes of classic jungle tunes that capitalised on nostalgia and an interest in the origins of the music. Many felt that jungle music had weathered the support, and then hostility, of the mainstream media (which had declared that "Drum and bass is dead" in the late 90s), and that the revival of chart success indicated that the style was more than a passing fashion.

## Since 2000

Since the revival in popularity in 2000, the drum and bass scene has become very diverse, despite its relatively-small size, to the point where it is difficult to point to any one subgenre as the dominant style.

In 2000, Fabio began championing a form he called Liquid funk, with a compilation release of the same name on his Creative Source label. This was characterised by influences from [disco](#) and [house](#), and widespread use of vocals. Although slow to catch on at first, the style grew massively in popularity around 2002-2004, and by 2004 it was established as one of the biggest-selling subgenres in Drum & Bass, with labels like Hospital Records and Soul:R and artists including

High Contrast, Calibre, Nu:Tone, London Elektriccity and Logistics among its main proponents.

The decade also saw the revival of [Jump-Up](#). Referred to as "Nu Jump Up", or pejoratively as [Clownstep](#), this kept the sense of fun and the simplistic, bouncing basslines from the first generation of Jump Up, but with tougher, harder production values. Prominent Nu Jump Up artists include Twisted Individual, Generation Dub, and DJ Hazard.

Sales figures for 2004 suggest that liquid funk and Nu Jump Up combined probably account for a significant majority of the drum and bass market.

The period also saw the rise of a style known as Dubwise, which returned drum and bass to its reggae-influenced roots, combined with modern production techniques which had advanced immeasurably since the early days of jungle. Although the dub-influenced sound was not new, having long been championed by artists like Digital and Spirit, 2003-2004 saw a significant increase in its popularity and visibility, with new artists like Amit and Visionary at the forefront.

Similarly, whilst there had long been a niche dedicated almost entirely to detailed drum programming and manipulation, championed by the likes of Paradox, the first half of this decade saw a revival and expansion in the subgenre known variously as Drumfunk, "Edits", or "Choppage". Major labels include Inperspective and Synaptic Plastic and the new wave of artists in this style include ASC, Fanu, Breakage, Fracture and Neptune, 0=0 and Equinox.

The new millennium also saw a fresh wave of live drum and bass bands. The likes of Reprazent and Red Snapper had performed live drum and bass during the 1990s, but the re-creation of London Elektriccity as a live band focussed renewed interest on the idea, with acts like The Bays, Keiretsu, Southampton based Gojira, Deadsilence Syndicate and U.V Ray (feat. Yuval Gabay) pursuing this avenue. In addition the popular Breakbeat Kaos label has begun to focus more and more on bringing a live sound into Drum & Bass, both in the records they release and in the live band night their group Pendulum is hosting in London in 2006.

## **The global scene in 2005**

The other major development largely occurring since the turn of the millennium is geographical: from UK-oriented beginnings, drum and bass has firmly established itself worldwide. There are strong scenes in other English-speaking countries including the U.S., Canada, Australia, New Zealand and South Africa. It is popular across Europe, especially in Germany and in The Netherlands, Baltics, Czech Republic, Russia, and Ukraine. It is also popular in South America. Asia also has a drum and bass scene in places like Singapore, Indonesia, Thailand, Malaysia and Hong Kong. São Paulo is sometimes called the drum and bass Ibiza. Brazilian drum and bass is sometimes called Sambass, although in Venezuela, artists have created Industrial forms of Drum and bass, and also Drill N Bass / IDM, mixing also with Latin rhythms like Salsa or Latin Jazz.

# Musicology of drum and bass

There are many views of what constitutes "real" drum and bass as it has many scenes and styles within it, from heavy pounding bass lines to the relaxed vibes of Liquid funk. It has been compared with [jazz](#) where the listener can get very different sounding music all coming under the same [music genre](#), because like drum and bass, it is more of an approach, or a tradition, than a style. As such, it is difficult to precisely define; however, the following key features may be observed:

## Defining characteristics

### Importance of drum and bassline elements

Despite the apparent simplicity, to the untrained ear, of drum & bass productions, an inordinate amount of time is spent on preparing tracks by the more experienced producers.

The name "drum and bass" should not lead to the assumption that tracks are constructed solely from these elements. Nevertheless, they are by far and away the most critical features, and usually dominate the mix of a track. The genre places great importance on deep sub-bass which is felt physically as much as it is heard, the "bassline". There has also been considerable exploration of different [timbres](#) in the bassline region, particularly within techstep. Basslines exist in many forms, but most notably they originate from sampled sources or [synthesizers](#). Live played basslines are rare. Sampled basslines are often taken from double bass recordings or from publicly available loops. Synthesized basslines are very common.

In drum & bass productions, the basslines are subjected to many and varied sound effects, including standard techniques such as echo, flanger, chorus, overdrive, equalization, etc. and drum & bass specific techniques such as the Reece Bass. These techniques are fully appreciated in a club or rave environment as only high grade bass speakers can fully reproduce the sounds of the eponymous bassline, whose frequencies are sometimes lower than audible (they can however be felt on the body). This has led to the creation of very large and intensely loud soundsystems by producers wishing to show off their tracks in a true high fidelity environment, such as Dillinja's Valve Soundsystem. This however does not mean that the music cannot be appreciated on personal equipment.

The drum element, that is the syncopated break, is another that producers spend a very large amount of time on. A drum fragment lasting seconds may often take a day or more to prepare, depending on the dedication of the producer; here Remarc is an acknowledged master.

### Tempo

Drum and bass is usually between 160-180 BPM, in contrast to other forms of [Breakbeat](#) such as [Nu skool breaks](#) which maintain a slower pace at around 130-140 BPM. A general upward trend in tempo has been observed during the evolution of drum and bass. The earliest Old School rave was around 125 / 135

bpm in 1989 / 1991, early (late 1992 - 1993) jungle / breakbeat hardcore was around 155-165 BPM. Since around 1996, drum'n'bass tempos have predominantly stayed in the 173 to 180 range. Some producers, such as Paradox, have started to once again produce tracks with slower tempos (i.e. in the 150's and 160's). The mid-170 tempo is a hallmark of the drum'n'bass sound.

## Context

For the most part, drum and bass is a form of [dance music](#), mostly designed to be heard in clubs. It exhibits a full frequency response and physicality which often simply cannot be fully appreciated on home listening equipment. As befits its name, the bass element of the music is particularly pronounced, with the comparatively sparse arrangements of drum and bass tracks allowing room for basslines that are deeper than most other forms of dance music. Consequently, drum and bass parties are often advertised as featuring uncommonly loud and bass-heavy sound systems.

Drum and bass is often heard via a [DJ](#). Because most tracks are designed to be mixed by a DJ, their structure typically reflects this, with intro and outro sections designed for a DJ to use while beat-matching, rather than being designed to be heard in entirety by the listener. The DJ typically mixes between records so as not to lose the continuous beat. In addition, the DJ may employ hip hop style "scratching", "double-drops" (where two tracks are synchronized such that both tracks drop at the same time), and "rewinds."

Most mixing points begin or end with the "drop". The drop is the point in a track where a switch of rhythm or bassline occurs and usually follows a recognisable build section and "breakdown". Sometimes the drop is used to switch between tracks, layering components of different tunes, though as the two records may be simply ambient breakdowns at this point, this could be considered lazier than blending the music where breakbeats play together. Some drops are so popular that the DJ will "rewind" or "reload" by spinning the record back and restarting it at the build. This is a technique which can easily be overused as it breaks the continuity of a set. "The drop" is a key point from the point of view of the dancefloor, since the drumbreaks often fade out to leave an ambient intro playing. When the beats re-commence they are often more complex and accompanied by a heavier bassline, encouraging the crowd to dance. "Jump up" initially referred to the urge for those seated to dance at this point, though it came later to refer more specifically to a style of the music. A "rewind" would be popular here as the crowd could dance from the start of the record, and to the change in music they hadn't anticipated.

DJs are typically accompanied by one or more MCs, drawing on the genre's roots in [hip hop](#) and [Reggae/Ragga](#).

There are however many albums specifically designed for personal listening. The mix CD is a particularly popular form of release, with a big name dj/producer mixing live, or on a computer, a variety of tracks for personal listening. Additionally, there are many albums containing unmixed tracks, suited for home or car listening.

## Relationship to other electronic music styles

Recently, smaller scenes within the drum and bass community have developed and the scene as a whole has become much more fractured into specific sub-genres. Some major sub-genres of drum and bass include:

- [Breakcore](#)
- [Clownstep](#)
- [Darkstep](#)
- [Drumfunk](#) (or "Choppage", "Edits")
- [Dubstep](#)
- [Hardstep](#)
- [Intelligent drum and bass](#) (or "Atmospheric DnB")
- Jazzstep (or "Jazz and Bass")
- [Jump-Up](#)
- Liquid funk
- [Neurofunk](#)
- Techmospheric
- Techstep
- Wobble

As with all attempts to classify and categorize music, the above should not be treated as gospel. Many producers release albums which touch into many of the above styles.

[Drill and bass](#), a sub-genre of [Intelligent dance music](#) (also known as "IDM"), popularized by Aphex Twin, features many of the same types of rhythms used in drum and bass and is generally focused on complexity in programming and instrumentation. Its main proponents include Squarepusher, Amon Tobin and Venetian Snares, amongst others.

### **Jungle vs Drum and Bass**

The difference between jungle and drum and bass is one of the most common debates within the community. There is no universally accepted semantic distinction between the terms "jungle" and "drum and bass". Some associate "jungle" with older material from the first half of the 1990s (sometimes referred to as "jungle techno"), and see drum and bass as essentially succeeding jungle. Others use jungle as a shorthand for ragga jungle, a specific sub-genre within the broader realm of drum and bass. In the U.S., the combined term "Jungle Drum and Bass" (JDB) has some popularity, but is not widespread elsewhere. Probably the widest held viewpoint is that the terms are simply synonymous and interchangeable: drum and bass is jungle, and jungle is drum and bass.

DJ Hype: "At the end of the day I am an ambassador for Drum and Bass the world over and have been playing for 16 years under the name Hype... To most of you out there Drum and Bass will be an important part of your lives, but for me Drum and Bass/Jungle is my life and always has been... We all have a part to play and believe me when I say I am no fucking bandwagon jumper, just a hard working Hackney man doing this thing called Drum and Bass/Jungle"

## Appearances in the mainstream

Certain drum and bass releases have found mainstream popularity in their own right, almost always material prominently featuring vocals. Perhaps the earliest example was Goldie's Timeless album of 1995, along with Reprazent's New Forms in 1997. More recently, tracks such as Shy FX and T-Power's "Shake UR Body" gained a UK Top 40 Chart placing. Hive's "Ultrasonic Sound" was also used in The Matrix soundtrack. More recently, video game tracks, specifically Rockstar Games releases, have contained many drum and bass tracks, i.e. the MSX/MSX 98 radio station in Grand Theft Auto III and Grand Theft Auto: Liberty City Stories.

On the other hand, [pop music](#) has also occasionally co-opted elements of drum and bass, albeit in watered-down fashion. Examples include Puretone and Girls Aloud. Drum and bass also often appears in advertising and TV.

# Accessing drum and bass

## Purchasing

Drum and bass is mostly sold in 12-inch vinyl single format, although some albums, compilations and DJ mixes are sold on CD. Purchasing drum and bass can involve searching specialized record shops or using one of many online vinyl, CD and mp3 retailers. Recently, sites such as [www.beatport.com](http://www.beatport.com) have become popular among people wishing to purchase drum'n'bass tunes, as they allow you to buy in mp3 or wav format on a per song basis at a fraction of the regular cost for buying a vinyl or cd single. The sites now commonly release tunes from major artists on the same day or earlier than their commercial vinyl release.

## Cultural Attitude

Drum and bass is sometimes associated with gun crime, homophobia and drug taking. Anecdotally though, most Drum and bass events held in London tend to be in gay nightclubs.

## Media

The best known drum and bass publication is Knowledge. Other publications include the longest running drum and bass magazine worldwide ATM Magazine, Canadian-based Rinse Magazine and Austrian-based Resident.

The 2 highest profile drum and bass radio shows are Fabio and Grooverider on BBC Radio One and also DJ Hype on the now legal Kiss 100 in London. The BBC's "urban" station 1Xtra also features the genre heavily, with DJs L Double and Bailey and Flight. The genre has long been supported by pirate radio stations, particularly in London; these days, they are joined by a large, and ever-expanding number, of internet radio stations available globally. In the US, XM Satellite Radio dedicates two hours a day to its drum and bass show, "Pressure", on channel 80 - The Move (XM).

Drum and bass has a strong online presence with many dedicated portals, forums and communities. Some of the largest of these are linked below.

## Books

- *All Crews: Journeys Through Jungle / Drum and Bass Culture* by Brian Belle-Fortune (ISBN 0954889703)
- *The Rough Guide to Drum 'n' Bass* by Peter Shapiro and Alexix Maryon (ISBN 1858284333)
- *State of bass, jungle: the story so far* by Martin James, boxtree (ISBN 0752223232)

# Drum and bugle corps

**Drum and bugle corps** is a name used to describe two forms of marching units.

- [Drum and bugle corps \(classic\)](#), or ("Golden Age") — such as those organized by the American Legion (**AL**) or the Veterans of Foreign Wars (**VFW**), and "alumni corps" of those organizations
- [Drum and bugle corps \(modern\)](#) — such as those organized by Drum Corps International (**DCI**) and other similar international organizations

## Drum and bugle corps (classic)

**Classic drum and bugle corps** are North American musical ensembles that descended from military bugle and [drum](#) units returning from World War I and succeeding wars. Traditionally, drum and bugle corps served as signaling units as early as before the American Civil War, with these signaling units having descended in some fashion from ancient drum and fife corps. With the advent of the radio, bugle signaling units became obsolete and surplus equipment was sold to veteran organizations (such as the Veterans of Foreign Wars and American Legion, two major organizers for classic drum corps). These organizations formed drum and bugle corps of civilians and veterans, and the corps performed in community events and local celebrations. Over time, rivalries between corps emerged and the competitive drum and bugle corps circuit evolved.

Traditional drum and bugle corps consist of bell-front [brass](#) horns, field [drums](#), a color guard, and an honor guard.

Drum and bugle corps have often been mistaken for [marching bands](#), since there is a similarity to both groups having horns and drums; and they are both essentially bands of musicians that march. The activities are different in organization (marching bands usually associate with high schools and colleges while drum corps are freestanding organizations), competition and performance (marching bands perform in the fall at football games, drum corps usually compete during the summer), and instrumentation (classic drum corps use only brass bugles and drums, marching bands incorporate [woodwinds](#) and other alternative instruments).

# History

Classic drum corps can trace their origins to many Veterans of Foreign Wars ("VFW") and American Legion ("AL") meeting halls, where veterans met and formed [musical ensembles](#) to entertain their communities. In addition to VFW- and AL-sponsored corps, other drum corps were founded by Boy Scouts of America troops (such as the corps that would become the modern-day corps The Cavaliers and the Madison Scouts), Elks lodges, YMCAs, the Catholic Youth Organization, Police Athletic Leagues (such as would found the Bluecoats), fire fighter organizations, and local businesses, as well as high schools and colleges.

Rivalries between corps led to a shift towards competition and the AL and VFW both ran successful competition circuits through the late 1960s and early 1970s.

With improved national transportation trends by the 1960s, drum and bugle corps proliferated, both in the sheer numbers of both new and established corps across North America, in the many competitions held then, and in the stadium attendance counts. This was the Golden Age of drum and bugle corps.

At this time, however, there was unrest among some directors and instructors who were critical of the competition-rules committees of the veterans' organizations which governed and sanctioned state and national championship competitions.

The VFW and American Legion rules differed to a degree (although American Legion rules predominated in nearly every contest) and pressure increased to find a common judging system. Concerns were also voiced over contest promoters' rights in choosing sponsors and judges, and complaints arose regarding the lack of self-governance of competition circuits. The dissenters also expressed reservations about the increasing numbers of independent non-corps-sponsored competitions.

Some corps managers, directors and instructors walked out of the 1969 VFW national rules committee meeting after their requests for major rules changes were not approved, and some of the protesting participants then formed the by-invitation-only (and short-lived) Midwest Combine in 1971. This apparent rebellion was heralded by some as the beginning of the death of drum and bugle corps as it was known, as one after another long-standing traditions were broken.

In 1972, Drum Corps International was founded, and was designed to create one uniform, corps-governed competitive circuit for junior drum and bugle corps (members aged twenty-one or less). This milestone event marked the beginning of the [modern drum corps](#) era.

The revolt against VFW and AL governance can most likely be attributed to two reasons. The payment structure for shows was weighted so that the corps with the highest placement got the most prize money; corps who attended shows from great distances but placed poorly were at times left with financial losses, and dissident corps sought a fixed payment structure for all participating corps.

The second major reason was the desire by the dissident corps to have more control over their competitive performances. As an example, at the height of the Vietnam War a 1971 show by the Garfield Cadets drew criticisms from VFW organizers over a formation where the corps formed a large peace sign, which angered the staff of that corps over its loss of "artistic freedom". Both the Combine and Drum Corps International demanded that corps themselves should control rulemaking decisions.

Most of the still-numerous North American competitive corps joined in the movement of change under new leadership, and by the mid-1970s the rapid introduction and proliferation into competitive drum and bugle corps of previously-unfamiliar innovations (on-field dancing, creative costuming, novelty effects and unusual instrumentation) effectively ended the Classic competitive era.

However, a Classic corps renaissance would begin within a decade.

# Drums and Bugles in Drum & Bugle Corps

## Bugles

With the widespread use of the 1892 Army field [trumpet](#), which was actually a "straight" (valveless) bugle in the key of G, American drum & bugle corps evolved in that key. However, it wasn't long before some members in some corps wished to add more notes to their brass repertoire. Early lines in the 1920s added D crooks on some horns in order to play more complicated songs in two lines, similar to a bell choir. Ludwig added the first valve to a bugle to make the G-D horn-in-one, wisely making the valve horizontal rather than vertical in order to preserve the look and handling of the straight bugle (and to make it more difficult to spot by unobservant judges in circuits which had not yet legalized the valve). The single horizontal valve allowed the diatonic scale to be played by each bugle.

The acceptance of the single-valved bugle took some time. Originally, the American Legion required that valved bugles have screws to allow the valve to be locked onto either the G or D open scale during certain competitions. Some smaller corps had straight bugles even into the 1960s, and there are still some corps, bands and other groups who continue to use straight bugles or G-D piston bugles to this day, as entire horn lines or as bugle sections.

In the late 1940s and early 1950s, inventive buglers across the country took to sanding one of the tuning slides so it could be used like a [trombone](#) slide. By the late 1950s and early 1960s, the slide was sometimes replaced with a half-tone rotary valve to F#, which allowed for nearly a full chromatic scale to be played. Some bass-baritones were equipped with full-tone rotary valves to F in order for some of the hornline to be able to achieve the desired Bugle Low A, and in the mid-1960s a bass-baritone rotor to E was briefly offered.

By 1967, the American Legion Uniformed Groups Rules Congress approved a mutual request by a number of instructors and managers to permit G-F-F# piston-rotor bugles in competition. This lighter bugle is able to achieve better intonation and a more complete chromatic scale than the G-D-F# bugles.

Slide-piston and/or rotor-piston bugles were common into the mid-1970's, and many non-competitive parade corps still existed that used straight bugles and single-valved models.

Manufacture of horizontal-piston bugles ceased in the 1990s with the desire of competitive corps management to convert to band-like three-valve brass instruments pitched in G, although today the honorary term "bugle" is applied to all competitive corps brass instruments.

The main advantages of horizontal-valved one-piston-with-slide and/or piston-rotor bugles include:

- 1) Ease of learning. The basic simplicity of the instrument allows for the possibility of rapid mastery by beginners.
- 2) Substantially lower cost.
- 3) Lightness.
- 4) Ease of repair.

Additions to drum and bugle corps voicings occurred in the mid-1930s with the popularity of the [baritone](#) bugle, pitched one octave below the [soprano](#).

The [tenor](#) bugle also came into use at about this time, and although it was pitched in the soprano range, its slightly larger bore offered a darker, almost cornet-like and more robust tone. The tenor bugle fell from general favor by 1960 though they remained in bugle catalogs.

French horn bugles became popular by mid-century, serving as bridges between sopranos and baritones.

By 1950 a few [bass-baritone](#) bugles began to be seen. These larger euphonium-like instruments, pitched like the baritone one octave below the soprano and tenor, added a deep foundation. By 1960 the bass-baritones had largely supplanted the baritones in most corps.

One widely applauded and popular 1962 addition was the contrabass, the biggest horn and lowest voice, two octaves below the soprano, which partially rests on the shoulder.

The mellophone or mellophonium was introduced soon after, and was quickly popular for its capability of soaring above the rest of the bugle section. However it did not supplant the French horn, which remained the dominant middle voice.

Other less-popular bugle types introduced in the 1960 included herald bugles, euphoniums, pistonless slide sopranos and piccolo bugles or "angel bugles" pitched an octave above the sopranos. The valve-rotor bugle remained popular until the late 1970s, when rules changes moved toward two-valve upright bugles.

## Drum Lines

Classic corps drum lines of the 1950s and 1960s used fewer exotic percussion instruments and relied instead on stadium-filling power from a traditional consist (or "battery") of six or eight 12-inch deep by 15-inch wide double-tension maple snare and tenor drum shells and two or occasionally three 26-inch wide by 12-inch deep bass drums with an ornamental shell covering of hard plastic in a glossy sparkle or pearlescent finish.

Until 1965, usually only one cymbalist was used in the field corps although two or even three cymbalists were not uncommon, especially on parade.

Until 1963, bass drummers used one stick or mallet and provided the foundation note in the battery. But in that year, drum instructors nationwide added two-stick rudimentary bass-drumming to their drumlines, a historic style adopted from fife and drum corps. While rudimentary bass drummers now had more to do, the one-stick bass drummers were often kept on as "foundation bass" or "straight bass" drummers.

The older-type, less-expensive and lighter single-tension drums, such as most corps used through the 1940s, were most often ordered for novice and feeder "cadet" corps.

Until 1956, drum heads were of stretched unborn calfskin, but beginning in 1957 the Ludwig Drum Company introduced mylar drum heads that gave a crisper sound and were impervious to damp weather.

The movement in classic corps is to drums which retain the Golden Age's unique sound.

## Color Guard

The color guard and non-musical marching members in drum & bugle corps largely developed out of military honor guards. Over the years, some corps have included baton majors and majorettes — but largely, the auxiliary units have consisted of tall flag carriers (8' foot pikes), rifles (developed from military rifle drill teams) and saber squads.

The drum & bugle corps still maintains an honor squad, consisting of the corps' country's National Flag and "protectors", or "sidearms". Often, the honor squad will contain rifle or saber carriers, or carriers of sponsors/posts' flags. Sometimes the "sidearm" member is just that — someone who sports a gun holster.

In the 1960's and prior, most color guards tended to be small, consisting of a few squads. As most big corps — again, with exceptions — were often all-male, many color guards were all-female in order to provide a marching opportunity for young women. There have, however, been many all-girl and all-male corps throughout drum and bugle corps' rich history, up to the present time. But prior to 1960, there were far more, which provided competitive opportunities for those corps who wished them, often without the touring requirements of today. And some units/areas of the country had mixed-gender corps going back decades.

Today, now that gender is culturally less divisive and the requirements of corps memberships being military veterans (to a certain percentage) is uncommon, sections are much more rarely limited by gender. Mostly during the late 1960s, flag lines in particular mushroomed in size. During the days of execution drill, wherein yardlines on football fields were more rare and optional, the color guard often was an integral part of drill "dress" (positioning by sight, interval and direction).

## Drum Majors

The field leader in drum & bugle corps is called a [drum major](#). Some corps appoint more than one, but there is usually one designated chief drum major who leads the corps in both marching direction and musical direction. Traditional corps drum majors are effective showmen who command the corps in all venues. Early in the 20th Century, commands were usually issued either through a mace or baton, and/or with whistle signals. Eventually this evolved into vocal commands and manual signals, although military units still maintain the baton-signaling methods.

## Performance

A drum and bugle corps performance consists of the playing of music, usually accompanied by marching on parade, in field-drill formation(s) or in a standstill performance. It is similar to that of a [marching band](#), but more in line with military presentation and heritage. Further, perfection of execution is more traditional to drum & bugle corps. A marching band takes instruments which are used indoors and takes them outside in order to participate in outdoor ceremonies. A drum & bugle corps took outdoor instruments and remained outdoors, occasionally going inside for "standstill" concerts.

Drum and bugle corps is, traditionally, a musical activity which extended the camaraderie of combat to a musical "battle" on (football)-sized fields. The evolution and perceived "politics" of judging, however, has led most "classic" corps to move to exhibition-only performances which not only avoids judging preferences and politics but also cuts the costs of performing and of producing field presentations.

Until the 1960s, competitive shows traditionally began with an inspection — owing to the corps' military heritage — to ensure all on the field were qualified to compete, and that the uniforms and equipment were presentable according to standards. Scoring was done by circuit-approved judges which considered performance and overall effect in both music and movement.

Classic or Golden Age drum and bugle corps emphasize the stages of their presentations (beginning, middle and end) by their location on the field. A performance typically begins with the corps stepping "off the line" (the left goal line on a standard American football field). The corps signals its readiness to the audience and judges by a drum major's salute. At the first step or note of music, the timekeeper will fire a timing pistol to designate the official start of post-inspection judging. (The timing pistol will be used again as an eleven-minute warning to designate the end of the minimum time permitted for the field performance.) The corps might perform an "opening fanfare", followed by an "off the line" number which takes the corps to mid-field. The next traditional number is a "color presentation" or "color pre" (presenting the national flag according to the flag code). Following the presentation of the colors is an "into concert" piece which takes the corps into a concert formation (usually played standing still). Then, an "out of concert number" follows. There is the "exit" piece off the field — the opposite sideline, followed by the final fanfare, often but not always played at a standstill. The corps then reconfigures into a single or double file and proceeds to "troop the stands" - marching from the audience's right to its left in columns close to the main grandstands while saluting, to the accompaniment of the [drumline](#). Rarely, the bugles may offer an encore tune at this time.

The corps members then will be at liberty until the final corps is on the field, and then will again muster for the massed "retreat" ceremony at which all the participating corps re-enter the field simultaneously, each usually in its own parade formation as only one corps "plays them on".

As the music and motion halts, the field announcer summons the corps' commanding officers to center front, recognitions are made, and lastly the scores (if this was a judged contest) are announced. Each corps then marches off individually with its own music in order of placement, and the winning corps often remains, continuing to perform.

This was and is the traditional structure of Classic drum & bugle corps field shows, which endured into the 1970s and which classic (or "Golden Age") drum & bugle corps still perform although some, if not being judged and therefore not bound by rules, may only employ partial marching in their programs.

## Example Competition Rules

The type of competitive rules drum and bugle corps used to compete under are exemplified by the following example from the All-American Judging Association:

DRUM & BUGLE CORPS RULES — JUNE 29th, 1958

\* A minimum drill of 11 minutes, a maximum 13 minutes.

\* All judging will continue through entire performance.

1. Inspection. Condition of uniforms, equipment and general appearance as a military unit. All instruments used must be on the inspection line. Total penalty will be deducted from the General Effect score. 2. Musical quality of bugles or fifes.....25% 3. Excellence of drumming.....25% 4. Marching and maneuvering.....30% 5. General effect.....20%

\* A penalty of 2 points will be deducted from the total score for each minute or fraction thereof for over or under time on the field.

\* If a member of the corps proper steps over the side boundary, a penalty of 1 point for each error will be assessed.

\* A 2 point penalty for any breach of the flag code.

\* All competing drum and bugle corps must march in the parade and appear in the grand finale to qualify for competition and prizes.

\* All-American judges will be in charge. No contestant or directors will be allowed to converse with judges while contest is going on. Please abide by this rule.

\* Any unit not reporting within 15 minutes of their set inspection time shall be penalized 2 points; a unit not reporting within 30 minutes shall be penalized 4 points.

\* Failure to report by any unit prior to the start of the inspection of the last competing group shall disqualify the unit.

## The Break Between "Classic" and "Modern" Corps

The late 1960s marked a high point in American drum corps activity and participation. At this point a group of a dozen or so managers and directors of the higher-scoring corps of the era met to organize a by-invitation-only cooperative group that took on the working title of "The Combine". The Combine's member corps all agreed to demand, starting in the 1970 competitive season, a fixed and predetermined appearance fee from contest sponsors where Combine corps would compete, rather than accept traditional prize money awards dependent on contest placements.

Contest audiences of 1970 also noticed that some Combine corps were attempting "Total Programs" - a phrase describing daring, controversial theme-based competitive innovations in costuming, marching and music that were clearly different and more radical than the then-standard norms.

From the Combine soon evolved the more structured, open-membership Drum Corps International (DCI). The first DCI National competition was held at Warhawk Stadium at Whitewater, Wisconsin in August of 1972.

Beginning in the early 1970s, many corps chose to become members of DCI or DCA (the "modern" drum corps organizations), leading to the withdrawal of support by their traditional veterans-group sponsors in some cases. The increased requirements of time and money to participate in DCI and DCA circuits proved prohibitive for many non-profit organizations with other primary missions. Groups without adequate funding did not survive. Many other groups chose not to move to the new style, citing tradition or principle. It was at this point that "classic" and "modern" drum and bugle corps became two very different activities.

Since the mid-1980s the classic "Golden Age" drum corps movement has continued to grow with approximately forty such American corps currently active; these have lately become known as "alumni corps" whether or not the majority of the membership is indeed a veteran of the Classic era. Most current classic corps are intended to serve as tributes and to remember the heritage of the Golden Age. Even so, they still are usually made up of people from a much larger area than the immediate city each represents.

The main Classic corps organization is the East-coast-based **Great American Seniors** (GAS). Forsaking competitive judging, the GAS-affiliated corps meet to rehearse, socialize, and perform to parade, standstill and field-exhibition audiences.

## Drum and bugle corps (modern)

A **drum and bugle corps** or **drum corps** (pronounced *core* in singular and *cores* in plural) is a musical marching unit, similar to a [marching band](#), consisting of [brass instruments](#), [percussion instruments](#), and a color guard. Drum corps perform in field competitions, parades, and other civic functions operating as Non-profit organizations. Most groups participate in competitive summer touring circuits operated by Drum Corps International (DCI), Drum Corps Associates (DCA), or an overseas derivative such as Drum Corps United Kingdom (DCUK), and Drum Corps Europe (DCE). It is primarily a youth activity (aged 22 and under), although DCA corps allow members of any age. Competitions occur on football fields and are judged based upon general effect, visual performance, and musical performance.

Musical repertoires can vary widely between shows, including [classical](#), [jazz](#), [big band](#), contemporary, Broadway, and Latin music. During summer tours, DCI and DCA sanction competitions across the United States and Canada, while DCUK and others sanction competitions in Europe and Japan. Each drum corps prepares a single show, approximately 10–12 minutes in length, and refines it throughout the entire summer tour. Highly competitive corps spend 8 to 10 weeks on tour full-time, practicing and performing their program until reaching the circuit Championships at the end of the summer, where all corps come together to compete for a title.

# History

Drum corps stems from a rich American military history, separate from other marching musical activities. Beginning after World War I through the 1970s, corps and competitions were often sponsored by the VFW, AL, and various others. Owing to their veterans-groups roots, corps were highly militaristic in nature. By the late 1960s, some managers, directors and staff wanted more creative freedom in artistic direction and in financial compensation. Some felt the show sponsors' prize-money structures, based on competitive placement, were not fairly compensating all corps for their appearances. Additionally, some felt the current judging rules were stifling musical and theatrical possibilities. At the peak of American drum corps participation with perhaps a thousand competitive corps active nationwide, several corps decided to band together and form their own organizations, which ultimately led to the formation of DCA in 1965 and DCI in 1972 (the birth of "modern" corps). As more and more corps joined these new organizations, the original veterans-group and other organizational sponsors of the drum corps activity withdrew. Concurrently, as equipment costs for the increasingly-complex competition routines mounted, and as creative and instructional demands rose, nearly all of the older and long-successful competitive corps began to falter and become competitively inactive, or disband. For the corps which remained, longer travel times were necessary to attend the shrinking numbers of remaining contests, further adding to the financial and time demands on corps and individual members. By the 1990s, most of the 1970s corps had dissolved, but some of the surviving corps did briefly benefit by the influx of those newly at-liberty members.

However, non-competitive classic-style corps (often and sometimes inaccurately known as "alumni corps") saw a renaissance beginning in the mid-1980s, and they continue to organize in the 21st Century; and members often remain vigilant about the virtues of the drum corps activity before they believe it was corrupted by the modern-style corps.

Freed from the traditional and more-restrictive judging rules of the late 1960s, modern corps began making innovative changes such as the use of multi-valve horns, wide-ranging tempos, intricate asymmetric drill formations, elaborate guard costumes and props, and stationary orchestral percussion instruments. A common criticism of modern drum corps is that they have become too similar to [marching bands](#), but there are important differences. Most obviously, modern competitive corps use only bell-front three-valve brass instrumentation. Corps are independent, non-profit organizations, whereas marching bands are usually associated with schools. The competitive season for modern corps is in the summer rather than fall. (Note: "Golden Age" classic corps competed in winter-season indoor "standstill" contests.) Drum corps shows are generally more complex and more professional than in marching bands, as members in full-time touring corps have no distractions outside of corps during the season, instructional and creative staffs are the best in the activity, and membership is attained through highly competitive auditions.

While generally concentrated in the United States and Canada, the activity has also spread to parts of Europe and Asia.

# Musical program

## Repertoire

A show normally consists of one genre of music, or sometimes melds separate genres together. Modern corps shows have become increasingly thematic and enveloping, with overarching show concepts rather than loosely-related musical selections. Often, especially with classical selections, a single composer is featured. Corps have played virtually every genre fit for field adaptation, including jazz, new age, classical, and even [rock music](#). It is becoming increasingly common to hear corps performing original music, composed specifically for the corps by their musical staff or consultants.

Structurally, shows have a few common components: an "opener" piece designed to grab the audience's attention, a percussion feature, a ballad (featuring the hornline), and a "closer", which is often the climax of the show. Depending on the length of each piece, there may be additional pieces interjected to showcase various musical concepts and elements of the corps. The goal is to have a well-balanced show with a wide variety of dynamics, tempos, and feels to demonstrate the corps' talents.

## Instrumentation

### Horns

One of the defining musical elements of drum corps is the exclusive use of bell-front [brass instrumentation](#). Throughout the years, the horns used in drum corps have evolved from true, valveless bugles to modern multi-valved brass instruments. These changes have effectively eliminated bugles from the activity, since the current three-valve approved instruments are more akin to band instruments than true bugles. Competitive drum and bugle corps have not used true bugles for several decades. Traditionally, corps use three-valve vertical-piston horns in the key of G, but horns in other keys are also allowed. From highest pitched to lowest they are: [sopranos](#), mellophones, [baritones](#) and euphoniums, and contra basses.

All these instruments can appear in either G or Bb; the name is not dependent on the key. Sopranos are essentially trumpets, but tend to have a narrower bell flare and larger bore than the trumpets used in other venues, a characteristic found in most of these horns but most obviously in the soprano. Mellophones are only one of many midrange or alto-voice horns that have been experimented with, but they have become the most widely used because of ease of consistent playability and tone quality compared to the alternatives, which include marching French horns, alto horns, and flugelhorns. A contra-bass is essentially a [tuba](#) configured so that it can be carried over the shoulder with the bell facing forward.

Until 2000, American drum and bugle corps hornlines were required to be pitched in the key of G. That year, the DCI rules congress passed a proposal to allow any key of bell-front brass instruments on the field. DCA followed suit in

2004. This allows music to be arranged truer to its original form and gives corps access to more affordable and higher-quality horns, along with a much wider resale market for used instruments. Hornlines, if not in G, are most commonly pitched in Bb, with mellophones usually pitched in F.

## **Percussion**

*Main article at [Marching percussion](#)*

The [percussion](#) section consists of two distinct but equally important divisions: the "pit" or "[front ensemble](#)" and the "battery".

Front ensemble members play orchestral percussion instruments, including marimbas, [xylophones](#), [vibraphones](#), [timpani](#), [drums](#), [cymbals](#), [gongs](#) and various other percussive instruments. As the nature of these instruments requires them to be stationary, the pit is typically centered on the front sideline, closest to the audience. Full-sized corps have between 8-12 members in their pit. Some corps use electronic amplification so delicate percussive instruments can be heard in a stadium setting. However, amplification has also been used for the more controversial purposes of talking, singing, and "drumspeak" (beat boxing). Prior to the mid-1980s, corps did not have front ensembles. Instead, members would march with glockenspiels, small xylophones, and timpani, carried with harnesses similar to other battery drums.

The battery consists of percussionists who march on the field along with the hornline and color guard. They commonly play four instruments: the marching snare drum, tenor drums (also known as "quads", "quints", or "toms"), marching cymbals, and marching tonal bass drums. In large DCI corps, the battery typically consists of 7–10 snare drummers, 4–5 tenor drummers, 4-6 cymbals players, and 5 bass drummers. Cymbal lines are known for providing visual effects on the field, as well as many metallic musical effects.

# Visual program

## Color guard

In modern drum corps, the color guard is a crucial part of a corps' visual program. The athletic and theatrical abilities of guard members are above and beyond any similar activity, performing interpretive dance as well as handling equipment. Standard equipment includes flags, rifles, and sabers, but other objects like bare poles, hoops, balls, and streamers are sometimes used to create visual effects that enhance the show.

The primary role of the color guard is to enhance the musical program that the corps is playing. The color guard interprets the music and gives a visual that compliments the music.

While the rest of the corps generally wears the corps' traditional uniform, the guard members wear uniforms that are custom-made for each season's show theme.

For more information, see the color guard and Winter Guard International articles.

## Drill formations

Drill formations have become very sophisticated in modern corps. Traditional blocks, company fronts, and symmetrical formations—while still used occasionally for impact—have largely given way to "Jell-O" formations and intricate developments aided by the use of computer-assisted drill writing programs. Drill writing is an art form unto itself, and is very carefully crafted to keep instrumental sections together, to put the featured members at the center of attention and visually reinforce musical phrasing, and of course to create the most interesting and innovative shapes and movements possible.

Technical drill structure can be broken down into several categories: linear forms, static forms, shape-driven forms, and movement-centered forms. Forms using lines and curves have long been used to create drill that is simple, yet powerful. The speed of the drill can vary to create a slow and flowing form or a series of quickly spinning bars or changing curves. Variations on follow-the-leader forms are the standard for many asymmetric lines. Shapes and symbols have also been used to great effect by many drum corps, with the most basic being geometric figures such as squares or blocks, [triangles](#), circles, and other regular or irregular figures. The translation and rotation of these figures, especially at speed, creates interesting and exciting drill. A long legacy of exciting and innovating forms highlights this category of drill, such as the "Z-pull" (The Cadets, 1983), moving and disappearing cross formations (Star of Indiana, 1991), "rotating" double helix (The Cavaliers, 1995), individually spinning boxes within a larger diamond square (Cavaliers, 2000), and inclusion of symbols such as the Maltese Cross for The Crossmen or the Fleur-de-lis (the ever-present symbol of the Madison Scouts), with a heartily enthusiastic response from fans in the audience. Forms that center around chaotic and rapid movement are the most difficult to describe in detail, as they can be of

indeterminate structure. "Scatter drill" would fall into this category, a seemingly random transition from one form to another so as to keep viewers in suspense until the last possible second.

Standing still might seem the simplest of drill moves, but for a drum corps even "standing still" is usually not completely stationary. This is when choreography for general effect primarily takes place. In what is referred to by various terms such as "park and bark", the corps holds position but members typically add their own leans, small steps, horn movements and pops, and other colorful flourishes. For the longest and loudest chords, the most technically demanding sections of music, and the ending of most shows, corps usually remain stationary to make a dramatic impact.

## **Marching technique**

In order to facilitate such demanding drill, corps must be diligent with their marching techniques. Every corps has its own unique blend of techniques that are used to differentiate themselves from other corps, such as keeping the leg as straight as possible or bending the knee, or keeping toes straight ahead or naturally angled out. Virtually every corps begins each movement (or "steps off") with the left foot (the one current exception being the Cadets) and relies on the "heel-toe roll" as the basis of their marching technique. Regardless of minor differences in techniques among corps, the goal of all corps is to achieve fluid, consistent movements that allow for precise musical technique at all tempos, step sizes, and directions. This means marching technique must not affect the rigidity of members' upper torsos, which must face toward the audience at all times for maximum aural projection. Horn players may twist their lower bodies in the direction of the move, but percussionists, due to the nature of their equipment, must keep their entire bodies facing forward at all times. This has led to the invention of the "crab step", where the legs cross over one another to facilitate sideways motion. For both drummers and horn players, turning the whole body in the direction of movement is rare, unless done for visual or musical effect. Being purely visual, guard members are not as bound to facing the front sideline and may be facing any direction at any time as choreography dictates. Marching backward is usually executed by staying on the toes (keeping heels off the ground), though some corps reverse the heel-toe roll step (to be toe-heel) during slow tempos. Guard members often "jazz step", which is similar to jogging with the toe hitting the ground before the heel.

## The season

While performances and competitions only occur during the summer, preparation for the next season starts as soon as the last one ends. Corps activity of some sort goes on year-round. Months in advance of next season's first camp, corps begin assembling their staffs, choosing their musical repertoires, writing drill, etc.

## Camps

For junior (DCI) corps, the season is a very intense process. Most corps begin having camps on or around Thanksgiving Day weekend and continue having monthly weekend camps throughout the winter. Potential members travel far and wide—literally from around the world—to attend the camps of their favorite corps. Membership in the top corps is highly competitive and is generally determined during the first few camps. By spring, the members have been chosen and camps are held more frequently as the beginning of the summer touring season approaches. Most junior corps require their non-local members to secure temporary housing (often with local members or a vacant dormitory) near the corps' rehearsals facilities around Memorial Day weekend. For most of May and into June (as college and high school classes end), full-day rehearsals are held virtually every day so members can finish learning the music and marching drill of the show. This pre-season "spring training" is usually 3–4 weeks long. It is not uncommon for members to rehearse 10–14 hours a day, 6–7 days a week throughout the entire pre-season. In mid to late June, corps leave to begin their summer tours.

For senior corps the process is not quite as grueling. Since most members are working adults and have lives outside of drum corps, senior corps rehearse on weekends and occasionally on weekday evenings. Rather than extensive tours, senior corps usually take weekend trips to perform in shows, and make longer trips only to regional championships and finals. Many smaller DCI corps and foreign corps have similar itineraries. Non-competitive corps, such as classic-style corps, alumni corps, or newly aspiring corps might not have a defined season at all. They practice and perform as they deem necessary or possible. Occasionally such corps make exhibition appearances at DCI or DCA shows.

## Divisions

Corps are generally divided and compete in two or three divisions or classes depending on size, age of members, and how much touring the corps wishes to be involved in. These divisions have changed over the years in accordance to shifts in trends and rules. Drum corps circuits worldwide generally follow this form:

- **Open Class** represents the elite full-sized corps that tour full-time.
- **'A' Class** represents corps with fewer members or a less-demanding tour.

- **Cadet Class** represents corps with particularly young members (generally under 14), which may serve as "feeders" for larger corps.

See each circuit's respective article to learn more about their divisions.

## Tour and competition

While on tour, junior corps travel mainly at night after leaving the performance venue. Members sleep on the buses and in sleeping bags on gym floors when the next housing destination is reached. Housing for the entire tour is secured in advance through local schools, churches, or other community facilities. Corps practice their shows for as long as possible each day before getting ready to leave for that night's competition, if scheduled. Not every day is a performance day; many days on tour are spent simply traveling to a distant location or entirely on the practice field.

A full-sized, adequately-funded junior corps will have a fleet of vehicles, including three or more coach buses for members and staff, a truck or van to carry souvenirs that are sold at shows, and two semi trucks, one for show equipment and one that serves as a kitchen on wheels. Most meals for all members and staff are provided by the cook truck, but occasionally corps have scheduled free days where there are no rehearsals or performances and the members are free to see some local sights and procure their own meals.

Competitions are not the only performances that corps partake in while on tour. Most corps also participate in several parades throughout the summer for exposure and to supplement their budget with performance fees. On the Fourth of July weekend, corps often locate themselves in large metro areas so they can participate in more than one parade.

The summer touring schedule is usually divided into two smaller tours. The first tour consists of more local or regional shows and the corps often return to their home bases for easy housing and practice facilities. The first tour ends in mid-July with a regional championship, followed by a few days off where members are free to do as they wish. For many members, this is their only chance all summer to visit home. Corps then reconvene at their home bases and begin the second tour, which usually involves more extensive national touring before culminating at DCI finals.

Competitions are usually held at college or high school football stadiums or similar venues, and are scored by circuit-approved judges. Because of the intense and superior competition between corps, the judging system is somewhat complex to allow for precise scoring and avoidance of ties. Most circuits follow the three-caption system of General Effect (GE), Visual, and Music, with GE being the most important factor. This is the scoring system currently used by DCI (others are similar):

### Total possible score: 100

| <b>General Effect</b> | <b>40</b> | <b>Visual</b> | <b>30</b> | <b>Music</b> | <b>30</b> |
|-----------------------|-----------|---------------|-----------|--------------|-----------|
| Visual                | 20        | Performance   | 10        | Brass        | 10        |
| Music                 | 20        | Ensemble      | 10        | Ensemble     | 10        |
|                       |           | Color guard   | 10        | Percussion   | 10        |

The timing and organization of contests varies significantly from circuit to circuit. Only large DCI corps typically have the funding and time commitment from members to participate in DCI's touring circuit, where corps spend the majority of the summer traveling around the continent performing at different local and regional contests. In other circuits, and for smaller DCI corps, competitions are usually scheduled to allow corps to travel, perform, and return home within a

weekend. For this reason, and to boost audience attendance, large competitions are more frequently scheduled on weekends.

A typical regular-season contest consists of fewer than 10 corps, with corps from one or more classes competing together but scored separately. In North America, DCI and DCA corps occasionally perform at the same shows. DCI also schedules larger contests interspersed throughout the latter half of its season. These are restricted to corps in specific classes and feature many (if not all) of the corps within each class. European circuits, such as DCUK, operate on a "minimum performance and lot" system: appearance at the first two shows of the year is determined by lot, and then the corps must appear in a minimum number of shows before the circuit's championships. In such a system, the championships are often the only time all corps in a class compete together.

Some circuits also organize optional individual and ensemble (I&E) competitions for individuals or groups from corps to showcase members' skills outside of the field performance environment. These are usually held only once or twice per season at championships or a major regional contest. Members practice their routine(s) in their scant free time throughout the season.

## Corps organization

Most corps are operated as or by dedicated non-profit organizations; very few are associated with schools or for-profit entities. Some corps are even parts of larger non-profit performance arts organizations, which might also include theater groups, winter guards, winter drumlines, and other various musical or visual activities. In Europe, many are also registered charities, assisting with their fundraising aims.

### Staff

Despite their non-profit status, a well-run corps is just like a well-run business. It requires many bright and dedicated people to handle the fiscal and operational responsibilities. There are three levels of staff operating a drum corps: **Executive**, **Instructional**, and **Volunteer**. Each plays an essential role in creating a well-run corps.

The **executive staff** includes the operational and tour director(s) and the board of directors. Often these people are unpaid volunteers. This group is almost always long-standing in successful corps. They create the long-term vision and strategy for the organization, handling the financial, operational, and organizational issues to keep the corps running. The board of directors is composed of alumni and other closely-affiliated people. They hire the executive (operational) director and other related positions directly; in turn, the executive and/or tour director(s) usually hire the instructional staff.

The **instructional staff** actually puts the show on the field. They create the concept of the show, choose and arrange the music, write the drill, and instruct the members on how to play, march, execute, and exude the image of the corps on the field. The staff consists of brass, percussion, guard, and visual (marching) instructors who are often alumni of the corps or other corps. A well-funded Division I corps usually has 15-20 full-time instructors. Just as members, they attend winter camps and travel with the corps all summer long.

**Volunteers** are the lifeblood of any corps. Parents, alumni, friends, and fans make the corps work on a day-to-day basis—driving buses and trucks, caring for the corps' uniforms, and countless other peripheral duties. Corps on touring circuits particularly rely on volunteers due to the extra necessities which come with the tour: cooking and cleaning, providing mechanical maintenance, health and medical needs—all of which are essential to getting the corps down the road to the next show.

### Dues and fundraising

Every corps requires some amount of dues from its members to help defray the cost of operations, or touring should the circuit so require. Dues vary from circuit to circuit and corps to corps, but generally range from the local equivalent of several hundred to well over a thousand dollars per member. Most corps provide ways to

help offset the cost of membership, often through personal sponsorships that the member must procure. Corps do everything they can to help potential members pay their dues. However, membership dues only pay for a fraction of the total cost of keeping a corps alive. It costs US\$100,000–\$500,000 or more to run a corps for a single season. Uniforms, equipment, and vehicles must be bought and maintained, food and fuel are consumed, and the instructional and creative staff members must be paid. Other sources of income are required. Many organizations run bingo halls as a major source of income. Some American corps run a fleet of charter buses, which is a natural extension of the corps' touring needs. All corps solicit sponsorships and endorsements at the corporate level and individual contributions from alumni and fans.

## Drum and lyre corps

A **drum and lyre corps** is a [marching](#) ensemble consisting of [percussion instruments](#) and a color guard. The instrumentation of a drum and lyre corps consists of a typical marching [drumline](#) (snare, tenor, and bass drums, and [cymbals](#)) with the addition of a lyre section. Lyre sections consist of bell lyres, or glockenspiels, as well as [vibraphones](#) and marimbas.

The drum and lyre corps activity descends from other marching ensembles, including [drum and bugle corps](#); drum and lyre corps are often parade ensembles, there is currently no competitive circuit for drum and lyre corps. One current DCI [drum corps](#), the Mandarin, can trace its history to a drum and lyre corps.

Drum and lyre corps music arrangements are typically pitched in the key of C; this is likely another adopted quality of drum and bugle corps, as drum and bugle corps hornlines were traditionally pitched in G, and lyres in C, a compatible key.

Marching movement of drum and lyre corps is also patterned after parade and show bands. Feet are lifted to equal heights and drumlines make frequent use of a "crab step" marching style to move sideways.

# Drum kit

## The **Drum kit**

1 Bass drum | 2 Floor tom | 3 Snare |  
4 Toms | 5 Hi-hat | 6 Crash cymbal and Ride cymbal

## **Other components**

China cymbal | Cowbell | Sizzle cymbal |  
Splash cymbal | Swish cymbal |  
[Tambourine](#) | Wood block |

A **drum kit** (or **drum set** or **trap set** - the latter an old-fashioned term) is mostly a collection of [drums](#), [cymbals](#) and sometimes other [percussion instruments](#) arranged for convenient playing by a drummer, usually for [jazz](#), [rock](#), or other types of contemporary music.

## History

Early drum kits were known as **trap kits** (short for *contraption*) and are one of the most contemporary members of the membranophone family. They usually consisted of a bass drum, a snare drum on a stand, a small [cymbal](#) and other small [percussion instruments](#) mounted on the bass drum or a small table, all played with drum sticks or brushes except for the bass drum. The bass drum was sometimes kicked to produce a sound, and is occasionally still called a *kick drum*, though bass drums are now nearly always pedal-operated, and sometimes even played with two pedals to allow for greater speed. *Trap set* survives in the term *trap case* still given to a case used to transport stands, pedals, sticks, and miscellaneous percussion instruments.

The hi-hat started out life in Dixieland drumming and was called a "snowshoe cymbal beater", and was operated in a similar way as it is today. At the same time another drum company was developing a similar product called a "low boy", at a lower position compared with a modern hihat. This then developed into the hihat as we know it today, with the introduction of many different branded products from companies (such as Drum Workshop and Pacific Drums and Percussion).

## Modern kits

The exact collection of components to a drum kit varies greatly according to musical style, personal preference, financial and transportation resources of the drummer. At a minimum a kit usually contains a bass drum sitting on the floor and played with a pedal, a snare drum on a stand, two or three tom-toms, some of which are mounted on top of the bass drum (or sometimes positioned on a snare stand) and the largest typically free-standing alongside it (on the floor - hence the word "floor tom"), a hi-hat (sometimes known as a 'sock' cymbal) comprising two small cymbals played by means of pedal with almost always the left foot, a ride cymbal and a crash cymbal arrangement. The most basic modern kits comprise of five pieces more commonly known as five piece kits.

## Kit additions and variations

Some drummers may add a second bass drum (played by the left foot), double bass pedals (played with both feet), additional toms, more cymbals, tambourines, woodblocks, cowbells, electronic pads that trigger sampled sounds, or any of a whole galaxy of accessory instruments. Some drummers, such as Billy Cobham, Dave Lombardo, Virgil Donati, Neil Peart, Terry Bozzio, Keith Moon and Mike Portnoy have gone to extreme lengths and built massive kits including features such as ranges of tuned tom-toms, allowing them to contribute melodically as well as rhythmically. These huge kits reached their zenith in the arena rock of the 1980s, and the trend since then has been towards a smaller instrument such as John Bonham's five-piece set. Most of the massive kits were custom made made by companies like Drum Workshop and Premier.

## Electronic drums

The first electronic drums were used in the early 1970's (and recorded by Carl Palmer of Emerson, Lake and Palmer) with the development of the synthesiser, it was inevitable that the drums would eventually be incorporated into the electronic sound. During the early 1980's drummers such as Bill Bruford of King Crimson incorporated large electronic setups within their acoustic setups and in Bruford's case almost completely diminished the need for acoustic drums. These drums were primarily made by the now defunct Simmons company and later by Tama of Japan. Although many criticised the use of electronic drums; there is a wider level of acceptance now and indeed some drummers such as Akira Jimbo and Tony Verderosa incorporate electronics into their sets in an interesting and innovative way.

Yamaha, Roland and many others have created [electronic drum sets](#) which use pads or triggers (mounted on acoustic drums) to play [sampled](#) or [synthesized](#) sounds. The trend in electronics since the late 1980s has been away from overtly electronic sounds and more towards an intensified acoustic sound.

Not only has the sound of electronic drums changed considerably towards a more naturalistic approach, indeed the 'feel' of electronic pads has also changed. With companies like Roland and Pinteck offering their popular 'Mesh' or 'V-drum' pads; designed to emulate the 'feel' of a real drum head. Yamaha offers rubber pads also designed to mimic the feel of 'real' drums. Originally, the feel of electronic pads was very hard and unforgiving and as a result many drummers suffered from wrist pains and other related injuries.

## Drum set notation

[Notation](#) of drum kit music once commonly employed the bass clef, but a neutral staff of two parallel vertical lines is usually preferred now. Many different conventions exist for the notation of different elements of the kit on the staff, and it is usual to label each instrument and technique mark the first time it is introduced,

or to add an explanatory footnote, on any score to clarify this. Below is common convention. Most variations follow a similar style.

### **Drums**

### **Cymbals**

### **Other**

### **Techniques**

#### Rim click

striking the rim of the snare drum with the edge of the stick (also known as side stick or cross stick)

#### Stick shot

hitting one stick, held with its tip against snare head, with the other stick

#### Brush sweep

sweeping the snare head with a brush in continuous circular motions (also known as "stirring soup")

### **Dynamic accents**

### **Anti-accents**

1. slightly softer than surrounding notes: u (breve)
2. significantly softer than surrounding notes: ( ) (note head in parentheses)
3. much softer than surrounding notes: [ ] (note head in brackets)

Category: [Percussion instruments](#)

# Drum machine

A **drum machine** is an [electronic musical instrument](#) designed to imitate the sound of [drums](#) and/or other [percussion](#) instruments.

Most modern drum machines are [sequencers](#) with a sample playback (rompler) or [synthesizer](#) component that specializes in the reproduction of [drum timbres](#) as well as the sound of other traditional [percussion](#) instruments. Though features vary from model to model, many modern drum machines can also produce unique sounds (though usually percussive in nature), and allow the user to compose unique drum beats.

# History

## Early drum machines

Early drum machines were often referred to as "rhythm machines." In 1930–31, the spectacularly innovative and complex Rhythmicon was realized by Léon Theremin on the commission of composer-theorist Henry Cowell, who wanted an instrument with which to play compositions whose multiple rhythmic patterns, based on the overtone series, were far too difficult to perform on existing keyboard instruments. The invention could produce sixteen different rhythms, each associated with a particular [pitch](#), either individually or in any combination, including en masse, if desired. Received with considerable interest when it was publicly introduced in 1932, the Rhythmicon was soon set aside by Cowell and was virtually forgotten for decades. The next generation of rhythm machines played only preprogrammed rhythms such as [mambo](#), [tango](#), or the like. The first commercially available rhythm machines were included in organs in the late 1960s, and were intended to accompany the organist.

The first stand-alone drum machine, the PAiA Programmable Drum Set, also happened to be the very first programmable drum machine. It was first introduced in 1969, and was sold as a kit, with parts and instructions which the buyer would use to build the machine. The first largely successful drum machine, however, was the Rhythm Ace. It was released around 1970 by a company then called Ace Tone (later called Roland). The Rhythm Ace was a preset-only unit; it was not possible for the user to alter or modify the pre-programmed rhythms. A number of other preset drum machines were later released in the 1970s. The first major pop song to use a drum machine was a cover version of Sly and the Family Stone's "Somebody's Watching You" recorded by Little Sister. The song, produced and composed by Sly Stone, entered the R&B charts in 1971. The first album in which a drum machine produced all the percussion was Arthur Brown/Kingdom Come's *Journey*, recorded in November 1972 using a Bentley Rhythm Ace.

## Drum sound synthesis

A key difference between such early machines and more modern equipment is that they used analog [sound synthesis](#) rather than digital sampling in order to generate their sounds. For example, a snare drum or maraca sound would typically be created using a burst of white noise whereas a bass drum sound would be made using sine waves or other basic waveforms. This meant that while the resulting sound was not very close to that of the real instrument, each model tended to have a unique character. For this reason, many of these early machines have achieved a certain "cult status" and are now sought after by [DJs](#) and producers for use in production of modern [techno](#) and [electronic music](#).

## Programmable drum machines

In 1979, the Roland CR-78 drum machine was released. It was one of the first programmable rhythm machines, which allowed the user to create their own beats. Later that same year, Roland offered the Boss DR-55. It was the first fully programmable drum machine for under \$200. The DR-55 had four sounds, and enough memory for only 16 rhythms. Hardly passable by modern standards, but in its time, the DR-55 was a relatively affordable breakthrough.

The Linn LM-1 Drum Computer (released in 1980 and pricey at \$4,000) was the first drum machine to use digital samples. Only 500 were ever made, but the list of those who owned them was impressive. Its distinct sound almost defines 80s pop, and it can be heard on dozens of hit records from the era, including The Human League's *Dare*, Visage's *The Anvil*, Gary Numan's *Dance*, and Ric Ocasek's *Beatitude*. Prince bought one of the very first LM-1s and used it on nearly all of his most popular recordings, including *1999* and *Purple Rain*.

Many of the drum sounds on the LM-1 were composed of two chips that were triggered at the same time, and each voice was individually tunable with individual outputs. Due to memory limitations, a crash sound was not available except as an expensive third-party modification. A cheaper version of the LM-1 was released in 1982 called the LM-2 (or simply Linndrum). It cost around \$3,000 and not all of its voices were tunable, making it less desirable than the original LM-1. The Linndrum included a crash sound as standard, and like its predecessor the LM-1, featured swappable sound chips. The Linndrum can be heard on records such as Men Without Hats' *Rhythm of Youth* and The Cars' *Heartbeat City*.

It was feared the LM-1 would put every session drummer in Los Angeles out of work and it caused many of L.A.'s top session drummers (Jeff Porcaro is one example) to purchase their own drum machines and learn to program them themselves in order to stay employed.

The famous Roland TR-808 also came out in 1980. At the time it was regarded with little fanfare, as it did not have digitally-sampled sounds; drum machines using digital samples were a good deal more popular. In time though, the TR-808, along with its successor, TR-909 (released in 1983), would soon become a fixture of the burgeoning underground dance, techno, and hip-hop genres, mainly because of its low cost (relative to that of the Linn machines), and the unique character of its analogue-generated sounds. The TR-808's sound only became truly desirable in the late 1980s, about five years after the model was discontinued. In a somewhat ironic twist, it is the analogue-model Rolands that have endured over time. The 808's and the 909's beats have since been widely featured in [pop music](#), heard on countless recordings right up to this day.

Programming can be done (depending on the machine) in *real-time*: the user creates drum patterns by pressing the trigger pads as though a [drum kit](#) were being played, or using *step-sequencing*: the pattern is built up over time by adding individual sounds at certain points by placing them, as with the TR-808 and TR-909 along a 16 step bar. For example, a '4 to the floor' generic dance pattern could be made by placing a closed high hat on the 3, 7, 11, and 15th steps, then a kick drum on the 1, 5, 9, and 13th steps, and a clap on the 5 and 13th. This pattern could be varied in a multitude of ways to obtain fills, break-downs and other elements that the programmer sees fit, which in turn can be sequenced- essentially the drum machine plays back the programmed patterns from memory in an order the programmer has chosen.

If the drum machine has MIDI connectivity, then one could program the drum machine with a computer or another MIDI device.

## MIDI breakthrough

Because these early drum machines came out before the introduction of MIDI in 1983, they used a variety of methods of having their rhythms synchronized to other electronic devices. Some used a method of synchronization called DIN-sync, or sync-24. Some of these machines also output analog CV/Gate voltages that could be used to synchronize or control analog [synthesizers](#) and other music equipment.

Drum machines can either be programmed in real time (the user hears a metronome and plays beats in time with the metronome) or in step time, where the user specifies the precise moment in time on which a note will sound. By stringing differently-programmed bars together, fills, breaks, rhythmic changes, and longer phrases can be created. Drum machine controls typically include Tempo, Start and Stop, volume control of individual sounds, keys to trigger individual drum sounds, and storage locations for a number of different rhythms. Most drum machines can also be controlled via MIDI.

By the year 2000, standalone drum machines became much less common, being partly supplanted by general-purpose hardware samplers controlled by sequencers (built-in or external), software-based sequencing and sampling and the use of loops, and [music workstations](#) with integrated sequencing and drum sounds. TR-808 and other digitized drum machine sounds can be found on archives on the Internet. However, traditional drum machines are still being made by companies such as Roland Corporation (under the name Boss), Zoom, Korg and Alesis, whose SR-16 drum machine has remained popular since it was introduced in 1991.

There are percussion-specific [sound modules](#) that can be triggered by pickups, trigger pads, or through MIDI. These are called [drum modules](#); the Alesis D4 and Roland TD-8 are popular examples. Unless such a sound module also features a sequencer, it is, strictly speaking, not a drum machine.

# Drum Major

The term **drum major** describes several similar appointments in [marching bands](#), [drum and bugle corps](#), and pipe bands. In common to all these forms of marching arts is that the drum major is responsible for providing commands (verbally or through hand gestures, or alternatively with a staff or mace) to the ensemble regarding where to march, what to play, and what time to keep.

## History

The position of drum major originated in the British Army with the Corps of Drums in 1650. Military groups performed mostly duty calls and battle signals during that period, and a fife and drum corps, directed by the drum major, would use short pieces to communicate to field units. With the arrival of military [brass band](#) and pipe bands around the 18th century, the position of the drum major was adapted to those ensembles.

Traditionally, a military drum major was responsible for:

- Military discipline of all band members
- The band's overall standards of dress and deportment
- Band administrative work
- Maintain the band's standard of military drill and choreograph marching movements

The musical performance of the ensemble was and may still be delegated to the senior or ranking drummer in the group.

With the advent of the radio militaries no longer needed bands or drum corps as signaling units. Today, military music ensembles and their drum majors operate in a detached fashion from the rest of the military, to varying degrees.

## **Military position**

A drum major position in the armed forces is usually an appointment and not a military rank. The modern military drum major continues to direct and instruct, as well as serving as a figurehead for the ensemble.

In the British Armed Forces, a Drum Major is always a senior non-commissioned officer who holds the rank of Sergeant, Staff Sergeant (or equivalent), or Warrant Officer. He is, however, always referred to and addressed as "Drum Major" and not by his rank. The insignia of appointment is four point-up chevrons worn on the wrist, usually surmounted by a drum and frequently by a crown or other badge dependant on rank, corps, regiment and/or service. Traditionally, a Drum Major is always a drummer (or bugler in the Royal Marines, where drums and bugles are always played by the same musicians), and a drummer would normally be required to have passed a number of courses in music, military skills, and leadership throughout his military career before his regiment would consider appointing him as a Drum Major.

In the United States Armed Forces and the Canadian Forces, the drum major is not required to be a drummer, the appointment being held by any suitably qualified musician.

## Marching arts

In the marching performance arts, including pipe bands, [marching bands](#), and [drum and bugle corps](#), the drum major position is one of leadership, instruction, and group representation, but usually not administrative duties. A band director or corps director assumes administrative responsibility.

Drum majors are mostly responsible for knowing the music of the ensemble and conducting it appropriately. What is "appropriate" conducting has evolved over the decades. During the 1970s and prior it was not uncommon for a stationary drum major to stamp his feet on the podium for an audible tempo; with the arrival of increasingly higher drum major platforms and thus greater visibility this has become both dangerous and unnecessary. In addition to memorizing the music (between six and nine minutes of music is typical for high school marching bands, college bands and drum corps may have that much or more, up to more than eleven minutes of music) a drum major usually memorizes dynamics as well as tempo.

To see one to three drum majors in most ensembles is typical. More usually indicates a group of prodigious size; conversely, no drum major may indicate a small band conducted by its director or a group lead by a horn sergeant or drumline captain. In some ensembles, drum majors switch positions during the show to allow all individuals a chance to conduct from the central podium, occasionally they may serve in other capacities such as performing a solo.

As marching bands have started to focus more directly on halftime shows and less on parades, the stereotypical staff or mace has vanished in preference of hand movements, occasionally with the use of a conductor's baton. Drum majors have also become more elevated over the years, having moved off of the field over the course of the 1970s and 1980s and onto small podiums, which in recent years have often become some eight feet in height or larger. There may be supplemental podiums for additional drum majors, usually smaller in stature.

A marching band or drum corps drum major (field conductor) is in charge of holding the band together, and directing the entire band during shows and competitions. This drum major is rarely a percussionist. They are chosen on their musical abilities, leadership qualities, attitude, and passion for the sport. They head the band, often with woodwind, brass, guard, and percussion captains directly underneath.

# Drumfunk

**Drumfunk** is a subgenre of [drum & bass](#) sometimes referred to as "edits" or "choppage". The term came into widespread use ca. 2000, when drumfunk itself began to expand. The hallmarks of drumfunk records are complex [breakbeats](#) which sound as though they are being played live on a [drumkit](#), but are actually comprised of samples which have been processed and rearranged electronically.

Though a sub-genre of drum & bass, it is usually much more complex than the standard drum patterns that exist within it. The focus of the song tends to be on the drums rather than the melodies or music itself. Also usually programmed from old drum samples which are relatively obscure rather than created.

Key drumfunk artists include Paradox (arguably the originator of both the term and production style), Fracture and Neptune, Danny Breaks, Seba, Macc, Fanu, ASC, 0=0, Senses and Chris Inperspective although other producers have been labeled as such from time to time.

Noted producer Breakage, for instance, has been associated with drumfunk, partly because of his love of cavernous, hollowed-out amen rolls, and in no small way because he remixed Equinox's seminal "Acid Rain" in such a tightly-wound, frenetic manner that it seems to leave the already ambitious original in the dust.

However, Breakage's tunes have not on the whole been as off-kilter and labyrinthinely syncopated as the obviously drumfunk output of Nucleus and Paradox. His more recent work (as of 2005) on the famed Bassbin label, "Ask me", and "So Vain", have tended towards a sort of "dub roller" mentality that finds comparison with (and presence in the dj sets of) Calibre's recent work.

# Drumline

A **drumline** is a group of percussionists who play a variety of [marching percussion](#) instruments. A drumline may be an incorporated section of a [marching band](#), a [drum and bugle corps](#), a pipe band, or a pep band, but also can exist independent of these larger ensembles. Most members of drumlines start in high school and occasionally go on to drum in more advanced lines in college, indoor ensembles, or drum corps. [Indoor percussion ensembles](#) serve as the most common outlet for stand-alone drumline performance.

Most drumlines can be divided into two sections; the *back battery* and [front ensemble](#). However, the term *drumline* is sometimes used to refer to just the battery. Dividing the battery further we arrive at the sub-sections of snare drums, tenors (also called toms, trios, quads, quints, timp-toms, hexes, six-pack), bass drums, and sometimes cymbals (also called plates).

The [marching percussion](#) instruments of a battery section features high tension drumheads so as to produce a loud, short, and articulate sound, ideal for the intricate passages played by contemporary drumlines. Marching snares are either 13 or 14 inches in diameter, depending on whether the line is playing indoors or outdoors. The circumference of the rim is lined with 12 evenly spaced lugs, designed to maintain the high tension of Kevlar or PET film heads. Tenor drums are sets of multiple drums worn by one marcher, usually in sets of 3 to 6 drums. Plastic and synthetic heads are most common in tenors and are tuned with a lower tension than snares, providing the drums with a more resonant, tonal sound which gives the drums a midrange, or tenor pitch support to the line. Marching basses consist of groupings of 4-6 individually carried bass drums. They are marched sequentially according size, with drum 1 being the smallest in diameter and weight and drum 4, 5, or 6, known as "bottom bass" being largest in diameter and weight. Marching cymbals are generally marched in groups of 2-8, though the range is simply by convention. Cymbals are held by each member of the sub-section and are either played by the individual holder, by a snare or tenor player, or used for visual purposes because of their reflective surfaces. A specific example is the well known "V" formation formed by the cymbal line of the Santa Clara Vanguard drum and bugle corps.

The *front ensemble* (also *pit* or *frontline*) can include any [percussion instrument](#). This wide selection of instruments allows for the front ensemble to produce the greatest [timbre](#) variety in a marching ensemble. Front ensemble instruments are typically stationary during performance and are therefore not bound to the limitations of being mounted to the player. Instruments usually played in the front ensemble include marimba, vibraphone, bells, xylophone, and chimes. Oftentimes, in order to add special sounds to a piece, many auxiliary percussion instruments will also be implemented by the frontline ensemble.

## Battery

The Battery percussion is one of the most popular sections for a drumline. There are four different types of battery percussion instruments. Marching Snare, Tenors (Quads or Quints), Bass Drums (usually 5 graduating in size), and Cymbals (can be anywhere from 3 to 8 different size cymbals, usually always marching crashes).

### Marching Snare

Marching Snare is probably one of the most prestigious positions on a drumline. Although all parts are important, the snare is one of the harder drums to play. Marching Snare music is usually more complicated and difficult than the bass drums or cymbals, and thus requires a lot of skill. Snare solos are very complicated and sometimes incorporate visual tricks that one performs with sticks.

### Tenors

Tenors are basically a marching version of tom-toms. Usually with four or five (sometimes six) different tenor drums that graduate in size. Since there are more drums to play, the tenors require a lot of skill and coordination. Different than snare technique, this requires more use of the arms than just the wrist. Tenors can have visuals too, but the sheer complexity of a lot of tenor solos makes enough visuals by just the movement of the arms around the drums.

### Basses

Bass drums are the heart of a drumline. They create the deep booming sound heard in any drum line. Bass Drum solos are written for multiple drums. Instead of being played by one person, the solo is split from drum to drum. Bass drums are considered to be the least difficult drum, but harder than the cymbals. In most cases, beginners will end up playing the bass drum.

# DualDisc

**DualDisc** is a type of double-sided optical disc developed by EMI Music, Universal Music Group, Sony/BMG Music Entertainment, Warner Music Group, and 5.1 Entertainment Group [1]. It features an audio layer similar to a CD (but not following the Red Book CD Specifications) on one side and a standard DVD layer on the other.

DualDiscs first appeared in the United States in March, 2004 as part of a marketing test conducted by the same five [record companies](#) who developed the technology. The test involved thirteen titles being released to a limited number of retailers in the Boston, Massachusetts, and Seattle, Washington, markets. The test marketing was seen as a success after 82% of respondents to a survey (which was included with the test titles) said that DualDiscs met or exceeded their expectations. In addition, 90% of respondents said that they would recommend DualDisc to a friend .

DualDisc titles received a mass rollout to retailers throughout the United States in February, 2005, though some titles were available as early as November, 2004. The recording industry had nearly 200 DualDisc titles available by the end of 2005 and over 2,000,000 units have been sold to date .

## Technical details

DualDiscs appear to be based on double-sided DVD technology such as DVD-10, DVD-14 and DVD-18 except that DualDisc technology replaces one of the DVD sides with a CD. The discs are made by fusing together a standard 0.6 mm-thick DVD layer (4.7-gigabyte storage capacity) to a 0.9 mm-thick CD layer (60-minute or 525-megabyte storage capacity), resulting in a 1.5 mm-thick double-sided hybrid disc that contains CD content on one side and DVD content on the other.

Because the 0.9 mm thickness of the CD layer does not conform to Red Book CD Specifications, which call for a layer no less than 1.1 mm thick, some CD players may not be able to play the CD side of a DualDisc due to a phenomenon called spherical aberration. As a result, the laser reading the CD side might get a "blurry" picture of the data on the disc; the equivalent of a human reading a book with glasses of the wrong strength. Engineers have tried to get around this by making the pits in the CD layer larger than on a conventional CD. This makes the CD side easier for the laser to read; equivalent to the book using bigger print to make it easier to see, even if the person's glasses are of the wrong strength. The inevitable downside to this, however, is that the playing time for the DualDisc CD layer decreases, from the standard 74 minutes of a conventional CD, to around 60 minutes.

Because the CD layer does not conform to specifications, Philips and Sony have refused to allow DualDisc titles to carry the CD logo and most DualDiscs contain one of two warnings:

- "This disc is intended to play on standard DVD and CD players.  
*May not play on certain car, slot load players and mega-disc changers.*"
- "The audio side of this disc does not conform to CD specifications and therefore not all DVD and CD players will play the audio side of this disc."

The DVD side of a DualDisc completely conforms to the specifications set forth by the DVD Forum and DualDiscs have been cleared to use the DVD logo.

## **Hopes for DualDisc**

Record companies have two main hopes for DualDiscs; the first being that they will eventually replace CDs as the preferred media for purchase at music retailers, and the second being that the inclusion of bonus DVD content at a price similar to a conventional CD will help to slow down online music piracy by giving consumers more incentive to buy their music through retailers. Some titles such as Devils & Dust by Bruce Springsteen were released in the United States on DualDisc only.

## **Costs versus conventional CDs**

In the US, the cost of a DualDisc at retail versus that of a conventional CD varies depending on the title but, on average, a DualDisc costs about \$1.50 to \$2.50 USD more than the same title on CD. Some DualDisc titles such as Mr. A-Z by Jason Mraz and In Your Honor by the Foo Fighters have enhanced packaging which increases the retail cost of the DualDisc version of the albums over their CD counterparts more than the average. There are also other factors which go into the additional costs such as production, marketing etc.

## Common DVD content

What one finds on the DVD side of a DualDisc title will vary. Common content includes:

- The entire album in higher-quality stereophonic and/or surround sound.
- Documentaries
- [Music videos](#)
- The artist's [discography](#).
- A link to the artist's website

## Audio types

The CD side of a DualDisc contains standard 16-bit LPCM audio sampled at 44.1 kHz. On the DVD side, most record companies, with the notable exception of Sony Music, provide the album's music in both high-resolution, 24-bit DVD-Audio (typically at a sample rate of 96 kHz for stereo and 48 kHz for surround sound) and lower-resolution, 16-bit Dolby Digital sound (typically sampled at 48 kHz). This is done to allow consumers with DVD-Audio players access to very high-resolution stereophonic and/or surround sound versions of the album while also providing the lower-resolution Dolby Digital stereophonic and/or surround sound which is compatible with any DVD player.

Because Sony has a high-resolution audio format in the marketplace which directly competes with DVD-Audio (see next section), Sony Music, as a general rule, only provides 16-bit, 48 kHz sampled LPCM stereophonic (and sometimes Dolby Digital Surround) sound on the DVD side of their DualDiscs. The sound is compatible with any DVD player; however, it does not provide the higher fidelity and resolution of 24-bit DVD-Audio.

## Competition

The biggest competition to DualDisc is the hybrid Super Audio CD (SACD), which was developed by Sony and Philips Electronics, the same companies that created the CD. DualDiscs and hybrid SACDs are competing solutions to the problem of providing higher-resolution audio on a disc that can still be played on conventional CD players.

DualDiscs take the approach of using a double-sided disc to provide the necessary backwards compatibility; hybrid SACDs are a one-sided solution that instead use two layers: a conventional CD layer and a high-resolution layer.

Lasers in conventional CD players have a different wavelength (typically around 780 nm) than those in SACD players (650 nm). Hybrid SACDs possess a special high density layer that is transparent to the conventional CD player's laser but is partially reflected by the SACD player's laser. When a hybrid SACD is placed into a conventional CD player, the laser beam passes through the high-resolution layer and is reflected by the conventional layer at the regular 1.2 mm distance. The result is that the hybrid disc plays as normal.

When a hybrid disc is placed into an SACD player, the laser is partially reflected by the high-resolution layer (at 0.6 mm distance) before it can reach the conventional layer. If a conventional CD is placed into an SACD player, the laser will read the disc without incident since there is no high-resolution layer to reflect. Because of the difference between the working distances of CDs and SACDs, the aperture of the lens in the SACD player must be adjusted to obtain the correct focal length.

Hybrid SACDs boast a higher compatibility rate with conventional CD players than DualDisc, due to the fact that hybrid SACDs conform to Red Book standards. However, a SACD or SACD-capable DVD player is required to take advantage of the enhanced SACD layer. With a DualDisc, consumers can use their existing DVD player to hear surround mixes. (DVD-Audio capable players are required for higher-resolution audio, if present.) It is currently estimated that 75% of households in the United States have at least one DVD player.

In addition, several SonyBMG titles whose regular editions include copy protection programs (such as XCP and SunnComm) do not feature the software on the DualDisc versions.

## Criticisms

There are numerous criticisms about DualDiscs, ranging from size to DualDiscs being more fragile than conventional CDs.

### Consumer complaints

In addition to the possible inability for some CD players to read a DualDisc properly, other consumer criticisms of DualDisc include:

- The 1.5 mm-thick disc can get jammed in a very small number of computer DVD drives, DVD players, slot-loading CD players (such as car CD players) and mega-changers. This may even damage the disc.
- For any CD player, the thinner CD layer makes reading the CD side of a DualDisc harder than reading a conventional CD. Thus, anomalies such as small scratches, fingerprints or disc tilt may cause tracking errors more easily than those same anomalies would on a conventional CD. Since disc damage is inevitable over time, this can mean a reduction in a DualDisc's effective lifetime as compared to a CD.
- The recommended 60-minute limit of the CD side prohibits it from including the entire content of some conventional CDs.
- Since both sides of the disc are used for data, a label cannot appear on either side of the disc. The only way that a consumer knows which side is CD and which is DVD is by looking at the center ring of the disc where it is marked.

### Manufacturer warnings

A number of electronics companies such as Lexicon [11], Marantz [12], Mark Levinson [13], Onkyo [14], Panasonic [15], Pioneer [16], and (ironically) Sony have issued statements warning consumers about possible problems with playing DualDisc titles on their equipment. These warnings range in severity from DualDiscs just not working with the equipment to actual damage to the disc and/or equipment.

### Legal controversy

There has been some controversy surrounding the DualDisc format, as Dieter Dierks, the inventor of the DVD Plus specification, claims that DualDisc technology is in violation of his European patents. This delayed the release of DualDisc titles in Europe, with them eventually hitting European shores in September 2005. The first British artist to announce a DualDisc release of his album was Sony/BMG recording artist Will Young.

## DualDisc releases

### Test releases

Below is a list of the thirteen initial DualDisc titles released as part of the test marketing. Some of these DualDisc titles are now out of print.

- 3 Doors Down's Away from the Sun
- AC/DC's Back In Black
- Audioslave's self-titled album
- Barenaked Ladies' Everything to Everyone
- David Bowie's Reality
- Dave Brubeck's Time Out (recalled due to licensing issues)
- Donald Fagen's The Nightfly
- The Donnas' Gold Medal (recalled due to a mastering error which resulted in one track being omitted from the album)
- Good Charlotte's The Young and the Hopeless
- Linkin Park's Reanimation
- P.O.D.'s Payable On Death
- R.E.M.'s Automatic for the People
- Andrew W.K.'s The Wolf

# Dub music

**Dub** is a form of Jamaican music, which evolved out of [ska](#) and [reggae](#) in 1970s Jamaica. The dub reggae sound includes adding extensive echo and reverb effects to an existing music piece, sometimes accompanied by snatches of the lyrics from the original version.

Dub is characterized as a "version" of an existing song, typically emphasizing the drums and bass for a sound popular in local Sound Systems. The instrumental tracks are typically drenched in sound processing effects such as echo, reverb, part vocal and extra percussion, with most of the lead instruments and vocals dropping in and out of the mix. Another hallmark of the dub sound is the massive low bass. The music sometimes features processed sound effects and other noises, such as birds singing, thunder and lightning, water flowing, and producers shouting instructions at the musicians. It can be further augmented by live DJs.

These versions are mostly instrumental, sometimes including snippets of the original vocal version. Often these tracks are used for "Toasters" rapping heavily-rhymed and alliterative lyrics. These are called "DeeJay Versions". As opposed to [hip hop](#) terminology, in [reggae](#) music the person with the microphone is called the "DJ" (elsewhere called the "MC", for 'Microphone Controller' or less commonly 'master of ceremonies'), while the person choosing the music and operating the turntables is the "Selector" (elsewhere called the [DJ](#)).

A major reason for producing multiple versions was economic: A record producer could use a recording he owned to produce numerous versions from a single studio session. Version was also an opportunity for a producer or remix engineer to experiment and vent their more creative side. The version was typically the B-side of a single, with the A-side dedicated to making a popular hit, and B-side for experimenting and providing something for DJs to talk over. In the 1970s whole albums of dub tracks were produced, often simply the dub version of an existing vocal LP, but sometimes a selection of dubbed up instrumental tracks for which no vocals existed.

Dub music evolved from early instrumental reggae music and "versions" that incorporated fairly primitive reverb and echo sound effects. Errol Thompson engineered the first strictly instrumental reggae album entitled "The Undertaker" by Derrick Harriott and the Crystalites released in 1970. This innovative album credits "Sound Effects" to Derrick Harriott.

Whilst some have tried to attribute the "invention" of dub music to just one person, the facts show that by 1973, instrumental reggae "versions" from various studios had evolved into "dub" as a sub genre of reggae. Through the simultaneous efforts of several independent Jamaican innovators, these competitive engineers and producers worked hard to leapfrog each other with each subsequent dub release with no single person being able to claim all the credit for the origination of "dub" as a genre.

In 1973, at least two producers, Lee Perry and the Aquarius studio engineer/producer team of Herman Chin and Errol Thompson simultaneously recognized that there was an active market for this new "dub" sound and consequently they started to release the first strictly 100% dub albums.

It was not until 1975 that King Tubby was internationally recognized as the premier dub artist/innovator/producer with the release of his two debut albums "King Tubby Meets The Upsetter At The Grass Roots Of Dub" and "Surrounded By

the Dreads at the National Arena". He was then immediately hailed as the leading dub music innovator of the day.

Dub has continued to progress from that point to this, its popularity waxing and waning with changes in musical fashion. Almost all reggae singles still carry an instrumental version on the b side and these are still used by the sound systems as a blank canvas for live singers and djs.

In the 1980s, Britain became a new center for dub production with Mad Professor and Jah Shaka being the most famous, while Scientist became the heavyweight champion of Jamaican dub. It was also the time when dub made its influence known in the work of harder edged, experimental producers such as Adrian Sherwood and the roster of artists on his On-U Sound label. Bands such as The Police and UB40 helped popularise Dub in the UK with UB40's 'Present Arms in Dub' album being the first ever DUB album to hit the UK top 40. The Welsh band Llwybr Llaethog are an important UK group to have frequently produced Dub tracks in addition to their usual hip-hop/electronic output.

In the 1990s and beyond dub has been influenced by and in turn influenced [techno](#), [jungle](#), [drum and bass](#), [house music](#), [trip hop](#), [ambient](#) music, and [hip hop](#), with many *electronic dub* tracks produced by nontraditional musicians from these other genres. Musicians such as Bill Laswell, Leftfield, Ott, Massive Attack, Bauhaus, The Clash, PiL, The Orb, Rhythm & Sound, Pole, Underworld, DeFacto and others demonstrate clear dub influences in their respective genres, and their innovations have in turn influenced the mainstream of the dub genre. In the UK, Europe, Japan and America independent record producers are making dub . DJs appeared towards the end of the 1990s who specialised in playing music by these musicians, such as the UK's Unity Dub. Traditional dub has, however, survived (see Iration Steppas and Aba Shanti-I, for example) and some of the originators like Lee Perry and Mad Professor continue to produce new material.

# Dubstep

**Dubstep** is the name given to the largely South London-based dark garage sound that originally came out of productions by El-B (as part of both Groove Chronicles and the Ghost camp), Zed Bias (aka Phuturistix, Maddslinky and more) and Steve Gurley in 1999-2000. Like another garage hybrid, [grime](#), it uses dark sounds, but differs from grime as it's largely instrumental. It also predates the evolution of grime by several years.

## Origins and Early Dubstep

The term 'dubstep' was coined by Ammunition Promotions and first used on an XLR8R magazine cover that featured Horsepower Productions. It gained full acceptance with the Dubstep Allstars Vol 1 CD (Tempa) mixed by DJ Hatcha.

The key touch points of the early dubstep sound were Croydon's now defunct Big Apple shop and rejuvenated Big Apple records that pushed the sound. Producers and DJs in the Croydon area included El-B and Jay Da Flex from Ghost, Hatcha, Menta/Artwork, Skream and Benga from Big Apple records, and Horsepower. Zed Bias also contributed a great deal of productions to the early sound. Steve Gurley (ex of Foul Play) had also experimented with darker 2step.

Horsepower released records on the Tempa label, alongside Big Apple one of the first distinctly dubstep labels. Tempa was run by Ammunition Promotions, the other key touch point for the early development of dubstep. Since 2001, Ammunition have been responsible for a raft of labels like Tempa, Soulja, Road, Vehicle, Shelflife, Texture, Stealth People, Bingo and more - though to date only Soulja, Bingo, Road and Tempa remain active.

## Forward

Ammunition also run club Forward>>, originally held at the Velvet Rooms in London's Soho and now running twice a month out of Plastic People in Shoreditch, east London. This club was critical in the development of dubstep, providing the first venue devoted to the sound and an environment in which producers could premier new music. Forward>> also run a radio show on key east London pirate station Rinse FM, hosted by producer/DJ Kode 9, owner of the pioneering Hyperdub label.

Also part of Forward>> from the start were other strains of garage hybrids. One style of early grime, then called '8bar', was played here by DJs like Slimzee (then of Pay As U Go, now part of Rinse FM). These flavours allowed producers like Croydon's Plasticman and Manchester's Mark One to come through with their own takes on the grime sound. The summer of 2005 has seen Forward>> bring grime DJs to the fore of the line up with Roll Deep, Jammer, Geeneus, Newham Generals performing with their respective MCs.

Forward>> also attracted the attention of Rinse FM DJs, who around 2003 opened up their schedule to dubstep DJs during a time where the traditional garage scene had turned their back on the sound. Rinse FM became a vital lifeline for the sound, strengthening the connection between dubstep and its urban London surroundings, while also allowing the scene to incubate new ideas.

## Dubstep Today

Throughout 2003 on Rinse FM and through his sets at Forward>>, DJ Hatcha began pioneering a new direction for dubstep, one that was to finally establish the scene as a distinct and new sound. Playing sets cut to 10" one-off reggae-style dubplates, he drew exclusively from a rich pool of new South London producers - first Benga and Skream, then also Digital Mystikz and Loefah - to pioneer a dark, clipped and minimal new direction in dubstep. The addition of Digital Mystikz to Hatcha sets brought with them an expanded palate of sounds and influences, most prominently reggae and dub, but also strange mystical melodies.

The south London collective Digital Mystikz (Mala and Coki) and Loefah soon came into their own, bringing sound system thinking, [dub](#) values, and appreciation of [jungle](#) bass weight to the dubstep scene - and with it a new lease on life. After 12"s on Big Apple, they began their own DMZ label, which has released seven 12"s to date. They also began their night DMZ, held every two months in Brixton, a part of London steeped in [reggae](#) history. Showcasing the best in new dubstep talent (such as Skream, N-Type, Scuba, Kode 9, D1, Random Trio, Chef, Joe Nice, Pinch, DJ Youngsta, Distinction, Vex'd and Blackdown ) and backed by a massive, sub-bass boosted sound system, the night is currently the benchmark dubstep night worldwide. Only Subloaded, Bristol's dubstep night promoted by DJ Pinch and the Context crew, can compare to DMZ's sound system in weight.

Another key turning point for the scene were the two misnamed 'Grime' compilations put together by Rephlex (assisted by Ammunition). Featuring Plasticman, Mark One and Slaughter Mob on the first volume, and Kode 9, Loefah and Digital Mystikz on the second, it introduced the different flavours to the global [electronica](#) audience, the repercussions of which can be seen in current productions and club nights.

2006 saw a massive expansion of interest in the sound. Building on the success of Skream's 2005 grimey anthem 'Midnight Request Line,' the hype around the DMZ night and support from online forums and bloggers, the scene exploded after Radio 1 DJ Mary Anne Hobbs gathered the cream of the scene together for one show, entitled 'Dubstep Warz.' The effect was to create a massive new audience for the scene, both in the UK and worldwide, after years of underground hard graft.

## Breakstep

There is a breakbeat influenced side of garage - originally called breakbeat garage, now more often referred to as 'breakstep.' This sound is not to be confused with dubstep itself, although there is some cross-over between artists.

Breakstep evolved from the 2 step garage sound. Moving away from the more soulful elements of garage, it incorporated downtempo [drum & bass](#) style basslines, trading the shuffle of 2 step for a more straight forward breakbeat drum pattern. The breakthrough for this style came in 1999 from DJ Deekline's 'I Don't Smoke' selling 15,000 units on Rat Records until eventually being licenced to EastWest in 2000 and climbing the top 40 UK chart to no.11. Following this came DJ Zinc's '138 Trek,' an experiment with [drum & bass](#) production at garage tempo (138 bpm). This instigated a dialog between breaks and garage producers, with Forward>> playing host to Zed Bias and Oris Jay (aka Darqwan). They were mirrored in breaks by producers like DJ Quest, Osmosis and Ed209. Current descendents of these artists include Toasty Boy, Mark One, Search & Destroy, Quiet Storm, DJ Distance, Reza, Slaughter Mob, Blackmass Plastics, Warlock and the Hotflush Recordings camp.

# Duet

A **duet** is a [musical composition](#) or [piece](#) for two performers, most often used for a vocal or piano duet. For other instruments, the word duo is often used. Two pianists performing together on the same piano is referred to as piano duet or piano four hands. Two pianists performing together on separate pianos is referred to as piano duo.

The word *duet* is generally used in any of the following ways:

- a pair of [musicians](#) playing the same [musical instrument](#),
- with the exception of pianists, a pair of musicians playing different instruments,
- the performance of a [song](#) by two people,
- a piece of music that can be performed by two people,
- as a general term for any activity done by two people.

In [Renaissance music](#), a duet specifically intended as a teaching tool, to be performed by teacher and student, was called a [bicinium](#).

Categories: [Musical groups](#) | [Musical forms](#)

# Duration

A **duration** is an amount of time or a particular time interval. For example, an event in the common sense has a duration greater than zero (but not very long), but in certain specialised senses, a duration of zero. It is often cited as one of the fundamental aspects of [music](#), see also [rhythm](#).

Durations, and their beginnings and endings, may be described as long, short, or taking a specific amount of time. Often duration is described according to terms borrowed from descriptions of [pitch](#). As such, the *duration complement* is the amount of different durations used, the **duration scale** is an ordering ([scale](#)) of those durations from shortest to longest, the *duration range* is the difference in length between the shortest and longest, and the *duration hierarchy* is an ordering of those durations based on frequency of use (DeLone et. al. (Eds.), 1975, chap. 3).

**Durational patterns** are the foreground details projected against a background metric structure, which includes [meter](#), tempo, and all rhythmic aspects which produce temporal regularity or structure. Duration patterns may be divided into rhythmic units and rhythmic gestures. (DeLone et. al. (Eds.), 1975, chap. 3) However, they may also be described using terms borrowed from the metrical feet of poetry: iamb (weak-strong), anapest (weak-weak-strong), trochee (strong-weak), dactyl (strong-weak-weak), and amphibrach (weak-strong-weak), which may overlap to explain ambiguity (Cooper and Meyer, 1960).

# Dutch School

In [music](#), the **Dutch School** refers, somewhat imprecisely, to the style of polyphonic vocal music composition in Europe in the 15th and 16th centuries. The composers of this time and place, and the music they produced, are also known as the **Franco-Flemish** or **Netherlands School**. See [Renaissance music](#) for a more detailed description of the musical style, and links to individual composers from this time.

As the country borders in this period do not agree with any national borders today, the term "Dutch" may be confusing. Few of the artists originated in what is now the Netherlands. Instead, the word "Dutch" refers to the Burgundian Netherlands, roughly corresponding to modern Belgium, northern France and the Netherlands. Most artists were born in Hainaut, Flanders and Brabant. During periods of political stability, this was a center of cultural activity for more than two hundred years, although the exact centers shifted location during this time, and by the end of the sixteenth century the focal point of the musical world shifted from this region to Italy.

While many of the composers were born in the region loosely known as the Netherlands, they were famous for working elsewhere. Netherlanders moved to Italy, to Spain, to towns in Germany and France and other parts of Europe, carrying their styles with them. The diffusion of their technique, especially after the revolutionary development of printing, produced the first true international style since the unification of [Gregorian chant](#) in the 9th century.

Following are five groups, or generations, that are sometimes distinguished in the Netherlands school. It should be noted that development of the musical style was continuous, and these generations only provide useful reference points.

- The *First generation* (1420-1450), dominated by Dufay and Binchois; this group of composers is most often known as the [Burgundian School](#)
- The *Second generation* (1450-1485), with Ockeghem as its main exponent
- The *Third generation* (1480-1520): Obrecht, Isaac and Josquin
- The *Fourth generation* (1520-1560): Willaert and Clemens non Papa
- The *Fifth generation* (1560-1600): Lassus. By this time, many of the composers of polyphonic music were native to Italy and other countries: the Netherlandish style had naturalized on foreign soil, and become a true European style.

## DVD single

A **DVD single** is a [music single](#) in the form of a DVD. The format was introduced in the late 1990s/early 2000s. Although many record companies refused to issue [CD singles](#), they readily issued DVD Singles, and some popular DVD singles include Kelly Clarkson's "A Moment Like This," Jessica Simpson's "With You," and Beyoncé's "Crazy In Love". The DVD single never really caught on in the USA, and many are out of print nowadays causing some to view them as collector items. The DVD single replaced the [Video single](#).

## DVD singles released in the USA

- "Music" - Madonna
- "What It Feels Like for a Girl" - Madonna
- "I'm Glad" - Jennifer Lopez
- "Fine" - Whitney Houston
- "Most Girls" - Pink
- "Pappa Don't Preach" - Kelly Osbourne
- "This Is Me" - Dream
- "B.O.B" - Outkast
- "He Wasn't Man Enough" - Toni Braxton
- "Just Be a Man About It" - Toni Braxton
- "Here with Me" - Dido
- "Don't Let Me Get Me" - Pink
- "U Don't Have to Call" - Usher
- "A New Day Has Come" - Celine Dion
- "Trapped in the Closet, Chapters 1-12"- R. Kelly
- "Survivor" - Destiny's Child
- "Fill Me In" - Craig David
- "There's Gotta Be More to Life" - Stacie Orrico
- "A Moment Like This" - Kelly Clarkson
- "White Flag" - Dido
- "I'm with You" - Avril Lavigne
- "With You" - Jessica Simpson
- "Crazy In Love" - Beyoncé
- "Bouncing Off The Ceiling (Upside Down)" - A\*Teens
- "Floorfiller" - A\*Teens
- "Try It on My Own" - Whitney Houston

## Ear training

**Ear training** or **aural skills** is what [musicians](#) do to improve their ability to identify the sounds of different [intervals](#), [chords](#), [rhythms](#), and other elements of [music](#). [Singing](#) plays an important part in ear training, since one must be able hear music in one's head and match pitch before it is possible to sing it reliably. One does not need absolute pitch to succeed at ear training; one goal of ear training is the development of relative pitch.

## Interval recognition

Interval recognition is a crucial skill for musicians: in order to determine the notes in a [melody](#), a musician must have some ability to recognize intervals. Some music teachers teach their students relative pitch by having them associate each possible interval with the first two notes of a popular song. Here are some examples for each interval, measured in half-steps (aka semi-tones) from zero (unison) to 12 (one complete octave), along with the name of each interval:

- 0: Unison: Happy Birthday To You (the two notes of "happy")
- 1: Minor second: Theme from Jaws
- 2: Major second: Frere Jacques
- 3: Minor third: Brahms' Lullaby, the Olympic Fanfare and Theme (heard as the first brass notes in the fanfare) which plays at the beginning of NBC Olympic broadcasts, Somewhere Out There
- 4: Major third: Have Yourself a Merry Little Christmas, Summon the Heroes (the 1996 Olympic theme, heard on NBC during Olympic broadcasts), Kumbaya
- 5: Perfect fourth: Auld Lang Syne ("Should Auld..."), the wedding song ("Here comes the bride"), or O Christmas Tree
- 6: Tritone: "Maria" and "Cool", from West Side Story, or the theme from The Simpsons
- 7: Perfect fifth: Also Sprach Zarathustra (Theme from 2001: A Space Odyssey), Hey There, Georgie Girl, or Twinkle, Twinkle, Little Star (between the first and second twinkles)
- 8: Minor sixth: Scott Joplin's The Entertainer (Main theme after the intro), Across the Stars from Star Wars, or the theme from Love Story
- 9: Major sixth: My Bonnie Lies Over The Ocean, or the NBC theme
- 10: Minor seventh: Somewhere, from West Side Story
- 11: Major seventh: a-Ha's Take On Me, or the first and third notes of Somewhere Over the Rainbow
- 12: Octave: Somewhere Over the Rainbow

In addition, there are various systems (including solfege, sargam, and numerical sight-singing) that assign specific syllables to different notes of the [scale](#). Among other things, this makes it easier to hear how intervals sound in different contexts, such as in different keys, or starting on different notes of the same scale.

## Chord recognition

Complementary to recognizing the melody of a song is hearing the harmonic structures that support it. Musicians often practice hearing different types of chords and their inversions out of context, just to hear the characteristic sound of the chord. They also learn [chord progressions](#) to hear how chords relate to each other in the context of a piece of music.

## Rhythm recognition

One way musicians practice rhythms is by breaking them up into smaller, more easily identifiable sub-patterns. For example, one might start by learning the sound of all the combinations of four eighth notes and eighth rests, and then proceed to string different four-note patterns together.

Another way to practice rhythms is by muscle memory: basically teaching the rhythm to different muscles in the body. One may start by tapping a rhythm with the hands and feet individually, or singing a rhythm on a syllable (e.g "ta"). Later stages may combine keeping time with the hand, foot, or voice and simultaneously tapping out the rhythm, and beating out multiple overlapping rhythms.

Keeping accurate time is a crucial part of rhythmic training. For this task, a metronome is a valuable tool.

## **Transcription**

Music teachers often recommend transcribing recorded music as a way to practice all of the above, including recognizing rhythm, melody and harmony.

# Early music

## Eras of European art music

[Ancient music](#) 1500 BCE - 476 CE

**Early music** 476 - 1600

[Common practice period](#) 1600 - 1900

[20th century classical music](#) 1900 - 2000

**Early music** is [European classical music](#) before the [Classical music era](#) and after [Ancient music](#). The common range given is from the end of [Ancient music](#) to the beginning of the [Baroque](#) era in about 1600, and so roughly corresponds with the European Middle Ages period.

## Post-Antiquity

For information on early music post-Antiquity, see the following articles:

- [Medieval music](#) (roughly 1000-1450)
- [Renaissance music](#) (roughly 1450-1600)
- [Baroque music](#) (roughly 1600-1750)

## **Authentic performance**

The term "early music" is closely associated with the concept of [authentic performance](#). The authentic performance movement began with the performance of early music, and in general, the earlier the music, the more likely it is that its performers will show an interest in authentic performance as it becomes more difficult for the reason listed below and others.

## Notation and performance

According to Margaret Bent (1998), Early [music notation](#), "is under-prescriptive by our standards; when translated into modern form it acquires a prescriptive weight that overspecifies and distorts its original openness." Before about 1600, written music did not consistently state which instruments are used when. A century earlier, people who wrote down music did not always specify whether lines of polyphony were to be sung or played on an instrument. Similarly, the notation frequently does not indicate what key to play the music in, if any. Accidentals were not necessary. Notations for rhythm go back only to about 1200. There is thus a speculative element to all modern performances of Medieval and Renaissance music. However, Renaissance musicians would have been highly trained in dyadic counterpoint and thus possessed this and other information necessary to read a score, "what modern notation [now] requires [accidentals] would then have been perfectly apparent without notation to a singer versed in counterpoint" (ibid). See the article on [Renaissance music](#) and its section on notation and performance.

# Earworm

**Earworm**, a loan translation of the German *Ohrwurm*, is a term for a song stuck in one's head, particularly an annoying one. Use of the English translation was introduced by James Kellaris, an associate professor of marketing at the University of Cincinnati. His studies appeared to demonstrate that different people have varying susceptibilities to earworms, but that almost everybody has been afflicted with one at some time or another.

Some sufferers from earworm prefer the term "repetunitis" or, if sufficiently acute, "melodymania."

## Examples

In the film Shrek, there is a parody of the song "it's a small world" by the Sherman Brothers, a powerful earworm.

*"Tenser" said the Tensor; Tension, Apprehension, and Dissension have begun -*  
This earworm was used to foil telepathic surveillance in Alfred Bester's award-winning science fiction novel The Demolished Man. It has become a well known meme in the sci-fi community.

| <b>Mainstream popularity:</b> | Remains a staple of popular music since the late 1980s. It reached its commercial pinnacle during the late-1990s, lower but existent in the 2000s  |

[Alternative hip hop](#) - [Jazz rap](#) - [Hardcore hip hop](#) - Mafioso rap - [Pop-rap](#) - [Latin rap](#)

New York City (Brooklyn - Queens - South Bronx - Staten Island - Harlem) - Philadelphia - New Jersey - Virginia

[Roots of hip hop](#) - Hip Hop Culture - [Gangsta Rap](#) - [Timeline of hip hop](#) - [Old school hip hop](#) - [the golden age of hip hop](#)

**East Coast hip hop** (sometimes also referred to as **New York hip hop**) is a style of [hip hop music](#) that originated in New York City during the late-1970s. East Coast hip hop emerged as a definitive subgenre after artists from other regions of the United States, chiefly the [West Coast](#) and the [South](#), emerged with different styles of hip hop. It has since grown into a major subgenre of hip hop, and has played an instrumental role in [hip hop history](#). East Coast hip hop has developed several creative epicenters and local scenes within the Northeastern United States, most of which are primarily located within African-American and Hispanic urban centers.

# Old school hip hop (1970–1986)

## 1970s

*For more details on this topic, see [Roots of hip hop](#).*

[Hip hop music emerged](#) from block parties thrown by owners of loud and expensive stereo equipment, which they could share with the community or use to compete among ultra-competitive West Indian DJs who began isolating the percussion break from funk or disco songs. The rough economic situation of the inter-city community motivated DJs to remake, rearrange, or remix existing recordings into completely different compositions with the use of [turntables](#). DJs would extend the *break* section of previously released songs by alternating between duplicate copies of a vinyl recording with the use of two turntables and a mixer. In the late 1970s, visionary DJs residing in New York City (specifically the Bronx), such as Kool Herc, Grandmaster Flash, and Afrika Bambaataa molded this new sound into a definable genre of music, which soon evolved into a urban sub-culture, which included [rapping](#), beatboxing, scratching, graffiti, and breakdancing. Therefore, because New York City is considered to be the birthplace of hip hop, many look to the East Coast (New York City in particular) as the prestigious capitol, or Mecca, of Hip hop culture.

Soon MCs entered the equation to enhance the DJ's efforts and act as a crowd moderator. Originally, early hip hop performers focused on introducing themselves and others in the audience (the origin of the still common practice of "shouting out" on hip hop records). These early performers often emceed for hours at a time, with some improvisation and a simple four-count beat, along with a basic chorus to allow the performer to gather his thoughts (such as "one, two, three, y'all, to the beat, y'all"). Later, the MCs grew more varied in their vocal and rhythmic approach, incorporating brief rhymes, often with a sexual or scatological theme, in an effort at differentiating themselves and entertaining the audience.

## 1980s

The techniques used in hip hop changed during the 1980s as well. Most important was the DJ records such as Grandmaster Flash's "Adventures on the Wheels of Steel" (known for pioneering use of scratching, which was invented by Grandwizard Theodore in 1977) as well as electronic recordings such as "Planet Rock" by Afrika Bambaataa and Run DMC's very basic, all electronic "Sucker MC's" and "Peter Piper" which contains genuine cutting by Run DMC member Jam Master Jay. Grandmaster Flash & the Furious Five released a "message rap", called "The Message", in 1982; this was one of the earliest examples of recorded hip hop with a socially aware tone. In 1984, Marley Marl accidentally caught a drum machine snare hit in the sampler; this innovation was vital in the development of [electro](#) and other later types of hip hop.

With the advent of recorded hip hop in the late 1970s, all the major elements and techniques of the genre were in place. While Kool Herc & the Herculoids were the

first hip hoppers to gain major fame in New York, the public at large was first introduced to hip hop by the releases of the first two commercially issued hip hop recordings, "King Tim III" by The Fatback Band and "Rapper's Delight" by The Sugarhill Gang. Neither act had significant roots in the culture; the Fatback Band was primarily a funk act, while the Sugarhill Gang was the studio creation of Sugar Hill co-founder Sylvia Robinson. Nevertheless, "Rapper's Delight" became a Top 40 hit on the U.S. Billboard pop singles chart, and after the releases of follow ups by acts such as Kurtis Blow ("The Breaks"), The Sequence ("Funk You Up"), and Grandmaster Flash & the Furious Five ("Freedom"), hip hop was pegged as a successful, yet temporary, trend in music. During the early 1970s, breakdancing arose during block parties, as b-boys and b-girls got in front of the audience to dance in a distinctive, frenetic style. The style was documented for release to a world wide audience for the first time in Beat Street.

Though not yet mainstream, it was well-known among African Americans, even outside of New York City; hip hop could be found in cities as diverse as Los Angeles, Washington, Baltimore, Dallas, Kansas City, Miami, Seattle, St. Louis, New Orleans, and Houston. In particular, Philadelphia was, for many years, the only city whose contributions to hip hop were valued as greatly as New York City's by hip hop purists and critics. Hip hop was popular there at least as far back as 1976 (first record: "Rhythm Talk", by Jocko Henderson in 1979), and the New York Times dubbed Philly the "Graffiti Capital of the World" in 1971, due to the influence of such legendary graffiti artists as Cornbread. The first female solo artist to record hip hop was Lady B. ("To the Beat Y'All", 1980), a Philly-area radio DJ.

# The Golden Age of Hip Hop (1986–1993)

Main article: [The golden age of hip hop](#)

[Old school hip hop](#) would often sample [disco](#), [soul](#), and [funk](#) tracks. In the case of the Sugarhill Gang, a live band was used for samples. However, the old school sound soon became based largely on drum machines and popular break samples. Mixing and scratching techniques eventually developed along with the breaks. In contrast with the later rhymes of new school hip hop, old school rap was relatively simple in its rhythms and cadences. However, from the mid- to late 1980s, Hip hop gradually gravitated to a more sample-reliant sound, as rappers increased their technical dexterity in crafting lyrics. As time went by, a distinction appeared between the "[old school](#)" sound (defined by simplistic rhyme schemes, straightforward messages, and sparse rhythms and cadences with few samples) and the new school. Typifying this [Golden Age](#) of the East Coast sound was Eric B. & Rakim's Paid in Full. Paid in Full showcased Rakim's multi-syllabic lyrical delivery which would be subsequently adapted by numerous rappers —introducing the idea of a rapid, continuous, free-rhythmic flow, based around deeply woven rhyme structures (incorporating internal rhymes and sophisticated metaphors). Furthermore, Eric B.'s innovative distillation of James Brown samples ushered the "godfather rap" period, which witnessed the extensive sampling of [R&B](#) and [soul music](#) as instrumentals for hip hop songs.

## Popularization

While New York City would remain the center of hip hop culture for much of the 1980s, [hip hop music](#) itself was gaining mainstream success and becoming increasingly accessible within the musical fabric of pop culture. Artists such as Kurtis Blow, Run DMC, Biz Markie, Slick Rick, Big Daddy Kane, and EPMD, were considered the closest thing to superstars that hip hop had yet produced, and all were firmly rooted on the East Coast. In fact, Kurtis Blow (Kurtis Blow), LL Cool J (Radio) and especially Run-D.M.C. (Raising Hell), were among the first hip hop artists to legitimize the genre by gaining acceptance from the mainstream media. LL Cool J's Radio spawned a number of singles that entered the dance charts, peaking with "I Can Give You More" (#21). 1986 saw two hip hop acts in the Billboard Top Ten; Run-D.M.C.'s "Walk This Way" collaboration with Aerosmith, and the Beastie Boys "(You Gotta) Fight for Your Right (To Party!)". The pop success of both singles was unheard of for the time. Kurtis Blow, whose appearance in a Sprite commercial made him the first hip hop musician to be considered mainstream enough to represent a major product, but also the first to be accused by the hip hop audience of [selling out](#). Other popular performer among mainstream audiences included DJ Jazzy Jeff & the Fresh Prince, who won rap's first grammy award in 1988.

## Diversification and The Rise of Alternative Hip Hop

During the late-1980s, Philadelphia's Schoolly D, developed what became known as [gangsta rap](#). Although Gangsta rap is usually credited as being an originally West Coast phenomenon (due to the mainstream exposure of Ice-T and N.W.A) Boogie Down Productions (Criminal Minded) and Kool G Rap (*Road to the Riches*) were instrumental in pioneering [hardcore hip hop](#), an East Coast variant of gangsta rap. Another major influence on East Coast hip hop was the pioneering work of the politically-aware performers, Public Enemy. In the late 1980s, Public Enemy became one of the premiere acts in hip hop, both among aficionados and mainstream listeners. In 1987, Public Enemy released their debut album (Yo! Bum Rush the Show) on Def Jam - one of hip hop's oldest and most important labels, and Boogie Down Productions followed up in 1988 with *By All Means Necessary*; both records pioneered wave of hard-edged politicized performers. In particular, Public Enemy's *It Takes a Nation of Millions to Hold Us Back* became surprisingly successful, despite its militant and confrontational tone, appearing on both the club and rap charts, and peaking at #17 and #11, respectively. Aside from the lyrical innovations, Public Enemy's DJ, Terminator X, and their production team, The Bomb Squad (along with Eric B., Marley Marl, and Prince Paul among others) both pioneered new techniques in sampling and scratching that resulted in dense, multi-layered sonic collages.

Public Enemy's politically aware lyrics and militant activism served as the blueprint for groups such as X-Clan, Brand Nubian, and Native Tongues Posse (the last of which arose as a form of [alternative rap](#) with artists like De La Soul and A Tribe Called Quest). In 1988 and 1989, albums from the Native Tongues Posse collective such as De La Soul's *Three Feet High and Rising*, A Tribe Called Quest's *People's Instinctive Travels and the Paths of Rhythm*, and the Jungle Brothers' *Done by the Forces of Nature* are usually considered the first definitive alternative rap albums, with [jazz](#)-based samples and quirky, insightful lyrics covering a diverse range of topics and strongly influenced by the Afrocentric messages of Bambaataa's Zulu Nation. This period, between 1988 and 1992, when the Native Tongues (together with other crews such as Pete Rock and CL Smooth and The Main Source) were at their creative peak, is considered the apogee of [golden age of hip hop](#).

In addition to the Native Tongues Posse, influential singles were released in 1988, by Gang Starr ("Words I Manifest") and Stetsasonic ("Talkin' All That Jazz"); these two singles fused hip hop with jazz in a way never done before, and helped lead to the development of [jazz rap](#). Dignable Planets also achieved phenomenal success in the early nineties with their single *Cool Like Dat* and the album *Reachin' (A New Refutation Of Time & Space)*, though this alternative rap movement largely fizzled out in the mid-1990s, with A Tribe Called Quest splitting up and De La Soul, the Jungle Brothers, and Gang Starr retreating to the hip hop underground.

# Modern Hip Hop (1993–Present)

## The Rise of the West Coast

Main article: [West Coast hip hop](#)

Though East Coast hip hop was dominant throughout the 1980s, N.W.A.'s Straight Outta Compton and later Dr. Dre's *The Chronic* would introduce [West Coast hip hop](#) to the mainstream, and went on to supersede the East Coast's dominance. *The Chronic*, in particular, took West Coast rap in a new direction that was strongly influenced by [P-funk](#) artists, melding the psychedelic [funky](#) beats with slowly drawled lyrics. This came to be known as [G-funk](#), and dominated mainstream hip hop for several years through a roster of artists on Death Row Records, including most popularly, Snoop Doggy Dogg, whose debut, *Doggystyle*, included "What's My Name" and "Gin and Juice", both Top Ten pop hits. Thus, for much of the early-to-mid 1990s, the West Coast hip hop scene overshadowed several East Coast rappers. Encapsulating the torpid times, Jay-Z stated that, "It's like New York's been soft ever since Snoop came through and crushed them buildings", while making a reference to Dogg Pound's "New York, New York" video that featured Death Row artists stepping on New York's famed skyline. East Coast hip hop appeared to be in such disarray, that in 1993, West Coast rappers sold three times as many records as their East Coast counterparts.

## The East Coast Renaissance

Although G-Funk was the most popular variety of hip hop during the early 1990s, New York's hip hop scene did not disappear, and would remain an integral part of the industry. Several New York rappers rising from the local underground scene, began releasing noteworthy albums (including Enta Da Stage, Enter the Wu-Tang: 36 Chambers, Illmatic, Only Built 4 Cuban Linx, The Infamous, Doe Or Die, and Reasonable Doubt) —most of them gaining outstanding critical recognition and prominence, despite their sporadic sales. Gabe Gloden of Stylus Magazine wrote, "*From my perspective in the Midwest, the market was dominated by [West Coast hip hop](#), and these albums didn't make much of a dent in West Coast sales, but with time, these albums filtered their way into everyone's collections*" [1]. The most commercially successful of these albums, *Ready to Die*, launched Notorious B.I.G. into stardom and established Bad Boy Records (under the direction of Puff Daddy) as the main competitor of Death Row Records. In addition to the hugely profitable and pop-accessible Bad Boy label, the East Coast produced its share of varied, highly acclaimed artists, including the lyrical genius Nas, the hugely influential hardcore groups Wu-Tang Clan, and Mobb Deep, and lesser-known artists such as Black Moon, Smif-N-Wessun, O.C., Mic Geronimo, and Jeru the Damaja. These events signaled what many hip hop purists have since coined as the "*East Coast Renaissance*".

## The *Shiny Suit* era & Mainstream pinnacle

*For more details on this topic, see [Pop.rap](#).*

The revival of the East Coast hip hop scene as a reemerging identity soon spawned an inter-coastal confrontation. This rivalry culminated into the murders of Tupac Shakur and The Notorious B.I.G. in the mid-1990s. In the wake of the deaths of both artists, Biggie's certified-diamond double album, *Life After Death*, became a huge posthumous success in 1997. Whereas West Coast dominance soon crumbled after the death of Tupac, as Dr. Dre and Snoop Dogg left Death Row Records and Suge Knight was jailed over illegal business practices. This spelled an end to the West Coast's four year reign—which was soon to be superseded to the East. Bad Boy Records went on to further dominate the charts upon the release of Puffy's and Ma\$e's respective multi-platinum albums: *No Way Out* and *Harlem World*.

Though this commercial success came at the detriment of critical acclaim, due to the perceived over-reliance on sampling). Generally, the era in which this sound prospered (called the "Shiny Suit Era" by some due to Puffy and Ma\$e's tendencies to wear expensive clothing that would literally shine) is not fondly remembered, and it is no coincidence that its rise to prosperity was virtually paralleled by a surge of activity in hardcore and alternative hip hop scenes. Afterwards, during the remainder of the late-1990s, a new breed of hard-edged East Coast rappers soon emerged, who began topping the charts once again. These rappers included DMX, Ja Rule, and Jay-Z, who all rose to mainstream prominence with their multi-platinum releases: *It's Dark and Hell Is Hot*, *Rule 3:36*, and *Vol. 2: Hard Knock Life*.

## 'Second Wave' Alternative hip hop

Just as [gangsta.rap](#) and [pop.rap](#) was beginning to achieve incredible mainstream and crossover success, hip hop's alternative side experienced a resurgence. The Afrocentric [neo-soul](#) movement was heavily influenced by the Native Tongues and artists such as Mos Def (*Black on Both Sides*), Talib Kweli (*Train Of Thought*), The Fugees (*The Score*), The Roots (*Things Fall Apart*), Erykah Badu (*Baduizm*), and Slum Village (*Fantastic Vol. 2*) achieved great success at the close of the decade. The Rawkus record label, home to Mos Def, Talib Kweli and Company Flow as well as Pharoahe Monch is largely credited with aiding the late 1990s resurgence of alternative rap.

Mos Def and Talib Kweli's 1998 release, *Black Star* (largely produced by Hi-Tek) also contributed greatly to this evolution, with its return to Native Tongues-style old school hip hop. Mos Def's solo debut, *Black on Both Sides* (1999), quickly established him as a darling of alternative media for its incendiary politics. Kweli's solo career, however, took some time to get off the ground; as he did not release his debut, *Reflection Eternal* until 2000. Pharaoh Monch's *Internal Affairs*, his 1999 solo debut after leaving Organized Konfusion, also added more gangsta and hardcore hip hop elements to the mix. The hip hop band, The Roots were among the leaders of the second alternative hip hop wave, dropping several critically acclaimed albums in the mid-to-late 1990s, including *Do You Want More?!!!??!* (1995), *Illadelph Halflife* (1996), and the breakthrough, *Things Fall Apart* in 1999.

## The Rise of the South

Main article: [Southern Rap](#)

However, for much of the early 2000s, the East Coast chart-dominance began losing its momentum to the then growing Dirty South. Particularly, in the year 2003 (a year which coincided with the retirement of Jay-Z and DMX, and the decline of Ja Rule's popularity), Southern Rap experienced an unprecedented degree of mainstream popularity with several hit singles, including Never Scared by Bone Crusher, featuring Killer Mike and T.I., Damn! by Youngbloodz, and especially Get Low (produced by Lil' Jon and featuring the Ying Yang Twins). Rap News Network summed up this phenomenon when it stated, "This year's hottest hip hop artists are from the Midwest and the South, from Atlanta or St. Louis or Chicago. Anywhere, it seems, but here [New York]." [2] Since then, 50 cent remains the only multi-platinum selling East Coast artist to top the charts. From the forementioned mass appeal of Lil' Jon and the Ying Yang Twins, to the meteoric rise of Missy Elliot, T.I., Ludacris, Outkast, to the rise of Houston rappers such as, Lil' Flip, and Chamillionaire, the East Coast has struggled to retain its former status in the mainstream.

Furthermore, despite having one of the most productive underground scenes in the country, East Coast hip hop currently suffers from frequent infighting. While East Coast rap is currently struggling for mainstream recognition, East Coast (most notably New York) critics, DJ's, radio personalities, and even a few upcoming rappers have frequently expressed their distaste for Southern dominance. Criticisms range from generalizations of the South as being only one type of music, claims of lack of lyricism and creativity, and even criticizing other East Coast rappers for collaborating with Southern artists. Some hip hop experts speculate that this will eventually lead to a regional war between today's popular Southern artists and today's upcoming East Coast acts, a la the infamous and tragic East Coast/West Coast feud.

## Musical style & Regional difference

The stand-out point of East Coast hip hop from other regional forms (in general) is the intricate and multi-threaded lyrics and delivery of this sub-genre. East coast artists tend to be more complex, witty, and versatile (depending on the artist). As a general rule, East Coast rap artists tend to emphasize [lyricism](#) coupled with production centered on the frenetic use of a [drum machine](#). Critically-acclaimed East Coast artists such as Mos Def, Talib Kweli, and Nas have a wide margin of subject matter thus appealing to a wider audience, particularly when they address social issues in their communities. Alternative styles usually develop in this region with groups such as A Tribe Called Quest, The Roots, Gang Starr, and De La Soul, and Common; who blend [jazz](#) or [abstract](#) production with socially-conscious lyrics.

Few rappers such as 50 Cent, Jay-Z, DMX, Jadakiss, and Fat Joe have adopted [gangsta rap](#) persona which typically glorifies violence, drugs or gang affiliation, or groups such as M.O.P. which could produce [hardcore](#), adrenaline inducing music. Furthermore, East coast hip hop also tends to have slower pace beats-per-minute (90-120 Beats Per Minute) than its southern and west coast counterparts.

# East Coast Swing

**East Coast Swing (ECS)** is a [partner dance](#) derived from the [Lindy Hop](#). The basic step is triple step, triple step, and a rock step. East Coast Swing (6 count) is intermixable with most forms of [swing dancing](#), though primarily with the Lindy Hop.

## Steps

- *Basic Closed*: In closed position, simply remain in the same position while doing footwork.
- *Basic Open*: In open position, remain in the same position while doing footwork.
- *She Goes*: In open position, leader raises left hand and follower spins under. (Left Inside Turn)
- *He Goes*: In open position, leader raises left hand and leader spins under. (Leader Left Outside Turn)
- *She Goes, He Goes*: In open position, leader raises left hand and follower spins under, then leader spins under. (Left Inside Turn followed by Leader Left Outside Turn)
- *Tuck Turn*: The leader gives a small nudge and raises left hand, and the follower goes under. (Left Outside Turn)
- *Throw Out*: After closed position rock step, leader gives small right forearm nudge, and follower goes to open position.
- *Return to Close*: In open position, the leader gives a small pull and the follower comes into closed position.
- *Cuddle*: Same step as *She Goes*, except the leader does not let go of the right hand. The leader and follower end up side-by-side in a cuddle position.
- *Waist slide*: In open position, leader raises right hand, and turns to his left, putting his right arm and his partners left arm over his head and in front of him while turning. He lets go with his left hand, continues to turn while maintaining the hold with his right hand, ends up facing his partner again, and regrips follow's right hand with his left.

# Footwork

Footwork can have many different forms:

- *Single Step*: Rock-step, step-hold, step-hold.
- *Double Step*: Rock-step, kick-step, kick-step; or rock-step, tap-step, tap-step.
- *Triple Step*: Rock-step, triple-step, triple-step.
- *Holds*: Rock step, hold-hold, hold-hold.

These forms can be mixed and matched, for example: Rock-step, triple-step, kick, hold.

The reasons to choose different footwork are as follows.

- *Learning*: Beginning dancers can do simple steps easily, but they may struggle with more complex footwork. Advanced dancers may enjoy more complex footwork.
- *Tempo*: Simpler footwork, such as steps and holds, are easier to do to fast music. Complex footwork makes slow music more interesting.
- *Musicality*: If the music has very simple rhythm, such as one beat per beat, then kick steps work well. If the music has a more complex rhythm, such as two beats per beat, then triple steps work well. If the music pauses (breaks) then holds work well.
- *Variety*: It is nice to vary the dance form, so if you use one kind of footwork for a while, you might want to try another form for a while.

## **East Coast - West Coast hip hop rivalry**

**The East Coast-West Coast hip hop rivalry** is probably the most famous rap feud of recent times is the early to mid-1990s rivalry between the East Coast's Bad Boy Records and the West Coast's Death Row Records, which was widely thought of and reported in the media as an East Coast vs West Coast dispute. Much of the what was conducted through the two most prominent rapper of that period, archrivals 2Pac and The Notorious B.I.G..

## Background

Hip hop had originated in the streets of New York, and the city remained the undisputed capital of hip hop until 1992, when Dr. Dre's *The Chronic* became one of the biggest-selling hip hop albums in history, followed shortly by Snoop Doggy Dogg's breakout album *Doggystyle* in 1993. Dre was on Death Row Records, headed by Suge Knight, and he soon built up a roster of stars like - Tupac Shakur, Tha Dogg Pound and Snoop Doggy Dogg that reigned on the charts, and Los Angeles began to rival New York for its place as the center for mainstream hip hop. This had already, and somewhat inevitably, created a tension between certain industry heavyweights on both coasts, each hungry for control of an increasingly lucrative market. The biggest stars on the East Coast at this time were Puff Daddy's Bad Boy Records crew, which was founded in 1993 and included Craig Mack, Mase and the Notorious B.I.G..

## Beginning

Bad Boy and Death Row were thrown into conflict with one another after Tupac Shakur was shot five times at a New York recording studio on November 30, 1994, and publicly blamed his former close friend Notorious B.I.G and his Bad Boy Records cohorts. This feud escalated after Suge Knight mocked Puff Daddy at the Source Awards in August 1995, announcing to the assembly of artists and industry figures: "If you don't want the owner of your label on your album or in your video or on your tour, come sign with Death Row." Despite Puff Daddy himself attempting to defuse the situation with a speech later in the evening, a later performance by Death Row's Dr. Dre and Snoop Dogg was booed (to which Snoop famously responded "The East Coast ain't got no love for Dr. Dre and Snoop Dogg?").

The feud continued to escalate through numerous incidents. First, in September 1995, a close friend of Knight's was gunned down at a birthday party thrown for producer Jermaine Dupri in Atlanta, Georgia, for which Knight publicly blamed Bad Boy Records. Then, in December, while filming the video for the Dogg Pound's song "New York, New York" in Manhattan, Snoop Dogg's trailer was shot at numerous times (though the trailer was in fact empty at the time). The video itself then became the source of further controversy on its release, featuring Death Row artists knocking over New York skyscrapers and landmarks, to which many East Coast artists and fans took offense. There was also suspicion that the song itself was also targeted at Bad Boy Records and New York in general, though this is unlikely as the song is in fact a remake of a Grandmaster Flash song, features only generic, non-specific braggadocio/battle rhymes with nothing that could be interpreted as a specific attack on any specific individuals, and was written and recorded before the Bad Boy/Death Row feud got off the ground.

## Development

In 1995, The Notorious B.I.G. released the track "Who Shot Ya." Tupac interpreted it as B.I.G. mocking his '95 shooting, and claimed it proved that Bad Boy had set him up. In early 1996, Tupac released the infamous diss track "Hit 'Em Up," in which he claimed to have had sex with the Notorious B.I.G.'s wife Faith Evans and that "this ain't no freestyle battle, y'all niggas getting killed" and was viewed as taking the feud to another level and critics today look on the song as one of the defining moments of the rivalry. B.I.G. soon responded on Jay-Z's track "Brooklyn's Finest" (a move which also caused Jay-Z to become embroiled in the dispute). In March 1996, at the Soul Train Awards in Miami, there was a confrontation in the parking lot between the respective entourages of Bad Boy and Death Row in which guns were drawn. Although an armed staring contest was all this confrontation eventually amounted to, it was readily apparent to hip hop fans and artists that this rivalry was getting very out of hand, and going far beyond the heated, but never violent, lyrical battles for the superiority of the past.

On September 7, 1996 Tupac Shakur was shot several times in Las Vegas, dying a few days later on Friday 13. On March 9, 1997, then Notorious B.I.G. was shot and killed in Los Angeles, California. Both murders remain unsolved, and numerous theories (some of them conspiracy theories) have sprung up. These include, most notoriously, that Shakur (and possibly Biggie) faked their own deaths.

In 1997, several rappers, including Bizzy Bone, Doug E. Fresh and Snoop Dogg met at the request of Louis Farrakhan, leader of the Nation of Islam and pledged to forgive any slights that may be related to the rivalry and deaths of Shakur and Biggie.

## Other

Prior to his death, Tupac had also come into separate disputes with several other East Coast rappers. Some friends of Tupac Shakur had been apparently snubbed by the group Mobb Deep at one of their concerts, and when word of the incident reached a then-jailed Tupac he sent out a message to Mobb Deep threatening violence. Mobb Deep immediately responded with the track "Drop a Gem on 'Em" which, although its official release on the Hell On Earth album occurred after Tupac's "Hit 'Em Up" single which mocked Mobb Deep, it had been circulating on mixtapes and radio in New York long before. Nas also angered Tupac by appearing to mock Tupac with the line "Fake thug, no love, you get the slug, CB4 gusto your luck blow..." in the track "The Message," although Nas denied that this line was ever aimed at Pac. Even Chino XL, an underground rapper from New Jersey with no eye on mainstream domination and no ties to Bad Boy Records, Nas or Mobb Deep, incurred Tupac's wrath on "Hit Em Up" by using him in a somewhat ambiguous simile "By this industry, I'm trying not to get fucked like Tupac in jail" (ironically, the track to which this line belongs is a duet with proud West Coast representative Ras Kass). Chino soon responded with a freestyle on live radio, but it was either ignored or not heard by Tupac. Since these rappers were all East Coast artists, and because they were often insulted in the same songs which Tupac insulted Bad Boy Records, they are often believed to be part of a greater "East Coast vs West Coast" war driven by allegiance and territory. Tupac was quick to diss any East Coast artist that had any kind of association with Biggie, and in fact was harsh on his Death Row labelmates who were reluctant to participate, such as Snoop Dogg and later Dr. Dre. Because of Tupac and Biggie's prominence on the West and East Coast respectively (both were believed to be the preeminent MCs of their time) the feud became widely known as East vs. West, rather than simply Bad Boy vs. Death Row. However, there were several different artists who, albeit less commercially successful, were relatively uninvolved in the beef; these included Nas, Redman, Busta Rhymes, and the Wu-Tang Clan. Some have claimed that the "East vs. West" paradigm amounted to media sensationalism; however, as previously stated, both artists were the preeminent rappers on their respective coasts, and often invoked their region in their music (the cover of Tupac's All Eyez on Me, for example, shows him flashing the "Westside" sign.)

## Aftermath

Soon after the death of Shakur, Death Row Records folded as Afeni Shakur, Tupac's mother, sued the label for allegedly cheating her son out of millions. Label head Suge Knight ended up in jail for unrelated probation violations. Lady of Rage and Nate Dogg have also filed suits against Death Row with similar allegations. Puff Daddy has also had multiple legal troubles, including a much-publicized case resulting from a shooting in a New York club; he has been acquitted, though fellow rapper Shyne was not. Bad Boy Records had for the most part maintained its place at the top of the industry since the death of Notorious B.I.G., with artist Mase achieving success before his early retirement (and un-retirement) and Puff Daddy (now Diddy) himself achieving considerable commercial success. More recently, Bad Boy has struggled as a record label due to a lack of marketable talent and allegations that Puff is more concerned with his other ventures (i.e., Sean John clothing). After Suge Knight's release from prison, Death Row Records was reborn as "Tha Row," signing many artists including former Dogg Pound member Kurupt, and Lisa "Left Eye" Lopes. Unfortunately Lopes was killed in a car crash not long after signing to the label, and none of their other signings have achieved much in the way of commercial success. Mostly Deathrow focuses on dissing former label mates, such as Snoop Dogg and Dr. Dre.

# Eclecticism

**Eclecticism** is a kind of mixed style in the fine arts: "the borrowing of a variety of styles from different sources and combining them" (Hume 2003, p.5). Significantly, Eclecticism hardly ever constituted a specific style in art: it is characterized by the fact that it was not a particular style. In general, the term describes the combination in a single work of a variety of influences — mainly of elements from different historical styles in architecture, painting, and the graphic and decorative arts. In [music](#) the term used may be either eclecticism or [Crossover music](#).

The term **eclectic** was first used by Johann Joachim Winckelmann to characterize the art of the Carracci, who incorporated in their paintings elements from the Renaissance and classical traditions. Indeed, Agostino, Annibale and Lodovico Carracci had tried to combine in their art Michelangelo's line, Titian's color, Correggio's chiaroscuro, and Raphael's symmetry and grace.

In the 18th century, Sir Joshua Reynolds, head of the Royal Academy of Arts in London, was one of the most influential advocates of eclecticism. In the sixth of his famous academical Discourses (1774), he wrote that the painter may use the work of the ancients as a "magazine of common property, always open to the public, whence every man has a right to take what materials he pleases." In 19th-century England, John Ruskin also pleaded for eclecticism.

Eclecticism was an important concept in Western architecture during the mid and late 19th century, and it reappeared in a new guise in the latter part of the 20th century. Much of [postmodern](#) art is characterized by eclecticism: in [hip-hop](#), for instance, the fusion of samples from different genres has become very popular.

Picasso has often been cited as an eclectic artist because of his African-influenced Period.

## Effects pedal

An **effects pedal**, or **stomp box**, is an [effects unit](#) housed in a small metal chassis, used by musicians, usually guitar players, but sometimes players of other string instruments. These devices alter the sound quality or [timbre](#) of the input signal, adding effects such as distortion, fuzz, overdrive, chorus, reverb, wah-wah, flanging, or phaser. They are called pedals or stomp boxes because they sit on the floor and have large on/off switches on top that are activated by foot. Some, such as wah-wah or volume pedals, are also manipulated while in operation by moving a large foot-activated analog switch.

## Usage

The pedal is connected to the signal chain utilizing two mono 1/4" jack plugs (or "phone plugs") (in/out). Some stomp boxes have stereo out via two mono out signals, and a few have stereo jacks for both input and output (though this is quite uncommon). Several pedals can be linked together in a chain. When a pedal is off or inactive, the signal coming in to the pedal is shunted onto a bypass, so that the "dry" or unaffected signal can go on to other effects down the chain, and thus any combination of effects on a chain can be created without having to reconnect boxes during a performance. The signal can be routed through the stomp boxes in any combination, but it is most common to put the signal distortion or wah wah pedal at the start of the chain; pedals which alters the pitch or color of the tone in the middle; and boxes which modify the resonance, like delay, echo, and reverb units at the end. They can also be used together with other [effects units](#).

## Types of pedals

- Distortion/Overdrive/Fuzz - The familiar "modern rock guitar" sound. A distortion pedal takes a normal electric guitar signal and introduces odd harmonics to literally distort the signal's waveform. Some distortion boxes are more accurately called "overdrive" boxes, which can either amplify the signal greatly or clip the peaks of the sound's waveform to impart a gritty, dirty, and/or harsh tone, intentionally reminiscent of a tube amplifier "driven" to its limit. Different types of distortion, each with distinct sonic characteristics, include regular distortion, overdrive or tube-style distortion, and "fuzz" (intended to recreate the classic 1960's tone of an overdriven tube amp combined with torn speaker cones). Although most distortion devices use solid state circuitry, some "tube distortion" pedals are designed with actual vacuum tubes. Distortion pedals designed specifically for bass guitar have seen increased popularity as well. Some commonly seen distortion pedals include:
  - BOSS DS-1
  - Dallas Arbiter Fuzz Face
  - Electro-Harmonix Big Muff
  - Ibanez Tube Screamer
  - Pro Co RAT
  - Marshall ShredMaster
  - Fuzzbox
- Delay/Echo - Creates a copy of an incoming sound and slightly time-delays it, creating either a "slap" (single repetition) or an echo (multiple repetitions) effect. Delay pedals may use either analog or digital technology. Analog delays often are less flexible and not as "perfect" sounding as digital delays, but some guitarists prefer the warmer tones they produce; some early delay devices actually used magnetic tape to produce the time delay effect. Some commonly seen delay pedals include:
  - BOSS DD-6
  - Line 6 Delay Modeller
- Chorus/flanger - A variation on delay which includes a cycling, variable delay time, and the delay time is so short that individual repetitions are not heard. The result is a thick, "swirling" sound that may suggest multiple instruments playing in unison (chorus) or a simulation of the fluid "tape flanging" effect associated with the psychedelic rock music of the 1960s. The chorus effect was especially popular with guitarists in the 1980s. Some chorus pedals include:
  - BOSS CE-1
  - Electro-Harmonix Small Clone
  - Ibanez CF-7

- Octavizer - mix the input signal with a synthesised signal whose musical tone is an octave lower or higher than the original.
  - Ampeg Scrambler
  - fOXX Tone Machine
  - Green Ringer
  - Tycobrahe Octavia
  
- Phase shifter - This device creates a complex frequency response containing many regularly-spaced "notches" in an incoming signal by combining it with a copy of itself out of phase, and shifting the phase relationship cyclically. The phasing effect is a kind of hollow "whooshing" sound reminiscent of a flying jet airplane. Some electronic "rotating speaker simulators" are actually phase shifters. Phase shifters were popular in the 1970s, particularly used with electric piano and funk bass guitar. Some phasing pedals include:
  - Dunlop Univibe
  - MXR Phase 90/100
  - BOSS PH-3
  - Electro-Harmonix Small Stone
  - Commonsound/4ms phaseur fleur
  
- Tremolo - A regular and repetitive variation in amplitude for the duration of a single note.
  - Dallas-Arbiter Trem Face
  - Commonsound/4ms tremulus lune
  - Empress Effects Tremolo
  
- Wah-wah - This foot-operated pedal is technically a kind of band-pass filter, which allows only a small portion of the incoming signal's frequencies to pass. Rocking the pedal back and forth alternately allows lower and higher frequencies to pass through, the effect being similar to a person saying "wow". The wah-wah pedal, used with guitar, is most associated with 1960s psychedelic rock and 1970s disco. During this period wah-wah pedals often incorporated a fuzzbox to process the sound before the wah-wah circuit, the combination producing a dramatic effect known as fuzz-wah. Some wah-wah pedals include:
  - Dunlop Cry Baby
  - VOX Wah Wah
  
- Volume pedal - Another rocking foot-pedal device, this is simply an ordinary volume control designed to be foot-operated while playing. A volume pedal enables a musician to fade into and out of a musical passage, or even individual notes. A guitar played this way sounds radically different because the percussive plucking of the strings can be softened or eliminated entirely, imparting an almost human-vocal sound. Volume pedals are also widely used with pedal steel guitars, as in country music. Some volume pedals are:
  - Ernie Ball Stereo Volume Pedal

- Compressor - This device does not radically alter the tone of an instrument the way the previously mentioned pedals do, but many guitarists use it as a kind of effect. A compressor acts as an automatic volume control, progressively decreasing the output level as the incoming signal gets louder, and vice versa. This evens out the overall volume of an instrument, and can make a guitar appear to sustain much longer than natural. Compressors can also change the behaviour of other effects, especially distortion. When applied to instruments with a normally short attack, such as drums or harpsichord, compression can drastically change the resulting sound. Some compressor pedals are:
  - BOSS CS-3
  - MXR Dynacomp
  - ToadWorks Mr. Squishy
  
- Pitch shifting - Devices that alter the pitch of the instruments. They are generally used with an expression pedal to give the player a good sense of the shift and to give the instruments a smooth bend-like effect, although some other utilizations have been done. Pitch shifters can also be used in a subtler fashion, for instance to allow someone to play a song that requires each guitar string to be tuned up or down a semitone, without actually adjusting the tuning of the strings. A type of effects unit that theoretically has a big potential of use, some examples are:
  - Digitech Whammy pedal
  - BOSS PS-5

A subtype of pitch shifting devices is the "octave pedal". Rather than giving the player a full control over the shift, it simply takes the input sound a whole octave above or below. This kind of effects pedals are generally used by [bassists](#).
  
- Multi Effects Pedals- A multi FX pedal is a single box that contains several different effects in it. Some multi FX pedals contain modelled versions of classic pedals. Some examples include:
  - Line 6 POD XT Live
  - Digitech RP200A
  - BOSS ME-50

## Effects pedals on other instruments

Many other musical instruments, among them the [piano](#), [pipe organ](#), [drums](#), and [harp](#), also make use of pedals to achieve tonal, dynamic, or other effects. The piano's sustain pedal is one well-known example. Pipe organs have one or more expression pedals and sometimes a crescendo pedal, which the organist can use to achieve dynamic (or "expressive") changes. Strictly speaking, however, these are neither considered nor called effects pedals.

One major exception appears on modern [electronic organs](#) and [synthesizers](#), which usually include a volume pedal similar to that of a guitar (indeed, the electronic organ and not the guitar pioneered this pedal), and some advanced models also include an additional effects pedal that may be programmed to serve several of the functions described in the preceding section. Their operation of each is similar to those on guitars; the organist places her entire foot on the pedal and, as (s)he plays, gently pumps up and down with heel and toe pressure to achieve whatever effects she desires. Because (s)he is usually seated and thus has better balance than the guitarist, the pedals are designed to have a wider range of motion. She can thus bring about more pronounced changes than the guitarist with only slight changes in her foot pressure, giving her a greater level of control than the guitarist. Some pedals also have switches on the end that allow her to achieve still other effects by "scrunching" her toes to the left or right on the pedal, either in isolation or while pumping the pedal up and down, leading to far more flexibility than most guitar pedals.

# Effects unit

**Effects units** are devices that affect the sound of an electric instrument when plugged in to the electrical signal path the instrument sends, most often an [electric guitar](#) or [bass guitar](#). They can also be used on other instruments or sound sources, like the Rhodes piano, synths or even the human voice. While some effect units transform the sound completely, others just color the sound picture in a minor way.

An effects unit consists of one or more electronic devices which typically contain analog circuitry for processing audio signals, similar to that found in music synthesizers, for example active and passive filters, envelope followers, voltage-controlled oscillators, or digital delays.

Effects units are packaged by their manufacturers, and used by musicians, in various sizes, the most common of which are the stomp-box and the rack-mount unit. A "Stomp box" is a metal box, containing the circuitry, which is placed on the floor in front of the musician and connected in line with, say, the guitar cord. The box is typically controlled by one or more foot-pedal on-off switches and typically contains only one or two effects. A second type of effects unit may contain the identical electronic circuit, but is mounted in a standard 19" equipment rack. Usually, however, rack-mount effects units contain several different types of effects. They are typically controlled by knobs or switches on the front panel, and often by a MIDI digital control interface. "Off-boards" are used by musicians who prefer multiple stomp-boxes; these may be simply pieces of plywood with several stomp-box units fastened to the plywood and connected in series. Rackmounted effects or off-boards can combine several effects in one unit, and can include analog controls such as pedals or knobs.

Modern desktop and notebook computers often have sound processing capabilities that rival commercially available effects boxes. Some can process sound through VST-plugins. With a decent sound card, musicians can play any instrument through a computer, emulating any effects unit or even an amplifier in a convincing way. Many VST-plugins are freely downloadable from the World Wide Web.

# Types of effects

## Dynamics

### Compressor

The gain of the amplifier is varied to reduce the dynamic range of the signal.

### Tremolo

Tremolo produces a periodic variation in the amplitude (volume) of the note.

i.e. A sine wave applied as input to a voltage-controlled amplifier produces this effect.

## Tone

### Overdrive and distortion

The signal is amplified past the limits of the amplifier, resulting in clipping.

Example: Guitar on "Spirit in the Sky" by Norman Greenbaum

### Wah-wah pedal

An effect that gives the instrument an almost vocal effect, familiar as the wah-wah pedal. Example: "White Room" by Cream, used by Eric Clapton. Popular in [funk](#) and [psychedelic rock](#) (i.e. Jimi Hendrix).

### Ring modulation

"Organic" effect.

### Equalizer

Adjusts the frequency response in a number of different bands of EQ. Variants include the Parametric EQ, which instead of flatly boosting and cutting frequencies, curves the frequency response to include changes in adjacent frequencies.

### Clean Boost or any other "booster"

Amplifies some aspect of the instrument's signal output. Generally used for preventing signal loss through long chains of effects units (pedals) and getting overdrive tones out of a tube amp. On stage, used for volume boosts for solos.

### Talk Box

A vowel-tuned wah that actually takes a human voice as the wah control. Used in many Bon Jovi songs

## Time-based

### Delay

First used by Les Paul, e.g. *I'm Forever Blowing Bubbles*. (Modern digital delay units, the first of which was the Eventide Harmonizer, involve sound waves being converted from analog to digital signals, and clocked through large banks of RAM memory. Paul achieved time delay by stretching audiotape between two reel-to-reel tape decks spaced several feet apart.)

### Echo

Uses delays to simulate an echo.

#### Chorus

Usually short delays to simulate more than one person playing at a time

#### Flanging

Uses very short variable delays to cause a changing comb filter effect

#### Reverb

Simulates echoes in stadiums, halls, other performance areas. Even actual surfaces, such as plate metal and metal springs, are sometimes simulated.

## Frequency

#### Pitch shifter

Also introduced by the Harmonizer which has a knob on the front to "change your pitch up." First used on *Itchycoo Park* by Small Faces.

#### Vibrato

Vibrato refers to a variation in frequency of a note, for example as an opera singer holding one note for a long time will vary the frequency up and down. A sine wave applied as input to a voltage-controlled oscillator produces this effect.

Guitarists often use the terms "vibrato" and "tremolo" inconsistently. A so-called *vibrato unit* in a guitar amplifier actually produces tremolo, while a *tremolo arm* on a guitar produces vibrato. However, *finger vibrato* is genuine vibrato. See [Electric guitar](#), tremolo, vibrato.

## Other specific effects

#### Defretter

It simulates a fretless [guitar](#)

#### [Acoustic guitar simulator](#)

Simulates an acoustic guitar.

#### Rotary speaker

A Leslie speaker simulation effect. One particular effect of this type (the Uni-Vibe) was made famous by Jimi Hendrix.

#### Envelope Follower

Uses the signal amplitude envelope to control one or more effects.

#### Pickup simulation

Simulates either a single-coil pickup if the musician has a humbucker or vice-versa.

#### Ambiance modelling

Creates an ambiance through an amalgam of effects.

#### Guitar amplifier modelling

Models instrument tone to imitate the tone produced by various amplifiers, especially to attain the valve sound with solid-state equipment.

These types of effects are usually digital, and can therefore be found as features of effect processors such as the Boss ME series and Vox multieffects.

## Notable manufacturers

- Behringer
- BOSS
- Digitech
- DOD
- Jim Dunlop
- Electro Harmonix
- Korg
- Lexicon
- Line6
- Roland
- TC Electronic

# Electric guitar

An **electric guitar** is a type of [guitar](#) that utilizes electronic pickups to convert the vibration of its steel-cored strings into electrical current. The signal may be electrically altered to achieve various tonal effects prior to being fed into an amplifier, which produces the final sound which can be either an electrical sound or an acoustic sound. Distortion pedals can change the sound that is emitted from the amplifier.

There are two main types of electric guitar:

- Hollow body electric guitars, sometimes called semi-acoustic, and themselves of two types:
  - Archtop electric guitars with a full sound box.
  - Thin hollow body guitars.
- Solid body guitars.

Some acoustic guitars are fitted with pickups purely as an alternative to using a microphone. These are also sometimes called *semi-acoustic*, and sometimes *acoustic electric*, but are regarded as acoustic rather than electric guitars. The terminology is not generally agreed, and the line hard to draw.

Specialised steel guitars, although they are also electric instruments descended from the guitar, are normally not considered electric guitars but rather as a separate instrument. This distinction has important consequences on claims of priority in the history of the electric guitar.

The electric guitar is used extensively in many popular styles of music, including [blues](#), [rock and roll](#), [country music](#), [pop music](#), [jazz](#), [rap](#) and even contemporary classical music.

# History

The popularity of the electric guitar began with the [big band](#) era because amplified instruments became necessary to compete with the loud volumes of the large brass sections common to jazz orchestras of the thirties and forties. Initially, electric guitars consisted primarily of hollow archtop acoustic guitar bodies to which electromagnetic transducers had been attached

## Early years

Electric guitars were originally designed by an assortment of luthiers, electronics enthusiasts, and instrument manufacturers, in varying combinations. Some of the earliest electric guitars used tungsten pickups and were manufactured in the 1930s by Rickenbacker. The electric guitar was first made famous in performance by jazz legend Charlie Christian.

The version of the instrument that is most well known today is the [solid body] electric guitar, a guitar made of solid wood, without resonating airspaces within it. One of the first solid body electric guitars was built by musician and inventor Les Paul in the early 1940s, working after hours in the Gibson Guitar factory. His "log" guitar, so called because it consisted of a simple 4x4 wood post with a neck attached to it, two Swedish hollow body halves attached to the sides, and homemade pickups and hardware. It was generally considered to be the first of its kind until recently, when research through old trade publications and with surviving luthiers and their families revealed many other prototypes, and even limited production models that fit our modern conception of an 'electric guitar.'

At least one company, Audiovox, built and may have offered an electric solid-body as early as the mid-1930s. Rickenbacker (Rickenbacher later spelled *Rickenbacker*, pronounced *Rickenbocker*) offered a solid Bakelite electric guitar beginning in 1935 that, when tested by vintage guitar researcher John Teagle, reportedly sounded quite modern and aggressive.

## Fender

In 1950 and 1951, electronics and instrument amplifier maker Leo Fender, through his eponymous company, designed the first commercially successful solid-body electric guitar, which was initially named the Broadcaster. However, the Gretsch company had a drumset by the same name (Broadkaster), so Fender was forced to change the name, choosing Telecaster in homage to the new phenomenon of television. Features of the Telecaster included an ash body; a maple 25½" scale, 21-fret neck attached to the body with four-bolts reinforced by a steel neckplate; two single-coil, 6-pole pickups (bridge and neck positions), with tone and volume controls, pickup selector switch, and an output jack mounted on the side of the body. A black bakelite pickguard concealed body routings for pickups and wiring. The bolt-on neck was consistent with Leo Fender's belief that the instrument design should be modular to allow cost-effective and consistent

manufacture and assembly, as well as simple repair or replacement. A variant of the Telecaster, the Esquire, had only the bridge pickup. Due to the Broadcaster trademark issue, the earliest Telecasters were delivered with headstock decals with the Fender logo but no model identification, and are commonly referred to by collectors as "Nocasters".

In 1954 Fender introduced the Stratocaster, or "Strat", which was positioned as a deluxe model and offered various product improvements and innovations over the Telecaster. These innovations included an ash or alder double-cutaway body design for badge assembly with an integrated vibrato mechanism (called a synchronized tremolo by Fender, thus beginning a confusion of the terms that still continues), three single-coil pickups, and body comfort contours. The Stratocaster has become the most-recognizable and most copied electric guitar design ever. Pink Floyd's guitarist, David Gilmour, owns one of the first Fender Stratocasters ever made. Leo Fender is also credited with developing the first commercially-successful [electric bass](#) called the Fender Precision Bass, introduced in 1951.

## Gibson

Gibson, like many guitar manufacturers, had long offered semi-acoustic guitars with pickups, and previously rejected Les Paul and his "log" electric in the 1940s. In apparent response to the Telecaster, Gibson introduced the first Gibson Les Paul solid body guitar in 1952, designed at least in part with input from Les Paul. Features of the Les Paul included a mahogany body with a carved maple top (much like a violin) and contrasting edge binding, two single-coil "soapbar" pickups, a 24 $\frac{3}{4}$ " scale mahogany neck with a more traditional glued-in "set" neck joint, binding on the edges of the fret board, and a tilt-back headstock with three tuners to a side. The earliest models had a combination bridge and trapeze-tailpiece design that was deemed unsuitable by Les Paul himself. Gibson then developed the Tune-o-Matic bridge and separate stop tailpiece, an adjustable non-vibrato design that has endured. By 1957, Gibson had made the final major change to the Les Paul as we know it today - the humbucking pickup, or humbucker. The humbucker, invented by Seth Lover, was a dual-coil pickup which produced a distinctive tone but also offered the advantage of elimination of the 60-cycle hum associated with single-coil pickups. The more traditionally designed and styled Gibson solid-body instruments were a contrast to Leo Fender's modular designs, with the most notable differentiator being the method of neck attachment and the scale of the neck (Gibson-24.75", Fender-25.5"). Each design has its own merits. To this day, the basic design of nearly every solid-body electric guitar available today echoes the features of early 1950s originals - the Fender Telecaster & Stratocaster, and the Gibson Les Paul.

## Types of electric guitar

Most electric guitars are fitted with six strings and are usually tuned from low to high E - A - D - G - B - E, the same as an acoustic guitar, although many guitarists occasionally tune their instruments in a different way, including "dropped D", various transposed and open chord tunings, usually to simplify fretting of some chord inversions in a certain key. Seven-string models exist, most of which add a low B string below the E. Seven-string guitars were popularized by Steve Vai and others in the '80s, and have been recently revived by some [nu metal](#) bands. Jazz guitarists using a seven-string include veteran jazzman Bucky Pizzarelli and his popular son John Pizzarelli. There are even eight-string electric guitars, such as the Novax played by Charlie Hunter, but they are extremely unusual. The largest manufacturer of 8- to 14-strings is Warr Guitars. Their models are used by Trey Gunn (of King Crimson) who has his own *signature* line from the company.

Jimmy Page, an innovator of [hard rock](#), used and made famous custom Gibson electric guitars with two necks - essentially two instruments in one; in his case, a 6-string and 12-string guitar, to replicate his use of two different guitars when playing live "Stairway to Heaven" so that he didn't have to pause to switch from one section to another. These are commonly known as double-neck (or, less commonly, "twin-neck") guitars. The purpose is to obtain different ranges of sound from each instrument; typical combinations are six-string and four-string (guitar and bass guitar) or, more commonly, a six-string and twelve-string. Such a combination may come handy when playing [ballads](#) live, where the 12-string gives a mellower sound as accompaniment, while the 6-string may be used for a guitar solo. English [progressive rock](#) bands such as Genesis took this trend to its zenith using custom made instruments produced by the Shergold company. Rick Nielsen, guitarist for Cheap Trick, uses a variety of custom guitars, many of which have five necks - more for comic effect than for actual usefulness. Guitar virtuoso Steve Vai occasionally uses a triple-neck guitar; one neck is twelve string, one is six string and the third is a fretless six string.

Some electric guitars have a tremolo arm or whammy bar, which is a lever attached to the bridge that can slacken or tighten the strings temporarily, changing the pitch or creating a vibrato. Tremolo properly refers to a quick variation of volume, not pitch; however, the misnaming (probably originating with Leo Fender printing "Synchronized Tremolo" right on the headstock of his original 1954 Stratocaster) is probably too established to change. Eddie Van Halen often uses this feature to embellish his playing, as heard in Van Halen's "Eruption". Early tremolo systems tended to cause the guitar to go out of tune with extended use; an important innovator in this field was Floyd Rose, who introduced one of the first improvements on the vibrato system in many years when in the late 1970s he began to experiment with "locking" nuts and bridges which work to prevent the guitar from detuning even under the most heavy whammy bar acrobatics.

## Pickups

Electric guitars are not usually amplified by using a microphone, but with special pickups that sense the movement of strings. Such pickups tend to also pick up the ambient electrical noises of the room, the so-called "hum", with a strong 50 or 60 Hz component depending on the locale. Hum is annoying, especially when playing with distortion, so "humbucker" pickups were invented to counter this. Normal pickups are single-coil; humbuckers are essentially like twin microphones arranged in such a way that electrical noise cancels itself. A similar effect may be achieved using a guitar with multiple single coil pickups with an appropriate selection of dual pickups. (See main articles on pickups and humbuckers.) Another instrument, the pedal steel guitar, does not look like a guitar at all, but resembles a small rectangular table with one or more sets of strings on top. Country musician Junior Brown uses a custom-built instrument of his invention, the guit-steel, which has one neck that is a steel guitar, and one standard electric guitar neck.

## The physical principle

The physics of electric guitars and other electric [string instruments](#) is fairly simple, since they are based on induced currents (see the electromagnetism article for more details).

Magnets are located under each string, which make the strings behave as magnets themselves. When a string is played, it oscillates at a certain frequency, causing the magnetic field it creates to oscillate with it. Solenoids (electromagnetic coils) are wrapped around each magnet, giving a periodic induced current (at the same frequency) .

## Electric guitar sound and effects

An acoustic guitar's sound is largely dependent on the vibration of the guitar's body and the air within it; the sound of an electric guitar is largely dependent on a magnetically induced electrical signal, generated by the vibration of metal strings near sensitive pickups. The signal is then shaped on its path to the amplifier. By the late 1960s, it became common practice to exploit this dependence to alter the sound of the instrument. The most dramatic innovation was the generation of distortion by increasing the gain, or volume, of the preamplifier in order to clip the electronic signal. This form of distortion generates harmonics, particularly in even multiples of the input frequency, which are considered pleasing to the ear.

Beginning in the 1960s, the tonal palette of the electric guitar was further modified by introducing an effects box in its signal path. Traditionally built in a small metal chassis with an on/off foot switch, such "stomp boxes" have become as much a part of the instrument for many electric guitarists as the electric guitar itself. Typical effects include stereo chorus, fuzz, wah-wah and flanging, compression/sustain, delay, reverb, and phase shift. Some important innovators of this aspect of the electric guitar include guitarists Frank Zappa, Link Wray, Jimi Hendrix, Brian May, Eddie Van Halen, Steve Jones, Jerry Garcia, David Gilmour, Yngwie J. Malmsteen, Steve Vai, Joe Satriani, Thurston Moore, Daniel Ash, and Tom Morello, and technicians such as Roger Mayer.

By the 1980s, and 1990s, digital and software effects became capable of replicating the analog effects used in the past. These new digital effects attempted to model the sound produced by analog effects and tube amps, to varying degrees of quality. There are many free to use guitar effects software for personal computer downloadable from the Internet. Today anyone can transform his PC with sound card into a digital guitar effects processor. Although there are some obvious advantages to digital and software effects, many guitarists still use analog effects for their real or perceived quality over their digital counterparts.

Some innovations have been made recently in the design of the electric guitar. In 2002, Gibson announced the first digital guitar, which performs analog-to-digital conversion internally. The resulting digital signal is delivered over a standard Ethernet cable, eliminating cable-induced line noise. The guitar also provides independent signal processing for each individual string. Also, in 2003 amp maker Line 6 released the Variax guitar. It differs in some fundamental ways from conventional solid-body electrics. For example it uses piezoelectric pickups instead of the conventional electro-magnetic ones, and has an onboard computer capable of modifying the sound of the guitar to realistically model many popular guitars.

## Uses

The electric guitar can be played either solo or with other instruments. It has been used in numerous genres of popular music, as well as (much less frequently) classical music.

### Contemporary classical music

While the [classical guitar](#) had historically been the only variety of guitar favored by classical composers, in the 1950s a few contemporary classical composers began to use the electric guitar in their compositions. Examples of such works include Karlheinz Stockhausen's *Gruppen* (1955-1957); Morton Feldman's *The Possibility of a New Work for Electric Guitar* (1966); George Crumb's *Songs, Drones, and Refrains of Death* (1968); Hans Werner Henze's *Versuch über Schweine* (1968); and Michael Tippett's *The Knot Garden* (1966-70).

In the 1980s and 1990s, a growing number of composers (many of them composer-performers who had grown up playing the instrument in rock bands) began writing for the instrument. These include Steven Mackey, Omar Rodriguez, Lois V Vierk, Tim Brady, John Fitz Rogers, Tristan Murail, and Yngwie Malmsteen with his *Concerto Suite for Electric Guitar and Orchestra*. The American composers Glenn Branca and Rhys Chatham have written "symphonic" works for large ensembles of electric guitars, in some cases numbering up to 100 players. Still, like many electric and electronic instruments, the electric guitar remains primarily associated with rock and jazz music, rather than with classical compositions and performances.

# Electric violin

An **electric violin** is simply a [violin](#) with an electronic signal output. The term can refer to an acoustic violin with an electric pickup of some type, but usually refers to a solid-body electric instrument.

Electrically amplified violins have been used in one form or another since the 1920s; jazz and blues artist Stuff Smith is generally credited as being one of the first performers to adapt pickups and amplifiers to violins. A few larger manufacturers attempted to sell electric violins in the 1930s and 1940s; Fender produced a small number of electric violins in the late 1950s but these instruments are very few in number. Larger scale manufacture of electric violins did not happen until the late 1990s.

Acoustic violins may be used with an add-on piezoelectric bridge or body pickup, but often suffer from feedback on stage, in addition to the raw piezo sound. Some magnetic pickups have no feedback but a less sharp sound.

To prevent feedback from the resonances of the hollow body under high amplification on stage, many instruments have a solid body. The [timbre](#) (tone color) of an acoustic violin is created directly because of these resonances, however, so depending on how the signal is picked up, an electric piezo violin may have a "rawer," "sharper" sound than an acoustic instrument. This raw sound is often preferred in rock, pop, and some [avant-garde](#) genres. Several "semi-hollow" designs exist, containing a sealed but hollow resonating chamber that provides some approximation of violin resonances while still reducing susceptibility to feedback.

Solid-body electric violins typically have a non-traditional, [minimalistic](#) design to keep weight down.

They are often seen as "experimental" instruments, being less established than electric guitar or bass. Hence, there are many variations on the standard design, such as frets, extra strings, machine heads, "[baritone](#)" strings that sound an octave lower than normal, sympathetic strings, and more, without even going into the many electronic effects used to shape the raw sound to suit the player's preference.

Acoustic 5-string violins exist, but it is much more common for an electric violin to have 5, 6 or 7 strings than an acoustic instrument. The typical solid body also accommodates the extra tension caused by more strings without stressing the instrument too much. Extra strings are usually a low C string for 5-strings, and a low C and high B or low F for 6, and a low C, F and B-flat (or high B) for 7.

Electric violin signals usually pass through electronic processing, in the same way as an electric guitar, to achieve a desired sound. This could include delay, reverb, chorus, distortion, or other effects.

## Pickups

Since it (usually) has metal strings, the sound of the violin can be sensed with either magnetic or piezoelectric pickups. Magnetic pickups generally may have a less sharp sound and less feedback. Magnetic pickups similar to those used on electric guitars are rare, but one unusual violin system uses the strings as a linear active pickup element. However, the small body size and curved string arrangement of a violin can often limit the amount of space available for coil placement, and can sometimes limit the choice of string material a performer uses.

Generally, piezo pickups are more common because of very cheap piezo materials available, as well as the flexibility of string material they allow. They are used to detect physical vibrations, sometimes in or on the body, but more commonly in the bridge. Some piezo setups have a separate pickup (or two, or even four in the case of some Barbera Transducer pickups) embedded in the bridge under each string. A few systems use transducers oriented in various directions to differentiate between bowed and plucked string motion.

Piezo pickups have a very high (capacitive) output impedance, and require a powered preamp for buffering the raw sound (a charge amplifier is best), and to avoid signal loss and excessive noise pickup in the instrument cable. Tube-driven preamps are sometimes favored over solid state due to the differences in distortion; see valve sound. A solid body provides room for this circuitry and a battery, although phantom power can make the battery unnecessary.

## Genres

Although the violin is an instrument used extensively in [classical music](#), electric violins are generally employed by classical performers only in the performance of [contemporary classical music](#). The electric violin is more frequently used by non-classical musicians in popular genres such as [rock](#), [hip hop](#), [pop](#), [jazz](#), [country](#), [New Age](#), and [experimental music](#).

## Tape-bow violin

Laurie Anderson's tape-bow violin, an electronic instrument developed in 1977, resembles an electric violin but does not have strings. It produces sound by drawing a bow, strung with a length of recorded magnetic tape rather than hair, across a magnetic tape head mounted on the instrument where the bridge would normally be. This anticipates the later technique of "scratching" in rap and [hip-hop music](#), where a vinyl recording is turned back and forth on a turntable.

# Electro

**Stylistic origins:** [Synth pop](#), [disco](#), [funk](#) and [Old school hip hop](#)

**Cultural origins:** early 1980s Detroit, Bronx

**Typical instruments:** [Synthesizer](#), [Drum machine](#), Vocoder, [Sampler](#)

**Mainstream popularity:** Mid- to late 1980s with a revival in the late 1990s.

**Derivative forms:** [Electroclash](#)

[Detroit techno](#) - [Freestyle music](#) - [Miami bass](#)

[Ghettotech](#)

**Electro**, short for **electro funk** (also known as **robot hip hop**) is an [electronic](#) style of [hip hop](#) directly influenced by Kraftwerk and [funk](#) records (unlike earlier [rap](#) records which were closer to [disco](#)). Records in the genre typically have all-electronic sounds and vocals are delivered in a deadpan, mechanical manner often through a vocoder or other electronic distortion.

## Characteristics

With few exceptions, the definition of the electro sound is the use of [drum machines](#) as the base of a track. A legendary drum machine with a recognizable sound still used today is the Roland TR-808. The instrumentation is generally all-electronic with a [funk](#)-style synthesizer bass line. Heavy use of effects such as reverb and echo together with electronic pads create a rich and simultaneously cold sound that emphasizes the common science fiction theme of the lyrics. Not all electro features [rapping](#); vocals processed through a Vocoder is a common element and [instrumental](#) tracks are more prominent than in related genres of electronic and hip hop music. In recent years it has become common for electro artists to perform using only laptop computers, this way emphasizing the technological theme of the music.

[Concept albums](#) are common in electro with Kraftwerk pioneering entire albums in technological or futuristic themes such as robots, computers or nuclear science. Many artists are entirely devoted to sci-fi subjects of this kind.

## History

Bronx, NY based artist Afrika Bambaataa's Planet Rock (1982) is one of the first electro records, using elements of Kraftwerk's Trans-Europe Express and Numbers. Bambaataa and artists like Juan Atkins' group Cybotron, Planet Patrol, Jonzun Crew, and Newcleus went on to influence the genres of [detroit techno](#), [ghettotech](#), [drum and bass](#) and [electroclash](#).

Los Angeles artists Egyptian Lover and Arabian Prince gave birth to [electro hop](#), a less funky, more bass-heavy [West Coast](#) sound, similar to 2 Live Crew and the [Miami Bass](#) scene. Detroit also has a unique style sometimes called "techno bass" which is a fusion of [Detroit Techno](#) and [Ghetto house](#) with the vocal element of [Miami Bass](#). On the East Coast and especially in Miami, electro spawned [freestyle](#), a soulful, Latin-centric variant.

Although the early 1980s were electro's heyday in the mainstream it enjoyed a popularity increase in the late 1990s with artists such as DMX Krew, Mr Velcro Fastener and Fannypack. Some current making artists making music in this style have embraced the pseudonyms of Detroit techno pioneers. The renewed interest in electro, though influenced to a great degree by Detroit and New York music, is primarily taking hold elsewhere with a variety of cities featuring electro club nights.

## Electro hop

**Electro hop** is a form of [dance music](#) mixed with [hip hop](#) which arose in Southern California in the early 1980s. While [hardcore hip hop](#) dominated the [East Coast](#), electro hop was the dominant form of [West Coast hip hop](#) during the early part of the decade. Purists, including most East Coast critics, hated electro hop and viewed it as watered-down. Electro hop largely died out with the rise of Ice-T, N.W.A. and other early [West Coast gangsta rappers](#).

# Electro house

**Electro house** (also known as **electronic house** and **dirty house**) is a subgenre of [house music](#) that rose to become one of the foremost genres of electronic dance music in 2004-6. Stylistically, it takes the 4/4 beats and moderate tempo of 'normal' house and adds harmonically rich analogue basslines, abrasive high-pitched leads and the occasional old-school piano or string riff. There is much cross-pollination with [minimal techno](#).

## Roots of electro-house

The most obvious precursor to the modern electro-house scene is the electroclash movement of the early 2000s. Hotly hyped, it was largely a re-run of the classic early 80s [electro](#) sound, but deliberately made cruder and more raw-sounding than even the primitive records on which it was based. It gathered popularity principally with fashionistas in Europe and New York, and without any real creative potential burned out quickly, since being generally considered a failure. However, the sound - as well as some of the artists and labels, notably Crosstown Rebels and City Rockers - have made a better fist of things by switching to electrohouse. Some artists - for instance, Felix da Housecat - associated with the movement had a noticeably housier sound even at the time and have since come to be seen as highly influential.

Previously and concurrent to electroclash, tech-house was developing. Traditionally, this had utilised more traditional Detroit influences, such as sweeping strings and 909 beats, but it developed a dirtier sound as the new millennium drew on, thanks largely to a trend of [acid house](#) revival (see for instance David Duriez and the Brique Rouge label).

In 2003 some tribal house DJs such as Steve Lawler, while previously associated with the darker-hued sounds of progressive house, began to use analogue basslines, starting the so-called 'dirty tribal' sound. Concurrently, the breaks scene did much the same with the popular tech-funk style. It was also at this time that the sound proper first began to emerge, centred on Erick Morillo's Subliminal label, and certain influential productions by himself, Harry 'Choo Choo' Romero and others.

By 2005, the sound had become the dominant movement in house music, with DJs and producers from all over the spectrum finding common ground in its dancefloor sensibilities and sense of fun - John Digweed, Dave Seaman and others from the progressive house scene; Tiefschwarz and Ben Watt from deep house, Peace Division and Steve Lawler from tribal and so on.

## Example productions

*Erick Morillo & Harry Choo Choo Romero - Dancin (Fuzzy Hair mix)* Typical of the sound.

*M.A.N.D.Y. - Jah* A minimal techno-influenced cut.

*Peace Division - Blacklight Sleaze*

*Kade - If U Want Me (don't bring me down) (menace mix)* A 'dirty tribal' track.

## **House**

[Acid](#) - [Ambient](#) - [Chicago](#) - [Dark](#) - [Deep](#) - [Dream](#) - [Garage](#) - [Ghetto](#) - [Hard](#) - [Hip](#) - [Italo](#) - [Latin](#) - [Minimal](#) - [Microhouse](#) - [Progressive](#) - [Pumpin'](#) - [Tech](#) - [Tribal](#)

## **Other [electronic music genres](#)**

[Ambient](#) | [Breakbeat](#) | [Drum and bass](#) | [Electronica](#) | [Electronic art music](#) | [Hard dance](#) | [Hardcore](#) | [House](#) | [Techno](#) | [Trance](#) | [Industrial](#) | [Synthpop](#)

# Electroacoustic music

The terms **Electroacoustic** or **Electroacoustic music** have been used to describe several different [musical genres](#) or musical techniques.

While generally seen as a branch of [electronic music](#), the definition and characteristics of electroacoustic music have been subject to much debate.

Electroacoustic music is a diverse field. Important centers of research and composition can be found around the world, and there are numerous conferences and festivals which present electroacoustic music, notably the International Computer Music Conference, the International Conference on New interfaces for musical expression, the Bourges International Electroacoustic Music Festival (Bourges, France), and the Ars Electronica Festival (Linz, Austria).

A number of national associations promote the art form, notably the Canadian Electroacoustic Community in Canada, SEAMUS in the US, and Sonic Arts Network in the UK. The Computer Music Journal and Organised Sound are two important journals dedicated to electroacoustic music.

## Questions of Definition

There is no consensus for the definition of "Electroacoustic music". Some contend that any sound played over a loudspeaker is "electroacoustic", while for others, the term also entails some aesthetic specifications.

While all electroacoustic music is made with electronic technology, the most successful works in the field are usually concerned with those aspects of sonic design which remain inaccessible to traditional [musical instruments](#) played live.

In particular, most electroacoustic compositions make use of sounds not available to, say, the traditional [orchestra](#); these sounds might include prerecorded sounds from nature or from the studio, [synthesized](#) sounds, processed sounds, and so forth.

Electroacoustic compositions also often explore spatial characteristics of sound, as sounds can be given trajectories, and can be placed in distant or near fields of listening. Electroacoustic music is typically less preoccupied with the 'traditional' concerns of score-based music- rhythm and melody- and more concerned with the interplay of gesture and texture, and what Denis Smalley has termed 'spectromorphology'- the sculpting of the sound spectrum in time.

## History

Many date the birth of electroacoustic music to the late 1940s and early 1950s, and in particular to the work of two groups of composers who generally were at strict odds with each other. The [Musique concrète](#) group was centered in Paris and was pioneered by Pierre Schaeffer; their music was based on the juxtaposition of natural sounds (meaning real, recorded sounds, not necessarily those made by natural forces) recorded to tape or disc. In Cologne, Elektronische Musik, pioneered by Herbert Eimert, was based around the construction of tones using only sine waves. The precise control afforded by the studio allowed for what Eimert considered to be an electronic extension and perfection of [serialism](#); in the studio, serial operations could be applied to elements such as timbre and dynamics. The common link between the two schools is that the music is recorded and performed through loudspeakers, without a human performer. While serialism has been largely abandoned in electroacoustic circles, the majority of electroacoustic pieces use a combination of recorded sound and synthesized or processed sounds, and the schism between Schaeffer and Eimert's approaches has been overcome.

It should be noted that isolated examples of electroacoustic music exist which predate Schaeffer's first experiments in 1948. Ottorino Respighi used a phonograph recording of a nightingale's song in his orchestral work 'The Pines of Rome' in 1924; experimental filmmaker Walter Ruttmann created a sound collage on an optical soundtrack in 1930; and John Cage used phonograph recordings of test tones mixed with live instruments in "Imaginary Landscape no. 1" (1939), among other examples. In the first half of the Twentieth Century, a number of writers also advocated the use of electronic sound sources for composition, notably Ferruccio Busoni, Luigi Russolo, and Edgar Varese.

## Characteristics

Many self-described "electroacoustic" pieces include live performers, either as a performer playing along with a tape, or, more recently, with live electronic processing of the performer's sound. Saxophonist Evan Parker has won acclaim for his recordings using live electronic processing. The term "acousmatic music" is often used to refer to pieces which consist solely of prerecorded sound. There are dozens of other terms which are either synonymous with "electroacoustic music", or which describe subsets or offshoots from the genre. These include: sonic art; computer music; electronic music; microsound; lowercase; soundscape; audio art; radiophonics; live electronics; musique concrète; field recording; experimental electronica.

Electroacoustic music is closely related to [Electronica](#) by technique; recently many popular electronica artists have been influenced by electroacoustic composers, for instance Amon Tobin, Autechre, Aphex Twin, Gescom, and Squarepusher.

Category: [Electronic music genres](#)

# Electroclash

**Electroclash** describes a style of fashion, music, and attitude that fuses [new wave](#), [punk](#), & electronic dance music with somewhat campy and absurdist post-industrial detachment - alongside vampy and/or camp sexuality. The movement combines the 1980s [electropop/New Wave/Italo disco](#) sound (using [synthesizers](#), [drum machines](#), etc.) with visuals that are equal parts post-1970's Westwood and Warhol fashion/art scenes, mid-70's, Kraftwerk-ian German influences, and early-80's New York Downtown dystopian avant-garde à la Liquid Sky.

Electroclash mainly developed in the late 1990s in the Hague, Munich, Berlin, New York City, and Detroit, with the first example of electroclash often cited as the Dutch artist I-F's cheeky 1993 track "Space Invaders Are Smoking Grass." The movement came to prominence in 2000 - 2002 through Larry Tee's roving, primarily gay Mutants club nights, and later Berliniamsburg nights at Club Luxx in Williamsburg, Brooklyn - and his Electroclash™ Festival (which Tee used to trademark the word "electroclash"). Tee's early electroclash parties were defined by tranny MCs, cocaine, a crowd dressed in revealing 1980s-inspired outfits, and Tee's collection of obscure [new wave](#) and [disco remix](#) records.

Opposed to the American primarily gay clubnights, the International DJ Gigolo nights held by DJ Hell in Munich around the same time attracted a rather straight / mixed crowd. In Berlin where the style peaked around 2002, Electroclash was so omnipresent that almost any trendy club would incorporate the style. Electroclash Parties were topping the lists of young tourist guides.

The name derives from the early 80's [electropop](#) bands who provide the majority of the musical influence. Lyrics are generally tongue-in-cheek and [punk](#) inspired, and often more given to attitude and pose than poetics or theme; while the vocal delivery is typically atonal to the point of caricature.

A bleakly ironic, but indulgently hyper-sexual post-feminist/post-9/11 stance is often evident in the themes of many Electroclash outfits. The genre is generally not a musical style as much as a kitsch-ily cold distanced stance - infected by exhibitionist sexuality and a winking fetish-isation of wealth, indulgence, consumption, and glamour culture - directly reflecting back to the trend's roots in gay club culture. Style is definitely the victor over substance, as a point of pride.

But perhaps more exactly, "electroclash" is an aesthetic approach to a certain set of musical ideas and instruments, similar to ["art rock"](#) in that it's not so much a style as a way of doing things. This approach to electronic music--some distinguishing features being a proclivity towards aggressive, defiant lyrics (and performance persona) and deceptively simple, "retro" arrangements--is what denotes it as different from [synthpop](#), [IDM](#), or other branches of [electronica](#).

Arguably, the movement has more in common with 'Paris Is Burning' style personal projection and dress-up than it has with any element of a musical genre. Essentially the trend of Electroclash, as fashion and pose, is its own driving force - the stylistic affectation is more important than anything going on in the actual music. The "band" Fischerspooner is an example of this philosophy in action - featuring indulgent, elaborately staged 1980s homage live shows with over-the-top backdrops, dramatic interludes, and costuming - rendering the music itself almost an afterthought to the production and image-making of the project.

In subsequent years, scenes in other cities and areas, such as in Southern California, spawned loosely affiliated, and generally more "serious" 80s homage projects adopting the electroclash moniker. The lyrical subjects and themes were

often taken more seriously and were considerably darker than those of the original East Coast style, toning down the original tongue-in-cheek flavor of the genre.

By the mid-2000's, 'electroclash' had become a popular synonym for "80s retro dance music." The genre has since gone on to be associated more strongly with international rather than U.S. scenes; dominant now in Berlin, Barcelona, and Mexico City rather than New York, Detroit, and San Francisco. In the UK, Electro has been most popular in the alternative gay scene, with nights like Nag Nag Nag, The Cock, Anti-Social, Death Disco, and Fuck The Pain Away.

# Electrocrass

**Electrocrass** is an early 2005 phenomenon and is considered a subcategory of the broader electronic music style, [electroclash](#). This style of music is characterized by blatantly and unapologetically sexual lyrics, lo-fi sounding synthesizer-crafted beats, and a blend of rap-like lyrics with more traditional and irreverent pop delivery. Electrocrass music has seen a surge of popularity in dance clubs that play [indie rock](#) and college rock.

Electrocrass is notably disparate from electroclash in that none of the major artists in the movement originate from New York City, considered the major center of the birth of the electroclash movement, brought about by artists such as Soviet, A.R.E. Weapons, and Fischerspooner.

The controversial and graphic nature of the lyrics that these artists create is usually not an issue, as none have achieved mainstream success and all are either signed to an indie label or self-release their music. These artists have achieved a huge gay fan base due to their pansexual attitudes and lyrics as well as by having gay members.

## Electronic art music

**Stylistic origins:** [20th century classical music](#)

**Cultural origins:** 1940s - 1950s

**Typical instruments:** [Synthesizer](#) - Tape loops (in latter incarnations were added [Sequencer](#) - [Keyboard](#) - [Sampler](#) - Computer)

**Mainstream popularity:** Small.

**Derivative forms:** [Techno](#) - [Electronica](#) - [IDM](#) - [Trance](#) - [Glitch](#)

### **[Subgenres](#)**

Electroacoustic - [Musique concrète](#) - [Noise](#)

**Electronic music** has existed, in various forms, for more than a century. Between the time that recording sounds was first made possible and the computer technology of today, a vast amount of change has occurred. Technology has been developed for creating sounds, for recording sounds, composing, and for altering sounds. Some technology involved electronics, but some important conceptual changes that did not depend on electronics still had a profound impact on the advent of electronic music.

The experimentation with technology was occurring in many countries simultaneously, sometimes for different purposes. Throughout the last century, musicians, artists, scientists, inventors, and businessmen each had interest in the progress of technology, and cross-pollination was and continues to be quite common. For this reason, part of the history necessarily includes advances in other fields.

The first quarter of the 20th century was often referred to as the Mechanical Age, which overlapped and shifted into the Electronic Age. The last quarter of the 20th century marked the beginning of the revolutionary Computer Age, in the throes of which we now find ourselves.

## Composers

As musicians, it is notable that some of the finest musicians and most highly acclaimed institutions are largely responsible for the progress made in the field of electronic music. This is not an isolated crowd; rather, it includes celebrities such as Stokowski, Boulez, Stockhausen, and institutions including Columbia University, Princeton University, and Stanford University, as well as many highly active and advanced studios in Europe. The beginnings of true electronic music were received with such profound appreciation. *Time Magazine* and the *Today show* featured the experimental composers and their works, an indication that they were well-received by conventional musicians.

The people involved in electronic music today still come from many different directions, and not solely from conventional classical, or art music academia. This fact may be part of the reason that classically trained performers have less awareness of electronic music than would be warranted considering its history. These classical performers tend to still be taught pre-20th Century and early 20th Century music, and the latter half of the century is largely ignored. As one can deduce from a brief look at the history of electronic music, the progress represents a natural course, a continuum, of progress of classical music. Many believe as flutist Patricia Spencer does, that the exploration of electronic instruments represents "the development of a new instrument." [17]

Its inclusion in the current pedagogy is quite appropriate; in fact, one would be ill advised to exclude teaching this music, seeing as it represents the current trend and profoundly affects the future of classical music. Proponents of electronic music today understand the importance of knowing the history, as exemplified in this statement by flutist Elizabeth McNutt, "A knowledge of the history brings greater understanding, and we are more forgiving." [18]

Mario Davidovsky, one of the most important living figures involved in electronic music, describes the effect electronic music had on his acoustic writing:

...and then when I would return to write chamber music and orchestral music, I was incredibly influenced by all these new ideas of how sound could behave.

He also understands this music to have a large impact on all contemporary composers:

We can say that 20th Century music has been greatly influenced by electronic music, whether the composers were using electronic instruments or not. [19]

## **History of the electronic music**

This history includes advances in music technology in general, some significant works and composers, and does not focus on flute music in particular. Interestingly, the composers of the pieces analyzed in this dissertation have their own place in this history, which brings the history through the generations to the present day.

## Recording devices

An important beginning to the history of electronic music is the ability to record sounds, which was not possible until 1867. It was then that Leon Scott deMartinville first recorded sound outlines onto cylinders coated with carbon (lampblack). This important discovery was the precursor to the phonograph.

Just a decade later, in 1878, Thomas A. Edison patented the phonograph, which uses cylinders as demonstrated first in deMartinville's device. Although cylinders continued to be used long after this, it was soon after the phonograph came into use that Emile Berliner developed the phonograph disc, in 1897. Also in this year, Berliner developed the telephone transmitter. [20]

In Copenhagen in 1898, Valdemar Poulsen patented the first magnetic recording machine, which used wire as the recording medium. This device was named the Telegraphone. It caused a sensation in 1900 when it was exhibited at the Exposition Universelle in Paris. Over the next couple of decades, many experimental devices were invented, some of which became obscure as the technology surpassed them.

## Telharmonium

One such device was an instrument called the Telharmonium, which was created by Thaddeus Cahill in 1902. The Telharmonium was also known as the Dynamaphone, and was able to produce any combination of notes and overtones, at any dynamic level. This instrument was a predecessor of the famous RCA Mark II Sound Synthesizer later installed at CPEMC in the 1950s. The major drawback of the Telharmonium was that it weighed over two hundred tons and was large. It soon fell into obscurity. [21]

## Audion

A significant invention, which was later to have a profound effect on electronic music, was Lee DeForest's triode audion—this was the first vacuum tube. Invented in 1906, this ultimately led to the amplification of electrical signals, electronic computation, and other endless electronic feats.

## Busoni

Just a year later, another significant contribution was made to the advent of experimental music. This was the 1907 publication of Ferruccio Busoni's *Sketch for a New Aesthetic of Music*, which discussed the use of electrical and other new sound sources in future music. He wrote of the future of music:

Only after a long and careful series of experiments, and a continued training of the ear, can render this unfamiliar material approachable and plastic for the coming generation, and for Art. [22]

Also in the *Sketch for a New Aesthetic of Music*, Busoni states:

Music as art, our so-called occidental music, is hardly four hundred years old; its state is one of development, perhaps the very first stage of a development beyond present conception. And we talk of 'classics' and 'hallowed traditions'! And we have talked of them for a long time!

We have formulated rules, stated principles, laid down laws—we apply laws made for maturity to a child that knows nothing of responsibility! This child-music-it floats on air! It touches not the earth with its feet. It knows no law of gravitation. It is well nigh incorporeal. Its material is transparent. It is sonorous air. It is almost Nature herself. It is free!

But freedom is something that mankind has never wholly comprehended, never realized to the full. Man can neither recognize nor acknowledge it. He disavows the mission of this child; he hangs weights upon it. This buoyant creature must walk decently, like anyone else. It may scarcely be allowed to leap—when it were its joy to follow the line of the rainbow, and to break sunbeams with the clouds! [23]

## Varèse

Through this writing, as well as his personal contact, Busoni was to have a profound effect on many musicians and composers, perhaps most notably his pupil, Edgard Varèse. Varèse said of his experience:

Together we used to discuss what direction the music of the future would, or rather, should take and could not take as long as the straitjacket of the tempered system. He deplored that his own keyboard instrument had conditioned our ears to accept only an infinitesimal part of the infinite gradations of sounds in nature. He was very much interested in the electrical instruments we began to hear about, and I remember particularly one he had read of called the Dynamophone. All through his writings one finds over and over again predictions about the music of the future which have since come true. In fact, there is hardly a development that he did not foresee, as for instance in this extraordinary prophecy: 'I almost think that in the new great music, machines will also be necessary and will be assigned a share in it. Perhaps industry, too, will bring forth her share in the artistic ascent. [24]

## Futurism

In Italy, the Futurists were coming at the changing aesthetic from a different angle, but one that also affected the world of classical music. A major thrust of the Futurist philosophy was to value "noise," and to place artistic and expressive value on sounds that had previously not been considered even remotely musical. A quote from their manifesto states that their credo is:

To present the musical soul of the masses, of the great factories, of the railways, of the transatlantic liners, of the battleships, of the automobiles and airplanes. To add to the great central themes of the musical poem the domain of the machine and the victorious kingdom of Electricity. [25]

In 1914, futurist Luigi Russolo held the first "art-of-noises" concert in Milan on April 21. This used his *Inonarumori*, described by Russolo as "acoustical noise-instruments, whose sounds (howls, roars, shuffles, gurgles, etc.) were hand-activated and projected by horns and megaphones." [26] In June, similar concerts are held in Paris.

## Theremin

Another development, which aroused the interest of many composers, occurred in 1919-1920. In Leningrad, Leon Theremin (actually Lev Termen) built and demonstrated his Etherophone, which was later renamed the Theremin. This led to the first compositions for electronic instruments, as opposed to noisemakers and re-purposed machines.

Composers who ultimately utilized the Theremin included Varèse—in his piece *Ecuatorial* (1934)—, Stokowski, and others. In 1929, Joseph Schillinger composed *First Airphonic Suite for Theremin and Orchestra*, premiered with the Cleveland Orchestra with Leon Theremin as soloist.

## Ondes Martenot

The 1920s have been called the apex of the Mechanical Age and the dawning of the Electrical Age. In 1922, in Paris, Darius Milhaud began experiments with "vocal transformation by phonograph speed change." [27] These continued over the next 5 years (to 1927).

This decade brought a wealth of early electronic instruments—along with the Theremin—, there is the presentation of the Ondes Martenot, which was designed to reproduce the microtonal sounds found in Hindu music, and the Trautonium. Maurice Martenot invented the Ondes Martenot in 1928, and soon demonstrated it in Paris. Composers using the instrument ultimately include Messiaen, Jolivet, Honegger, Milhaud, Varese, and Koechlin. In 1937, Messiaen wrote *Fets des bells eaux for 6 ondes-martinot*, and featured the instrument as a soloist in *Trois petites liturgies de la Presence Divine*.

## Trautonium

The Trautonium was also invented in 1928, and in 1940, Richard Strauss used Trautonium in his *Japanese Festival Music*. This new class of instruments, which are microtonal by nature, was adopted by composers slowly at first, but by the early 1930s there is clearly a burst of new works incorporating these and other electronic instruments.

In 1924, Ottorino Respighi composed *The Pines of Rome*, which calls for the use of a phonograph recording of nightingales. This probably constitutes the first true "electroacoustic" composition/performance; that is, the first combination of acoustic instruments with an electronic device. However, this is actually more along the lines of using of a sound effect, as was occurring in radio or film at the time, and therefore should probably not really be considered a proper electroacoustic composition.

The following year, Antheil first composed for mechanical devices, electrical noisemakers, motors and amplifiers in his unfinished opera, *Mr. Bloom*, as a response to the "art of noises" of Luigi Russolo, Marinetti and the other Futurists.

And just one year later in 1926, was the premiere of Antheil's *Ballet Mécanique*, using car horns, airplane propellers, saws and anvils.

Recording of sounds made a leap in 1927, when American inventor J. A. O'Neill developed a recording device that used magnetically coated ribbon. Surprisingly, however, this failed to take off commercially. Two years later, Laurens Hammond established his company for the manufacture of electronic instruments. He went on to produce the Hammond organ, which was based on the principals of the Telharmonium, along with other developments including early reverberation units. [28]

## First synthesizer

In that same year, A. Givelet and P. Coupleux develop an instrument utilizing oscillators controlled by punched paper rolls. This is arguably the first real "synthesizer". Just a few years later (in 1935), another significant development was made in Germany. Allgemeine Elektrizitäts Gesellschaft (AEG) demonstrated the first commercially produced magnetic tape recorder, called the "Magnetophon". The tape itself was invented by Fritz Pfeumer, and manufactured by I.G. Farben AG. Audio tape, which had the advantage of being fairly light as well as having good audio fidelity, ultimately replaced the bulkier wire recorders.

In 1939, John Cage composed *Imaginary Landscape no.1* while teaching at The Cornish School in Seattle. The piece calls for muted piano, [cymbal](#), and two variable-speed [turntables](#) playing records of test tones. This could be considered the first use of electronically produced sounds as instrumental voices. This differs from Antheil's use of mechanical gadgets, and from Respighi's use of recordings as pure sound effect (bird sounds). Cage composed two more pieces in his *Imaginary Landscape* series, both in 1942 while in Chicago, which expanded on this pioneering work. He composed *March (Imaginary Landscape no. 2)* for percussion [quintet](#) and amplified coil of wire, and then *Imaginary Landscape no. 3* for percussion, tin cans, muted [gong](#), audio frequency oscillators, variable speed turntables, frequency recordings (test tones), buzzer, amplified coil of wire, and marimba amplified with a contact microphone.

## Post-war

The post-war 1940s were a time of much activity, both in Europe (particularly France and Germany), and the United States. In Paris, Paul Boisselet was experimenting with disc and tape procedures. Ultimately, composers in France favored recording and manipulating acoustic sounds, and are the progenitors of *Musique Concrète*. In the United States, the focus turned more toward the generation of sounds, as well as the generation of compositions through use of computers. In 1946, the ENIAC (the Electronic Numerical Integrator and Computer) was invented, the first true computer.

## Pierre Schaeffer

In 1948, Radiodiffusion-Télévision Française (RTF) broadcast composer Pierre Schaeffer's *Etude aux Chemin de Fer* on October 5th. This was the first "[movement](#)" of *Cinq études de bruits*, and marked the beginning of studio realizations and [musique concrète](#). Schaeffer employed a disk-cutting lathe, four

turntables, a four-channel mixer, filters, an echo chamber, and a mobile recording unit.

Just a year later, in 1949, Schaeffer created a musique concrete piece using flute sounds as the raw material: *Variations sur une Flûte Mexicaine* ('Variations on a Mexican Flute'). This piece marked the first use of flute in conjunction with electronics. The piece was broadcast on Paris Radio on November 3.

In late January of 1950, it was played at a tape concert at the Paris Conservatory. Not long after this, Pierre Henry began collaborating with Schaeffer, a collaboration that was to have profound and lasting effects on the progression of electronic music. Also associated with Schaeffer, Varese begins work on *Déserts* for chamber orchestra and tape. The tape parts were created at Pierre Schaeffer's studio, and were later revised at Columbia University.

In 1950, Schaeffer gives the first public (non-broadcast) concert of musique concrete at the Ecole Normale de Musique in Paris. "Schaeffer used a PA system, several turntables, and mixers. The performance did not go well as creating live montages with turntables had never been done before." [29] Pierre Henry later that same year collaborated with Schaeffer on *Symphonie pour un homme seul* (1950) the first major work of musique concrete. In Paris in 1951, in what was to become an important worldwide trend, RTF established the first studio for the production of electronic music. Also in 1951, Schaeffer and Henry produced an opera, *Orpheus*, for concrete sounds and voices.

## Morton Feldman

Meanwhile, back in the United States, sounds were being created electronically and used in composition, as exemplified in a piece by Morton Feldman called *Marginal Intersection*. This piece is scored for winds, brass, percussion, strings, 2 oscillators, and sound effects of riveting, and is one of those that uses Feldman's "box notation" system. Feldman composed this at the age of twenty-five. The Music for Magnetic Tape Project was then formed by John Cage, Earle Brown, Christian Wolff, David Tudor, and Morton Feldman, and lasted three years until 1954. Cage completed *Williams Mix* while working with the Music for Magnetic Tape Project. The group had no permanent facility, and had to rely on borrowed time in commercial sound studios.

## Columbia University

Also in the U.S., in the same year, significant developments were happening in New York City. Columbia University purchased its first tape recorder—a professional Ampex machine—for the purpose of recording concerts.

Vladimir Ussachevsky, who was on the music faculty of Columbia University, was placed in charge of the device, and almost immediately began experimenting with it. Herbert Russcol writes: "Soon he was intrigued with the new sonorities he could achieve by recording musical instruments and then superimposing them on one another." [30] Ussachevsky said later: "I suddenly realized that the tape recorder could be treated as an instrument of sound transformation." [31]

On May 9 of that year, Ussachevsky presented several demonstrations of tape music/effects that he created at his Composers Forum, in the McMillin Theatre at Columbia University. In an interview, he stated: "...I presented a few examples of my discovery in a public concert in New York together with other compositions I had written for conventional instruments." [32] Otto Luening, who had attended this concert, remarked: "The equipment at his disposal consisted of an Ampex tape

recorder...and a simple box-like device designed by the brilliant young engineer, Peter Mauzey, to create feedback, a form of mechanical reverberation. Other equipment was borrowed or purchased with personal funds." [33]

Just three months later, in August of 1951, Ussachevsky traveled to Bennington, Vermont at Luening's invitation to present his experiments. There, the two collaborated on various pieces. Luening described the event: "Equipped with earphones and a flute, I began developing my first tape-recorder composition. Both of us were fluent improvisors and the medium fired our imaginations." [34] They played some early pieces informally at a party, where "a number of composers almost solemnly congratulated us saying, 'This is it' ('it' meaning the music of the future)." [35]

Word quickly reached New York City. Oliver Daniel telephoned and invited the pair to "produce a group of short compositions for the October concert sponsored by the American Composers Alliance and Broadcast Music, Inc., under the direction of Leopold Stokowski at the Museum of Modern Art in New York. After some hesitation, we agreed... Henry Cowell placed his home and studio in Woodstock, New York, at our disposal. With the borrowed equipment in the back of Ussachevsky's car, we left Bennington for Woodstock and stayed two weeks. ...In late September, 1952, the travelling laboratory reached Ussachevsky's living room in New York, where we eventually completed the compositions." [36]

Two months later, on October 28, Vladimir Ussachevsky and Otto Luening presented the first Tape Music concert in the United States. The concert included Luening's *Fantasy in Space* (1952)—"an impressionistic virtuoso piece" [37] using manipulated recordings of flute—and *Low Speed* (1952), an "exotic composition that took the flute far below its natural range." [38] Both pieces were created at the home of Henry Cowell in Woodstock, NY. After several concerts caused a sensation in New York City, Ussachevsky and Luening were invited onto a live broadcast of NBC's Today Show to do an interview demonstration—the first televised electroacoustic performance. Luening described the event: "I improvised some [flute] sequences for the tape recorder. Ussachevsky then and there put them through electronic transformations." [39]

## Sequencer

These short few months were some of the most exciting in music history and technology, and the profundity of it was recognized at the time. It seems doubtful that electroacoustic music ever received such a wide audience again, unless one includes televised concerts by latter day rock and jazz fusion groups. Others were certainly active exploring new technology also. In that same year, 1951, former [jazz](#) composer Raymond Scott invented the first sequencer, which consisted of hundreds of switches controlling stepping relays, timing solenoids, tone circuits and 16 individual oscillators.

After this point, we see a spate of compositions utilizing the new technology, and a great deal included acoustic as well as electronic sounds. In 1952, Henk Badings composed the *Capriccio for violin and two sound tracks*, which is one of the earliest known pieces for combined electric and acoustic sounds.

## Maderna and Berio

That same year, the first piece to use flute as an acoustic instrument along with electronics was composed. This was done by Bruno Maderna, in Italia, and was entitled *Musica su Due Dimensioni* (Music in Two Dimensions) for flute,

percussion, and electronic sounds on tape. The tape part was later revised in 1958. The following year, Luciano Berio, in Italia, composed his *Mimusique n. 1*, and Luening and Ussachevsky collaborated again, this time composing *Rhapsodic Variations* for orchestra and tape. Edgard Varese, in France, received an Ampex tape recorder as an anonymous gift and began work on *Déserts*, for orchestra and tape, while Stockhausen, in Cologne, completes *Studie I*.

## Stochastic

An important new development was the advent of computers for the purpose of composing music, as opposed to manipulating or creating sounds. Iannis Xenakis began what is called "musique stochastique," or "stochastic music," which is a method of composing that employs computers and mathematical probability systems. Different probability algorithms were used to create a piece under a set of parameters. Xenakis used a computer to aid in calculating the velocity trajectories of glissandi for his orchestral composition *Metastasis*.

## Déserts

1954 saw the advent of what would now be considered authentic electric plus acoustic compositions—acoustic instrumentation augmented/accompanied by recordings of manipulated and/or electronically generated sound. Three major works were premiered that year: Varese's *Déserts*, for chamber ensemble and tape sounds, and two works by Luening and Ussachevsky: *Rhapsodic Variations for the Louisville Symphony* and *A Poem in Cycles and Bells*, both for orchestra and tape. By dint of his beginning work on *Déserts* the year before, in 1953, the prize for being the first to compose a "proper" electroacoustic piece should probably go to Varese. Because he had been working at Schaeffer's studio, the tape part contains much more concrete sounds than electronic. "A group made up of wind instruments, percussion and piano alternates with mutated sounds of factory noises and ship sirens and motors, coming from two loudspeakers." [40]

*Déserts* was premiered in Paris in the first stereo broadcast on French Radio. At the German premiere, which was conducted by Bruno Maderna, the tape controls were operated by Karlheinz Stockhausen. [41] The title *Déserts*, suggested to Varese not only, "all physical deserts (of sand, sea, snow, of outer space, of empty streets), but also the deserts in the mind of man; not only those stripped aspects of nature that suggest bareness, aloofness, timelessness, but also that remote inner space no telescope can reach, where man is alone, a world of mystery and essential loneliness." [42] Meanwhile, Stockhausen composed his *Elektronische Studie II*—the first electronic piece to be notated.

In 1955, more experimental and electronic studios began to appear. Notable were the creation of the Milan Studio de Fonologia RAI, (with Luciano Berio as artistic director), a studio in Tokyo founded by Mayazumi, and the Phillips studio at Eindhoven, the Netherlands, which was later shifted to University of Utrecht Institute of Sonology in 1960.

The impact of computers continued in 1956. Lejaren Hiller and Leonard Isaacson composed *Iliac Suite* for [string quartet](#), the first complete work of computer-assisted composition using algorithmic composition. "... Hiller postulated that a computer could be taught the rules of a particular style and then called on to compose accordingly." [43]

That same year Stockhausen composed *Gesang der Jungelinge*, the first major work of the Cologne studio, based on text from the Book of Daniel. An important

technological development of that year was the invention of the Clavivox synthesizer by Raymond Scott with subassembly by Robert Moog.

Later, Milton Babbitt began applying serial techniques to electronic music.

From 1950 to 1960 the vocabulary of tape music shifted from the fairly pure experimental works which characterized the classic Paris and Cologne schools to more complex and expressive works which explored a wide range of compositional styles. More and more works began to appear by the mid-1950's which addressed the concept of combining taped sounds with live instruments and voices. There was also a tentative interest, and a few attempts, at incorporating taped electronic sounds into theatrical works. [44]

1957 saw an exciting new development in computer technology. The first use of a computer to generate sound was demonstrated at Bell Telephone Laboratories, New Jersey by Max Mathews, who used the MUSIC4 program running on an IBM mainframe computer, which used a primitive digital to analog converter. Mathews later left Bell Labs to work at Stanford, which became a major center for electronic and computer music.

In 1958, University of Illinois at Champaign/Urbana established the Studio for Experimental Music under the initial direction of Lejaren Hiller. The studio became, and remains, one of the most important centers for electronic music research in the United States.

The public remained interested in the new sounds being created around the world, as can be deduced by the inclusion of Varese' *Poeme Electronique*, which was played over four hundred loudspeakers at the Phillips Pavilion of the 1958 Brussels World Fair. That same year, Mauricio Kagel, an Argentinean composer, composed *Transición II*, the first piece to call for live tape recorder as part of performance. The work was realized in Cologne. Two musicians performed on a piano, one in the traditional manner, the other playing on the strings and wood. Two other performers used tape to unite the presentation of live sounds with the future of pre-recorded materials from later on and its past of recordings made earlier in the performance.

In 1958, one of the most important and influential studios was formed. The Columbia-Princeton Electronic Music Center (CPEMC) was formed by Vladimir Ussachevsky and Otto Luening of Columbia, and Milton Babbitt and Roger Sessions in Princeton with the help of a \$175,000 Rockefeller Grant. Other composers involved included Mario Davidovsky, Halim El-Dabh, Bülent Arel, Luciano Berio, Milton Babbitt, Charles Wuorinen, Pril Smiley, and Jacob Druckman. In 1960, CPEMC obtains the RCA Mark II Sound Synthesizer, the first major voltage-controlled synthesizer.

This is the same year that the integrated circuit was invented.

By this time, a strong community of composers and musicians working with new sounds and instruments was well established, and growing. 1960 witnessed the composition of Luening's *Gargoyles* for violin and tape as well as the premiere of Stockhausen's *Kontakte* for electronic sounds, piano, and percussion. This piece existed in two versions—one for 4-channel tape, and the other for tape with human performers. "In *Kontakte*, Stockhausen abandoned traditional musical form based on linear development and dramatic climax. This new approach, which he termed 'moment form,' resembles the 'cinematic splice' techniques in early twentieth century film." [45]

The 1960s also saw the development of large mainframe computer synthesis. Max Mathews of Bell Labs perfected MUSIC V, a direct digital synthesis language. Concurrent with this was the development of smaller voltage-controlled synthesizers by Moog Music and others that made instruments available to most composers, universities and popular musicians. A well-known example of the use of these synthesizers is the *Switched-On Bach* album by Wendy Carlos.

These were fertile years for electronic music - not only for academia, but for independent artists as well. It was within this period (1966-7) that pioneer Reed Ghazala discovered and began to teach "circuit-bending" —the application of the creative short circuit. Ghazala's process would eventually realize the current international circuit-bending school, a powerful force in contemporary art music.

This time is also the true beginning of live electronic performance. The Synket, a live performance instrument—used extensively by composer John Eaton in works such as *Concert Piece for Synket and Orchestra* (1967)—was invented.

ONCE Festivals, featuring multimedia theater music, were organized by Robert Ashley and Gordon Mumma in Ann Arbor, MI.

Milton Babbitt composed his first electronic work using the synthesizer—his *Composition for Synthesizer*—which he created using the RCA synthesizer at CPEMC.

"For Babbitt, the RCA synthesizer was a dream come true for three reasons. First, the ability to pinpoint and control every musical element precisely. Second, the time needed to realize his elaborate serial structures were brought within practical reach. Third, the question was no longer "What are the limits of the human performer?" but rather "What are the limits of human hearing?" [46]

The collaborations also occurred across oceans and continents. In 1961, Ussachevsky invited Varese to the Columbia-Princeton Studio (CPEMC). Upon arrival, Varese embarked upon a revision of *Déserts*. He was assisted by Mario Davidovsky and Bulent Arel. [47]

The intense activity occurring at CPEMC and elsewhere inspired the establishment of the San Francisco Tape Music Center in 1963. It was established by Morton Subotnick, and soon incorporated a voltage-controlled synthesizer based around automated sequencing by Donald Buchla, and used in album-length Subotnick pieces such as *Silver Apples of the Moon* (1967) and *The Wild Bull* (1968).

Back across the Atlantic, in Czechoslovakia, 1964, the First Seminar of Electronic Music was held at the Radio Broadcast Station in Plzen. Four government-sanctioned electroacoustic music studios were later established in the 1960s under the auspices of extant radio and television stations.

New instruments continued to develop. In 1964, the first fully-developed [Moog synthesizer](#) was completed. Robert Moog began public sales the following year (1965). Another popular instrument was the Hammond organ.

In 1965, Karlheinz Stockhausen composed *Mikrofonie II* for choir, Hammond organ, electronics and tape.

## Pop electronic music

In 1966, the Beach Boys became the first pop music group to use electronic instruments (using a keyboard-controlled variation on the Theremin, in the song "I Just Wasn't Made for These Times" on *Pet Sounds*).

The Beatles follow a year later by using concrete techniques on *Revolver* and *Sgt. Pepper's Lonely Hearts Club Band*, directly influenced by recordings of Schaeffer and Stockhausen (whose face appears on the album cover).

1967 was another exciting year for electronic music. Leon Kirschner composed *String Quartet No. 3*, the first piece with electronics to win the Pulitzer Prize.

Also that year, Max Mathews and F. Richard Moore developed GROOVE, a real-time digital control system for analog synthesis, eventually to be used extensively by composers Laurie Spiegel and Emmanuel Ghent in the 1970s. In 1979, Sequential Circuits company introduced the Prophet, the first synthesizer to use microprocessor control.

## Mini-Moog

In 1970, Charles Wuorinen composed *Times Encomium*, the first Pulitzer Prize winner for an entirely electronic composition. Also in the 1970s, the Mini-Moog was created. This was a small, integrated synthesizer that made analog synthesis easily available and affordable, along with newcomers ARP and Oberheim. This paralleled the development of real-time digital synthesis. Charles Dodge composed *Speech Songs* (1972) based on early speech synthesis research.

## Synclavier

Jon Appleton (with Jones and Alonso) invented the Dartmouth Digital Synthesizer, later to become the New England Digital Copt's Synclavier. Barry Vercoe wrote Music 11, a next-generation music synthesis program (later evolving into csound, which is still widely used).

IRCAM (Paris) became a major center for computer music research and realization and development of the Sogitec 4X computer system[1], featuring then revolutionary real-time digital signal processing. Pierre Boulez's *Repons* (1981) for 24 musicians and 6 soloists used the 4X to transform and route soloists to a loudspeaker system.

"Under the general direction of Pierre Boulez and funded by the French government, IRCAM is a large and active research organization devoted to the scientific study of musical phenomena and to bringing together scientists and musicians to work on common interests." [48]

In the mid to late 1970s, the British band Throbbing Gristle spawned an entire sub-genre dubbed [industrial music](#). [Electroacoustic music](#) and experimental electronic music thus became a widespread musical "underground" outside of academe thanks in part to "taper culture"—a sort of western samizdat in which musicians and composers traded and distributed their works on cassette tapes (much cheaper and more accessible than vinyl). The most respected (and popular) practitioners of "industrial music" were and continue to be knowledgeable of academic composers in the oeuvre and informed by their theoretical works. These would include groups such as the Hafler Trio, Jim O'Rourke, Organum, Sonic Youth, and Illusion of Safety.

## MIDI

In 1980, a group of musicians and music merchants met to standardize an interface by which new instruments could communicate control instructions with other instruments and the prevalent microcomputer. This standard was dubbed MIDI (Musical Instrument Digital Interface). A paper was authored by Dave Smith of Sequential Circuits and proposed to the Audio Engineering Society in 1981. Then, in August 1983, the MIDI Specification 1.0 was finalized.

The advent of MIDI technology allows a single keystroke, control wheel motion, pedal movement, or command from a microcomputer (e.g., an Apple Macintosh) to activate every device in the studio remotely and in synchrony, with each device responding according to conditions predetermined by the composer.

MIDI instruments and software made powerful control of sophisticated instruments easily affordable by many studios and individuals. Acoustic sounds became reintegrated into studios via sampling and sampled-ROM-based instruments.

Miller Puckette developed graphic signal-processing software for 4X called Max (after Max Mathews) and later ports it to Macintosh (with Dave Zicarelli extending it for Opcode) for real-time MIDI control, bringing algorithmic composition availability to most composers with modest computer programming background. At the same time, Sequential Circuits introduced the Prophet 600—the first MIDI keyboard.

Soon thereafter, in 1983, Yamaha introduced the first stand-alone digital synthesizer, the DX-7. It used frequency modulation synthesis (FM synthesis), first experimented with by John Chowning at Stanford during the late '60s, "turning FM synthesis from a software algorithm that ran on mainframes into chips that powered a commercial synthesizer took seven years." [50]

In 1985, the final MIDI specification was published by the MIDI Manufacturers Association. Also in 1985, Digidesign released Sound Designer software for the Macintosh, this being the first consumer-level hard disk recording and editing software. David Jaffe, Julius Smith and Perry Cook (CCRMA studios of Stanford University) prototype physicaling, a method of synthesis in which physical properties of existing instruments are represented as computer algorithms which can then be manipulated and extended.

Barry Vercoe describes one of his experiences with early computer sounds:

At IRCAM in Paris in 1982, flutist Larry Beauregard had connected his flute to Di Giugno's 4X audio processor, enabling real-time pitch-following. On Guggenheim at the time, I extended this concept to real-time score-following with automatic synchronized accompaniment, and over the next two years Larry and I gave numerous demonstrations of the computer as a Chamber musician, playing Handel flute sonatas, Boulez's *Sonatine for flute and piano* and by 1984 my own *Synapse II for flute and computer* the first piece ever composed expressly for such a setup. A major challenge was finding the right software constructs to support highly sensitive and responsive accompaniment. All of this was pre-MIDI, but the results were impressive even though heavy doses of tempo rubato would continually surprise my Synthetic Performer. In 1985 we solved the tempo rubato problem by incorporating learning from rehearsals (each time you played this way the machine would get better). We were also now tracking violin, since our brilliant young flutist had contracted a cancer. Moreover, this version used a new standard called MIDI, and here I was ably assisted by former student Miller Puckette, whose initial concepts for this task he later expanded into a program called MAX. [51]

The last decade brought a flurry of new activity. In the 1990s, interactive computer-assisted performance started to become popular. A description of a new real-time development follows:

Automated Harmonization of Melody in Real Time: An interactive computer system, developed in collaboration with flutist/composer Pedro Eustache, for realtime melodic analysis and harmonic accompaniment. Based on a novel scheme of harmonization devised by Eustache, the software analyzes the tonal melodic function of incoming notes, and instantaneously performs an orchestrated harmonization of the melody. The software was originally designed for performance by Eustache on Yamaha WX7 wind controller, and was used in his composition *Tetelestai*, premiered in Irvine, California in March 1999. [52]

Tod Machover (MIT and IRCAM) composed *Begin Again Again* for "hypercello," an interactive system of sensors measuring physical movements of the cellist. This piece was premiered by Yo-Yo Ma.

Max Mathews perfected *Radio Baton* to compliment his Conductor program for real-time tempo, dynamic and timbre control of a pre-input electronic score. Morton

Subotnick released a multimedia CD-ROM *All My Hummingbirds Have Alibis*. Many used MIDI technology to compose works that included acoustic instruments (such as James Mobberley's *Caution to the Winds* for piano and tape) pioneered by Mario Davidovsky's *Synchronisms* series several decades earlier.

Electronic art music has had a significant influence on mass culture, from the aforementioned Beatles to Michael Jackson, who used his synclavier to realize timbres conceived in his head. Due to technological advancements made over the past century, timbre composition allows for just as much creative freedom as any other art form. The precise modulation of numerous parameters of sound allows composers to satisfactorily express themselves not only with melodies, harmonies, and rhythms, but with [timbres](#) as well.

Reed Ghazala (self-taught electronic designer, author and composer) is the most significant figure in contemporary electronic art music, being the artist behind the "circuit-bending" school. A process of chance short-circuiting, experimental electronic instruments result from Ghazala's technique, a system presently being taught via workshops and universities world-wide. While Ghazala's work first received attention through his article series in EMI (Experimental Musical Instruments magazine, 1992-98, Ghazala here introduced his term "circuit-bending"), Ghazala's website, the first to include a circuit-bending tutorial, and book (*Circuit-Bending, Build Your Own Alien Instruments*, pub. Wiley & Sons), are the foundation of the circuit-bending movement (considered the first electronic art movement).

## Electronic body music

**Stylistic origins:** [Industrial music](#), electronic dance music

**Cultural origins:** Early 1980s, Belgium, United Kingdom, Canada

**Typical instruments:** [Synthesizer](#) - [Drum machine](#) - [Sequencer](#) - [Keyboard](#) - [Sampler](#))

**Mainstream popularity:** Small

**Derivative forms:** [Goa trance](#) - New beat - [Industrial rock](#)

### **[Subgenres](#)**

[Aggrotech](#) - [Futurepop](#)

**Electronic body music (EBM)** is a [music genre](#) that combines elements of [industrial music](#) and electronic dance music. Emerging in the early-to-mid 1980s, the genre's early influences range from the industrial music of the time (Throbbing Gristle, Psychic TV) to the early dance scene (Portion Control, 400 Blows), straight-ahead electronic music (Kraftwerk) and electropunk (DAF, Liaisons Dangereuses). In the 1990s, the usage of the term widened to include artists influenced by other styles such as [synthpop](#) and [trance](#).

# History

## Early EBM

The term was coined by the Belgian band Front 242 in 1984 to describe their music). Another term that has been used to refer to EBM is "techno-industrial". Through the 1980s and early 1990s the style, now sometimes referred to as "Old-school EBM") in contrast with more recent examples of the genre, was characterized by harsh and often sparse electronic beats and became popular in the underground club scene, particularly in Europe. In this early period the most important labels were the European PIAS and Antler-Subway and the North American Wax Trax!. Early bands besides Front 242 include Die Krupps, Nitzer Ebb, Borghesia, The Weathermen (with a strong Funk-influence), Klinik (more Industrial), Bigod 20, A Split Second (a Belgian Electro-Rock/New Beat project), à;GRUMH..., Severed Heads, Cobalt 60, Signal Aout 42, Insekt and Front Line Assembly. Older style EBM also had an influence on many new beat artists.

## Developments

By the mid 1990s, EBM began to borrow more heavily from [synthpop](#) with the early releases of such bands as Leaether Strip, Covenant, :wumpscut: and VNV Nation combining harsh industrial beats with [synthesizer](#)-driven melodies. This evolution of EBM has been termed by fans as **electro-industrial** [2] (or **elektro** for short, not to be confused with the hip-hop subgenre [electro](#)), although many still refer to it as EBM or sometimes "new-school EBM". Other notable new-school EBM bands include C-Tec, Stromkern, Funker Vogt, E-Craft, Bio-Tek, Suicide Commando, Tactical Sekt, Feindflug, Unter Null, Dismantled, and Velvet Acid Christ.

Another variation of EBM that developed in the mid-1990s and resurfaced more recently is [aggrotech](#), later known as 'terror EBM', which combines the basics of electro-industrial with harsher song structures, aggressive beats and lyrics, usually distorted, of a militant, pessimistic or explicit nature.

By the late 1990s many of these middle-era EBM bands (notably VNV Nation, Covenant, and Apoptygma Berzerk) were incorporating more influences from synthpop and [trance](#). VNV's Ronan Harris and Apoptygma's Stephan Groth called this new style [futurepop](#), a term now more widely used to describe their later music and that of similar groups.

Other more recent bands such as Ionic Vision, Spetsnaz or Proceed have gone the other way by producing older style EBM releases in the new millennium.

## Artists

### Older style EBM

# Electronic drum

An **electronic drum** is a [percussion instrument](#) in which the sound is generated by an electronic waveform generator or sampler instead of by acoustic vibration.

## How Electronic Drums Work

When an electronic drum pad is struck, a voltage change is triggered in the embedded piezoelectric transducer (piezo) or force sensitive resistor (FSR). The resultant signals are transmitted to an electronic [drum module](#) via TS or TRS cables, and are translated into digital waveforms, which produce the desired percussion sound assigned to that particular trigger pad. Most newer drum modules have trigger inputs for 2 or more [cymbals](#), a kick, 3-4 toms, a dual-zone snare, (head and rim) and a hi-hat. The hi-hat has a foot controller which produces open and closed sounds with some models offering variations in-between. By having the ability to assign different sounds to any given pad, the electronic drummer has nearly unlimited potential for configuring many different sounding [drum kits](#) from one set of electronic drums. Additionally, electronic drummers can sample non-percussive sounds and use them as drum sounds, as is the case with most [industrial music](#). Many see this as a great advantage over acoustic drums, as one can have a [jazz](#), [rock](#) or [ballad](#) drumset by merely changing the kit selector switch on the module.

## Early Electronic Drums

Many drummers claim that early electronic drums gave only an approximation of the sound of acoustic drums, as there were often technical issues with triggering, as well as musical issues such as decreased range of dynamic and tonal subtlety. Consequently, the pioneering electronic drumsets such as the early Simmons and Yamaha models, were often used for certain types of [rock](#), [disco](#) and [techno](#) genres in which the drums were usually expected to play a specific pattern or beat repeatedly with no variation in timbre. These were little more than manual [sequencers](#).

It should be noted that there are inexpensive low-end drums and modules currently in production whose quality is just marginally better than their pioneering counterparts. For the most part, these are targeted toward the hobbyist or novice drummer.

## Recent Innovations

Newer drum kits by Roland, Ddrum and Yamaha have addressed many of the downfalls of early electronic drums. While each of these manufacturers have entry-level units, the professional kits are geared toward creating a sound and playing experience which is nearly indistinguishable from a quality acoustic kit. Examples include the Yamaha DTXtreme IIS, the DDrum4SE and Roland's TD-12 and TD-20, having 2006 MSRPs ranging between \$2,195.00 and \$6,699.00. Typically, these high-end kits are equipped with:

- High quality digital samples- These modules offer 24 bit samples of actual percussion sounds with hundreds of samples from which to choose.
- Positional sensing and dynamic impact detection- The module can detect which area of the drum head is impacted, and provide a sample representative of that strike on an acoustic head. Additionally, the volume and timbre of the strike is dependent on the strength of the impact.
- Multiple triggers- Snares and Toms have impact zones for both the head and the rim, allowing for rim and cross shots as well as shell tapping. Cymbals can accommodate zones for edge, bow and bell strikes.
- Realistic Hi-Hats- These are mounted on standard stands, and allow for actual open and closed foot playing. An electronic module within the unit detects the movement and provides variations of open, partially open, and closed samples as played, with different sounds assigned to a foot close, and a quick close-open.
- Multiple outputs- These modules have multiple 'outs' to the sound board such that each percussion group (ie. Toms, Cymbals, etc) can be independently mixed (like the multiple miking of an acoustic kit). Additionally, these groups have independent volume faders on the module to fine tune volume settings for each group.
- Expansion slots/MIDI connections- for upgrading samples and software as they are improved through continuing R&D efforts.

Though these innovations may help attract serious drummers, many purists feel that electronic drum kits will never offer the same nuances and playability of an acoustic set.

## **Manufacturers of electronic drums and drum triggers**

Listed below are some of the companies that produce electronic drum modules, trigger pads, and acoustic triggers

- Alesis
  - Alternate Mode
  - Boom Theory
  - Dauz
  - Ddrum
  - Hart Dynamics
  - Mandala Drums
  - Pacific Digital Corporation
  - Pintech
  - RET Percussion
  - Roland Corporation
  - Sherpa
  - Smartrigger
  - Staff Drum
  - Yamaha Corporation

## **Famous drummers that use electronic drums, or have used them in the past**

- Danny\_Carey (Tool) - several Mandala and Simmons drums
- Nick\_Mason (Pink\_Floyd)
- Akira\_Jimbo

# Electronic music

**Electronic music** is a term for [music](#) created using electronic devices. As defined by the IEEE standards body, electronic devices are low-power systems and use components such as transistors and integrated circuits. Working from this definition, distinction can be made between instruments that produce sound through electromechanical means as opposed to instruments that produce sound using electronic components. Examples of an electromechanical instrument are the teleharmonium, Hammond B3, and the [electric guitar](#), whereas examples of an electronic instrument are a Theremin, [synthesizer](#), and a computer.

# History

## Late 19th century early 20th century

Before electronic music, there was a growing desire for composers to use emerging technologies for musical purposes. Several instruments were created that employed electromechanical designs and they paved the way for the later emergence of electronic instruments. An electromechanical instrument called the Teleharmonium (or Telharmonium) was developed by Thaddeus Cahill in 1897. Simple inconvenience hindered the adoption of the Teleharmonium: the instrument weighed seven tons and was the size of a boxcar. The first electronic instrument is often viewed to be the Theremin, invented by Professor Leon Theremin circa 1919 - 1920. Another early electronic instrument was the Ondes Martenot, which was used in the *Turangalîla-Symphonie* by Olivier Messiaen and also by other, primarily French, composers such as Andre Jolivet.

## Post-war years: 1940s to 1950s

*Main articles: History of electronic art music, [Musique concrète](#)*

The tape recorder was invented in Germany during World War II. It wasn't long before composers used the tape recorder to develop a new technique for composition called *Musique concrète*. This technique involved editing together recorded fragments of natural and industrial sounds. Frequently, composers used sounds that were produced entirely by electronic devices not designed for a musical purpose. The first pieces of *musique concrète* were written by Pierre Schaeffer, who later worked alongside such avant-garde classical composers as Pierre Henry, Pierre Boulez and Karlheinz Stockhausen. Stockhausen has worked for many years as part of Cologne's Studio for Electronic Music combining electronically generated sounds with conventional orchestras. The first electronic music for magnetic tape composed in America was completed by Louis and Bebe Barron in 1950.

Two new electronic instruments made their debut in 1957. Unlike the earlier Theremin and Ondes Martenot, these instruments were hard to use, required extensive programming, and neither could be played in real time. The first of these electronic instruments was the computer when Max Mathews used a program called *Music 1*, and later *Music 2*, to create original compositions at Bell Laboratories. Other well-known composers using computers at the time include Edgard Varèse, and Iannis Xenakis. The other electronic instrument that appeared that year was the first electronic synthesizer. Called the RCA Mark II Sound Synthesizer, it used vacuum tube oscillators and incorporated the first electronic music sequencer. It was designed by RCA and installed at The Columbia-Princeton Electronic Music Center where it remains to this day.

The Columbia-Princeton Electronic Music Center, now known as the Computer Music Center, is the oldest center for electronic and computer music research in the United States. It was founded in 1958 by Vladimir Ussachevsky and Otto

Luening who had been working with magnetic tape manipulation since the early 1950s. A studio was built there with the help of engineer Peter Mauzey and it became the hub of American electronic music production until about 1980. Robert Moog developed voltage controlled oscillators and envelope generators while there, and these were later used as the heart of the [Moog synthesizer](#).

## 1960s to late 1970s

Because of the complexities of composing with a synthesizer or computer, let alone the lack of access, most composers continued exploring electronic sounds using musique concrète even into the 60s. But musique concrète was clumsy at best and a few composers sought better technology for the task. That search led three, independent, teams to develop the world's first, playable, electronic [synthesizers](#).

The first of these synthesizers to appear was the Buchla. Appearing in 1963, it was the product of an effort spearheaded by musique concrète composer Morton Subotnick. In 1962, working with a grant from the Rockefeller Foundation, Subotnick and business partner Ramon Sender hired electrical engineer Don Buchla to build a "black box" for composition. Subotnick describes their idea in the following terms:

"Our idea was to build the black box that would be a palette for composers in their homes. It would be their studio. The idea was to design it so that it was like an analog computer. It was not a musical instrument but it was modular...It was a collection of modules of voltage-controlled envelope generators and it had sequencers in it right off the bat...It was a collection of modules that you would put together. There were no two systems the same until CBS bought it...Our goal was that it should be under \$400 for the entire instrument and we came very close. That's why the original instrument I fundraised for was under \$500."

Another playable synthesizer, the first to use a piano styled keyboard, was the brainchild of Robert Moog. In 1964, he invited composer Herb Deutsch to visit his studio in Trumansburg. Moog had met Deutsch the year before, heard his music, and decided to follow the composer's suggestion and build electronic music modules. By the time Deutsch arrived for the visit, Moog had created prototypes of two voltage-controlled oscillators. Deutsch played with the devices for a few days; Moog found Deutsch's experiments so musically interesting that he subsequently built a voltage-controlled filter. Then, by a stroke of luck, Moog was invited that September to the AES Convention in New York City, where he presented a paper called "Electronic Music Modules" and sold his first synthesizer modules to choreographer Alwin Nikolais. By the end of the convention, Moog had entered the synthesizer business.

Also in 1964, Paul Ketoff, a sound engineer for RCA Italiana in Rome, approached William O. Smith, who headed the electronic music studio at the city's American Academy, with a proposal to build a small playable synthesizer for the academy's studio. Smith consulted with Otto Luening, John Eaton, and other composers who were in residence at the academy at the time. Smith accepted Ketoff's proposal, and Ketoff delivered his Synket (for Synthesizer Ketoff) synthesizer in early 1965.

Although electronic music began in the world of classical (or "art") composition, within a few years it had been adopted into popular culture with varying degrees of enthusiasm. One of the first electronic signature tunes for television was the theme

music for Doctor Who in 1963. It was created at the BBC sound special effects unit Radiophonic Workshop by Ron Grainer and Delia Derbyshire.

In the late 1960s, Wendy Carlos popularized early [synthesizer](#) music with two notable albums Switched-On Bach and The Well-Tempered Synthesizer, which took pieces of baroque [classical music](#) and reproduced them on Moog [synthesizers](#). The Moog generated only a single note at a time, so that producing a multilayered piece, such as Carlos did, required many hours of studio time. The early machines were notoriously unstable, and went out of tune easily. Still, some musicians, notably Keith Emerson of Emerson Lake and Palmer did take them on the road. The theremin, an exceedingly difficult instrument to play, was even used in some popular music, most notably in "Good Vibrations" by The Beach Boys. There was also the Mellotron which appeared in the Beatles' Strawberry Fields Forever, and the volume tone pedal was uniquely used as a backing instrument in Yes It Is.

As technology developed, and [synthesizers](#) became cheaper, more robust and portable, they were adopted by many [rock bands](#). Examples of relatively early adopters in this field are bands like The United States of America, The Silver Apples and Pink Floyd, and although not all of their music was electronic (with the notable exception of The Silver Apples), much of the resulting sound was dependent upon the synthesiser. In the 1970s, this style was mainly popularised by Kraftwerk, who used electronics and robotics to symbolise and sometimes gleefully celebrate the alienation of the modern technological world. To this day their music remains uncompromisingly electronic. In Germany particularly electronic sounds were incorporated into popular music by bands such as Tangerine Dream, Can, Popol Vuh and others.

In [jazz](#), amplified acoustic instruments and synthesizers were combined in a series of influential recordings by Weather Report. Joe Zawinul, the synthesizer artist in that group, has continued to field ensembles of the same kind. The noted jazz pianist Herbie Hancock with his band The Headhunters in the 1970s also introduced jazz listeners to a wider palette of electronic sounds including the synthesizer, which he further explored with even more enthusiasm on the Future Shock album, a collaboration with producer Bill Laswell in the 1980s, which spawned a pop hit "Rockit" in 1983.

Musicians such as Tangerine Dream, Klaus Schulze, Brian Eno, Vangelis, Jean Michel Jarre, Ray Buttigieg, as well as the Japanese composers Isao Tomita and Kitaro, also popularised the sound of electronic music. The film industry also began to make extensive use of electronic music in [soundtracks](#). An example is the Wendy Carlos' score for A Clockwork Orange, Stanley Kubrick's film of the Anthony Burgess novel.

The score for Forbidden Planet, by Louis and Bebe Barron, had used electronic sound, although not synthesizers per se, in 1956. Once electronic sounds became more common in popular recordings, other science fiction films such as Blade Runner and the Alien series of movies began to depend heavily for mood and ambience upon the use of electronic music and electronically derived effects. Electronic groups were also hired to produce entire soundtracks, just like other popular music stars.

## Late 1970s to late 1980s

*Main articles: History of industrial music, [Electropop](#)*

In the late 1970s and early 1980s there was a great deal of innovation around the development of electronic music instruments. Analogue synthesisers largely gave way to digital synthesisers and samplers. Early samplers, like early

synthesisers, were large and expensive pieces of gear -- companies like Fairlight and New England Digital sold instruments that cost upwards of \$100,000. In the mid 1980s, this changed with the development of low cost samplers. From the late 1970s onward, much popular music was developed on these machines. Groups like Gary Numan, Heaven 17, Eurythmics, Severed Heads, The Human League, John Foxx, Thomas Dolby, Orchestral Manoeuvres in the Dark, Norman Iceberg, Yazoo, The Art of Noise, Depeche Mode and New Order developed entirely new ways of making popular music by electronic means. Fad Gadget is cited by some as a father to the use of electronics in [New Wave](#).

The natural ability for music machines to make stochastic, non-harmonic, staticky noises led to a genre of music known as [industrial music](#) led by pioneering groups such as Throbbing Gristle (which commenced operation in 1975), Wavestar and Cabaret Voltaire. Some artists, like Nine Inch Nails, KMFDM, and Severed Heads, took some of the adventurous innovations of musique concrète and applied them to mechanical dance beats and, later on, metal guitars. Others, such as Test Department, Einstürzende Neubauten, took this new sound at face value and created hellish electronic compositions. Meanwhile, other groups (Robert Rich, :zoviet\*france:, rapoon) took these harsh sounds and melded them into evocative soundscapes. Still others (Front 242, Skinny Puppy) combined this harshness with the earlier, more pop, or rather dance-oriented sounds, forming [electronic body music](#) (EBM).

Allied with the growing interest in electronic and industrial music were artists working in the realm of [dub music](#). Notable in this area was producer Adrian Sherwood whose On-U Sound record label in the 1980s was responsible for integrating the industrial and noise aesthetic with tape and dub production with artists such as the industrial-funk outfit Tackhead, vocalist Mark Stewart and others. This paved the way for much of the 1990s interest in dub, first through bands such as Meat Beat Manifesto and later downtempo and trip hop producers such as Kruder & Dorfmeister.

## Recent developments: 1980s to early 2000s

*Main articles: [History of techno](#), [History of house](#), [History of trance](#)*

The development of the [techno](#) sound in Detroit, Michigan and house music in Chicago, Illinois in the early to late 1980s, and the later UK-based [acid house](#) movement of the late 1980s and early 1990s all fueled the development and acceptance of electronic music into the mainstream and to introduce **electronic dance music** to nightclubs. Electronic composition can create rhythms faster and more precise than is possible using traditional [percussion](#). The sound of electronic dance music often features electronically altered sounds of traditional instruments and vocals. See [dance music](#).

It was in UK legislation to counter the [rave](#) culture that a current definition of popular electronic dance music was given, with the Criminal Justice and Public Order Act 1994 stating that music at raves, "includes sounds wholly or predominantly characterised by the emission of a succession of repetitive beats."

The falling price of suitable equipment has meant that [popular music](#) has increasingly been made electronically. Artists such as Björk and Moby have further popularized variants of this form of music within the mainstream.

# Overview

## Genres

*Main article:* [List of electronic music genres](#)

Electronic music, especially in the late 1990s fractured into many genres, styles and sub-styles, too many to list here, and most of which are included in the main [list](#). Although there are no hard and fast boundaries, broadly speaking we can identify the [experimental](#) and [classical](#) styles: [electronic art music](#), [musique concrète](#); the [industrial music](#) and [synth pop](#) styles of the 1980s; styles that are primarily intended for dance such as italo disco, [techno](#), [house](#), [trance](#), [electro](#), [breakbeat](#), [drum and bass](#) and styles that are intended more as experimental styles or for home listening such as [IDM](#), [glitch](#) and [trip-hop](#). The proliferation of personal computers beginning in the 1980s brought about a new genre of electronic music, known loosely as chip music or [bitpop](#). These styles, produced initially using specialized sound chips in PCs such as the Commodore 64, grew primarily out of the demoscene. The latter categories such as IDM, glitch and chip music share much in common with the art and *musique concrète* styles which predate it by several decades.

## Notable artists and DJs

With the explosive growth of computers music technology and consequent reduction in the cost of equipment in the late 1990s, the number of artists and DJs working within electronic music is overwhelming. With the advent of hard disk recording systems, it is possible for any home computer user to become a musician, and hence the rise in the number of "bedroom bands", often consisting of a single person. Nevertheless notable artists can still be identified. Within the experimental and classical or "art" traditions still working today are Karlheinz Stockhausen, Pierre Boulez and Steve Reich. The genre of ambient electronic music was formed at the turn of the 1970s in Germany by Popol Vuh, Klaus Schulze and Tangerine Dream. Influential musicians in industrial and later synth pop styles include Throbbing Gristle, Cabaret Voltaire (both now defunct), the Human League and Kraftwerk who released their first album in over a decade in 2003. In house, techno and drum and bass pioneers such as Juan Atkins, Derrick May, Goldie, A Guy Called Gerald and LTJ Bukem are still active as of 2003. Commercially successful artists working under the "electronica" rubric such as Fatboy Slim, Faithless, Fluke, The Chemical Brothers, Daft Punk, The Crystal Method, Massive Attack, The Prodigy, Orbital, Propellerheads, Underworld, Überzone, Björk and Moby continue to release albums and perform regularly (sometimes in stadium-sized arenas, such has the popularity of electronic dance music grown). Some DJs such as Paul Oakenfold, John Digweed, Paul van Dyk, Armin van Buuren, Ferry Corsten and Tijs Verwest (aka Tiësto) have reached true superstar status and can command five-figure salaries for a single performance. They perform for hours on end mixing their music into pre-recorded singles. Some

DJs have world wide Radio, and internet, broadcasted shows that air weekly. Such as A State Of Trance, a show mixed by Armin van Buuren. The critically acclaimed Autechre and Aphex Twin continue to put out challenging records of (mostly) home-listening music. On a more popular scale, Michael Jackson used to be heavily engaged in creating unique timbres, many of which were created electronically.

## **Notable record labels**

Until the 1980s, there were virtually no record labels that deal with exclusively electronic music. Because of this dearth of outlets, many of the early techno pioneers started their own. For example, Juan Atkins started Metroplex Records a Detroit-based label, and Richie Hawtin started his hugely influential Plus 8 imprint. In the United Kingdom Warp Records emerged in the 1990s as one of the pre-eminent sources of home-listening and experimental music. Later arrivals include Astralwerks, Ninja Tune, Tiesto's Black Hole Recordings and Oakenfold's Perfecto Record label.

## **Electronic music press**

United States magazine sources include the Los Angeles based Urb, BPM Magazine and San Francisco based XLR8R and other magazines such as e/i and Grooves. British electronic music sources include the London-based magazine The Wire (a monthly publication), DJ, Mixmag, Knowledge, Computer Music, Music Tech Magazine and Future Music. German magazine sources include Spex as well as Berlin-based De:bug.

## Electronic music in movies

Here is a short list of movies where electronic music plays a leading role

A Clockwork Orange (1971)  
Primorsky Boulevard (1988)  
Trainspotting (1996)  
Pi (1998)  
Better Living Through Circuitry (1999) - Rave documentary.  
Go (1999)  
Human Traffic (1999)  
Groove (2000)  
Kevin & Perry Go Large (2000)  
Stark Raving Mad (2002)  
24 Hour Party People (2002)  
It's All Gone Pete Tong (2004)  
Moog (2004) - Documentary about Robert Moog.  
Party Monster (2003)

# Electronic musical instrument

An **electronic musical instrument** is a [musical instrument](#) that produces its sounds using electronics. In contrast, the term electric instrument is used to mean instruments whose sound is produced mechanically, and only amplified or altered electronically - for example an [electric guitar](#). Usually the instrument will have some way of controlling the sound, such as by adjusting the [pitch](#), frequency, or duration of each [note](#).

All electric and electronic musical instruments can be viewed as a subset of audio signal processing applications. Simple electronic musical instruments are sometimes called sound effects; the border between sound effects and actual musical instruments is often hazy.

French [composer](#) and engineer Edgard Varèse created a variety of compositions using electronic horns, whistles, and tape. Most notably, he wrote Poème Électronique for the Phillips pavilion at the Brussels World Fair in 1958.

Electronic musical instruments are now widely used in most styles of music. The development of new electronic musical instruments continues to be a highly active and interdisciplinary field of research. Specialized conferences, notably the International Conference on New interfaces for musical expression, have organized to report cutting edge work, as well as to provide a showcase for artists who perform or create music with new electronic music instruments.

The STEIM foundation in Amsterdam ( in the Netherlands) is a highly influential research and development center for electronic music instruments. Many of the new concepts for musical man-machine interaction have come from the STEIM research team; in collaboration with its many guest researchers. These researchers are all active composers, musicians, artists, theater performers and engineers. Since the late seventies STEIM's director Michel Waisvisz has been an influential composer/performer and inventor of new concepts for live electronic music performance. He introduced early gestural sensor based instruments in the concert hall and also his recent work is an important inspiration for a new generation of live performers using physical sensor instruments to play laptop-based sound-synthesis in composed or improvised music.

## Early electronic musical instruments

In the broadest sense, the very first electrified musical instrument was the Denis d'or, dating from 1753. It was followed by the Clavecin électrique by the Frenchman Jean-Baptiste de Laborde in 1761.

The first purely electronic musical instrument was the Telharmonium, built by Thaddeus Cahill in 1906. Employing electric generators and tonewheels to produce notes, it had a length of 60ft and a weight of 200 tons; because of a lack of suitable loudspeakers at that time, the music was distributed over the telephone network.

One of the many instruments constructed in the following decades was the Theremin, invented by Leon Theremin in 1917, which used a vacuum tube oscillator to make sounds that depended on the interactions of the user with an RF field. This was followed in 1928 by the Ondes Martenot which had a keyboard as well as several auxiliary controllers.

The sound of the Ondes Martenot is used extensively in the Turangalîla-Symphonie and other works by Olivier Messiaen. However, these were not true synthesizers in the modern sense, as they were not configurable to produce a range of complex sounds by additive or subtractive synthesis, instead generating single pure tones with controllable [pitch](#), amplitude and vibrato.

Ca. 1929 Friedrich Trautwein invented the Trautonium in Berlin. It was played with a resistor wire which has to be pressed against a metal plate. Oskar Sala was one of the first players and continued development until his death in 2002. Paul Hindemith wrote some compositions for it.

These early electronic instruments produced only pure tones and were frequently used to make avant garde music. In April 1935, Laurens Hammond introduced the Hammond tonewheel organ, which generated complex tones using an electro-mechanical principle derived from the design of the Telharmonium. Later Hammond used the Leslie speaker to achieve special modulation effects, and the resulting Hammond organ sound is still regarded as the benchmark for the "electric organ" sound. This sound can be simulated by many modern synthesizers and digital samplers.

# Synthesizers

The most commonly used electronic instruments are [synthesizers](#), so-called because they artificially generate sound using techniques such as additive, subtractive, FM and physical modelling synthesis to create sounds.

Dr. Robert Moog introduced the first practical commercial modern music [synthesizer](#) with his [Moog synthesizer](#). This instrument used a series of tone generators with keys that would adjust the tone generators' pitch. To gain enough money to engineer this synthesizer, Moog sold Theremins, a very peculiar instrument that uses no switches to trigger pitch or volume, relying instead upon a pair of antennae and the variable capacitance occasioned by the presence of the instrumentalist's hands.

The first digital synthesizers were academic experiments in sound synthesis using digital computers. FM synthesis was developed for this purpose, as a way of generating complex sounds digitally with the smallest number of computational operations per sound sample.

Category: [Electronic music instruments](#)

# Electronic organ

An **electronic organ** is an electronic [keyboard instrument](#), originally designed to imitate the sound of a [pipe organ](#).

## Description

Most current electronic organs are not restricted to pipe organ sounds, but contain other voices imitating instruments such as a trilled [mandolin](#) which have no corresponding organ stops, and electronic sounds that have no acoustic equivalent.

The main exceptions are some high-quality instruments designed purely as pipe organ replacements, particularly for churches. These are often called **pipeless organs**. There are also a few hybrid instruments that use pipes for a few main sounds, and electronics for others. Although many musicians hotly debate the sound quality of electronic organs compared to pipe organs, many churches that are unable to afford costly pipe organs have turned to less-expensive electronic organs as a viable alternative; even a congregation that could afford a modest pipe organ may instead opt for a digital organ that simulates a much larger pipe organ than they could afford. Digital organs may also reduce maintenance costs, as tuning and repairing pipe organs is very costly.

## Early history

The immediate predecessor of the electronic organ was the [harmonium](#), or reed organ, an instrument that was very popular in homes and small churches in the late nineteenth and early twentieth centuries. In a fashion not totally unlike that of pipe organs, reed organs generated sound by forcing air over a set of reeds by means of a bellows, usually operated by constantly pumping a set of pedals. While reed organs had limited tonal quality, they were small, inexpensive, self-powered, and self-contained. The reed organ was thus able to bring an organlike sound to venues that were incapable of housing or affording pipe organs. This concept was to play an important role in the development of the electric organ.

Electricity arrived on the organ scene in the first decades of the 1900s, but it was slow to have a major impact. Electrically-powered reed organs appeared during this period, but their tonal qualities remained much the same as the older, foot-pumped models. Meanwhile, some experimentation with producing sound by electric impulses was taking place in the first decades of the twentieth century, especially in France. The first widespread success in this field, however, was a product of the Hammond Corporation in the mid-1930s. The Hammond Organ quickly became the successor of the reed organ, displacing it completely.

From the first, however, electronic organs operated on a radically different principle from all previous organs. In the place of reeds and pipes, Hammond introduced a set of rapidly spinning magnetic wheels, called tonewheels, which served as transducers that generated electrical signals of various frequencies that were fed through an amplifier to a loudspeaker. The organ was electrically powered, replacing the reed organ's twin bellows pedals with a single swell (or "expression") pedal more like that of a pipe organ. Instead of having to pump at a constant rate, as had been the case with the reed organ, the organist simply varied her pressure on this pedal at will to change the volume as she desired. Unlike reed organs, this gave her great control over her music's dynamic range, while at the same time freeing one or both of her feet to play on a pedalboard, which, unlike nearly all reed organs, electronic organs incorporated. From the beginning, the electronic organ also had a second manual, also very rare among reed organs. While they meant that the electronic organ required greater musical skills of the organist than the reed organ had, the second manual and the pedalboard along with the expression pedal greatly enhanced her playing, far surpassing the reed organ's limited capabilities.

The most revolutionary difference in the Hammond, however, was its huge number of tonewheel settings, achieved by manipulating a system of drawbars located near the manuals. By using the drawbars, the organist could combine a variety of electronic tones in varying proportions, thus giving the Hammond vast "registration." In all, the Hammond was capable of producing more than 250 million tones. This feature, combined with the three-keyboard layout (i.e., manuals and pedalboard), the freedom of electrical power, and a wide, easily controllable range of volume made the first electronic organs far more flexible than any reed organ, or indeed any other musical instrument in history except, perhaps, for the pipe organ itself.

In the wake of the Hammond Organ's invention, later models--especially those of competitors--used various combinations of oscillators and filters to produce electric tones. Today, however, modern electronic organs use high-quality digital samples

to produce as accurate a sound as possible. The heat generated by early models with vacuum tube tone generators and/or amplifiers led to the somewhat derogatory nickname "toaster"; today's solid-state instruments do not suffer from this problem.

Electronic organs were once popular home instruments, comparable in price to pianos and frequently sold in department stores. After their début in the 1930s, they captured the public imagination, largely through the film performances of Hammond organist Ethel Smith. Nevertheless, they initially suffered in sales during the Great Depression and World War II. After the war they became more widespread, peaking in popularity in the 1950s and early 1960s, but undoubtedly undercut by the rapid growth of television and high fidelity audio systems as home entertainment alternatives during that same period. Home electronic organ models usually attempted to imitate the sounds of theatre organs and/or Hammonds, rather than classical organs.

## The 1950s and 1960s

### The spinet organ

Following World War II, most electronic home organs were built in a configuration usually called a spinet organ, which first appeared in 1949. These compact and relatively inexpensive instruments became the natural successors to the reed organs. They were marketed as competitors of home [pianos](#) and often aimed at would-be home organists who were already pianists (hence the name "spinet," a small upright piano). The instrument's design reflected this concept: the spinet organ physically resembled a piano, and it presented simplified controls and functions that were both less expensive to produce and less intimidating to learn. One feature of the spinet was automatic chord generation; with many models, the organist could produce an entire chord to accompany her melody merely by playing the tonic note, i.e., a single key, on a special section of the manual.

On spinet organs the keyboards were typically at least an octave shorter than is normal for organs, with the upper manual missing the bass, and the lower manual missing the treble. The manuals were usually offset, inviting (although not requiring) the new organist to dedicate her right hand to the upper manual and her left to the lower, rather than using both hands on a single manual. This seemed designed in part to encourage the pianist, who was accustomed to a single keyboard, to make use of both manuals. Stops on such instruments, relatively limited in number, were frequently named after orchestral instruments that they could, at best, only roughly approximate, and were often brightly colored (even more so than those of theatre organs). The spinet organ's loudspeaker, unlike the original Hammond models of the 1930s and 1940s, was housed within the main instrument (behind the kickboard), which saved even more space, although it produced a sound inferior to that of free-standing speakers.

The spinet organ's pedalboard normally spanned only a single octave, was often incapable of playing more than one note at a time, and was effectively playable only with the left foot (and on some models only with the left toes). This limitation, combined with the shortened manuals, made the spinet organ all but useless for performing or practicing classical organ music, but at the same time it allowed the novice home organist to explore the challenge and flexibility of simultaneously playing three keyboards (two hands and one foot). The expression pedal was located to the right and either partly or fully recessed within the kickboard, thus conveniently reachable only with the right foot. This arrangement spawned a style of casual organist who would naturally rest her right foot on the expression pedal the entire time she played, unlike classically-trained organists or performers on the earlier Hammonds. This position, in turn, instinctively encouraged her to pump the pedal while playing, especially if she was already accustomed to using a piano's sustain pedal to shape her music. Her expressive pumping added a strong dynamic element to home organ music that much classical literature and hymnody lacked, and would help influence a new generation of popular keyboard artists.

### The chord organ

Shortly after the debut of the spinet the "chord organ" appeared. This was an even simpler instrument designed for those who wanted to produce an organlike sound in the home without having to learn much organ (or even piano) playing technique. The chord organ had only a single manual that was usually an octave shorter than its already-abbreviated spinet counterpart. It relied more heavily on automatic chord generation than other models; it also possessed scaled-down registration and no pedalboard or expression pedal (volume being determined by a knob near the manual instead, an inefficient arrangement that effectively eliminated the dynamic playing that an expression pedal allowed). As was the case with the spinet, the loudspeaker was housed within the kickboard.

## The console organ

On the other end of the spectrum were larger and more expensive home models, known as "console organs" because they resembled pipe organ consoles. These instruments had a more traditional configuration, including full-range manuals, a wider variety of stops, and a two-octave (or occasionally even a full thirty-two note) pedalboard easily playable by both feet in standard toe-and-heel fashion. (Console organs having thirty-two note boards were sometimes known as "concert organs.") Console models, like spinet and chord organs, had their speakers mounted above the pedals, though the classic Hammond design of the 1930s and 1940s made use of free-standing loudspeakers, usually manufactured by Leslie, that produced a higher-quality sound than a spinet organ's small built-in speakers. With their more traditional configuration, greater capabilities, and better performance compared to spinets, console organs were especially suitable for use in small churches, public performance, and even organ instruction. The home musician or young student who first learned to play on a console model often found that she could later make the transition to a pipe organ in a church setting with relative ease.

By the 1960s, electronic organs were ubiquitous in all genres of popular music, from Lawrence Welk to [acid rock](#) and the Wild Mercury Sound of the Bob Dylan album *Blonde on Blonde*. In some cases, Hammonds were used, while in others, very small all-electronic instruments, only slightly larger than a modern digital keyboard, called "combo organs," were used. (Various organs made by Farfisa were especially popular, and remain so among retro-minded rock combos.) The 1970s and 1980s saw increasing specialization: the jazz scene continued to make heavy use of Hammonds, while various styles of [rock](#) began to take advantage of more and more complex electronic [keyboard instruments](#) as large-scale integration and then digital technology began to enter the mainstream. The original Hammond tonewheel design, phased out in the mid-1970s, is still very much in demand by professional organists, and the industry continues to see a lively trade in refurbished instruments even as technological advance allows new organs to perform at levels unimaginable only two or three decades ago.

## Frequency divider organs

With the development of the transistor, electronic organs that used no mechanical parts to generate the waveforms became practical. The first of these was the **frequency divider organ**, the first of which used twelve oscillators to produce one octave of chromatic scale, and frequency dividers to produce other notes. These were even cheaper and more portable than the Hammond. Later developments made it possible to run an organ from a single radio frequency oscillator.

Frequency divider organs were built by many companies, and also offered in kit form to be built by hobbyists.

A few of these have seen notable use, such as the Lowrey played by Garth Hudson. Its electronic design made the Lowrey easily equipped with a pitch bend feature that is unavailable for the Hammond, and Hudson built a style around its use.

During the period from the 1940s through approximately the 1970s, a variety of more modest self-contained electronic home organs from a variety of manufacturers were popular forms of home entertainment. These instruments often simplified the traditional organ stops into imitative voicings such as "trumpet" and "marimba" and as technology progressed they increasingly included automated features such as one-touch chords, electronic rhythm and accompaniment devices, and even built-in tape players. These were intended to make playing complete, layered "one-man band" arrangements extremely easy, especially for those not necessarily trained as organists. While a few such instruments are still sold today, their popularity has waned greatly, and many of their functions have been incorporated into more modern and inexpensive portable keyboards. The Lowrey line of home organs is the epitome of this type of instrument.

In the '60s and '70s, a type of simple, portable electronic organ called the combo organ was popular, especially with pop and rock bands, and was a signature sound in the pop music of the period (e.g. The Doors, Iron Butterfly). The most popular combo organs were manufactured by Farfisa and Vox.

## The modern electronic organ

Modern professional electronic organs have reached a degree of sophistication, complexity, and expense surpassed only by the pipe organ itself. The consoles of some of these instruments, at first glance, may be almost indistinguishable from those of pipe organs (although a closer examination, as well as the obvious absence of pipes, will quickly reveal the difference). Electronic organs are still made for the home market, but they have been largely replaced by the digital keyboard or [synthesizer](#), which is not only smaller and cheaper than typical electronic organs or traditional pianos, but also far more capable than the most advanced electronic organs of earlier years. Modern digital organs, by the same token, are far more advanced in design and capabilities than their ancestors.

Today's instruments incorporate digital sampling, MIDI, and Internet connectivity for downloading of music data and instructional materials, as well as making use of floppy disk and media card storage. While electronically they are radically different from their predecessors, their basic appearance makes them instantly identifiable as the latest generation in a long line of electronic organs that now reaches back more than seventy years.

The very best digital organs today have a number of features which distinguish their sound from that of simpler instruments, including the following.

- Multiple digital-to-analog converters, to prevent degradation of sound quality as multiple stops are used (simpler instruments multiplex one or two DACs for all stops at once).
- Each note in each register is sampled from that actual pipe, as opposed to simpler instruments in which one sample has its frequency shifted digitally to generate different notes.
- Long samples allow a more realistic envelope, as opposed to repeating a short sample.
- Sampling is done with 24-bit or 32-bit resolution instead of CD-quality 16-bit resolution.
- Sampling is done at a much higher frequency than the 44,100 samples per second of CD-quality audio.
- At least four independent amplifiers to provide a more spacious sound.
- A dedicated high power woofer for the low frequencies of the sound; the best digital organs can thus approach -- though not yet quite attain -- the physical feeling of a real pipe organ.
- Simulated changes of windchest pressure -- when many notes are sounding at once, the air pressure of a real pipe organ will drop slightly, which changes the sound of all the pipes; some electronic organs can simulate this effect.

A digital organ with all the above features can be difficult to tell from the sound of a real pipe organ. Of course, such digital organs will cost more than simpler ones, because such an organ may need to store the equivalent of 40 hours or more of sampled sound. The most advanced digital organs also offer some capabilities rarely found in pipe organs, such as changing between equal temperament and one or more historic tuning systems merely by flipping a switch.

For hybrid organs, which combine actual pipes with electronic stops, an important issue is that pipes change pitch with the weather, but digital audio systems do not. The frequency of sound produced by an organ pipe is determined by its geometry and by the speed of sound in the air within it. The speed of sound changes with the temperature and humidity of the air; therefore the pitch of a pipe organ will change as the weather changes, so the pitch of the digital side in a hybrid instrument must be retuned as needed. The simplest way this can be done is with a manual control that the organist can adjust, but better models can make such adjustments automatically.

# Electronica

## Electronica

**Stylistic origins:** [House](#), [Techno](#), [Electronic art music](#), [Musique concrete](#), [Experimental music](#), [Rock music](#)

**Cultural origins:** early-1990s, Europe, United States

**Typical instruments:** [Synthesizer](#) - [Drum machine](#) - [Sequencer](#) - [Keyboard](#) - [Sampler](#) (traditional instrumentation such as [guitar](#), [bass](#), [drums](#) often featured more regularly than other electronic genres)

**Mainstream popularity:** Large, especially from 1996 onwards

## Subgenres

Big beat - [Bitpop](#) - Chip - [Downtempo](#) - [Glitch](#) - [IDM](#) - [Nu.jazz](#) - [Trip.hop](#)

## Fusion genres

[Indietronica](#) - [Post-rock](#)

## Other topics

[Electronic musical instrument](#) - [Computer music](#)

**Electronica** is a rather vague term that covers a wide range of [electronic](#) or electronic-influenced [music](#). The term has been defined by some to mean modern electronic music that is not necessarily designed for the dance-floor, but rather for home listening. The origins of the term are murky, although it appears to have been coined by British music paper Melody Maker in the mid-1990s, originally to describe the electronic rock band Republica. The term subsequently gained a life of its own, and became popular in the United States as a means of referring to the then-novel mainstream success of post-[Rave](#) global electronic dance music. Prior to the adoption of "electronica" as a blanket term for more experimental dance music, terms such as *electronic listening music*, *braindance* and [intelligent dance music](#) (*IDM*) were common.

In the mid-1990s electronica began to be used by MTV and major record labels to describe mainstream electronic dance music made by such artists as The Chemical Brothers (who had previously been described as big beat or chemical breaks) and The Prodigy, although even at this stage it was not a particularly incisive term. It is currently used to describe a wide variety of musical acts and styles, linked by a penchant for overtly electronic production; a range which includes commercial chart acts such as Björk, Goldfrapp and Daniel Bedingfield, [glitchy](#), experimental artists such as Autechre, EBE, and Boards of Canada, to [dub](#)-oriented [downtempo](#), downbeat, and [trip-hop](#).

## History

With the explosive growth of sequencing, sampling and synthesis technology in the late 1980s, it became possible for a wider number of musicians to produce electronic music. With the advent of computer sequencers, relatively cheap computer-based recording systems and software synthesis in the late 1990s, it became possible for any home computer user to become a musician, and hence the rise in the number of "bedroom techno" acts, often consisting of a single person. A classic example of the one man electronic composer is Bill Holt's Dreamies (an early analog pioneer of electronic pop) cited by the All Media Guide as one of the finest examples of experimental pop from the era.

## Post-rave fusions

Artists that would later become commercially successfully under the "electronic" banner such as Fatboy Slim, Daft Punk, The Chemical Brothers, The Crystal Method, and Underworld began to record in this early 1990s period. Underworld with its 1994 dubnobasswithmyheadman released arguably one of the defining records of the early electronica period with a blend of club beats, wedded to song writing and subtle vocals and guitar work. A focus on "songs", a fusion of styles and a combination of traditional and electronic instruments often sets apart musicians working in electronic-styles over more straight-ahead styles of [house](#), [techno](#) and [trance](#). This genre is also noted for far higher production values than others, featuring more layers, more original samples and fewer "presets", and more complex rhythm programming.

The more experimental Autechre and Aphex Twin around this time were releasing early records in the "intelligent techno" or so-called [intelligent dance music](#) (IDM) style, while other Bristol-based musicians such as Tricky, Leftfield, Massive Attack and Portishead were experimenting with the fusion of electronic textures with [hip-hop](#), [R&B](#) rhythms to form what became known as [trip-hop](#). Later extensions to the trip hop aesthetic around 1997 came from the highly influential Vienna-based duo of Kruder & Dorfmeister, whose blunted, dubbed-out, slowed beats became the blueprint for the new style of [downtempo](#). [Rock](#) musicians were also quick to pick up on the trends in electronic music, and by the mid-1990s so-called "[post-rock](#)" bands such as Stereolab and Tortoise, and more recently 65daysofstatic and Peace Burial at Sea, were incorporating electronic textures into their music.

## Growing commercial interest

Around the mid-1990s with the success of the big beat-sound exemplified by The Chemical Brothers in the United States (due in part to the attention from mainstream artists like Madonna), music of this period began to be produced with a much higher budget, production values, and with more layers than most dance

music before or after (since it was backed by major record labels and MTV as the "next big thing").

By the late 1990s artists like Moby were pop stars in their own right, releasing albums and performing regularly (sometimes in stadium-sized arenas, such had the popularity of electronic dance music grown). In fact, the status as the next big thing turned out to be shortlived, and some argued that this period exemplifies the notion of record labels and MTV attempting to force a trend upon an audience. During this period, MTV aired shows about the rave lifestyle, started purely electronic music shows such as AMP, and featured many electronica artists. However, the popularity of electronica was never sustained in the United States.

In the United States and other countries like Australia, electronic (and the other attendant dance music genres) remains popular, although largely underground, while in Europe it has arguably become the dominant form of [popular music](#).

# Electropop

**Electropop** (also called *Technopop*) is a subgenre of [synth pop](#) music which flourished during the early 1980s, although the first recordings were made in the late 1970s. Numerous bands have carried on the electropop tradition into the 1990s and 2000s. Electropop is often characterised by a cold, robotic, electronic sound, which is largely due to the limitations of the analog synthesizers used to make the music.

Electropop songs are [pop](#) songs at heart, with simple, catchy hooks and dance beats, but differing from those of electronic dance music genres which electropop helped to inspire — [techno](#), [dub](#), [house](#), [electroclash](#), etc. — in that strong songwriting is emphasized over simple danceability. Electropop is closely intertwined with the [New Romantic](#) movement of the early 80s, and the synthpop and electroclash movements of the 1990s and beyond.

## Notable electropop musicians

### 1970s

Buggles  
Human League (continued recording into 1980s, 1990s, 2000s)  
Japan (continued recording into 1980s)  
Kraftwerk (continued recording into 1980s, gap during 1990s, reappeared in 2000s)  
M  
Gary Numan (continued recording into 2000s)  
New Musik (1979-1982)  
Space (French band)  
Sparks (US Band that moved to the UK, still recording today)  
Yellow Magic Orchestra

### 1980s

A Flock of Seagulls  
Blancmange  
Depeche Mode (continued recording into 1990s, 2000s)  
Thomas Dolby  
Duran Duran (continued recording into 1990s, 2000s)  
Erasure (continued recording into 1990s, 2000s)  
Eurythmics (continued recording into 1990s, 2000s)  
John Foxx (continued recording into 1990s, 2000s)  
Heaven 17 (continued recording into 1990s)  
Howard Jones (continued recording into 1990s)  
Norman Iceberg  
Men Without Hats  
Modern Talking (continued recording into 1990s, 2000s)  
Bill Nelson  
New Order (continued recording into 1990s, 2000s)  
Orchestral Manoeuvres in the Dark  
Pet Shop Boys (continued recording into 1990s, 2000s)  
Rational Youth (continued recording into 1990s)  
Soft Cell  
Tears for Fears  
Thompson Twins  
Ultravox  
Yello (continued recording into 1990s, 2000s)  
Yazoo (Yaz in the U.S.)  
Fad Gadget  
Visage

## 1990s

Joy Electric (continued recording into 2000s)  
Orgy (continued recording into 2000s)  
Polysics  
Röyksopp(continued recording into 2000s)  
Sneaker Pimps  
Télépopmusik  
Air (continued recording into 2000s)

# Emo

**Stylistic origins:** [hardcore punk](#), [indie rock](#)

**Cultural origins:** mid 1980s Washington, DC

**Typical instruments:** [Guitar](#) - [Bass](#) - [Drums](#) - [Synthesizer](#)

**Mainstream popularity:** Sporadically through the 1980s and '90s, growing in the early 2000s

**Emocore** - [Hardcore emo](#) - [Emo violence](#) - [Screamo](#) - Emotional metalcore

[Post-hardcore](#)

Midwestern emo

[Timeline of alternative rock](#)

**Emo** is a subgenre of [hardcore punk](#) music. Since its inception, *emo* has come to describe several independent variations, linked loosely but with common ancestry. As such, use of the term (and which musicians should be so classified) has been the subject of much debate.

In its original incarnation, the term *emo* was used to describe the music of the mid-1980s Washington, DC scene and its associated bands. In later years, the term emocore, short for "emotional hardcore", was also used to describe the DC scene and some of the regional scenes that spawned from it. The term emo was derived from the fact that, on occasion, members of a band would become spontaneously and literally emotional during performances. The most recognizable names of the period included Rites of Spring, Embrace, One Last Wish, Beefeater, Gray Matter, Fire Party, and, slightly later, Moss Icon. The first wave of emo began to fade after the breakups of most of the involved bands in the early 1990s.

Starting in the mid-1990s, the term emo began to reflect the indie scene that followed the influences of Fugazi, which itself was an offshoot of the first wave of emo. Bands including Sunny Day Real Estate and Texas Is the Reason put forth a more [indie rock](#) style of emo, more melodic and less chaotic in nature than its predecessor. The so-called "indie emo" scene survived until the late 1990s, as many of the bands either disbanded or shifted to mainstream styles.

As the remaining indie emo bands entered the mainstream, newer bands began to emulate the more mainstream style, creating a style of music that has now earned the moniker *emo* within popular culture. Whereas, even in the past, the term *emo* was used to identify a wide variety of bands, the breadth of bands listed under today's emo is even more vast, leaving the term "emo" as more of a loose identifier than as a specific genre of music.

# History

## The first wave (1985–1994)

In 1985 in Washington, D.C., Ian MacKaye and Guy Picciotto, veterans of the DC hardcore music scene, decided to shift away from what they saw as the constraints of the basic style of hardcore and the escalating violence within the scene. They took their music in a more personal direction with a far greater sense of experimentation, bringing forth MacKaye's Embrace and Picciotto's Rites of Spring. The style of music developed by Embrace and Rites of Spring soon became its own sound. (Hüsker Dü's 1984 album Zen Arcade is often cited as a major influence for the new sound.) As a result of the renewed spirit of experimentation and musical innovation that developed the new scene, the summer of 1985 soon came to be known in the scene as "Revolution Summer".

Within a short time, the D.C. emo sound began to influence other bands such as Moss Icon, Nation of Ulysses, Dag Nasty, Shudder To Think, Fire Party, Marginal Man, and Gray Matter, many of which were released on MacKaye's Dischord Records. The original wave of DC emo finally ended in late 1994 with the collapse of Hoover.

Where the term *emo* actually originated is uncertain, but members of Rites of Spring mentioned in a 1985 interview in Flipside Magazine that some of their fans had started using the term to describe their music. By the early 90s, it was not uncommon for the early DC scene to be referred to as *emo-core*, though it's unclear when the term shifted.

As the D.C. scene expanded, other scenes began to develop with a similar sound and DIY ethic. In San Diego in the early 1990s, Gravity Records released a number of records in the hardcore emo style. Bands of the period included Heroin, Indian Summer, Angel Hair, Antioch Arrow, Universal Order of Armageddon, Swing Kids, and Mohinder. Also in California, Ebullition Records released records by bands of the same vein, such as Still Life and Portraits of Past, as well as more traditional [hardcore punk](#) bands, all having various social and political themes in common.

At the same time, in the New York/New Jersey area, bands such as Native Nod, Merel, 1.6 Band, Policy of 3, Rye Coalition and Rorschach were feeling the same impulse. Many of these bands were involved with the ABC No Rio club scene in New York, itself a response to the violence and stagnation in the scene and with the bands that played at CBGBs, the only other small venue for hardcore in New York at the time. Much of this wave of emo, particularly the San Diego scene, began to shift towards a more chaotic and aggressive form of emo, nicknamed [screamo](#).

By and large, the more hardcore style of emo began to fade as many of the early era groups disbanded. However, aspects of the sound remained in bands such as Four Hundred Years, Yaphet Kotto and Pennsylvania punk rockers Plow United. Also, a handful of modern bands continue to reflect emo's hardcore origins, including Circle Takes the Square, Hot Cross, City of Caterpillar, Funeral Diner, and A Day in Black and White.

Back in D.C., following the disbanding of both Rites of Spring and Embrace, MacKaye and Picciotto decided to join forces in a new band, called Fugazi. While

Fugazi itself was not categorized as emo, the music it created would soon influence the second major wave of emo.

## Early emo's influence

In California, particularly in the Bay Area, bands like Jawbreaker and Samiam began to mix the DC influence with [pop punk](#) to come up with their own take on the classic DC emo sound. On Jawbreaker's album *Bivouac*, singer Blake Schwarzenbach evolved from the traditional [hardcore](#) vocal sound into a more melodic crooning, which displayed a more emotional feeling of loss than the desperation and frantic nature of MacKaye's voice. Other bands soon reflected the same sense of rough melody, including Still Life and Long Island's *Garden Variety*. The style continued to evolve into the 2000s through bands like Avail and Hot Water Music.

Also in the early 90s, bands like Lifetime reacted in their own way to the demise of youth crew styled straight-edge hardcore and desired to seek out a new direction. While their music was often classified as emo, it was also considered to be [melodic hardcore](#). In response to the more metal direction their hardcore peers were taking, Lifetime initially decided to slow down and soften their music, adding more personal lyrics. The band later added a blend of speed, aggression, and melody that defined their sound. Lifetime's sound, lyrics, and style were a virtual blueprint for later bands, including Saves The Day and The Movielife.

Similarly, bands such as Converge, heavily influential on modern [metalcore](#), drew inspiration from East Coast emo bands and added a sense of catharsis and atypically introspective lyrics.

## The second wave (1994–2000)

As Fugazi and the Dischord Records scene became more and more popular in the indie underground of the early 1990s, new bands began to spring up. Combining Fugazi with the [post-punk](#) influences of Mission of Burma and Hüsker Dü, a new genre of emo emerged.

Perhaps the key moment was the release of the album *Diary* by Sunny Day Real Estate in 1994. Given Sub Pop's then-recent success with Nirvana and Soundgarden, the label was able to bring much wider attention to the release than the typical indie release, including major advertisements in *Rolling Stone*. The heavier label support allowed the band to secure performances on TV shows, including *The Jon Stewart Show*. As a result, the album received widespread national attention.

As more and more people learned about the band, particularly via the fledgling World Wide Web, the band was given the tag *emo*. Even where Fugazi had not been considered emo, the new generation of fans shifted the tag from the earlier hardcore style to this more [indie rock](#) style of emo. It wasn't uncommon for Sunny Day and its peers to be labelled with the full "emo-core". However, when pressed to explain "emo", many fans split the genre into two brands: the "hardcore emo" practiced in the early days and the newer "indie emo".

In the years that followed, several major regions of "indie emo" emerged. The most significant appeared in the Midwest in the mid-90s. Many of the bands were influenced by the same sources, but with an even more tempered sound. This brand of emo was often referred to as "Midwestern emo" given the geographic location of the bands, with several of the best-known bands hailing from the areas around Chicago, Kansas City, and Milwaukee. The initial bands in this category

included Boy's Life and Cap'n Jazz. In ensuing years, bands such as The Promise Ring, Braid, Elliott, and The Get Up Kids emerged from the same scene and gained national attention.

The area around Phoenix, Arizona became another major scene for emo. Inspired by Fugazi and Sunny Day Real Estate, former punk rockers Jimmy Eat World began stirring in emo influences into their music, eventually releasing the album *Static Prevails* in 1996. The album was arguably the first emo record released by a major label, as the band had signed with Capitol Records in 1995.

Other bands that followed the "indie emo" model included Colorado's Christie Front Drive, New York's Texas Is the Reason and Rainer Maria, California's Knapsack and Sense Field, Austin's Mineral, and Boston's Piebald and Jejuné.

Strangely, as "indie emo" became more widespread, a number of acts who otherwise would not have been considered part of the "indie emo" scene had their albums referred to as *emo* because of their similarity to the sound. The hallmark example was Weezer's 1996 album *Pinkerton*, which, in later years, was considered one of the defining "emo" records of the 90s.

As the wide range of emo bands began to attract notoriety on a national scale, a number of indie labels attempted to document the scene. Many emo bands of the late 90s signed to indie labels including Jade Tree Records, Saddle Creek, and Big Wheel Recreation. California's Crank Records released what many considered the defining compilation of 90s emo in 1997, titled *(Don't Forget to) Breathe*, which featured tracks by The Promise Ring, Christie Front Drive, Mineral, Knapsack, and Arizona's Seven Storey Mountain. In 1998, Deep Elm Records released the first installment in a series of compilations called *Emo Diaries*, featuring tracks from Jimmy Eat World, Samiam, and Jejuné. In 1999, famed 70s compilation label K-tel even released an emo compilation titled *Nowcore: The Punk Rock Evolution*, which, regardless of its source, was surprisingly comprehensive. (Nowcore included tracks by Texas Is the Reason, Mineral, The Promise Ring, Knapsack, Braid, At the Drive-In, and Jawbox, among others.)

With the late-90s emo scene being more national than regional, major labels began to turn their attention toward signing emo bands with the hopes of capitalizing on the genre's popularity. Many bands resisted the lure, citing their loyalty to the independent mentality of the scene. Several bands cited what they saw as mistreatment of bands such as Jawbox and Jawbreaker while they were signed to majors as a reason to stay away. The conflict felt within many of the courted emo bands resulted in their break-ups, including Texas Is the Reason and Mineral.

By the end of the decade, the word *emo* cropped up in mainstream circles. In the summer of 1998, *Teen People* magazine ran an article declaring "emo" the newest "hip" style of music, with The Promise Ring a band worth watching. The independent nature of the emo scene recoiled at mainstream attention, and many emo bands shifted their sound in an attempt to isolate themselves from the genre. In the years that followed, Sunny Day Real Estate opted to shift to a more prog-rock direction, Jejuné aimed for happy pop-rock, and The Get Up Kids and The Promise Ring released lite-rock albums.

While "indie emo" almost completely ceased to exist by the end of the decade, many bands still subscribe to the Fugazi / Hüsker Dü model, including Thursday, The Juliana Theory, and Sparta.

## **The third wave (2000–Present)**

At the end of the 1990s, the underground emo scene had almost entirely disappeared. However, the term *emo* was still being bandied about in mainstream

media, almost always attached to the few remaining 90s emo acts, including Jimmy Eat World.

However, towards the end of the 1990s, Jimmy Eat World had begun to shift in a more mainstream direction. Where Jimmy Eat World had played emocore-style music early in their career, by the time of the release of their 2001 album *Bleed American*, the band had almost completely removed its emo influences. As the public had become aware of the word *emo* and knew that Jimmy Eat World was associated with it, the band continued to be referred to as an "emo" band. Newer bands that sounded like Jimmy Eat World (and, in some cases, like the more melodic emo bands of the late 90s) were soon included in the genre.

2003 saw the success of Chris Carrabba, the former singer of Further Seems Forever, and his project Dashboard Confessional. Carrabba's music featured lyrics founded in deep diary-like outpourings of emotion. Where earlier emo had featured lyrics of a more dark and painful direction, Carrabba's featured a greater focus on love won and lost and the inability to cope. While certainly emotional, the new "emo" had a far greater appeal amongst teenagers experiencing love for the first time, who found insight and solace in Carrabba's words and music.

With Dashboard Confessional and Jimmy Eat World's success, major labels began seeking out similar sounding bands. Just as Nirvana, Pearl Jam, and the other Seattle scene bands of the early 1990s were unwillingly lumped into the genre "[grunge](#)", some record labels wanted to be able to market a new sound under the word *emo*. Which sound that was didn't particularly matter.

At the same time, use of the term "emo" expanded beyond simply the musical genre, which added to the confusion surrounding the term. The word "emo" became associated with feelings of unashamed emotion. Common fashion styles and attitudes that were becoming idiomatic of fans of similar "emo" bands also began to be referred to as "emo". (For further discussion, see [Emo \(slang\)](#).) As a result, bands that were loosely associated with "emo" trends or simply demonstrated emotion began to be referred to as *emo*.

In an even more expanded way than in the 90s, *emo* has come to encompass an extremely wide variety of bands, many of whom have very little in common. The term has become so wide-ranging that it has become nearly impossible to describe what exactly qualifies as "emo".

Correctly or not, *emo* has often been used to describe such bands as AFI, Alexisonfire, A Static Lullaby, Brand New, Coheed and Cambria, Fall Out Boy, Finch, From Autumn To Ashes, From First To Last, Funeral for a Friend, Hawthorne Heights, Matchbook Romance, My Chemical Romance, Silverstein, Something Corporate, The Starting Line, Taking Back Sunday, The Used, Thrice, and Thursday. Fans of several of these bands have recoiled at the use of the "emo" tag, and have gone to great lengths to explain why they don't qualify as "emo". (The revulsion of some bands from the term *emo* is not unlike the retreat from the genre by the bands in the indie emo scene near the end of the 90s.)

In some cases, "new emo" bands are simply trying to pursue their own version of the "emo" that came before on their own terms. However, the backlash stemming from the success of a few seemingly "less emo" (and more popular in the mainstream) bands, including Dashboard Confessional and The Used, has brought an increasingly substantial pool of detractors.

As a result of the continuing shift of "emo" over the years, a serious schism has emerged between those who ascribe to particular eras of "emo". Those who were closely attached to the hardcore origins recoil when another type of music is called "emo". Many involved in the independent nature of both 80s and 90s emo are upset at the perceived hijacking of the word *emo* to sell a new generation of major label music. Regardless, popular culture appears to have embraced the terms of "emo" far beyond its original intentions, out of the control of the independent-minded.

In a strange twist, screamo, a sub-genre of the new emo, has found greater popularity in recent years through bands such as Thrice and Glassjaw. (As a reference, see Jim DeRogatis' November 2002 article about Screamo.) The term [screamo](#), however, was used to describe an entirely different genre in the early 1990s, and the new screamo bands more resemble the emo of the early 1990s. Complicating matters further is that several small scenes devoted to original screamo still exist in the underground. However, the new use of "screamo" demonstrates how the shift in terms connected to "emo" has made the varying genres difficult to categorize.

Even still, the difficulty in defining "emo" as a genre may have started at the very beginning. In a 2003 interview by Mark Prindle, Guy Picciotto of Fugazi and Rites of Spring was asked how he felt about "being the creator of the emo genre". He responded: "I don't recognize that attribution. I've never recognized 'emo' as a genre of music. I always thought it was the most retarded term ever. I know there is this generic commonplace that every band that gets labeled with that term hates it. They feel scandalized by it. But honestly, I just thought that all the bands I played in were punk rock bands. The reason I think it's so stupid is that - what, like the Bad Brains weren't emotional? What - they were robots or something? It just doesn't make any sense to me."

## Backlash

As the chorus of detractors increased, emo became more and more a target of derision. As certain fashion trends and attitudes began to be associated with "emo", stereotypes emerged that created a specific target for criticism.

In the early years of the "third wave", the derision was relatively light-hearted and self-effacing. In September of 2002, web developer Jason Oda put forth Emogame. The game poked fun at numerous emo stereotypes and musicians, but in a manner that could be appreciated by fans and detractors alike.

In ensuing years, the derision increased dramatically. Male fans of emo found themselves hit with homosexual slurs, largely a reflection of the style of dress popular within the "emo scene" and the displays of emotion common in the scene. Complaints pointed to the histrionic manner in which the emotions were often expressed, not necessarily to the emotions themselves.

In October of 2003, Punk Planet contributor Jessica Hopper levelled the charge that the "third wave" era of emo was sexist. In her opinion, it was all too common for emo bands to write songs from a male perspective that castigated women for causing emotional damage. The collective result was that women were being demonized, and in a wholly generic manner, given that the songs didn't appear to be about a particular female. The problem was enhanced by the seeming lack of balance in emo, given the apparent absence of females participating in emo music. Hopper believed that the sexism was unique to the new version of emo, as "indie emo" era bands such as Sunny Day Real Estate seemed to provide depth to the female characters portrayed in their songs.

Collective reaction to Hopper's article was mixed, and many dismissed the charge outright, noting that [rock music](#) as a genre had a long history of issues with sexism; the problem wasn't unique to emo music or directly related. By comparison to a genre like 1980s [hair metal](#), in which popular songs (such as Warrant's "Cherry Pie") often objectified women, the perceived sexism in emo was more of an intellectual argument than something that could be specifically cited in the music.

Critics of modern emo also point to the increasingly generic nature of the music. As popular bands have attempted to flee the "emo" tag, the remaining bands appear to fit the genre solely because of their similarity to other so-called "emo" bands. Critics note a slow homogenization of the genre, with newer bands adhering to a stereotypical style rather than redefining it, not unlike the waning years of [grunge music](#) in the 1990s.

At the same time, the persistent criticism and negative stereotypes have led to an increasing perception of modern emo as the new "guilty pleasure". Despite the criticism, the modern version of emo has maintained mainstream popularity. However, given the disfavor of the term "emo", the question of whether new bands will openly associate with "emo" leaves the future unclear.

# Emo Violence

**Stylistic origins:** [hardcore punk](#), [indie rock](#)

**Cultural origins:** mid 1980s Washington, DC

**Typical instruments:** [Guitar](#) - [Bass](#) - [Drums](#) - [Synthesizer](#)

**Mainstream popularity:** Sporadically through the 1980s and '90s, growing in the early 2000s

[Emocore](#) - [Hardcore emo](#) - **Emo violence** - [Screamo](#) - Emotional metalcore

[Post-hardcore](#)

Midwestern emo

[Timeline of alternative rock](#)

**Emo Violence** or "Emoviolence", also related to [screamo](#) and [Hardcore Emo](#), is a subgenre of music that evolved from [Hardcore](#) in the early 1990s, primarily in the Southeast of the United States - Florida in particular, (this can be seen on the Southeast Hardcore, Fuck Yeah!! compilation). This form of music uses vocals pushed past the point of normal sound by yelling and screaming, with occasional spoken words or singing. Emo Violence is often poorly recorded to give it a foggy, low-fidelity sound. Although just as loud as [Grindcore](#), it ends up being much less technical and dark sounding than Napalm Death or as crunchy and angular as Pig Destroyer.

Emo Violence is the direct link from [Emo](#) to [Screamo](#) through reprocessing of influences. The term was originally coined by the group In/Humanity as a joke in reference to their own band and friend's bands Palatka and End of the Century Party. The tongue-in-cheek genre descriptor was a play on other meaningless genre descriptors of the time: (namely [emo](#) and [powerviolence](#)). In/Humanity claims that the phrase actually comes from the song "Emotional Violence" by the [funk](#) group Cameo (band).

## Etymology

The term Emo Violence was originally created by the band In/Humanity as a joke. Chris Bickel, the band's front man, took the name from the Cameo album "Emotional Violence", the usage itself an ironically joking play on the term [power violence](#), as used to describe bands like Infest, Man Is The Bastard and Spazz. The term then began to be used to refer to other bands in the southeast that played a similar style such as Palatka and End of the Century Party (whose split 7" is perhaps the quintessential emo violence record). Although the term became more commonplace in the underground hardcore scene, it was always seen as a tongue-in-cheek description, but was used by bands who wanted to separate themselves from emotive hardcore and hated the term "screamo." Bands who play emo violence today (in the EOTCP/Palatka sense of of the genre) are few and far between - Those who claim the genre usually have have little similarity to its founding fathers.

## Comparisons

The major difference between Emo Violence and [Screamo](#) is the *chaos* element. Whereas most Screamo albums are meant to be well produced, tight, coherent and less than dissonant, Emo Violence tends to forsake that for a more raw, unpolished aggressive sound. Emo Violence bands tend to claim bands from the late 70's, early 80's hardcore punk movement as their influences. Screamo bands tend to claim other screamo bands and Emo Violence bands as their influences.

Unlike [screamo](#) or [emo](#), there have been no 'waves' of emo violence. As mentioned previously, very few bands have continued the sound that Palatka, EOTCP and In/Humanity were famous for. [Screamo](#) bands like Orchid and Jerome's Dream are often incorrectly placed in the genre.

## **Notable Artists**

End of the Century Party  
In/Humanity  
Eurich  
Palatka  
The South

## Notable Records

In/Humanity - 'Occultonomy' 7" (Contains the song 'Emo Violence Generation') (Old Glory)  
In/Humanity - 'Your Future Lies Smoldering At The Feet Of The Robots' 7" (Various Labels)  
In/Humanity - 'The Nutty Antichrist' LP (Passive Fist)  
Eurich - s/t 7" (Fragil)  
Palatka/Asshole Parade - 'Network of Friends' Split LP (Coalition Records)  
Palatka - 'The End of Irony...' One Sided LP (No Idea)  
The End of The Century Party - 'Isn't It Perfectly Fucking Delightful...' LP (Belladonna)  
The End of The Century Party/Palatka - 'Florida Colloboration Split' 7" (Kurt and Jason)  
The End of The Century Party - 'Songs, Dances and Drums' 7" (Enslaved)  
The South - 'Sick Pits Bro Sesh' 7" (Dead Tank Records)  
V/A - 'Fragil Comp #1' 7" - Songs by... Palatka, Eurich, EOTCP & Prevail. (Fragil)  
V/A - 'Southeast Hardcore, Fuck Yeah! 7" - Songs by... Palatka, Eurich, EOTCP, In/Humanity, Asshole Parade & Ansojuan (Kurt and Jason)

Discography CD's are available from Eurich, The End of The Century Party and In/Humanity. Palatka swore never to put anything onto CD. Although 625 Records repressed the 'Possessed To Skate' compilation onto the format, something which label owner Max Ward regrets.

Categories: [Emo](#)

## End-blown flute

The **end-blown flute** is a simple [woodwind instrument](#) where the player directs air against the end of a pipe or tube. Although the required embouchure is difficult to master — many hours of practice are required to even produce a single tone — once acquired the player can make music on even the simplest tube or pipe from a hardware store. Unlike pan pipes, both ends of the tube are open, and unlike a recorder or tin whistle, there is no fipple.

End-blown flutes are widespread in folk music. In the Mediterranean and Middle East the ney is frequently used, constructed from reed. Depictions of early versions of the ney can be found in wall paintings in the pyramids of Egypt, indicating that it is one of the oldest musical instruments in continued use. In Turkey the nai and kaval are both end-blown. China has the xiao, Japan has the shakuhachi and hocchiku, and Korea has the danso. People of the Andes play the quena, and the Hopi have a flute similar to the ney.

## English Madrigal School

The brief but intense flowering of the musical [madrigal](#) in England, mostly from 1588 to 1627, along with the composers who produced them, is known as the English Madrigal School. The English madrigals were a cappella, predominantly light in style, and generally began as either copies or direct translations of Italian models. Most were for three to six voices.

## Style and Characteristics

Most likely the impetus for writing madrigals came through the influence of Alfonso Ferrabosco, who worked in England in the 1560s and 1570s in Queen Elizabeth's court; he wrote many works in the form, and not only did they prove popular but they inspired some imitation by local composers. The development that caused the explosion of madrigal composition in England, however, was the development of native poetry — especially the sonnet — which was conducive to setting to music in the Italian style. When Nicholas Yonge published *Musica transalpina* in 1588, it proved to be immensely popular, and the vogue for madrigal composition in England can be said to truly have started then.

*Musica transalpina* was a collection of Italian madrigals, mostly by Ferrabosco and Marenzio, fitted with English words. They were loved, and several similar anthologies followed immediately after the success of the first. Yonge himself published a second *Musica transalpina* in 1597, hoping to duplicate the success of the first collection.

While William Byrd, probably the most famous English composer of the time, experimented with the madrigal form, he never actually called his works madrigals, and shortly after writing some secular songs in madrigalian style returned to writing mostly sacred music.

The most influential composers of madrigals in England, and the ones whose works have survived best to the present day, were Thomas Morley, Thomas Weelkes and John Wilbye. Morley is the only composer of the time who set verse by Shakespeare for which the music has survived. His style is melodic, easily singable, and remains popular with *a cappella* singing groups. Wilbye had a very small compositional output, but his madrigals are distinctive with their expressiveness and chromaticism; they would never be confused with their Italian predecessors. Weelkes was also a composer of expressive and sometimes chromatic music (and also a skilled composer of church music) but he unfortunately had an early burnout, losing his battle with alcoholism and depression.

Madrigals continued to be composed in England through the 1620s, but the ayre and "recitative music" rendered the style obsolete; somewhat belatedly, characteristics of the Baroque style finally appeared in England. While the music of the English Madrigal School is of generally high quality and has endured in popularity, it is useful to remember that the total output of the composers was relatively small: Luca Marenzio in Italy alone published more books of madrigals than the entire sum of madrigal publications in England, and Philippe de Monte wrote more madrigals (over 1100) than were written in England during the entire period.

## Composers

The following list includes almost all of the composers of the English Madrigal School who published works. Many of these were amateur composers, some known only for a single book of madrigals, and some for an even smaller contribution.

John Bennet (c1575- after 1614)  
John Bull (1562-1628)  
William Byrd (1543-1623)  
Thomas Campion (1567-1620)  
Richard Carlton (c1558-1638?)  
Michael Cavendish (c1565-1628)  
John Dowland (1563-1626)  
Michael East (composer) (c1580-c1648)  
John Farmer (c1565-1605)  
Giles Farnaby (c1560-c1620)  
Alfonso Ferrabosco (1543-1588) (He was Italian, but worked in England for two decades)  
Orlando Gibbons (1583-1625)  
Thomas Greaves (fl.c1600)  
William Holborne (composer) (fl.1597)  
John Jenkins (1592-1678)  
Robert Jones (fl.1597-1615)  
George Kirbye (c1565-1634)  
Henry Lichfield (fl.1613), d. after 1620)  
Thomas Morley (1557-1603)  
John Mundy (c1555-1630)  
Peter Philips (c1560-1628) (Lived and published in the Netherlands, but wrote in an English style)  
Francis Pilkington (c1570-1638)  
Thomas Tomkins (1572-1656)  
Thomas Vautor (c1580-?)  
John Ward (1571-1638)  
Thomas Weelkes (1576-1623)  
John Wilbye (1574-1638)

# Enhanced CD

**Enhanced CD** is a certification mark of the Recording Industry Association of America for various technologies that combine audio and computer data for use in both compact disc and CD-ROM players.

The primary data formats for Enhanced CD disks are mixed mode (Yellow Book/Red Book), CD-i, hidden track, and multisession (Blue Book).

## Problems

Sometimes computer CD ripping programs (particularly cdparanoia) have problems ripping some enhanced CDs, especially those which have the data after the audio section. These CDs have the data 11400 sectors (2m32s) after the audio, but some CD rippers may try to rip this blank section with the last track; the end result is that the ripper stalls during the last track, or simply errors out.

## List of Enhanced CDs

(in alphabetical order by artist)

Alice in Chains - Music Bank - 1999  
Alice In Chains - Nothing Safe-Best Of The Box - 1999  
Anthrax - Vol. 8 - the Threat is Real - 1998  
Christina Aguilera - "My Kind Of Christmas" - 2000  
Fiona Apple - Tidal - 1996  
Fiona Apple - When the Pawn - 1999  
Fiona Apple - Extraordinary Machine - 2004  
The Ataris - So Long, Astoria - 2003  
David Bowie - all of his albums reissued by EMI in 1999 were released as Enhanced CDs  
Beastie Boys - Don't Mosh In The Ramen Shop (unreleased) - 1996  
Beastie Boys - To The 5 Boroughs - 2004  
B(if)tek - 2020 - 2000  
Blink-182 - Enema Of The State - 1999  
Blink-182 - Blink-182 - 2003  
Blues Traveler - Bridge - 2001  
Jackson Browne - Looking East - 1996  
Carman - Mission 3:16 (EP) - 1997  
Chevelle - Wonder What's Next - 2002  
Clipse - Lord Willin' - 2002  
Eric Clapton - One More Car, One More Rider - 2002  
Counting Crows - Hard Candy - 2002

# Epic metal

**Epic metal** is a subgenre of [heavy metal](#).

## Traditional Epic metal

It was born in the U.S. in the early 1980s as a slower and more solemn branch of heavy metal. Early albums remained quite close to the main genre, both in the music and in lyrical themes like bikes, women, and a healthy amount of self-apology, adding with time themes from epic poetry, mythology and fantasy literature. Bands from this era include Cirith Ungol, Omen Manilla Road and Medieval Steel.

Later, it received influences from [doom metal](#) bands like Candlemass and from Bathory's Viking-themed albums, lost some of the light hearted themes for history and religion. Bands from this era tend to be from the mediterranean area, and include DoomSword from Italy, Forsaken from Malta and BattleRoar from Greece.

## Power metal

The term has been used also for a genre between [power metal](#), [speed metal](#) and melodic metal with a balance between slow and solemn [hymns](#) and the occasional outburst into powerful mid-tempos. A typical property of epic metal is a certain grandiose element and a penchant for [trumpets](#), [violins](#) or even a full orchestra accompaniment. Themes in this genre are often taken from epic poetry and fantasy.

Epic metal bands in this meaning include Hammerfall, Rhapsody, Battlelore, Nighthawk and Viperine. Recently, the Tolkien influenced Power Metal band Blind Guardian has been going in a more Epic direction than their earlier Power Metal albums.

## Battle metal

**Battle metal** is a sub-genre of [black metal](#) related to this second meaning of Epic Metal, drawing on themes of medieval or fantasy battle and fighting, and in the opinion of some would be suitable for the [soundtrack](#) for a Role Playing Game. Battle metal bands like Summoning were thought to be possible contributors to the soundtrack of the Lord of the Rings movies, but this was mainly because of the Tolkien-related content of their music and they did not appear on the soundtrack. Most bands who play battle metal also contribute to other sub-genres of [black metal](#): for instance, Bathory are prominent in the [Viking metal](#) sub-genre, and Waylander are pioneers of three sub-genres of black metal: this one, [folk metal](#) and Celtic Metal. Other [metal](#) bands have produced songs that fit the battle metal genre; the [power metal](#) band Thy Majestie is an example. Turisas is considered to be the band who gave the genre its name by mixing all the previously mentioned styles and much more into one on their album *Battle Metal* (2004)

# Ethno jazz

Apart from other definitions of Ethno Music (such as Ethno Rock, Ethno Jazz, etc. in Wicke/Ziegenrücke, *Handbuch der populären Musik, 2001* - "Handbook of Popular Music"), which means popular music and jazz from outside the industrialised world, and the marketing of such music, particularly in the industrialised world, the following should be noted:

Ethno Jazz is sometimes equaled to [World Music](#) or is regarded as its successor, particularly before the 1990s. An independent meaning of "Ethno Jazz" emerged around 1990 with globalisation and later the Internet as well as the commercial success of Ethno groups and musicians. From the American and European view, interpretations from developing countries, particularly the developing southeast Asia and the People's Republic of China, became important.

Whereas global regions like India, Latin America and Africa had been reached already before 1990, they regained importance in the form of Ethno Music, and Ethno Jazz in particular. Notable examples are the emergence of jazz through the interaction between New Orleans and Cuba, the Afro-Cuban jazz in the 1940s and 50s, Arab influence in Jazz in the 1950s and 60s and Indian influence through The Beatles and Rock Jazz of the 1960s and 70s.

Ethno Jazz, particularly from the 1990s, meant Jazz was in accordance with the more American and European view, but realised with the typical musical differences of non-American and -European regions, particularly the expanding centres of Southeast Asia and China. Superficially, and out of an American and European view, Ethno Jazz is sometimes not as Jazz, but probably something similar missing a more suitable classification.

During the 1990s, after the end of the long-time cold war conflict between east and west, there was a global enthusiasm about the development of Ethno-Musik, especially Ethno Jazz. The rapidly growing megacities (over 10 million inhabitants, like Tokyo, Seoul, Shanghai, Jakarta, Bombay, São Paulo, Mexico City) further promoted substantial urbanisation based development of Ethno Jazz.

The impact of September 11th suddenly divided the world into opposing camps again, from which the Ethno realm was not exempt, for example with respect to islamic and arabic influences.

# Ethnomusicology

**Ethnomusicology** (from the Greek *ethnos* = nation and *mousike* = music), formerly **comparative musicology**, is the study of [music](#) in its cultural context, cultural [musicology](#). It can be considered the anthropology or ethnography of music. Jeff Todd Titon has called it the study of "people making music". It is often thought of as a study of non-Western musics, but can include the study of Western music from an anthropological perspective. "Ethnomusicology as western culture knows it is actually a western phenomenon." (Nettl 1983:25)

While musicology contends to be purely about music itself (almost always Western classical music), ethnomusicologists are often interested in putting the music they study into a wider cultural context. Ethnomusicology as it emerged in the late 19th century and early 20th century, practiced by people such as Béla Bartók, Zoltán Kodály, Vinko Zganec, Franjo Ksaver, Carl Stumpf, Erich von Hornbostel, Curt Sachs and Alexander J. Ellis, tended to focus on non-European music of an oral tradition, but in more recent years the field has expanded to embrace all musical styles from all parts of the world.

Ethnomusicologists apply theories and methods from cultural anthropology as well as other disciplines in the social sciences and humanities. Many ethnomusicological works are created not necessarily by 'ethnomusicologists' proper, but instead by anthropologists examining music as an aspect of a culture. A well-known example of such work is Colin Turnbull's study of the Mbuti pygmies. Another example is Jaime de Angulo, a linguist who ended up learning much about the music of the Indians of Northern California. Yet another is Anthony Seeger, professor at the University of California, Los Angeles, who studied the music and society of the Suyá people in Mato Grosso, Brazil.

Four important centers for ethnomusicological study are the Universities of California at Los Angeles and Santa Barbara, Indiana University, the Institute of Ethnology and Folklore Research at University of Zagreb, Croatia, and the School of Oriental and African Studies, at University of London. With regard to African music, Paul Berliner, Andrew Tracey, and Hugh Tracey are well known, the latter being the founder of the International Library of African Music.

# Euro disco

The term **Euro disco** refers to a collection of styles and genres of [electronic dance music](#) that had emerged from Europe by the early 1980s, incorporating elements of [electropop](#) and [disco](#) into new hybrids such as [Hi-NRG](#), [Italo disco](#), Eurohouse, British Pop and others. The term is also commonly written as Eurodisco and Euro-disco. A typical Euro disco song has a contrasting verse-chorus form, a synthesizer-based accompaniment, and lyrics sung in English.

One of the early representors of the genre was a British group Imagination, with their series of hits throughout 1981 and 1982. In 1982 Euro disco began to develop in Italy by groups like Gazebo, Kano and Lectric Workers. In 1983, Italian disco artists became popular in Europe with disco songs entering top charts in every major European country.

The influence of Euro disco had infiltrated dance and pop in the US by 1983, as European producers and songwriters inspired a new generation of American performer eager to breathe new life into dance music otherwise abandoned by US radio. While disco had been declared "dead" due to a backlash there in 1979, subsequent Euro-flavored successes crossing the boundaries of rock, pop, and dance, such as "Call Me" by Blondie and "Gloria" by Laura Branigan, ushered in a new era of American-fronted dance music often forgotten in favor of, or considered a subgenre within the "Second British Invasion" happening concurrently. Branigan moved deeper into the Euro disco style for further hits, alongside Giorgio Moroder-produced US acts Berlin and Irene Cara.

By 1984, musicians from other countries had begun to produce Euro disco songs. In Germany, notable practitioners of the sound included Modern Talking, Sandra, and Fancy.

Some note that the same elements which were later embraced in greater measure as Euro disco had already come together cohesively as early as the mid-to late-1970s in certain tracks by artists such as the Swedish group ABBA, and the American singer Donna Summer.

By the early 1990s, its mainstream popularity having waned in the US, Euro disco developed into [eurodance](#).

## [Disco](#)

[Bright disco](#) - [Dance-punk](#) - Disco polo - **Euro disco** - [Hi-NRG](#) - [House](#) - [Italo disco](#) - [Spacesynth](#)

[Discothèque](#) - [Nightclub](#) - [Orchestration](#) - Other [electronic music genres](#)

Categories: [Disco](#) | [Dance music](#) | [Music genres](#)

The music sub-genre **Eurobeat** is closely related to [Hi-NRG](#) and [disco](#). It is also very closely related to the Japanese Para Para dance culture.

Eurobeat, as the name implies, is a music genre from Europe. Stemming from [Italo Disco](#), it is generally held to have originated in Italy in the late '70s and early '80s. Despite being European in origin, its main market has always been Japan, where its synthetic and emotionally upbeat stylings are popular. Even though many Europeans and Americans have heard [Eurodance](#), Eurobeat is still a largely unknown genre in Europe where other types of music are dominant.

Although highly popular in Japan, Eurobeat has become more and more popular in the Western world in the past few years. The anime Initial D by Shuichi Shigeno uses Eurobeat music regularly in its episodes during racing scenes between the characters, and because of this it has come to the attention of some anime fans outside Japan.

Eurobeat's sound is its main link to its italo disco origins, where it was just one of many different experiments in pure-electronic dance. There are certain synth instruments that recur across the entire genre: a sequenced octave bass, distinctive brass and harp sounds, and tight, predictable percussion in the background. These sounds are layered with vocals and natural instruments (guitar and piano are common) into complex, ever-shifting melodies that, at their best, burst with energy.

## Eurobeat genre

Eurobeat can create a number of different genres, while still keeping its own originality intact. In the late 1970s and early 1980s there were many new genres emerging from the creation of [electronic music](#). Disco was the beginning of a whole new era in music, with popular artists such as George Clinton and Earth, Wind & Fire. However when disco music quickly became unpopular in North America, it remained in the limelight in Europe.

While modern music is often recognized by its lyrics, Eurobeat is recognized not primarily by its lyrics, but by its synthesized chorus known as the **Sabi** (short for **Sabishigaru**, not to be mistaken for the Japanese Wabi-sabi), which means "*to remember someone or something*" in Japanese. This of course refers to the generally acknowledged fact that you mostly remember the Sabi as opposed to the stanzas of the Eurobeat song. This broad genre can create a great number of different "sub-genres" within it because of this combination of harmony and rhythm. Sometimes it can still sound like the old disco music we know, sometimes it can be very "fast and happy" like Happy Hardcore or Speed Music, and occasionally it even uses guitars as a method of Saiba.

One peculiar thing about Eurobeat is the fact that each artist is often credited with a variety of different aliases (See "Popular Eurobeat Artists" below for details). Artists usually adopt different stage names according to the mood of each song, or depending on who wrote their lyrics. For instance, Ennio Zanini has stated on the SCP Music website that he goes by the name of "Fastway" on songs which are more upbeat and sprinkled with high-pitched female backing vocals, and goes by "Dusty" on his more "serious" tracks. Also a popular theory is that Eurobeat artists such as Clara Moroni and Giancarlo Pasquini manufacture the same acts under many different names in order to "compete with themselves". (Compare to legendary House producer Thomas Bangalter, who is infamous for the same practice).

Eurobeat also has notoriety for name recognition, lifting titles from popular songs and using them as the names of Eurobeat tracks. Examples are "Like a Virgin", "Goodbye Yellow Brick Road", and "Station to Station." The Eurobeat songs that reuse song titles typically have nothing to do with the song it lifted its title from (i.e., not a cover).

## The Eurobeat formula

Like most musical genres, (modern) Eurobeat has a fairly specific formula to it:  
Intro -> synth -> verse -> bridge -> chorus -> synth -> extro

Of course, different names are used for these sections in different parts of the world. The *synth* has been known to be called a (synth) hook, riff, line, chorus, etc. The *verse* is often referred to as the "A melody", the *bridge* referred to as the "B melody", and the *chorus* called the "sabi" in Japanese.

Eurobeat is notorious for it's complex rhythm, always attempting to throw the listener in another direction, but the flow is usually a one way ticket. After the synth, the song usually repeats the verse, bridge, and chorus (although with different lyrics most the time) and then goes into a "breakdown" where there can be a variety of new parts to the song including a guitar solo, the dropping and adding of percussion, or a plain instrumental version of the track. Typically though, this only encompasses the verse and bridge; the chorus is usually sung once again, and then the synth and extro play. The extro can either be the synth played again, or something reminiscent of the intro. Another thing to note is that the intro is somewhat like an instrumental rendition of the verse, bridge, and chorus, while the synth is a lot like a synthesized version of the chorus. They don't have to sound completely similar, but they do in fact fit on top of each other most of the time.

There's a particular style of formula when it comes to the different "labels" of the Eurobeat world:

**A Beat C:** Typically follows the formula above, rarely straying away from a different type. This label is considered by the majority of the Eurobeat world to be the most "mainstream" label, taking a little bit of everything and adding it to their own style. They also have the largest amount of singers, which gives them variety.

**Delta:** Usually drops percussion during the breakdown while the singer sings the first verse and bridge again. Synths are typically very "harsh"-sounding, and bass is relatively low depending on the producer of each track.

**Hi-NRG Attack:** As with Delta, percussion usually drops during the breakdown. The thing with this label is that it's known for it's relatively "quirky" lyrics and rhythm. Synths are known to be very wild, sometimes playing a different note at every 1/4 beat.

**Time:** The interesting thing about Time is that most of the label's music includes a very long Intro and typically ends with a fade-out of the synth instead of an extro (which most labels don't do too often). To many, their synth can either be very intense, or can be a rather subtle, somewhat duplicated synth from previous songs.

**Vibration:** This label can surprise you. Sometimes they'll put in a simple percussion drop during the breakdown, and sometimes there is a very intense guitar solo or even new lyrics. Very unpredictable.

**SAIFAM:** This label can resemble house music very much if you listen closely. They typically use the formula of adding a new section of percussion, bass, and synth after every 4th measure. After the last synth (sometimes after the chorus is goes straight to the following) there is typically a percussion drop until there are only 4 measures of a "kick" or "hat" left. As with Vibration, SAIFAM can be somewhat unpredictable, but they don't tend to stray away from this formula.

**SCP Music:** SCP almost always follows A Beat C's formula. Rarely is there ever a percussion drop, but instead you can find a guitar solo or "ad-libbing" of lyrics or synthesizers. The interesting thing about SCP is that their music closely resembles Trance but still doesn't stray away from that authentic Eurobeat sound.

An honorable mention includes **Akyr Music**, which seems to take lessons from each of the labels and apply it to it's own music, or you can hear a strong similarity between Delta because Laurent G. Newfield produced many tracks for Delta.

## Popular Eurobeat artists

| Name                              | Labels   | Aliases   | Groups  |
|-----------------------------------|--|---|---|
| <b>Alessandra<br/>Mirka Gatti</b> | A-Beat C   | Domino, Juliet, Mirka, Dynamika, 94 Sale, Eskimo, Sheela, Marie Aldridge, Paula Roberts.  | Go Go Girls, King & Queen, A-Beat Sisters, Groove Twins, Salt & Pepper.                                 |

## Eurobeat compilations

There are many Eurobeat compilations series, the most famous (and longest running) are Super Eurobeat and the various "Super Eurobeat presents..." compilations by Avex Trax. Other notable compilations include:

- Aerobeat Eurobeat
- EuroPanic!
- Eurobeat Disney
- Eurobeat Flash
- Gazen ParaPara!!
- LovePara<sup>2</sup>
- Maharaja Night
- ParaPara Paradise
- Super Euro Best
- Super Euro Christmas
- That's Eurobeat
- The Early Days of SEB
- Tokio Hot Nights
- VIP Mega Euro Star

# Eurodance

**Eurodance** stands for European [Dance Music](#) that has been popular in Europe, Oceania, South America, and Canada between 1992 to 2000 and up until now. Between 1993-1995 that original genre was considered a mainstream phenomenon being diversified and mixed with another [electronic music](#) genres until today. It is closely related to the so-called *Euro-pop* and *Euro-rap*, similar phenomena, all three characterized by the fact that audience and performers were mostly Western European and Scandinavian, Germany, Sweden, Netherlands, Finland, Denmark, Norway, Belgium and Italy being their fief. Eastern European countries such as Romania, Hungary, Croatia, Poland, and Russia have also emerged into the Euro music scene.

## History

Its roots are drawn from the mostly rap performances of 2 Unlimited, Dr. Alban Masterboy or Snap, which were the first to emphasize the combo female chorus - male rap. The current style has expanded, as performances can be included in rap, trance, techno, or house. It is essentially dance or club oriented music that is usually (but not always) produced in Europe. Hit songs often go international. The genre "Eurodance" can also be used interchangeably with the term "Euro".

Its "mainstream" can be characterized by female vocals, with simple chorus, male rap parts and a strong beat from 110 to 150 BPM with synthesizer riffs. It is often very positive and upbeat; the lyrics often involve issues of love and peace or expressing and overcoming difficult emotions. Almost all Eurodance emphasizes percussion and rhythm. Most Eurodance is also very melody-driven. Strangely, lyrics are in English 90% of the time, no matter what country the artist is from. Some artists will also release their songs in both English and their native language.

Eurodance is very much commercial music. It can be even seen as a some kind of culmination of commerciality in music business. Some producers, like Swedish Max Martin or Italian Larry Pignagnoli, were behind dozens of bands. If band members became too demanding, they could be fired and replaced by others. Only few bands survived more than one or two records. The most successful 90's eurodance groups are arguably the Dutch group 2 Unlimited, Italian groups Cappella, Ice MC and Eiffel 65, and German groups Snap!, Culture Beat, Real McCoy and La Bouche.

It has been suggested that many female vocalists were selected for their looks more than for talent. Live performances were mostly playbacks, sometimes different female singers performing in studio recordings than on stage. Many acts, like Captain Jack and Jonny Jakobsen (Dr. Bombay) had a carefully planned humoristic image. A group called E-rotic received attention with its erotic lyrics and [music videos](#).

Some artists, like Aqua, Daze or Hit'n'Hide are not usually considered mainstream eurodance, but fall into the [bubblegum pop](#) category.

Other in between cases are Blümchen and Scooter, approaching the [happy hardcore](#) genre. Although sometimes considered eurodance, projects such as Sash!, ATB or Antiloop were mostly progressive house and trance groups.

Eurodance reached its commercial peak in the United States in 1995/1996 with the Top 40 radio success of artists such as La Bouche ("Be My Lover"), Real McCoy ("Another Night" and "Runaway"), 2 Unlimited ("Get Ready For This") and Corona ("Rhythm Of The Night") among others. Sales in the hundreds of thousands of the first Eurodance CD compilation series, DMA Dance: Eurodance, released on U.S. independent label Interhit (formed by Jeff Johnson and Chris Cox of Thunderpuss) in conjunction with *Dance Music Authority* magazine, provided further evidence of the popularity of the eurodance sound in the USA.

Later into the 90s trance was starting to influence Eurodance which rebirthed into euro-trance, which also incorporated some elements from progressive house. Artists like Scooter, Charly Lownoise and Mental Theo and E-Type began the trend which lead to the birth of hundreds of projects in this subgenre.

Today, Eurodance music has evolved and the categories may cross over one another. Sub-categories within the genre of Eurodance are not set in stone but are

commonly recognized as:

**Classic Eurodance** - As mentioned earlier, often a female vocalist and a male rapper. Synths are old fashioned, often has an early to mid 90's sound.

**Bubblegum** - Started in Denmark. Usually female artists with silly lyrics and happy sounds. Chorus, verse style lyrics. Not to be taken seriously, but often amusing and cheerful.

**Eurotrance** - Often vocal and sometimes rap. Usually not chorus, verse lyrics - more vague or repetitive. Simple lyrics. A lot of effects and echoes on the vocals. Driving percussion and ethereal chords. Often has a strong synth line with addicting rhythm.

**Eurotechno** - Tends to use more sound effects and chord hit type sounds with minimal vocals. Crazy keyboard synths. Loud and powerful.

**High Energy (Hi-NRG)** - Derived from disco. An Italian creation, sometimes called "Italo". It is Pop, Classic Eurodance, and Trance combined, and perhaps sped up a little bit. It is very uplifting. The vocals are very full sounding and so are the synth arrangements.

**Euro Pop** - Basically it is Pop music with elements of Classic Eurodance or Trance but isn't quite one of the other categories. Often Chorus, verse style lyrics.

**Eurohouse** - Similar to eurotrance, but less often contains vocals, and even less frequently contains many lyrics. Uses harder synths and often has longer, slowly changing and growing songs at a slower tempo. The current trend has been 'Tek-house' style a la Benni Bennis.

**ITALODANCE** - Has its roots from 80's groups like Valerie Dore, Savage, Sabrina, Miko Mission and Radio Rama. Italo in the 90's took a Eurodance form. Groups like Cappella, Alexia, Taleesa, Mollella, CO.RO, DA Blitz, and Double You burst into the scene with success. The newer Italo style today has a sort of a marching beat to it. Some claim Eiffel 65 and GiGi Da'Gostino were the fathers of this style.

**Classical music** is a broad, somewhat imprecise term, referring to [music](#) produced in, or rooted in the traditions of, European art, ecclesiastical and concert music, encompassing a broad period from roughly 1000 to the present day. The central norms of this tradition, according to one school of thought, developed between 1550 and 1825, focusing on what is known as the [common practice period](#).

The term classical music did not appear until the early 19th century, in an attempt to 'canonize' the period from Bach to Beethoven as an era in music parallel to the golden age of sculpture, architecture and art of classical antiquity, (from which of course no music has directly survived). The earliest reference to 'classical music' recorded by the Oxford English Dictionary is from about 1836. Since that time the term has developed in common parlance as a simple opposite to [popular music](#).

## Timeline

According to one school of thought, musical works are best understood in the context of their place in musical history; for adherents to this approach, this is essential to full enjoyment of these works. There is a widely accepted system of dividing the history of classical music composition into stylistic periods. According to this system, the major time divisions are:

- [Ancient music](#) - the music generally before the year 476, the approximate time of the fall of the Roman Empire. Most of the extant music from this period is from ancient Greece.
- [Medieval](#), generally before 1450. Monophonic chant, also called plainsong or [Gregorian Chant](#), was the dominant form until about 1100. Polyphonic (multivoiced) music developed from monophonic chant throughout the late Middle Ages and into the Renaissance.
- [Renaissance](#), about 1450–1600, characterized by greater use of [instrumentation](#), multiple melodic lines and by the use of the first bass instruments.
- [Baroque](#), about 1600–1750, characterized by the use of complex tonal, rather than modal, [counterpoint](#), and growing popularity of keyboard music (harpsichord and [pipe organ](#)).
- [Classical](#), about 1730–1820, an important era which established many of the norms of composition, presentation and style. Also, the classical era is marked by the disappearance of the harpsichord and the clavichord in favour of the piano, which from then on would become the predominant instrument for keyboard performance and composition.
- [Romantic](#), 1815–1910 a period which codified practice, expanded the role of music in cultural life and created institutions for the teaching, performance and preservation of works of music.
- [Modern](#), 1905-1985 a period which represented a crisis in the values of classical music and its role within intellectual life, and the extension of theory and technique. Some theorists, such as Arnold Schoenberg in his essay "Brahms the Progressive," insist that Modernism represents a logical progression from 19th century trends in composition; others hold the opposing point of view, that Modernism represents the rejection or negation of the method of Classical composition.
- [20th century](#), usually used to describe the wide variety of post-Romantic styles composed through the year 2000, which includes late Romantic, Modern and Post-Modern styles of composition.
- The term contemporary music is sometimes used to describe music composed in the late 20th century through present day.
- The prefix neo is usually used to describe a 20th Century or Contemporary composition written in the style of an earlier period, such as classical, romantic, or modern. So for example, Prokofiev's *Classical Symphony* is considered a Neo-Classical composition.

The dates are generalizations, since the periods overlapped. Some authorities subdivide the periods further by date or style. However, it should be noted that

these categories are to an extent arbitrary; the use of [counterpoint](#) and fugue, which is considered characteristic of the Baroque era, was continued by Mozart, who is generally classified as typical of the Classical period, by Beethoven who is often described as straddling the Classical and Romantic periods, and Brahms, who is often classified as Romantic.

## Classical music as "music of the classical era"

*Main article:* [Classical music era](#)

In [music history](#), a different meaning of the term *classical music* is occasionally used: it designates music from a period in musical history covering approximately Carl Philipp Emanuel Bach to Beethoven – roughly, 1730–1820. When used in this sense, the initial C of *Classical music* is sometimes capitalized to avoid confusion.

## The nature of classical music

Classical music is primarily a *written* musical tradition, preserved in [music notation](#), as opposed to being transmitted orally, by rote, or in recordings. While there are differences between particular performances of a classical work, a piece of classical music is generally held to transcend any interpretation of it. The use of musical notation is an effective method for transmitting classical music, since the written music contains the technical instructions for performing the work. The written score, however, does not usually contain explicit instructions as to how to interpret the piece, apart from directions for dynamics and tempo; this is left to the discretion of the performers, who are guided by their personal experience and musical education, their knowledge of the work's idiom, and the accumulated body of historic performance practices.

Classical music is meant to be experienced for its own sake, unlike music that serves as an adjunct to other forms of entertainment (although orchestral film music is occasionally treated as classical music). Classical music concerts often take place in a relatively solemn atmosphere, and the audience is usually expected to stay quiet and still to avoid distracting the concentration of other audience members. The performers often dress formally, a practice which is taken as a gesture of respect for the music and the audience, and performers do not normally engage in direct involvement or casual banter with the audience. Private readings of [chamber music](#) may take place at more informal domestic occasions.

Its written transmission, along with the veneration bestowed on certain classical works, has led to the expectation that performers will play a work in a way that realizes in detail the original intentions of the composer. Indeed, deviations from the composer's instructions are sometimes condemned as outright ethical lapses. During the 19th century the details that composers put in their scores generally increased. Yet the opposite trend—admiration of performers for new "interpretations" of the composer's work—can be seen, and it is not unknown for a composer to praise a performer for achieving a better realization of the composer's original intent than the composer was able to imagine. Thus, classical music performers often achieve very high reputations for their musicianship, even if they do not compose themselves.

Classical composers often aspire to imbue their music with a very complex relationship between its affective (emotional) content, and the intellectual means by which it is achieved. Many of the most esteemed works of classical music make use of musical development, the process by which a musical germ, idea or *motif* is repeated in different contexts, or in altered form, so that the mind of the listener consciously or unconsciously compares the different versions. The classical genres of [sonata form](#) and fugue employ rigorous forms of musical development. (See also [History of sonata form](#))

Another consequence of the primacy of the composer's written score is that [improvisation](#) plays a relatively minor role in classical music, in sharp contrast to traditions like [jazz](#), where improvisation is central. Improvisation in classical music performance was far more common during the [Baroque](#) era than in the nineteenth and twentieth centuries, and recently the performance of such music by modern classical musicians has been enriched by a revival of the old improvisational practices. During the Classical period, Mozart and Beethoven sometimes

improvised the [cadenzas](#) to their [piano concertos](#) (and thereby encouraged others to do so), but they also provided written cadenzas for use by other soloists.

*Art music*, *concert music*, and *orchestral music* are terms sometimes used as synonyms of classical music.

## Complexity

Classical works often display great musical complexity through the composer's use of development, modulation (changing of keys), variation rather than exact repetition, musical phrases that are not of even length, counterpoint, polyphony and sophisticated [harmony](#).

Also, many long classical works (from 30 minutes to three hours) are built up from a hierarchy of smaller units: namely phrases, periods, sections, and movements. Schenkerian analysis is a branch of music theory which attempts to distinguish these structural levels.

## Emotional content

As with many forms of fine art, classical music often aspires to communicate a transcendent quality of emotion, which expresses something universal about the human condition. While emotional expression is not a property exclusive to classical music, this deeper exploration of emotion arguably allows the best classical music to reach what has been called the "sublime" in art. Many examples often cited in support of this, for instance Beethoven's setting of Friedrich Schiller's poem, Ode to Joy in his 9th symphony, which is often performed at occasions of national liberation or celebration, as in Leonard Bernstein's famously performing the work to mark the collapse of the Berlin Wall, and the Japanese practice of performing it to observe the New Year.

However, some composers, such as Iannis Xenakis, argue that the emotional effect of music on the listeners is arbitrary and therefore the objective complexity or informational content of the piece is paramount.

## Instruments

Classical and popular music are often distinguished by their choice of instruments. The instruments used in common practice classical music were mostly invented before the mid-19th century (often, much earlier), and codified in the 18th and 19th centuries. They consist of the instruments found in an [orchestra](#), together with a few other solo instruments (such as the [piano](#), harpsichord, and [organ](#)). Electric instruments such as the [electric guitar](#) and [electric violin](#) play a prominent role in popular music, but of course play no role in classical music before the twentieth century, and only appear occasionally in the classical music of the 20th and 21st centuries. Both classical and popular musicians have experimented in recent decades with electronic instruments such as the [synthesizer](#), electric and digital techniques such as the use of sampled or computer-generated sounds, and the sounds of instruments from other cultures such as the gamelan.

None of the bass instruments existed until the Renaissance. In Medieval Music, instruments are divided in two categories: loud instruments for use outdoors or in church, and quieter instruments for indoor use.

Many instruments which are associated today with popular music used to have important roles in early classical music, such as bagpipes, vihuela, hurdy-gurdy and some woodwind instruments. On the other hand, the acoustic guitar, for example, which used to be associated mainly with popular music, has gained prominence in classical music through the 19th and 20th centuries.

Finally, while equal temperament became gradually accepted as the dominant [musical tuning](#) during the 19th century, different historical temperaments are often used for music from earlier periods. For instance, music of the English Renaissance is often performed in mean tone temperament.

## Durability

One criterion that might be said to distinguish works of the classical musical canon is its cultural durability. However, this is not a distinguishing mark of all classical music: works by J. S. Bach (1685–1750) continue to be widely performed and highly regarded, while music by many of Bach's contemporaries, while undoubtedly "classical", is deemed mediocre, and is rarely performed.

## Influences between classical and popular music

Classical music has always been influenced by, or taken material from, popular music. Examples include occasional music such as Brahms' use of student drinking songs in his Academic Festival Overture, genres exemplified by Kurt Weill's *The Threepenny Opera*, and the influence of jazz on early- and mid-twentieth century composers including Maurice Ravel. Certain [postmodern](#) and [postminimalist](#) classical composers acknowledge a debt to popular music.

There are also many examples of influence flowing the other way, including popular songs based on classical music, the use to which Pachelbel's Canon has been put since the 1970s, and the musical [crossover](#) phenomenon, where classical musicians have achieved success in the popular music arena (one notable example is the "Hooked on Classics" series of recordings made by the Royal Philharmonic Orchestra in the early 1980s). In fact, it could be argued that the entire genre of film music could be considered part of this influence as well, since it brings orchestral music to vast audiences of moviegoers who might otherwise never choose to listen to such music (albeit for the most part unconsciously).

## Classical music and folk music

Composers of classical music have often made use of [folk music](#) (music created by untutored musicians, often from a purely oral tradition). Some have done so with an explicit nationalist ideology, others have simply mined folk music for thematic material.

## Commercial uses of classical music

Certain staples of classical music are often used commercially (that is, either in advertising or in the soundtracks of movies made for entertainment). In television commercials, several loud, bombastically rhythmic orchestral passages have become cliches, particularly the opening "O Fortuna" of Carl Orff's *Carmina Burana*; other examples in the same vein are the *Dies Irae* from the Verdi *Requiem*, and excerpts of Aaron Copland's "Rodeo".

Similarly, movies often revert to standard, cliched snatches of classical music to represent refinement or opulence: probably the most-often heard piece in this category is Mozart's *Eine kleine Nachtmusik*.

## Classical music in education

Throughout history, parents have often made sure that their children receive classical music training from a young age. Early experience with music provides the basis for more serious study later. For those who desire to become performers, any musical instrument is practically impossible to learn to play at a professional level if not learned in childhood. Some parents pursue music lessons for their children for social reasons or in an effort to instill a useful sense of self-discipline; lessons have also been shown to increase academic performance. Some consider that a degree of knowledge of important works of classical music is part of a good general education.

The 1990s marked the emergence in the United States of research papers and popular books on the so-called Mozart effect: a temporary, small elevation of scores on certain tests as a result of listening to Mozart. The popularized version of the controversial theory was expressed succinctly by a New York Times music columnist: "researchers have determined that listening to Mozart actually makes you smarter." Promoters marketed CDs claimed to induce the effect. Florida passed a law requiring toddlers in state-run schools to listen to classical music every day, and in 1998 the governor of Georgia budgeted \$105,000 a year to provide every child born in Georgia with a tape or CD of classical music. One of the original researchers commented "I don't think it can hurt. I'm all for exposing children to wonderful cultural experiences. But I do think the money could be better spent on music education programs."

## European free jazz

**European free jazz** is a part of the global [free jazz](#) scene with its own development and characteristics. It is hard to establish who is the founding father of European free jazz because of the different developments in different European countries. One can, however, be certain that European free jazz took its development from American [free jazz](#), where e.g. Ornette Coleman revolutionised the way of playing.

## Beginnings

The founders of European free jazz usually came from a classic jazz background and then went over [bebop](#) and [hardbop](#) into [free jazz](#). Some people credit the German saxophonist Peter Brötzmann with the starting of free jazz in the 1960s. He is renowned for his violent play, although the harmonies in his play are often overheard. His protegee Peter Kowald interpreted [free jazz](#) on the double bass. Trombonist Albert Mangelsdorff, although coming from a more classic background, had great influence too. Alexander von Schlippenbach's Globe Unity Orchestra created a big scandal at its debut in Berlin.

## East Germany

In East Germany, trombonist Conny Bauer and drummer Günter Sommer spread [free jazz](#) in the Socialist block.

## **Britain**

In the UK the saxophonist Evan Parker who was highly influenced by John Coltrane took on the role of Brötzmann for Britain. The guitarist Derek Bailey and trombonist Paul Rutherford also developed the British scene.

## Today

Today the [free jazz](#) players of the 1960s and 1970s have aged considerably. Many young players have gone into the direction of more experimental play, called [free improvisation](#), which completely neglects the [jazz](#) idiom.

Category: [Jazz](#)

# Euro-Trance

**Euro-Trance** is a hybrid of [Hard Trance](#) and [Eurodance](#) music incorporating [Hardstyle](#) bass drums and trance elements. The trance synths at times sound like techno hoovers with trancey effects and strings backing it up. The vocals are often pitched up for the most part, but sometimes they can be heard as in normal pitch range. This is often confused as [vocal trance](#) because of its use of vocals. The lyrical content is usually pretty simple, containing an introduction to the song with usually no or little drums, and often includes renderings of classic [Happy Hardcore](#) anthems or melodies.

## Euro-Trance Artists

A list of some main euro-trance producers:

ALX (Alex Ross)  
Baracuda (Axel Konrad, Markus Schafferzyk, Mell, Verena)  
Bass-T (Sebastian Göckede)  
Cascada (Manuel Reuter, Yann Pfeifer)  
Deepforces (Christian Blecha)  
Deep Spirit (Dominik Cydlik, Bernhard Hochrainer & Roland Binder)  
DJ Manian (Manuel Reuter)  
Future Trance United (Baracuda, Megara vs. DJ Lee, Pulsedriver, Rocco vs. Bass-T & Special D.)  
Groove Coverage (Axel Konrad, Markus Schafferzyk, Mell, Verena)  
Pulsedriver (Slobodan Petrovic Jr.)  
Rob Mayth (Robin Brandes)  
Rocco (Sven Gruhnwald)  
Special D. (Dennis Horstmann)  
Starsplash (Charly Lownoise & Franky Tunes)  
Sven-R-G (Sven Gruhnwald)  
Tune Up! (Manuel Reuter & Yann Pfeiffer)  
Verano (Marco Stork & Dennis Nicholls)

# **Eurovision Song Contest**

Running since 1956, the **Eurovision Song Contest** is an annual televised song contest with participants from numerous countries whose national television broadcasters are members of the European Broadcasting Union (EBU). The Contest is broadcast on television and radio throughout Europe, in selected countries around the world, and on the Internet.

## Overview

The Contest's name comes from the EBU's Eurovision TV distribution network. Because it is the highest-profile event distributed by the network, the Song Contest itself is often simply called "Eurovision". ESC is an abbreviation used when referring to the Contest on websites and in forums.

The structure of the Contest is as follows:

- Each country, through a variety of means, chooses an artist and song to represent them.
- Each song from every country is then performed once on the night, vocally live.
- After all songs have been performed, viewers have ten minutes to vote for their favourite song. Viewers can not vote for their own country e.g. voters in Ireland can not vote for the Irish entry.
- All the votes are added up per country (e.g. all of the votes from Irish televoters, from French voters etc.)
- Each country, via satellite link, reveals its votes. The top ten songs voted for in each country receive points, from 1-8, then 10 and 12 points. Points are announced per country in reverse order.
- In the end, the winner is the country with the most points. In a tie, it is the country with (any number of) points awarded from most countries that wins.
- The winning country receives the honour of hosting the next year's Contest.

The programme can reach a potential television audience of more than one billion. Any member of the EBU (even those outside Europe) may participate in the Contest. Of these non-European members, only Israel and Morocco have participated in the Contest. Lebanon had planned to enter the 2005 Contest, but they were forced to withdraw because they admitted that they could not be sure the broadcast wouldn't be cut whilst Israel were performing.

The theme music played before and after the broadcasts of the Eurovision Song Contest (and other Eurovision broadcasts) is the prelude to Marc-Antoine Charpentier's setting of Te Deum.

## History

In the event of a tie it used to be the song with the most twelve points which won (as was the case in 1991) however it is now the song which received any points from the most countries which wins the tiebreak

## Hosts

Hosting the Eurovision Song Contest is an honour accorded to the winning country from the previous year. Many people believe that host countries have experienced financial difficulties through having to host. Particularly Ireland which won 3 years in a row. This situation was famously parodied in the Father Ted episode "A Song for Europe" (although the Contest was simply referred to as the 'Eurosong Competition').

However, most of the expense of the Contest is covered by event sponsors and contributions from the other participating nations. The 2004 ESC was allocated a budget of some €15 million and was the most expensive edition ever. The Contest is considered a unique showcase for launching the host country as a tourist destination. For example in the summer of 2005, Ukraine abolished its normal visa requirements for tourists to coincide with its hosting of the ESC.

## Interval Acts

The entertainment provided by the host nation between the competitors' performances and the scoring is sometimes used as the launch of a successful career. The Irish dancing show Riverdance was first seen internationally at the 1994 Contest. The Hothouse Flowers had a successful career after their interval appearance in 1988. The Danish band Aqua also performed the interval act when Copenhagen hosted the competition in the year 2001 as a farewell to the music industry just before their split.

## Winning Streaks

Occasionally, the host nation wins for a second year in a row. This first happened in 1969 when Spain (in its four-way tie with the Netherlands, France, and the United Kingdom) won the Contest in Madrid. The hosts also won the Contests in 1973 (Luxembourg), 1979 (Israel), 1993 (Ireland), and 1994 (Ireland again).

Ireland is the only nation to have won three times in a row; in 1992, 1993 and 1994. It also holds the title of most wins - with seven, in 1970, 1980, 1987, 1992, 1993, 1994 and 1996.

Whilst having won the Contest five times, two fewer than Ireland, the United Kingdom have the highest cumulative points total by some distance. This is largely courtesy of the country placing second an incredible fifteen times.

Although other countries had opportunities to host the event twice in a row <sup>[1]</sup>, the first country to do so was Ireland, which actually hosted the Contest three times in a row, as they won the Contest in 1992, 1993 and 1994 and hosted the event in 1993, 1994, and 1995.

The United Kingdom holds the record for hosting the Contest the most times - eight in total - 1960, 1963, 1968, 1972, 1974, 1977, 1982 and 1998 — having hosted four times after winning the Contest (the Netherlands were given the

honour after the 1969 tie) and taken the reins four other times when other broadcasters declined. Ireland has hosted the competition seven times, following its seven wins.

## **Terry Wogan**

In the United Kingdom the Contest is taken less seriously than in many other countries. Many blame this on broadcaster Terry Wogan who adds light humour to his voice over commentary on UK Television. Others, however, argue that he is what has kept it so interesting for UK viewers for so many years. Wogan tends to make light of the alleged regional voting blocks e.g "Greece gives Cyprus douze points, quelle surprise!"

## Musical Styles

The maximum duration of each song is three minutes, and although musicians of any genre can play, the musicians and songs selected for the Contest tend towards very commercial [pop](#). Some viewers of the Contest view the event as a combination of camp entertainment and a musical train wreck (a fact played upon in the UK broadcast with the sardonic BBC commentary of Terry Wogan) and a subculture of Eurovision Song Contest drinking games has evolved in some countries.

It's worth noting that the voting system used for the Contest was originally designed to select a single compromise winner from a large field of candidates. A number of countries use this same system to select their entries, some of them going through several rounds of voting before selecting a winner. After repeated iterations of the system, variations from middle-of-the-road pop music tend to be eliminated.

## Winners

Often the winner of the Eurovision gets largely forgotten after their win: however there have been notable exceptions like ABBA and Céline Dion. Usually the winner becomes a massive star in their home country and eventually in neighbouring countries. The 2004 winner Ruslana became a superstar in her home country Ukraine, yet has failed to make a major splash in most of Europe, except for Belgium and Greece. The 2005 winner Elena Papatrizou achieved even more fame in Greece, Cyprus, Turkey and Sweden yet failed to reach success outside of these four countries. However, Elena is due to release remixes in the US in 2006 as well as an English album in Europe. Sertab Erener, the only Turkish winner of the Eurovision Song Contest, achieved a lot more fame in Turkey, Greece and Germany, and became more well known. However, she wasn't as successful outside those three countries.

The credibility of the show has been called in to question in some countries - (UK for example sees it as a comedy show but nonetheless keeps good viewing figures, Italy has declined to enter since 1997); conversely "new Europe" nations see it as a chance to showcase their nation and culture. This may or may not have a bearing on "Political and Regional Voting Patterns" as described above.

## Selection procedures

Participating nations use a number of different methods to select their entries. Many of them mimic the final Contest with big stage productions, telephone or jury voting, and a selection of songs to choose from. Others follow different paths.

For the 2002 Contest, the Spanish TVE created a reality show *Operación Triunfo* that showed the selection and training of unknown singers. At the end, one of them would be elected by the public to represent the country in the Contest. The format was initially an enormous success in Spain, ran for two more years there and was swiftly exported to other countries. One example was the Irish *You're A Star*, a Pop Idol clone run by RTÉ from 2003 to 2005, which carried the ultimate prize of representing Ireland at Eurovision. The original Spanish show was quietly dropped for the 2005 Contest after the three previous entries had disappeared into mid-table obscurity in the international contests. The Spanish reverted to a conventional national pre-selection competition. The Irish show was not dropped; however the prize of representing Ireland in the Eurovision was.

In recent years, more and more countries have used this "reality show" method of selecting their singing entrants and choosing the song at a later stage, with mixed results. Twelve of the participating countries in the 2004 Song Contest were winners on a reality show.

More successful has been the system where the national broadcaster privately selects one singer and a selection of songs from which the national public votes. This method was used for Turkey, Ukraine, and Greece in the years when these countries won the Contest.

In the United Kingdom the entry is chosen by the public during the programme "Making Your Mind Up", which took its name from UK group Bucks Fizz's winning entry in 1981.

Countries with many very successful international artists tend not to enter them as it is unlikely they would choose to compete, for example it is considered unlikely Ireland would enter U2 or the United Kingdom would enter The Rolling Stones. Several countries have used their most famous export in previous years, however, with the most recent being TATU's participation for Russia in 2003, or Las Ketchup (of 'The Ketchup Song' fame) competing for Spain in 2006.

For more information on each country's selection procedures, visit the country-specific links at the bottom of the page.

## **Spinoffs and imitators**

There are a number of other contests and events that are either spun off from the Eurovision Song Contest or resemble it closely.

### **The Junior Eurovision Song Contest**

Denmark originally held a song contest for children in 2000: then it organised a Nordic Children's Eurovision, in which children from Denmark, Norway, and Sweden competed in 2002. The EBU saw clips of the show and liked it so decided to create an official Children's Eurovision.

Thus, starting in 2003, an annual children's version of the Contest was established, called the Junior Eurovision Song Contest. As originators of the concept, Denmark were given the honour of hosting the first running of the event, which was won by Croatia.

In the Junior Eurovision Song Contests the performers always compose their own songs.

Even though the Junior Eurovision Song Contest was approved by the EBU, it hasn't been very successful, and has generally had unsatisfactory audience ratings, particularly in the United Kingdom, where from 2004 it was only shown on digital channel ITV2.

### **An American Eurovision Contest?**

In 2006 the format of the Eurovision Song Contest was sold to an American Broadcaster in order to compete with American Idol in the ratings. The member countries of the EBU will be replaced by the different States and territories of the United States.

### **Intervision Song Contest**

Between 1977 and 1980 the countries of the Eastern bloc had a song contest of their own, known as the Intervision Song Contest. Organised by the Intervision Network and held in Sopot, Poland, it replaced an earlier event — the Sopot International Song Festival.

## Trivia

- Joan Manuel Serrat was originally slated to represent Spain in 1968 with the song "La La La", but wanted to sing it in Catalan. The ruler of Spain at the time, Francisco Franco, ordered that the song be performed in Spanish. Serrat refused and was replaced by Massiel, who went on to win the Contest.
- The 1974 Carnation Revolution in Portugal began when their entry E depois do adeus was broadcast on Portuguese radio. The song was the signal to the rebels to start the revolution.
- Lebanon had intended to participate for the first time in 2005, but was forced to withdraw when it emerged that Lebanese law made it impossible to show the Israeli entry. (The Contest rules require participating broadcasters to show all the songs).
- It has been argued that Israel and sometimes Turkey are not in Europe and hence should not be in the Contest. However being a member of the EBU is the requirement rather than geographical concerns. As long as the EBU can transmit to all participating countries (no matter how far away) they are permitted to take part. This means that Morocco was able to participate in 1980.
- Steve Coogan portrayed a spoof singer Tony Ferrino who "won" the Contest for Portugal in 1980 with a classic hit "Papa Bendi". The real winner that year was Johnny Logan.

## The Contest in Popular Culture

- The Eurovision Song Contest was the central focus of an episode of Father Ted. The joke was that the Irish had lost so much money by winning so many times they decide to choose the worst possible entry as their song entry. Father Ted and Dougal win with an entry called "My Lovely Horse".
- In an episode of The Young Ones, Alexei Sayle dressed as Benito Mussolini and performed a mock Contest entry called "Make Silly Noises".
- The short-lived BBC comedy Heartburn Hotel featured an episode in which the delegation from the impoverished Eastern European state of Zagrovia, recovering from a recent civil war, stayed in the grotty Birmingham hotel run by Tim Healy's character whilst taking part in that year's Eurovision Song Contest. Although the country in question is, of course, fictitious, the Contest had indeed been held in Birmingham that year (1998), and the programme notably included some specially filmed footage of the Zagrovia "entry" - entitled "Lik, Lik, Lik" ("Love, Love, Love"), sung by Saskia - being performed on the actual ESC stage at the National Indoor Arena, complete with commentary by Terry Wogan.
- At the 2005 MTV Europe Music Awards, the British host Sacha Baron Cohen made a parody of Eastern European countries hosting the Contest. As the fictitious Kazakh TV personality Borat, Cohen opened the show by welcoming the viewers to *The Eurovision Song Contest 2005*. The award

show also included other, more subtle, references to the ESC, like overly long folk-dance sequences (common in the *interval act* of the ESC), and a pointless appearance by the (still fake) Kazakh president.

- British comedy Maid Marian and her Merry Men (1989) included a Eurovision parody in their song contest 'a Song for Worksop.' Upon forming the idea for the song contest, Marian described in vivid detail the exact manner in which she would host the show, mirroring Eurovision hosts of the past, and the winning song was the Guy of Gisborne's idiotic composition 'Ding-a-Ling-a-Ling, Dong-a-Long-a-Long.'
- Famous British comedy troupe, Monty Python, parodied the Eurovision Song Contest in their popular 70s variety comedy show, Monty Python's Flying Circus.
- In the 1977 film Jubilee a character is referred to as "England's entry for the Eurovision Song Contest" about 32 minutes in. This is ironic as constituent nations of the UK, unlike in football and other sports, do not have their own entries. This is arguably because it is technically EBU members, rather than countries themselves, competing. Therefore, as the BBC covers all of the United Kingdom, we have a United Kingdom entry.
- In the 2000 film An Everlasting Piece after about 7 minutes a wig technician asks during customer/client smalltalk whether the client knows where the Eurovision Song Contest is being held that year.
- The Swedish 2000 film 'Livet är en schlager' (Life is a Schlager) is about a housewife that gets her life turned upside-down when she participates in 'Melodifestivalen', the Swedish qualifier for the Eurovision Song Contest.

## Endnotes

1. Luxembourg declined to host the 1974 Contest after the expenditure of hosting the previous year. Israel declined to host the 1980 Contest because the IBA preferred to spend their budget on upgrading their transmission to colour.

# Exotica

**Exotica** is a musical genre, named after the 1957 Martin Denny album of the same title, popular during the late 1950s to mid 1960s typically with the middle-aged suburban set who came of age during World War II. The musical colloquialism exotica means tropical ersatz: the non-native, pseudo experience of Oceania (Polynesia, Melanesia, Micronesia, Southeast Asia, and especially Hawaii). While the South Seas forms the core region, exotica reflects the "musical impressions" of every place from standard travel destinations to the mythical "shangri-las" dreamed by armchair safari-ers.

Les Baxter's album, *Ritual of the Savage* (*Le Sacre du Sauvage*), would become the cornerstone of Exotica. This album featured lush orchestral arrangements along with tribal rhythms and featured such classics as "Quiet Village", "Jungle River Boat", "Love Dance", and "Stone God." *Ritual* is the seminal Exotica record, influencing all that came after it. As the 1950s progressed, Baxter carved out a niche in this area, producing titles in this style for Yma Sumac and Bas Sheva).

In 1956, Martin Denny burst on to the scene with his dreamy Hawaiian rhythms complete with exotic birdcalls. The new technology of stereo recording gave the music, and the oriental ethnic instruments in it, an almost surreal effect. After forming his band in 1955. In 1957, Denny with Les Baxter as composer produced the "Quiet Village", which established the sound of Polynesian music. After a string of successful albums Denny's commercial appeal faded as the Tiki fad waned. By the mid-1960s [rock and roll](#) supplanted Exotica in the American musical mainstream. Interestingly enough, Exotica and its parent genre, lounge, have resurfaced and have gained in popularity in recent years.

According to vinylist Hipwax, "exotica relies on percussion: [conga](#), bongos, vibes, [gongs](#), boo bams (bamboo sticks), Tahitian log, Chinese bell tree, bird calls, big-cat roars, and even primate shrieks invoke the dangers of the jungle. Except for a handful of singers and standards with lyrics, singing is rare. Abstract, sirenish ululations, fierce chants, or guttural growls are common, however."

## See also

- Mexican bandleader Juan Garcia Esquivel is sometimes regarded as forming part of the Exotica movement.
- The music of American composer Raymond Scott is also recognized as a precursor to exotica, as several of his songs were written with the intent of transporting the listener to exotic locations via novelty instruments and sound effects.

Categories: [World music genres](#)

# Experimental music

**Experimental music** is any [music](#) that challenges the commonly accepted notions of [what music is](#). There is an overlap with avant-garde music. John Cage was a pioneer in experimental music and defined and gave credibility to the form. David Cope (1997), describes experimental music as that, "which represents a refusal to accept the status quo."

For experimental [popular music](#) see: [art rock](#).

Michael Nyman in his book *Experimental Music: Cage and Beyond* uses the term "experimental" to describe the work of American modernist composers (John Cage, Christian Wolff, Earle Brown, Morton Feldman, Terry Riley, LaMonte Young, Philip Glass, Steve Reich, etc.) as opposed to the European avant-garde at the time (Karlheinz Stockhausen, Pierre Boulez). The "experiment" is not whether a piece succeeds or fails, but is in the fact that the outcome of the piece is uncertain (or unforeseeable).

As with other edge forms that push the limits of a particular form of expression, there is little agreement as to the boundaries of experimental music, even amongst its practitioners. On the one hand, some experimental music is an extension of traditional music, adding unconventional instruments, modifications to instruments, noises, and other novelties to (for example) orchestral compositions. At the other extreme, there are performances that most listeners would not characterize as music at all.

While much discussion of experimental music centers on definitional issues and its validity as a musical form, the most frequently performed experimental music is entertaining and, at its best, can lead the listener to question core assumptions about the nature of music.

## Keywords

**Aleatoric music** - Also called 'chance music' (Cage's habitual usage). Music in which the composer introduces the elements of chance or unpredictability with regard to either the composition or its performance.

**Graphic notation** - Music which is written in the form of diagrams or drawings rather than using "conventional" notation (with staves, clefs, notes etc).

**Microtones** - A pitch interval that is smaller than a semitone. This includes quarter tones and intervals even smaller. Composers have, for example, experimented in dividing the octave into 31 and 53 microtones, and using this scale as a basis for composition.

# Techniques

Some of the more common techniques include:

- [Extended techniques](#): Any of a number of methods of performing on a [musical instrument](#) that are unique, innovative, and sometimes regarded as improper.
- "Prepared" instruments—ordinary instruments modified in their tuning or sound-producing characteristics. For example, guitar strings can have a weight attached at a certain point, changing their harmonic characteristics (Keith Rowe is one musician to have experimented with such techniques). Cage's prepared piano was one of the first such instruments.
- Unconventional playing techniques—for example, strings on a piano can be manipulated directly instead of being played the orthodox, keyboard-based way (an innovation of Henry Cowell's known as "string piano"), a dozen or more piano keys may be depressed simultaneously with the forearm to produce a tone cluster (another technique popularized by Cowell), or the tuning pegs on a guitar can be rotated while a note sounds (called a "tuner glissando").
- Incorporation of [instruments](#), tunings, [rhythms](#) or [scales](#) from non-Western musical traditions.
- Use of sound sources other than conventional musical instruments such as trash cans, telephone ringers, and doors slamming.
- Playing with deliberate disregard for the ordinary musical controls (pitch, duration, volume).
- Use of 'radical' scores which serve as non-conventional written/graphic 'instructions' to be actively interpreted by the performer(s). Cage is credited with the original development of the radical score and this influence continued through other composers/artists such as LaMonte Young, George Brecht, Yoko Ono etc. and far beyond. The most radical score of all is often said to be 'December 1952' by Earle Brown, who studied under Cage.

Cope (ibid) describes a "basic outline" from "simple to...complex":

- Antimusic
- Biomusic
- Situation and circumstance music
- Soundscapes

# Expressionism

**Expressionism** as a musical genre is notoriously difficult to exactly define. It is, however, one of the most important movements of [20th Century music](#). The central figures of musical expressionism are Arnold Schoenberg and his pupils, Anton Webern and Alban Berg, the so-called [Second Viennese School](#). The expressionist period can be associated loosely with Schoenberg's atonal period, which can be found after he finally rejected tonality, but before he began composing according to the [twelve-tone technique](#), although the extent to which clear divisions between periods can be made is debatable.

Roughly speaking, musical expressionism can be said to begin with Schoenberg's Second String Quartet (written 1907-08) in which each of the four movements gets progressively less tonal. The third movement is arguable atonal and the introduction to the finale is very chromatic, arguably has no tonal centre, and features a soprano singing "Ich fühle luft von anderem planeten" ("I feel the air of another planet"), taken from a poet by Stefan George. This may be representative of Schoenberg entering the 'new world' of atonality.

In 1909, Schoenberg composed the one act 'monodrama' *Erwartung*. This is a thirty minute, highly expressionist work in which atonal music accompanies a musical drama centred around a nameless woman. Having stumbled through a disturbing forest, trying to find her lover, she reaches open countryside. She stumbles across the corpse of her lover near the house of another woman, and from that point on the drama is purely psychological: the woman denies what she sees and then worries that it was she who killed him.

The plot is entirely played out from the subjective point of view of the woman, the audience is never able to get an objective viewpoint. Furthermore, the emotional distress of the woman is reflected in the music; this might be compared to the aesthetic of Edvard Munch's *The Scream*, in which the surrounding landscape is affected by the scream of the protagonist. This inter-disciplinary comparison is representative of the inter-disciplinary nature of expressionism; it is a genre that is found in literature and in painting. The plot to *Erwartung* has some grounding in reality in the true story of the lunatic Anna O. (real name Bertha Pappenheim). The [libretto](#) was written by her sister, Marie: an expression of her own anguish perhaps? These three features (subjectivity, the aesthetic of the 'scream', and an expression of real life hardship, are all characteristic features of other musical expressionist works.

In 1909, Schoenberg completed the Five Orchestral Pieces. These were constructed freely, based upon the subconscious will, unmediated by the conscious, anticipating the main shared ideal of the composer's relationship with the painter Wassily Kandinsky. As such, the works attempt to avoid a recognisable form, although the extent to which they achieve this is debatable.

Between 1908-1913, Schoenberg was also working on a musical drama, *Die Glückliche Hand*. The music is again atonal. The plot begins with an unnamed man, cowered in the centre of the stage with a beast upon his back. The man's wife has left him for another man; he is in anguish. She attempts to return to him, but in his pain he does not see her. Then, to prove himself, the man goes to a forge, and in a strangely Wagnerian scene (although not musically), forges a masterpiece, even with the other blacksmiths showing aggression towards him. The woman returns, and the man implores her to stay with him, but she kicks a

rock upon him, and the final image of the act is of the man once again covered with the beast upon his back.

This plot is highly symbolic, written as it was by Schoenberg himself, at around the time when his wife had left him for a short while for the painter Richard Gerstl. Though by the time Schoenberg began the work, she had returned, their relationship was far from easy. The central forging scene is seen as representative of Schoenberg's disappointment at the negative popular reaction to his works. His desire was to create a masterpiece, as the protagonist does. Once again, Schoenberg is expressing his real life difficulties.

At around 1911, the painter Wassily Kandinsky wrote a letter to Schoenberg, which initiated a long lasting friendship and working relationship. The two artists shared a similar viewpoint, that art should express the subconscious (the 'inner necessity') unfettered by the conscious. Kandinsky's *Concerning The Spiritual In Art* (1914) expounds this view. The two exchanged their own paintings with each other, and Schoenberg contributed articles to Kandinsky's publication *Der Blaue Reiter*. This inter-disciplinary relationship is perhaps the most important relationship in musical expressionism, other than that between the members of the [Second Viennese School](#).

The inter-disciplinary nature of expressionism found an outlet in Schoenberg's paintings, encouraged by Kandinsky. An example is the self portrait *Red Gaze* (see ), in which the red eyes are the window to Schoenberg's subconscious.

Webern's music was close in style to Schoenberg's expressionism for only a short while, c. 1909-13. His *Five Pieces for Orchestra*, Op. 10 (1911-13) are an example of his expressionist output, and might be compared to Schoenberg's *Five Orchestral Pieces*, Op. 16, composed 1909.

Berg's contribution includes his Op. 1 Piano Sonata, and the *Four Songs* of Op. 2. His major contribution to the genre, however, is the opera *Wozzeck*, composed between 1914-25, a very late addition to the genre. The opera is highly expressionist in subject material in that it expresses mental anguish and suffering and is not objective, presented, as it is, largely from *Wozzeck's* point of view, but it presents this expressionism within a cleverly constructed form. The opera is divided into three acts, the first of which serves as an exposition of characters. The second develops the plot, while the third is a series of musical variations (upon a [rhythm](#), or a [key](#) for example). Berg unashamedly uses [sonata form](#) in one scene in the second act, describing himself how the first subject represents Marie (*Wozzeck's* mistress), while the second subject coincides with the entry of *Wozzeck* himself. This heightens the immediacy and intelligibility of the plot, but is somewhat contradictory with the ideals of Schoenberg's expressionism, which seeks to express musically the subconscious unmediated by the conscious. While *Wozzeck* helped to popularise the genre, it did so at the expense of the ideals.

Indeed, by the time *Wozzeck* was performed in 1925, Schoenberg had introduced his [twelve-tone technique](#) to his pupils, representing the end of his expressionist period (in 1923).

As such, musical expressionism can be said to be chiefly centred upon the ideas and work of Arnold Schoenberg (1907-1923), although Berg and Webern did also contribute significantly to the genre. It was a significant, if not altogether popular style, and some of its influences can be seen in Béla Bartók's opera *Bluebeard's Castle* (1911), with its emphasis on psychological drama represented in music.

Category: [20th century classical music](#)

## Extended play

An **extended play** or **EP**, is typically the name given to vinyl records or CDs which are too long to be called [singles](#) but too short to qualify as [albums](#). Usually, an album has eight or more tracks (anywhere between 25-80 minutes), a single has one to three (5-15 minutes), and an EP four to eight (or around 15-30 minutes). Some artists, especially in the days of vinyl, have released full-length albums that could fit the definition of a modern-day EP (Yes' *Close to the Edge* is nearly 39 minutes long; Prince's *Dirty Mind* is seconds short of a full half hour.) Conversely, there are EPs that are long enough to be albums (Marilyn Manson's *Smells Like Children* for example, which is 54 minutes long; Estradasphere's *The Silent Elk of Yesterday* clocks in at 74 minutes, 54 seconds).

There are also some some EPs which are even shorter than the standard single. It has become customary in recent years for new bands to release their first release nominally as an 'EP' to give it more grand connotations than a single. By giving the release a unique name (as opposed to it being named after the lead track on the CD) the band can garner more attention for the other tracks on the CD. Using the example of Arctic Monkeys, by calling their first release 'Five Minutes With Arctic Monkeys' rather than 'Fake Tales of San Francisco' (the first track on the CD) they also put the second track "From The Ritz to the Rubble" in the limelight. Thus, 'Five Minutes With Arctic Monkeys' is more akin to a double-A side than a standard EP. Subsequently, similar releases by other new bands could be described as 'triple-A sides' or even 'quadruple-A sides'.

A [remix](#) single is not considered an EP unless it also has other songs on it (an EP/single hybrid). The name "extended play" has become something of a misnomer, for though it originally was used for singles that were extended beyond the standard length, it is now more often synonymous with an album that is shorter than usual; indeed, EPs are sometimes referred to as "**mini-albums**" (see below). For this reason, among others, they are referred to as "EPs", the full name being used much more rarely.

EPs were released in various sizes in different eras. In the 1950s and 1960s, EPs were typically 45 RPM recordings on 7" (18cm) disks, with two songs on each side. By coincidence, the format gained wide popularity with the coming of Elvis Presley, and it is sometimes erroneously stated that the term "EP" derived from his initials. Nevertheless, he practically ruled the Billboard EP charts, hitting the top 10 sixteen different times, six of them going to number 1, the latter staying at the top for 86 weeks. Through his EPs, Presley earned 6 Gold, 10 Platinum, of which 2 were Multi-Platinum RIAA certifications, representing sales in excess of 16.5 million units, the most ever, by any recording artist, whether solo, or group.

In 1967, The Beatles released a double-EP containing all the songs from their TV film *Magical Mystery Tour*. In the 1970s and 1980s there was less standardization, and EPs were made on 7" (18cm), 10", or 12" (30cm) discs running either 33S or 45 RPM. Some novelty EPs used odd shapes and colours, and a few were picture discs.

Alice in Chains is the first and only band to ever have an EP reach #1 on Billboard album chart. The EP, *Jar of Flies* was released January 25th of 1994.

## Defining "EP"

The term **EP** is also sometimes applied to compact discs with short playing times. However, since a CD can carry any amount of material up to around 80 minutes, the distinction between a CD EP and a short CD LP is somewhat arbitrary and is based on artistic and marketing factors. For example, EPs are usually released as a promo or as a method for an artist to release a collection of songs unfit for an album. Some artists prefer to use the term "**mini-album**" instead of "EP", bringing a stronger significance to the work instead of it being counted as a mere add-on to an artist's discography. Today, an artist will often make and record a batch of songs, all together, and then set some aside for an upcoming album, and the rest for the EP. In this way, an EP is a preview of the upcoming album, which is typically released 1-2 months after the EP.

Music fans have been divisive on whether, for example, a five-track release of 60 minutes would be considered an EP or an album; this choice is left for the artist to determine themselves. The Mars Volta ran into problems with their five-track album *Frances the Mute* before its release; the final two tracks, "Miranda, That Ghost Just Isn't Holy Anymore" and "Cassandra Gemini", were divided into nine semi-arbitrary sections so the band would be paid an album's wages rather than an EP's.[1] Fans of doom metal or experimental music such as Opeth and Current 93 are very familiar with albums containing a very low track count; indeed, Opeth's eight albums all contain single-digit track counts. Dream Theater often has few songs on their albums, such as *Six Degrees of Inner Turbulence* or *Train of Thought*, yet almost every song is in the double digits for play time. Meshuggah released a single track 22 minute EP, "I", comprised of a set of sections that could easily be categorised as individual tracks or or simply different parts of a very complex song. A more famous example is that of Pink Floyd's albums *Animals* and *Wish You Were Here*; both are clearly albums, but each have only five tracks (two of the tracks on *Animals* barely add up to three minutes, while the remaining three each well exceed ten minutes).

As fans of classical music can point out, distinctions based on track count does not always lead to a clear cut distinction. Beethoven's 9th Symphony could be split into only four tracks, yet it lasts over 71 minutes, depending on the tempo.

## The 7" EP in punk rock

The first recordings released by many [punk rock](#) bands were released in 7" EP format, mainly because the short song nature of the [genre](#) that resulted made it difficult to create sufficient material to fill an LP. Many such bands also were unsigned, or signed to a minor record label that did not have the funds to release a full length album, particularly by newly formed bands. As many record stores would not sell demo tapes, the 7" EP became a standard release for punk rock bands, who could sell them nationwide at a cheap price, and thus be heard beyond the areas where they performed. These records would vary in length, having anywhere from 2 to as many as 10 or more songs (4 being somewhat of a standard), and recorded at 33 RPM as often as 45 (outside of punk rock many people refer to any 7" record as a 45, as it has been the standard speed for such records). Some of these recordings would qualify as [singles](#), although this term was sometimes eschewed as being a mainstream design for determining commercial airplay, which did not apply to the vast majority of such bands. The term "single" also had a way of being somewhat dismissive of any tracks other than the primary one, delegating them as b-sides, when many bands, having a 7" record as their most significant release, would put all their best songs on the recording. Using the term EP in such cases would be considered technically incorrect, as they were not "extended", and the term "7 inch" became a standard. For bands that went on to achieve commercial success, it was often customary for the original EP tracks to be released later on full-length albums, or to be somehow re-issued in another format.

## **Split 7" EP**

The split 7" EP has also been a widespread feature in the genre, in which two bands would release such a record together, each performing on one side. This was a way to cut costs, particularly for self-released EPs, and was often used as a way for a more established band to help promote a promising newer act. Alternately, two bands with friendly relations with each other would release split EPs together. In some countries, split EPs are also used by major record labels to promote two new albums by wholly different artists, usually in the form of radio promos.

- Gramophone record
- [List of EPs](#)
- Concept EP

## Extended technique

**Extended technique** is a term used in [music](#) to describe unconventional, unorthodox or "improper" techniques of singing, or of playing [musical instruments](#).

## Examples include

added electronics or MIDI control  
unusual bowing technique: double stops and multiple stops, sul ponticello, sul tasto, Col legno  
breath technique or articulation: multiphonics, tonguing or flutter tonguing, continuous breathing or circular breathing, trumpet half-valve playing, humming while blowing, double buzz, blowing a disengaged mouthpiece or reed, unusual mutes  
Sprechstimme (speech-singing)  
ululation  
prepared piano and prepared guitar  
string piano  
unusual harmonics, including multiphonics  
glissandi, tuner glissando  
string microtones (vertical and linear)  
exaggerated tremolo  
exaggerated brass head-shakes  
activating keys or valves without blowing  
tapping or rubbing the soundboard of stringed instruments  
alternate fingerings  
altered tunings (scordatura)  
tapping  
combination of a mouthpiece of one instrument with the main body of another. (Alto saxophone mouthpiece combined with a standard trombone is a particularly successful permutation.)  
turning the mouthpiece of a woodwind instrument upside-down and playing as normal.

## Well known performers and composers who use a notable amount of extended techniques include

composer Henry Cowell  
composer John Cage  
composer Sofia Gubaidulina  
composer Helmut Lachenmann  
vocalist Joan La Barbara  
vocalist Shelley Hirsch  
vocalist and composer Meredith Monk  
vocalist and composer Maja Ratkje  
composer Krzysztof Penderecki  
composer and multireedist Joseph Celli  
pianist and composer David Tudor in his own work and in the prepared piano techniques of Cage and the New York School  
cellist and improviser Frances-Marie Uitti, two bows and curved bows  
violinist, violist and improviser Ernesto Rodrigues, curved bow  
flautist Ian Anderson  
composer Robert Erickson  
trombonist Stuart Dempster  
bassist Bertram Turetzky  
composer Ben Gaunt  
rock guitarist Tom Morello  
rock guitarist Eddie Van Halen  
rock guitarist Jimi Hendrix  
guitarist Derek Bailey  
guitarist Fred Frith  
classical guitarist Štěpán Rak  
guitarist Enver Izmailov  
jazz saxophonist Rahsaan Roland Kirk  
bassist Michael Manring  
guitarist Kenneth Johnston with Curable Interns  
guitars, basses, synths, drums, vocals, tape loops Ninety Years Without Slumber

# Extreme music

**Extreme music** is a term used to describe a variety of musical styles including subgenres of metal, [hardcore](#), [industrial](#) and [electronic music](#) and also some [freeform jazz](#).

## Definition

Extreme music is categorised as music that contains one or more elements that are abhorrent to the average listener (in some cases leading to debates as to whether certain artists can even be described as music). These may include: unusual tempos (very fast or very slow), unusual quantities of distortion or white noise, excessive volume, highly obscene, violent or nonsensical lyrics (often in combination with an unusual vocal style, such as screams, barks, growls or heavy [glitch](#) distortion), dissonant or atonal scales and unusual, often jazz-based time signatures, very rapid and jarring changes of tempo or even genre, highly unusual song structures and lengths etc., often in combination with each other.

In most peoples definitions, any sort of overt popular exposure (ie regular radio-play on commercial channels, appearance on MTV) will negate a genre or styles status as extreme, that term necessarily describing something that is beyond the scope of the current mainstream. An example of what was once deemed (or would have been deemed) extreme style that is no longer considered so is [thrash metal](#), a stepped up version of which forms the foundation for much modern [death metal](#), a style that is still, by and large, considered extreme.

## 'Common' extreme music styles

- Avant-garde: Whilst not all Avant-Garde artists fall under the 'extreme music' blanket, many do, especially with the extension of the genre to include various post-black metal artists such as Sigh, Blut Aus Nord, ...and Oceans etc. Modern Avant-Garde is categorised mainly by either the jarring or subtle juxtaposition of often dissimilar genres. These can often include other genres of extreme music.
- [Breakcore](#): Breakcore is a loosely defined electronic music style which mixes together elements of [jungle/drum & bass](#), [hardcore techno](#), [glitch](#) and [industrial music](#).
- Drone doom: Drone doom is the slowest and most minimalistic variety of doom metal, usually built around heavily downtuned [bass guitar](#). Riffs, of which there are few, are typically simple and extremely slow, occasionally lasting over a minute. As such, most drone doom songs last anywhere from 10 to 30 minutes; a few songs last more than an hour and make up an entire album. Adding to its minimalistic nature, drone doom typically lacks vocals or even drums, although these elements are not unheard of. Such Bands include Sunn 0))) and Earth.
- Extreme metal: Extreme metal covers multiple subgenres, such as [black metal](#), [death metal](#), [sludge metal](#) and the many sub-subgenres beneath them. Most extreme metal is categorised by extremes of tempo, often combined with heavy guitar distortion and guttural, sometimes indecipherable vocals. Guitar work can either be very simple or highly technical, with some bands (such as DragonForce) being acclaimed as 'extreme' simply through pure speed and virtuosity. Watered down elements of extreme metal have filtered into the mainstream in the form of the distorted guitars and vocals used by some [nu metal](#) acts, and debate runs high in the underground metal community as to whether certain bands are or are not still extreme, with those that are no longer thought of as extreme often being accused of 'selling out'.
- [Grindcore](#): Grindcore fuses heavily speeded up [hardcore punk](#) with varying amounts of influence from other genres such as extreme metal and jazz to create a very fast and violent form of music. Lyrics are sometimes delivered in a style that is totally indecipherable, being little more than a series of grunts or squeals, that can only be understood with the aid of a lyrics sheet. Songs are often very short, with tracks under a minute in length not uncommon. Napalm Death is the most well-known band within this genre and is often credited as its originator, but this distinction may fall to bands like Repulsion and DRI. The most critically acclaimed on the other hand are probably art-grind proponents Pig Destroyer, though genre elitists debate on whether they fall under grindcore's umbrella.
- [Mathcore](#)/Jazzcore: These closely related styles are a fusion of hardcore punk and post-hardcore with free-form jazz. The genre is categorised by its aggressive style and screamed vocals coupled with highly technical jazz instrumentation which shifts tempo and time-signature in bizarre and often unexpected ways. Lyrics often make use of extended, overly subtle poetic

allegories and surreal imagery that are often accused of being overly pretentious. This style has recently received a lot of critical attention due to the relative popularity of Dillinger Escape Plan.

- **Noise**: related to experimental [industrial](#) music and [drone](#), Noise music is a mainly electronic form that buries rhythms and melodies under shifting static and white noise, often deliberately using low-quality recordings or very high distortion settings to create a very distorted and often grating sound, often with little reference to conventions such as rhythm. Some noise and drone artists have received much praise from critics for their original and often subtle musical experimentation, but very few bands have any sort of widespread fanbase, with perhaps Merzbow being a minor exception.
- **Powerviolence**: Strated in the late 80's/early 90's. Catorgrized by extermly fast tempos mixed extereemly slow tempos. Pionered by bands like Neanderthal, Infest, Crossed Out, Spazz, and Man Is The Bastard.
- **Speedcore**: Speedcore is a subgenre of 1990s [hardcore techno](#) music which extols massively high bpm counts, normally taken to mean anything over 300 bpm (five beats per second). As with [Grindcore](#), tracks are often very short.

## Seminal extreme artists

These are some bands which are commonly agreed to have had some significant effect on the molding or shaping of what we now call extreme music. Many of these bands have since been left behind by what would commonly be called 'extreme' music:

- Bathory: First three albums were crucial in the creation of the [lo-fi](#), often very minimalist form of metal known as [black metal](#). Later progressed to become key in the development of [Viking](#) and [folk metal](#).
- The Berzerker: The first band to attempt mixing extreme metal with [speedcore](#).
- Carcass: Created the Gore subgenre of [death metal](#). Directly inspired countless other groups such as Cattle Decapitation and The County Medical Examiners.
- Celtic Frost: Introduced the avant-garde to heavy metal.
- Death: Normally credited with forging [death metal](#) from [thrash](#), though some dispute that this distinction actually belongs to Possessed. Death certainly helped to introduce jazz-like levels of virtuosity into the genre.
- Knut: Widely forgotten, but highly influential in the formation of the genre known as [Mathcore](#)
- Merzbow: One of the most innovative and influential, and certainly most well known, Noise musicians.
- Napalm Death: Creators the grindcore genre and fused heavy metal and hardcore punk into a more extreme style of music.
- Suffocation: One of the first bands to experiment with death metal to create more complex songs.
- Throbbing Gristle: Founders of Industrial Records and coined the term "[industrial music](#)".
- Venom: At the time of its release Black Metal was one of the most extreme records ever seen, and gave a name to a genre, as well as direction to the next twenty years of European extreme metal.
- Venetian Snares: Produces experimental IDM, breakcore and glitchcore in non-4/4 time signatures (mostly in 7/4).

# Fake music

**Fake music** is a type of condensed [musical notation](#) which can be easier to sightread than conventional sheet music. It is used predominantly but not exclusively by [jazz](#) musicians.

In a [sheet](#) of fake music (often known as a **leadsheet** or **chart**) generally only one staff is used and only the [melody](#) line is fully notated. (A pianist reading from a leadsheet must refer to the [chord](#) symbols printed above the staff to construct a left-hand sequence and provide [harmonic](#) accompaniment). The chord symbols also provide a structure for an ensemble to improvise upon. In addition to chord symbols, a leadsheet may contain additional symbols to indicate [rhythmic](#) devices (known as *hits* or *kicks*) that an ensemble might be required to play in unison.

Collections of fake music are known as fakebooks, the most famous of which is called The Real Book.

Categories: [Musical notation](#) | [Jazz](#)

# Fandango

**Fandangos** is a form of [flamenco music](#) style, probably derived from the jota. The fandangos form probably has more derivations than any other in flamenco.

The *fandangos grandes* (big fandangos) are normally danced by couples, which start out slowly with gradually increasing tempo. This is the form from which many others are derived.

The *fandanguillos* (little fandangos) are livelier more festive derivations of fandangos. Some regions of Spain have developed their own style of fandangos, such as Huelva (*fandangos de Huelva*) and Málaga (*fandangos de Málaga*, or Verdiales).

The rhythm is essentially the same as for [bulerias](#) and soleares.

# Fanfare

A **fanfare** is a short piece of [music](#) played by [trumpets](#) and other [brass instruments](#), frequently accompanied by [percussion](#), usually for ceremonial purposes. The term is also used symbolically, for instance of occasions for which there is much publicity, even when no music is involved.

A **fanfare** is also a typical Dutch and Belgian orchestra, with trumpets, trombones, flugelhorns, French horns/saxhorns, tubas, saxophones and percussion.

Fanfares originated in the Middle Ages; although popular depictions of ancient Rome frequently include fanfares, the evidence is slight. In 18th century France the fanfare was a movement with energy and repetition of notes, and fanfares of the modern description date from the 19th century, when they were composed for British coronations (such as Hubert Parry's I was glad for Edward VII) and other important occasions.

Some [composers](#) have used the style as a theme:

Fanfare for the Common Man, Aaron Copland

Fanfare for a New Theatre, Igor Stravinsky

Fanfare for St Edmundsbury, Benjamin Britten

20th Century Fox Fanfare, Alfred Newman 1954

# Farruca

A form of [Flamenco](#) music, probably originating in the Galicia region of north-western Spain. A light, fun, form typical of cante chico traditionally danced only by men, is seldom sung.

The Farruca is commonly played in the key of A minor, with each falseta being 2 measures of 4/4 time with emphasis on the 1st, 3rd, 5th, and 7th beats: **[1]** 2

**[3]** 4 **[5]** 6 **[7]** 8

Categories: [Flamenco styles](#)

## Fashioncore

**Fashioncore** is a pejorative term used for [bands/musicians](#) viewed as non-substantial or derided [emo](#), [hardcore](#) or, more frequently, Emotional Metalcore musicians and their fans. As is usually the case with condescension in subcultures, it is often used by veterans of a particular scene, in this case, the hardcore/metalcore one.

# Festival seating

**Festival seating**, also known as **general seating** or **stadium seating**, is a method of seating at concerts and other performances in which the best seats are available on a first-come, first-served basis.

Many music acts prefer festival seating because it allows the most enthusiastic fans to get near the stage and generate excitement for the rest of the crowd. Some performers and bands insist on a festival seating area near the stage.

On December 3, 1979, the Riverfront Coliseum (now called the U.S. Bank Arena) in Cincinnati, Ohio, was the site of one of the worst rock concert tragedies in United States history. Eleven fans were killed and several dozen others injured in the rush for seating at the opening of a sold-out concert by The Who. The concert was using "festival seating." When the crowds waiting outside heard the band performing a soundcheck, they thought the concert was beginning and tried to rush into the still-closed doors, trampling those at the front of the crowd.

The tragedy was blamed on poor crowd control, mainly the failure of arena management to open enough doors to deal with the crowd outside. As a result, concert venues across North America switched to assigned seating or changed their rules about festival seating. Cincinnati immediately outlawed festival seating at concerts, although it overturned the ban on August 4, 2004, since the ban was making it difficult for Cincinnati to book concerts. (In 2002, the city had made a one-time exception to the ban, allowing festival seating for a Bruce Springsteen concert; no problems were experienced.) Cincinnati was the only city in the U.S. to outlaw festival seating altogether.

## Field holler

**Field Hollers** as well as work songs were African American styles of music from before the Civil War, this style of music is close related to [Spirituals](#) in the sense that it expressed religious feelings and included subtle hints about ways of escaping slavery, among other things. Slaves in New Orleans had a field area called Congo Square in which they were allowed time on Sundays to dance and sing more freely than they could on the plantations.

## Fife and drum blues

**Fife and Drum blues** is a rural derivation of traditional [country blues](#). It is performed typically with one lead fife player often also the [band](#) leader and vocalist, and a troop of [drummers](#). The drum troop is loosely structured unlike [drum corps](#) and may have any number of snare, tom and bass drum players. Fife and drum performances were family affairs often held at reunions and big picnics. It is suggested by most texts that it has roots not in the American Revolutionary War, but actually in Africa; the use of fife is merely a replacement for instruments the slaves had used in Africa.

Fifes were carved from cane that grew locally. Drums were often hand-made, and equally often just percussive objects. The vocals seem to derive from two main styles:

1. Traditional call and response of Black Spirituals
2. Short repetitive [lyric](#)

The genre originates in very rural areas of the farming South and today persists in a stretch of sparsely populated Southern states stretching from northwest Georgia to an area south of Memphis. Notable performers are Napoleon Strickland, Dan Emmett, and Otha Turner.

# Fight song

A **fight song** is a primarily sports term, referring to a [song](#) associated with a team. In both professional and amateur sports, fight songs are a popular way for fans to cheer for their team. Although the term "fight song" is primarily an American term, the use of fight songs is commonplace around the world, and may be referred to as **team anthems**, **himnos equipos**, or **team songs** in other countries, such as Australia, Mexico and New Zealand. Fight songs differ from [stadium anthems](#), used for similar purposes, in that they are usually written specifically for the purposes of the team, whereas stadium anthems are not. There is a song by Marilyn Manson entitled "The Fight Song" off of the album Holy Wood

In the United States, fight songs are especially popular for American football, especially at the collegiate and high school level, but several NFL teams maintain traditional songs usually several decades old. Notable fight songs include Skol, Vikings, Bear Down, Chicago Bears, Go! You Packers! Go!, Fly, Eagles Fly and perhaps one of the oldest and most famous, Hail to the Redskins. "HIMNO TECOS" is the fight song of The First Division futbol team UAG Tecos of the private university in Guadalajara.

Hundreds of colleges have fight songs, some of which are almost a century old. Fight songs are laden with history; in singing a fight song, fans feel part of a large, time-honored tradition. The following list contains some of the most established and popular in America.

# Film score

A **film score** is the background [music](#) in a film, generally specially written for the film and often used to heighten emotions provoked by the imagery on the screen or by the dialogue.

In many instances, film scores are performed by [orchestras](#), which vary in size from a small chamber [ensemble](#) to a large ensemble, often including a choir. The orchestra is either a studio orchestra, employed by the studio, or a performing orchestra such as the London Symphony Orchestra. However, TV, video games, and films with even smaller budgets, often utilize sampling technology to re-create the sound of an orchestra. This is generally much cheaper, although most film-makers try to avoid this.

Some films use [popular music](#) as the primary musical component, but an orchestral score is more often preferred. An orchestral score can be much more closely adapted to a film while popular music is based upon a strong and repetitive [rhythm](#) that is inflexible and cannot be easily adapted to a scene. Popular genres of music also tend to date quickly as styles rapidly evolve while orchestral music tends to age much more gracefully. Instead, popular music may be included for special occasions where more attention must be diverted to the music. In these cases, songs are usually not written specifically for the film (see [soundtrack](#)).

## How a film score is created

After the film has been shot (or has completed some shooting), the composer is shown an unpolished "rough cut" of the film (or of the scenes partially finished), and talks to the director about what sort of music (styles, themes, etc.) should be used — this process is called "spotting." Sometimes the director will have added "temp music": already published pieces that are similar to what the director wants. Most film composers strongly dislike temp music, as directors often become accustomed to it and push the composers to be imitators rather than creators. On certain occasions, directors have become so attached to the temp score that they decided to use it and reject the score custom-made by a composer. The most famous case of this is Stanley Kubrick's *2001: A Space Odyssey*, where Kubrick opted for existing recordings of classical works rather than the score by Alex North which eventually got Kubrick sued by composer György Ligeti.

Once a composer has the film, he/she will then work on creating the score. Some films are then re-edited to better fit the music. Instances of this include the collaborations between filmmaker Godfrey Reggio and composer Philip Glass, where over several years the score and film are edited multiple times to better suit each other. Arguably the most successful instances of these are the associations between Sergio Leone and Ennio Morricone. In the finale of *The Good, the Bad and the Ugly*, Morricone had prepared the score used before and Leone edited the scenes to match it. His other two famous films, *Once Upon a Time in the West* and *Once Upon a Time in America*, were completely edited to Morricone's score as the composer had prepared it months before the film's production. Another example is the famous "flying" scene in Steven Spielberg's *E.T. the Extra-Terrestrial*. The score, composed by long-time collaborator John Williams, proved so difficult to synchronize in this specific scene during the recording sessions that Spielberg gave Williams a blank check and asked him to record the cue without picture, freely. Spielberg then re-edited the scene later on to perfectly match the music.

When the music has been composed and orchestrated, it is then performed by the orchestra or ensemble, often with the composer conducting. The orchestra performs in front of a large screen depicting the movie, and sometimes to a series of clicks called a "click-track" that changes with meter and tempo, assisting the conductor to synchronize the music with the film.

Films often have different themes for important characters, events, ideas or objects, taking the idea from Wagner's use of leitmotif. These may be played in different variations depending on the situation they represent, scattered amongst incidental music. A famous example of this technique is John Williams' score for *Star Wars* Episodes IV-VI, and the several themes associated with characters like Darth Vader, Luke Skywalker, and Princess Leia (see *Star Wars* music for more details).

Most films have between forty and seventy-five minutes of music. However, some films have very little or no music. *Dogme 95* is one genre that has music only from within a film, such as from a radio or television (thus called "source music" because it comes from a source within the film's depiction).

## Artistic merit

The artistic merits of film music are frequently debated. Some critics value it highly, pointing to music such as that written by Erich Wolfgang Korngold, Aaron Copland, Bernard Hermann, and others. Some even consider film music to be a defining genre of classical music in the late 20th century, if only because it is the brand of classical music heard more often than any other. In some cases, film themes have become accepted into the canon of classical music. These are mostly works from already noted composers who have done scores, for instance Sergei Prokofiev's score to *Alexander Nevsky* (film) or Vaughan Williams' score to *Scott of the Antarctic*. Others see the great bulk of film music as meritless. They consider that much film music is derivative, borrowing heavily from previous works. Composers of film scores typically can produce about three or four per year. The most popular works by composers such as John Williams and Danny Elfman are still far from entering the accepted canon. Even so, major orchestras sometimes perform concerts of such music.

## Historical notes

Before the age of sound motion pictures, great effort was taken to provide suitable music for films, usually through the services of an in-house pianist or organist, and, in some case, entire orchestras. Examples of this include Victor Herbert's score in 1915 to *Fall of a Nation* (a sequel to *Birth of a Nation*) and Camille Saint-Saëns' music for *L'Assassinat du duc de Guise* in 1908 — arguably the very first in movie history. Most accompaniment at this time comprised pieces by famous composers, also including studies. These were often used to form catalogues of film music, which had different subsections broken down by 'mood' and/or genre: dark, sad, suspense, action, chase, etc. This made things much easier for the in-house pianists and orchestras to pick pieces that fitted the particular feel of a movie and its scenes.

A full film score widely regarded as the first made by a popular artist came in 1980 with the film *Flash Gordon*, by the rock group Queen. Although many of their fans consider the soundtrack (subsequently released as an album) to be a mediocre effort, the album received great critical acclaim. This had not been done before in popular film history: any featured band had films written around the music (notably The Beatles with *Yellow Submarine*, and The Who's *Tommy*).

## Notable film score composers

Please note: Films are only highlights of the composer's works, and thus impartial and not a complete listing.

Richard Addinsell: Warsaw Concerto in Dangerous Midnight (re-issued as Suicide Squadron)

David Arnold: Independence Day, Stargate, Tomorrow Never Dies, The World Is Not Enough, Die Another Day

Klaus Badelt: Poseidon, Pirates of the Caribbean: The Curse of the Black Pearl

John Barry: several James Bond films, Dances With Wolves, Zulu, Out of Africa, Born Free

Hubert Bath: Cornish Rhapsody in the 1945 production of Love Story, Hitchcock's Blackmail

Jack Beaver: Portrait of Isla in The Case of the Frightened Lady

Elmer Bernstein: The Magnificent Seven, To Kill a Mockingbird, The Great Escape

Jon Brion: Eternal Sunshine of the Spotless Mind, Magnolia, I e Huckabees, Punch-Drunk Love

Roy Budd: Get Carter, The Wild Geese

Don Davis: The Matrix, The Matrix Reloaded, The Matrix Revolutions  
John Debney

Patrick Doyle: Carlito's Way, Gosford Park, Bridget Jones' Diary, Harry Potter and the Goblet of Fire, Kenneth Branagh films such as Henry V

Randy Edelman: DragonHeart, The Last of the Mohicans, Dragon: The Bruce Lee Story

Danny Elfman: Pee-wee's Big Adventure, Beetlejuice, Batman (1989 film), The Nightmare Before Christmas, Mission: Impossible (film), Spider-Man (film)

Michael Giacchino: Mission: Impossible III, The Incredibles, Looking For Comedy In the Muslim World

Philip Glass: The Fog of War, the Qatsi trilogy (Koyaanisqatsi, Powaqatsi, Naqoyqatsi), Truman Show, Candyman, The Hours and Thin Blue Line

Elliot Goldenthal: Heat, A Time to Kill, Frida

Jerry Goldsmith: many Star Trek scores, both film and TV; The Omen, Patton, Planet of the Apes

Ron Goodwin: Where Eagles Dare, 633 Squadron, Those Magnificent Men in Their Flying Machines, Battle of Britain

Harry Gregson-Williams (occasionally with John Powell): The Rock, Armageddon, Shrek, Man on Fire, Metal Gear Solid 2: Sons of Liberty, Metal Gear Solid 3: Snake Eater, "Team America: World Police", Kingdom of Heaven, The Chronicles of Narnia: The Lion, the Witch and the Wardrobe

Bernard Herrmann: Citizen Kane, Journey to the Center of the Earth, Mysterious Island, and many Alfred Hitchcock films, most famously Psycho, Vertigo and North by Northwest

Joe Hisaishi: Nausicaä of the Valley of Wind, Castle in the Sky, Princess

Mononoke, Sonatine, Hanabi, Spirited Away  
James Horner: Titanic, Star Trek II: The Wrath of Khan, Legends of the Fall, Braveheart, Apollo 13, Aliens, A Beautiful Mind  
James Newton Howard: Batman Begins, The Fugitive, Unbreakable, Signs, King Kong  
Akira Ifukube: Godzilla (1954), Rodan (film), King Kong vs. Godzilla, Atragon, Mothra vs. Godzilla, The War of the Gargantuas, Battle in Outer Space, Destroy All Monsters, Terror of Mechagodzilla, Godzilla vs. Destoroyah  
Ilayaraja: Mouna Raagam, Idayathai Thirudathe, Dalapathi, Hey Ram, Lajja, Anjali, Sadma, Johnny, Muthalmariyadai  
Maurice Jarre: Lawrence of Arabia, Dr Zhivago  
Trevor Jones: Cliffhanger, Labyrinth, The Last of the Mohicans, Mississippi Burning, Dark City, Excalibur  
Michael Kamen: Robin Hood, Prince of Thieves, Band of Brothers (TV), X-Men, Lethal Weapon, Licence to Kill  
Bernhard Kaun: Frankenstein (1931), Return of Dr. X (1939)  
Erich Wolfgang Korngold: The Sea Hawk, The Adventures of Robin Hood  
Michel Legrand: Les parapluies de Cherbourg, The Thomas Crown Affair.  
Albert Hay Malotte: Disney animations, The Big Fisherman  
Mark Mancina: Speed, Twister, Tarzan  
Henry Mancini: Breakfast at Tiffany's and the Pink Panther movies  
Dario Marianelli: The Brothers Grimm, Pride & Prejudice, V for Vendetta  
Giorgio Moroder: Flashdance, Scarface, The Neverending Story  
Ennio Morricone: Il buono, il brutto, il cattivo, Peur sur la ville, The Untouchables, The Mission, The Thing, The Good, the Bad and the Ugly, Once Upon a Time in the West, Cinema Paradiso, Days of Heaven  
John Murphy: Lock, Stock and Two Smoking Barrels, Snatch and 28 Days Later  
Alfred Newman: Wuthering Heights, How the West Was Won, The Greatest Story Ever Told, The King and I (1956 film)  
Thomas Newman: The Shawshank Redemption, American Beauty, Road to Perdition  
Randy Newman: The Natural, Toy Story  
Jack Nitzsche: The Exorcist, One Flew Over the Cuckoo's Nest, Starman, Stand By Me  
Michael Nyman: The Piano, Gattaca  
John Ottman: X2: X-Men United, Fantastic Four, The Usual Suspects  
Basil Poledouris: Conan the Barbarian, RoboCop, Starship Troopers, The Hunt for Red October  
Popol Vuh: Several films of Werner Herzog  
Rachel Portman: The Cider House Rules, Emma  
John Powell: Face/Off, Paycheck  
Sergei Prokofiev: Alexander Nevsky, Lieutenant Kije, Ivan the Terrible  
Trevor Rabin: Con Air, Armageddon, Enemy of the State  
A.R. Rahman: Kannathil Muthamittal, Bombay, Roja, Lagaan: Once Upon a Time in India  
David Raksin: Forever Amber, The Bad and the Beautiful, Laura.  
Miranda Ravin: Exempla Healthcare Film, Sonnenalp, Jefferson Symphony Orchestra.  
Heinz Roemheld: The Black Cat, Yankee Doodle Dandy (songs by George M. Cohan), Ruby Gentry  
Nino Rota: The Godfather, Romeo and Juliet, Otto e Mezzo, The Glass

## Mountain

Miklós Rózsa: Spellbound, Quo Vadis, Ben-Hur

Camille Saint-Saëns, the first renowned classical composer to write for films

Ryuichi Sakamoto: The Last Emperor, Merry Christmas, Mr. Lawrence

Gustavo Santaolalla: The Motorcycle Diaries, Brokeback Mountain

Lalo Schifrin: Bullitt, Dirty Harry, Rush Hour, Mission: Impossible (TV), Tango

Eric Serra: GoldenEye, The Big Blue, The Fifth Element

Howard Shore: The Lord of the Rings, Philadelphia, Se7en, The Silence of the Lambs, A History of Violence

Ryan Shore: Prime, Harvard Man, Vulgar

Alan Silvestri: Back to the Future, Forrest Gump, The Mummy Returns

Max Steiner: Gone with the Wind, King Kong, Casablanca

Leith Stevens: Destination Moon, The War of the Worlds (1953), The Wild One

Dimitri Tiomkin: Giant, Rio Bravo, Gunfight at the OK Corral.

Shigeru Umebayashi: Yumeji, In the Mood for Love, House of Flying Daggers, 2046

Vangelis: Chariots of Fire, Blade Runner, 1492: Conquest of Paradise

Franz Waxman: The Bride of Frankenstein, Objective Burma, Spirit of St. Louis

John Williams: Star Wars series, Superman: The Movie, Schindler's List, Indiana Jones series, Jaws series, Hook, Harry Potter series, Jurassic Park series

Ralph Vaughan Williams: Scott of the Antarctic

Hans Zimmer: The Rock, The Lion King, Driving Miss Daisy, Gladiator, Black Hawk Down, Mission: Impossible 2, Crimson Tide, Hannibal, The Last Samurai, Matchstick Men

# Film soundtrack

A **film soundtrack** is the [music](#) that is from or inspired by a feature film. Soundtracks themselves are not limited to film. One may find soundtracks to television shows, ranging from ER to the anime Cowboy Bebop, and video games such as the Final Fantasy series.

Soundtracks can be divided by purpose and placement. As a general rule, soundtracks can be divided into the score and the songs from (or inspired by) the movie/TV show/video game.

## Origin

It is likely the film "soundtrack" came into existence about the same time as the films themselves. Early films were silent, but were released with cue sheets or scores so that individual theater houses could play music, recorded or live, at appropriate places in the film. The first reels of 1961's *West Side Story* and 2001's *Moulin Rouge!* follow the practice of the era of silent film by beginning with an orchestra playing the opening theme. With the advent of talkies in 1927, music was optically integrated into the actual film itself, and the wide world of film soundtracks was born.

## Score (background music)

*Main article [film score](#)*

The score to a film is also known as its background music. This is arguably the most common type of music heard on a film soundtrack, is music composed and placed to enhance the desired emotion of a scene, be it positive or negative. The actors on screen are talking and moving normally, that is, they are neither singing nor dancing nor interacting with the music in any way (except in cases of a spoof). A person watching the movie may not be aware that anything is playing, but might comment on the poorness or flatness of a scene should the music be removed. The background music is usually orchestrated without meaningful vocals (with the exception of some chanting), and somewhat formless, based heavily on musical peaks and troughs that highlight the scene but which otherwise may be nonsensical or even boring when played alone.

Most background music follows a general pattern of [instrumentation](#) and technique to achieve whatever ends the composer desires. Common examples of such devices used in background music include trilling [violins](#) to indicate suspense, legato [flutes](#) to convey peaceful or pastoral setting, [trumpet fanfares](#) for military or martial scenes, and [drumming](#) for tribal events.

Movies with notable soundtracks consisting mainly of background music include the Lord of the Rings movie trilogy (Howard Shore, composer), Star Wars (John Williams, composer), The Mission (Ennio Morricone, composer) and The Piano (Michael Nyman, composer).

## Themes

Closely related to a movie's background music is the theme(s) of the movie. A theme is a particular melodic or rhythmic motif that appears in the music whenever a certain event, usually the presence or entrance of a major character, occurs (see [leitmotif](#)). Themes differ from background music in that they are usually tuneful and will stand alone if removed from the context of the movie. Also unlike background music, the song may often have purposeful lyrics.

The theme is usually repeated throughout the course of the film. Sometimes, it is introduced early and manipulated with regards to tempo, key, and instrumentation to fit the particular mood. For example, an upbeat theme may be played in a minor mode if the character it is associated with suffers or dies. It may be slowed down for a romantic moment or sped up for stressful emotions. It may be placed in [counterpoint](#) with another theme to show a relationship. A theme may also be hinted at as a character develops and be finally played in full when the character reaches a peak. For example, in the Attack of the Clones, when Anakin Skywalker makes the choice to exact revenge on the people who killed his mother, the Imperial March from Star Wars is played in full for the first time that movie.

A single movie may have one or many strong themes. Often, a movie will have a primary theme played during the opening and/or closing credits that is not heard in totality anywhere else in the film. In certain cases, this song may be sung (usually by a popular singer unrelated to the rest of the film) during the credits, but instrumented when inserted into the film. This is called the title song and is discussed later. A film may have an orchestrated theme as well as a title song, composed by different people with different results. Often, one will succeed commercially while the other will fail.

The theme of a film may eventually come to symbolize a character or the film itself, to the point where the original purpose of the theme may be lost. The opening strains of *Also sprach Zarathustra* and *Blue Danube Waltz* by Richard Strauss are inextricably linked to *2001: A Space Odyssey*, though few can remember when in the film the themes were first played. Themes are usually titled for the movie they occur in, such as *The Theme from Schindler's List* or *Theme from the Magnificent Seven*, and may be distinguished as to why they occur, such as the *Love Theme from Romeo and Juliet*.

## Title song

A title song is a theme, usually sung to lyrics, and associated with a particular movie that is heard *in toto* during the credits and rarely anywhere else in the film, except in the case of musicals. Usually the title song is composed for the movie itself, but sometimes existing pieces are used, especially when a current movie is set in a recent era that possessed stereotypical music, such as [disco](#). The singer of the title theme is usually unrelated to the movie itself, with Barbra Streisand being a notable exception.

Title songs are, by and large, vague in their references to the film's particulars, focusing instead on general themes of love, loss, and betrayal. These songs often go on to be commercial successes even if the movie was forgettable, though the fate of both movie and title song are intertwined. One wonders if "My Heart Will Go On" would have become such a hit had not Titanic succeeded as well as it did. Ditto for "I Will Always Love You" and its corresponding movie *The Bodyguard*.

Occasionally, a film will have both a popular orchestrated theme and a sung theme. The James Bond films all feature the James Bond theme as well as a movie-specific title song, such as Carly Simon's *The Spy who Loved Me* (*Nobody Does it Better*).

## Musicals

Many films made in the 1940s through 1960s especially were little more than filmed [musicals](#), screen-based adaptations of popular staged plays. In the musical, important feelings, events, and conversations take place using song and dance rather than using dialogue and action. The resulting play is about half speech and half music.

There is also background music in musicals, but it is different than that of non-musicals. Since most of the action in a musical is accompanied by singing and dancing, the only parts scored with background music in the musical are dialogue and transition scenes. This music is usually composed entirely of the themes played earlier, only instead of being sung, they are orchestrated. This is called incidental music. Incidental music is non-interactive: the characters do not acknowledge it or use it.

Musicals usually have only one title song. However, that title song may mention elements of the plot and characters that the general public may not understand. As a result, a musical's most commercially successful song may not be the title 'song. Jesus Christ Superstar had a title song of the same name, but it was the piece I Don't Know How to Love Him that gained the most air play. In the case of Chess, the Act II song "One Night in Bangkok" was transformed into a 1980s hit by Murray Head, leaving the musical itself to languish in relative obscurity. The title song may or may not be sung by the actor/actress who originated the role.

Soviet cinematography traditionally relied heavily on songs with lyrics, even in non-musical films.

Modern films are rarely musicals, though recent films such as Chicago and Moulin Rouge seem to be reviving the trend. The closest Hollywood comes to producing musicals nowadays are animated films, though Bollywood still embraces the film musical as a viable form.

## Animated musicals

Most animated films produced by Disney are musicals. Indeed, almost every feature-length animated feature which is not anime is a musical, although Pixar's animated features are not musicals. Animated films share all basic characteristics with their live-action counterparts, except that the incidental music is more likely to be novel, i.e. in the tradition of non-musical film scores.

Title songs from animated musicals do sometimes go on to become commercially successful, a fact capitalized on by such singers as Elton John (The Lion King) and Céline Dion (Beauty and the Beast). The glory days of the Disney song might be considered to have come during the tenure of Alan Menken and Howard Ashman.

## **Songs *from* the movie**

Existing in a similar place, but different class, as the score are the so-called songs from the movie, which will be abbreviated SftM for now. SftM are discrete songs, almost always not composed specifically for the movie, heard during the course of the movie itself. A SftM may either be background music or semi-interactive.

An SftM used as background music functions much in the same way as an orchestrated piece would. It is added external to the movie and used to heighten the mood. The main difference is its existing as a full, independent song without being a theme (and thus played only once during the film), though a piece such as Shaft would traverse that boundary.

A semi-interactive SftM is a song playing in the context of the movie, such as the background music in a club or a tune heard on the radio of a character's car. When a semi-interactive SftM is playing, it functions as background music, so it would be rare to see a gang fight scene with a giddy SftM unless the director were going for irony.

The average movie soundtrack will contain eight or so SftM by popular artists tangentially or unrelated to the film itself. Forrest Gump's soundtrack is one of the best selling of all times and reads almost like a laundry list of popular tunes from the Baby Boomer generation.

## **Songs *inspired by* the movie**

A somewhat recent invention, songs inspired by the movie are almost always not actually played in the movie itself. Instead, as the title suggests, they are derivative of the musical, cultural, social, etc. themes of the film. This seems to be done primarily to capitalize on the success of a particular film. After the soundtrack to *The Lion King* was released to great acclaim, Disney released the follow-up album *Rhythm of the Pridelands*.

## Notable soundtracks

8 Mile (This movie has two soundtracks, the first containing award winning hit "Lose Yourself")

2001: A Space Odyssey (memorable theme music Also Sprach Zarathustra became a radio hit, rare for a classical instrumental piece)

American Graffiti (massive-selling double album of rock oldies)

Apocalypse Now (another hit, memorable use of the Ride of the Valkyries by Richard Wagner)

Black Hawk Down (by Hans Zimmer. One of his best soundtracks composed, given the short time frame he had to finish the task for the movie)

The Bodyguard (by Whitney Houston and others, bestselling of all time)

Deep Red (first album by Goblin, 1975 soundtrack to popular Dario Argento thriller)

Selmasongs (from Dancer in the Dark by Björk)

Fast Times at Ridgemont High (successful soundtrack using contemporary hits)

Flashdance (launched several hit songs, surprise hit)

Garden State (won a Grammy for Best Soundtrack in 2005 for first time director Zach Braff)

Gladiator (yet another of Hans Zimmer's best-composed soundtracks)

A Hard Day's Night (early rock and roll soundtrack by The Beatles)

The Harder They Come (very successful soundtrack and movie, launched career of Jimmy Cliff, early mainstream reggae music)

Jungle Book (first soundtrack in the modern sense, from the 1942 film scored by Miklós Rózsa)

Miami Vice (TV soundtrack that stayed at the top of the album charts for 11 weeks in 1985)

Mo' Better Blues (established Gang Starr's reputation and helped launch jazz rap)

O Brother Where Art Thou? (surprise bluegrass hit, Grammy winner)

Peter Gunn (first jazz soundtrack, theme song is still recognizable by many people today)

Reservoir Dogs (soundtrack deliberately chose the "worst" songs of the 1970s, became a cult favorite)

Saturday Night Fever (massive hit mostly by the Bee Gees, brought disco to the mainstream)

Shaft (hit by Isaac Hayes, his biggest record and Academy Award winner)

Space Jam (popular tracks by Seal, and R. Kelly)

Star Wars (hugely popular movie, and music by John Williams that became the bestselling score-only soundtrack of all time)

The Stoned Age (early teen film focused on a cult band, Blue Öyster Cult)

Superfly (A number one hit for Curtis Mayfield, pioneering socially conscious lyrics in funk and soul)

That's the Way of the World (film unsuccessful, soundtrack a huge hit)

for Earth, Wind & Fire)

Till the Clouds Roll by (soundtrack and film inspired by life of Jerome Kern, early use of the release of a soundtrack to promote a film)

Urban Cowboy (soundtrack from the movie that brought country music and the honky tonk lifestyle to many suburban cultures, and spawned many hits, credited to have been launching the boom in country music appeal in 1980)

The Lord of the Rings film trilogy (Original scores by Howard Shore who iconically evoked the sounds of Tolkien's Middle-Earth; roughly 80 different leitmotifs were composed for all three films)

## Bestselling soundtracks

The Bodyguard (1992); 17 times platinum  
Saturday Night Fever (1977); 15 times platinum  
Purple Rain (1984); 13 times platinum  
Forrest Gump (1994); 12 times platinum  
Dirty Dancing (1987); 11 times platinum  
The Lion King (1994); 10 times platinum  
(Tie) Top Gun (1986); Footloose (1984); 9 times platinum  
Grease (1978); 8 times platinum  
Waiting to Exhale (1995); 7 times platinum

## List of songs popularized by a movie

Some of these songs had been released before the movie, but had found little success only to become popular once featured in the movie. Other songs were released alongside the film or were briefly re-popularized some years after their initial peak. (This list does not include songs associated with a cinematic opera or musical.)

Most of these theme songs occur at least once during a climax during the movie, and are often played during the opening and/or closing credits; the close association between the highlights of a movie and a particular song, especially when the two are marketed together (as in a [music video](#)), means that songs can find new audiences. For example, Quentin Tarantino's use of "La La Means I Love You" and 1970s Philly soul group The Delfonics led to a renaissance in hipness for the band some fifteen years after their mainstream success ended.

- Blue Öyster Cult's "Don't Fear the Reaper" from The Stoned Age
- Elton John's "Circle of Life" from The Lion King
- Céline Dion's "My Heart Will Go On" from Titanic
- Stealers Wheel's "Stuck In The Middle" from Reservoir Dogs
- Lynyrd Skynyrd's "Tuesday's Gone" from Dazed and Confused
- The Proclaimers' "I'm Gonna Be (500 Miles)" from Benny and Joon
- Queen's "Bohemian Rhapsody" from Wayne's World
- Rolling Stones' "Time Is on My Side" from Fallen
- Simple Minds' "Don't You (Forget About Me)" from The Breakfast Club
- Whitney Houston's "I Will Always Love You" from The Bodyguard
- R. Kelly's "I Believe I Can Fly" from Space Jam
- "March of the Volunteers", theme song to the movie Sons and Daughters in a Time of Storm, which became the national anthem of the People's Republic of China
- Louis Armstrong's "What a Wonderful World" from Good Morning, Vietnam

# Filmi

**Filmi** is Indian [popular music](#) as written and performed for Indian cinema. The various Indian cinema industries produce thousands of films a year, most of which are musicals and feature elaborate song and dance numbers. There is constant work for pop music composers — or music directors, to use the Indian term. Movie soundtracks are released as tapes and CDs, before the movie is released. They dominate pop music.

This may be partly due to widespread music piracy in India. Songs released only on CD may be popular, but they will not necessarily make any money for the artists, thanks to illegal copying. A composer makes more money as a music director, due to up-front payments by film-makers, and also gets free publicity. This is also true of singers and musicians. Filmi thus attracts some of the most talented Indian artistes.

Why musicals? Some say that the long tradition of Indian temple spectacles, sacred dramas danced and sung, still shapes Indian tastes. Others point to the linguistic diversity of India. Many languages are spoken and there are a number of regional cinemas. Only films that transcend language barriers have any hope of being all-India hits. Music, not being tied to any one language, expresses the feelings of the characters even to people who can't follow the dialogue.

Indian cinema does not require that its performers act, dance, and sing — they must merely act and dance. They only pretend to sing, lip-synching songs sung by professional playback singers. Playback singers need not be beautiful or photogenic; they need only be supremely good singers. They tend to sing for many films, have long careers and be adored by their fans.

(One might usefully contrast the forthrightness of Indian practice with Hollywood's assumption that musical stars should be actors, dancers, *and* singers. When Hollywood does use playback singers, the practice is buried in the end-of-film credits and ignored as much as possible by the publicists. Perhaps one reason that Hollywood does not produce as many musicals as India is that it is harder to find performers with the multiple talents required.)

Filmi is often said to have begun in 1931, with the release of Ardeshir M. Irani's *Alam Ara* and its popular soundtrack. In the earliest years of the Indian cinema, filmi was generally Indian (classical and folk) in inspiration, with some Western elements. Over the years, the Western elements have increased, but without completely destroying the Indian flavour.

## **Music directors**

Naushad and Khaiyyam were noteworthy music directors of the 1940s and 1950s, writing scores redolent of the elegance of Northern India's Moghul and Rajput courts. As Indian cinema segued into the go-go years of the 1960s and 1970s, pop artists like R.D. Burman and duos like Nadeem-Shravan and Jatin-Lalit gave filmi a stronger western flavor. Ilayaraaja became phenomenally successful during the 1980s especially in southern India. In the 1990s and 2000s, the dominant force in filmi has been the phenomenally successful A. R. Rahman, who vaulted from fame in the Tamil film industry to success in Bollywood and finally to hit musicals in London and New York.

## Playback singers

According to an interview that Lata Mangeshkar gave the author Nasreen Munni Kabir (Bollywood, Channel 4 Books, 2001), the Indian film industry at first refused to credit playback singers. Like the Hollywood producers, Indian film producers tried to pretend that the actors and actresses were singing in their own voices. After several of her songs became hits on records and radio, Lata demanded that her name appear in the film credits too. This was first done in 1949, in the film Barsaat. Producers and directors soon found that Lata's name helped sell films. Lata and other playback singers became pop idols.

Lata had a high, pure, piercing soprano voice that survived all the indignities of bad sound reproduction and background generator noise from traveling movie shows (long the only source of entertainment for many Indian villages). She, her sister Asha Bhosle and Geeta Dutt dominated female playback singing for decades. As Lata's voice has aged, she is singing less and less. Other singers have gained fame, like Alka Yagnik and Kavita Krishnamurthy.

Well-known male playback singers include Mohammed Rafi, Mukesh, Kishore Kumar, Talat Mahmood, and Manna Dey. Younger singers include Udit Narayan, Kumar Sanu, Abhijeet, and Sonu Nigam.

## **Lyricists**

In the 1950s and 60s, lyricists like Shailendra, Hasrat Jaipuri, Sahir Ludhianvi and Raja Mehendi Ali Khan wrote lyrics still fondly remembered today. Lyrics tended towards the literary and drew heavily on contemporary Urdu and Hindi poetry. The pop lyrics of later years are deplored by filmi traditionalists.

## Instrumentalists

[Instruments](#) played as background to the vocals include:

Bansuri  
Daf  
Dholak  
Harmonium  
Jal Tarang  
Khol  
Manjira  
Rabab  
Santoor  
Sarangi  
Sarod  
Shehnai  
Sitar  
Tabla  
Tabla tarang  
Tanpura  
Violin.

Unlike music directors and playback singers, instrumentalists do not get film credits and are less likely to use movies as a springboard to popular success.

## Accusations of plagiarism

Because popular music directors score a great many films over the course of a year, there is always a tendency to cut corners and speed production by plagiarizing. The usual target is a catchy Western tune with proven audience appeal. For example, one production number in Dil (1990) is based on Carl Perkins' Blue Suede Shoes, sung with Hindi lyrics. Of late the Indian film industry has been gaining visibility outside India and now there is real legal risk in plagiarism. Some producers have actually paid for the musical rights to popular Western songs. The Indian audience is also much better acquainted with Western music and films these days and more apt to notice the imitations. It would be hard to measure musical plagiarism with any exactness, but it is probably diminishing. Accusations of plagiarism in filmi music are discussed at this site, .

## **Wider success for filmi**

Filmi is also making converts and exerting influence beyond the usual Desi audiences. Western music stores carry Bollywood compilations. Baz Luhrman showcases the song "Chamma Chamma" from China Gate in his 2002 movie Moulin Rouge. A. R. Rahman, one of the most popular current music directors, now has a musical, Bombay Dreams, playing in London and New York.

Non-Indians interested in sampling filmi can listen to several Internet radio stations. If local music stores don't carry filmi, CDs can be purchased online or at local Indian grocery/spice/video stores. Some CDs are simply movie soundtracks; others are compilations of favorite songs by popular music directors or playback singers. Consult those Wikipedia articles for lists of popular artists.

# Flamenco

## [New Flamenco](#)

**Flamenco** is a [song](#), [music](#) and dance style which is strongly influenced by the Gitanos, but which has its deeper roots in Moorish and Jewish musical traditions.

Flamenco culture originated in Andalusia (Spain), but has since become one of the icons of Spanish music and even Spanish culture in general.

According to Blas Infante in his book "Orígenes de lo flamenco y secreto del cante jondo", etymologically, the word Flamenco comes from Hispano-Arabic fellah mengu, "Peasant without Land". This hypothesis has no basis in historical documents, but Infante connects it to the huge amount of Ethnic Andalusians who decided to stay and mix with the Gypsy newcomers instead of abandoning their lands because of their religious beliefs (Moriscos). After the Castilian conquest of Andalusia, the Reconquista, most of the land was expropriated and given to warlords and mercenaries who had helped the Castilian kings enterprise against Al-Andalus. When the Castilians later ordered the expulsion or forceful conversion of the Andalusian Moriscos, many of them took refuge among the Gypsies, becoming fellahmengu in order to avoid death, persecution, or forced deportation. Posing as Gypsies they managed to return to their cultural practices and ceremonies including the singing.

Other hypotheses concerning the term's etymology include connections with Flanders, the flameante (arduous) execution by the performers, or the flamingos.

Originally, flamenco consisted of unaccompanied [singing](#) (*cante*). Later the songs were [accompanied](#) by [flamenco guitar](#) (*toque*), rhythmic hand clapping (palmas), rhythmic feet stomping (zapateado) and [dance](#) (*baile*). The toque and baile are also often found without the cante, although the song remains at the heart of the flamenco tradition. More recently other instruments like the cajón (a wooden box used as a percussion instrument) and [castanets](#) (*castañuelas*) have been introduced.

"Nuevo Flamenco", or [New Flamenco](#), is a recent variant of Flamenco which has been influenced by modern [musical genres](#), like [rumba](#), salsa, [pop](#), [rock](#) and [jazz](#).

# Flamenco history

Many of the details of the development of flamenco are lost in Spanish history. There are several reasons for this lack of historical evidence:

- The turbulent times of the people involved in flamenco culture. The Moors, the Gitanos and the Jews were all persecuted and expelled by the Spanish Inquisition at various points in time as part of the Reconquista.
- The Gitanos mainly had an oral culture. Their [folk songs](#) were passed on to new generations by repeated performances in their social community.
- Flamenco was for a long time not really considered an art form worth writing about according to Spaniards. Flamenco music has also slipped in and out of fashion several times during its existence.

Granada, the last Muslim stronghold, fell in 1492 when the armies of the Catholic king Ferdinand II of Aragon and queen Isabella of Castile reconquered this city after about 800 years of mainly Moorish rule. The Treaty of Granada was created to have a formal base for upholding religious tolerance, and this paved the way for the Moors to surrender peacefully. For a few years there was a tense calm in and around Granada, however the inquisition did not like the religious tolerance towards Muslims and Jews. Therefore the inquisition used religious arguments to convince Ferdinand and Isabella to break the treaty and force the Moors and Jews to become Christians or leave Spain for good. In 1499, about 50,000 Moors were coerced into taking part in a mass Baptism. During the uprising that followed, people who refused the choices of Baptism or deportation to Africa, were systematically eliminated. What followed was a mass exodus of Moors, Jews and Gitanos from Granada city and the villages to the mountain regions (and their hills) and the rural country.

It was in this socially and economically difficult situation that the musical cultures of the Moors, Jews and Gitanos started to form the basics of flamenco music: a Moorish singing style expressing their hard life in Andalusia, the different *compas* (rhythm styles), rhythmic hand clapping and basic dance movements, see Andalusian cadence. Many of the songs in flamenco still reflect the spirit of desperation, struggle, hope, and pride of the people during this time. Flamenco singers are specifically renowned for their somewhat harsh and natural vocal quality. This style is meant to evoke the nature of suffering so closely related to the origins of the music. Other local Spanish musical traditions (i.e. Castillian traditional music) would also influence, and be influenced by, the traditional flamenco styles.

The first time flamenco is mentioned in literature is in 1774 in the book *Cartas Marruecas* by José Cadalso. The origin of the name flamenco however, is a much-debated topic. Some people believe it is a word of Spanish origin and originally meant Flemish (*Flamende*). However, there are several other theories. One theory suggest an Arabic origin taken from the words *felag mengu* (meaning: 'peasant in flight' or 'fugitive peasant').

During the so-called golden age of flamenco, between 1869-1910, flamenco music developed rapidly in music cafés called *cafés cantantes*. Flamenco

dancers also became one of the major attractions for the public of those cafés. The art of Flamenco dance was immediately defined in the contrast between male and female styles. Males typically focus more on complex foot movements partnered with relatively little upper-body movement. The female style on the other hand incorporates graceful and distinctly feminine, hip, hand, and arm movements. Along with the development of Flamenco dance, guitar players supporting the dancers increasingly gained a reputation, and so flamenco guitar as an art form by itself was born. Julián Arcas was one of the first [composers](#) to write flamenco music especially for the guitar.

The flamenco guitar (and the very similar [classical guitar](#)) is a descendent from the [lute](#). The first guitars are thought to have originated in Spain in the 15th century. The traditional flamenco guitar is made of Spanish cypress and spruce, and is lighter in weight and a bit smaller than a classical guitar, to give the output a 'sharper' sound. The flamenco guitar, in contrast to the classical, is also equipped with a barrier (often plastic) similar to a pick guard enabling the guitarists to incorporate rhythmic tapping of the fingers while they play. The flamenco guitar is also utilized in several different ways from the classical guitar, including individual strumming patterns and styles, as well as the use of a capo in many circumstances.

In 1922, one of Spain's greatest writers, Federico García Lorca and renowned composer Manuel de Falla organised the Fiesta del Cante Jondo, a folk music festival dedicated to cante jondo ("deep song"). They did this to stimulate interest in this, by that time unfashionable, flamenco music style. Two of Lorca's most important poetic works, Poema del Cante Jondo and Romancero Gitano, show Lorca's fascination with flamenco.

# Flamenco styles

Flamenco music styles are called **palos** in Spanish. There are over 50 different styles of flamenco. A palo can be defined as the basic rhythmic pattern of a flamenco style, but also covers the whole musical and cultural context of a particular flamenco style.

The rhythmic patterns of the palos are also often called *compás*. A *compás* is characterised by a recurring pattern of beats and accents. These recurring patterns make up a number of different rhythmic and musical forms known as *toques*.

To really understand the different palos it is also important to understand their musical and cultural context:

- The mood intention of the palo (dancing - Fandango, consolation - Solea, fun - Buleria, etc.).
- The set of typical melodic phrases, called falseta's, which are often used in performances of a certain palo.
- The relation to similar palos.
- Cultural traditions associated with a palo (men's dance - Farruca)

The most fundamental palos are: Toná, Soleá, Fandango and Seguiriya. These four palos all belong in the *cante jondo* category and form the rhythmic basis for nearly all the other palos.

Flamenco *cante* consists of a number of traditional (and not-so-traditional) forms, with characteristic [rhythmic](#) and [harmonic](#) structures. The rhythm (*compas*) is perhaps the most fundamental distinguishing feature of the different flamenco forms. The *cante jondo*, called the mother of flamenco, consists of 12 beats, with accents on the 3rd, 6th, 8th, 10th, and 12th beats. Songs are composed of several falsetas with rhythms defined by the song form.

Some of the forms are sung unaccompanied, while others usually have a guitar and sometimes other accompaniment. Some forms are danced while others traditionally are not. Amongst both the songs and the dances, some are traditionally the preserve of men and others of women, while still others would be performed by either sex. Many of these traditional distinctions are now breaking down; for example the *Farruca* is traditionally a man's dance, but is now commonly performed by women too.

The classification of flamenco forms is not entirely uncontentious, but a common and convenient first classification is into three groups. The deepest, most serious forms are known as *cante jondo* (or *cante grande*), while relatively light, frivolous forms are called *cante chico*. Forms which do not fit into either category but lie somewhere between them are classified as *cante intermedio*. Many flamenco artists, including some considered to be amongst the greatest, have specialised in a single flamenco form.

- Serranas

## Flamenco artists

Flamenco occurs in two types of settings. The first, the *Juerga* is an informal gathering where people are free to join in creating music. This can include dancing, singing, violin, *Palmas* (hand clapping), or simply pounding in rhythm on an old orange crate. Flamenco, in this context, is very dynamic; It adapts to the local talent, instrumentation, and mood of the audience. One tradition remains firmly in place: Singers are the most important part.

The professional concert is more formal and organized. The most common performance usually has only one instrument, but sometimes more are used, with guitar almost always at the center. Dancers are the next addition, followed by singers.

It is rare to find an artist who has mastered performing in both settings at the same level.

## Florida death metal

Florida always has been the home of an active death metal scene. In particular, the Tampa area is noteworthy. **Florida death metal** was most influential in the mid-1980's to early 1990's before thrash metal and metal music waned in popularity. The albums covers were often characterised by illegible band title fonts over various morbid pictures often supplemented by occult symbols at a 50-70% tint. New music is still being produced but what was once a flood is now a trickle. Super-saturation of the market likely played a major role in the downturn of the music's popularity.

## **The sound**

It is hard to classify the sound. Some of it was formed by pioneers like Obituary. Morrisound Studios also helped define it with releases of bands like Massacre. The vocals tended to be growling, grunting, or screaming with the lyrics. Some bands, like Nocturnus, even used heavy synthesizer effects in some of their releases. The production quality was often less than perfect, but fans of the genre worried more about an aggressive, brutal sound than things like production.

# Flute

The **Flute** (Ger. Flöte) is a [musical instrument](#) of the [woodwind](#) family. Unlike other woodwind instruments, a flute produces its sound from the flow of air against an edge, instead of using a reed. A [musician](#) who plays the flute is generally referred to as either a *flautist* or a *flutist*.

Flute tones are sweet in character and blend well with other instruments. The flute's pitch, and various aspects of its [timbre](#) are flexible, allowing a very high degree of instantaneous expressive control.

## History

The flute has appeared in many different forms in many different locations around the world. A flute made from a mammoth tusk, found in the Swabian Alb and dated to 30,000 to 37,000 years ago and one seven-hole flute made from a swan's bone in the Geissenklosterle Cave in Germany to circa 36,000 years ago are among the oldest known musical instruments. A bone fragment of a juvenile cave bear with a pair of holes found at Divje Babe in Slovenia and dated to about 50,000 years ago may also be an early flute.

## Flute acoustics

A flute produces sound when a stream of air directed across the top of a hole bounces in and out of the hole. Some engineers have called this a fluidic multivibrator, because it forms a mechanical analogy to an electronic circuit called a multivibrator.

The stream beats against the air in a resonator, usually a tube. The player changes the pitch of the flute by changing the effective length of the resonator. This is done either by closing holes, or more rarely, with a slide similar to a [trombone's](#) slide.

Because the air-stream has a lower mass than most resonators used in musical instruments, it can beat faster, but with less momentum. As a result, flutes tend to be softer, but higher-pitched, than other sound generators of the same size.

To be louder, a flute must use a larger resonator and a wider air-stream. A flute can generally be made louder by making its resonator and tone-holes larger. This is why police whistles, a form of flute, are very wide for their pitch, and why organs can be far louder than concert flutes: an organ pipe's tone-hole may be several inches wide, while a concert flute's is a fraction of an inch.

The air-stream must be flat, and precisely aimed at the correct angle and velocity, or else it will not vibrate. In fipple flutes, a precisely machined slot extrudes the air. In organs, the air is supplied by a regulated blower.

In non-fipple flutes, especially the concert flute and piccolo, the player must form and direct the stream with his or her lips, which is called an embouchure. This allows the player a wide range of expressions in pitch, volume, and timbre, especially in comparison to fipple flutes. However, it also makes the transverse flute immensely more difficult for a beginner to get a full sound out of than fipple flutes such as the recorder. Transverse flutes also take more air to play, which requires deeper breathing and makes circular breathing trickier, but still not impossible.

Generally, the quality called "tone colour" or "timbre" varies because the flute produces harmonics in different intensities. A harmonic is a frequency that is a whole number multiple of a lower register, or "fundamental" tone of the flute. Generally the air-stream is thinner (to vibrate in more modes), faster (providing more energy to vibrate), and aimed across the hole more shallowly (permitting a more shallow deflection of the airstream to resonate).

Almost all flutes can be played in fundamental, octave, tierce, quatre and cinque modes simply by blowing harder and making the air-stream move more quickly and at a more shallow angle. Flute players select their instrument's resonant mode with embouchure and breath control, much as brass players do.

Many believe that the timbre is also affected by the material from which the instrument is made. For instance, instruments made of wood are usually less bright than metal instruments. Different metals are also thought to influence the tone. However, a study in which professional players were blindfolded could find no significant differences between instruments made from a variety of different metals. In two different sets of blind listening, no instrument was correctly identified in a first listening, and in a second, only the silver instrument was identified by a significant fraction of the listeners. The study concluded that

there was 'no evidence that the wall material has any appreciable effect on the sound color or dynamic range of the instrument'. Physicists who study flutes usually agree that relatively small differences in shape are more important than differences in material, because the waves in the air couple only weakly to vibrations in the body. Wooden flutes usually have different shapes from metal instruments. For instance, the junction between the tone hole risers and the bore are usually sharper in wooden instruments, and these sharper edges are expected to have a substantial effect on sound. This does not mean that a gold flute is no better than, say, a brass one. The gold flute is likely to have been hand finished by the most proficient maker in the factory.

## Categories of flute

At its most basic, a flute can be an open tube which is blown like a bottle. Over time, the increasing demands of musical performance have led to the development of what many people consider *the* flute, the Western concert flute, which has a complex array of keys and holes.

There are several broad classes of flutes. With most flutes, the musician blows directly onto the edge of the flute. However, some flutes, such as the recorder, tin whistle, [whistle](#), fujara, and ocarina have a duct that directs the air onto the edge (an arrangement that is termed a "fipple"). This gives the instrument a distinct timbre which is different from non-fipple flutes and makes the instrument easier to play, but takes a degree of control away from the musician. Usually, fipple flutes are not referred to as flutes, even though the physics, technique and sound are similar.

Another division is between **side-blown** (or **transverse**) flutes, such as the Western concert flute, [piccolo](#), fife, dizi, and bansuri; and [end-blown flutes](#), such as the recorder, ney, kaval, quena, shakuhachi and tonette. The player of a side-blown flute uses a hole on the side of the tube to produce a tone, instead of blowing on an end of the tube. The earliest transverse flute is a chi (è) flute discovered in the Tomb of Marquis Yi of Zeng at the Suizhou site, Hubei province, China. It dates from 433 BC, of the later Zhou Dynasty. It is of lacquered bamboo with closed ends. It has five stops that are at the flute's side instead of top. Chi flutes are mentioned in Shi Jing, compiled and edited by Confucius.

Flutes may be open on one or both of their ends. The ocarina, [pan pipes](#), police whistle, and bosun's whistle are closed-ended. Open-ended flutes such as the concert flute and the recorder have more harmonics, and thus more flexibility for the player, and brighter timbres. An organ pipe may be either open or closed, depending on the sound desired.

Flutes can be played with several different air sources. Conventional flutes are blown with the mouth, although some cultures use nose flutes. [Organs](#) are blown by bellows or fans.

## The Western concert flutes

The Western concert flute is a transverse flute which is closed at the top. Near the top is the embouchure hole, against which the player blows. The flute has circular finger-holes, various combinations of which can be opened or closed by the flautist, by means of a mechanism of keys, to produce the various notes in the flute's playing range. The note produced depends on which finger-holes are opened or closed by the flautist and on how the flute is blown by the flautist. With rare exceptions (i.e., flutes with custom-made fingering-systems), the Boehm system is the fingering-system in correspondence with which Western concert flutes are designed and manufactured.

The standard concert flute is [pitched](#) in C and has a range of about 3 and a half octaves starting from middle C. However, many professional flutes have an

extra key to reach the B directly below middle C. This means that the concert flute is one of the highest orchestral instruments, with only the piccolo being higher. Also commonly used in [orchestras](#) is the [piccolo](#), a small flute usually pitched one octave above the concert flute. Alto and bass flutes, respectively pitched a perfect fourth and an octave below the concert flute, are used occasionally. Parts for the alto flute are more common than for the bass. Many other sizes of flute and piccolo are used from time to time. A much-less common instrument of the current pitching system is the treble G flute. An older pitching system, used principally in older wind-band music, includes D-flat piccolos, E-flat soprano flutes (the primary instrument, equivalent to today's concert C flutes), F alto flutes, and B-flat bass flutes.

The modern professional concert flute is generally made of silver, gold, or combinations of the two. Student instruments are usually made of nickel silver, or silver-plated brass. Curved headjoints are also available for student flutes which make the flute shorter making it possible for children as young as 3 years old to play the flute. Wooden flutes and headjoints are more widely available than in the past.

The modern concert flute comes with various options. The B-flat key (invented and pioneered by Briccialdi) and the B foot joint (which extends the flute's range down one semitone) are practically standard.

Open hole flutes (where some keys have a circular hole through the middle that the player must cover with fingertips) are common among concert-level players, though some flautists (particularly students, but sometimes even professional flutists as well) select closed-hole "plateau" keys. Students often use temporary plugs to cover the holes in the keys until they master the more exact finger-placement that open-hole keys demand. Some people believe that open-hole keys permit louder and clearer sound projection in the flute's lower range. Open-hole keys are also needed for some modern "extended" avant garde pieces, including those requiring the player to play harmonic overtones, or to manipulate "breathy" sounds in addition to the traditional "pure" tone.

Open-hole keys are typical of French technique, championed by the Paris Conservatoire, which dominated in the 20th century. However, the century has changed, and the French school is under fire; specifically, the placement of the G-key (previously offset in student models and inline in professional models) may or may not be moving, depending on whom you ask. Less controversial options include the amusingly named "gizmo key", which facilitates C7.

To play the Western concert flute, one holds the flute in a transverse position, and blows across the hole in the mouthpiece. To distinguish separate notes, one pushes down the keys of the flute in distinct fingerings. However, there are a few alternate fingerings (called trill fingerings) that will assist one in playing difficult passages.

### Members of the concert flute family

From high to low, the members of the concert flute family include:

- [Piccolo](#) in C or D-flat
- Treble flute in G
- Soprano flute in Eb
- Concert flute (also called **C flute**, **boehm flute**, **silver flute**, or simply **flute**)
- Flûte d'amour (also called **tenor flute**) in B-flat or A
- Alto flute in G
- Bass flute in C
- Contra-alto flute in G

- Contrabass flute in C (also called **octobass flute**)
- Subcontrabass flute in G or C
- Double contrabass flute in C (also called **octobass flute**)
- Hyperbass flute in C (also spelled **hyper-bass flute**)

Each of the above instruments has its own range. The piccolo is an octave higher in pitch than the concert flute. Like the concert flute, it reads music in C, but sounds one octave higher. The alto flute is in the key of G, and extends the low register range of the flute to the G below middle C. Its highest note is a high G (4 ledger lines above the treble clef staff). The bass flute is an octave lower than the concert flute, and the contrabass flute is an octave lower than the bass flute.

Less commonly seen flutes include the treble flute in G, pitched one octave higher than the alto flute; the soprano flute, between the treble and concert; and the tenor flute or flûte d'amour in B flat or A, pitched between the concert and alto.

The lowest sizes (larger than the bass flute) have all been developed in the 20th century; these include the sub-bass flute is pitched in F, between the bass and contrabass; the subcontrabass flute (pitched in G or C), the contra-alto flute (pitched in G, one octave below the alto), and the double contrabass flute in C, one octave lower than the contrabass. The flute sizes other than the concert flute and piccolo are sometimes called harmony flutes.

## The Indian flutes

The Indian flute, one of the oldest instruments of [Indian classical music](#), developed independently of the western flute. The Hindu god Krishna is said to be a master of the instrument. The Indian flutes are very simple instruments when compared with their western counterparts; they are made of bamboo and are keyless. The Indian concert flutes are available in standard pitches. In Carnatic Music, the pitches are referred by numbers such as 3 1/2, 4, 5, etc., which is counting upwards from the note C which is taken as 1. However, the pitch of a composition is itself not fixed and hence any of the flutes may be used for the concert (as long as the accompanying instruments, if any, are tuned appropriately) and is largely left to the personal preference of the artist.

Two main varieties of Indian flutes are currently used. The first is the Bansuri, which has six finger holes and one blowing hole, is used predominantly in Hindustani music, the music of north India. The second is Venu or Pullanguzhal, which has eight finger holes, is predominantly used in [Carnatic music](#), the music of south India. The south Indian flute had only seven finger holes till the 8-holed flute and the current fingering standard was developed by Sharaba Shastri of the Palladam school, in the beginning of the 20th century.

The quality of the sound from the flute depends on the specific bamboo used to make it, and it is supposed that the best bamboos are from the Nagarcoil area in South India.

# Flutina

The **flutina** is an early precursor to the diatonic button accordion, having one or two rows of treble buttons, which are configured to have the tonic of the [scale](#), on the "draw" of the bellows. There is usually no [bass](#) keyboard: the left hand operates an air valve (silent except for the rush of air). A rocker switch, called a "bascule d'harmonie" is in the front of the keyboard. When this switch is thumb activated, it would open up a pallet (a pad that covers a tone hole, at the other end of the [key](#) button(s), (see photo) for a simple Tonic/Dominant drone: Tonic on the draw and Dominant on the press, e.g. Tonic [notes](#) C/g, and Dominant G/d, without any major or minor thirds.

Many of these "Flutina" accordions were imported into the United States and were common photographers' studio props. This imparted a touch of "culture" to the sitter, hence the many tintype, ambrotype, etc. images of men and women, with their hands poised over "Flutinas", which they may (or may not) have actually played. Many of the images date from the 1850s through the American Civil War period (1861-1865).

The internal construction of the flutina resembles the English Wheatstone concertina more than the "reed banks" used in regular accordion construction. Thus, it has a concertina-like sound. Underneath the pallet/keyboard face, there is a rectangular, wooden board, reed pan, with reed chambers, made with air tight, leather covered, thin wooden dividers,. These dividers are between the reeds, for the diatonic scale notes. The brass reed tongues are mounted on reed shoes, with each tongue nailed on with a single metal pin. These reed shoes (or frames) are inserted into dovetail-shaped slots into the top side of the pan. If the keyboard has two rows of keys, the outside row plays the diatonic scale, while the inside row plays the sharps and flats, and these chromatic reeds face the interior of the bellows, in dovetailed slots on the backside of the pan board, without any dividers. The face of the pallet/keyboard actually slides out to reveal the inset reed pan, reminiscent of the construction of a pencil box, or a Japanese puzzle box. The accordion bellows has a very short "throw"(the maximum extension of the bellows, when drawn out), with most [instruments](#) having only four folds. Larger versions had 5 to 7 folds in the bellows. The use of the 4 fold bellows made the duration of the note played very short, and the volume of the note comparatively soft, in contrast to the later "German" style accordions, with their larger, multi-fold bellows.

## The name "flutina"

The term "flutina" is actually a more specific English name for a version of the *accordéon diatonique*, *accordéon mélodique*, *clavier (keyboard) mélodique*, or even *accordéon romantique*. Instrument makers of the 19th century often invented many distinct names for all these "new" versions of the same instrument.

All these names, which the French makers gave these instruments, have the pallets on the outside, but the name "Flutina" implies an accordion with the pallets opening on the interior side of the face, just above the buttons, and the air exiting from a narrow slot in back of the protruding keyboard. This feature was supposed to give a more "flute-like" tone to the reeds. Whether the French makers ever used the name "Flutina" is not known.

# History

The earliest version was known as the *Clavier Melodique* ("melodious keyboard"), circa 1831. It was made by Pichenot Jeune ("Young Pichenot"), and was probably one of the first accordions capable of playing a [melody](#). The first recorded factory was that of Napoleon Fourneux in Paris.

The Accordion of Cyril Demian (1829) described in his Austrian (at Vienna) patent application, had 5 pallets with 10 [chords](#) (musical triads) available. It all depended on which direction the player moved the bellows. One key pressed down had 2 chords: one chord on the "press" (in) and the other chord, on the "draw" (out). Demian also produced some Accordions with a single note per button "on the draw" or, "on the press". One of his models, had single notes and two rows of keys: first row the diatonic scale, the second row played the accidentals. The accordion Tutor published in the Year of 1833 by Adolph Müller (Austrian National Bibliotheca) has an example, please see the German text. [1]) includes pictures and descriptions of many different models. A music journal of Paris, printed in the year of 1831, has many details about the beginning of accordion production in Paris. The article starts out with the statement that the first accordion was copied from a Demian instrument, and later, Demian invented many different scale systems, with some buttons in the second row being divided in the middle. More information about it, is in the German wikipedia. Note: After Demian's 1829 patent, there is some controversy about the exact dates of further inventions, and the times of applied manufacture, of accordions. Thus, opinions differ, somewhat, among musical instrument historians.

## ACCORDEON NOTICES IN CONTEMPORARY PRINT:

- 1837, an Advertisement in the musical news paper „LE MENESTREL“ of M. Reisner, selling accordeons.

By \*1845, There were many makers of accordions, listed in various journals: Alexandre, Fourneaux, Jaulin, Lebroux, Neveux, Kasriel, Leterme, Reisner, Busson, M. Klaneguisert. All of these makers sold two different models at that time:

- - one without any chromatic accidentals– a diatonic one row or two row system,
  - and one two rows of buttons with accidentals – diatonic outside row/chromatic inside row.

A single scale system for these accordions was not universal adopted, many competing "key layouts" existed. These variations offered slightly differing advantages to the player, and were "championed" by the different manufacturers.

Later versions of the "Flutina" had a few open (tonic and fifth) chords available on the bass side, in addition to the silent "air" key. The most famous

maker of these "flutina" accordions was Busson of Paris. Busson also is thought to have had a part in the development of the piano accordion (circa 1880s). The heyday of the "Flutina" was approximately from 1840 to 1880. In the United States of America, the more robust steel-reeded German Melodians "won out" over these brass-reeded, soft, and delicate "accordeon melodiques". French "accordeon" manufactures nearly came to an end during the Franco-Prussian War 1870-71. From 1880 on, the Italian accordion makers took over a large share of the French market for accordions.

## Reference Literature

For a more detailed survey of flutinas/accordeons romantiques, please note the reference book "L'Accordeon" below. It is a good history of all types of accordions, and has an extensive section on accordeons romantiques, with many color photos. Note: It is available only in the French language! Title: "L'Accordeon" Author: Monichon, Pierre, Publisher: Payot/ Lausanne, Date: 1985, Pages: 144.

# Folk dance

**Folk dance** is a term used to describe a large number of dances that tend to share the following attributes:

- They were originally danced in about the 19th century or earlier (or are, in any case, not currently copyrighted);
- Their performance is dominated by an inherited tradition rather than by innovation;
- They were danced by common people and not exclusively by aristocracy;
- There is no one governing body that has final say over what "the dance" is or who is authorized to teach it. This also means that no one has the final say over the definition of folk dance or the minimum age for such dances.

Folk dances are traditionally performed during social events by people with little or no professional training. New dancers often learn informally by observing others and/or receiving help from others. Folk dancing is viewed as more of a social activity rather than competitive, although there are professional and semi-professional folk dance groups, and occasional folk dance competitions.

## Types of folk dance

Types of folk dance include contradance, English country dance, international folk dance, Irish dance, Maypole dance, Morris dance, Scottish country dance, square dance, and sword dance. Some choreographed dances such as Israeli folk dance are called folk dances, though this is not true in the strictest sense. Country dance overlaps with contemporary folk dance and ballroom dance. Most country dances and ballroom dances originated from folk dances, with gradual refinement over the years.

Folk dances are often part of the social fabric of the country, and often have common features. People familiar with folk dancing can often determine what country a dance is from even if they have not seen that particular dance before. Some countries' dances have features that are unique to that country, although neighboring countries sometimes have similar features. For example, the German and Austrian schuhplattling dance consists of slapping the body and shoes in a fixed pattern, a feature that few other countries' dances have. Folk dances sometimes evolved long before current political boundaries, so that certain dances are shared by several countries. For example, some Serbian, Bulgarian, and Croatian dances share the same or similar dances, and sometimes even use the same name and music for those dances.

Although folk dancing was historically done by the common people of the local culture, international folk dance has received some popularity on college campuses and community centers within the United States and other countries.

## Terminology

The term "folk dance" is sometimes applied to dances of historical European culture, typically originated before 20th century. For other cultures the terms *ethnic dance* or *traditional dance* are sometimes used, although the latter terms may encompass ceremonial dances.

Modern street dances such as hip hop are not generally considered folk dances because such dances are living and evolving dance forms, while folk dances are to a significant degree bound by tradition.

[Ballroom dance](#), depending on the particular dance, can be considered folk dance.

The terms *ethnic* and *traditional* are used when it is required to emphasize the cultural roots of the dance. In this sense, nearly all folk dances are ethnic ones. If some dances, such as [polka](#), cross ethnic boundaries (and even cross the boundary between *Folk* and [Ballroom](#) dance), ethnic differences are often considerable enough to speak of, e.g., "Czech Polka" vs. "German Polka".

However, not all ethnic dances are folk ones. The simplest example of these are ritual dances or dances of ritual origin.

## Folk dancing in the media

Richard Thompson wrote a song folk dancers titled *Don't Sit On My Jimmy Shands*, a reference to Scottish musician Jimmy Shand that produced [bagpipe](#) music. In the 1960's this movement was supported by record labels such as *Folk Dancer* by Michael and Maryann Herman, and the Folkways label by Moses Asch which is currently under the Smithsonian Institute.

# Folk metal

**Stylistic origins:** [Heavy metal](#), [Folk music](#), [Power metal](#)

**Cultural origins:**

**Typical instruments:** [Electric guitar](#) - [Bass guitar](#) - [Drums](#)

**Mainstream popularity:** Regionwise popularity

Celtic metal, Vedic metal, [Viking metal](#), [Oriental metal](#)

[Timeline of heavy metal](#)

**Folk metal** is a sub-genre of [heavy metal](#) that incorporates elements of [folk music](#).

## Different styles

There are many different forms of folk metal, due to the many varying folk traditions throughout the world. One thing to note also, however, is the fact that different forms of metal are combined with these folk traditions also. For instance, the band Mael Mórdha combine Gaelic/Irish folk music with [doom metal](#), whilst another Celtic metal band, Geasa (and their brother band, Primordial) combines Irish folk with [black metal](#). Singaporean band Rudra who play vedic metal is another example. Whilst the two folk sounds may sound similar, the actual metal is different. Bands, however, are usually grouped according to their [folk](#) stylings.

## Popularity

Folk metal bands often have no commercial success in the country of their origin, whilst at the same time being considered a huge band commercially in other countries. Examples of this are the Northumbrian folk metal band Skyclad, who have had no success in England, but lots of followers in continental Europe and South America, or Celtic metal band Cruachan, who have had no big successes in Ireland, and yet are a hit in Russia. Overall though, folk metal is seen by a lot of people as nothing more than a novelty. The bands themselves may wish to see a fusing of their native culture to more modern heavy metal, but to many people who misunderstand this, the bands are nothing more than curiosities. This is in sharp contrast to many critics who have praised the technical skill of groups like Skyclad, Waylander, Cruachan, Vintersorg, Finntroll and Elvenking. Unfortunately as the popularity of Folk music in many countries declines, so too does the interest in folk metal. One thing which has been achieved by the fusion however has been interest in native Celtic and Viking culture and music. Many metal fans who discovered folk metal have since went on to become fans of pure folk bands. Folk Metal has also gained popularity in South East Asia and South Asia through the advent of a new sub-genre called Vedic metal which is based on Hinduism's holy scriptures and the Vedic philosophy.

## Development of folk metal

The originators of folk metal are undoubtedly Skyclad, but the genre was not really popularised until bands like Cruachan, Otyg and Windir appeared in the mid to late 1990s. Eastern Europe is also home to numerous folk-influenced [black metal](#) bands, the most prominent of which are Graveland and Nokturnal Mortum. The band Bathory also pioneered the genre with albums such as Hammerheart, and is arguably the first to have brought Viking mythology and history into folk metal. Bands such as Amon Amarth continue to use the themes laid down by Bathory and others, though they do not follow in the same vein musically (Amon Amarth being a [death metal](#) band). Bands that use folk metal themes in their lyrics but not in their music are generally not considered to be part of the folk metal genre.

## Sub-genres of folk metal

### Viking metal

*Main article:* [Viking metal](#)

### Oriental metal

*Main article:* [Oriental metal](#)

### Celtic metal

Celtic metal is a sub-genre of folk metal. Its focus is on Celtic mythology and instruments mixed with some other genre of metal. Celtic metal has developed a huge underground scene in Ireland, where pioneers like Cruachan, Geasa, Waylander and other such bands play. By far the most successful album is Cruachan's *Tuatha Na Gael* which sold out its label's supplies within a few months. It cannot be considered a great success, however, because it was a small label and only pressed a few thousand CDs.

### Vedic metal

Vedic metal is a form of folk metal popularized in South Asia, South East Asia and other parts of the continent. The lyrics heavily derive from the Vedic literature and philosophy. This genre has been pioneered by Singaporean band Rudra in the late 1990s. Since then, this genre has grown in popularity. Bands like Aryadeva (Ukraine), Symmetry (Indonesia), Warriors Of Peace (India), Asura (India), Advaita (New Zealand), The Aryan March (India), Narasimha (Singapore), Kaliyuga (Malaysia), Azrael (Australia) and Blue River (Sri Lanka) have done pioneering work in the genre. Often, along with the Vedic lyrics, the music has shades of Indian Classical music. The definitive album of this genre is the Rudra album *The Aryan Crusade* released in 2001.

# Folk music

**Folk Music**, in the original sense of the term, is [music](#) by and of the common people.

Folk music arose, and best survives, in societies not yet affected by mass communication and the commercialization of culture. It normally was shared by the entire community (and its performance not strictly limited to a special class of expert performers), and was transmitted by word of mouth.

During the 20th and 21st century, the term *folk music* took on a second meaning: it describes a particular kind of [popular music](#) which is culturally descended from or otherwise influenced by traditional folk music. Like other popular music, this kind of folk music is most often performed by experts and is transmitted in organized performances and commercially distributed recordings. However, popular music has filled some of the roles and purposes of the folk music it has replaced.

*Folk music* is somewhat synonymous with ***traditional music***. Both terms are used semi-interchangeably amongst the general population; however, some musical communities that actively play living folkloric musics (see Irish traditional music for a specific example), have adopted the term *traditional music* as a means of distinguishing their music from the popular music called "folk music," especially the post-1960s "[singer-songwriter](#)" genre. See also: [World music](#).

## Defining folk song

"Folk song is usually seen as the authentic expression of a way of life now, past or about to disappear (or in some cases, to be preserved or somehow revived). Unfortunately, despite the assembly of an enormous body of work over some two centuries, there is still no unanimity on what folk music (or folklore, or the folk) 'is'" (Middleton 1990, p.127).

Gene Shay, co-founder and host of the Philadelphia Folk Festival, defined folk music in an April 2003 interview by saying: "In the strictest sense, it's music that is rarely written for profit. It's music that has endured and been passed down by oral tradition. [...] And folk music is participatory—you don't have to be a great musician to be a folk singer. [...] And finally, it brings a sense of community. It's the people's music."

The English term *folk*, which gained usage in the 18th century (during the Romantic period) to refer to peasants or non-literate peoples, is related to the German word *Volk* (meaning people or nation). The term is used to emphasize that folk music emerges spontaneously from communities of ordinary people. "As the complexity of social stratification and interaction became clearer and increased, various conditioning criteria, such as 'continuity', 'tradition', 'oral transmission', 'anonymity' and uncommercial origins, became more important than simple social categories themselves."

Charles Seeger (1980) describes three contemporary defining criteria of folk music (Middleton 1990, p.127-8):

1. A "schema comprising four musical types: 'primitive' or 'tribal'; 'elite' or 'art'; 'folk'; and 'popular'. Usually...folk music is associated with a lower class in societies which are culturally and socially stratified, that is, which have developed an elite, and possibly also a popular, musical culture." Cecil Sharp (1972), A.L. Lloyd ().
2. "Cultural processes rather than abstract musical types...*continuity* and *oral transmission*...seen as characterizing one side of a cultural dichotomy, the other side of which is found not only in the lower layers of feudal, capitalist and some oriental societies but also in 'primitive' societies and in parts of 'popular cultures'." Redfield (1947) and Dundes (1965).
3. Less prominent, "a rejection of rigid boundaries, preferring a conception, simply of varying practice within *one* field, that of 'music'."

David Harker (1985) argues that "folk music" is, in Peter van der Merwe's words, "a meaningless term invented by 'bourgeois' commentators". Jazz musician Louis Armstrong and blues musician Big Bill Broonzy have both been attributed the remark "All music is folk music. I ain't never heard a horse sing a song."

## Subjects of folk music

Apart from [instrumental music](#) that forms a part of folk music, especially [dance music](#) traditions, much folk music is vocal music, since the instrument that makes such music is usually handy. As such, most folk music has [lyrics](#), and is about something.

Narrative verse looms large in the folk music of many cultures. This encompasses such forms as traditional epic poetry, much of which was meant originally for oral performance, sometimes accompanied by instruments. Many epic poems of various cultures were pieced together from shorter pieces of traditional narrative verse, which explains their episodic structure and often their in medias res plot developments. Other forms of traditional narrative verse relate the outcomes of battles and other tragedies or natural disasters. Sometimes, as in the triumphant Song of Deborah found in the Biblical Book of Judges, these songs celebrate victory. Laments for lost battles and wars, and the lives lost in them, are equally prominent in many folk traditions; these laments keep alive the cause for which the battle was fought. The narratives of folk songs often also remember folk heroes such as John Henry to Robin Hood. Some folk song narratives recall supernatural events or mysterious deaths.

[Hymns](#) and other forms of religious music are often of traditional and unknown origin. Western [musical notation](#) was originally created to preserve the lines of [Gregorian chant](#), which before its invention was taught as an oral tradition in monastic communities. Folk songs such as Green grow the rushes, O present religious lore in a mnemonic form. In the Western world, [Christmas carols](#) and other traditional songs preserve religious lore in song form.

Other sorts of folk songs are less exalted. Work songs are composed; they frequently feature call and response structures, and are designed to enable the labourers who sing them to coordinate their efforts in accordance with the rhythms of the songs. In the armed forces, a lively tradition of jody calls are sung while soldiers are on the march. Professional sailors made use of a large body of sea shanties. Love poetry, often of a tragic or regretful nature, prominently figures in many folk traditions. Nursery rhymes and nonsense verse also are frequent subjects of folk songs.

## Variation in folk music

Music transmitted by word of mouth through a community will, in time, develop many variants, because this kind of transmission cannot produce word-for-word and note-for-note accuracy. Indeed, many traditional folk singers are quite creative and deliberately modify the material they learn.

Because variants proliferate naturally, it is naïve to believe that there is such a thing as the single "authentic" version of a [ballad](#) such as "Barbara Allen." Field researchers in folk song (see below) have encountered countless versions of this ballad throughout the English-speaking world, and these versions often differ greatly from each other. None can reliably claim to be the original, and it is quite possible that whatever the "original" was, it ceased to be sung centuries ago. Any version can lay an equal claim to authenticity, so long as it is truly from a traditional folksinging community and not the work of an outside editor.

Cecil Sharp had an influential idea about the process of folk variation: he felt that the competing variants of a folk song would undergo a process akin to biological natural selection: only those new variants that were the most appealing to ordinary singers would be picked up by others and transmitted onward in time. Thus, over time we would expect each folksong to become esthetically ever more appealing — it would be collectively composed to perfection, as it were, by the community.

On the other hand, there is also evidence to support the view that transmission of folk songs can be rather sloppy. Occasionally, collected folk song versions include material or verses incorporated from different songs that makes little sense in its context. A perfect process of natural selection would not have permitted these incoherent versions to survive.

# The decline of folk traditions in modern societies

Folk music seems to reflect a universal impulse of humanity. No fieldwork expedition by cultural anthropologists has yet discovered a preindustrial people that did not have its own folk music. It seems safe to infer that folk music was a property of all people starting from the dawn of the species.

However, the development of modern society--first literacy, then the conversion of culture into a salable commodity--created a new form of transmission of music that first influenced, then in some societies essentially eliminated the original folk tradition. The decline of folk music in a culture can be followed through three stages.

## Stage I: Urban influence

One of the first folk traditions impacted by modern society was the folksong of rural England. Starting in Elizabethan times, urban poets wrote [broadsheet ballads](#) that (thanks to printing) could be sold widely. The ballads probably didn't need musical notation, since they would have been sung to tunes that everybody knew, the folk tradition being very much alive at the time. These ballads heavily influenced the folk tradition, but did not override it. In fact, the folk tradition showed great resilience. Through the process of folk transmission, the urban ballads were modified, keeping the more vivid content and ironing out the less "citified" material. The resulting body of folk lyrics is widely considered to be a very appealing blend. Thus, the printing press and widespread literacy did not suffice to destroy the English folk tradition, but in some ways enriched it.

The English folk song legacy was probably affected by urban melodies as well as words. The clue here is that folk music in remote rural areas of the English-speaking world, such as Highland Scotland or the Appalachian mountains, abounds in tunes that employ the pentatonic scale, a scale widely used for folk music around the world. However, pentatonic music was rare among the rural English villagers who first volunteered their tunes to researchers in the late 19th century. A plausible explanation is that life in rural England was far more closely affected by the proximity to the urban centers. Music in the standard major and minor scales evidently penetrated to the nearby rural areas, where it was converted to folk idiom, but nevertheless succeeded in displacing the old pentatonic music.

## Stage II: Replacement of folk music by popular music

The pattern of urban influence on folk music was intensified to outright destruction as soon as the capitalist economic system had developed to the point that music could be packaged and distributed for the purpose of earning a profit--in other words, when [popular music](#) was born. It was around Victorian

times that ordinary people of the Western world were first offered music as a mass commodity, for example, in the phenomenon of Music Hall.

The introduction of popular music was simultaneous with the latter part of the Industrial Revolution. This was a time of great change in lifestyle for the great body of the people, notably the migration of the old agrarian communities to the new industrial ones. It is likely that the resulting social disruption helped cut people's emotional bonds to their old folk music, and thereby helped the shift in taste toward popular music.

As technology advanced, succeeding generations became enticed with popular music in ever more accessible and desirable forms. Gramophone records became LPs and then CDs; the Music Hall gave way to radio, followed by television. With the ever-increasing success of popular music, the musical life of many individuals eventually ceased to include any folk music at all. Moreover, since popular music for most people is passive music (that is, listened to, but not created or performed), the overwhelming success of popular music also entailed a sharp decline of music as an active, participatory activity.

### **Stage III: Loss of musical ability in the community**

The terminal state of the loss of folk music can be seen in the United States and a few similar societies, where except in isolated areas and among hobbyists, traditional folk music no longer survives. In the absence of folk music, many individuals do not sing. It is possible that non-singers feel intimidated by widespread exposure in recordings and broadcasting to the singing of skilled experts. Another possibility is that they simply cannot sing, because they did not sing when they were small children, when learning of skills takes place most naturally.

There is anecdotal evidence that the loss of singing ability is continuing rapidly at the present time. As recently as the 1960s, audiences at American sporting events collectively sang the American national anthem before a game; the anthem is now generally assigned to a recording or to a soloist.

Inability to sing is apparently unusual in a traditional society, where the habit of singing folk song since early childhood gives everyone the practice needed to be able to sing at least reasonably well.

### **Regional variation**

The loss of folk music is occurring at different rates in different regions of the world. Naturally, where industrialization and commercialization of culture are most advanced, so tends to be the loss of folk music. Yet in nations or regions where folk music is a badge of cultural or national identity, the loss of folk music can be slowed; this is held to be true, for instance in the case of Hungary, Ireland, Brittany, and Galicia, Greece and Crete all of which retain their traditional music to some degree, in some such areas the decline of folk music and loss of traditions has been reversed such as Cornwall.

## Fieldwork and scholarship on folk music

Starting in the 19th century, interested people - academics and amateur scholars - started to take note of what was being lost, and there grew various efforts aimed at preserving the music of the people. One such effort was the collection by Francis James Child in the late 19th century of the texts of over three hundred [ballads](#) in the English and Scots traditions (called the Child Ballads). Contemporaneously came the Reverend Sabine Baring-Gould, and later and more significantly Cecil Sharp who worked in the early 20th century to preserve a great body of English rural folk song, music and dance, under the aegis of what became and remains the English Folk Dance and Song Society (EFDSS). Sharp also worked in America, recording the folk songs of the Appalachian Mountains in 1916-1918 in collaboration with Maud Karpeles and Olive Dame Campbell.

Around this time, composers of [classical music](#) developed a strong interest in folk song collecting, and a number of outstanding composers carried out their own field work on folk song. These included Percy Grainger and Ralph Vaughan Williams in England and Béla Bartók in Hungary. These composers, like many of their predecessors, incorporated folk material into their classical compositions.

In America, during the 1930s and 1940s, the Library of Congress worked through the offices of musicologist Alan Lomax and others to capture as much American field material as possible.

Often, PLL fieldworkers in folk song hoped that their work would restore folk music to the people. For instance, Cecil Sharp campaigned, with some success, to have English folk songs (in his own heavily edited and expurgated versions) to be taught to schoolchildren.

One theme that runs through the great period of scholarly folk song collection is the tendency of certain members of the "folk", who were supposed to be the object of study, to become scholars and advocates themselves. For example, Jean Ritchie was the youngest child of a large family from Viper, Kentucky that had preserved many of the old Appalachian folk songs. Ritchie, living in a time when the Appalachians had opened up to outside influence, was university educated and ultimately moved to New York City, where she made a number of classic recordings of the family repertoire and published an important compilation of these songs.

## Folk revivals

As folk traditions decline, there is often a conscious effort to resuscitate them. Such efforts are often exerted by bridge figures such as Jean Ritchie, described above. Folk revivals also involve collaboration between traditional folk musicians and other participants (often of urban background) who come to the tradition as adults.

The folk revival of the 1950's in Britain and America had something of this character. In 1950 Alan Lomax came to Britain, where at a Working Men's Club in the remote Northumberland mining village of Tow Law he met two other seminal figures: A.L.'Bert' Lloyd and Ewan MacColl, who were performing folk music to the locals there. Lloyd was a colourful figure who had travelled the world and worked at such varied occupations as sheep-shearer in Australia and shanty-man on a whaling ship. MacColl, born in Salford of Scottish parents, was a brilliant playwright and songwriter who had been strongly politicised by his earlier life. MacColl had also learned a large body of Scottish traditional songs from his mother. The meeting of MacColl and Lloyd with Lomax is credited with being the point at which the British roots revival began. The two colleagues went back to London where they formed the Ballads and Blues Club which eventually became renamed the Singers' Club and was the first, as well as the most enduring, of what became known as folk clubs. As the 1950s progressed into the 1960s, the folk revival movement built up in both Britain and America.

We must mention too Brittany's Folk revival beginning in the 50s with the "bagadou" and the "kan-ha-diskan" before growing to world fame through Alan Stivell 's work since the mid 60s.

Another example is the Hungarian model, the *tanchaz* movement. This model involves strong cooperation between musicology experts and enthusiastic amateurs, resulting in a strong vocational foundation and a very high professional level. They also had the advantage that rich, living traditions of Hungarian folk music and folk culture still survived in rural areas, especially in Transylvania. The involvement of experts meant an effort to understand and revive folk traditions in their full complexity. Music, dance, and costumes remained together as they once had been in the rural communities: rather than merely reviving folk music, the movement revived broader folk traditions. Started in the 1970s, *tanchaz* soon became a massive movement creating an alternative leisure activity for youths apart from discos and music clubs—or one could say that it created a new kind of music club. The *tanchaz* movement spread to ethnic Hungarian communities around the world. Today, almost every major city in the U.S. and Australia has its own Hungarian folk music and folk dance group; there are also groups in Japan, Hong Kong, Argentina and Western Europe.

## The emergence of popular folk artists

During the twentieth century, a crucial change in the history of folk music began. Folk material came to be adopted by talented performers, performed by them in concerts, and disseminated by recordings and broadcasting. In other words, a new genre of [popular music](#) had arisen. This genre was linked by nostalgia and imitation to the original traditions of folk music as it was sung by ordinary people. However, as a popular genre it quickly evolved to be quite different from its original roots.

Confusingly, popular (*i.e.*, commercially-disseminated) music based on a folk tradition is called "folk music", no matter how different it may be from a folk music rooted in the community. As a result, some individuals in a modern society are unaware that folk music of the original variety ever existed. For instance, many Americans, including some musicians, appear to believe that "folk music" has always meant a genre of song dominated by simplistic guitar accompaniments and primarily oriented towards political protest, humorous schtick, and/or obsessive musing on bad relationships and other personal "issues."

The rise of folk music as a popular genre began with performers whose own lives were rooted in the authentic folk tradition. Thus, for example, Woody Guthrie began by singing songs he remembered his mother singing to him as a child. Later, in the 1930s and 1940s, Guthrie both collected folk music and also composed his own songs, as did Pete Seeger, who was the son of a professional musicologist. Through dissemination on commercial recordings, this vein of music became popular in the United States during the 1950s, through singers like the Weavers (Seeger's group), Burl Ives, Harry Belafonte and the Kingston Trio, who tried to reproduce and honor the work that had been collected in preceding decades. The commercial popularity of such performers probably peaked in the U.S. with the ABC Hootenanny television series in 1963, which was cancelled after the arrival of the Beatles, the "British invasion" and the rise of folk-rock.

The itinerant folksinger lifestyle was exemplified by Ramblin' Jack Elliott, a disciple of Woody Guthrie who in turn influenced Bob Dylan. Sometimes these performers would locate scholarly work in libraries and revive the songs in their recordings, for example in Joan Baez's rendition of "Henry Martin," which adds a guitar accompaniment to a version collected and edited by Cecil Sharp. Publications like Sing Out! magazine helped spread both traditional and composed songs, as did folk-revival-oriented record companies.

Many of this group of popular folk singers maintained an idealistic, leftist/progressive political orientation. This is perhaps not surprising. Folk music is easily identified with the ordinary working people who created it, and preserving treasured things against the claimed relentless encroachments of capitalism is likewise a goal of many politically progressive people. Thus, in the 1960s such singers as Joan Baez, Phil Ochs and Bob Dylan followed in Guthrie's footsteps and to begin writing "protest music" and topical songs, particularly against the Vietnam War, and likewise expressed in song their support for the American Civil Rights Movement. The influential Welsh-language singer-songwriter, Dafydd Iwan, may also be mentioned as a similar

example operating in a different cultural context. Some critics, especially proponents of the ethnocentric Neofolk genre, claim that this type of American 'progressive' folk is not folk music at all, but 'antifolk'. This is based on the idea that as liberal politics supposedly eschews the importance of ethnicity, it is incompatible with all folkish traditions. Proponents of this view often cite romantic nationalism as the only political tradition that 'fits' with folk music.

In Ireland, The Clancy Brothers & Tommy Makem (although the members were all Irish born, the group became famous while based in New York's Greenwich Village, it must be noted), The Dubliners, Clannad, Planxty, The Chieftains, The Pogues and a variety of other folk bands have done much over recent years to revitalise and repopularise Irish traditional music. These bands were rooted, to a greater or lesser extent, in a living tradition of Irish music, and they benefitted from collection efforts on the part of the likes of Seamus Ennis and Peter Kennedy, among others.

In Hungary, the group Muzsikás and the singer Márta Sebestyén became known throughout the world due to their numerous American tours and their participation in the Hollywood movie *The English Patient* and Sebestyén's work with the Deep Forest band.

## The blending of folk and popular genres

The experience of the last century suggests that as soon as a folk tradition comes to be marketed as popular music, its musical content will quickly be modified to become more like popular music. Such modified folk music often incorporates [electric guitars](#), [drum kit](#), or forms of rhythmic syncopation that are characteristic of popular music but were absent in the original.

One example of this sort is contemporary [country music](#), which descends ultimately from a rural American folk tradition, but has evolved to become vastly different from its original model. [Rap](#) music evolved from an African-American inner-city folk tradition, but is likewise very different nowadays from its folk original. A third example is contemporary [bluegrass](#), which is a professionalised development of American old time music, intermixed with [blues](#) and [jazz](#).

As less traditional forms of folk music gain popularity, one often observes tension between so-called "purists" or "traditionalists" and the innovators. For example, traditionalists were indignant when Bob Dylan began to use an electric guitar. His electrified performance at the 1965 Newport Folk Festival was to prove to be an early focal point for this controversy.

Sometimes, however, the exponents of amplified music were bands such as Fairport Convention, Pentangle, Mr. Fox and Steeleye Span who saw the electrification of traditional musical forms as a means to reach a far wider audience, and their efforts have been largely recognised for what they were by even some of the most die-hard of purists. Traditional folk music forms also merged with [rock and roll](#) to form the hybrid generally known as [folk rock](#) which evolved through performers such as The Byrds, Simon and Garfunkel, The Mamas and the Papas.

Outside the English-speaking world, the Breton artist Alan Stivell (a Celtic harpist, multi-instrumentist and singer) has also fused folk music with rock and other influences. His tours and records since the mid-1960s have also influenced the work of many musicians everywhere.

Since the 1970s a genre of "contemporary folk", fuelled by new singer-songwriters, has continued to make the coffee-house circuit and keep the tradition of acoustic non-classical music alive in the United States. Such artists include Steve Goodman, John Prine, Cheryl Wheeler, Bill Morrissey, Christine Lavin and Gundula Krause. Lavin in particular has become prominent as a

leading promoter of this musical genre in recent years. Some, such as Lavin and Wheeler, inject a great deal of humor in their songs and performances, although much of their music is also deeply personal and sometimes satirical. While from Ireland The Pogues and The Corrs brought traditional tunes back into the [album](#) charts.

In the 1980s a group of artists like Phranc and The Knitters propagated a form of folk music also called country punk or [folk punk](#), which eventually evolved into [Alt country](#). More recently the same spirit has been embraced and expanded on by performers such as Dave Alvin, Ani DiFranco, and Steve Earle. At the same time, a line of singers from Baez to Phil Ochs have continued to use traditional forms for original material.

The appropriation of folk has even continued into [hard rock](#) and [heavy metal](#), with bands such as Skyclad, Waylander and Finntroll melding distinctive elements of folk styles from a wide variety of traditions, including in many cases traditional instruments such as fiddles, tin whistles and [bagpipes](#) as an element of their sound. Unlike other folk-related genres, [folk metal](#) shies away from monotheistic religion in favour of more ancient pagan inspired themes. System of a Down for instance, is an alternative metal band whose music reflects influence from a variety of Middle Eastern and Caucasian folk traditions, especially Armenian.

A similar stylistic shift, without using the "folk music" name, has occurred with the phenomenon of [Celtic music](#), which in many cases is based on an amalgamation of Irish traditional music, Scottish traditional music, and other traditional musics associated with lands in which Celtic languages are or were spoken (a significant research showing that the musics have any genuine genetic relationship is still to be done - at this point, only a book in French written by Alan Stivell studies a bit the subject of Celtic Music-); so Breton music and Galician music are often included in the genre).

[Neofolk](#) music is a modern form of music that began in the 1980's. Fusing traditional European folk music with post-industrial music forms, historical topics, philosophical commentary, traditional songs and paganism, the genre is largely European. Although it is not uncommon for neofolk artists to be entirely acoustic, playing with entirely traditional instruments.

One of the more unusual offshoots of modern folk music is the genre now known as filk, a form of music defined primarily by who its audience is.

Another trend is "antifolk," begun in New York City in the 1980s by Lach in response to the confines traditional folk music. It now has a home at the Antihootenany in the East Village, where artists like Beck, the Moldy Peaches and Nellie McKay got their starts, and artists such as Robin Aigner's Royal Pine, Matt Singer, Phoebe Kreutz and Curtis Eller continue to push the envelope of "folk."

Folk music is still extremely popular among some audiences today, with folk music clubs meeting to share traditional-style songs, and there are major folk music festivals in many countries, eg the Port Fairy Folk Festival is a major annual event in Australia attracting top international folk performers as well as many local artists. Indeed, even for those who consider themselves hip, the arrival of Americana and the music of Bonnie "Prince" Billy, Devendra Banhart and Travis MacRae has shown that Folk Music can still be cutting edge.

The Cambridge Folk Festival in Cambridge, England is always sold out within days, and is noted for having a very wide definition of who can be invited as folk musicians. The "club tents" allow attendees to discover large numbers of unknown artists, who, for ten or fifteen minutes each, present their work to the festival audience.

## Pastiche and parody

Popular culture sometimes creates pastiches of folk music for its own ends.

One famous example is the pseudo-ballad sung about brave Sir Robin in the film *Monty Python and the Holy Grail*. Enthusiasts for folk music might properly consider this song to be pastiche and not parody, because the tune is pleasant and far from inept, and the topic being lampooned is not balladry but the medieval heroic tradition. The arch-shaped melodic form of this song (first and last lines low in pitch, middle lines high) is characteristic of traditional English folk music. A more recent similarly incisive send-up of folk music, this time American in origin, is the film *A Mighty Wind* by Christopher Guest and Eugene Levy.

In the magazine *fRoots* there was a long-running parody of the English Folk Dance and Song Society (EFDSS). They were called "Dance Earnestly and Forget About Song Society" (DEAFASS). DEAFASS supporters favored the [accordion](#) over the melodeon and the string bass over the [electric bass](#).

Another instance of pastiche is the notoriously well-known theme song for the television show *Gilligan's Island* (music by George Wyle, lyrics by Sherwood Schwartz). This tune is also folk-like in character, and in fact is written in a traditional folk mode (modes are a type of [musical scale](#)); the mode of "Gilligan's Island" is ambiguous between Dorian and Aeolian. The lyrics begin with the traditional folk device in which the singer invites his hearers to listen to the tale that follows. Moreover, two of the stanzas repeat the final short line, a common device in English folk stanzas. However, the raising of the key by a semitone with each new verse is an unmistakable trait of commercial music and never occurred in the original folk tradition.

Folk music is easy to parody because it is, at present, a [popular music](#) genre that relies on a traditional music genre. As such, it is likely to lack the sophistication and glamour that attach to other forms of popular music. Folk music satire ranges from the worst excesses of Rambling Syd Rumpo and Bill Oddie to the deft and subtle artistry of Sid Kipper, Eric Idle and Tom Lehrer. Even "serious" folk musicians are not averse to poking fun at the form from time to time, for example Martin Carthy's devastating rendition of "All the Hard Cheese of Old England" (written by Les Barker), to the tune of "All the Hard Times of Old England", Robb Johnson's "Lack of Jolly Ploughboy," and more recently "I'm Sending an E-mail to Santa" by the Yorkshire-based harmony group Artisan. Other musicians have been known to take the tune of a traditional folk song and add their own words, often humorous, or on a similar-sounding yet different subject; these include The Wurzels, The Incredible Dr. Busker and The Mrs Ackroyd Band.

Filk music is a closely related musical genre which originated as parodies of folk songs, and parody remains a dominant theme of the style. It is evolving into a true folk tradition, however, with songs learned orally that are undergoing the "folk process" of change in melody and text.

**Folkies** is the popular term for folk music enthusiasts.

While the term itself is neutral, and is used by some folk music enthusiasts in an informal and friendly manner, it has at times been used by the popular press at least since the late 1950s, as part of a light-hearted beatnik stereotype.

# Folk punk

**Folk punk** is a genre of music that combines elements of [folk](#) and [punk rock](#) music. There are two distinct types of folk punk. The first is artists like The Knitters - punk music musicians who play in a traditional folk style. There are also modern artists who perform acoustically in the folk style, this is the "riotfolk" genre.

Like much punk music in general, folk-punk tends to be quite political, most often on the radical left and anarchist side of the spectrum. Folk punk is seen as exploring the legacy of traditional American [folk music](#), which often contained themes of working class solidarity and community resistance facing the encroaching problems of industrialization and modern capitalism. Classic folk songs such as "This Land is Your Land" and "Sixteen Tons" have been covered by folk punk bands.

While the genre has grown greatly recently, much credit to the establishment of folk punk has gone to Plan It X Records of Bloomington, Indiana for helping popularize the sound. Many staple folk punk bands are either currently on the label or have previously had some connection to it. Among these are Against Me! - perhaps the best known folk punk band - although their sound has been moving more and more towards general punk rock and has moved away from the DIY (do it yourself) ethic that is central to the genre. However, some of these bands don't actually have any real relation to (or even sound like) actual folk music. The only relation could be pointed at the use of "obscure" instruments (or instruments hardly used in punk rock) like a violin, banjo, or a mandolin. Other notable folk-punk labels and bands include This Bike Is A Pipe Bomb, Fistolo Records, (Philadelphia, PA) and The Riot-Folk! Collective

Other locations significant to the folk punk scene are Athens, Ga and Gainesville, Fl (the birth place of Against Me!). There are also a few folk-punk acts from the northeast such as Bread and Roses, The Can Kickers, Evan Greer, and Sharp Teeth, all from the greater Boston area. Also, Salt Lake City, UT has a large folk punk scene with bands such as Bombs and Beating Hearts, James Miska, xacrox and xJoshx. The scene is also taking shape in Toronto, Canada with artists such as Timothy Cameron, and the collective based band PondScum, in DC with artists like Spoonboy and Rachel Jacobs, and Ohio, with the very popular band Defiance, Ohio (also involved with plan-it-x.)

Other significant folk punk artists and bands include ArnoCorps Erik Petersen/Mischief Brew: Chris Fredda: Madeline Adams (madelinesongs.com): The Heroic Livers: Defiance, Ohio (defianceohio.terrorware.com); Ghost Mice; Saw Wheel, Rumbleseat, Spoonboy, Tennessee Whiskey Tots, and the artists involved in the Riot-Folk! Collective.

A symbol commonly used by the folk punk music scene is the anarchy heart. This is similar to the anarchy symbol except that instead of the A being set in a circle it is set within a heart. This symbolises "love is freedom" while the A within an O symbolises "anarchy is order". This may have originated in northern Florida.

# Folk-rock

**Folk-rock** is a musical genre, combining elements of [folk music](#) and [rock music](#).

In the original and narrowest sense, the term referred to a genre that arose in the United States and Canada around the mid-1960s. The sound was epitomized by tight vocal harmonies and a relatively "clean" (effects- and distortion-free) approach to electric instruments epitomized by the jangly sound of the Byrds' guitarist Roger McGuinn. The repertoire was drawn in part from folk sources, but even more from folk-influenced [singer-songwriters](#) such as Bob Dylan.

This original folk-rock directly led to the distinct, eclectic style of **British folk-rock** (a.k.a. **electric folk**) pioneered in the late 1960s by Pentangle and Fairport Convention. Starting from a North-American style folk-rock, Pentangle, Fairport and other related bands deliberately incorporated elements of traditional British folk music. At the same time, in Brittany, Alan Stivell began to mix his Breton roots with Irish and Scottish roots and with rock music. Very shortly afterwards, Fairport bassist Ashley Hutchings formed Steeleye Span in collaboration with traditionalist British folk musicians who wished to incorporate electrical amplification, and later overt rock elements, into their music.

This, in turn, spawned several other variants: the self-consciously English folk rock of the Albion Band and some of Ronnie Lane's solo work, and the more prolific current of **Celtic rock**, incorporating traditional music of Ireland, Scotland, Cornwall, and Brittany. Through at least the first half of the 1970s, Celtic rock held close to folk roots, with its repertoire drawing heavily on traditional Celtic [fiddle](#) and [harp](#) tunes and even traditional vocal styles, but making use of rock-band levels of amplification and percussion.

In a broader sense, folk-rock includes later similarly-inspired musical genres and movements in the English-speaking world (and its Celtic fringes) and, to a lesser extent, elsewhere in Europe. As with any genre, the borders are difficult to define. Folk-rock may lean more toward folk or toward rock in its instrumentation, its playing and vocal style, or its choice of material; while the original genre draws on the music of North American English-speaking whites, there is no clear delineation of which folk cultures music might be included as influences. Still, the term is not usually applied to rock music rooted in the blues-based or other African American music (except as mediated through folk revivalists), nor to rock music with Cajun roots, nor to music (especially after about 1980) with non-European folk roots, which is more typically classified as [world music](#).

## The roots of folk-rock

Folk-rock arose mainly from the confluence of three elements: urban/collegiate folk vocal groups, singer-songwriters, and the revival of North American rock and roll after the British Invasion. Of these, the first two owed direct debts to Woody Guthrie, Pete Seeger and the Popular Front culture of the 1930s.

The first of the urban folk vocal groups was the Almanac Singers, whose shifting membership during the late 1930s and early 1940s included Guthrie and Seeger and Lee Hayes. In 1947 Seeger and Hayes joined Ronnie Gilbert, and Fred Hellerman to form the Weavers, who popularized the genre and had a major hit with a cleaned-up cover of Leadbelly's "Irene", but fell afoul of the U.S. Red Scare of the early 1950s. Their sound, and their broad repertoire of traditional folk material and topical songs inspired other groups such as the Kingston Trio (founded 1957), the Chad Mitchell Trio, and the (usually less political) "collegiate folk" groups such as The Brothers Four, The Four Freshmen, The Four Preps, and The Highwaymen. All featured tight vocal harmonies and a repertoire at least initially rooted in folk music and (in some cases) topical songs.

When the term *singer-songwriter* was coined in the mid-1960s, it was applied retroactively to Bob Dylan and other (mainly New York-based) folk-rooted songwriters. Scottish songster Donovan also fit this mold. Dylan's material would provide much of the original grist for the folk-rock mill, not only in the U.S. but in the UK as well.

None of this would likely ever have intersected with rock music, though, if it had not been for the impulse of the British Invasion. The Beatles, the Rolling Stones, and numerous other British bands reintroduced to America the broad potential of rock and roll as a creative medium. One of the first bands to craft a distinctly American sound in response was the Beach Boys; while not a folk-rock band themselves, they directly influenced the genre, and at the height of the folk-rock boom in 1966 had a hit with a cover of the 1920s West Indian folk song "Sloop John B", which they had learned from The Kingston Trio.

However, there are a few antecedents to folk-rock in pre-British Invasion American rock; one could cite some of the later recordings of Buddy Holly, which highly influenced artists like Dylan and the Byrds, and to some extent some recordings by [country](#)-influenced performers like The Everly Brothers. This was not a recognized trend at the time, and probably would have not been noticed if not for subsequent events.

## The original folk-rock impulse

In the United States the heyday of folk-rock is likely between the mid-sixties to the mid-seventies, aligning itself approximately with the hippie movement. Arising originally from the folk-influenced music of Bob Dylan and earlier musicians, the folk revivalist vocal combo, and the rock music of the British Invasion, it later incorporated elements of [country music](#), drawing on Hank Williams and others.

## British and Celtic folk-rock

The British style of folk-rock (in its early years, often called electric folk) was established by the band Fairport Convention, who formed in North London in the late 1960s. Steeleye Span, also prominent in this vein, was formed by folk musicians who wished to add electric instruments and experiment with song structures. Nick Drake's music has had a large impact on modern folk-rock.

Across the English Channel in Brittany or France, a similar fusion of folk and rock elements can be found in the Breton folk rock music of Alan Stivell (1970s and later) and the French Malicorne, founded by one of Alan Stivell's musicians.

British folk-rock combined with experimental aspects, found for example in The Incredible String Band, eventually developed into [prog rock](#).

## Elsewhere in Europe and the Mediterranean

In Romania Transsylvania Phoenix (known in Romania simply as Phoenix), founded in 1962, introduced significant folk elements into their rock music around 1972 in an unsuccessful attempt to compromise with government repression of rock music. The attempt failed, and they ended up in exile during much of the Ceau\_escu era, but much of their music still retains a folk-rock sound. The present-day bands Spitalul de Urgenc (Romanian) and Zdob \_i Zdob (Moldova) also both merge folk and rock.

Other fusions of folk and rock include [New Flamenco](#) (Spain), the pop-oriented forms of North African raï music, and in the music of The Pogues and the Dropkick Murphys, both of whom draw on traditional Irish music and [punk rock](#).

Turkey, during the 1970s and 1980s, also sustained a vibrant folk-rock scene, drawing inspirations from diverse ethnic elements of Anatolia, the Balkans, Eurasia and the Black Sea region and thrived in a culture of intense political strife, with musicians in nationalist and Marxist camps.

Another folk-rock band is Gåte from Norway who combines Norwegian folk songs(stev) and rock.

## Folk-rock artists

All of the performers listed here had or have both significant folk elements and significant rock elements in their music.

## Singer-songwriters

A number of singer-songwriters are associated strongly with folk-rock. Among those who started out strongly identified with folk music but later incorporated rock influences in their music are:

- Leonard Cohen
- Donovan
- Bob Dylan
- Joni Mitchell
- Bruce Springsteen
- Phil Ochs (arguably a different phenomenon, since his rock music was relatively separate from his folk-influenced music)
- Richard Thompson
- Alan Stivell
- James Taylor

In addition, others (usually of at least a slightly younger generation) seem to have mixed both elements from the outset of their careers:

- Jonatha Brooke
- Jim Croce
- Indigo Girls
- Neil Young
- Gillian Welch
- Joel Sprayberry

Singer-songwriter Paul Simon, as one half of Simon & Garfunkel, was a transitional figure between a Dylanesque singer-songwriter and the folk-rock vocal sound.

Canadian singer-songwriter Nathan Bishop performs both folk and rock instrumentation and leans on both the lyrical and narrative traditions in his songs.

## 1960s North American folk-rock vocal groups

These bands were associated with original North American "folk-rock" sound, drawing to some extent on traditional folk music, but to a greater extent on the work of folk-influenced contemporary songwriters, such as Bob Dylan or the Scottish singer-songwriter Donovan.

- The Band
- Buffalo Springfield
- The Byrds

Crosby, Stills & Nash  
The Mamas & the Papas  
Simon & Garfunkel  
Peter, Paul & Mary, transitional between urban folk vocal groups and folk-rock  
The Turtles, whose first hits were in this genre, but who headed off in other musical directions

## **Other U.S. bands of this era**

There were also significant folk influences in the music of several other North American bands of this period who were not generally identified with the folk-rock label.

The Grateful Dead  
Jefferson Airplane  
Love  
Moby Grape  
Sonny and Cher  
Dion DiMucci (mid and late 1960s recordings)  
Gene Vincent (mid and late 1960s recordings)

## **British and Irish folk-rock**

The British and Irish folk-rock (or "electric folk") sound started out as an offshoot of the North American. Fairport Convention, almost certainly the seminal band of this movement, began with a sound very close to that of North American folk-rock, but began deliberately incorporating elements from the folk music of the British Isles. Several bands in Brittany were also closely associated with this musical movement following the work of Alan Stivell.

Unrelated to this movement would be a few British acts of the mid-1960s whose music was based on or paralleled US folk-rock of the time, such as Chad and Jeremy, Peter and Gordon, The Searchers or Marianne Faithfull.

Capercaillie  
Fairport Convention  
Alan Stivell (Breton)  
Five Hand Reel  
Hedgehog Pie  
Horslips  
Jethro Tull; not all of their music has folk elements, but Songs from the Wood, Heavy Horses and Stormwatch are clearly of this genre.  
Lindisfarne  
Malicorne (French)  
Magna Carta  
Pentangle  
Planxty  
Renaissance  
Richard Thompson  
Steeleye Span  
The Strawbs  
Tricks Upon Travellers

Van Morrison, although not associated with this sound in its heyday, has more recently done some music along these lines, especially in his

collaborations with The Chieftains.

The Incredible String Band began in this mode before heading off in other musical directions. Lead singer Robin Williamson has often returned to this style of music.

All of the above were active in the early 1970s. A clearly related sound can be found in Irish music of a slightly later period.

The Corrs

The Waterboys

The Canadian bands Spirit of the West and Great Big Sea are also more associated with this sound than with the earlier North American folk-rock.

The Canadian band Celticore are fusing two folk traditions, that of Cape Breton and Newfoundland with a broad definition of rock that includes elements of hard rock, funk, and jazz while retaining the original flavour of the traditional music.

A similar impulse (but a very different sound) can be found in bands who mix traditional Irish music with punk rock. The prototype of this approach might be Thin Lizzy's heavy-metal-inspired 1973 version of "Whiskey in the Jar"

Dropkick Murphys

The Pogues

Fathom (band)

Flogging Molly

A recent book, "Electric Folk" by Britta Sweers (2005) concentrates on Fairport Convention and Steeleye Span. Another recent book "Irish Folk, Trad and Blues: A Secret History" by Colin Harper (2005) covers Horslips, The Pogues, Planxty and others.

Present folk-rock includes bands such as Aaron Sprinkle, The Tossers, The River Bends, One Star Hotel, Tegan & Sara, and acoustic favorite Denison Witmer.

# Folktronica

**Folktronica** is a genre derivative of and combining both [folk music](#) and [electronica](#).

## The Name

The label "folktronica" seems to have originated in the British press, although (as with the almost non-term [post-rock](#)) it has come to encompass performers and bands that include elements of ambient electronica, folk, [jazz](#), [classical](#), and even [hip-hop](#). In 2001, [postmodern pop](#) artist Momus released an album titled *Folktronic* deliberately exploring (and satirizing) the fusion. A similar genre is "Laptop folk", which refers to a slightly more minimalistic electronic folk.

# Football chant

**Football chants** are repetitive [chants](#) generated by the crowd at football (soccer) matches, particularly professional ones. Throughout Europe and Latin America it is considered normal for the supporters to spend much of their time shouting at the players, opposing spectators, the referee, or just the world in general. They are intended to encourage the supporters' team, insult the opposition, or just make a noise.

The chants themselves can vary enormously, from the simple and repetitive to the topical and complex, encompassing tradition and vulgarity. An example of simple, though proud chanting is the Brazilian chant, sung by the fans at World Cup matches: "Eu sou brasileiro, com muito orgulho, com muito amor" (I am Brazilian, with a lot of pride, with a lot of love). They frequently contain vulgar or antagonistic lyrics, in fact a lot of things shouted within football stadiums would not be acceptable in a number of situations outside of one, and as long as the chants are not used outside of football, it is tolerated. Most importantly, it should be said that they generally contribute to people's enjoyment of a game and its atmosphere, and are an integral part of football culture.

They are also known as a *terrace chant* - a terrace being the old standing areas in football grounds in the 1900's till around the 90's in top flight football. Terraces are still used in lower league football where crowds and stands are smaller.

## Common chants

One of the world-know football chants is "Olé, Olé". The word is a expression in the tauromachy after the bullfighter engaging the bull with a capote like a expression of approve by the public who attend this spectacle. The chant is most-popular in Europe, especcially in Spain and France and Italy also in Latin America like form of the fan of the local football team fan to support them.

Also this word is like a cheers by the fans when the local team is winning and make precising ball passes between the team members.

The simplest chant is just the name of the team shouted over and over again, often with clapping in the gap; e.g. "Tottenham" (clap clap clap); "Tottenham" (clap clap clap). Chants being nothing if not competitive, opposing supporters may respond by shouting an insulting word in the gap, most commonly used is shit.

A variation upon this clapping is: "clap clap, clap clap clap, clap clap clap clap, clap clap". The most famous instances of this rhythm were firstly, during the late 1990s when AAPT Smartchat released a successful Australian advertising campaign - "A, A, A A P, A A P T, Smart chat!". The rhythm can also be heard at the beginning of the Hoodoo Gurus song "Wipeout (Like Wow)".

The next simplest chant, used when your team is ahead, is just the score repeated, e.g. "two nil; two nil", particularly if one of the teams has scored recently, sung to a tune approximating "Amazing Grace".

Chants can also support particular players. A common one is "One David Beckham! There's only one David Beckham" (or whoever). When an England international squad included two players both called Gary Stevens the chant became "Two Gary Stevens! There's only two Gary Stevens"; conversely, during the late 1990s Arsenal played host to the chant "Two Ian Wrights! There's only two Ian Wrights", in reference to their new signing Luis Boa Morte who bore a striking resemblance to Wright. When Andy Goram was diagnosed as schizophrenic, opposing fans chanted "Two Andy Gorams! There's only two Andy Gorams". This is an example of the commonplace confusion between Schizophrenia and Dissociative identity disorder. In Australian rules football, the song "One Tony Lockett" was created, referring to the legendary status of the AFL's leading goalkicker of all time - "There's only one Tony Lockett!".

All of the above are sung to the tune "Guantanamo", as are "Sing when you're winning, you only sing when you're winning" (the variant "You don't even sing when you're winning" has been heard at Manchester United), and (when an easy shot or a penalty is missed) "Score in a brothel, you couldn't score in a brothel". The tune "Blue Moon" is used for the chant "Twelve men, you've only got twelve men" (when the referee is perceived to be biased to one team - acting as their 12th man). Most chants can be adapted to the name of almost any player.

The Gap Band's "Oops Upside Your Head" was adapted by Glasgow Celtic's more hardline supporters as "Ooh! Aah! Up the 'RA! Say ooh ah up the 'RA!", where 'RA is an affectionate term for the IRA. This was adapted by Republic of Ireland fans into "Ooh! Aah! Paul McGrath!" (the "th" in McGrath being silent)

and then by Leeds United fans as "Ooh! Aah! Cantona!". Just as famously it has been adapted in Australian cricket, with fast bowler Glenn McGrath the subject of the "Ooh! Aah! Glenn McGrath" chant.

The Duran Duran song "Rio" was adapted in several ways for Rio Ferdinand; in fact in 2002, fan Simon Le Bon (Duran Duran's lead singer) promised to re-record one of the football chants if the team won.

The song "Go West" by the Village People provides the melody for the common chant "You're shit, and you know you are" and many, many others, including more specialised chants such as "One nil, to the Arsenal" (which popularised the usage of "Go West" in English football), "Go West Bromwich Albion" and "Posh Spice takes it up the arse", made famous when Victoria Beckham mentioned it in her autobiography as an example of the less-than-warm welcome shown to her by fans of her new husband's team, Manchester United.

Another melody for chants is that of the [hymn](#) Guide Me O Thou Great Redeemer which goes "Bread of heaven, bread of heaven, feed me now and ever more! Feed me now and ever more". The most famous incarnation of this is "You're not singing, you're not singing, you're not singing any more! You're not singing any more!" sung when the opposition's supporters have stopped chanting as a result of conceding a goal.

A large proportion of chants have the same tune as hymns, because hymns were traditionally sung before the start of all football matches in the late 19th and early 20th century. The hymn Abide With Me is still sung before the FA Cup Final every year. Very few chants are adapted from popular pop music, Go West and Winter Wonderland being notable exceptions.

A somewhat sinister riposte to Manchester United supporters' song, Always Look on the Bright Side of Life which they customarily used to sing when leading to taunt their opposition is to be found in a song sung to the same tune Always Look on the Runway for Ice, a reference to the tragic Munich air disaster of February 6, 1958, in which 23 of the 43 people on board died, 8 of them Man United players. This has been countered in recent years, such as against Leeds United, when the song *Always Watch Out For A Turk With A Knife* which is a reference to the two Leeds supporters who were fatally stabbed whilst in Turkey for a Champions League match.

In the Australian A-League competition, the Melbourne Victory fans are known for their famous "Kitzbichler" chant. It is directed towards the exciting Austrian midfielder Richard Kitzbichler, and is sung to the tune of "Tequila", with the entire crowd singing the tune "do do do do do do, do do", then shouting "KITZBICHLER!".

Further examples include:

- "Who's the bastard in the black?" (meaning the referee. There are some variations to this, such as Celtic's "Who's the Mason in the black?")
- "Can we play you every week?" (a particular favourite among supporters in the Isles of Scilly League which has only two teams and who play each other 20 times or so during the course of a season)
- "Are you X in disguise?" (where X is a weak or a rival team)
- "You're supposed to be at home" (when the away team supporters are being more vocal in their support than those of the home team) as well as the obverse of this coin, "You should have come in a taxi" sung when the away supporters are few in numbers.
- "My garden shed" (used by away supporters to insult the size of the host ground - *My garden shed/Is bigger than this/My garden shed/Is bigger than this/It's got a door and a window/My garden shed/Is bigger than this*). Conversely, a poor side playing in an attractive stadium may be greeted by

the simpler chant of "Nice ground, shit team", to the tune of the Pompey Chimes.

- "<Insert name here>'s a wanker!" (notably an Australian chant, used to degrade anyone on the field)
- "<Insert name here> walks on water! Tra la la la la la!" (used whenever a sportsman completes an amazing deed, for example, Stephen Milne's 11 goal haul in Round 22, 2005)
- "Stand up, if you hate <insert name here>." This can refer to a person or a team, and would be accompanied, of course, with the singing fans standing.

Some football teams also have songs which are traditionally sung by their supporters. Probably the most famous of these are Liverpool's and Celtic's (or Rodgers and Hammerstein's) "You'll Never Walk Alone" and West Ham's (or Jaan Kenbrovin and John Kellette's) "I'm Forever Blowing Bubbles". Inevitably, these have become targets for parody by opposition fans; "You'll Never Walk Alone" has been adapted to "You'll Never Get A Job", a reference to the high unemployment in Liverpool during the early 1980s.

Some chants form part of protest by the fans against the management of the club, usually if the majority of fans believe the manager should be sacked. Some chants might be a protest to the chairman not to sell a star player.

Another chant is "Who ate all the pies?", to the tune of Knees Up Mother Brown, which is aimed at a supposedly overweight player or official. During the 1990s, opposition fans at Nottingham Forest games began singing "He's got a pineapple on his head" to the tune of "He's got the whole world in his hands" to Jason Lee because of his somewhat unorthodox hair cut. The chant became famous when featured on David Baddiel and Frank Skinner's Fantasy Football League.

Very often chants are abuse directed at an opposition player, particularly if an incident has happened that has irritated fans of the other team, for example if the player has appeared to have cheated to get a penalty kick. Abuse is also commonly directed at match officials, usually only the referee after a controversial decision has been made. Common variations include "You don't know what you're doing", "You're not fit to referee", "Shit refs, we only get shit refs", with "The referee's a wanker!" probably the most popular.

It is believed that one of the earliest chants was written by Edward Elgar (a fan of Wolverhampton Wanderers). Elgar set the words "He banged the leather for goal!" to music in praise of Wolves player Billy Malpas. Elgar reused the tune in his oratorio Caractacus. It is not thought that his chant was widely used on the terraces.

## Songs associated with football teams

**Note:** ALL Brazilian football teams have official anthems associated to them.

Aberdeen F.C. - "Stand Free"  
FC Bayern Munich - "Stern des Südens" (Star of the South), "So sehen Sieger aus" (That's What Winners Look Like)  
Birmingham City F.C. - "Keep Right On"  
Brentford F.C. - "Hey Jude"  
Brighton and Hove Albion F.C. - "Sussex By The Sea"  
Bristol Rovers F.C. - "Goodnight Irene"  
Burnley F.C. - "No Nay Never" (to the tune of The Wild Rover)  
Celtic F.C. - "The Celtic Song", "You'll Never Walk Alone", "The Fields of Athenry", "The Willie Maley Song", "Over and Over"  
Chelsea F.C. - "Blue is the Colour"  
Chicago Fire - "Don't Stop Living in the Red"  
Coventry City F.C. - "Eton Boating Song" Twist and Shout"  
Crystal Palace F.C. - "Glad All Over"  
Derby County F.C. - "Steve Bloomer's Watchin'"  
Eintracht Frankfurt - "Im Herzen von Europa" (In the heart of Europe)  
Everton F.C. - "Z-Cars"  
Feyenoord Rotterdam - "I Will Survive"  
Fulham F.C. - "There's only one F in Fulham"  
Heart of Midlothian F.C. - "European Song" (to the tune of My Way)  
Hibernian F.C. - "Sunshine over Leith" (by The Proclaimers)  
Huddersfield Town A.F.C. - "Smile A While" and "Those Were The Days" (to the tune of the Mary Hopkin song of the same name)  
Ipswich Town F.C. - Singing The Blues  
Leeds United F.C. - "Marching On Together"  
Liverpool F.C. - "You'll Never Walk Alone" (also sung often by Celtic F.C. and Feyenoord fans)  
Manchester City F.C. - "Blue Moon" (originally and still sung by Crewe Alexandra F.C. fans)  
Manchester United F.C. - United road ( country road)  
Millwall F.C. - "No One Likes Us - We Don't Care." (To the tune of Sailing) "Let 'em Come." - Official Club Song.  
Newcastle United F.C. - "Blaydon Races"  
Norwich City F.C. - "On the Ball, City" (Oldest known football song in the world)  
Nottingham Forest F.C. - "You've Lost That Loving Feeling"  
Notts County F.C. - "The Wheelbarrow Song"  
Plymouth Argyle F.C.-"Semper Fidelis"  
Preston North End F.C.-"Can't Help Falling In Love"  
Rangers F.C. - "Billy Boys" (to the tune of Marching Through Georgia)  
"God Save The Queen" (A reference to Rangers largely Protestant, loyalist fans base)  
Reading F.C.-"Sweet Caroline"  
Sheffield United F.C. - The Greasy Chip Butty Song  
Southampton F.C. - "When the Saints Come Marching In"

Spartak Moscow - "I vragu nikogda ne dobit'sya" (Our Enemy Shall  
Never Achieve It)  
Stoke City F.C. - "Delilah"  
Sunderland A.F.C. - "Can't Help Falling In Love"  
West Bromwich Albion F.C. - "The Lord's my sheperd" (Psalm 23)  
West Ham United F.C. - "I'm Forever Blowing Bubbles"  
Wolverhampton Wanderers F.C. - "Theme from Emmerdale"

## Chant Laureate

On 11 May 2004, Jonny Hurst was chosen as England's first 'Chant Laureate'

Barclaycard set up the competition to choose a Chant Laureate, to be paid £10,000 to tour Premiership stadiums and compose chants for the 2004-5 football season. The judging panel was chaired by the Poet Laureate Andrew Motion, who said "*What we felt we were tapping into was a huge reservoir of folk poetry.*"

## Franco-country

**Franco-country** is a [musical](#) style originating from French Canada. It is characterised mainly by the rhythms and styles of American [country music](#) but with the twangy Québécois Jouale accent. Sometimes the songs are sung in French, but not always.

Popular practitioners of Franco-country include: Renée Martel, Gildor Roy, Patrick Norman, André Lejeune and Georges Hamel.

# Free improvisation

**Free improvisation** or **free music** is improvised music without any rules beyond the taste of the musicians involved, and not in any particular style. The music generally thought of as "Free Improvisation" developed in the U.S. and Europe in the mid and late 1960's, largely as an outgrowth of [free jazz](#) and [modern classical](#) musics. Free improvisation is both a [musical genre](#) and a technique.

Performers may choose to play in a certain style or key--though free music is far more often atonal--or at a certain tempo, but would be considered anomalous. Conventional [songs](#) are highly uncommon in free improvisation; there is generally more emphasis placed on mood, [texture](#) or, more simply, on performative gesture than on [melody](#), [harmony](#) or predictable [rhythm](#). These elements are improvised at will, as the music progresses.

Guitarist Derek Bailey has proposed non-idiomatic improvisation as a more accurately descriptive term, claiming the form offers musicians more possibilities "per cubic second" than any genre (Guitar Player, January 1997); while guitarist Elliott Sharp (himself occasionally active in one form or another of free improvisation) has argued--partly tongue in cheek--that no improvisation is ever truly free, excepting the unlikelyhood of amnesiac improvising musicians. (ibid)

Free music is a relatively little known, and somewhat loosely-defined genre, and none of its exponents can be said to be "famous" amongst the general public. However, in experimental circles, a number of free musicians are well known, including the aforementioned Derek Bailey, trombonist Conny Bauer, saxophonists Evan Parker and Peter Brötzmann, and guitarist Keith Rowe.

Perhaps the earliest free recordings are two songs by [jazz pianist](#) Lennie Tristano: "Intuition" and "Digression," both recorded in 1949 with a [sextet](#) including saxophone players Lee Konitz and Warne Marsh. Jazz critic Harvey Pekar has pointed out that one of Django Reinhardt's recorded improvisations strays drastically from the chord changes of the established piece. While noteworthy, these examples were clearly in the jazz idiom. A transitional period of in jazz the late 50s and early 60s instigated seemingly simultaneously by Cecil Taylor, Sun Ra, Ornette Coleman and Joe Maneri, allowed for radical improvised departures from the harmonic material of the composition. These ideas were extended in 1961's, Free Fall recording by jazz clarinetist Jimmy Giuffre's trio and culminated in New York Eye and Ear Control, a soundtrack for a film by Michael Snow recorded for the ESP-Disk label under the leadership of Albert Ayler. Snow suggested to Ayler that the band simply play without a composition or themes, and free improvisation, as a genre, was born.

In 1966 Elektra issued the first recording of European free improvisation by the UK group AMM, which included at the time Cornelius Cardew, Eddie Prevost, Lou Gare, Keith Rowe and Lawrence Sheaf. Through the remainder of the 60s and through the 70s, free improvisation spread across the U.S., Europe and East Asia, entering quickly into a dialogue with Fluxus, happenings and performance art (Cardew was associated with La Monte Young and other New York happenings artists) initially and making its influence immediately felt on rock and roll (Syd Barrett of Pink Floyd was famously an AMM devotee; the Grateful Dead were noteworthy extensions of the influence).

John Stevens' Spontaneous Music Ensemble was also formed in the mid-60s and included, at various times, influential players such as Derek Bailey, Evan Parker, Kenny Wheeler, Trevor Watts, Roger Smith, and John Butcher. Musica Electronica Viva were formed in Rome in 1966 by Alvin Curran, Richard Teitelbaum, Frederic Rzewski, Allan Bryant, Carol Plantamura, Ivan Vandor, and Jon Phetteplace. Blurring the lines between free jazz and free improvisation, the the Chicago-based Association for the Advancement of Creative Musicians, a loose collective of improvising musicians and including Muhal Richard Abrams, Henry Threadgill, Anthony Braxton, Jack DeJohnette, Lester Bowie, Roscoe Mitchell, Joseph Jarman, Famadou Don Moye, and Malachi Favors was formed in 1965 and included many of the key players in the nascent international free improvisation scene. (Braxton recorded many times with Bailey and Teitelbaum; Mitchell recorded with Thomas Bruckner and Pauline Oliveros; etc.)

Free improvisation saw its full bloom in the mid-70s as Japanese players like saxophonist Karou Abe and guitarist Masayuki Takayanagi took the music to dazzling heights, the Los Angeles Free Music Society ran ahead with rambunctious glee through the ideals of free music, and in 1976 Derek Bailey founded Company Week a festival which lasted until 1994 and combined an ever-changing roster of improvisors who collaborated live. The spirit of Company survives in expanded form in the High Zero Festival of Improvised Music in Baltimore, Maryland which began in 1999 and which places improvising musicians who have never collaborated before in novel configurations for four days each year.

Free music performers come from a variety of backgrounds, and there is often considerable crossover with other genres. For example, acclaimed soundtrack composer Ennio Morricone was a member of the free improvisation group Nuova Consonanza. Rock musician Thurston Moore has released a number of free improvisation collaborations. And, vice-versa, many free music performers also record and perform other styles of music: Anthony Braxton has written opera, and John Zorn has written acclaimed orchestral pieces. Elements of [noise rock](#), [IDM](#), [minimalism](#) and electroacoustic music are not uncommon in free improvisation.

The London based independent radio station Resonance 104.4FM, founded by the London Musicians Collective, frequently broadcasts experimental and free improvised performance works. Chicago's Sound Experiment, WNUR 89.3 FM is another source for free improvised music on the radio.

Free music performers often emphasise [extended technique](#).

# Free jazz

**Free jazz** is a movement of [jazz music](#) characterized by diminished dependence on formal constraints. Developed in the 1950s and 1960s, it was pioneered by artists such as Ornette Coleman, Eric Dolphy, Cecil Taylor, Albert Ayler, Archie Shepp, Bill Dixon and Paul Bley. Some of the best known examples are the later works of John Coltrane.

While free jazz is most often associated with the era of its birth, many musicians — including Peter Brötzmann, Ken Vandermark, William Parker, John Zorn, George Lewis (trombonist) and the late Derek Bailey — have kept the style alive to the present day, continuing its development as jazz idiom.

## History

Ornette Coleman is often regarded as having crystallized the free jazz form in the late 1950s, and many consider his first explorative albums such as *Something Else* and *The Shape of Jazz to Come* to be the beginning of the movement.

Indeed, the style owes its name to Coleman's 1960 recording *Free Jazz: A Collective Improvisation*. He intended it only as an album title, but the term quickly became synonymous with the current adventurous innovations in jazz, and eventually became the name of a movement and style.

In the 1960s, the loosely-defined movement was sometimes called "Energy Music" or "The New Thing".

There were earlier precedents, however. Two songs by pianist Lennie Tristano are sometimes cited as the earliest free jazz. "Digression" and "Intuition" were both recorded in 1949; neither had prearranged [melody](#), [harmony](#) or [rhythm](#). Both songs maintained a sense of harmonic consonance, however, which is undermined in most free jazz.

Most of Sun Ra's music could be classified as free jazz, although Sun Ra said repeatedly that his music was written and boasted that what he wrote sounded more free than what "the freedom boys" played.

Some of Charles Mingus's work was also important in establishing free jazz. Of particular note are his early Atlantic albums, such as *Pithecanthropus Erectus*, *The Clown*, and *Tijuana Moods*, in which he employed a compositional technique of humming tunes to his players and allowing them to feel their own melodies.

Since the mid-1950s, saxophonist Jackie McLean had been exploring a concept he called "The Big Room", where the often strict rules of [bebop](#) could be loosened or abandoned at will. Similarly, Cecil Taylor, the most prominent free jazz pianist, began stretching the bop boundaries as early as 1956.

The trio led by Jimmy Giuffrè with Paul Bley and Steve Swallow between 1960 and 1962 received little attention during their original incarnation, but afterwards were regarded as one of the most innovative free jazz ensembles.

Eric Dolphy's work with Charles Mingus, John Coltrane, and Chico Hamilton, along with his solo work, helped to set the stage for free jazz in the music community.

## Definition

There is no universally accepted definition of free jazz, and any proposed definition is complicated by many musicians in other styles drawing on free jazz, or free jazz sometimes blending with other genres. Many musicians also tend to reject efforts at classification, regarding them as useless or unduly limiting.

Free jazz uses [jazz](#) idioms but generally considerably less [compositional](#) material than in most earlier styles — [improvisation](#) is essential, and whereas in earlier styles of jazz the improvised solos were always built according to a template provided by composed material ([chord](#) changes and [melody](#)), in free jazz the performers often range much more widely. Free jazz as a style has grown considerably since its inception, and the ability to improvise freely is a common skill. But, as guitarist Marc Ribot has remarked, free jazz musicians like Ornette Coleman and Albert Ayler, "although they were freeing up certain strictures of bebop, were in fact each developing new structures of composition."

Typically this kind of music is played by small groups of musicians. In popular perception, free jazz is loud, aggressive, dissonant and in general full of sound and fury. Many critics, particularly at the music's inception, suspected that the abandonment of familiar elements of jazz pointed to a lack of technique on the part of the [musicians](#). Most free jazz musicians use overblowing techniques or otherwise elicit unconventional sounds from their instruments. Today such views are more marginal, and the music has built up a tradition and a body of accompanying critical writing. It remains less commercially [popular](#) than most other forms of jazz.

Beyond this, free jazz is most easily characterised in contrast with what we refer to here as "other forms of jazz", an umbrella which covers [ragtime](#), [dixieland](#), [swing](#), [bebop](#), [cool jazz](#), [jazz fusion](#) and other styles.

"Other forms of jazz" use clear regular [meters](#) and strongly-pulsed [rhythms](#), usually in 4/4 or (less often) 3/4. Free jazz normally retains a general pulsation and often swings but without regular metre, and often with frequent *accelerando* and *ritardando*, giving an impression of the rhythm moving in waves. Often players in an ensemble adopt different tempi. Despite all of this, it is still very often possible to tap one's foot to a free jazz performance; rhythm is more freely variable but has not disappeared entirely.

Other forms used harmonic structures (usually cycles of diatonic chords). Improvisors played solos using notes based on the notes in the chords. Free jazz almost by definition dispenses with such structures, but also by definition (it is, after all, "jazz" as much as it is "free") it retains much of the language of earlier jazz playing. It is therefore very common to hear diatonic, altered dominant and blues phrases in this music. It is also fairly common for a drone or single chord to underpin a performance (see [modal jazz](#)), but the absence of such rudimentary devices is typical as well.

Finally, other forms use composed melodies as the basis for group performance and improvisation. Free jazz practitioners sometimes use such material, and sometimes do not. In some music which is called "free jazz", other compositional structures are employed, some of them very detailed and

complex; the music of Anthony Braxton furnishes many examples. It would perhaps be best to call this modern or [avant-garde jazz](#), reserving the term "free jazz" for music with few or no pre-composed elements.

## Philosophies

The emergence of free jazz, like previous developments in jazz, was largely tied to the African-American experience. Just as the development of [bebop](#) was a reaction against popular [swing music](#), free jazz emerged to counter the growing white interest in finger-popping [soul jazz](#) and other music of the 1950s. This idea can be seen in the approaches of the musicians themselves, as in Ornette Coleman's *This is Our Music* (1960). Both these developments, bebop in 1940 and free jazz in 1960, reveal directions that were more intellectual, less danceable, and less marketable to white audiences. Groups like the Art Ensemble of Chicago, the flagship group of the Association for the Advancement of Creative Musicians (AACM), and Sun Ra made Black identity an integral part of their public personae as musicians, more visibly than previous generations of jazz musicians. This is not to say that the music was racially segregated; white bassist Charlie Haden was a member of Ornette Coleman's influential quartet from the very beginning, and free jazz's principles were quickly assimilated into musical developments in all corners of global society.

Many free jazz musicians regard the music as signifying in a broadly religious way, or to have gnostic or mystical connotations, as an aide to meditation or self-reflection, as evidenced by Coltrane's *Om* album, or Charles Gayle's *Repent*.

## Free jazz in the world

Outside of North America, free jazz scenes have become established in Europe and Japan. Saxophonists Peter Brotzmann, Evan Parker, trombonist Conny Bauer, guitarist Derek Bailey and drummer Han Bennink were among the most well-known early European free jazz performers, and all continue making music in the 21st century. European free jazz can generally be seen as approaching [free improvisation](#), with an ever more distant relationship to jazz tradition. That being said, specifically Brotzmann has had a significant impact on the free jazz players of the U.S. Japanese guitarist Masayuki Takayanagi and saxophonist Kaoru Abe, among others, took free jazz in another direction, approaching the energy levels of noise. Some international jazz musicians have come to North America and become immersed in free jazz, most notably Ivo Perelman from Brazil and Gato Barbieri of Argentina (this influence is evident in Barbieri's early work, but fades in his more commercially successful efforts). American musicians like Don Cherry, John Coltrane, and Pharoah Sanders integrated elements of the music of Africa, India, and the Middle East for a sort of [World music](#)-influenced free jazz.

# Free music

**Free music**, like free software, is music that can freely be copied, distributed and modified for any purpose. Thus free music is either in the public domain or licensed under a public license. It does not mean that there should be no fee involved. The word free refers to freedom (as in free software), not to price.

Some free music is licensed under licenses that are intended for software (like the GPL) or other written media (the GFDL). But there are also licenses especially for music and other works of art, such as EFF's Open Audio License, the Ethymonics free music license ([1]), LinuxTag's OpenMusic License ([2]), the Free Art license and the Creative Commons Licences.

Some record labels distributing free music:

- Jamendo
- Kahvi
- Krayola Records
- LOCA Records
- Magnatune
- Opsound

Category: [Music industry](#).

## Free reed aerophone

A **free reed aerophone** is a [musical instrument](#) where sound is produced as air flows past a vibrating reed in a frame. Air pressure is typically generated by breath or with a bellows.

## Operation

The following illustrations depict the type of reed typical of [harmonicas](#), [accordions](#) and reed organs as it goes through a cycle of vibration. One side of the reed frame is omitted from the images for clarity; in actuality, the frame surrounds the reed on four sides.

Each time the reed passes through the frame, it interrupts air flow. These rapid, periodic interruptions of the air flow initiate the audible vibrations perceived by the listener.

In a free-reed instrument, it is the physical characteristics of the reed itself, such as mass, length, cross-sectional area and stiffness, that primarily determine the pitch (frequency) of the musical note produced. Of secondary importance to the pitch are the physical dimensions of the chamber in which the reed is fitted, and of the air flow.

## History

The most likely precursor to free reed aerophones is the Jew's harp, an instrument known to many cultures throughout the world, and by many names. In this instrument, the main sound producer is the vibrating reed tongue itself, rather than the air flow.

Various free reed instruments appear to have been invented since antiquity, but were unknown in the West until comparatively recently. Among the ancient instruments, the Khene of Laos and the Sheng of China have survived to modern times. It has been claimed that the Sheng was brought to Saint Petersburg, Russia near the end of the 18th century, inspiring a series of inventions in the early 19th century that were the foundation of the development of the modern free reeds; Cyrill Demian's (*see below*) patent of 1829 however states that the reeds in his instrument "were known for more than 200 years as Regale, Zungen, Schnarrwerk, in organs."

Some notable early modern free reed instruments:

- Querhammerflügel with Aoline, circa 1810, made by Johann Kasper Schlimbach at Königshofen Bayern, using steel reeds and frames made in one part.
- The hand-aeoline, by Christian Buschmann, 1822.
- The [accordion](#), patented in 1829 by Cyrill Demian.
- The [concertina](#), patented in two forms (perhaps independently):
  - Sir Charles Wheatstone, 1844.
  - Carl Friedrich Uhlig, 1834.

## Other examples

- The [harmonica](#).

## Related instruments

In the related [woodwind instruments](#), a vibrating reed is used to set a column of air in vibration within the instrument. In such instruments, the pitch is primarily determined by the effective length of that column of air.

Categories: [Musical instruments](#)

## Freestyle battle

**Freestyle battles** are usually contests (though they can occur spontaneously) where [rappers](#) compete or *battle* each other in the form of [freestyle rap](#) or cypher. The intention is for each rapper to insult their opponents more cleverly than he or she insults the others. Winners are often judged by simple audience response, though more structured battles can involve appointed judges.

In freestyle battles, it is often considered an act of dishonor to recite (or "spit") any written raps, because it shows that the rapper who does so is incapable of spitting spur-of-the-moment lyrics.

Freestyle battling is expressed in many forms in rap culture, such as the popular movie *8 Mile*, where actor Eminem uses freestyle battling to win money and respect.

## Venue

Traditionally, a battle usually takes place before live audiences. Recently, however, the Internet has been used as a forum to hold online battles. Proponents of this developing artform that some call "text" or script say that the Internet provides a safe environment for artists to practice their skills. Without being hindered by beats, an online writer may use the full range of his or her imagination and vocabulary in a battle. The boundary is stressed even more so as many MCs or groups may record a "Diss Track" to spread and send throughout an audience or directly to another MC or group via the internet, CDs, or radio. Critics however, argue that true battles can only be held before a live audience.

The live audience involved in a freestyle battle is critical. In a battle rap the MC is downgrading his opponent and all of his words are aimed to his opponent, but he is really playing to the crowd. The crowd can serve as a way to breakdown the opponent by making him look inferior in front of his peers. The crowd's response is what drives the two battling rappers. And in most cases, it is the crowd that determines the winner of the battle.

## Battle raps

**Battle raps** are raps written about **freestyle battles**. They often incorporate the same self-glorification, insulting language, and violent metaphors as a real freestyle battle, but they are written beforehand, allowing the rapper to create much more complex, wittier verses than he or she would be able to in a freestyle battle. These raps romanticize real freestyle battles, express machismo and/or disgust with other rappers (sometimes referred to as wack MCs), or are sometimes created just as a fun exercise of lyrical skill. Some of the most significant Hip hop rivalries have been the result of the battle rap.

Battle raps are closer to the original form of MCing than concept raps, which are more essayic or narrative in form. This is because they feature 'shout outs' and insulting language, which are actually an evolved form of the roasting that was part of the original MC's craft (or toasting as it was called in Jamaica by Ragga and other dub artists).

## **Battle rappers**

Some of the best-known battle rappers are:

- Big L
- Hieroglyphics (hip hop)
- Chester P (British)
- Eminem
- Eyedea
- Jin
- Juice
- Rhymefest
- Sirius Jones
- Supernatural
- Papoose

## Freestyle music

**Freestyle** or **Latin Freestyle**, also called **Latin Hip Hop** in its early years, is a form of [electronic music](#) that is heavily influenced by Hispanic (Cuban, Dominican, Puerto Rican, & Mexican) and African-American culture. Freestyle emerged around 1982 and hit its peak in 1987. It continues to be produced today and enjoys some degree of popularity, especially in urban Latino population centers. Another popular modern genre Florida breaks evolved from this sound.

The music first developed primarily in New York City and Miami in the mid-1980s. It eventually grew to other cities with a Hispanic population which include Chicago, Philadelphia, Union City and Los Angeles. Initially, it was a fusion of the vocal styles found in 1970s disco music with the syncopated, synthetic instrumentation of 1980s electro, as favored by fans of breakdancing. It was also influenced by sampling, as found in [hip hop music](#). In the 1990s, the electro and hip hop influences were supplanted by [house music](#). Freestyle music based on house rather than electro is sometimes referred to as **Freestyle-House**.

## Term usage

Why freestyle is actually called freestyle is subject to speculation.

Some feel the term *freestyle* may refer to the difference between the mixing techniques used by DJs spinning this form of music (at least in its pre-house incarnations) and those who were spinning disco, the only other widely played dance music that incorporated sung vocals. Disco, with its relatively predictable beat structure, could be mixed with smooth, slow, and consistent techniques, but freestyle's syncopated beat structures demanded that DJs get creative, incorporating aspects of both disco and [hip\\_hop](#) techniques; they often had to (or had more freedom to) mix more quickly and more responsively to the individual pieces of music.

Others believe it refers to the vocal technique: singing melodic pop vocals over the kind of beats that were previously used only with rap and semi-chanted electro-funk vocal styles was a form of "freestyling" —getting creative by mixing up the styles— somewhat akin to the use of the term in reference to competitive, "freestyle rap."

Another explanation is that the dancing associated with this music allows for a great degree of freedom of expression than the other music that was prevalent at the time. Each individual dancer is "free" to create his or her own "style."

## Musical heritage

Before 1982, hip hop was based on rather traditional genres, typically funk and disco tracks such as Good Times by CHIC. It was only the rapping that clearly made the distinction as to what constituted a rap track.

The music of early rap records was performed live in the studio and then mixed with the rapping, whereas live hip hop was two turntables and a microphone with DJs such as Kool DJ Herc, Afrika Bambaataa and Grandmaster Flash. Herc was a Jamaican, and in the beginning he brought the Jamaican tradition of dee jaying (toasting) and mixing to the Bronx, NY. In the end, Jamaican and African American traditions merged into the new music called hip hop.

### ***Planet Rock***

Herc first tried to make people listen to the [reggae](#) tracks from Jamaica but it didn't work. Then he started using [funk](#) and [soul](#) records, focusing on the instrumental breaks. The *Ultimate Breaks and Beats* series includes tracks from "Mary Mary" to "Apache" which have been sampled many times and are still used today by hip hop DJs. Of course, this music was organic rather than electronic. But hip hop DJs discovered weird sounds from Europe such as Kraftwerk's Numbers, Art of Noise's "Beatbox" and Trans Europe Express, which, although electronic, were funky and danceable. Back then, this music was called [techno](#).

With Baker and Robie, Afrika Bambaataa mixed famous samples from Kraftwerk's Trans Europe Express and Numbers with funkier sounds inspired by Captain Sky's Super Sperm and taking melodic elements from a rock version of Ennio Morricone's The Mexican. The result: Planet Rock (1982) by Afrika Bambaataa and the Soul Sonic Force, a track that transformed hip hop music.

This new style of hip hop came to be called Electro Funk. A group of young singers named Planet Patrol recorded a sung version of Planet Rock, Play at your own risk, also produced by Baker and Robie. Electro Funk was to rule hip hop for the next few years, both in NY and LA (Egyptian Lover, World Class Wreckin Cru), and in Miami, a new kind of hip hop called Miami Bass would emerge. House music was also heavily influenced by Electro Funk. John Robie and Arthur Baker realized the potential of the new genre and went on mixing the sound with [R&B](#) Vocals: *I.O.U.* by Freeez featuring John Rocca was an instant club hit, charting high and becoming an instant classic on numerous compilations.

### **The music**

It is a genre with rather clear features: a dance tempo with stress on beats 2 & 4; syncopation on a bassline, lead synth, or [percussion](#), with optional stabs (provided as synthesized brass or orchestral samples); 16th beat high-hat; a [chord progression](#) which lasts 8, 16, or 32 beats and is usually in a minor key; relatively complex, upbeat melodies with singing, verses, and a chorus, with themes about love or dancing. Freestyle music in general is heavily influenced by Latin music, especially with respect to rhythms and brass/horn and keyboard parts. The Latin "clave" rhythm can be felt in many songs (such as in the defining Clave Rocks by Amoretto). The tempo of Freestyle music is almost always between 110 and 130 beats per minute (BPM), typically around 118 BPM. The keyboard parts are often elegant and clever, with many short melodies and countermelodies, again a strong influence from Latin music.

## Early cultural effects

The new exciting sounds rejuvenated the funk, soul and hip hop club scenes. While most of the neighborhood clubs were closing their doors for good, some Manhattan clubs were suddenly thriving. Places like the Roxy, the Funhouse, Broadway 96, Gothams West, and Roseland that played this were packed. Records like "Play At Your Own Risk" by Planet Patrol, "One More Shot" by C Bank, "Numbers" by Kraftwerk, "Al-Naafiyish (The Soul)" by Hashim and "I.O.U." by Freeez became huge hits. Some producers wisely copied the sound and made songs that were more melodic. Records like "I Remember What You Like" by Jenny Burton, "Running" by soon-to-be pop stars Information Society, and "Let The Music Play" and "Give Me Tonight" by Shannon were all over New York radio. Many people list Let the Music Play as the first freestyle track. Indeed, Let the Music Play became freestyle's biggest record, still getting heavy airplay through radio and other venues. The song was produced by Chris Barbosa, a Latino from NY. Barbosa changed and refined the electro funk sound, adding Latin American rhythms and a totally syncopated drum sound. That was definitely a reason why the style came to be very popular among Latinos as well as Italian Americans. Furthermore, many DJs who played the music, such as Jellybean, Tony Torres, Raul Soto and Roman Ricardo were Hispanic. However, those on stage performing the songs were not, neither were most of the producers making the music. For example, Information Society's notable hit "Running", was written by Murat Konar, whom is of Indian descent, and produced by the band, which is of Scandinavian descent. This marks a notable merging of underground Hispanic and African-American urban cultures, hence, the names *Latin Hip Hop* or *Latin Freestyle*. Now, the more neutral term *Freestyle* is generally preferred.

KPWR (Power 106) in Los Angeles, WQHT-FM (Hot 97) in New York, and XHRM-FM (Hot 92.5) in San Diego began playing hits by artists like TKA, Sweet Sensation, and Expose on the same playlists as Pop superstars like Michael Jackson and Madonna. Tracks like TKA's One Way Love and Sweet Sensation's Hooked On You received new life and the success of these tracks as well as the just-released Show Me by the Cover Girls helped get them added to stations around the country. "(You Are My) All and All." by Joyce Sims became the first Freestyle record to cross over into the [R&B](#) market. It was also one of the first Freestyle records to crack the European market. Although still in its early stages, Freestyle was now getting national attention, and was fast becoming dance music for the 80s.

## The Miami scene

Not only electro was very popular in Miami, also freestyle was embraced with the southern Latin capital of the US. Pretty Tony, a.k.a. Tony Butler, actually first made electro, then bass and finally freestyle. He had a one man group called Freestyle and his success would begin in 1983 with the hit single 'Fix it in the Mix' and later that year a strong showing with artist Debbie Deb singing "When I Hear Music". Joining him in early 1984 New York rapper TK Rodriguez fronted the group Fastlane and would release the single 'Young Ladies' Hip hop's first southern track. That year TK introduced Pretty Tony to Arthur Baker, Kurtis Blow and Afrika Bambaataa and he worked alongside Butler on Debbie Deb's 'Look Out Weekend'. Rodriguez' introduction of freestyle singer Trinere would become Butler's most successful artist and production.

Company B, Stevie B, Paris By Air, Linear, Will To Power, and Exposé's later hits defined Miami Freestyle. Many labels confused New York Freestyle and Miami Freestyle, thinking they had the same audience. They thought their promotional strategy would work for both genres, which resulted in skipping the all too important step of cultivating a record at the street and club level before going to radio. This often led to poor results for the New York-based Freestyle. New York Freestyle, even in its most polished forms, retained a raw edge and underground sound, using minor chords that made the tracks darker and more moody. The lyrics also tended to be about unrequited love or other more somber themes, dealing with the reality of what inner city teens were experiencing emotionally.

Miami records on the other hand, tended to be more optimistic, using major chords similar to those used in early disco giving them a more upbeat sound. This is probably why the Miami records fared better at mainstream Pop radio than New York Freestyle. Some Miami artists like Stevie B, after doing their first shows in the New York market, saw the difference and began using the Miami sound combined with New York Freestyle, often with successful results.

## Freestyle as a pop-crossover genre

By 1989, [Freestyle](#) was at its peak as an underground genre. Around this time, Lisa Lisa and Cult Jam, one of the first Latino freestyle acts to get behind the microphone, began to make it big on the freestyle scene. Their records were produced by Full Force, who also made UTFO's music and even once worked together with James Brown. The music of Lisa Lisa and Cult Jam was less electro and more pop, and that was also probably the reason why groups such as Lisa Lisa and Cult Jam, TKA, Sweet Sensation and especially the Cover Girls were able to crossover into the pop market at the end of the 1980s.

Soon thereafter, however, freestyle was seemingly swallowed up by the mainstream pop industry: MC Hammer, Paula Abdul, Bobby Brown, New Kids On The Block and Milli Vanilli had definite freestyle influences, with their hip hop beats and electro samples, but were undoubtedly a new pop-mainstream form of the underground dance music of the 1980s, repackaged with catchier tunes, slicker production and MTV-friendly videos. Along with this pop appropriation of the genre and the success of these artists, not only on crossover stations but R&B stations as well, freestyle ceased to be as important as an underground genre, giving way to newer genres, such as [Gangsta rap](#) and new forms of [Dance music](#) coming from Europe and Detroit, such as [House](#), [Trance](#) and [Rave](#), which seemed younger, fresher and newer than their freestyle influences.

## **The Freestyle Comeback**

Freestyle, staying largely an underground genre with still a sizeable following in New York, has seen a recognizable comeback in the cities the music once dominated. In Miami, a Latin radio station shoved aside their Reggaeton music blocks to make room for Freestyle playlists. A recent Madison Square Garden concert showcasing Freestyle's greatest performers went very well-received, and new Freestyle being released appears to be well-taken by longtime Freestyle enthusiasts and newcomers alike.

## Selected freestyle hits

### 1980s

Alisha - Baby Talk  
C-Bank - I Won't Stop Loving You  
Carmen - You & Me  
Company B - Fascinated  
Coro - Where Are You Tonight  
Cover Girls - Show Me  
Cynthia - Change On Me  
Debbie Deb - When I Hear Music  
Exposé - Point Of No Return  
Fascination - Don't You Think It's Time"  
Freeez - I.O.U.  
Freestyle - Don't Stop The Rock  
Hanson and Davis - Hungry For Your Love  
Information Society - Running  
Jaya - If You Leave Me Now  
Joyce Sims - (You Are My) All And All  
Jellybean - The Mexican  
Johnny O - Fantasy Girl  
Judy Torres - No Reason To Cry  
Leather & Lace - Tender Heart  
Lisa Lisa & Cult Jam - Can You Feel The Beat  
Nancy Martinez - For Tonight  
Nayobe - Please Don't Go  
Nice N Wild - Diamond Girl  
Nocera - Summertime, Summertime  
Noel - Silent Morning  
Nolan Thomas - Yo, Little Brother  
Pajama Party - Yo No Sé  
Planet Patrol - Play At Your Own Risk  
Pretty Poison - Catch Me (I'm Falling)  
Sa-Fire - Boy, I've Been Told  
Shannon - Let The Music Play  
Stevie B - Dreaming Of Love  
Sweet Sensation - Hooked on You  
Trinere - How can we be wrong  
Timex Social Club - Rumors  
Tina B - Honey To A Bee

### 1990s

Alisha - Bounce Back  
Angelina - Release Me  
Angelique - I Can't Live Without You/No Puedo Vivir Sin Ti  
Bernardo - Why Did You Quit On Me  
Bomfunk Mc'S - Freestyler  
Buffy - Give Me a Reason  
Chase - Forget Me Not  
Collage - I'll Be Loving You  
Corina - Temptation  
Coro - Do Unto Me  
Clear Touch - Cherish  
Cynthia - How I Love Him  
Daize - "Misery"  
George Lamond - It's Always You  
Jocelyn Enriquez - I've Been Thinking About You  
Lil' Johanna - Real Love  
Lil' Suzy - Take Me In Your Arms  
Lina Santiago - Feel So Good  
Joi Mae - He's My Baby  
Lisette Melendez - A Day In My Life (Without You)  
Nina Bena - Sweetheart  
Planet Soul - Set You Free  
Rare Arts - Boricua Posse  
Rochelle - Holding On to Love  
Rockell - In A Dream  
Rockell & Collage - Can't We Try  
Samantha - Be Sure  
Spanish Fly - "Treasure Of My Heart"  
Timmy T - "Time After Time"  
TKA - Maria  
Two In A Room - El Trago  
Voyce - Here We Are

TKA - Scars of Love  
Voice In Fashion - Only In The  
Night  
Will To Power - Dreamin'

# Freestyle rap

**Freestyle rap** is an improvisational form of [rapping](#), that is with no previously composed lyrics, and reflecting a direct mapping of the mental state and performing situation of the artist. It is similar in this sense to improvisational music or acting and draws comparisons to improvisational [Jazz](#) in particular. Freestyle Rap is generally believed to have originated in the [East Coast hip hop](#) scene in the mid to late 1980s.

Due to the improvised nature of freestyle, rules for meter and rhythm are usually relaxed relative to conventional rap. Many artists base their set on the situation and mental state, but have a ready supply of prepared lyrics and rhyme patterns they can use as filler or even around which they can build their set. Often, freestyling is done in a group setting (called a cypher) or as part of a freestyle battle. In these cases, freestyle verses are often prepared in the rapper's head as the other rappers in the cypher or the opponent in the battle take their turn. Freestyling is also often used by many rappers when beginning to write a song, in order to get a feel for the beat and to brainstorm lyrical ideas.

Freestyles have been mostly an underground phenomenon since the early nineties, partly due to rap lyrics becoming considerably more complex in terms of rhyme scheme and meter. Furthermore, many rappers often deliver standalone written verses on radio shows that are referred to or labelled on records or on filesharing programs as freestyles, which has somewhat distorted the meaning of the term. There is often confusion as to whether or not "freestyle verses" are in fact freestyled, with many rappers' written lyrics being simple enough to seem freestyled and many of the best freestylers' improvised lyrics being complex and confident enough to seem written. In the early 21st century, freestyling (particularly freestyle battling) experienced a resurgence in popularity of sorts as successful freestyle battle competition TV shows were shown by both BET and MTV, and Eminem's movie 8 Mile brought the excitement of the freestyle battle to mainstream movie audiences.

# Freetekno

## Type of illegal party

Free party / Squat Party

Teknival

**Freetekno**

Sound system

## Music Played at the Parties

*Also see [Rave music](#)*

[breakcore](#) - free tekno - [gabba](#) - [jungle](#) - [psychedelic trance](#) - [speedcore](#) - [terrorcore](#) - [acid techno](#) and [techno](#)

**Freetekno** is the name for both a type of music (also known as hardtek) and a cultural movement that is present in both Europe and North America. Freetekno sound systems or tribes form in loose collectives, frequently with anarchist philosophies. These sound systems join together to hold parties wherever a viable space can be found - typical locations include warehouses (also known as squat parties), fields, abandoned buildings or forests. Because freetekno parties are usually held illegally this sometimes leads to clashes with the police, as was the case at both the 2004 and 2005 Czechtek festivals and many other, smaller parties around the world at different times.

London in the United Kingdom plays host to "free parties" (term used by the squat party scene) thrown by an array of sound systems every week. A regular theme is (and always has been) techno, although drum & bass, breakbeat and hardcore can be common. Parties will occur all over London from derelict/deserted buildings in the borough of Hackney Wick to empty office blocks in the City of London.

## Music

Free tekno or hardtek is also a style of music which takes elements from both [techno](#) and [hardcore](#) and tends to be very fast and loaded with energy. Speedbass, speedcore and other forms of underground music can be heard at freetekno parties. Freetekno events do not always play spine-crunching, brain melting, ear-drum shattering [hardcore](#), though; [Psychedelic trance](#), [drum and bass](#), [Breakbeats](#), [world beat](#), [house](#), and many types of experimental [fusion](#) music are also popular at freetekno events.

## Organization

There is no central organizing body for freetekno sound systems or parties. It is not a specific group of people, but rather a way of living and partying that ties together diverse individuals. Sound systems start up between friends. Trust and respect are key elements of the scene.

Free tekno parties are likely to attract many sorts of people: ravers, punks, squatters, students. In summer, parties are planned which go on for up to one week. All artists are invited to contribute and sometimes up to eighty sound systems attend. These parties are termed teknivals.

The atmosphere is friendly and the party goes police themselves. Racism, sexism and aggression are not tolerated. The freetekno party is a good example of a Temporary Autonomous Zone.

## How To Host a Freetekno Party

Freeteknitians share a Do It Yourself attitude. Let this section be a guide on how you can throw your own Freetekno party. There are several things that you will need if you are planning a freetekno party. Have these items arranged and confirmed (to the hour) well in advance, as it is a big stress to try and arrange them the day of the event.

### Location

Scout out your location well in advance. If it's an urban party, check the place out first, maybe during the day time. Consider how easily and covertly you can get possibly hundreds of ravers inside the place. Check it out for dangerous drops, equipment, electrical and fire hazards. If you can deal with them, do so, otherwise use caution tape to secure them. If your location is in a forest or park, scout it out to make sure it's not all muddy.

### Map Point

Arrange a map point for people to meet at on the way to the party. Consider accessibility, perhaps place your map point along a transit route. Provide a link to Mapquest or Google Maps. Don't release your location or map point until 24 hours before the event. This discourages pushers and police from showing up and ruining your fun.

### Power Source

The most popular power sources are gas-fired generators, like the kind a person may buy for use at a cottage. Gas generators typically provide the most power, and are thus preferred by most soundsystems. They are not the only alternative, though, many soundsystems run off of discarded car batteries. The downside to this is the weight and bulk of your power source. There are even some soundsystems out there that are run by bicycle power

### Speakers

Obviously if you want to make noise, you'll need speakers. Powered speakers are ideal as they don't require an amp, but old amps are easy to

come by anyways. If you don't have speakers you can rent them from music stores in your area. Be on the lookout for discarded speakers, as well. They may still be salvageable.

#### DJ equipment

If you want DJs to play, you'll need at least two turntables, a mixer (use a durable one) and all the necessary cables

#### Transportation

You'll need to haul all this stuff around, somehow. Arrange a ride well in advance. Be certain that your ride is available to haul the equipment to the party and back the next morning. Know your driver. Make sure the driver isn't intoxicated.

#### Decoration

Good decorations make the difference between a good party and a great party. Don't let this slip past you. Make your decorations weeks in advance.

## **Teknival**

Massive parties called teknivals are held across Europe and in Ontario every year, many of which attract thousands of people and can last a week or longer. Some feel that teknivals echo prehistoric rituals, and provide an experience greater than the sum of its parts.

## **History**

The freetekno movement appeared in first half of the 1990s and is currently very strong in France, Czech Republic, Slovak Republic, Italy, Netherlands, Great Britain, Spain, Italy, Germany, Austria, Poland and Canada.

## **Police Clashes**

More recently, the 12th annual tekival in the Czech Republic, known as Czechtek, was broken up by Czech police, leaving 50 citizens and police injured. The organisers of the festival are going to appeal to the Czech courts and protests were held in the aftermath in Prague. It was reported by various press that Czech Police were refusing entry at their borders to people suspected of going to the Tekinival. This refusal of entry was based upon looks, clothing and what car was being driven. Clearly breaching an array of European Law in the process.

## Spirit

Freetekno parties are known for their strong community and positive attitude. The people who throw these parties are usually putting themselves at great financial and legal risk, and are expecting nothing but a good time in return.

The majority of freetekno attendees understand this, and attempt to make the party as safe, comfortable and enjoyable as they can. There are exceptions to this, however, but the general attitude of freeteknitians is to allow people to be themselves.

Freeteknitians come from a wide variety of backgrounds. They have diverse political and religious beliefs and economic resources. Some generalities can be observed: Freeteknitians are often anarchists

# French house

**French House** is a late 1990s form of [house music](#), greatly influenced by 1970s and 1980s [disco](#) and [funk](#), as well as the productions of Thomas Bangalter. The music can be noted by the infamous "filter effect" (e.g. Daft Punk). French house may have vocal samples. French House is also known as "filter house" or "tefunk".

Examples:

Stardust - Music Sounds Better With You

Onira - Tight Leather

Thomas Bangalter & DJ Falcon - So Much Love To Give

Benjamin Diamond - Little Scare

Bel Amour - Bel Amour

Other French house artists: Demon, School, Jean Jaques Smoothie

## House

[Acid](#) - [Ambient](#) - [Chicago](#) - [Dark](#) - [Deep](#) - Dream - [Garage](#) - [Ghetto](#) - [Hard](#) - [Hip](#) - Italo - [Latin](#) - [Minimal](#) - [Microhouse](#) - Progressive - [Pumpin'](#) - [Tech](#) - [Tribal](#)

## Other [electronic music](#) genres

[Ambient](#) | [Breakbeat](#) | [Drum and bass](#) | [Electronica](#) | [Electronic art music](#) | [Hard dance](#) | [Hardcore](#) | [House](#) | [Techno](#) | [Trance](#) | [Industrial](#) | [Synthpop](#)

## Front ensemble

In a [marching band](#) or [drum corps](#), the **front ensemble** or **pit** is the stationary [percussion](#) ensemble typically placed in front of the football field. Originally, the front ensemble consisted of keyboard percussion and [timpani](#), the marching versions of which are heavy and awkward. Groups began adding more and more traditional percussion instruments to the pit, and in its modern form, the ensemble may contain any type of percussion instrument from [cymbals](#) to Afro-Cuban percussion such as [congas](#) to world percussion such as djembes. The main emphasis of the pit in drum corps style groups are the mallet instruments: marimba, [vibraphone](#), and [xylophone](#). Some marching band circuits also allow non-standard instruments (such as the [violin](#)) or electronic instruments (such as [synthesizers](#) and [electric guitars](#)) in the pit. However, this is extremely controversial and divisive within the drum corps community.

In Indoor Drumline, the front ensemble may not necessarily be placed at the "front" as the name suggests. The show designers can place the, where it would be most effective for the show. The ensemble still consists of the same instruments however, and can vary in size from as few as 1 or 2 people to as big as 20 or more people.

In a [stage musical](#), the accompanying [orchestra](#) sits in the orchestra pit. It is from this type of front ensemble that the term "pit" became used for a marching band/drum corps front ensemble.

# Frottola

The **frottola** was the predominant type of Italian popular, secular song of the fifteenth and early sixteenth century. It was the most important and widespread predecessor to the [madrigal](#). The peak of activity in composition of frottolas was the period from 1470 to 1530, at which time the form was replaced by the madrigal.

While "frottola" is a generic term, several subcategories can be recognized, as would be expected of a musical form which was used for approximately a hundred years, maintaining immense popularity for more than half of that time. Most typically, a frottola is a composition for three or four voices (more towards the end of the period), with the uppermost voice containing the melody: instrumental accompaniments may have been used. The poem usually has a rhyme scheme of abba for a ripresa (reprise), and a stanza of *cdcdda* or *cdcdeea*, though there is much variation between subtypes of frottola. Most likely the poetic forms are descended from the fourteenth-century ballata, though the music shows a startling simplification from late fourteenth-century practice.

Musically, the frottola avoids [contrapuntal](#) complexity, preferring homophonic textures, clear and repetitive rhythms, and a narrow melodic range. It was an important predecessor not only to the madrigal, but to much later practices in the [Baroque](#) era such as monody, since it anticipates chordal accompaniment, has the melody in the highest voice, and shows an early feeling for what later developed into functional harmony.

Very little is known about performance practice. Contemporary editions are sometimes for multiple voices, with or without lute tablature; occasionally keyboard scores survive. Frottolas may have been performed as solo voice with [lute](#) accompaniment—certainly Marchetto Cara may have performed them this way at the Gonzaga court, as is implied by his renown as lutenist, singer, and composer of frottolas—and they also may have been performed by other combinations of singers and instruments as well.

The most famous composers of frottola were Bartolomeo Tromboncino and Marchetto Cara, although some of the popular secular compositions of Josquin (for example *Scaramella* and *El Grillo*) are stylistically frottolas, though not in name.

The frottola was a significant influence not only on the madrigal, but on the French chanson, which also tended to be a light, danceable, and popular form. Many French composers of the period went to Italy, either to work in aristocratic courts or at the papal chapel in Rome. While in Italy they encountered the frottola, and incorporated some of what they heard in their native secular compositions.

## Composers

Composers of frottolas include:

Bartolomeo Tromboncino  
Marchetto Cara  
Filippo de Lurano  
Michele Pesenti  
Michele Vicentino  
Giovanni Brocco  
Antonio Caprioli  
Francesco d'Ana  
Lodovico Fogliano  
Giacomo Fogliano  
Erasmus Lapidida

Except for Tromboncino and Cara, who were extremely famous, very little is known about most of these composers; in many cases only their names survive, and those because Petrucci, the prominent Venetian publisher, included their names in collections containing their music.

# Funk

## Funk

**Stylistic origins:** [Soul music](#) with a more pronounced beat and influences from [Rhythm & Blues](#), [Jazz](#), [Rock and Roll](#) and [Psychedelic music](#)

**Cultural origins:** mid to late 1960s US

**Typical instruments:** [Guitar](#) - prominent [Bass](#) - [Drums](#) - [Horns](#)

**Mainstream popularity:** High in the 1970s, later revival of funk beats in metal and hip hop

## Subgenres

Go go - [P-Funk](#)

## Fusion genres

[Afrobeat](#) - [Funkcore](#) - [Funk metal](#) - [G-Funk](#)

**Funk** is a distinct style of [music](#) originated by African-Americans, e.g., James Brown and his band members (especially Maceo and Melvin Parker), and groups like The Meters. Funk best can be recognized by its syncopated three against four rhythms; thick bass line (often based on an "on the one" beat); razor-sharp rhythm guitars; chanted or hollered vocals (as that of Marva Whitney or the Bar-Kays); strong, rhythm-oriented [horn sections](#); prominent [percussion](#); an upbeat attitude; African tones; danceability; and strong jazz influences (e.g., as in the music of Miles Davis, Herbie Hancock, George Duke, Eddie Harris, and others).

## Characteristics

Compared to funk's predecessor, the [soul music](#) of 1960s, funk typically uses more complex [rhythms](#), while song structures are usually simpler. Often, the structure of a funk song consists of just one or two riffs. Sometimes the point at which one riff changes to another becomes the highlight of a song. The soul [dance](#) music of its day, the basic idea of funk was to create as intense a groove as possible.

One of the most distinctive features of funk music is the role played by [bass guitar](#). Before soul music, bass was rarely prominent in [popular music](#). Players like the legendary Motown bassist James Jamerson brought bass to the forefront, and funk built on that foundation, with melodic basslines often being the centerpiece of songs. Notable funk bassists include George Porter, Jr., Bootsy Collins and Larry Graham of Sly & the Family Stone. Graham is often credited with inventing the percussive "slap bass technique," which was further developed by later bassists and became a distinctive element of funk.

Some of the best known and most skillful soloists in funk have [jazz](#) backgrounds. Trombonist Fred Wesley and saxophonist Maceo Parker are among the most notable musicians in the funk music genre, both having worked with James Brown and George Clinton. Many funk musicians were

directly reacting to the increasingly complex structure of Bebop and Modern Jazz. Modern Jazz was becoming so complicated that there could be 4 chord changes per measure, creating a dizzying rapidfire movement through key centers and themes. Funk virtually abandoned chord changes, creating static single chord vamps with little harmonic movement, but with a complex and driving rhythmic feel. Jazz was, in turn, strongly influenced by funk in the 1970s, beginning with Miles Davis, the founder of the [jazz fusion](#) movement.

In funk bands, guitarists typically play in a percussive style. "Dead" or muted notes often are used in riffs to strengthen percussive elements. Jimi Hendrix was the pioneer of funk rock and his improvised other-worldly solos influenced Eddie Hazel of Funkadelic. Eddie Hazel, who later worked with George Clinton is one of the most notable guitar soloists in funk. Jimmy Nolen and Phelps Collins are famous funk rhythm guitarists who both worked with James Brown.

# History

## Origin of funk

The word "funk", once defined in dictionaries as body odor or the smell of sexual intercourse, commonly has been regarded as coarse or indecent. African-American musicians originally applied "funk" to music with a slow, mellow groove, then later with a hard-driving, insistent rhythm because of the word's association with sexual intercourse. This early form of the music set the pattern for later musicians. The music was slow, sexy, loose, riff-oriented and danceable. *Funky* typically described these qualities. In jam sessions, musicians would encourage one another to "get down" by telling one another, "Now, put some *stank* ('stink'/funk) on it!" At least as early as the 1930s, [jazz](#) songs carried titles such as Buddy Bolden's *Funky Butt*. As late as the 1950s and early 1960s, when "funk" and "funky" were used increasingly in the context of soul music, the terms still were considered indelicate and inappropriate for use in polite company.

The distinctive characteristics of African-American musical expression are rooted in West African musical traditions, and find their earliest expression in spirituals, work chants/songs, praise shouts, gospel and blues. In more contemporary music, gospel, blues and blues extensions and jazz often flow together seamlessly. Funky music is an amalgam of [soul music](#), [soul jazz](#) and [R&B](#).

## James Brown and funk as a genre

Only with the innovations of James Brown in the late 1960s was funk regarded as a distinct genre. In the R&B tradition, these tightly rehearsed bands created an instantly recognizable style, overlaid with catchy, anthemic vocals. Often cueing his band with the command, "On the one!" Brown changed the rhythmic emphasis from the two-four beat of traditional soul music to a one-three emphasis previously associated with white musical forms -- but with a hard-driving, brassy swing. This pumping, one-three beat became a signature of classic funk. While James Brown's 1965 Top 10 King Records hit "Papa's Got a Brand New Bag" is widely presumed to be the song that paved way for the funk genre, much of Brown's work in 1965 and 1966, though remarkable, still maintained the rhythms and approach found in earlier records. It was the #1 R&B hits "Cold Sweat" in 1967, "I Got The Feelin'" and "Say It Loud, I'm Black And I'm Proud" in 1968 that further defined the feel of funk. R&B #1's "Give It Up Or Turn It Loose" and "Mother Popcorn" in 1969 continued to solidify the tight rhythms, riffs and grooves for which funk music is known, setting the standard for James Brown's future work and the rising wave of funk to come in the 1970s.

Other musical groups picked up on the riffs, rhythms, and vocal style innovated by James Brown and his band, and the style began to grow. Dyke &

the Blazers based in Phoenix, Arizona released "Funky Broadway" in 1967, perhaps the first record to have "funky" in the title. Meanwhile, on the West Coast, Charles Wright & the Watts 103rd Street Rhythm Band were releasing funk tracks beginning with their first album in 1967, culminating in their classic single "Express Yourself" in 1970. The Meters defined funk in New Orleans starting with their Top Ten R&B hits "Sophisticated Cissy" and "Cissy Strut" in 1969. Another group who would define funk in the decade to come were The Isley Brothers whose funky 1969 #1 R&B hit, "It's Your Thing", signaled a breakthrough in black music bridging the gaps of the rock of Jimi Hendrix and the upbeat soul of Sly & the Family Stone.

## 1970s and P-Funk

In the 1970s, a new group of musicians further developed the "funk rock" approach innovated by Jimi Hendrix. George Clinton, with his bands Parliament and, later, Funkadelic, produced a new kind of funk sound heavily influenced by [jazz](#) and [psychedelic music](#). The two groups had members in common and often are referred to singly as "Parliament-Funkadelic." The breakout popularity of Parliament-Funkadelic gave rise to the term "[P-Funk](#)," which both referred to the music by George Clinton's bands and defined a new subgenre.

"P-funk" also came to mean something in its quintessence, of superior quality, or *sui generis*, as in the lyrics from "P-Funk," a hit single from Parliament's album "Mothership Connection":

*"I want the bomb. I want the P-Funk. I want my funk uncut."*

The 1970s was probably the era of highest mainstream visibility for funk music. Other prominent funk bands of the period included Earth, Wind & Fire, Bootsy's Rubber Band, The Meters, Tower of Power, Ohio Players, The Commodores, War, Kool & the Gang, Confunkshun, Slave, Cameo, Midnight Star, Lakeside, the Bar-Kays, Betty Davis, Zapp, and many more.

Two bands in particular, Earth, Wind & Fire and Tower of Power, took the rhythmic power of funk and added to it more complex song forms, combined with large scale instrumentation -- large horn sections, latin percussion, numerous capable soloists. These bands sold many records and brought the funk ethos to a larger audience.

Already, in late 1960s, many jazz musicians — among them Horace Silver, Herbie Hancock (with his Headhunters band), Grover Washington, Jr., and Cannonball Adderley, Les McCann and Eddie Harris — had begun to combine jazz and funk. Sometimes this approach is called "jazz-funk". Additionally, in the late 1960s work of Miles Davis (with girlfriend/wife Betty Davis) and Tony Williams helped to create [Jazz fusion](#) and influenced funk.

Funk music was exported to Africa in the late 1960s, and melded with African singing and rhythms to form Afrobeat. Fela Kuti was a Nigerian musician who is credited with creating the music and terming it "Afrobeat".

[Disco](#) music owed a great deal to funk. Many early disco songs and performers came directly from funk-oriented backgrounds.

## 1980s and stripped-down funk

In the 1980s, many of the core elements that formed the foundation of the P-Funk formula began to be usurped by machines. Horns were replaced by

[synths](#), effectively phasing out horn sections, and the horns that remained were simplified from the patterns and hooks of the earlier funk sound. Horn solos were out. The classic keyboards of funk, like the Hammond B3 organ and the Fender Rhodes piano began to be replaced by the brash sound of new digital synthesizers like the Yamaha DX7. Drum machines began to replace the "funky drummers" of the past, and the slap and pop style of bass playing began to fall out of favor, often replaced by thinner sounding and rhythmically simpler keyboard bass. The lyrics and hooks of funk began to change from often suggestive and using double entendre to more graphic and sexually explicit. Rick James was the first funkateer of the 80s to assume the funk mantle dominated by P-Funk in the 70s. His 1981 album *Street Songs* with the singles "Give It To Me Baby" and "Super Freak" resulted in James becoming a bit of a rock star, and paved the way for the future direction of explicitness in funk. Prince, using a stripped-down instrumentation similar to Rick James, went on to have as much of an impact on the sound of funk as any one artist since James Brown. Prince combined eroticism, technology, an increasing musical complexity, and an outrageous image and stage show to ultimately create a musical world as ambitious and imaginative as P-Funk or The Beatles. The Time, originally conceived as an opening act for Prince and based on his "Minneapolis sound", went on to define their own style of stripped-down funk based on tight musicianship and sexual themes.

Bands that began during the 1970s P-Funk era incorporated some of the uninhibited sexuality of Prince and state-of-the-art technological developments to continue to craft funk hits. Cameo, Zapp, The Gap Band, The Bar-Kays, and The Dazz Band all found their biggest hits in the 80s, but by the latter half of the 80s, funk had lost its commercial impact.

Afrika Bambaataa influenced by Kraftwerk created "Electro Funk", a minimalist machine-driven style of funk with his single "Planet Rock" in 1982. Also known simply as Electro, this style of funk was driven by synthesizers and the electronic rhythm of the TR-808 drum machine. The single "Renegades of Funk" followed in 1983.

## Recent developments

While funk was all but driven from the radio by slick commercial [R&B](#) and [New Jack Swing](#), its influence continued to spread. Rock bands began adding elements of Funk to their sound, creating new combinations of "funk rock" and [funk metal](#). Jane's Addiction, Prince, Primus, Fishbone, Faith No More and the Red Hot Chili Peppers spread the approach and styles garnered from funk pioneers to all new predominantly white audiences in the mid-to-late 1980s and the 1990s. These bands later inspired the underground mid-1990s [funkcore](#) movement.

Artists like The Brand New Heavies and Me'shell Ndegeocello carried on with strong elements of funk in the 1990s, but never came close to reaching the commercial success of funk in its heyday.

Today, [hip hop](#) artists regularly sample old funk tunes. James Brown is said to be the most sampled artist in the history of hip hop. P-Funk also is sampled frequently—samples of old Parliament and Funkadelic songs formed the basis of West Coast G Funk. Dr. Dre (considered the progenitor of the [G-Funk](#) genre) has freely acknowledged to being heavily influenced by George Clinton's psychedelic funk: *"Back in the 70s that's all people were doing: getting high, wearing Afros, bell-bottoms and listening to Parliament-Funkadelic. That's why I called my album "The Chronic" and based my music*

*and the concepts like I did: because his shit was a big influence on my music. Very big".*

Funk is a major element of certain artists identified with the Jam band scene of the late 1990s and 2000s. Medeski Martin & Wood, Galactic, Soulive, and Karl Denson's Tiny Universe all drawing heavily from the funk tradition. Vermont-based Phish went through a period of funky jams which fans refer to as their "cow funk" stage.

Since the mid 1990s the New Funk scene, centered around the Deep Funk collectors scene, is producing new material influenced by the sounds of rare funk 45's. Labels include Desco, Soul Fire, Daptone, Timmion, Neapolitan, Kay-Dee, and Tramp. Bands include Sharon Jones and the Dap Kings, The Soul Destroyers, Speedometer, The Poets of Rhythm, The Neapolitans, Quantic Soul Orchestra, The New Mastersounds and Lefties Soul Connection. These labels often release on 45 rpm records. Although specializing in music for rare funk DJ's there is beginning to be cross over into the mainstream such as Sharon Jones' 2005 appearance on Late Night with Conan O'Brien.

## Funk dance

**Funk dance** or **funk styles** refer to [dance](#) styles that are primarily danced to [funk](#) music. More specifically they can be used for a group of street dance styles that originated in California in the 1970s, mainly [popping](#) and locking. Though these specific dance styles have today been incorporated into the hip hop culture to some extent, and are often seen danced to [hip hop music](#) and [electronica](#) as well, they were originally and are still commonly danced to funk music. One of the reasons that the term *funk styles* first appeared was to give these dances their own identity and avoid them being primarily associated with hip hop and breakdancing.

# Funk metal

**Funk metal** is a type of [music](#) that incorporates hard-driving [heavy metal guitar](#) riffs, the pounding [bass](#) rhythms characteristic of [funk](#), and sometimes, [hip hop](#)-style rhymes. The style emerged in the mid-1980s pioneered by Extreme in the mid-1980s, and later popularized by the Red Hot Chili Peppers, Prince, Primus, and Faith No More.

# Funkcore

## Funk

**Stylistic origins:** [Soul music](#) with a more pronounced beat and influences from [Rhythm & Blues](#), [Jazz](#), [Rock and Roll](#) and [Psychedelic music](#)

**Cultural origins:** mid to late 1960s US

**Typical instruments:** [Guitar](#) - prominent [Bass](#) - [Drums](#) - [Horns](#)

**Mainstream popularity:** High in the 1970s, later revival of funk beats in metal and hip hop

## Subgenres

Go go - [P-Funk](#)

## Fusion genres

[Afrobeat](#) - **Funkcore** - [Funk metal](#) - [G-Funk](#)

**Funkcore** is a [musical genre](#), or perhaps movement, derived from a fusion of American-styled [hardcore punk](#) and [funk](#). Most often, hard, loud, fast [guitars](#) are featured, but unlike in [rock music](#), it does not overpower the [bass](#), which is heavy and driving. [Drums](#) are often funk-influenced, but with intense [metal](#)-styled pounding. [Synthesizers](#) or [trumpets](#) sometimes make an appearance, although they are not integral.

## Origins

Since the early days of punk, some bands had taken a funk and [soul](#) influence. Rock legends the Clash, famed for their musical experimentation, briefly adopted a funky sound for some tracks on their album Sandinista!. Later, groundbreaking post-punk group Gang of Four took a punk sound and attitude and coupled it with funky bass licks and groove-driven tunes. However, the first punk band to create a true funk fusion was the seminal Austin, Texas band, The Big Boys, who could be seen as the first truly "funkcore" band. The Big Boys, which lasted from 1978 to 1984, became known for explosive and funky live shows. They slowed down punk tempos to allow for syncopated rhythms and played with non-punk bands such as the Washington, D.C., go-go act Trouble Funk as well as seminal punk bands such as Minor Threat and Black Flag. The Big Boys can be seen as a direct precursor to funky rock acts such as the Red Hot Chili Peppers and Fishbone. The Red Hot Chili Peppers especially epitomise funkcore, and inspired many modern funkcore bands. Their fusion of funky bass-heavy rhythms and punk rock leads became the basis of all funkcore.

The genre may be in its infancy, but a number of bands have embraced this style. (Liberty Spike have dubbed themselves "the definitive funkcore band" in jest). The label *funkcore* is somewhat ambiguous, with some [rapcore](#) bands (Korn have been labelled "[emo-funk-core](#)" by OnlineSeats.com) sometimes using the term. Again, many bands fit the loose definitions of funkcore, but also include elements of [electronica](#), most often because of influence by [industrial metal/industrial rock](#) artists.

## Funkcore bands

Many bands claim to be inspired largely by Faith No More's funk-metal sound. In the nineties, popular bands such as Rage Against the Machine, Red Hot Chili Peppers and Primus comprised the funk-metal scene, another major influence for many bands. Some funkcore bands, often those influenced heavily by punk rock or Rage Against the Machine, are highly political like their inspiration, such as Australia's Liberty Spike or the UK's James Brown's Corpse. The most popular bands in America tend to be more commercial. Xashinto Fwong, The Quartermass Experiment and The New Imprint are good examples of American funkcore. Early Incubus tracks are considered to be funkcore, as the band stated that their original influences include Red Hot Chili Peppers, Primus, and Mr. Bungle. (See Fungus Amongus and S.C.I.E.N.C.E.)

# Funky drummer

The "**funky drummer**" [break](#) is one of the most used sampled [drum](#) loops in [hip hop](#) and [drum and bass](#) music, together with the [Amen break](#), which is more related to drum-and-bass.

The original song from which the break is sampled is James Brown's song "Funky Drummer" (recorded November 20, 1969 in Cincinnati, Ohio). The drums on the original song are played by Clyde Stubblefield, who was the drummer for Brown's band at that time. Rapper and producer Edan's mix-tape "Sound of the Funky Drummer" features only tracks which use the "Funky Drummer" beat.

Rappers who sample James Brown have included references to him and even this song in their lyrics, two examples being LL Cool J in "Boomin' System" ("The girlies, they smile, they see me comin, I'm steady hummin, I got the Funky Drummer drummin") and Public Enemy in "Fight the Power" ("1989 the number, another summer, sound of the funky drummer.")

## Track list

The following is an incomplete list of tracks that employ the funky drummer break.

100th Monkey - "I Don't Know"  
2 Live Crew - "Coolin'"  
808 State - "Pacific 202"  
A Tribe Called Quest - "Separate / Together"  
Atari Teenage Riot - "Start The Riot"  
Beastie Boys - "Shadrach"  
Big Daddy Kane - "Mortal Combat"  
Biz Markie - "Spring Again"  
Bone Thugs-N-Harmony - "Fuck tha Police"  
Candy Flip - "Strawberry Fields Forever"  
Chumbawamba - "The Wizard of Menlo Park"  
Coldcut - "Say Kids, What Time Is It?"  
Credit To The Nation - "Call It What You Want"  
De La Soul - "Oodles of O's"  
Depeche Mode - "My Joy"  
DJ Jazzy Jeff & the Fresh Prince - "2 Damn Hype", "Hip Hop Dancer's Theme", "Jazzy's Groove", "Magnificent Jazzy Jeff", "Pump Up the Bass"  
DJ Teh Cheat (Homestar Runner) - "Everybody to the Limit" -  
Dr. Dre - "Let Me Ride"  
The Dream Academy - "Love"  
Enigma - "Carly's Song"  
Eric B. & Rakim - "Lyrics of Fury", "Relax With Pep"  
Fine Young Cannibals - "I'm Not the Man I Used to Be"  
Gang Starr - "2 Deep"  
George Michael - "Waiting For That Day"  
Geto Boys - "Read These Nikes", "Mind of a Lunatic"  
GusGus - "Purple"  
Heavy D - "Flexin'"  
Ice Cube - "Jackin' For Beats", "Endangered Species"  
Ice T - "Radio Suckers", "Original Gangster", "I Ain't New Ta This"  
Jam & Spoon - "Kaleidoscope Skies"  
Kid 'n Play - "Slippin'", "Foreplay"  
Kool G Rap - "It's a Demo"  
K-Os - "B-Boy Stance"  
Kris Kross - "Jump", "Lil' Boys in Da Hood"  
Lassigue Bendthaus - "Re-Cloned"  
LL Cool J - "Mama Said Knock You Out"  
Masters At Work - "Jus' a Lil' Dope"  
MC Frontalot - "Good Old Clyde"  
Mobb Deep - "Flavor For the Non-Believers"  
My Bloody Valentine - "Instrumental B"  
Nas - "Get Down"  
Naughty by Nature - "Hot Potato", "Ready For Dem"

NWA - "Fuck tha Police", "Quiet on tha Set"  
Pete Rock & CL Smooth - "Go With the Flow"  
The Pharcyde - "Officer"  
Pizzicato Five - "Baby Love Child"  
Prince - "Gett Off", "My Name is Prince"  
Public Enemy - "She Watch Channel Zero", "Bring the Noise", "Rebel  
Without a Pause", "Fight the Power"  
Redman - "Rated R"  
Run-DMC - "Beats to the Rhyme", "Back From Hell", "Word is Born",  
"Run's House"  
Salt-N-Pepa - "Let the Rhythm Run"  
Scarface (rapper) - "Born Killer"  
Scorn (band) - "The Wizard" (Black Sabbath cover)  
Sinéad O'Connor - "I Am Stretched On Your Grave"  
Sir Mix-A-Lot - "No Holds Barred"  
Slick Rick - "The Moment I Feared"  
Snap! - "Blasé Blasé"  
Sublime - "Scarlet Begonias"  
TLC - "Shock Dat Monkey"  
Ultramagnetic MC's - "Give the Drummer Some"  
US3 - "An Ordinary Day in an Unusual Place (Pts. 1 & 2)"  
Vanilla Ice - "Stop That Train"

## Furniture music

***Furniture music***, or in French *musique d'ameublement* (sometimes more literally translated as *furnishing* music), is [background music](#) originally played by live performers. The term was coined by Erik Satie, apparently in 1917, that is a few years before muzak was invented - this term rather indicating background music from *recorded* resources.

# Satie's compositions

## The music

Although many other music by Erik Satie can be experienced (and is sometimes indicated as) furniture music, Satie applied the name only to five short pieces, composed in three separate sets:

- 1st set (1917), for [flute](#), [clarinet](#) and [strings](#), plus a [trumpet](#) for the first piece:
  - 1. **Tapisserie en fer forgé** - pour l'arrivée des invités (grande reception) - A jouer dans un vestibule - Mouvement: *Très riche* (Tapestry in forged iron - for the arrival of the guests (grand reception) - to be played in a vestibule - Movement: Very rich)
  - 2. **Carrelage phonique** - Peut se jouer à un lunch où à un contrat de mariage - Mouvement: *Ordinaire* (Phonic tiling - Can be played during a lunch or civil marriage - Movement: Ordinary),
- 2nd set, **Sons industriels** (Industrial sounds, February/March 1920), for [piano](#) duet, 3 clarinets and [trombone](#):
  - Premier Entr'acte: **Chez un "Bistrot"** (First Entr'acte: At a "Bistro")
  - Second Entr'acte: **Un salon** (Second Entr'acte: A drawing room)
- 1923, commissioned by Mrs Eugène Meyer jr. (living in Washington DC), for small orchestra:
  - **Tenture de cabinet préfectoral** (Wall-lining in a chief officer's office)

The first set was apparently never performed (nor the score published) during Satie's lifetime.

The second set contained reminiscences of popular tunes by, amongst others, Camille Saint-Saëns and Ambroise Thomas. It was premiered in Paris the year it was composed, as intermission music to a lost comedy by Max Jacob. During these intermissions the audience was invited to visit an exposition of children's drawings in the gallery hosting the premiere.

Indications of the intentions of the artists giving the first performance are found in the manuscript of the score:

Furnishing divertissement organised by the group of musicians known as the "Nouveaux Jeunes"  
Furnishing music replaces "[waltzes](#)" and "[operatic](#) fantasias" etc.  
Don't be confused! *It's something else!!!* No more "false music"  
Furnishing music completes one's property;  
it's new; it doesn't upset customs; it isn't tiring; it's French; it won't wear out; it *isn't boring*  
--quoted in Gillmor, 1988, p 325-326

See also Entr'acte article for more details regarding the circumstances of this first, and only documented, public performance of furniture music during Satie's lifetime, assisted by the composer himself.

The separate commissioned piece was sent to America. There are no known public performances or publications of this music prior to leaving the European continent. This piece is sometimes presented as *furniture music No. 3*.

As Satie's pieces of *furniture music* were, unlike *Muzak*, very short pieces, with an indefinite number of repeats, this kind of furniture music later became associated with repetitive music (sometimes used as a synonym of [minimal music](#)), but this kind of terminology did not yet exist in Satie's time.

## Publication

For a quarter of a century after the composer's death, all of the *furniture music* pieces remained hidden for the general public, apart from being mentioned in early Satie biographies. By the end of the 1960s parts of the furniture music started to appear as facsimile illustrations to press articles and new Satie biographies. The first full publication of sets 1 and 3 followed in the early 1970s. There was no full publication of the 2nd set before the last years of the 20th century.

## Revival

Several decades after Satie's death *furniture music* was revived, largely due to the American composer John Cage, as the composer's theory of [minimalist](#) background music. Furniture music appeared as the launchpad for minimalist/experimental/avant-garde musics since it was the first instance of music being played or produced out of context. Music not as a centerpiece but as a cerebral backdrop.

These and other related ideas were picked up by several composers of the neo-Classical/20th Century school of music, accentuating atmosphere and texture over traditional form and movement. The minimalist references and anachronisms weren't solidified until composer John Cage performed Satie's "hidden" piece Vexations 840 times as per requested by Satie's own scribbled notes on the original sheet music.

# Futurepop

## Futurepop

**Stylistic origins:** [Electronic body music](#), [Trance](#), [Synthpop](#)  
**Cultural origins:** Mid 1990s, Norway, United Kingdom, United States, Germany, Canada  
**Typical instruments:** [Synthesizer](#) - [Drum machine](#) - [Sequencer](#) - [Keyboard](#) - [Sampler](#)  
**Mainstream popularity:** Medium  
**Derivative forms:** Technopop

## [Subgenres](#)

none

## Other topics

### [Subgenres of industrial](#)

**Futurepop** is a recently-emerging electronic dance music genre, an outgrowth of [electronic body music](#) incorporating influences from [synthpop](#) (such as [song structure](#) and vocal style) and [uplifting trance](#) (grandiose and arpeggiated [synthesizer](#) melodies). The term was coined by Ronan Harris (of VNV Nation) and Stephan Groth (of Apoptygma Berzerk) while attempting to describe the style of music their bands produced.

In recent years the basic futurepop concept has been expanded upon in various ways, with bands like mind.in.a.box and Rotersand pushing the progressive trance aspect of the genre, while others such as XPQ-21 have incorporated further influences from [industrial](#) and [synthpop](#). Further, traditionally harder [aggrotech](#) bands are using futurepop-style melodic hooks in their songs, such as Suicide Commando and SITD.

Futurepop music is popular in the cyber, [goth](#) and general alternative electronic scenes. Music festivals that feature futurepop bands include Infest, Wave Gotik Treffen and M'era Luna.

## Gabber music

**Gabber**, **gabba** (pronounced *gahba* or *gahbuhr* in Dutch), or **hardcore**, is a subgenre of [electronic music](#) that is a subgenre of [hardcore techno](#). The style was born in the Dutch city of Rotterdam in the early 1990s. The essence of the gabber sound is a distorted kick sound, overdriven to the point where it becomes a square wave and makes a recognizably melodic tone. Gabber tracks typically also include samples and synthesised melodies with the typical tempo ranging from 160 to 220 bpm.

# Origins

## The term 'gabber'

The term traces its roots back to the Hebrew word for 'mate' or 'friend'. Apocryphally, one of these gabbers wanted to enter the Roxy in Amsterdam, where the bouncer said, "No, gabber, you can't come in here." Source of the Dutch term for the genre, "gabberhouse", was DJ "Hardy" Ardy Beesemer.

## The origins of the gabber sound

In general the track *We Have Arrived* (1990) by Mescalinum United is considered to be the first gabber track. The first Dutch gabber track is *Rotterdam Termination Source's Poing* (1992). The record shop Midtown in the Nieuwe Binnenweg of Rotterdam is one of the shrines of Gabber music. Fans dressed in Australian and Cavello tracksuits, Nike Air Max sport shoes, bomber jackets, and the majority of them would have shaven heads. The bald gabbers did not see male gabber fans with a head of hair as real gabbers and referred to them as "swabbers", comparing their head of hair to a mop. Female fans often shaved the sides and back of their head and wore their hair in a pony tail. Later, in 1999 and beyond, their clothing style more and more changed and brands like Fred Perry, Lonsdale and Ben Sherman were added to their outfits.

The style began in the late 1980s, but some claim that it was diluted by happy hardcore and, for hardcore fans, by commercialisation which resulted in a younger crowd being attracted to the scene. The commercial organisation ID&T helped a lot in making the music popular by organising parties and selling merchandise. After the airing of what were felt by many hardcore fans as humiliating video clips, notably *Hakke en Zage* (1996) by Gabber Piet, some gabbers felt they were being made fun of. The name gabber is somewhat less used these days to describe this music style. Many would now prefer to call the style 'hardcore'. After surviving underground for a number of years, in 2002 the style has become more popular again in the Netherlands.

## Nu style gabber

There was a somewhat divisive split in the hardcore scene starting in the late 1990s. Some producers started embracing a slower style characterized by a deeper, harder bass drum that typically had a longer envelope than was possible in the traditional, faster style. This newer sound was referred to as "New Style" (or "Nu Style") and "New Skool" and as the tempo got slower and slower it began to become similar to hard house. Many hardcore enthusiasts hated hard house and the club scene it typifies, and frequently DJs would be

booed by one group of fans and cheered for by another at the same party, depending on the tempo and style of music they were playing. This is similar to the rivalry and mutual dislike that surfaced earlier between fans of "regular" hardcore and happy hardcore. Eventually the two styles met in the middle, and most gabber today is produced in a bpm range of 160-170. This is typically a little bit slower than the Rotterdam style of the mid-90's and somewhat faster than the slowest Newstyle tracks that emerged.

## Style

Gabber is characterised by its bassdrum sound. Essentially, it comes from taking a normal synthesized bassdrum and overdriving it heavily. The approximately sinusoidal sample starts to clip into a squarewave with a falling pitch. This results in a number of effects: the frequency spectrum spreads out, thus achieving a louder, more aggressive sound. It also changes the amplitude envelope of the sound by increasing the sustain. Due to the distortion, the drum also develops a melodic tone. It is not uncommon for the bassdrum pattern to change pitch throughout the song to follow the bassline.

The second frequently used component of gabber tracks is the "hoover", a patch of the Roland Alpha Juno synthesizer. A "hoover" is typically a distorted, grainy, sweeping sound which, when played on a low key, can create a dark and brooding bassline. Alternatively, when played at higher pitches, the hoover becomes an aggressive, shrieking lead. Faster gabba tracks often apply extremely fast hoover-patterns - gapping (changing the volume rapidly between the maximum and silence) is often used. Common elements also include guitar riffing (often done live at gabber parties) and MCing (more often than not also distorted).

Lyrics and themes of gabber usually deal with self-indulgence, sex, violence and anti-establishment. However, it must be noted that gabber songs usually carry a hint of irony in themselves - although some songs are meant to be taken seriously, this is by no means a trend.

The aforementioned two subgenres of gabba differ in essentially one thing: the tempo.

- **Oldskool gabba**, staying true to its mentality, defines "hardness" in speed: tracks rarely go under 160 BPM, and bassdrum rolls often go up to a speed where the beats themselves are hardly distinguishable from each other.
- **Nuskool gabba**, however, slows the speed down to 150 BPM, but extends the length of the bassdrum so the bass-frequency resonance keeps on longer. (In this aspect, "nugabba" obviously cannot be considered less powerful than its precursor, although slower hardcore is often less energetic.) A typical style in the subgenre is what fans apostrophe as *shuffle gabba* or *triplet gabba*, a style best made known by Rotterdam Terror Corps: the beats are divided into triplets and all hoover notes are played in a short, staccato-like fashion, giving the song a march-like feel.

## Subdivisions

The gabba genre has a number of different styles related to it, including [speedcore](#), [terrorcore](#), [hardcore](#), [breakcore](#), [darkcore](#), frenchcore, [hardstyle](#), jumpstyle, [bouncy techno](#), nu style gabba, extratone and noizecore.

## Misconceptions

It is a misconception that all gabber is simple and loud music. The style later became (somewhat limited by the fans' taste) a creative style, in which complex [rhythmic](#) and [melodic](#) combinations are very common. In much of gabber, melodies and drums are overlaid with a number of filter effects, which adds richness to the music. Gabber has grown into a serious style of music where producers are encouraged to experiment.

Because of the extreme tempo of the music, and the shaven heads and clothing preference being associated with skinheads or neo-nazis, some generalize that gabber fans are all members or supporters of neo-rightist or neo-Nazi groups. For example, in the early 1990s, gabber gained a following in the very small neo-fascist rave scene in the American Midwest and in Germany.<sup>[1]</sup> Yet most gabber fans are opposed to racism, fascism, and sexism.

The gabber scene is often associated with the use of speed, ecstasy, ketamine and other drugs. This, of course, is also just generalization - while it is true that many drug-user gabber fans exist, it is no way required.

While this music style is very distinct, some sampling from the UK rave music scene is apparent. Gabber events follow the same DJ and MC format, and many of the same philosophies of unity.

## Gaelic punk

**Gaelic Punk** is a subgenre of [punk rock](#) consisting of groups and bands singing in Scottish Gaelic as an effort to preserve and spread knowledge of the minority language. The term has also been used to retrospectively describe the Irish Celtic influenced Pogues. Other bands labelled as such include Flogging Molly, The Real Mackenzies and Dropkick Murphys, who while singing in English, make use of traditionally Gaelic musical instruments such as [bagpipes](#) and fiddle.

Gaelic punk has gained recent media attention, both through Gaelic and English channels in Scotland by coverage of bands such as Oi Polloi and Mill a h-Uile Rud, who have started writing and recording in the Scottish Gaelic language.

## History

Runrig is the best known Gaelic rockband, but there was certainly a history of other rock bands singing in Scottish Gaelic, including Ultravox (Man of Two Worlds). However most rock music in Gaelic pre-Gaelic punk was of the folk rock variety. The exception may be Scatha, a band from Tomintoul (not to be confused with a Brazilian band of the same name), who were playing music classed as [thrash metal](#) (sometimes [grindcore](#)) in Gaelic during the mid-1990s.

The Scottish Gaelic language first appeared on the punk scene with *Gaelic for Punks* classes at the Edinburgh European City of Punk festival, held in 1997. The event was covered by Scottish Gaelic news programme Telefios, which helped spread the word and spark an interest in this alternative Scottish Gaelic music. The bands who took it upon themselves to promote Scottish Gaelic see it as a political effort to spread and promote the Scottish Gaelic language, as well as other minor languages internationally in order to preserve biocultural diversity.

Punk in the Welsh language, by bands such as Anhrefn, was also an inspiration, being in existence for much longer, and also having met with success. However, a chief difference, is that Welsh punk has emerged from the language's heartlands, whereas Gaelic punk has often been by learners and outsiders.

## Notable bands

There are currently three punk bands that use the Scottish Gaelic language in their music:

Oi Polloi from Edinburgh, Scotland  
Mill a h-Uile Rud, Seattle, United States  
Atomgevitter, Glasgow, Scotland

Another group, although not falling into the Gaelic punk genre, is Nad Aislingean which record their [pop](#)/techno music in Scottish Gaelic.

Mill a h-Uile Rud were the feature of a documentary made by "BBC Alba"'s arts series Ealtainn, which followed them on a tour of Europe as well as filming them at gigs in the "Gaelic-speaking heartland" of the Isle of Lewis. Both national and local radio has featured the bands, as has national and international printed media. Recently both the widely read Maximum Rocknroll and Punk Planet carried features on this new sub-genre of punk.

Oi Polloi have recently completed recording a full length LP - **Ar Cànan, Ar Ceòl, Ar-a-mach** - entirely in Gaelic. This makes it the first full-length rock LP sung entirely in Gaelic since Runrig released their *Play Gaelic* LP in the late 1970's. Lyrics and sleeve-notes are entirely in Gaelic and English translations are only available on their website. The LP has also marked a musical change with an emphasis on more melodic, radio-friendly songs. The LP was supported by a five-week European tour which took in several countries as well as minority cultures such as Brittany and Catalonia.

# Galant

In music, **Galant** was a term referring to a style, principally occurring in the third quarter of the 18th century, which featured a return to [classical](#) simplicity after the complexity of the late [Baroque](#) era. This meant (in some implementations) simpler music, with less ornamentation, decreased use of polyphony (with increased importance on the [melody](#)), musical phrases of regular length, a reduced harmonic vocabulary (principally emphasizing tonic and dominant), and a less important bass line. It was, in many ways, a reaction against the showy [Baroque](#) style. Probably the most famous composer in the Galant style was Johann Stamitz.

Movement toward the preponderance of a homophonic texture in music had begun more than two centuries earlier, when composers started to insert sustained passages of homophony in their [masses](#) and [motets](#) to underline important portions of the text. It proceeded through the 16th century with the development of such generally homophonic vocal genres as the [frottola](#) and [villanella](#) in Italy, which led to monody and [opera](#), the [air de cour](#), air a boire and other continuo-accompanied songs in France, and the English [lute song](#). Homophony grew popular during these years in instrumental music as well. Composed instrumental music seems to have consisted almost exclusively of transcribed [chansons](#) and other vocal works, or else the mere playing of such on instruments rather than singing them, until fairly late in the 15th century. In addition to this, however, existed a tradition of improvised dance-accompaniment music, and what early surviving instrument-specific compositions that are not of liturgical function follow in that vein. Indeed, a gulf between liturgical and non-liturgical instrumental music soon grew which was similar to that between the two vocal categories, though this was manifested more in form than texture.

During the 17th century, local schools of keyboard, plucked-instrument, and ensemble styles arose in France, England, and Italy, while the Germans tended to take stylistic elements from various sources. The stratification of melody and accompaniment that had been developing in vocal music also greatly influenced the instrumental; the two treble-plus-basso continuo texture of the Corellian trio sonata late in the century, for example, clearly derives from that of the earlier Monteverdian "concerto" for a few voices and continuo. It was in these local schools that emerged and congealed the characteristics called "galant," a style which was fully-fledged by the 1720s, and which, it is important to note, was recognised and referred to by this name in the writings of such contemporary commentators as Johann Mattheson (an important German theorist and composer), and Johann Joachim Quantz (composer and flute pedagogue).

Composers at least some of whose work can be described as galant include Francois Couperin, Jean-Philippe Rameau, and Jean-Fery Rebel of France, Giovanni Battista Sammartini, Baldassare Galuppi, and Antonio Vivaldi of Italy, the three most important Bach sons, Georg Philipp Telemann, and Johann Gottlieb Graun of Germany, and in England Thomas Augustine Arne, William Boyce, and John Stanley. As can be seen, perhaps, from some of these names, the galant style existed alongside of others, such as the lingering but increasingly retrospective high Baroque in all its national forms. As can equally

be seen, the galant style was a driving force leading to the incipient "classical," or "Viennese classical" style to which point some works of Sammartini, Vivaldi, and C.P.E. Bach in particular among the above-mentioned composers. The German mid-18th century style arising from and sometimes synonymous with the galant is the *Empfindsamer Stil*, which in part led to the tendencies often called *Sturm und Drang*.

# Galante music

## History of European art music

|                     |               |
|---------------------|---------------|
| <u>Medieval</u>     | (476 – 1400)  |
| <u>Renaissance</u>  | (1400 – 1600) |
| <u>Baroque</u>      | (1600 – 1760) |
| <u>Classical</u>    | (1730 – 1820) |
| <u>Romantic</u>     | (1815 – 1910) |
| <u>20th century</u> | (1900 – 2000) |

## Contemporary classical music

A new style of European classical music, fashionable from the 1720s to the 1770s, was called **Galante music**. It consciously simplified contrapuntal texture and intense composing techniques that realized a pattern on the page and substituted a clear leading voice with a transparent accompaniment. Progressive musicians of Bach's own generation were seeking a fresh, immediate emotional appeal.

As early as 1721, the German theorist Johann Mattheson recognized a modern style, *einem galanten Stylo* and named among its leading practitioners Giovanni Bononcini, Antonio Caldara, Georg Philipp Telemann and operatic composers we might consider baroque: Alessandro Scarlatti, Antonio Vivaldi and Handel (Hertz 2003). All were composing Italian opera seria, a voice-driven musical style, and opera remained the central form of galante music. The new music was not as essentially a court music as it was a city music: the cities emphasized by Daniel Hertz, a recent historian of the style, were first of all Naples, then Venice, Dresden, Berlin, Stuttgart and Mannheim, and Paris. Many galante composers spent their careers in less central cities, ones that may be considered consumers rather than producers of the style galante: Johann Christian Bach and Karl Friedrich Abel in London, Paisiello in St Petersburg, Telemann in Hamburg and Boccherini, quite isolated, in Madrid.

The rejection of so much accumulated learning and formula in music is paralleled only by the rejection in the early 20th century of the entire structure of key relationships. Not every contemporary was delighted with this revolutionary simplification: Johann Samuel Petri, in his *Anleitung zur Praktischen Musik* (1782) spoke of the "great catastrophe in music" (Blume 1970).

The change was as much at the birth of Romanticism as it was of Classicism. The folk-song element in poetry, like the singable *cantabile* melody in galante music, was brought to public notice in Thomas Percy's *Reliques of Ancient Poetry* (1765) and James Macpherson's "Ossian" inventions during the 1760s.

Telemann's later music, Bach's sons, Quantz, Hasse, Giovanni Battista Sammartini, Giuseppe Tartini, Galuppi, Stamitz, Domenico Alberti, and early Mozart are exemplars of Galante style.

This simplified style was melody-driven, not constructed, as so much classical music was to be, on rhythmic or melodic motifs: "It is indicative that Haydn, even in his old age, is reported to have said, 'If you want to know whether a melody is really beautiful, sing it without accompaniment.'" (Blume 1970 p. 19)

The affinities of Galante style with Rococo in the visual arts are easily overplayed, but characteristics that were valued in both genres were freshness, accessibility and charm. Watteau's *fêtes galantes* were rococo not merely in subject matter, but also in the lighter, cleaner tonality of his palette, and the glazes that supplied a galante translucency to his finished pictures often compared to the orchestrations of galante music (Hertz 2005).

## Gallican chant

**Gallican chant** refers to the liturgical [plainchant](#) repertory of the Gallican rite of the Roman Catholic Church in Gaul, prior to the introduction and development of elements of the Roman rite from which [Gregorian chant](#) evolved. Although the music was largely lost, traces are believed to remain in the Gregorian corpus.

# Gametrack

**Gametrack** is a genre of music. It is soundtrack from video games, hence the name.

The name of the genre was found on a few files found on the Gnutella Network (Limewire and BearShare run on this network). Naturally, the files were shared over the network and more and more people downloaded them. The name could well have been a spelling mistake!

Gametrack is also the name of a set of motion sensor gloves available for the Playstation 2. An Xbox version release is planned.

# Gamewave

**Gamewave** is primarily classified as an [electronic music](#) genre that was born in the early 90s with the idea of creating a musical style influenced by [video game music](#).

Welle:Erdball, a new-wave band from Germany, are considered pioneers of the genre. Aside from Welle:Erdball, the genre was mostly dormant until 1998 and the appearance of Japanese group Metronome, their debut release (circa 2000) titled Yapuu ga Shoukansareta Machi. During the same year, Swedish group Machinae Supremacy were founded. Machinae Supremacy did not draw influences from Metronome and played in a considerably different vein, but both bands paralleled each other by combining [chiptune](#) music with the [rock](#) and [orchestra](#) genres.

By 2004-05, Metronome had already released dozens of singles, 5 albums, and 1 DVD. Machinae Supremacy had been allowing their fans to download a line of free MP3s which eventually encouraged the band to release *Deus Ex Machinae*, their first album. During this period several similar bands sprung up in Japan including MOSAIC.WAV and YMCK. The Western (mostly North American) scene did not possess many gamewave artists, aside from some groups like Colorado's Mr. Pacman. Game-music cover bands like The Advantage, The NESkimos, and The Minibosses were abundant, as were such bands in Japan. Groups like the 14 Year Old Girls and HORSE the band were considered game-related artists but not gamewave bands.

Gamewave music and lyrics have strong links with the video game community. Many gamewave bands have somehow been involved with games or game music - Machinae Supremacy composed the OST for Jets N Guns, a PC shooting game, while MOSAIC.WAV were well known for performing Hentai game theme songs.

Essentially, the genre loosely combines rock, orchestral, and most importantly chiptune elements. Although gamewave always drew from many other genres as well, the 3 mentioned are almost always present. At the same time, each band plays their own niche of music. Machinae Supremacy have a strong emphasis on SID/Metal, YMCK uses classical/jazz melodies, MOSAIC.WAV uses Akihabara Pop culture references (a.k.a. Akiba-Pop as their primary basis).

## Examples of Gamewave Albums

- Nyntändo-Schock by Welle: Erdball - 1993
- Yappu ga Shoukansareta Machi by Metronome - 2000
- 1Metronome by Metronome - 2003
- Deus Ex Machinae by Machinae Supremacy - 2004
- We Love Akiba-Pop! by MOSAIC.WAV - 2004
- Family Music by YMCK - 2004

Category: [Electronic music genres](#)

# Gangsta rap

**Gangsta rap** is a [subgenre](#) of [hip-hop music](#) which involves a lyrical focus on the lifestyles of inner-city criminals.

Although crime and violence in the inner city have always been part of [hip hop](#)'s lyrical canon, before the rise of gangsta rap the subject was not embraced or addressed so blatantly. Gangsta rap also signalled an end to the mainstream popularity of socially conscious lyrics put forward by [golden age](#) artists. Gangsta rap was pioneered by Ice-T, who was influenced by Schooly D's Hardcore rap but still mixed in a lot of social commentary in his lyrics. Crews such as N.W.A would go on to set the stage for gangster rap to be the norm.

With the popularity of Dr Dre's The Chronic in 1992, gangsta rap became the most commercially lucrative subgenre of hip-hop. Since then, many gangsta rap artists have moved towards a more pop-friendly mainstream sound.

## Controversy over subject matter

The subject matter inherent in gangsta rap has caused a great deal of controversy, with many observers criticizing the genre for the messages it espouses including homophobia, misogyny, racism, and materialism. Gangsta rappers generally defend themselves by pointing out that they are describing the reality of inner-city life and claim that when rapping, they are simply playing a character.

Given that the audience for gangsta rap has become predominately white, some commentators (for example, Spike Lee in his satirical film *Bamboozled*) have even criticized it as analogous to black minstrel shows and blackface performance, in which performers, both black and white, were made up to look African American, acted in a stereotypically uncultured and ignorant manner for the entertainment of white audiences. Some performers, such as The Geto Boys, are even accused of being cartoonish and over-the-top (though many artists, particularly the Geto Boys, would be the first to freely admit this).

More recently, gangsta rappers are endorsing a controversial tactic to avoid talking with police. It called "no snitching" and usually enforced in the lyrics of a certain rapper's songs. Others formed an underground campaign reportedly using *Stop Snitchin* shirts to encourage witnesses not to testify against drug dealers and gang members. Or to whereas frighten anyone with information about their crimes from snitching, or reporting to the police. The perceived response to such reporting is retaliatory violence against the snitcher.

## Gangsta rap in the 1980s

Los Angeles' Ice T is the first gangsta rapper due to his influential "Six n' da Mornin'" and other aggressive, gritty recordings (like Rhyme Pays, 1987); his first rap in 1982 included references to guns, "hoes" and "niggers", but he remained a low-key rapper until 1987. The N.W.A are crucial to the foundations of the genre by upgrading Ice T's lyrics to more violent lyrics. Gangsta rap is usually credited as being an originally West Coast phenomenon, due to the influence of Ice-T and N.W.A, as acts such as Schoolly D, BDP, and Public Enemy are usually considered hardcore rappers. Ice T's Gangsta Rap is based on Schoolly D's Hardcore Rap and it's a subgenre of the Hardcore Rap. After the disbandment of the N.W.A, Dr. Dre (one of the crew's former) pioneered a new style of Gangsta Rap called G-funk (Gangsta Funk) based on George Clinton's [P-funk](#) (Parliament Funkadelic).

## Hip hop moves west and gangsta rap appears

Until the very late 1980s, hip hop had been dominated by the East Coast (essentially New York City, though Philadelphia and New Jersey also had vital scenes), with West Coast hip hop a curiosity dominated by dance-heavy and critically reviled [electro hop](#) artists like Egyptian Lover and World Class Wreckin' Cru. The latter crew included Dr. Dre before he joined N.W.A.

Aside from electro hop, early pioneer gangsta rap artists, including most notably Ice-T, gained underground fame in the Los Angeles area during the mid 1980s. Ice-T is often considered the earliest gangsta rapper, though paradoxically, he is most well known to mainstream America for the controversy regarding "Cop Killer", a song from his [heavy metal](#) band Body Count's self-titled debut album which bears virtually no resemblance to modern forms of gangsta rap. Aside from N.W.A and Ice-T, early West Coast rappers include Too \$hort (from Oakland, California) turned from an Old School rapper to a gangsta rapper through the new [golden era](#) and others from Compton and Watts, Los Angeles, as well as Oakland, San Francisco and San Diego.

By the late 1980s, gangsta rap began to become a major force in hip hop. The first blockbuster hip hop album was N.W.A's Straight Outta Compton first released in 1988. Straight Outta Compton also established West Coast hip hop as a vital genre, and a rival of hip hop's long-time capital, New York City. Straight Outta Compton sparked the first major controversy regarding hip hop lyrics when their song "Fuck Tha Police" earned a letter from the FBI strongly expressing law enforcement's resentment of the song.

# Gangsta rap in the 1990s

## G funk and Death Row Records

In 1992, former N.W.A member Dr. Dre released *The Chronic*, which further established the dominance of West Coast gangsta rap and Death Row Records, and is also the beginning of [G-funk](#), a slow, drawled form of hip hop that dominated the charts for some time. Extensively sampling [P-Funk](#) bands, especially Parliament and Funkadelic, G-funk was multi-layered, yet simple and easy to dance to, with anti-authoritarian lyrics that helped endear it to many young listeners. Another G-Funk success was Ice Cube's *Predator* album released on the same time as *The Chronic* in 1992. It sold over 5 million copies and was #1 in the Charts. Despite the fact that Ice Cube wasn't a Death Row artist. One of the genre's biggest crossover stars was Dre's protégé Snoop Doggy Dogg (*Doggystyle*, 1993), whose exuberant party-oriented themes made songs such as "Gin and Juice" club anthems and top hits nationwide. Tupac Shakur (*Me Against the World*, 1995) has endured as one of the most successful West Coast hip hop artists of all time. Snoop and Tupac were both artists on Death Row Records, owned by Dre and Marion "Suge" Knight. Many of Tupac's greatest hits sampled or interpolated earlier music by Zapp & Roger.

## Mafioso rap

'**Mafioso rap**' is a hip hop sub-genre which flourished in the mid-1990s. It is the pseudo-Mafia extension of [East Coast hardcore rap](#), and was the counterpart of West Coast [G-Funk](#) rap during the 1990s. In contrast to [West Coast](#) Gangsta rappers, who tended to depict realistic urban life on the ghetto streets, Mafioso rappers' subject matter included self-indulgent and luxurious fantasies of rappers as Mobsters, or *Mafiosi*, while making numerous references towards notorious crime organizations of the Italian underworld, including the Gambino crime family and Cosa Nostra. Fantasized and fictional narratives told by Mafioso rappers are often adapted versions of classic crime thrillers, most notably *Bonnie and Clyde*, *The Godfather*, *Goodfellas*, *Casino*, *King of New York*, and *Scarface*. Another trademark feature of Mafioso rap is the idolizing of high profile organized crime figures. These crime kingpins range from legendary gangsters of the 1920s and 1930s such as Al Capone, Frank Costello, and Lucky Luciano, to the druglords of Latin America (including Pablo Escobar).

Kool G Rap was one of the first rappers to embrace the Mafioso theme in his subject matter. On his debut album, *Road to the Riches* (1989), Kool G Rap showcases graphic narratives about the "*glamorous life*" of a criminal:

*Gettin' richer and richer, the police took my picture  
But I still supplied, some people I knew died*

*Murders and homicides for bottles of suicide  
Money, jewelry, livin' like a star  
And I wasn't too far from a Jaguar car  
In a small-time casino, the town's Al Pacino  
For all of the girls, the pretty boy Valentino  
I shot up stores and I kicked down doors  
Collecting scars from little neighborhood wars  
Many legs I broke, many necks I choked  
And if provoked I let the pistol smoke  
Eyes of hate and their hearts get colder  
Some young male put in jail  
His lawyer so good his bail is on sale  
Lookin' at the hourglass, how long can this power last?  
Longer than my song but he already fell  
He likes to eat hardy, party  
Be like John Gotti, and drive a Maserati*

Kool G Rap's epic tales, chronicling the crime underworld of drug trafficking and the luxurious pleasures of the high-end illegal business, helped inspire the related Mafioso rap phenomenon of the mid-1990s, which later achieved some mainstream success and great critical acclaim with albums such as Raekwon's *Only Built 4 Cuban Linx*, AZ's *Doe or Die*, and Jay-Z's *Reasonable Doubt*. At the genre's zenith in the mainstream music industry, mafioso-inspired albums, including Nas's *It Was Written* and Biggie's *Life After Death*, went on to become multi-platinum commercial successes.

## **The rise of Bad Boy records**

Meanwhile, [East Coast rappers](#) like Black Moon (*Enta da Stage*, 1993), Mobb Deep (*The Infamous*, 1995), Nas (*Illmatic*, 1994) and the Notorious B.I.G. (*Ready to Die*, 1994) pioneered a grittier sound in East Coast gangsta rap or known as hardcore rap. B.I.G. and the rest of Puff Daddy's Bad Boy Records roster paved the way for New York City to take back chart dominance from the West Coast as gangsta rap continued to explode into the mainstream. The "East Coast/West Coast" battle between Death Row Records and Bad Boy Records resulted in the deaths of Death Row's Tupac Shakur and Bad Boy's Notorious B.I.G. This had a knock-on effect on Death Row itself, which sank quickly when most of its big name artists like Dr. Dre and Snoop Dogg left and it found itself on the receiving end of multiple lawsuits. Dr. Dre, at the MTV Video Music Awards, claimed that "gangsta rap was dead", which proved untrue. Bad Boy Records survived, though not untarnished. Puff Daddy's commercial empire continued to lose the support of the hip hop fan base with a mainstream sound aimed at middle-class America, and challenges from Atlanta and, especially, Master P's No Limit stable of popular rappers.

## **Southern and Midwestern gangsta rap**

After the deaths of Biggie and Tupac, gangsta rap remained a major commercial force. However, most of the industry's major labels were in turmoil, or bankrupt, and new locations sprang up.

Atlanta had been firmly established as a hip hop center by artists such as Goodie Mob and Outkast and many other Southern hip hop artists emerged in

their wake, whilst gangsta rap artists achieving the most pop-chart success. Jermaine Dupri, an Atlanta-born record producer and talent scout, had great success after discovering youthful pop stars Kris Kross (Totally Krossed Out, 1992) performing at a mall, and later masterminded a large roster of commercially successful acts on his So So Def label which although mostly weighted towards pop-rap & R&B, also included rap artists such as Da Brat (Funkdafied, 1994), and himself. Perhaps the most famous gangsta rapper from the South is Scarface for Rap-A-Lot Records.

Master P's No Limit Records label, based out of New Orleans, also became quite popular, though critical success was very scarce, with the exceptions of some later additions like Mystikal (Ghetto Fabulous, 1998). No Limit had begun its rise to fame with Master P's The Ghetto Is Trying to Kill Me! (1994, 1994 in music), and subsequent hits by Rappin' 4-Tay (Don't Fight the Feeling, 1994), Silkk the Shocker (Charge It 2 Da Game, 1998) and C-Murder (Life or Death, 1998). Cash Money Records, also based out of New Orleans, had enormous commercial success with a very similar musical style and quantity-over-quality business approach to No Limit but achieved even less critical acclaim and were widely ridiculed.

Cleveland based rap group Bone Thugs-N-Harmony also had a monumental impact on the Midwestern gangsta rap scene. The mid-1990s saw Bone metamorphose into an extremely popular commercial rap assemblage with the release of their critically acclaimed album E 1999 Eternal. Their fast, harmonizing vocals (coupled with their fast rap delivery) changed the limitations of gangsta rap.

Houston, TX The Geto Boys were the first rappers from H-Town, and the first dirty douth rappers. But Today music from Houston is much more mainstream then it was when Geto Boys were rapping. With mainstream rappers from Houston such as Lil Flip, Mike Jones, Chamillionaire, Paul Wall, Slim thug, and Micheal "5000" Watts production. Yet there is still underground music in Houston such as Bun b, Pimp C, UGK, Z-Ro, Scarface and the Geto Boys

## The mainstream era

Before the late nineties, gangsta rap and hip hop in general, while being extremely popular, had always been seen as a fringe genre that remained firmly outside of the pop mainstream. However, the rise of Bad Boy Records signaled a major stylistic change in gangsta rap (or as it is referred to on the East Coast, hardcore rap), as it morphed into a new subgenre of hip hop which would become even more commercially successful. Notorious B.I.G. is seen by many to have initiated gangsta rap's move towards conquering the pop charts, as he was the first hardcore gangsta rapper to produce albums as a calculated attempt to include both gritty gangsta narratives and polished, catchy, danceable pop productions entirely aimed at the clubs and at the mainstream pop charts. Between the release of Biggie's debut album Ready to Die in 1994 and his follow-up Life after Death in 1997, his sound changed from the darker, sample-heavy production to a cleaner, more upbeat sound fashioned for popular consumption (though the references to guns, drug dealing and life as a thug on the street remained). [R&B](#)-styled hooks and instantly recognizable samples of well-known [soul](#) and [pop](#) songs from the 1970s and 1980s were the staples of this sound, which was showcased primarily in his latter-day work for The Notorious B.I.G. ("Mo Money, Mo Problems"), Ma\$e ("Feels So Good"), and non Bad Boy artists such as Jay-Z ("Can I Get A...") and Nas ("Street Dreams"). Very little of this commercially minded music was met with acclaim from hip hop enthusiasts or critics, however - Puff Daddy's "loop it and leave it"

style of sampling, which most of the time just consisted of rapping over someone else's instrumental, was criticized heavily. Generally, the era in which this sound prospered (called the "Shiny Suit Era" by some due to Puffy and Ma\$e's tendencies to wear expensive clothing that would literally shine) is not fondly remembered, and it is no coincidence that its rise to prosperity was virtually paralleled by a surge of activity in underground and alternative hip hop scenes.

Also achieving similar levels of success with a similar sound at the same time as Bad Boy was Master P and his No Limit label in New Orleans, as well as the New Orleans upstart Cash Money label. A Cash Money artist, The B.G., popularized a catch phrase in 1999 that sums up what the majority of late-nineties mainstream hip hop focused on subject-wise: "Bling-Bling." Whereas much gangsta rap of the past had portrayed the rapper as being a victim of urban squalor, the persona of late-nineties mainstream gangsta rappers was far more weighted towards hedonism and showing off the best jewelry, clothes, liquor, and women. Many of the artists who achieved such mainstream success in fact started out as straight gangsta rappers - artists such as Ma\$e, Jay-Z and Cam'Ron are straight out of the mid-90s New York school of gritty gangsta rap, influenced by artists such as the Notorious B.I.G, Mobb Deep, and Nas. Ma\$e, Jay-Z and Cam'Ron are also typical of the more relaxed, casual flow that became the pop-gangsta norm. However many of these artists are not considered to be gangster like their contemporary peers of the west coast.

Pop-inflected gangsta rap continues to be successful into the 21st century, with many artists deftly straddling the divide between their hip hop audience and their pop audience, such as Ja Rule and Jay-Z. The influence of West Coast gangsta rapper 2Pac on the East Coast rap scene has also become increasingly apparent in the new century.

## **Hardcore East Coast gangsta rap after 1997**

Although the "softer" pop/R&B-inflected artists received the most commercial success, hardcore gangsta rap continued to thrive on the East Coast. Baltimore-born DMX is often credited with reviving New York's hardcore scene with *It's Dark and Hell Is Hot*, his 1998 debut, which entered the charts at #1. DMX's work was clearly inspired by that of Nas (*Illmatic*, 1994), The Wu-Tang Clan (*Enter the Wu-Tang (36 Chambers)*, 1993), and 2Pac (*All Eyez On Me*, 1996). DMX's management company, Ruff Ryders Entertainment, ran a record label by the same name which also featured Eve (*Scorpion*, 2001) and The Lox, defectors from Bad Boy (*We Are the Streets*, 2000).

However, the biggest success for post-Bad Boy East Coast gangsta was 50 Cent, who achieved worldwide superstardom after jointly signing with Eminem's Shady Records and Dr. Dre's Aftermath Entertainment and releasing the album *Get Rich or Die Tryin'*, before launching numerous similarly styled affiliate artists such as Lloyd Banks, Young Buck and Tony Yayo. 50 Cent's music was harder-edged than most artists who had achieved similar levels of success, though he made occasional concessions to a more mainstream sound, particularly in his single releases.

# Garage

**Garage** is any of several different varieties of modern electronic dance music generally connected to [house](#) or [disco](#). Usage is different in the US and UK.

The term was first used in the US to describe records in the late 70s and early 80s that formed the eclectic playlist of the "Paradise Garage" [nightclub](#) in New York City. Over time, the term in the US came to mainly describe the more [soulful](#), [gospel](#)-inspired styles of disco and house music first made popular by Tony Humphries at club Zanzibar in Newark, NJ.

The evolution of house music in the UK in the late 1990s led to the term being applied to a new form of music also known as speed garage or *UK Garage*. This style is now frequently combined with other forms of music like [hip hop](#), [rap](#) and [R&B](#), all broadly filed under the description urban music. The correct pronunciation of UK Garage is "GARR-idge" (rather than the American pronunciation "grr-AHGE"), as this is the most common pronunciation of the word in the British Isles.

Artists like Shanks & Bigfoot and The Artful Dodger have made Garage music mainstream in the UK, whilst Dizzee Rascal's arrival raised the profile of Grime, an offshoot of Garage. However on the East London underground scene Garage is distinctly different, it has a much more raw sound, placing a greater emphasis on electronic beats and rhythms.

"'Garage' is one of the most mangled terms in dance music. The term derives from the Paradise Garage itself, but it has meant so many different things to so many different people that unless you're talking about a specific time and place, it is virtually meaningless. Part of the reason for this confusion (aside from various journalistic misunderstandings and industry misappropriations) is that the range of music played at the Garage was so broad. The music we now call 'garage' has evolved from only a small part of the club's wildly eclectic soundtrack." -- Frank Broughton/Bill Brewster in Last Night A DJ Saved My Life

# UK Garage

## 2step

**2Step** (also known as **2 step**, **two step** or **2 step garage**) is a typically British style of modern [dance music](#), and one of the two major sub-genres of UK Garage (although UK Garage is sometimes imprecisely used as a synonym for 2Step), together with its brother 4x4 Garage.

## History

The roots of 2Step are embedded in **(US) garage**, a form of [house music](#) named after the legendary New York club Paradise Garage, where some DJs (e.g. Larry Levan) started playing this style of dance music during the 1980s.

In the UK, where [jungle](#) and [techno](#) were strong at the time, Garage was played in the second room at Jungle parties (as counterpart to chill-out rooms at [techno parties](#)). As Jungle tracks are usually much faster compared to (US) Garage, DJs in the UK started to speed up Garage tracks to make them more suitable for the jungle audience in the UK. The media started to call this fast-played garage music "Speed Garage", 2Step's predecessor. DJs usually played dub versions (arrangements without vocals) of Garage tracks, which do not sound odd when played faster. The absence of vocals left a lot of empty space for MCs, who started rhyming to the records. Since then MCs became one of the vital aspects of Speed and UK Garage parties and records. Early promoters of Speed Garage included the Dreem Team and Tuff Jam and many pirate radio stations like Magic FM, Deja Vu, Erotic FM or Kiss FM. The Speed Garage scene was also called the "Sunday Scene". The reason behind this was that it was difficult to hire a club at that time for a party playing any other sound than the predominant Jungle or Hardcore. So the only available night for Speed Garage was Sunday night. Popular party labels who focused on this kind of music were Deja Vu, Spread Love and Twice as Nice.

Speed garage already incorporated many aspects of today's UK Garage (and 2Step) sound like sub-bass lines, [ragga](#) vocals, spin backs and reversed drums. What changed over time, until the so called 2Step sound emerged, was the addition of further [funky](#) elements like [RnB](#) vocals, more shuffled beats and a different drum pattern. The most radical change from Speed Garage to 2Step was the removal of the 2nd and 4th bass kick from each bar (see "Characteristics" for more details). So you could say that 2Step actually has taken the speed out of Speed Garage. This energy-deficit is compensated by syncoping bass lines and the percussive use of other instruments like pads, strings and pizzicatos.

While there were many key players involved in making UK Garage the most hyped dance music genre around the turn of the century, some of them really stand out. Among those Todd Edwards, who is sometimes cited as the most influential person on the whole UK Garage scene. The producer from New

Jersey, who never actually made any 2Step track, changed the whole way of working with vocals. Instead of having full verses and choruses, he picked out vocal phrases and played them like an instrument. This became possible through the use of [sampling technology](#). Edwards' way of chopping vocals and using them in a very unusual manner was adopted by many UK Garage producers and is still a very characteristic element of the whole UK Garage vibe.

The UK's "answer" to Todd Edwards was MJ Cole, a classically trained oboe and piano player, who became very successful with his own songs "Sincere" and "Crazy Love". Even more successful became the producer duo The Artful Dodger, aka Pete Dinklage and Mark Hill, who (together with Craig David) were very successful with the track "*Re-rewind*", which became an anthem for the whole 2Step scene.

Recent developments are showing an evolution into two main directions: firstly, 2Step is moving away from its glamorous appeal into a darker direction called [Grime](#). This sound is much harder and rougher than its predecessor. This is one of the reasons why 2Step is being pushed back underground again, as more and more people turn away from the "negative" sound. Secondly, you see *4x4 Garage* gaining popularity, which is a convergence towards UK Garage's mother House music. This sound abandons the classical 2Step patterns used for UK Garage, as it employs the old "4 to the floor" drum pattern (see "Characteristics") as it is used in many forms of electronic music.

## Characteristics

*2Step* is a melting pot of ideas incorporating elements from a wide field of different styles (mainly house, jungle, [rhythm and blues](#) and [Hip Hop](#)) and has produced a large spectrum of different sounding songs/tracks over the last few years. What holds all 2Step productions together is the basic logic of the drum patterns, which also denominated the name of this style of electronic dance music.

### Bass kick and snare drum

Different from other styles of electronic dance music (e.g. most forms of house and techno), 2Step does not use a so called "4 to the floor" bass drum, which hits strictly on every beat of a bar (usually those types of music have 4/4 bars and therefore you will have 4 bass kicks per bar, which explains the name of this bass drum pattern). 2Step differs from this scheme as its bass kicks basically skip the 2nd and the 4th beat of each bar. Additionally, besides the first bass kick (which usually rests on the first beat), the other kicks are also moved away from the main beats of the bar and create a busy and skippy feeling. What holds the pattern together is a powerful snare drum on the 2nd and the 4th beat. There may be additional snare drums to add further groove and drive to the pattern, but you will always have a snare drum which emphasizes the 2nd and 4th beat of any bar.

### Other drum sounds

Alongside the basic kick and snare, the drum kit used for 2step consists of closed and open hi-hats which give the pattern the needed drive to create a busy groove. Furthermore you will find additional snare drums, and other kinds of [percussion](#), which will vary from song to song. The sound of the drum elements is often slightly distorted, as most of them are "second-hand", which

means, that they are manipulated by various kind of sound-modifying techniques and are difficult to classify.

## **Bass**

As 2step was heavily influenced by Jungle, the bass lines play a strong role for the 2step sound. Often you have very dominant sub-bass lines, which generate heavy pressure if heard in the club or on a sound system which is able to play low frequencies. Sometimes these bass lines are doubled with an organ. Mostly you will find bass melodies of two bars length, which are interacting with the drum pattern.

## **Heavy shuffle**

All 2Step tracks are heavily shuffled, which gives the tracks a swing feeling. This means that you move away from a metronomic and strict to a more natural sounding drum pattern, which creates a very busy and nervous feeling. This swing beat is quickly applied to the whole track, as the "quantisation function" of modern music production programs (e.g. Cubase or Logic) allows the application of a shuffle feeling with the push of a button.

## **Tune**

Basically you will find two different kinds of tunes among 2step tracks. Firstly, you will find tracks that are very upbeat and create a positive vibe. Mostly these tracks contain full vocal arrangements and are very bright and crisp sounding. Many R'n'B [bootlegs](#) and remixes go into this direction. Secondly, there are tracks that have a more bass oriented composition. There the main focus is on a heavy bass line that is already meant to be the hook of the track. Sometimes there exist many different versions of the same track to cover both aspects of 2step music and it's the listener's (or the DJ's) choice which track he prefers.

## **DJs**

The first commercial Garage (UKG) album was "Pure Garage" produced and mixed by the now legendary DJ EZ. There are now half a dozen Pure Garage albums available, and you can still hear DJ EZ on Kiss 100, 10pm –12pm on Friday nights.

## **MCs**

As described in the history part, you will find tons of 2step records with MCs rhyming to the music. This is very characteristic for 2step tracks. Often you will find separate versions of the same tune, one with the MC's rhymes and one without it. The reason for this is that at 2step parties you mostly have live MCs rhyming to the music and DJs will therefore play versions without the recorded MCs to leave enough space for the live MC's voice.

## **Notable tracks**

The Artful Dodger feat. Craig David - "Re-Rewind"  
MJ Cole - "Sincere"  
Monsta Boy - "I'm Sorry"  
N'n'G - "Liferide"

So Solid Crew - "21 Seconds"  
Sisqó - "Thong Song" (The Artful Dodger Remix)  
Sunship - "Try Me Out (Let Me Lick It)"  
Underdog Project - "Summer Jam"  
Wideboys - "Sambucca"  
N'n'G - "Right Before My Eyes"  
Shola Ama - "Imagine (Club Asylum Remix)"  
Sweet Female Attitude - "Flowers"  
Amar - "Sometimes It Snows In April"

## 4x4 Garage

**4x4 Garage** is a variety of UK garage with a 4/4 time signature and drums consisting of a bass drum on each beat in the bar, similar in style to [house music](#).

4x4 garage was the most common form of garage before 2 step garage became more popular. Since the "death" of garage in the mainstream and the increased popularity of [grime](#), 4x4 has once again become the favoured drum pattern for producers of UK garage.

The terms "4x4", "Speed Garage" and "Bassline House" have become interchangeable in today's 4/4 garage scene, although speed garage is often used to falsely identify 2 step or UK garage. Bassline House and 4x4 Beats will sound the same to most people, unless they listen to it often, in which case it is easy to distinguish these two different styles.

Since the turn of the new millennium, this brand of garage has re emerged as a firm favourite with UK clubbers, resulting in the return of the term "raving" among clubbers. A number of new producers, DJ's and nightclubs have also emerged of the back of its success, including DJ Joe Hunt, Danny Bond, Naughty Nick, and Big Ang. Many major clubs such as Air, Moonlounge and Radius have hosted speed garage nights and promotions, while the longstanding champion of the 4x4 garage sound Niche Nightclub from sheffield has now sadly shutdown, it was the original home of Speed Garage.

# Garage punk

**Stylistic origins:** 1950s [R&B](#), [rock and roll](#), [country](#), and [rockabilly](#), 1960s [garage rock](#), frat rock, [psychedelic rock](#), pub rock, [glam rock](#), and proto-punk

**Cultural origins:** Mid 1970s United States, Australia and United Kingdom.

**Typical instruments:** Vocals – [Guitar](#) – [Bass](#) – [Drums](#)

**Mainstream popularity:** Chart-topping in the UK, less success elsewhere. Some success for [pop punk](#), especially [ska punk](#) and [Two Tone](#)

**Derivative forms:** [Alternative rock](#) – [Emo](#) – [Gothic rock](#) – [Grunge](#) – [Math rock](#) – [New Wave](#) – [Post-punk](#) – [post-punk revival](#)

[Anarcho-punk](#) – [Christian punk](#) – [Crust punk](#) – **Garage punk** – [Hardcore](#) – [Horror punk](#) – [Oi!](#) – [Pop punk](#)

[Anti-folk](#) – Chicano punk – [Death rock](#) – [Funkcore](#) – Jazz punk – [Psychobilly](#) – [Queercore](#) – [Ska punk](#) – [Two Tone](#)

[History](#) – [Cassette culture](#)

**Garage punk** is a subgenre of [punk rock](#). However, as with many terms applied to popular culture, the precise meaning can be hard to define. Garage punk is often used to refer to garage bands that are on small independent record labels or that aren't on labels at all (unsigned) and that happen to play some variety of [punk](#). In that sense, garage punk (and likewise, [garage rock](#)) can be seen as a descendent of the [punk](#) and [new wave](#) movements of the late 1970s and early 1980s, as a counter-culture movement opposed to mainstream [corporate rock](#).

In the late 1980s and into the 1990s, a new breed of revivalist [punk](#) began to fester in the [indie rock](#) underground that became known as “garage punk.” Garage punk is obviously closely related to garage rock revival, although most of these modern garage punk bands took their influences from some of the proto punk bands of the 1960s garage rock genre, such as The Sonics, The Monks, through the early 1970s (The Stooges, MC5, New York Dolls) as well as raw, simplistic “Killed By Death”-era punk rock, British pub rock, power pop and early, hard-edged new wave, rather than the British Invasion bands and their imitators. Most garage punk bands also drew heavy influences from 1950s and early '60s R&B and primitive rock'n'roll, which further helped to separate this genre from other, more common styles of punk music. Some of the first garage punk bands to appear on the scene included DMZ, The Dwarves, The Stomachmouths, Thee Mighty Caesars, Poison 13, Pussy Galore, The Gories, The Devil Dogs, Supercharger, The Mummies, The Makers, Teengenerate, The New Bomb Turks, and The Oblivians. Attitude and primitive, lo-fi, “budget rock” aesthetics were far more important to the

development of garage punk than catchy melodies and fancy '60s mod-style clothes, and that attitude was reflected in the sound of the music: primitive, dirty, raw, sleazy, sexy, menacing, noisy, and just flat-out ugly. The garage punk movement is not as interested in copying the sounds and looks of the '60s so much as just trying to bash out some unpretentious, wild and wooly three-chord punk/rock'n'roll with a strong back beat. Some of these bands (like The Mummies, Phantom Surfers, Man or Astro-Man?, and The Bomboras) also dabbled in instrumental [surf rock](#).

[Timeline of alternative rock](#)

"**Garage rock**" is a raw form of [rock and roll](#) that enjoyed wide success in the United States and Canada from 1963 to 1967.

## History

The style had been evolving from regional scenes in the USA as far back as 1959. "Dirty Robber" by the Wailers, from Tacoma, Wash., is often cited as the first "garage rock" song. Aside from the Wailers, in these early years very few American bands could truly be called garage artists. The Rumlbers, from Downey, Calif., came close in 1962 with their grungy take on [surf music](#) with "I Don't Need You No More" released on Dot (a national label).

In 1963 garage bands crept into the national charts. These bands were all products of local scenes, and included: The Kingsmen (Portland), Paul Revere and the Raiders (Portland), The Trashmen (Minneapolis) and the Rivieras (South Bend, Ind.). This was before the Beatles played on the Ed Sullivan Show (Feb. 1964), which mitigates somewhat the theory that the British Invasion was solely responsible for the emergence of garage bands.

Nevertheless, the British Invasion of 1964-1966 did greatly influence the garage band sound as many local American bands (often surf or hot rod groups) began augmenting a British Invasion sound. The British Invasion also inspired new, and often very amateurish, bands to form. Garage rock peaked both commercially and artistically in 1966. It went into a slow, but irreversible, decline beginning in the Fall of 1967.

One reason, perhaps, it declined is that it was not an identified genre in its own time. The style was first identified in the early 1970s by record collectors. Originally it was called "[punk rock](#)." However, when the Sex Pistols/Ramones era dawned, it was renamed "1960's punk" to avoid confusion. Eventually, likely in the 1980s, the punk rock tag was dropped altogether in favor of "garage rock."

"Garage rock" comes from the perception that many such performers were young and amateurish, and often rehearsed in a family garage. This connotation also evokes a suburban, middle-class setting. It is, of course, quite simplistic to conclude that all garage bands met this demographic dynamic.

The best songs of the genre conveyed great passion and energy. The performances were often amateurish or naïve. Typical themes revolved around the traumas of high school life, and lyin' and cheatin' girls. Superficially, this implies that the music was very limited. In reality, "Garage rock" performers were quite diverse in both musical ability and in style. Bands ranged the gamut from one-chord musical crudeness (e.g., The Seeds, The Keggs) to near-studio musician quality (e.g., The Knickerbockers, The Remains). There were also regional variations in many parts of the country with the Pacific Northwest states of Washington and Oregon having the best defined regional sound.

Thousands of garage bands were extant in the USA and Canada during the era. Several dozen of these produced national hit records, including "Psychotic Reaction" by The Count 5 (1966), "Pushin' Too Hard" by The Seeds (1966), "Gloria" by the Shadows of Knight (1966), "96 Tears" by Question Mark and the Mysterians (1966), "Talk Talk" by The Music Machine (1966), "Louie, Louie" by The Kingsmen (1963-64), and "Dirty Water" by The Standells (1966).

A larger number produced regional hits. Examples include: "Where You Gonna Go" by the Unrelated Segments in Detroit (1967), "The Witch" by the Sonics in Seattle (1965) and "Girl I Got News for You" by the Birdwatchers in

Miami (1967). As one would expect, the vast majority of garage bands were commercial failures. This is despite most of the better bands being signed to major or large regional labels.

By 1968 the style largely disappeared from the national charts ("Question of Temperature" by the Balloon Farm was a notable exception), and was only being played as a trace element at the local level as new styles had evolved to replace garage rock (e.g., [progressive rock](#), [country rock](#), [Bubblegum](#), etc.) and as the music industry withdrew its support.

Record collectors began to document this music beginning in 1970 as first reported in Greg Shaw's Bomp Magazine. In 1972, rock critic Lenny Kaye assembled a collection of some of the more commercially successful songs of the era on a compilation LP called "Nuggets." This record, with decent record sales, reacquainted many of these mid-sixties bands to the attention of collectors and mainstream rock fans for the first time. It also helped to coalesce an identity for the genre.

In the later 1970s and early 1980s, compilation LPs surfaced which more deeply explored the extent of garage rock than Nuggets ever did. These records became widely known to record collectors. The better of these are the Pebbles, Boulders and Back from the Grave series. Largely because of the success of these compilations beginning in the late 1970s a full-scale revival of the music occurred. This revival peaked around 1987, but the garage rock revival continues into the present, and has helped influenced a similar form of music, [garage punk](#).

## Revivals

The first garage rock revival occurred in the mid-1970s, when bands such as The Dictators, DMZ, The Hypstrz and The Fleshtones emulated the look and sound of sixties garage rock. Several of the ["punk"](#) bands that emerged in the later seventies, notably The Ramones, were heavily influenced by the sixties garage acts, as were proto punk bands of the early '70s like Iggy and The Stooges and The New York Dolls. Iggy had even been in a mid-sixties garage band, The Iguanas, who released a fab version of "Mona" in 1966.

In the 1980s, another garage rock revival saw a number of bands earnestly trying to replicate the sound, style, and look of the '60s garage bands (see The Chesterfield Kings, The Fuzztones, The Milkshakes, and The Cynics as examples of this); this trend coincided with a similar [surf rock](#) revival, and both styles fed in into the [alternative rock](#) movement and future [grunge music](#) explosion, which some say was partially inspired by garage rock from Seattle like The Sonics and The Wailers, but was largely unknown by fans outside the immediate circles of the bands themselves.

This movement also evolved into an even more primitive form of garage rock that became known as [garage punk](#) by the late 1980s, thanks to bands such as Thee Mighty Caesars, The Gories, The Mummies, and The Devil Dogs. Bands playing garage punk differed from the garage rock revival bands in that they were less cartoonish caricatures of '60s garage bands and their overall sound was even more loud, obnoxious, and raw, often infusing elements of proto punk and 1970s punk rock (hence the "garage punk" term). Garage rock and garage punk coexisted throughout the 1990s and into the 2000s with many independent record labels releasing thousands of records by bands playing various styles of primitive rock and roll all around the world. Some of the more prolific of these independent record labels included Estrus, Hangman, Rip Off, In The Red, Telstar, Crypt, Dionysus, Get Hip, Bomp! and Long Gone John's Sympathy for the Record Industry. Also in the early 2000s, a few bands playing garage rock actually gained mainstream appeal and commercial airplay, something that had eluded garage rock bands of the past. These included The Strokes, The White Stripes, The Vines, The (International) Noise Conspiracy and garage-punkers The Hives. Other lesser-knowns such as The Detroit Cobras, The Young Werewolves, The 5.6.7.8's, The Dirtbombs, The New Bomb Turks, the Oblivians, Teengenerate, The Makers, Guitar Wolf, Lost Sounds, and others enjoyed moderate underground success and appeal.

In the late '90s, Steven van Zandt ("Little Steven") became a torchbearer, spokesperson, and proponent for garage rock, promoting concerts and festivals in New York City and also, in 2002, starting a syndicated radio program called Little Steven's Underground Garage and also launching an Underground Garage channel on the Sirius Satellite Radio network.

# Gatefold

A **gatefold cover** or **gatefold LP** is a form of packaging for LP records which was popular in the late 1960's and early 1970's. A gatefold cover, when folded, is the same size as a standard LP cover (i.e., a 12 inch, or 30 centimetre, square). The technique has been used for many notable LPs, in particular The Beatles' Sgt. Pepper's Lonely Hearts Club Band. The larger gatefold cover provided a means of including artwork, liner notes, and/or song lyrics that would otherwise not have fit on a standard record cover. Gatefold sleeves were also used when an album contained more than one record (for example, a [double-album](#) would include one record in each half of the cover).

Gatefold packaging was invented, and first used by, band leader and studio recording pioneer Enoch Light, so he could fit prose he had written describing the sounds in each song on the album sleeve.

# Gay anthem

A **gay anthem** is a [song](#), usually of the [dance music](#) genre that has become widely popular among or has been associated with the gay community; usually gay men. Gay anthem lyrics are usually marked with pride, defiance or hope against the odds.

Typical examples include I Will Survive and I Am What I Am, both sung by Gloria Gaynor. However, there have been gay garage rock, punk and hardcore anthems, such as "Gay Rude boys unite" by Leftover Crack (see [Queercore](#)).

# Gendhing

The **gendhing** (also written, as in the old orthography, **gending**) is a class of gendhing structures used in Javanese gamelan music. **Gendhing** can also be used to refer to gamelan compositions in general.

Gendhing is the longest and most complicated of the gendhing structures. It is typically played in a slow irama, although it may have faster sections. Gendhing are sometimes classified by which elaborating instrument is most prominent, called gendhing bonang or gendhing rebab. Gendhing never use the kempul or gong suwukan.

Gendhing have two parts, a merong and a minggah (or "inggah"). Both consist of a single gongan lasting four nongan, but the nongan can be of different lengths. Gendhing are then classified according to the number of kethuk strokes in a nongan in each section. The merong section does not use the kempyang, but the minggah section does. There are two patterns for the kethuk in the merong, arang ("infrequent, sparse") and kerep ("frequent"). Both have the kethuk play only at the end of a gatra, but in the kerep pattern, it is at the end of all odd-numbered gatrak, whereas in the arang, it is at the end of the gatrak of doubled odd numbers (that is, gatrak 2, 6, 10, 14, etc.). In the minggah section, the kempyang and kethuk play in the same pattern as in the ketawang, but with no other interpunctuating instruments.

For an example of the gendhing structure, consider "gendhing kethuk 2 kerep minggah kethuk 4." This means that in the merong, there will be two kethuk strokes that happen on odd-numbered gatra, and in the minggah, there will be four gatrak per nongan. The structure would then look like:

Merong:

```

...T .....T ...N
...T .....T ...N
...T .....T ...N
...T .....T ...G

```

Minggah:

```

pTp. pTp. pTp. pTpN
pTp. pTp. pTp. pTpN
pTp. pTp. pTp. pTpN
pTp. pTp. pTp. pTpG

```

where "." indicates no interpunctuating instrument plays, p indicates the stroke of the kempyang, T the kethuk, N the kenong, and G the simultaneous stroke of the gong and kenong. Thus, in each section, the gong plays once, the kenong divides that into four parts, and then that is divided into parts according to the given structure. Here, in each part, each nongan lasts 16 beats (*keteg*), and thus the gongan lasts 64.

That was a fairly short example; a "kethuk 4 arang" merong, for example, would look like:

```

.....T .....T .....T .....
.....T .....N
.....T .....T .....T .....
.....T .....N

```

.....T .....T .....T .....  
 .....T .....N .....  
 .....T .....T .....T .....  
 .....T .....G .....

and thus a nongan would last 16 gattras (64 beats), and a gongan 64 gattras (256 beats). Obviously, in a long structure like that, especially at a slow tempo, a single gongan may last many minutes.

The merong section may include a ngelik, which would also have the length of a single gongan. The minggah section may also use one of the other structures, especially the ladrang. If that is the case, the piece will be noted something like "minggah ladrang". If the other section has a different name, that will be given as well.

Between the merong and inggah is a bridge section called the ompak. Typically it has the length of one nongan, and a contrasting balungan melody to the merong.

# Generative music

**Generative music.** There are four primary perspectives on generative music that have slightly different but related meanings (Wooller et. al., 2005):

1. *Linguistic/Structural*: music composed from analytic theories that are so explicit as to be able to generate structurally coherent material (Loy and Abbott 1985; Cope 1991). This perspective has its roots in the generative grammars of language (Chomsky 1956) and music (Lerdahl and Jackendoff 1983), which generate material with a recursive tree structure.

2. *Interactive/Behavioural*: music generated by a system component that ostensibly has no inputs. That is, 'not transformational' (Rowe 1991; Lippe 1997:34; Winkler 1998).

3. *Creative/Procedural*: music generated by processes that are designed and/or initiated by the composer. Steve Reich's *Its gonna rain* and Terry Riley's *In C* are examples of this (Eno 1996).

4. *Biological/Emergent*: non-deterministic music (Biles 2002), or music that cannot be repeated, for example, ordinary wind chimes (Dorin 2001). This perspective comes from the broader generative art movement.

- Lerdahl and Jackendoff's publication described a generative grammar for tonal music, based mostly on a Schenkerian model, that could be automated to produce tonal counterpoint of any length which obeys certain structural principles at many levels.
- In *Its gonna rain*, overlapping tape loops of the spoken phrase "it's gonna rain" are played at slightly different speeds, generating different patterns through phasing.
- Brian Eno has used generative techniques on many of his works, starting with *Discreet Music* (1975) up to and including (according to *Sound on Sound* Oct 2005) his latest album 'Another Day on Earth'. His works, lectures, and interviews on the subject have done much to promote generative music in the avant-garde music community.
- Many software programs are now available to create generative music, such as SSEYO's *Koan Pro* (1994-2005) (used by Brian Eno to create his hybrid album 'Generative Music 1'), Karlheinz Essl's *Lexikon-Sonate* (1992-2004) and *MusiGenesis* (2005), a program that evolves music. In 2004, software such as SSEYO's *miniMIXA* started to appear that allows users of connected devices such as mobile phones and PDAs to create and experience generative music 'on-the-move'. Lauri Gröhn has developed *Synesthesia* software that generates music from any pictures in a few seconds.

- The madplayer uses generative techniques to create electronic music, as does LEMu (Live Electronic Music). Many algorithmic music projects are also considered to be generative. [algorithmic.net](http://algorithmic.net) comprehensively maps them.

# Genus

In ancient Greek [music theory](#), a **genus** is a family of divisions of the tetrachord (four notes spanning a perfect fourth) used to create [musical scales](#). The three genera are distinguished by their characteristic largest intervals, between the upper two notes. The diatonic genus has a characteristic interval of a major second, the chromatic genus has a minor third, and the enharmonic genus has a major third. (Note that this original Greek usage of diatonic ("stretched out"), chromatic ("colorful"), and enharmonic ("harmonious") does not generally correspond to the modern definitions of these terms.) The term *pyknon* ("compression") refers to the remainder of the tetrachord in the chromatic and enharmonic genera, where two adjacent intervals are a semitone or smaller.

In contrast to modern scales, the tetrachord was perceived as descending from its highest pitch (here *mese*). Thus the pitches are given in terms of their ratios downward from mese, or as negative cents.

Here are the traditional Pythagorean tunings of the diatonic and chromatic tetrachords:

Diatonic hypate parhypate lichanos mese 4/3 81/64 9/8 1/1 | 256/243 | 9/8 | 9/8 | -498 -408 -204 0 cents

Chromatic hypate parhypate lichanos mese 4/3 81/64 32/27 1/1 | 256/243 | 2187/2048 | 32/27 | -498 -408 -294 0 cents

Since there is no reasonable Pythagorean tuning of the enharmonic genus, here is a representative tuning due to Archytas:

Enharmonic hypate parhypate lichanos mese 4/3 9/7 5/4 1/1 | 28/27 | 136/35 | 5/4 | -498 -435 -386 0 cents

Originally, the [lyre](#) had only four strings, so only a single tetrachord was needed. Larger scales are constructed from conjunct or disjunct tetrachords. Conjunct tetrachords share a note, while disjunct tetrachords are separated by a *disjunctive tone* of 9/8 (a Pythagorean major second). Alternating conjunct and disjunct tetrachords form a scale that repeats in octaves (as in the familiar diatonic scale, created in such a manner from the diatonic genus), but this was not the only arrangement.

The Greeks analyzed genera using various terms, including diatonic, enharmonic, and chromatic, the latter being the color between the two other types of modes which were seen as being black and white. Scales are constructed from conjunct or disjunct tetrachords: the tetrachords of the chromatic genus contained a minor third on top and two semitones at the bottom, the diatonic contained a minor second at top with two major seconds at the bottom, and the enharmonic contained a major third on top with two quarter tones at the bottom, all filling in the perfect fourth (Miller and Lieberman, 1998) of the fixed outer strings. However, the closest term used by the Greeks to our modern usage of chromatic is *pyknon* or the density ("condensation") of chromatic or enharmonic genera.

Didymos chromatic tetrachord 16:15, 25:24, 6:5

Eratosthenes chromatic tetrachord 20:19, 19:18, 6:5

|                           |                   |
|---------------------------|-------------------|
| Ptolemy soft chromatic    | 28:27, 15:14, 6:5 |
| Ptolemy intense chromatic | 22:21, 12:11, 7:6 |
| Archytas enharmonic       | 28:27, 36:35, 5:4 |

(ibid)

## G-funk

**G-funk** (**Gangsta-funk** or **Ghetto-funk**) is a type of [hip hop music](#) that emerged from [West Coast gangsta rap](#) in the early 1990s. G-funk (largely derived from slowing the tempo down of [funk music](#)) incorporates multi-layered and melodic [synthesizers](#), slow hypnotic grooves, a deep bass, background female vocals, the extensive sampling of [P-funk](#) tunes, and a high portamento sine wave keyboard lead—a feature that became the genre's notable trademark. This genre was characterized by a predictable and rather hedonistic subject matter (typically violence, sex, and endless drug-use) and a slurred “*lazy drawl*” that sacrificed [lyrical](#) complexity for clarity and rhythmic cadence. G-funk became the premier subgenre of mainstream hip hop for a span of nearly four years (from the release of Dr. Dre's landmark debut, *The Chronic*, in 1992, to the collapse of the Los Angeles-based label Death Row Records in 1996).

## Origins

There has been some debate over who should be considered the "father of G-funk." Some consider N.W.A leader Eazy-E to be the originator of the subgenre; however, while N.W.A was undoubtedly a gangsta rap group, their beats (produced by Dr. Dre and DJ Yella) were much rawer and grittier than the G-funk sound Dr. Dre popularized with *The Chronic*. Others argue that Above The Law are the originators of the sound (the sound being present in one of their tracks titled "Call it what you want", being recorded before *The Chronic*). Since *The Chronic* was the first G-Funk album to go mainstream and gain nation wide attention, it is generally agreed that G-funk started with Dr. Dre. Some have drawn comparisons between G-funk and San Francisco-based Mobb Music, which has never gained widespread mainstream success but incorporates elements similar to G-funk, with more tempo variations, less portamento, synthesizers, Moog bass lines, and more live [instruments](#).

## Criticism and Backlash

Prior to the success of *The Chronic*, prominent groups of the [golden age of hip hop](#) such as Public Enemy and Native Tongues Posse, embraced more socially aware issues such as drug abuse, poverty, racism, and African American empowerment. Whereas rappers utilizing the G-funk sound essentially rapped about the [gangsta](#) subject matter that Dre's former group, N.W.A, had helped bring to the mainstream in the late 1980s. This led to some criticism from hip hop purists, who accused these rappers of "dumbing down" rap (as demonstrated by Common's *I Used to Love H.E.R.*). Furthermore, because of its mainstream appeal and popularity, G-Funk was regarded by hip hop purists, as a watered down form of music. This was a view that was particularly prevalent among several [East Coast](#) critics, [DJs](#), and radio personalities. It was this disillusionment with mainstream hip hop that led certain hip hop critics to enthusiastically embrace East Coast albums such as Black Moon's *Enta Da Stage*, The Wu-Tang Clan's *Enter the Wu-Tang (36 Chambers)* (see 1993 in music), and Nas's and The Notorious B.I.G.'s respective debuts: *Illmatic* and *Ready to Die*. These successive releases were hailed as the beginning of an East Coast hip hop renaissance, that later included albums such as *Only Built 4 Cuban Linx*, *The Infamous*, *Doe Or Die*, and *Reasonable Doubt*.

Despite such criticism and mounting pressure from censorship groups opposed to gangsta rap, *The Chronic* and to a lesser extent, *Doggystyle*, were both critically-acclaimed as well as commercially successful. The singles "Nuthin' But a "G" Thang" (*The Chronic*) and "Gin and Juice" (*Doggystyle*) became the most famous examples of G-funk in this era. The G-funk sound could also be heard in rapper 2Pac's most popular releases, including *Me Against the World* and most notably the song "Cant C Me" (produced by Dr. Dre) featured on *All Eyez on Me*, the latter of which was released on the Death Row label.

## End of the G-funk era

In 1996, following Dr. Dre's departure from Death Row Records, Tupac Shakur's murder, and Suge Knight's imprisonment for racketeering, the G-funk era effectively came to an end. Dr. Dre attempted to update and expand on the sound with his 1996 release *Dr. Dre Presents...The Aftermath* as well as 1997's *Nas, Foxy Brown, AZ, and Nature Present The Firm: The Album*, the latter of which he partially produced. While both albums went platinum, they were unsuccessful by Dre's standards, and had little impact on the hip-hop scene.

However, the G-funk sound has had a lasting impact on hip hop, and its influence can be heard in albums such as Dre's successful 1999 comeback *2001*, which features a significantly different production style from *The Chronic* but has its roots in the G-funk sound he helped pioneer.

# Ghetto house

**Ghetto house** or **booty house** is a type of [Chicago House](#) which started being recognised in its own right from around 1994 onwards. It features minimal 808 and 909 [drum machine](#)-driven tracks, and sometimes sexually explicit [lyrics](#).

Using the template of classic Chicago [House music](#) (primarily, *Percolator* by Cajmere), and adding the smut perceived by casual fans of [Miami Bass](#), it is usually made on very minimal equipment with little or no effects. It usually features a "4-to-the-floor" kick drum (full sounding, but not too long or distorted) along with Roland 808 and 909 synthesised tom-tom sounds, minimal use of analogue synths, and short, slightly dirty sounding (both sonically and lyrically) vocal samples, often repeated in various ways. Also common are 808 and 909 clap sounds, and full "[rapped](#)" [verses](#) and [choruses](#).

## [House](#)

[Acid](#) - [Ambient](#) - [Chicago](#) - [Dark](#) - [Deep](#) - [Dream](#) - [Garage](#) - [Ghetto](#) - [Hard](#) - [Hip](#) - [Italo](#) - [Latin](#) - [Minimal](#) - [Microhouse](#) - [Progressive](#) - [Pumpin'](#) - [Tech](#) - [Tribal](#)

## Other [electronic music](#) genres

[Ambient](#) | [Breakbeat](#) | [Drum and bass](#) | [Electronica](#) | [Electronic art music](#) | [Hard dance](#) | [Hardcore](#) | [House](#) | [Techno](#) | [Trance](#) | [Industrial](#) | [Synthpop](#)

# Ghettotech

**Ghettotech** is a form of electronic dance music originating from Detroit. It combines elements of Chicago's [ghetto house](#) with [electro](#), [hip hop](#), [techno](#), and grafts the perceived raunch of [Miami Bass](#) as the vocal stamp of the music. It is usually faster than most other dance music genres, at roughly 145 to 170 bpm, and features often pornographic lyrics.

The spelling and indeed the use of the word *Ghettotech* is contentious. Other spellings include **Ghetto Tech**, **GetoTek**, **Ghettotec**, and other names include **Detroit Bass** (sharing the title with Detroit area Electro), **Booty Bass** (sharing the title with [Miami Bass](#)), **Booty Music** (an umbrella term to which the genre falls under), **Tech**, **Ghetto**, **Ghetto Shit** or **Accelerated Funk**.

The Ghettotech style was created by a few [DJs](#) and producers mostly working in Detroit, with a strong influence from [Miami Bass](#) and continuing influence from Chicago's [ghetto house](#). It has existed in Detroit since approximately 1994.

Some GhettoTech artists are DJ Assault, DJ Godfather, DJ Bam Bam, Ignition Technician, Sole Tech, DJ Nasty, Erik Travis, Disco D, Mr. De', Starski & Clutch, 12 Tech Mob, 313 Bass Mechanics, DJ Omega, DJ Shortstop, The Detroit Grand Pubahs, DJ Funk, DJ Deeon, DJ Nehpets, DJ Slugo and Dump Emergency.

# Ghost Dance

Noted in historical accounts as the **Ghost Dance of 1890**, the Ghost Dance was a religious movement incorporated into numerous Native American belief systems. The traditional ritual used in the Ghost Dance, the circle dance, has been used by many Native Americans since pre-historic times, but was first performed in accordance with Jack Wilson's teachings among the Nevada Paiute in 1889. The practice swept throughout much of the American West, quickly reaching areas of California and Oklahoma. As the Ghost Dance spread from its original source, Native American tribes synthesized selective aspects of the ritual with their own beliefs often creating change in both the society that integrated it and the ritual itself. At the core of the movement was the prophet of peace Jack Wilson, known as Wovoka among the Paiute, who prophesized a nonviolent end to Euro-American expansion while preaching messages of clean living, an honest life, and cross-cultural cooperation. Perhaps the best known facet of the Ghost Dance movement is the role it reportedly played in instigating the Wounded Knee massacre in 1890 that killed 391 Lakota Sioux.[1] The Ghost Dance is most vividly remembered for this Sioux sect, which displayed extensive distortion toward millenarianism, thus driving it away from the religion's core principles.

# Historical foundations

## Paiute background

Paiutes living in Mason Valley, at the time of settlement by Euro-American homesteaders, are collectively known as the Tövusi-dökadö, "Cyperus-bulb Eaters." The Northern Paiute community thrived upon a subsistence pattern of foraging through this locally plentiful food source for a portion of the year; while also augmenting their diets with fish, pine nuts, and the occasional clubbing of wild game.

The Tövusi-dökadö lacked any permanent political organization or officials, instead operating within a less stratified social system of self-proclaimed spiritually blessed individuals organizing events or activities for the betterment of the group as a whole. Usually, a community event organized was centered on the observance of a ritual at a prescribed time of year or was intended to organize activities like harvests or hunting parties. One such extraordinary instance illustrating this system occurred in 1869 when a Paiute named Hawthorne Wodziwob organized a series of community dances as a way to announce his vision. He told the Paiutes that he had traveled to the land of the dead, and about the promises that the souls of the recently deceased made to him there. They promised to return to their loved ones within a period of 3-4 years. Wodziwob's peers accepted this vision, probably due to his already reputable status as a healer, as he also urged the populace to dance the common circle dance as was customary during a time of festival. He continued preaching this message for 3 years with the help of an admiring local weather doctor named Tavibo, Jack Wilson's father.

Previous to Wodziwob's religious movement, a devastating typhoid epidemic struck in 1867, coupled with other European diseases one tenth of the population was killed.[3] Not taking into consideration the excessive individual psychological stress this event placed on community members, it more importantly caused grave disorder in the economic system by preventing many families from being able to continue their nomadic lifestyle following pine nut harvests and wild game herds. Without any other options, most of these partial families ended up in Virginia City seeking wage work.

## Round dance precursors

The physical form of the ritual associated with Ghost Dance can neither be claimed to have originated from Jack Wilson, or to have died with him. Referred to as the round dance, it characteristically includes a circular community dance held around an individual that leads the ceremony. Often accompanying the ritual are intermissions of [trance](#), exhortations, and prophesying.

The term "prophet dances" was applied during an investigation of Native American rituals carried out by anthropologist Leslie Spier, a student of Franz

Boas. He discovered that types of round dances were present throughout much of the Pacific Northwest including the Columbia plateau (including Washington, Oregon, Idaho, and parts of western Montana). However Spier's study was conducted at a time when most of these rituals had already incorporated Christian elements, further clouding the issue of the round dance's origin.

Difficulty in acquiring absolute pristine data concerning North America societies during its pre-historic or proto-historic eras has presented itself due to Europeans impact on native populations long before they ever physically reached more remote areas of the continent. Changes in Native American society before physical contact can be attributed to severe disease epidemics, an increased frequency and volume in trade caused by the introduction of European goods or from Europeans purchasing local resources, and the introduction of the horse which revolutionized the foraging lifestyle for some aboriginal societies.

Enculturation and diffusion (anthropology) are not the only explanations for the common circle dance rituals. Anthropologist James Mooney was one of the first to study circle dances and observed striking similarities in rituals between tribes. However he also claimed that "a hope and longing common to all humanity, manifests through behavior rooted in human physiology and common experience"; therefore alluding to either the notion of universal imprints on the human mind, or a ubiquitous behavior drawn from universal life course events.

## Jack Wilson's vision

Jack Wilson, the prophet formerly known as Wovoka until his adoption of a Euro-American name, experienced a vision on 1889 January 1. Received during a solar eclipse, it was not his first time experiencing a vision directly from God, but now as a young adult he was better spiritually equipped to handle his profound message. Jack had received training from an experienced shaman in his community under his parent's guidance after realizing that he was having difficulty interpreting his first vision. Jack was also training to be a weather doctor, following in his father's footsteps, and had established himself throughout Mason Valley as a gifted and blessed young leader. He often presided over circle dances symbolizing the sun's heavenly path across the sky while his captive audience listened to his preaching of universal love.

Anthropologist James Mooney conducted an interview with the charismatic messiah in 1892. Stories and beliefs that Jack talked about with him were later validated as the same preachings given to his fellow Native Americans.[4] This has been documented by letters between tribes and by notes that Jack asked his pilgrims to take upon their arrival at Mason Valley. Jack told Mooney that when in heaven he was before God, amongst of his ancestors who were engaged in their favorite pastimes. The land was filled with wild game and God showed it to him before instructing him to return home to tell his people that they must love each other, not fight, and live in peace with the whites. God continued that Jack's people must work, not steal or lie; and that they must not engage in the old practices of war. God said that if his people abide by these rules, they would be united with their friends and family in this other world. With God, he proclaimed, there will be no sickness, disease, or old age. Jack continues that he was then given a dance and commanded to bring it back to his people. If his people performed this dance, which lasted for five days, in the proper intervals the performers would secure their happiness and hasten the reunion of the living and deceased. Lastly, God gave Jack powers over weather and told him that he would be the deputy in charge of affairs in the Western United States leaving current President Harrison as God's deputy in the East. Jack was then told to return home and preach God's message.

Jack Wilson left the presence of God convinced that if every Indian in the West danced the new dance to "hasten the event", all evil in the world would be swept away leaving a renewed earth filled with food, love, and faith. Quickly accepted by his Paiute brethren, the new religion was termed "dance in a circle". Although the first time Euro-Americans encountered the practice it was through contact with the Sioux, their expression "spirit dance" was used which was translated into ghost dance.

## Role in Wounded Knee Massacre

Through a parade of Native Americans and some Euro-Americans, Jack Wilson's message spread across much of the western portion of the United States. Early in the religious movement many tribes sent members to investigate the self-proclaimed messiah, other communities sent delegates only to be cordial. Regardless of why people were coming to visit Jack, many left believers and returned to their homeland preaching his message. The Ghost Dance was even incorporated by many Mormons who, residing in Utah, traveled to Jack to evaluate whether or not he was the messiah that Joseph Smith Jr predicted would arrive in the year 1890.

While most followers of the Ghost Dance understood the messiah as a teacher of pacifism and peace, others, whom the ideals eluded, did not.

A representation of the Ghost Dance's misinterpretation is the image of the Ghost Shirt, a special garment rumored to repel bullets through spiritual power. While it is uncertain where the belief originated, James Mooney pointed out that the most likely source is the Mormon endowment robe, which members of the Mormon Church believed would protect the pious wearer from danger. Despite the uncertainty of who created the belief, it is certain that chief Kicking Bear brought the concept to his own people, the Lakota Sioux in 1890. Another Lakota interpretation of Jack's religion, that strays from his core concept, is drawn from the original idea of a "renewed earth" in which "all evil is washed away". The Lakota understanding of this included the removal of all Euro-Americans from their lands. The same cannot be said of Jack's order of the Ghost Dance which would teach accepting Euro-Americans.

In 1890 February, the United States government broke a Lakota treaty by adjusting the Great Sioux Reservation of South Dakota, an area that formally encompassed the majority of the state, into five relatively smaller reservations. This was done to accommodate homesteaders from the east and was in accordance with the government's clearly stated "policy of breaking up tribal relationships" and "conforming Indians to the white man's ways, peaceably if they will, or forcibly if they must." Once on the half-sized reservations, tribes were separated into family units on 320 acre plots, forced to farm, raise livestock, and send their children to boarding schools that forbid any inclusion of Native American traditional culture and language.

To help support the Sioux during the period of transition, the Bureau of Indian Affairs (BIA), was delegated the responsibility of supplementing the Sioux with food and hiring Euro-American farmers as teachers to the once proud hunters. By the end of the 1890 growing season, the Sioux farmer's hard work trying to cultivate crops in the semi-arid region of South Dakota failed due to the inability of the land to produce agricultural yields during a time of intense heat and lack of rain. Unfortunately for them, this was also the time when the government's patience supporting the "lazy" Indians also failed resulting in rations to the Sioux being cut in half. With the bison virtually eradicated from the plains a few years earlier, the Sioux had no option but to starve. Increased performances of the Ghost Dance ritual ensued frightening the supervising agents of the BIA, who successfully requested thousands more troops deployed to the reservation.

By 1890 December 15 a leader of the Hunkpapa Sioux named Sitting Bull was arrested on the reservation for failing to stop his people from practicing the Ghost Dance. During the incident, a Sioux witnessing the arrest fired at one of the soldiers resulting in an immediate retaliation. Deaths on both sides resulted included the loss of Sitting Bull himself.

Another Sioux leader, Big Foot, was stopped while in route to convene with the remaining Sioux chiefs. U.S. Army officers forced him and his people to relocate to a small camp close to the Pine Ridge Agency in order for the soldiers to be able to more closely watch the old chief who was on the U.S. Army's list of troublemaking Indians. That evening, December 28th, the small band of Sioux erected their tipis on the banks of Wounded Knee Creek. The following day during an attempt to collect any remaining weapons from the band, one young Sioux warrior refused to relinquish his arms resulting in a struggle in which his weapon discharged into the air. Other young Sioux warrior, protected by their ghost shirts, responded by brandishing their previously concealed weapons to which the U.S. forces responded with carbine firearms. Two bands of Native American reinforcements arrived at the creek, Oglalas and Brules, after hearing the gunshots. After the fighting had concluded 39 U.S. soldiers lay dead amongst the 153 dead Sioux, 62 of which were women and children.

Following the massacre, chief Kicking Bear official surrendered his weapon to General Nelson A. Miles. Outrage in the Eastern United States emerged as the general population learned about the events that had transpired. Many Americans felt U.S. Army actions were harsh and the related the massacre at Wounded Knee Creek to an ungentlemanly act of kicking a man when he is already down. Americans had been told on numerous occasions that the Native American had already been successfully pacified. Public uproar played a role in the reinstatement of the previous treaty's terms including full rations and more monetary compensation for lands taken away.

# Anthropological perspectives

## Religious revitalization model

Anthropologist Anthony F. C. Wallace's model (1956) describing the process of religious revitalization. It is derived from studies of another Native American religious movement, The Code of Handsome Lake, which led to the formation of the Longhouse Religion.

**I. *Period of generally satisfactory adaptation*** to a group's social and natural environment.

**II. *Period of increased individual stress***. While the group as a whole is able to survive through its accustomed cultural behavior, however changes in the social or natural environment frustrate efforts of many people to obtain normal satisfactions of their needs.

**III. *Period of cultural distortion***. Changes on the group's social or natural environment drastically reduce the capacity of accustomed cultural behavior to satisfy most persons' physical and emotional needs.

**IV. *Period of revitalization***: (1) reformulation of the cultural pattern, (2) its communication, (3) organization of a reformulated cultural pattern, (4) adaptation of the reformulated pattern to better meet the needs and preferences of the group, (5) cultural transformation, (6) routinization- the adapted reformulated cultural pattern becomes the standard cultural behavior for the group.

**V. *New period of generally satisfactory adaptation*** to the group's changed social and/or natural environment.

## Ghost Dance within revitalization model

In Alice Beck Kehoe's ethnohistory of the Ghost Dance, she presents the movement within the framework of Wallace's model of religious revitalization. The Tövusi-dökadö's age of traditional subsistence patterns constitutes a period of generally satisfactory cultural adaptation to their environment which lasted until around 1860. Corresponding with an influx of Euro-American settlers begins the second phase of Wallace's model hallmarked by increased individual stress placed on some members of the community. Almost the entire 1880s are placed into the model's third period, that of cultural distortion, due to the increased presence of Euro-American agribusiness and the United States' government. With the introduction of Jack Wilson's Ghost Dance, the fourth period of revitalization is ushered which characteristically occurs after sufficient changes accrue to significantly warp the society's cultural pattern. Following the revitalization is yet another period of satisfactory adaptation which is dated to about 1900. By this time almost all sources of traditional food were eradicated from the Tövusi-dökadö's long-established homeland, leading to the adoption of Euro-American subsistence methods while still maintaining a Paiute culture.

## **Reason for rejection**

“Worthless words” was the description given to the Ghost Dance in 1890 by Navajo leaders. Three years later James Mooney arrived at the Navajo reservation in northern Arizona during his study of the Ghost Dance movement, only realize that the ritual was never incorporated into Navajo society even during the brief period of its widespread acceptance in western portions of the United States. Kehoe describes why the movement never gained fervor in 1890, according to the revitalization model, among the Navajo and illuminates the circumstances of the Navajo’s later acceptance of the Peyote Religion.

## Movements with similarities

1856-1857 Cattle-Killing in South Africa in which perhaps 60,000 of the Xhosa people died of self-induced starvation. They destroyed their food supplies based on a vision that came to Nongqawuse. The Righteous Harmony Society was a Chinese movement which also believed in magical clothing, reacting against Western colonialism.

The Maji Maji Rebellion where an African spirit medium gave his followers war medicine that he said would turn German bullets into water.

The Melanesian Jon Frum cargo cult believed in a return of their ancestors brought by Western technology (see Vailala Madness).

The Spanish Carlist troops fought against secularism and believed in the detente bala — pieces of cloth with an image of the Holy Heart of Jesus — would protect them against bullets.

Burkhanism was an Altayan movement that reacted against Russification.

Child soldiers in the civil wars of Liberia wore wigs and wedding gowns to confuse enemy bullets by assuming a dual identity. (see <http://slate.msn.com/id/2086490/>)

## Girl group

A **girl group**, as the name implies, is a [musical group](#) featuring a group consisting usually of young female [singers](#), singing mostly [pop](#) and [R&B](#) songs. It is essentially the female equivalent of a [boy band](#). They are distinct from girl bands and All-women bands, where the women sing *and* play instruments.

## Early girl-groups

Girl groups date back to the late 1950s and the beginning of the 1960s, when they were often manufactured by producers or record companies. Often in these times, the girl group was used as a vehicle for the latest work by a label's resident songwriters, such as the work of Phil Spector and the early days of Motown. Even earlier, female [pop music](#) singing groups were popular; "Sister groups" like the Andrews Sisters and the Boswell Sisters were composed of sisters or relatives. Groups such as the Boswells and the Keller Sisters and Lynch were pop recording artists dating as far back as the 1920s.

The sound of many early [rock and roll](#) girl groups was engineered by a producer. For instance, Phil Spector's Wall of Sound production featured a thick layer of instrumentation ([drums](#), [guitar](#), [bass](#), a [horn section](#) and often something more exotic, such as *Glockenspiel* or [vibraphone](#)). Amidst the musical accompaniment, there was a lead vocal, often deliberately girlish in tone, singing deceptively simple, naïve lyrics which artfully and eloquently expressed the emotions of teenagers of the time. An example would be The Shirelles' "Will You Still Love Me Tomorrow", which doubles as both a charming love song and, implicitly, a portrayal of adolescent sexual mores. Other groups, including some New York City-based ones like The Chiffons, used more conventional [pop music](#) arrangements, while the Motown groups used typical driving Motown arrangements of the period.

By the mid-late 1960s, in the face of the British Invasion and the increasing popularity of rock music, the popularity of girl groups began to wane. During this time, only a few all-female groups, such as The Supremes and Martha and the Vandellas, made the transition to an earthier, soulful sound and success. Fanny was among the first all-female rock act to gain success in the United States and Europe. This group was among the first to sign with a major recording company (1969, Warner Brothers) and record albums released by major labels.

## Later girl groups

In recent times, the sound of girl groups has been defined, and has helped to define, the popular musical styles of the period.

While the 1980s saw the emergence of rock and punk-rock girl groups such as The Go-Go's, the girl groups of the 1990s returned to a manufactured pop style marketed as clean-cut and aimed at young, predominantly female, audiences. The Spice Girls were one of the most influential girl group of this time, bringing their slogan "Girl Power" to popular use through several number one pop singles, sold-out concerts, and even a popular motion picture. In the early 2000s, girl groups again increased in popularity, spawning such bands as California-based Dream, the Swedish quartet Play, the Russian duo t.A.T.u..

Today's most notable girl groups include American bands such as Destiny's Child and British bands such as Atomic Kitten, Girls Aloud and the Sugababes.

# Glam metal

**Stylistic origins:** [Heavy metal](#), [Glam rock](#), [Punk rock](#)

**Cultural origins:** Late-1970s–Early- 1980s, United States

**Typical instruments:** [Electric guitar](#) - [Bass guitar](#) - [Drums](#)

**Mainstream popularity:** Extremely popular throughout the 1980s

Shock rock

[Timeline of heavy metal](#)

**Glam metal** is a sub-genre of [heavy metal music](#), that arose in the late 1970s in the United States. It was a dominant genre in popular [rock music](#) throughout the 1980s.

The genre is referred to by detractors as **hair metal** (a term popularized by MTV in the 1990s), due to the bands styling their long hair in a teased fashion. Sometimes, it is referred to by the more derogatory terms [cock rock](#), or **butt rock**. During its heyday the genre was often referred to as **heavy metal** or simply **metal**.

## Origins

The genre is influenced heavily by 1970s rock and heavy metal bands, such as Alice Cooper, Black Sabbath, New York Dolls, KISS, The Sweet, Aerosmith, and others.

A few bands experimented with mixing "[Glam rock](#)" and "[Heavy metal](#)" before the 1980s hit. Angel, Starz, and Legs Diamond were prime examples. However, it wasn't until the early 80s that the genre truly began to gather speed.

Some credited Van Halen as the first glam metal band, but others argued that the movement on the Sunset Strip was kick-started largely by Mötley Crüe. Either way, both bands played a prominent part in the genre's direction.

In 1980, a year prior to Mötley Crüe forming, a UK band known as Wrathchild, fronted by Rocky Shades, also emerged playing Glam Metal style music and having a similar image. However, they did not gain the same level of fame as their American contemporaries.

## First wave of glam metal

In the early 1980s, heavy metal spawned several sub-genres; glam metal became its most popular manifestation. The first wave of glam metal bands included the likes of Mötley Crüe, Van Halen, Twisted Sister, Ratt, W.A.S.P., Dokken, and Quiet Riot. Their music was less melodic than their younger contemporaries, like Cinderella, whose music and image ultimately became synonymous with the genre.

One of the first massively successful glam metal albums was Def Leppard's *Pyromania*, released in 1983. Under the guidance of producer Mutt Lange, the album was a gritty hard rock record contained within polished mainstream-friendly production. The success of the album influenced much of the hard rock scene of the era to pursue a more mainstream sound than some of their predecessors, and opened the door to what would become the popular era of glam metal.

A year later, Van Halen released *1984*, which was immensely successful, containing hit singles "Jump", "Panama", "Hot For Teacher", and "I'll Wait". Ozzy Osbourne went glam and made the album *The Ultimate Sin*, which hit number six on the Billboard 200 and became his highest charting album up to that point.

Glam metal was aggressive, with lyrics often focusing on girls, drinking, drug use, and the occult. Musically, glam metal songs often featured distorted guitar riffs, "hammer-on" solos, anthemic choruses, frenzied drumming, and complementary bass. Glam metal performers became infamous for their debauched lifestyles, their long, teased hair, and use of make-up, clothing, and accessories, traits somewhat reminiscent of glam rock.

By the mid-1980s, glam metal could be defined by two major divisions. On the mainstream side were bands such as Bon Jovi, whose 1986 album *Slippery When Wet* was a huge success at Top 40 radio and MTV, and Europe, whose single "The Final Countdown" hit number one in 26 countries. On the other side came the more insular Los Angeles scene around the Sunset Strip, which eventually spawned such bands as Poison, Faster Pussycat, L.A. Guns, and Guns N' Roses.

The visual aspects of glam metal made the music appealing to music television, particularly MTV. During the mid-to-late 1980s, glam metal tracks were in heavy rotation on the channel. Glam metal bands often resided at the top of MTV's daily Dial MTV countdown, and bands eagerly appeared on the channel to help promote their music.

While glam metal was highly successful at MTV, the genre found occasional problems at radio. While a handful of major-market radio stations, such as KNAC in Los Angeles, heavily played glam metal music, most medium and small markets lacked stations that specialized in new rock. Even rock stations in markets such as New York tended to focus on classic rock. In many cities, glam metal tracks were often relegated to Top 40 stations, who spun only the most popular tracks. However, even with that limiting factor, the popularity of those tracks meant that glam metal music was virtually ubiquitous by the late 80s.

Glam metal enjoyed widespread success during the 1980s, but bands often found themselves on the wrong end of critics and the music industry. One notable example came in 1987 with the release of Mötley Crüe's *Girls, Girls, Girls*. Before the establishment of Soundscan in 1991, Billboard's album chart was decided by a combination of reports from retailers, wholesalers, and industry professionals, rather than on actual album sales. As the band related on MTV's *Week in Rock*, the week that *Girls, Girls, Girls* peaked at #2 on the Billboard chart, it was actually the highest-selling album of that week. However, the industry professionals gave extra weight to Whitney Houston's sophomore album, allowing it to retain the top spot. In the band's opinion, the industry simply wouldn't allow their album to hold the #1 spot. (The band eventually conquered the top spot with their next album, *Dr. Feelgood*, which became the biggest album of their career.)

Glam metal continued to grow its fanbase as the 80s progressed. Def Leppard's 1987 album *Hysteria* spawned numerous successful singles, and eventually sold more than ten million copies in the US. Poison's second album *Open Up And Say...Ahh!* spawned a huge single in "Every Rose Has Its Thorn", and eventually sold eight million copies worldwide.

As more glam metal bands found success, a discernible formula emerged in the way that glam metal bands were marketed. Labels would start off by releasing a hard-rocking anthem, then follow it with a power ballad. From Poison ("Nothing But a Good Time" and "Every Rose Has Its Thorn") to Warrant ("Down Boys" and "Heaven") to White Lion ("Wait" and "When the Children Cry") to Winger ("Seventeen" and "Heading for a Heartbreak"), the formula became so commonplace that it began to be seen as a glam metal cliché. Fans of the genre balked as well, noting that, of the pair, the power ballad typically received far more airplay on mainstream radio. They feared that the genre would be known only for the ballads.

## Sleaze glam

In 1987, Guns N' Roses completely changed the direction of glam metal. They incorporated the sounds of [blues](#) and [punk](#) into the music, while keeping some of the images of glam rock. Other bands arose during this time following a similar musical path, such as Faster Pussycat, L.A. Guns, Roxx Gang, and Dangerous Toys. This offshoot of Glam Metal was dubbed "Sleaze Glam," and more recently, "Sleaze Metal."

In the United Kingdom, a similar movement was emerging although more Hanoi Rocks and Johnny Thunders influenced sound than their American contemporaries, bands included Dogs D'Amour, London Quireboys, Soho Roses, Kill City Dragons, and others. Around this time British band The Cult moved their music away from their post-punk roots and began playing a more AC/DC Sleaze influenced sound and toured the United States with Guns N' Roses.

## Decline of glam metal

In the early 1990s, glam metal's popularity rapidly declined, after over a decade of success. While several factors played a role, the most often cited was the surge in popularity of [grunge](#) music from Seattle, such as that performed by Nirvana, Pearl Jam, and Alice in Chains. (Ironically, Alice in Chains started as a glam metal band, and opened for Van Halen on their 1991 tour in support of *For Unlawful Carnal Knowledge*.)

One element in the decline was the significant role that music television played in glam metal's success. While alternative rock was more serious in tone, it contained many of the elements that made glam metal so ideal for music television, including its own visual style in the way of "grunge" fashion. As MTV shifted its attention to the new style, glam metal bands found themselves relegated more and more often to *Headbanger's Ball* and late night airplay, and almost entirely disappeared from the channel by early 1994. Given glam metal's lack of a major format presence at radio, bands were left without a clear way to reach their audience.

Another factor that contributed to the decline of glam metal was the general "out with the old" attitude often held by the status quo whenever a new decade comes around (not unlike the popular hatred of [disco](#) in the early 1980s). With the influx of alternative music as the "new" genre, rock bands that did not adhere to the format were often dismissed as passé. Even bands who altered their style to match the new sound found themselves dismissed as "80s bands".

As grunge grew to greater success, many glam metal bands discovered that their labels were no longer supportive. Many major labels felt they had been caught off-guard by the somewhat surprise success of Nirvana's *Nevermind*, and had begun turning over their personnel in favor of younger staffers more versed in "alternative" music. Jani Lane of Warrant commented on the change in a late-1990s interview with MTV, noting that he knew his band was in trouble when he walked into his label's offices and noticed that the prominent Warrant display had been replaced by one of Alice in Chains. Nearly all of the popular glam metal bands found themselves dropped from their respective labels by the middle of the 1990s.

In a notable irony, many grunge and alternative music bands, who had established their careers by professing anti-corporate attitudes, wound up signing contracts with major record labels. At the same time, many glam-metal bands, once considered proponents of "corporate rock", ended up signing with independent labels. Labels such as CMC International and Perris Records were aware that glam metal had an audience, and were more than willing to help bring the music to its fanbase.

The decline in glam metal was further compounded by many key 80s metal bands, glam or otherwise, coincidentally either breaking up, losing significant band members, and/or releasing new albums that largely displeased existing fans. For example, Ozzy Osbourne announced his retirement, Vince Neil was briefly fired from Mötley Crüe, C.C. DeVille left Poison, and Guns N' Roses released a cover album and essentially disbanded.

Some critics wondered if the state of the country in the early 1990s may have had an effect on glam metal's popularity. Given that the US was going through a major recession at the beginning of the decade, several critics wondered if music fans had simply rejected the high-spirited nature of glam metal for the more serious attitudes put forth by grunge bands. Where glam metal as a genre tended to avoid topics such as politics, new bands such as Pearl Jam placed themselves at the center of the political battles associated with the 1992 US Presidential election.

## Revival

During the late 1990s, however, several glam metal bands of the popular era began to assert themselves again. Mötley Crüe reunited with Vince Neil, recorded the 1997 album *Generation Swine*, and embarked on a successful US tour. Poison reunited with C.C. Deville, and embarked on a successful 1999 tour of amphitheaters. A 2000 package tour featuring Poison, Slaughter, Cinderella, and Dokken sold extremely well.

By the early 2000s, a handful of new bands began to revive glam metal. The successful British band, The Darkness, was one example, albeit in a more tongue-in-cheek manner, somewhat reminiscent of early Queen. Newer glam metal bands, such as Murderdolls, Gemini Five, and Private Line, have been growing their fanbase. Until their vocalist died in early 2006, Crashdiet were also gaining popularity and were the first band of the genre to sign to a major label in over a decade. Some unsigned and lesser-known bands of the genre that formed during glam metal's popular years are now being signed to smaller labels such as Perris Records and releasing material. Beautiful Creatures, a band formed by ex-Bang Tango frontman Joe Leste, even signed a major label deal with Warner Brothers Records in 2000. Other bands that have been formed in the late 90's, early millenium have taken a certain amount of influence from Glam Metal, including Buckcherry, Damone, and RCA Records' Bullets and Octane.

And, even as newer bands adopt glam metal, many of the most popular glam metal bands continue to perform. Bands such as L.A. Guns, Ratt, and W.A.S.P. have appeared in package tours together, and Mötley Crüe and Poison are continuing to record material and tour. The *Monster Ballads* compilation series has sold well, with the first volume peaking at #18 on the Billboard 200. Even Guns N' Roses is signalling a return in 2006, given the leaking of new material and the booking of festival dates, potentially leading up to the long-awaited release of *Chinese Democracy*.

# Glam punk

**Glam punk** (or **Glitter punk**) is a term used to describe bands who mix elements of [glam rock](#) and protopunk or [punk rock](#) music. Elements of [rock](#) are normally included too.

# History

## 1970s

The first and most potent example of glam punk, is the New York Dolls, they are often considered one of the creators of [punk rock](#) music in general. Though after the [punk](#) explosion in London during the 1970s happened the Dolls were considered "glam" in comparison. Which would lead to them being described as "**Glam-Punk**".

Iggy Pop is also considered by some as "Glam punk" this is most likely due to the protopunk sound of the Stooges which was largely influential on the punk rock movement, coupled with Iggy's angrogynous image and close friendship as well as workings with Glam rock icon David Bowie, who produced some of Iggy Pop's music.

The same could be said for Alice Cooper Band who were one of the first [Glam rock](#) bands and were later influential to the likes of Hanoi Rocks, punk bands such as the Sex Pistols have also cited them as an influence.

Other more obscure groups from around this time such as Hollywood Brats, the Jook, Milk 'N' Cookies, Jet, and others can be heard on the compilation "Glitterbest: 20 Pre Punk 'n' Glam Terrace Stompers".

## 1980s

The 1980s saw a re-emergence of the "Glam punk" styling with the band Hanoi Rocks. While playing in London the group influenced several other bands who played in a similar style; Soho Roses, Kill City Dragons, Dogs D'Amour, the Babysitters, etc.

Shades of "Glam punk" can also be heard in the "sleaze glam" subgenre of [Glam metal](#), which emerged in the late 1980s. New York Dolls hugely influenced bands in the "sleaze glam" genre, such as Guns N' Roses, Faster Pussycat, L.A. Guns, Shotgun Messiah and others. Though these bands also incorporated "heavy metal" elements, not found in pure Glam punk.

## 1990s

Swedish band Backyard Babies were the most prominent example of "Glam punk", during the 1990s with their album Total 13. Guitarist Dregen once described the Babies in an interview as "The missing link between KISS and The Ramones." Michael Monroe of Hanoi Rocks guested on one of the band's tracks, guitarist Dregen has also recorded a live acoustic album with the Dogs D'Amour vocalist Tyla.

**Mainstream popularity:** Largely popular in the UK during the 70s and to a lesser extent in the United States

**Derivative forms:** [Punk rock](#), [Gothic rock](#), [New wave](#), Pub rock

## [Glam Metal](#)

**Glam rock** (less commonly, and mostly in the USA, known also as **Glitter rock**), was a style of [rock music](#) popularised in the early 1970s. It was mostly a British phenomenon, at its peak between the years of 1971 and 1973, made famous by acts such as Slade, David Bowie, Gary Glitter and T. Rex and had influence on groups such as Queen and Kiss. In the USA, Glam made less of an impression and was largely confined to selected music fans in the cities of New York and Los Angeles, although Alice Cooper incorporated a lot of the glam rock style.

Glam was distinguished by the glittery, sparkly costumes of the performers, perceived as glamorous by fans, and its bouncy rock n' roll songs. Lyrical emphasis was often on "teenage revolution" (T. Rex's - "Children of the Revolution", Sweet's - "Teenage Rampage") as well as sexuality, decadence and fame.

Glam performers often dressed androgynously in make up and glittery, florid costumes not dissimilar to costumes that Liberace or Elvis Presley wore when performing in cabaret. An example would be David Bowie during his Ziggy Stardust and Aladdin Sane phases. Sexual ambiguity was briefly in vogue: some bands took to playing in drag outfits for a while and Bowie told the press he was bisexual, although he later denied it, whilst the late Jobriath was among rock's first openly gay stars.

## Progenitors

Credit for starting the Glam genre is often given to Marc Bolan of T. Rex or David Bowie. Proponents included Slade, Mud, Gary Glitter, Sweet, Mott The Hoople and early Roxy Music including Brian Eno.

In America, glam rock was most prominently represented by the proto-punk New York Dolls, whose Rolling Stones-influenced rawk-n-roll was matched by the feminine look of the band. Another key American influence on glam rock, although commonly over-looked, Iggy Pop was very important to the development of the genre. Earlier, in 1968-69, Alice Cooper had arguably sketched the first hints of glam rock when they used a transvestite look and an overtly sexual attitude as part of their image.

In Italy, Renato Zero had already (and probably independently from abroad tendencies) used disguisements, androgine appearance and heavy make-up in the late 1960s, but with little success. After he became popular in the late-1970s, he was criticized as having borrowed the look from Bowie and Cooper.

## **Glam rock in theatre and cinema**

Theatre and Cinema played an important role in the Glam rock movement.

The stars of Andy Warhol's stage play *Pork* are considered influential on the movement. Wayne County was in particular an influence on David Bowie.

Another Andy Warhol Superstar, Jackie Curtis, was influential on the look and dress of glam rock.

Some examples of movies that reflect Glam Rock include: Brian DePalma's *Phantom of the Paradise*; *The Rocky Horror Picture Show*; T. Rex's documentary *Born To Boogie*; David Bowie's *The Rise and Fall of Ziggy Stardust*; Alice Cooper's *Good to See You Again*; Gary Glitter's *Remember Me This Way*; Slade's *Flame*; Todd Haynes' *Velvet Goldmine*; and most recently the film version of *Hedwig and the Angry Inch*.

## Subsequent influence

Glam rock was a major influence upon the late 1970s UK [punk rock](#) movement, notably the Sex Pistols. It was also an influence on the British [Goth rock](#) movement, particularly the bands who played at the Batcave in London.

The glam rock movement even made the shores of Japan at the turn of the 1970s, with local bands the Sadistic Mika Band and Vodka Collins having successful glam recordings on EMI records.

A trend amongst some Glam rock groups was releasing a Christmas single, examples of this are Slade's "Merry Christmas Everybody", Wizzard's "I Wish It Could Be Christmas Everyday", and Gary Glitter's "Another Rock N' Roll Christmas". These tracks receive heavy rotation in the United Kingdom every Christmas.

Today, the glam rock legacy is carried out by few worldwide; for example, The Darkness.

## Glee Club

A **Glee Club** is a [choir](#), historically of men but also of just women or mixed voices, which traditionally specializes in singing short songs. Glee clubs originated in England, but are no longer common in Britain; modern glee clubs are primarily found in North American colleges and universities. Glee in this context does not refer to the mood of the music or its singers, but to a specific form of English seventeenth and eighteenth century part song, the glee. Most American Glee Clubs are choruses in the standard sense and no longer perform *glees*.

# Glitch

**Glitch** (also known as **Clicks and Cuts** from a representative compilation series by the German [record label](#) Mille Plateaux) is a genre of [electronic music](#) that became popular in the late 1990s with the increasing use of digital signal processing, particularly on computers. The music is focused on [rhythm](#) and is sometimes considered a sub-genre of [intelligent dance music](#).

Glitch is often produced on computers using modern digital production software to splice together small "cuts" (samples) of music from already recorded songs, with beats made out of erroneously produced short clicks and bits of noise as well as skipping CDs. The genre is thus named after the use of digital artifacts and noise-like distortions (see "glitch"). These glitches are often very short, and are typically used in place of traditional percussion or instruments. However, not all artists of the genre are working with erroneously produced sounds or even using digital sounds.

Popular software for creating glitch includes Reaktor, Super Collider, Ableton Live, GleetchLAB, MAX/MSP, Miller Smith Puckette's Pure Data, and Chuck. In the hardware realm, glitch music is generated through circuit bending.

## History

Though Glitch developed in the 1990s, there were earlier precedents. Glitch is influenced by [Musique concrète](#), [techno music](#), [industrial music](#) and [ambient music](#). Active since the 1970s, turntablist Christian Marclay occasionally scratches or otherwise damages vinyl records to make music from the resulting skips and loops. The fluxus artist Yasunao Tone used damaged CDs in his Techno Eden performance in 1985.

The first proper glitch album is arguably Oval's *Wohnton* (1993). Trumpeter Jon Hassell's 1994 album *Dressing For Pleasure* — a dense mesh of [funky trip hop](#) and [jazz](#) — features several songs with the sound of skipping CDs layered into the mix.

## Notable artists

|                    |              |                   |                  |
|--------------------|--------------|-------------------|------------------|
| 000                | Dabrye       | Fennesz           | Pan sonic        |
| Alva Noto          | Daedelus     | The Flashbulb     | Phonecia         |

# GNU Free Documentation License

## GNU Free Documentation License

Version 1.2, November 2002

Copyright (C) 2000,2001,2002 Free Software Foundation, Inc. 51 Franklin St, Fifth Floor, Boston, MA 02110-1301 USA Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

### **0. PREAMBLE**

The purpose of this License is to make a manual, textbook, or other functional and useful document "free" in the sense of freedom: to assure everyone the effective freedom to copy and redistribute it, with or without modifying it, either commercially or noncommercially. Secondly, this License preserves for the author and publisher a way to get credit for their work, while not being considered responsible for modifications made by others.

This License is a kind of "copyleft", which means that derivative works of the document must themselves be free in the same sense. It complements the GNU General Public License, which is a copyleft license designed for free software.

We have designed this License in order to use it for manuals for free software, because free software needs free documentation: a free program should come with manuals providing the same freedoms that the software does. But this License is not limited to software manuals; it can be used for any textual work, regardless of subject matter or whether it is published as a printed book. We recommend this License principally for works whose purpose is instruction or reference.

### **1. APPLICABILITY AND DEFINITIONS**

This License applies to any manual or other work, in any medium, that contains a notice placed by the copyright holder saying it can be distributed under the terms of this License. Such a notice grants a world-wide, royalty-free license, unlimited in duration, to use that work under the conditions stated herein. The "Document", below, refers to any such manual or work. Any member of the public is a licensee, and is addressed as "you". You accept the license if you copy, modify or distribute the work in a way requiring permission under copyright law.

A "Modified Version" of the Document means any work containing the Document or a portion of it, either copied verbatim, or with modifications and/or translated into another language.

A "Secondary Section" is a named appendix or a front-matter section of the Document that deals exclusively with the relationship of the publishers or authors of the Document to the Document's overall subject (or to related matters) and contains nothing that could fall directly within that overall subject. (Thus, if the Document is in part a textbook of mathematics, a Secondary Section may not explain any mathematics.) The relationship could be a matter

of historical connection with the subject or with related matters, or of legal, commercial, philosophical, ethical or political position regarding them.

The "Invariant Sections" are certain Secondary Sections whose titles are designated, as being those of Invariant Sections, in the notice that says that the Document is released under this License. If a section does not fit the above definition of Secondary then it is not allowed to be designated as Invariant. The Document may contain zero Invariant Sections. If the Document does not identify any Invariant Sections then there are none.

The "Cover Texts" are certain short passages of text that are listed, as Front-Cover Texts or Back-Cover Texts, in the notice that says that the Document is released under this License. A Front-Cover Text may be at most 5 words, and a Back-Cover Text may be at most 25 words.

A "Transparent" copy of the Document means a machine-readable copy, represented in a format whose specification is available to the general public, that is suitable for revising the document straightforwardly with generic text editors or (for images composed of pixels) generic paint programs or (for drawings) some widely available drawing editor, and that is suitable for input to text formatters or for automatic translation to a variety of formats suitable for input to text formatters. A copy made in an otherwise Transparent file format whose markup, or absence of markup, has been arranged to thwart or discourage subsequent modification by readers is not Transparent. An image format is not Transparent if used for any substantial amount of text. A copy that is not "Transparent" is called "Opaque".

Examples of suitable formats for Transparent copies include plain ASCII without markup, Texinfo input format, LaTeX input format, SGML or XML using a publicly available DTD, and standard-conforming simple HTML, PostScript or PDF designed for human modification. Examples of transparent image formats include PNG, XCF and JPG. Opaque formats include proprietary formats that can be read and edited only by proprietary word processors, SGML or XML for which the DTD and/or processing tools are not generally available, and the machine-generated HTML, PostScript or PDF produced by some word processors for output purposes only.

The "Title Page" means, for a printed book, the title page itself, plus such following pages as are needed to hold, legibly, the material this License requires to appear in the title page. For works in formats which do not have any title page as such, "Title Page" means the text near the most prominent appearance of the work's title, preceding the beginning of the body of the text.

A section "Entitled XYZ" means a named subunit of the Document whose title either is precisely XYZ or contains XYZ in parentheses following text that translates XYZ in another language. (Here XYZ stands for a specific section name mentioned below, such as "Acknowledgements", "Dedications", "Endorsements", or "History".) To "Preserve the Title" of such a section when you modify the Document means that it remains a section "Entitled XYZ" according to this definition.

The Document may include Warranty Disclaimers next to the notice which states that this License applies to the Document. These Warranty Disclaimers are considered to be included by reference in this License, but only as regards disclaiming warranties: any other implication that these Warranty Disclaimers may have is void and has no effect on the meaning of this License.

## **2. VERBATIM COPYING**

You may copy and distribute the Document in any medium, either commercially or noncommercially, provided that this License, the copyright notices, and the license notice saying this License applies to the Document are reproduced in all copies, and that you add no other conditions whatsoever to those of this License. You may not use technical measures to obstruct or control the reading or further copying of the copies you make or distribute.

However, you may accept compensation in exchange for copies. If you distribute a large enough number of copies you must also follow the conditions in section 3.

You may also lend copies, under the same conditions stated above, and you may publicly display copies.

### **3. COPYING IN QUANTITY**

If you publish printed copies (or copies in media that commonly have printed covers) of the Document, numbering more than 100, and the Document's license notice requires Cover Texts, you must enclose the copies in covers that carry, clearly and legibly, all these Cover Texts: Front-Cover Texts on the front cover, and Back-Cover Texts on the back cover. Both covers must also clearly and legibly identify you as the publisher of these copies. The front cover must present the full title with all words of the title equally prominent and visible. You may add other material on the covers in addition. Copying with changes limited to the covers, as long as they preserve the title of the Document and satisfy these conditions, can be treated as verbatim copying in other respects.

If the required texts for either cover are too voluminous to fit legibly, you should put the first ones listed (as many as fit reasonably) on the actual cover, and continue the rest onto adjacent pages.

If you publish or distribute Opaque copies of the Document numbering more than 100, you must either include a machine-readable Transparent copy along with each Opaque copy, or state in or with each Opaque copy a computer-network location from which the general network-using public has access to download using public-standard network protocols a complete Transparent copy of the Document, free of added material. If you use the latter option, you must take reasonably prudent steps, when you begin distribution of Opaque copies in quantity, to ensure that this Transparent copy will remain thus accessible at the stated location until at least one year after the last time you distribute an Opaque copy (directly or through your agents or retailers) of that edition to the public.

It is requested, but not required, that you contact the authors of the Document well before redistributing any large number of copies, to give them a chance to provide you with an updated version of the Document.

### **4. MODIFICATIONS**

You may copy and distribute a Modified Version of the Document under the conditions of sections 2 and 3 above, provided that you release the Modified Version under precisely this License, with the Modified Version filling the role of the Document, thus licensing distribution and modification of the Modified Version to whoever possesses a copy of it. In addition, you must do these things in the Modified Version:

- **A.** Use in the Title Page (and on the covers, if any) a title distinct from that of the Document, and from those of previous versions (which should, if there were any, be listed in the History section of the Document). You may use the same title as a previous version if the original publisher of that version gives permission.
- **B.** List on the Title Page, as authors, one or more persons or entities responsible for authorship of the modifications in the Modified Version, together with at least five of the principal authors of the Document (all of its principal authors, if it has fewer than five), unless they release you from this requirement.
- **C.** State on the Title page the name of the publisher of the Modified Version, as the publisher.
- **D.** Preserve all the copyright notices of the Document.

- **E.** Add an appropriate copyright notice for your modifications adjacent to the other copyright notices.
- **F.** Include, immediately after the copyright notices, a license notice giving the public permission to use the Modified Version under the terms of this License, in the form shown in the Addendum below.
- **G.** Preserve in that license notice the full lists of Invariant Sections and required Cover Texts given in the Document's license notice.
- **H.** Include an unaltered copy of this License.
- **I.** Preserve the section Entitled "History", Preserve its Title, and add to it an item stating at least the title, year, new authors, and publisher of the Modified Version as given on the Title Page. If there is no section Entitled "History" in the Document, create one stating the title, year, authors, and publisher of the Document as given on its Title Page, then add an item describing the Modified Version as stated in the previous sentence.
- **J.** Preserve the network location, if any, given in the Document for public access to a Transparent copy of the Document, and likewise the network locations given in the Document for previous versions it was based on. These may be placed in the "History" section. You may omit a network location for a work that was published at least four years before the Document itself, or if the original publisher of the version it refers to gives permission.
- **K.** For any section Entitled "Acknowledgements" or "Dedications", Preserve the Title of the section, and preserve in the section all the substance and tone of each of the contributor acknowledgements and/or dedications given therein.
- **L.** Preserve all the Invariant Sections of the Document, unaltered in their text and in their titles. Section numbers or the equivalent are not considered part of the section titles.
- **M.** Delete any section Entitled "Endorsements". Such a section may not be included in the Modified Version.
- **N.** Do not retitle any existing section to be Entitled "Endorsements" or to conflict in title with any Invariant Section.
- **O.** Preserve any Warranty Disclaimers.

If the Modified Version includes new front-matter sections or appendices that qualify as Secondary Sections and contain no material copied from the Document, you may at your option designate some or all of these sections as invariant. To do this, add their titles to the list of Invariant Sections in the Modified Version's license notice. These titles must be distinct from any other section titles.

You may add a section Entitled "Endorsements", provided it contains nothing but endorsements of your Modified Version by various parties--for example, statements of peer review or that the text has been approved by an organization as the authoritative definition of a standard.

You may add a passage of up to five words as a Front-Cover Text, and a passage of up to 25 words as a Back-Cover Text, to the end of the list of Cover Texts in the Modified Version. Only one passage of Front-Cover Text and one of Back-Cover Text may be added by (or through arrangements made by) any one entity. If the Document already includes a cover text for the same cover, previously added by you or by arrangement made by the same entity you are acting on behalf of, you may not add another; but you may replace the old one, on explicit permission from the previous publisher that added the old one.

The author(s) and publisher(s) of the Document do not by this License give permission to use their names for publicity for or to assert or imply endorsement of any Modified Version.

## **5. COMBINING DOCUMENTS**

You may combine the Document with other documents released under this License, under the terms defined in section 4 above for modified versions, provided that you include in the combination all of the Invariant Sections of all of the original documents, unmodified, and list them all as Invariant Sections of your combined work in its license notice, and that you preserve all their Warranty Disclaimers.

The combined work need only contain one copy of this License, and multiple identical Invariant Sections may be replaced with a single copy. If there are multiple Invariant Sections with the same name but different contents, make the title of each such section unique by adding at the end of it, in parentheses, the name of the original author or publisher of that section if known, or else a unique number. Make the same adjustment to the section titles in the list of Invariant Sections in the license notice of the combined work.

In the combination, you must combine any sections Entitled "History" in the various original documents, forming one section Entitled "History"; likewise combine any sections Entitled "Acknowledgements", and any sections Entitled "Dedications". You must delete all sections Entitled "Endorsements."

## **6. COLLECTIONS OF DOCUMENTS**

You may make a collection consisting of the Document and other documents released under this License, and replace the individual copies of this License in the various documents with a single copy that is included in the collection, provided that you follow the rules of this License for verbatim copying of each of the documents in all other respects.

You may extract a single document from such a collection, and distribute it individually under this License, provided you insert a copy of this License into the extracted document, and follow this License in all other respects regarding verbatim copying of that document.

## **7. AGGREGATION WITH INDEPENDENT WORKS**

A compilation of the Document or its derivatives with other separate and independent documents or works, in or on a volume of a storage or distribution medium, is called an "aggregate" if the copyright resulting from the compilation is not used to limit the legal rights of the compilation's users beyond what the individual works permit. When the Document is included in an aggregate, this License does not apply to the other works in the aggregate which are not themselves derivative works of the Document.

If the Cover Text requirement of section 3 is applicable to these copies of the Document, then if the Document is less than one half of the entire aggregate, the Document's Cover Texts may be placed on covers that bracket the Document within the aggregate, or the electronic equivalent of covers if the Document is in electronic form. Otherwise they must appear on printed covers that bracket the whole aggregate.

## **8. TRANSLATION**

Translation is considered a kind of modification, so you may distribute translations of the Document under the terms of section 4. Replacing Invariant Sections with translations requires special permission from their copyright holders, but you may include translations of some or all Invariant Sections in addition to the original versions of these Invariant Sections. You may include a translation of this License, and all the license notices in the Document, and any Warranty Disclaimers, provided that you also include the original English version of this License and the original versions of those notices and disclaimers. In case of a disagreement between the translation and the original version of this License or a notice or disclaimer, the original version will prevail.

If a section in the Document is Entitled "Acknowledgements", "Dedications", or "History", the requirement (section 4) to Preserve its Title (section 1) will typically require changing the actual title.

## **9. TERMINATION**

You may not copy, modify, sublicense, or distribute the Document except as expressly provided for under this License. Any other attempt to copy, modify, sublicense or distribute the Document is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

#### **10. FUTURE REVISIONS OF THIS LICENSE**

The Free Software Foundation may publish new, revised versions of the GNU Free Documentation License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns. See <http://www.gnu.org/copyleft/>.

Each version of the License is given a distinguishing version number. If the Document specifies that a particular numbered version of this License "or any later version" applies to it, you have the option of following the terms and conditions either of that specified version or of any later version that has been published (not as a draft) by the Free Software Foundation. If the Document does not specify a version number of this License, you may choose any version ever published (not as a draft) by the Free Software Foundation.

## Go Go

**Go-Go** is a subgenre of [funk music](#) developed in and around Washington, D.C. in the mid and late 1970s. While its musical classification, influences, and origins are debated, Chuck Brown (b. 1934) is regarded as the fundamental force behind the creation of go-go music.

Go-go is defined by continuous, complex, heavy rhythm arrangements focused through two motifs performed on multiple congas, tumbadoras, and rototoms, interspersed with timbale and cowbell parts, driven by heavy-footed drumming and punctuated by crowd call-and-response. A swing rhythm is often implied (if not explicitly stated).

Some go-go bands have seen varying degrees of success nationally and worldwide, but Washington, D.C. remains the preeminent center for the music.

## History

Chuck Brown, a fixture on the Washington music scene with Chuck Brown & the Soul Searchers ("We the People", "Ashley's Roachclip"), inspired other local bands in the mid-1970s to incorporate go-go music more and more into their standard live shows. This included the funk-driven Trouble Funk and the rock-influenced E.U., who became the most popular bands on the go-go music scene by the end of the 70s. Brown's 1979 hit single "Bustin' Loose" was the culmination of go-go music's early success. Trouble Funk briefly signed with New Jersey's Sugar Hill Records, where they released the minor hit "Pump Me Up". E.U. scored a national hit when they performed their song "Da Butt" in the motion picture *School Daze* in 1988.

The next generation of go-go featured The Junk Yard Band and Rare Essence, two enduring bands that gained popularity after go-go had become established. The Junk Yard Band began as a group of children as young as nine years old, performing music on a hodge-podge of discarded items fashioned into musical instruments. They signed and toured with New York's Def Jam Records, where they released the 12-inch single "The Word". Rare Essence, who was mentored at a young age by Chuck Brown, signed briefly with Mercury Records, but both bands' prominence were primarily established in and around Washington and the Mid-Atlantic area.

Many of these bands still perform today, along with successive generations of bands. Go-Go is always performed live at nightclubs, neighborhood parties, and sometimes with famous singers. Go-Go initially spread through the distribution of free cassette tapes, and is now found locally in the Maryland, Washington D.C., and Virginia area for sale on CDs.

Go-go clubs sometimes acquired a reputation for violence, and in some areas of Washington, clubs are not permitted to play go-go or have go-go bands appear. One well-publicized venue with trouble was Club U, located inside a DC government building at the corner of 14th Street NW and U Street NW, where a murder and other incidents happened before the club was closed.

# Popular go-go bands and songs

## First generation

- Chuck Brown ("Bustin Loose," "That'll Work," "Money")
- E.U. (Experience Unlimited) ("Da Butt," "EU Freeze," "Future Funk")
- Trouble Funk ("Pump Me Up," "Drop the Bomb," "E Flat Boogie")
- Little Benny and the Masters ("Who came to boogie")

## Second generation

- Backyard Band ("91 Dope Jam", "Unibomber", "Skillet", "Thug Passion", "Keep it Gangsta", "Pretty Girls", "Fakin Like")
- Junk Yard Band ("Sardines," "Rough it Off," "Go Hard")
- Northeast Groovers ("The Rumble," "Off the Muscle," "The Water")
- Rare Essence ("Lock It," "Work the Walls," "Body Moves," "Overnight Scenario")

## Hybrid Go-go and R&B bands

- After Hours Band
- Da Measures Band/Drastic Measures Band
- Familiar Faces
- LISSSEN Band
- Soul Patrol
- Suttle Thought

# Goa trance music

## Goa trance

**Stylistic origins:** [Indian classical music](#), [Industrial/EBM](#), [Acid house](#), [Psychedelic rock](#)

**Cultural origins:** Late 1980s - Mid/late 1990s, Goa, Europe, Israel (influenced by Hippie culture)

**Typical instruments:** Roland TB-303, Roland TR-909, [Sequencer](#)

**Mainstream popularity:** Europe, Israel, Japan, Brazil peaking in the mid/late-1990s

## [Subgenres](#)

Psychedelic chillout - [Psybient](#)

## Fusion genres

[Psychedelic trance](#)

**Goa trance** (often referred as *Goa* or by the number 604) is a form of [electronic music](#) and is a style of [trance music](#). It originated in the late 1980's and early 1990's in the Indian state of Goa, which is distinctive as most forms of [trance music](#) were developed in Europe.

Goa trance is closely related to the emergence of [psychedelic trance](#) during the latter half of the 1990s; however, the distinction between the two genres is largely a matter of opinion (and they are considered by some to be synonymous, some say that the psychedelic trance is more "metallic" and the goa is more "organic".) These two are, however, sonically distinct from other forms of trance, largely by the unique sounds they use. In many countries they are generally more underground and less commercial than other forms of trance. The goa sound is more likely to be heard at outdoor parties and [festivals](#) than in clubs. The first compilations or albums where the Goa trance sound could be heard, distinguishable from "normal" [trance music](#), is likely Dragonfly Records "*Project II Trance*" and its successor "*Order Odonata*".

## History

The music has its roots in the popularity of the Goa state in India in the late 1960s and early 1970s as a hippie mecca, and although musical developments were incorporating elements of industrial music and EBM with the spiritual culture in India throughout the 1980's, the actual Goa trance style did not officially appear until the early 1990s. As the hippie tourist influx tapered off in the 1970s and 1980s, a core group remained in Goa, concentrating on developments in music along with other pursuits such as yoga and recreational drug use. The music that would eventually be known as Goa trance did not evolve from one single genre, but was inspired mainly by Industrial music/EBM like Front Line Assembly and A Split-Second, acid house (The KLF's "What time is love?" in particular) and psychedelic rock like Ozric Tentacles, Steve Hillage and Ash Ra Tempel. In addition to those, oriental tribal/ethnic music also became a source of inspiration, unsurprisingly considering that it was from Goa in the Orient that Goa trance originated. A very early example (1974) of the relation between psy-rock and the music that would eventually be known as Goa trance is The Cosmic Jokers (a collaboration between Ash Ra Tempel and Klaus Schulze) highly experimental and psychedelic album "Galactic Supermarket", which features occasional 4/4 rhythms intertwined with elements from psy-rock, early analogue synths and occasionally tribal-esque [drum](#) patterns.

The introduction of [techno](#) and its techniques to Goa led to what eventually became the Goa trance style; early pioneers included DJs Laurent, Fred Disko, Goa Gil, and, a bit later Mark Allen. Many "parties" (generally similar to raves but with a more mystic flavour, at least in early 90's) in Goa revolve entirely around this genre of music. In other countries, Goa is also often played at raves, festivals and parties in conjunction with other styles of trance and techno.

Today, Goa trance has a significant following in Israel, brought to that country by former soldiers returning from recreational "post-army trips" to Goa in the early 1990s. A great deal of Goa trance is now produced in Israel, but its production and consumption is a global phenomenon. New "hot-spots" today include Brazil, Japan, South Africa and Mexico. The actual Goa sound/style has changed a lot since 1997. From 1997 till 2000 the Goa Trance scene was without any clear goal. The musicians tried a lot from breakbeats to minimal techno. The main thing in this time was to make anything different than the good old music. So anything could be heard at a Goa party. After 2000 some new styles were born and fixed and have survived till now. Today a lot of music from the Goa trance drawer hasn't anything to do with the original sound of Goa trance, however achieving a psychedelic sound (be it organic or metallic) is still the emphasis that producers are out to accomplish.

There is also one special underground genre called suomisaundi, which originates in Finland. One of its trademark features is reference to early/mid-90's classic Goa trance music, and this genre is often exhibited in Finland's forest party scene. At these parties, mostly Goa trance and Suomi-style psytrance are played.

## The sound of Goa trance

*Never changing. Forever true. In the name of love. Dance for paradise.*

--as sampled by Boris Blenn

Goa is essentially "dance-trance" music (it was referred to as "Trance Dance" in its formative years), and as such has an energetic beat, often in 4/4 and often going into 16th or 32nd notes, especially for the pumping basslines. It is also noted for switching to a 12/8 beat with the same tempo during some parts of the song. A typical track will generally build up to a much more energetic movement in the second half then taper off fairly quickly toward the end. The BPM typically lies in the 130 - 150 range, making goa trance faster than more mainstream trance, although some tracks may have BPMs as low as 110 or as high as 170. Generally 8-12 minutes long, Goa tracks usually have a noticeably stronger bassline than other trance music and incorporate more organic "squelchy" sounds (sounds put through a resonance filter, thought to sound especially good on psychedelic drugs), with equipment used including popular analogue synthesizers such as the Roland TB-303, Roland Juno-60/106, Novation Bass-Station, Korg MS-10, and notably the Roland SH-101, used by one of the most prolific artists of the genre Simon Posford (Hallucinogen, Shpongle, The Infinity Project, Younger Brother). Hardware samplers manufactured by Akai, Yamaha and Ensoniq were also popular for sample storage and manipulation.

A popular element of both Goa trance and the closely related psytrance is the incorporation of strange samples into the tracks, mostly from sci-fi movies. Those samples mostly relates to drugs, parapsychology, Extraterrestrials, existentialism, OBE's, dreams, various fields of science and other things that could be deemed as "mysterious" and "unconventional". For an extensive list of such samples.

## Goa trance parties

In the state of Goa, Goa trance parties can take place in unusual locations such as on a beach, in a desert or in the middle of the forest, although it is not uncommon for them to be held in conventional locations like clubs. These days, the need to pay the local police baksheesh means that they're generally staged around a bar, even though this may only be a temporary fixture in the forest or beach. Once the baksheesh is paid, then the party-goers are free to bring out their charas and fill their chillums without fear of getting arrested.

The parties around the New Year tend to be the most chaotic with busloads of people coming in from all Mumbai, Delhi, Bangalore and the world over. Travelers, beggars and sadhus from all over India pass by to join in the fun.

Goa parties also have a definitive visual aspect - the use of "fluoro" (fluorescent paint) is common on clothing and on decorations such as tapestries. The graphics on these decorations are usually associated with topics such as aliens, Hinduism, other religious (especially eastern) images, mushrooms (and other psychedelic imagery), shamanism and technology. Shrines in front of the DJ stands featuring religious items are also common decorations.

## Goa trance in popular culture

For a short period in the mid-1990s Goa trance enjoyed significant commercial success with support from DJs like Paul Oakenfold. Only a few artists came close to being Goa trance "stars". The most notable are Astral Projection, Man With No Name, Shpongle, and Infected Mushroom. Juno Reactor had their music featured in many Hollywood movies like Mortal Kombat, The Matrix, and even Once Upon a Time in Mexico; however, whether or not those are actually Goa or psychedelic trance tracks is debatable.

In fact, Goa trance remains very much an underground form of music and except for the more popular artists, such as (Hallucinogen or Juno Reactor), Goa trance albums are usually not sold in mainstream record stores.

At the Mexican Rave Scene in the movie, Man on Fire several relatively famous goa trance songs (G.M.S - Juiced) can be heard in the background.

## Typical Goa trance music tracks

- *"Mahadeva"* - Astral Projection
- *"Mystical Experiences in Goa"* - Etnica

# Gong

A **gong** is any one of a wide variety of metal [percussion](#) instruments. The term is Malayu-Javanese in origin but widespread throughout Asia. The instrument itself appears to have origins in the bronze drums of China, [cymbals](#) of central Asia, and perhaps even in European [bell](#)-casting techniques.

Gongs are broadly of two types. **Suspended gongs** are more or less flat, circular disks of metal suspended vertically by means of a cord passed through holes near to the top rim. **Bowl gongs** are bowl-shaped, and rest on cushions. Gongs are made mainly from bronze or brass but there are many other alloys in use.

## Types of gong

**Suspended gongs** are played with beaters. In general, the larger the gong, the larger and softer the beater. Large gongs may be 'primed' by lightly hitting them before the main stroke, greatly enhancing the sound. Keeping this priming stroke inaudible calls for a great deal of skill. The smallest suspended gongs are played with bamboo sticks, or even western-style drumsticks.

**Bowl gongs** may be played in many different ways, not all of them strictly percussion. The rim may be rubbed with the finger, for example, or the gong may be struck with a beater. Bowl gongs are used in temple worship, especially in Buddhism.

## Traditional suspended gongs

### A 10" Chau Gong

By far the most familiar to most Westerners is the *chau gong* or *bullseye gong*. Large chau gongs, called *tam-tams* (not to be confused with tom-tom drums), have become part of the symphony orchestra. Sometimes a chau gong is referred to as a *Chinese gong*, but in fact it is only one of many types of suspended gongs that are associated with China.

The chau gong is made of copper-based alloy, bronze or brass. It is almost flat except for the rim, which is turned up to make a shallow cylinder. On a 10" gong, for example, the rim extends about a half an inch perpendicular to the gong surface. The main surface is slightly concave when viewed from the direction to which the rim is turned. The centre spot and the rim of a chau gong are left coated on both sides with the black copper oxide that forms during the manufacture of the gong, the rest of the gong is polished to remove this coating. Chau gongs range in size from 7" to 80" in diameter.

The earliest Chau gong is from a tomb discovered at the Guixian site in the Guangxi Zhuang Autonomous Region of China. It dates from the early Western Han Dynasty.

Traditionally, chau gongs were used to clear the way for important officials and processions, much like a police siren today. Sometimes the number of strokes on the gong was used to indicate the seniority of the official. In this way, two officials meeting unexpectedly on the road would know before the meeting which of them should bow down before the other.

### Uses of gongs in the symphony orchestra

Gustav Mahler was one of the first composers to use the tam-tam in his symphonic works. Within a few decades the tam-tam became an important member of the percussion section of a modern symphony orchestra. Fine examples of its use are demonstrated in the symphonies of Dimitri Shostakovich and, to a lesser extent, Sergei Rachmaninov. Karlheinz Stockhausen used a 60" tam-tam in his *Mikrophonie #1*.

## Nipple gongs

**Nipple gongs** have a raised boss or nipple in the centre, often made of a different metal to the rest of the gong. They have a clear resonant tone with less shimmer than other gongs, and two distinct sounds depending on whether they are struck on the boss or next to it.

Nipple gongs range in size from 6" to 14" or larger. Sets of smaller, tuned nipple gongs can be used to play a tune.

A **Bau gong** is a type of nipple gong used in Chinese temples for worship.

## Opera gongs

An essential part of the [orchestra](#) for Chinese opera is a pair of gongs, the larger with a descending tone, the smaller with a rising tone. The larger gong is used to announce the entrance of major players, of men, and to identify points of drama and consequence. The smaller gong is used to announce the entry of lesser players, of women, and to identify points of humour.

Opera gongs range in size from 7" to 12", with the larger of a pair one or two inches larger than the smaller.

## Pasi gongs

A **Pasi gong** is a medium-size gong 12" to 15" in size, with a crashing sound. It is used traditionally to announce the start of a performance, play or magic. Construction varies, some having nipples and some not, so this type is more named for its function than for its structure or even its sound.

Pasi gongs without nipples have found favour with adventurous middle-of-the-road kit drummers.

## Tiger gong

A **tiger gong** is a slightly descending or less commonly ascending gong, larger than an opera gong and with a less pronounced pitch shift. Most commonly 15" but available down to 8".

## Shueng Kwong

A **Sheng Kwong** gong is a medium to large gong with a sharp staccato sound.

## Wind gong

Wind gongs are flat and heavy, with a high pitched, heavy tuned overtone and long sustain. Played with a nylon tip drumstick they sound a bit like the coil chimes in a mantle clock. Some have holes in the centre, but they are mounted like all suspended gongs by other holes near the rim. They are lathed both sides and are medium to large in size, typically 15" to 22" but sizes from 7" to 40" are available.

Wind gongs are the type most commonly used by heavy [rock](#) drummers. Traditionally, a wind gong is played with a large soft mallet, which gives a completely different sound to a drumstick.

## **Modern orchestral gongs**

As well as the tam-tam, there are a number of new gong types that were created during the 20th century specifically for orchestral use.

### **Planet gongs**

A series of 14 tuned gongs by Paiste, ranging in size from 24" to 38".

### **Sound Creation gongs**

A series of 13 theme gongs by Paiste, ranging in size from 11" to 60".

## Gong - general

In older Javanese usage and in modern Balinese usage, **gong** is used to identify an ensemble of instruments. In contemporary central Javanese usage, the term gamelan is preferred and the term **gong** is reserved for the gong ageng, the largest instrument of the type, or for surrogate instruments such as the gong komodong or gong bumbu (blown gong) which fill the same musical function in ensembles lacking the large gong. In Balinese usage, gong refers to Gamelan Gong Kebyar.

Some primitive [drums](#) are known as Tam Tams, "slit gongs" or slit drums. The people of Vanuatu in particular, cut a large log with 'totem' type carvings on the outer surface and hollow out the centre leaving only a slit down the front. This hollowed out log gives the deep resonance of drums when hit on the outside with sticks.

## Gongs - general

A **gong** (| pinyin *luo2*; Malay language or Javanese language: *gong-gong* or *tam-tam*) is a percussion sonorous or [musical instrument](#) of Chinese origin and manufacture, made in the form of a broad thin disk with a deep rim, that has spread to Southeast Asia - a type of flat bell.

Gongs vary in diameter from about 20 to 40 in., and they are made of bronze containing a maximum of 22 parts of tin to 78 of copper; but in many cases the proportion of tin is considerably less. Such an alloy, when cast and allowed to cool slowly, is excessively brittle, but it can be tempered and annealed in a peculiar manner. If suddenly cooled from a cherry-red heat, the alloy becomes so soft that it can be hammered and worked on the lathe, and afterwards it may be hardened by re-heating and cooling it slowly. In these properties it will be observed, the alloy behaves in a manner exactly opposite to steel, and the Chinese avail themselves of the known peculiarities for preparing the thin sheets of which gongs are made. They cool their castings of bronze in water, and after hammering out the alloy in the soft state, harden the finished gongs by heating them to a cherry-red and allowing them to cool slowly. These properties of the alloy long remained a secret, said to have been first discovered in Europe by Jean Pierre Joseph d'Arcet at the beginning of the 19th century. Riche and Champion are said to have succeeded in producing tam-tams having all the qualities and timbre of the Chinese instruments. The composition of the alloy of bronze used for making gongs is stated to be as follows: Copper, 76.52; Tin, 22.43; Lead, 0.26; Zinc, 0.23; Iron, 0.81. The gong is beaten with a round, hard, leather-covered pad, fitted on a short stick or handle. It emits a peculiarly sonorous sound, its complex vibrations bursting into a wave-like succession of [tones](#), sometimes shrill, sometimes deep. In China and Japan it is used in religious ceremonies, state processions, marriages and other festivals; and it is said that the Chinese can modify its tone variously by particular ways of striking the disk. Gongs may have been used on towers in place of place.

The gong has been effectively used in the [orchestra](#) to intensify the impression of fear and horror in melodramatic scenes. The tam-tam was first introduced into a western orchestra by François Joseph Gossec in the funeral march composed at the death of Mirabeau in 1791. Gaspare Spontini used it in *La Vestale* (1807), in the finale of Act II, an impressive scene in which the high pontiff pronounces the anathema on the faithless vestal. It was also used in the funeral music played when the remains of Napoleon were brought back to France in 1840. Meyerbeer made use of the instrument in the scene of the resurrection of the three nuns in *Robert le diable*. Four tam-tams are now used at Bayreuth in *Parsifal* to reinforce the bell instruments, although there is no indication given in the score. The tam-tam has been treated from its ethnographical side by Franz Heger. In more modern music, the tam-tam has been used by composers such as Karlheinz Stockhausen in *Mikrofonie #1* and by George Crumb. Crumb expanded the timbral range of the tam-tam by giving performance directions (in *Makrokosmos III: Music For A Summer Evening*) such as using a "well-rosined contrabass bow" to bow the tam-tam, producing an eerie harmonic sound.

## **Signal gongs**

### **Railcar mounted**

The signal bell mounted on a tram, trolley, streetcar, cable car or light rail train is known as a gong. It is a bowl-shaped bell typically mounted on the front of the leading car. It is sounded to act as a warning in areas where whistles and horns are prohibited. The "Clang" of the trolley refers to the sound made by the warning gong. In the Tram controls, the gong is operated by a foot lever. A smaller gong with a bell pull is mounted by the rear door of these railcars. It operated by the conductor to notify the motorman that it is safe to proceed.

### **Rail crossing**

A railroad crossing with a flashing traffic signal or wigwag will also typically have a warning bell, also known as a gong. The gong is struck by an electric-powered hammer to give motorists and pedestrians an audible warning of an oncoming train. Many railroad crossing gongs are now being replaced by electronic sounding devices that have no moving parts to fail.

### **Boxing (sport)**

A bowl-shaped center mounted gong is standard equipment in a boxing ring and is known as a boxing ring gong. It is struck with a hammer to signal the start and end of each round. An example is made by the Everlast boxing equipment company. The expression "saved by the bell" refers to the gong sounding the end of a boxing round.

## Gongs in popular culture

Gongs have been used in upper class households as waking devices, or to summon domestic help.

A man hitting a gong twice starts all Rank films. This iconic figure is known as the gongman.

Queen's classic song Bohemian Rhapsody ends with the sound of a gong.

In The Addams Family television show, the sound of the gong (activated by a bell pull) would summon Lurch the family butler. Upon appearing, Lurch would utter his basso profundo catchphrase, "You Rang?"

## Gospel music

**Gospel music** may refer either to the religious music that first came out of African-American churches in the 1930's or, more loosely, to both black gospel music and to the religious music composed and sung by white southern Christian artists. While the separation between the two styles was never absolute — both drew from the Methodist hymnal and artists in one tradition sometimes sang songs belonging to the other — the sharp division between black and white America, particularly black and white churches, kept the two apart. While those divisions have lessened slightly in the past fifty years, the two traditions are still distinct.

In both traditions, some performers, such as Mahalia Jackson have limited themselves to appearing in religious contexts only, while others, such as the Golden Gate Quartet and Clara Ward, have performed gospel music in secular settings, even night clubs. Many performers, such as the Jordanaires, Al Green, and Solomon Burke have performed both secular and religious music. It is common for such performers to include gospel songs in otherwise secular performances, although the opposite almost never happens.

Although predominantly an American phenomenon Gospel music has spread throughout the world including to Australia with choirs such as The Elementals and Jonah & The Whalers and festivals such as the Australian Gospel Music Festival. Norway is home to the popular Oslo Gospel Choir and most importantly The Ansgar Gospel Choir.

# Black gospel

**Stylistic origins:** Spirituals, [blues](#), [hymns](#)

**Cultural origins:** Late 19th century African Americans

**Typical instruments:** Originally, sparse or none; later pianos, guitars and drums, organ, electric guitars

**Mainstream popularity:** Peak in 1940s and 50s US, derivatives like [soul](#) remain popular

**Derivative forms:** [Rhythm and blues](#) - [Soul music](#)

Jubilee quartets - Mass choirs

Jamoo

[Spirituals](#)

## Origins (1920s – 1940s)

What most people would identify today as " — gospel —" began very differently eighty years ago. The gospel music that Thomas A. Dorsey, Sallie Martin, Dr. Mattie Moss Clark, Willie Mae Ford Smith and other pioneers popularized had its roots in the more freewheeling forms of religious devotion of "Sanctified" or "Holiness" churches — sometimes called "holy rollers" by other denominations — who encouraged individual church members to "testify," speaking or singing spontaneously about their faith and experience of the Holy Ghost and Getting Happy, sometimes while dancing in celebration. In the 1920s Sanctified artists, such as Arizona Dranes, many of whom were also traveling preachers, started making records in a style that melded traditional religious themes with barrelhouse, blues and boogie woogie techniques and brought [jazz](#) instruments, such as drums and horns, into the church. It is also important to note that gospel music is not just a form of music. It is an intricate part of the religious experience for many church-goers.

Dorsey, who, as jonny g, had once composed for and played piano behind [blues](#) giants Tampa Red, Ma Rainey and Bessie Smith, worked hard to develop this new music, organizing an annual convention for gospel artists, touring with Martin to sell sheet music and gradually overcoming the resistance of more conservative churches to what many of them considered sinful, worldly music. Combining the sixteen bar structure and blues modes and rhythms with religious lyrics, Dorsey's compositions opened up possibilities for innovative singers such as Sister Rosetta Tharpe to apply their very individual talents to

his songs, while inspiring church members to "shout" — either to call out catch phrases or to add musical lines of their own in response to the singers.

This free-er style affected other black religious musical styles as well. The most popular groups in the 1930s were male quartets or small groups such as The Golden Gate Quartet, who sang, usually unaccompanied, in jubilee style, mixing careful harmonies, melodious singing, playful syncopation and sophisticated arrangements to produce a fresh, experimental style far removed from the more somber hymn-singing. These groups also absorbed popular sounds from pop groups such as The Mills Brothers and produced songs that mixed conventional religious themes, humor and social and political commentary. They began to show more and more influence from gospel as they incorporated the new music into their repertoire.

## **Golden age (1940s – 1950s)**

The new gospel music composed by Dorsey and others proved very important among quartets, who began turning in a new direction. Groups such as the Dixie Hummingbirds, Pilgrim Travelers, Soul Stirrers, Swan Silvertones, Sensational Nightingales and Five Blind Boys of Mississippi introduced even more stylistic freedom to the close harmonies of jubilee style, adding ad libs and using repeated short phrases in the background to maintain a rhythmic base for the innovations of the lead singers. Individual singers also stood out more as jubilee turned to "hard gospel" and as soloists began to shout more and more, often in falsettos anchored by a prominent bass. Quartet singers combined both individual virtuoso performances and jack off innovative harmonic and rhythmic invention — what Ira Tucker Sr. and Paul Owens of the Hummingbirds called "trickeration" — that amplified both the emotional and musical intensity of their songs.

At the same time that quartet groups were reaching their zenith in the 1940s and 1950s, a number of women singers were achieving stardom. Some, such as Mahalia Jackson and Bessie Griffin, were primarily soloists, while others, such as Clara Ward, The Caravans, The Davis Sisters and Dorothy Love Coates, sang in small groups. While some groups, such as The Ward Singers, employed the sort of theatrics and daring group dynamics that male quartet groups used, for the most part women gospel singers relied instead on overpowering technique and dramatic personal witness to establish themselves.

Roberta Martin in Chicago stood apart from other women gospel singers in many respects. She led groups that featured both men and women singers, employed an understated style that did not stress individual virtuosity, and sponsored a number of individual artists, such as James Cleveland, who went on to change the face of gospel in the decades that followed.

## **Gospel's influences**

Gospel artists, who had been influenced by pop music trends for years, had a major influence on early [rhythm and blues](#) artists, particularly the "bird groups" such as the Orioles, the Ravens and the Flamingos, who applied gospel quartets' a cappella techniques to pop songs in the late 1940s and throughout the 1950s. Individual gospel artists, such as Sam Cooke, and secular artists who borrowed heavily from gospel, such as Ray Charles and James Brown, had an even greater impact later in the 1950s, helping to create

soul music by bringing even more gospel to rhythm and blues. Elvis Presley is probably the biggest gospel artist but he is also in the rock'n roll hall of fame and country music hall of fame. His gospel favorites were "Why me Lord," "How great thou art," and "You'll never walk alone".

Many of the most prominent soul artists, such as Aretha Franklin, Marvin Gaye, Wilson Pickett and Al Green, had roots in the church and gospel music and brought with them much of the vocal styles of artists such as Clara Ward and Julius Cheeks. Secular songwriters often appropriated gospel songs, such as the Pilgrim Travelers' song "I've Got A New Home", which Ray Charles turned into "Lonely Avenue", or "Stand By Me", which Ben E. King and Lieber and Stoller adapted from a well-known gospel song, or Marvin Gaye's "Can I Get A Witness", which reworks traditional gospel catchphrases. In other cases secular musicians did the opposite, attaching phrases and titles from the gospel tradition to secular songs to create soul hits such as "Come See About Me" for the Supremes and "99 1/2 Won't Do" for Wilson Pickett.

### **Gospel choirs appearing in other genres**

One trend in modern music is to use a gospel choir occasionally in the middle of a song in a different genre, such as [alternative](#) or [rock](#). The following are examples.

Downfall by matchbox twenty  
Under the Bridge by Red Hot Chili Peppers  
I'm Alright by Jars of Clay  
All These Things That I've Done by The Killers

| <b>Typical instruments:</b>   | Originally, sparse or none  |
| <b>Mainstream popularity:</b> | Popularized through secular artists such as Elvis Presley and evangelists such as Billy Graham and Jimmy Swaggart |

[Bluegrass](#) gospel

CCM

Often called **country gospel** to distinguish it from black gospel, white gospel music has followed a different trajectory during the past eighty years. Some of its roots are found in the publishing work and "normal schools" of Aldine S. Kieffer and Ephraim Ruebush. It was promoted by traveling singing school teachers, southern gospel quartets, and shape note music publishing companies such as the A. J. Showalter Company (1879), the James D. Vaughan Publishing Company and the Stamps-Baxter Music and Printing Company.

Southern gospel also drew much of its creative energy from the Holiness churches that arose throughout the south in the first decades of the twentieth century and that created new music, in addition to the traditional hymns of the eighteenth and nineteenth centuries, to accompany their new forms of worship.

Some early country gospel artists, such as The Carter Family, achieved wide popularity through their recordings and radio performances in the 1920s and 1930s. Others, such as Homer Rodeheaver, George Beverly Shea or Cliff Barrows, became well-known through their association with traveling evangelists such as Billy Sunday or Billy Graham.

The city of Hartford, Arkansas, was for a time known as an oasis of Gospel publishing, being home to the Hartford Music Company, which employed the talents of Albert E. Brumley (composer of "I'll Fly Away") and E.M. Bartlett (composer of "Victory in Jesus").

Among the best known southern gospel performers are The Statesmen Quartet, The Blackwood Brothers, the Jordanaires, J.D. Sumner and the Stamps Quartet, the Oak Ridge Boys, The Happy Goodman Family, and The Cathedrals. As in the case of black gospel, the churchgoing audience for white gospel music has not always forgiven its stars, such as the Oak Ridge Boys, who have crossed over to pop music. Other traditional groups, such as The Imperials, helped lead the development of Contemporary Christian Music. In recent years, Southern Gospel Music has experienced a resurgence of

popularity due to the success of Bill and Gloria Gaither's "Homecoming" series of videos, featuring many of the legends of SGM performing together with many currently popular groups, such as The Gaither Vocal Band, The Hoppers, and Ernie Haase & Signature Sound.

The Gospel Music Association is a major group of gospel artists who maintain a hall of fame covering all aspects of gospel music. The Southern Gospel Music Association (SGMA) focuses on Southern Gospel specifically and has a physical Hall of Fame and Museum located in the Dollywood theme park at Pigeon Forge, TN.

# Goth

**Goth** is a contemporary subculture prevalent in many countries around the globe. It began in the United Kingdom during the early 1980s in the [gothic rock](#) scene, an offshoot of the [post-punk](#) genre. The goth subculture is remarkable for its longevity compared with others of the same era. Its imagery and cultural proclivities show influences from nineteenth century Gothic literature, mainly by way of horror movies (particularly cinematic depictions of vampires).

The goth subculture has associated "gothic" tastes in music and fashion. Gothic music encompasses a number of different styles. Common to all is a tendency towards a "dark" sound. Styles of dress within the subculture range from [death rock](#), [punk](#), Victorian, androgyny, some [Renaissance](#) style clothes, combinations of the above, and/or lots of black attire, makeup and hair.

# Origins and development of the subculture

## Original subculture

By the late 1970s, there were a few [post-punk](#) bands in the United Kingdom labeled "gothic." However, it was not until the early 1980s that [gothic rock](#) became its own [subgenre](#) within [post-punk](#) and that followers of these bands started to come together as a distinctly recognizable group. The opening of the Batcave in London's Soho in July 1982 provided a prominent meeting point for the emerging scene, which had briefly been labeled positive punk by the New Musical Express. The term "Batcaver" was later used to describe old-school goths.

Independent of the British scene, the late 1970s and early 1980s saw [death rock](#) branch off from American punk. In Germany, members of the emerging goth subculture were called *Gruffties* (engl. "*vault creatures*" or "*tomb creatures*") in the '80s and early '90s. They represented generally a fusion between the goth subculture and the [New wave](#) movement and were forming the early part of the "dark culture."

## Goth after post-punk

After the demise of [post-punk](#), goth continued to evolve, both musically and visually. This caused variations in style ("types" of goth). Local scenes also contributed to this variation. By the 1990s, Victorian fashion saw a renewed popularity in the goth scene, drawing on the mid-19th century gothic revival and the more morbid aspects of Victorian culture. The 2003 Victoria and Albert Museum Gothic exhibition in London furthered a tenuous connection between modern goth and the medieval gothic period.

Over time, the gothic subculture has developed its own "goth slang", with regional variations.

## Current boundaries of the subculture

By the 1990s, the term "goth" and the boundaries of the goth subculture had become more contentious. New youth subcultures evolved, or became more popular, some of them being conflated with the goth subculture by the general public and the popular media. This was based primarily on appearance, and the fashions of the subcultures, rather than the musical genres of the bands associated with them. As time went on, the term was extended even further in popular usage, sometimes being applied to groups that had neither musical nor fashion similarities to the original gothic subculture.

This has led to the introduction of terms that some goths and others use to sort and label associated trends and members of loosely related subcultures.

These include mallgoths or Neo-Goths in the US, Cuervos in Spain, Dark In Latin America, gogans in Australia, and spooky kids or moshers in the UK. Sai Ho, a Melbourne playwright, is particularly scathing about what he terms *baby goths*. More positive terms, such as *mini-goths* or *baby bats*, are also used by some older goths to refer to youths they see as exhibiting potential for growth into "true" goths later on.

The response of these younger groups to the older subculture varies. Some, being secure in a separate subcultural identity, express offense at being called "goths" in the first place, while others choose to join the existing subculture on its own terms. Still others have simply ignored its existence, and decided to appropriate the term "goth" themselves, and redefine the idea in their own image. Even within the original subculture, changing trends have added to the complexity of attempting to define precise boundaries.

## The music

The bands that began the [gothic rock](#) and [death rock](#) scene were limited in number, and included Bauhaus, Siouxsie & the Banshees, Southern Death Cult, Sex Gang Children, 45 Grave, The Damned, And Also The Trees, The Virgin Prunes, Joy Division, The Cure, The Cramps and Christian Death.

By the mid-eighties, the number of bands began proliferating and became increasingly popular, including The Sisters of Mercy, The Mission UK, Xmal Deutschland, Dead Can Dance, and Fields of the Nephilim. The nineties saw the further growth of eighties bands and emergence of many new bands. Factory, 4AD, and Beggars Banquet released much of this music in Europe, while Geffen and Cleopatra Records amongst others released much of this music in the United States, where the subculture grew especially in New York and Los Angeles, with many nightclubs featuring gothic/industrial nights. The popularity of 4AD bands such as Dead Can Dance and The Cocteau Twins resulted in the creation of a similar US label called Projekt. This produces what is colloquially termed Ethereal, as well as the more electronic [Darkwave](#).

By the mid-1990s, styles of music that were heard in venues that goths attended ranged from [gothic rock](#), [death rock](#), [darkwave](#), [industrial](#), [EBM](#), [ambient](#), [experimental](#), [synthpop](#), [shoegaze](#), [punk rock](#), 1970s [glam rock](#) (not to be confused with later glam rock), [indie rock](#), to 1980s dance music. This variety was a result of a need to maximize attendance from everyone across the alternative music scene, particularly in smaller towns, and due to the eclectic tastes of the members of the subculture; but it also signaled new shifts in attitude. Gothic rock was originally clearly differentiated from industrial and heavy metal by older participants in the alternative scene, but newcomers and media misconceptions blurred the boundaries in the nineties as [gothic rock](#) became significantly less popular in the US and UK. Thus while [industrial](#) or [heavy metal](#) bands such as Marilyn Manson, Jack Off Jill, Nine Inch Nails, Type O Negative, Lacuna Coil, Dimmu Borgir, Cradle of Filth, Slipknot, and Mortiis were often labeled as "goth" by the media, this categorization was strongly resisted by longstanding goths. Even more confusion was added with the rise of [gothic metal](#), with such bands consciously using gothic imagery from the dark ages in their own music and appearance and started even following fashion trends indistinguishable from older goth ones. Arguments about which music is and is not goth became an ever more significant part of how the subculture tried to define itself.

The other significant development of the nineties was the popularity of electronic dance bands such as VNV Nation and Covenant in the goth scene. The rise of what has been called cybergoth music and style, which has much in common with techno/synthpop, caused bitter divisions between its fans and those firmly attached to the analog and/or guitar based sound of [gothic rock](#). Bands with a [darkwave](#) sound or those such as Soft Cell, or The Cruxshadows, which combine an electronic and gothic rock sound, appeal to both sides to some extent.

Recent years have seen a resurgence in the early positive punk and [death rock](#) sound, in reaction to the EBM, [futurepop](#), and synthpop, which had taken over many goth clubs. Bands with an earlier goth sound like Cinema Strange,

Bloody Dead And Sexy, Black Ice, and Antiworld are becoming very popular. Nights like Ghoul School and Release The Bats promote death rock heavily, and the Drop Dead Festival brings in death rock fans from all over the world.

Today, the goth music scene thrives most actively in Western Europe, especially Germany, with large festivals such as Wave-Gotik-Treffen, Zillo, and others drawing tens of thousands of fans from all over the world.

# Gothabilly

**Gothabilly** is a portmanteau which refers to an unusual fusion of rockabilly music and the Goth culture. Separate from "Psychobilly" due to the comedic aspect that is often inhibited in the over the top, violent lyrics. Often the vocal styles are very similar to classic rockabilly. While the gothabilly subgenre is widely acknowledged to have been started by The Cramps in the late 70's, the term itself didn't come into fruition until the early 90's in an interview with Salon Betty frontwoman, Betty X. The adage quickly caught on.

On a similar note, the terms Death Lounge and Deathabilly can also be credited to Betty X in the same time period.

Among the bands of this genre of music:

- The Birthday Party
- Bone Orchard
- Calabrese
- The Coffinshakers
- The Cramps
- The Cryptkeeper 5
- Concumbre Zombi
- Cult of the Psychic Fetus
- Dark Violence of Beauty
- Dr. Daniel & the Rockabilly Vampires
- Frankenstein
- Ghoultown
- The Hillbilly Headhunters
- Koffin Kats
- Nick Cave and the Bad Seeds
- Salon Betty
- Scary Boom
- The Young Werewolves

# Gothic metal

**Stylistic origins:** [Black metal](#), [Death metal](#), [Doom metal](#)

**Cultural origins:** early 1990s, Europe

**Typical instruments:** [Guitar](#) - [Bass](#) - [Drums](#) - [Keyboard](#)

**Mainstream popularity:** Small, dedicated fanbases mainly focused in Europe

Gothic-Doom

United States, United Kingdom, Scandinavia Germany

**Gothic metal** is a genre of [heavy metal music](#) that originated in the early 1990's in Europe as an outgrowth of doom-death, a subgenre of [doom metal](#). The definition of gothic metal is commonly debated; older fans and musicians have a firm concept of the genre having been around through its growth and evolution, having strict ideas of what bands pertain to the genre and what bands don't. Newer fans reject this categorization as limiting, useless or wrong, often claiming bands are gothic metal that do not meet the criteria of the older fans.

## Sounds, constructs and lyrics

Gothic metal is sometimes considered a loose genre in the way it sounds because the genre is defined by its composition of the music and its aesthetics, leaving individual bands to provide different interpretations. It also makes unique use of dual vocalists, keyboards and acoustic guitars, making it distinctive in comparison to other metal genres.

Gothic metal tends to refer to [doom metal](#), [black metal](#), and [death metal](#) for its composition, heavily synthesizing the styles of their melody and rhythm ideas in its guitar work, causing the music to be aggressive and fast paced. Acoustic guitars are sometimes present in gothic metal, and in bands that use two guitars, the second guitarist is often found playing a form of acoustic guitar. The acoustic guitar is used in the same way as its electronic counterpart, and is normally found playing melodies that are as equally complex. The bass guitar in gothic metal usually plays lower tones akin to doom metal combined with the aggression of black and death metal, often being the main contributor to the atmosphere in songs.

Keyboards play a major role in gothic metal, often replacing the second guitarist in bands and taking on the role of either lead or rhythm. The keyboards are often used to imitate a variety of instruments, most often string and wind instruments. Keyboards tend to support the bass in setting the atmosphere and mood of songs.

The atmosphere is commonly tailored to fit the song; warm and energetic, empty and enclosing. The atmosphere rarely follows the deep morbidity of doom metal unlike its origin/offspring, doom-death/gothic-doom, or the upbeat nature of its sister genre, [symphonic metal](#).

Lyricaly, gothic metal is centered around romances and fantasy tales that end in tragedy for one or more parties involved. The setting for the lyrics are most often in the [New Age](#) or the Dark Ages, but can also be in Victorian, Edwardian, Roman, or modern eras. The romantic- and fantasy-themed lyrics often used in gothic metal cover many broad subjects and are intended as being themes and guides to the lyricist, rather than a complete prerequisite of the genre. Gothic Metal bands typically do not write their albums in the form of separate songs; they rather write [concept albums](#) in the form of books. This is so that each song acts as a part, or, chapter, inspiring people to listen to the whole album in order to hear the story, instead of just certain songs. Penumbra's *Seclusion* and Silentium's *Sufferion - Hamartia of Prudence* are two gothic metal albums that feature this style of lyrics.

Gothic metal bands normally have two vocalists, (also known as "Beauty and the Beast" vocals). One vocalist is typically male and uses vocals akin to black or death metal. The other vocalist is usually female, and often uses [soprano](#) vocals, or harmonic singing. Sometimes bands will use other forms of vocals included with the two prior vocalists, including (but not limited to) female death/black vocals, [Gregorian chanting](#) and male singing, but this tends to be limited to backing vocals and their use within the song

# History

## Origins (1983-1993)

The earliest stage of gothic metal can be traced to bands in the 1980s, who utilized the dark aesthetics of [gothic rock](#) with aspects of composition akin to doom metal. Bands of this type are credited mainly for their later influence on the subgenres, doom-death and gothic-doom.

Although Glenn Danzig's Samhain made some attribution to this manner of composition, [Death rock](#) band Christian Death are regarded by some as the most influential to the founding of the subgenre. Though the influence seems to come from the bands line up containing Valor Kand's version of "Christian Death", who themselves are considered to play a style of Heavy Metal, unlike the original line up founded by Rozz Williams, who had a more punk influenced sound. The current line up with Valor has featured members of [metal](#) bands such as Cradle Of Filth guesting on albums.[3]

Celtic Frost, although considered by many as an early black metal band, also played a semi-important role in the development of doom-death, due to their use of "gothic-sounding" atmospherics.

In the 1990s, a group of young bands in Northern England borrowed from the early gothic rock sound of the 1980s and incorporated it with the slow, down-tuned guitar dirges of Black Sabbath and similar [doom metal](#) bands. Doom-death, as it was known, was the first stage of the gothic-doom subgenre and the gothic-metal genre. Bands most notable for this style included Paradise Lost, My Dying Bride, and Anathema.

Although death metal and black metal were two of the larger genres of metal at this time, especially in the Scandinavian region, many bands who started in either genre had progressed more toward doom-death styles; two of these bands were Moonspell and Theatre of Tragedy.

While early doom-death bands Paradise Lost and Anathema used some female vocals in their music, the Netherland's The Gathering was the first doom-death band with a leading female singer, Marike Groot on the album Always... and then Martine Van Loon on Almost a Dance (both later replaced by another female singer, Anneke van Giersbergen). This set a pattern for gothic metal by adding the first implications of using two vocalists in the bands, which later became a signature of gothic metal as it was quickly imitated by bands including Tristana and Theatre of Tragedy.

## Gothic Metal (1993-present)

Gothic metal originated in the early 1990's with bands such as Tristana and Therion taking the doom-death sound that had arisen and making romantically-themed music that borrowed from black metal's and death metal's guitar and vocal styles. These bands left behind some of the depressing nature and

gothic rock elements of their origins to add more warm and classical elements into the music.

A softer genre known as [symphonic metal](#) had evolved in the mid- to late-1990s from gothic metal bearing strong similarities to its predecessor, with bands led by female singers. During this time the divide between gothic metal and the new born symphonic metal became apparent; symphonic metal maintained a simpler approach, with more operatic and classical themes, while gothic metal incorporated more aggressive elements of death metal and black metal directly into the music, adding more technically complex melodies and rhythms into its music. Trail of Tears and Penumbra heading this last known progression in the music.

The gothic metal scene is currently very developed in Europe and Scandinavia, most notably in England, France, Norway and the Netherlands, and is growing rapidly in Germany. Much of the scene's core fan base has developed itself in England and France, with many of the bands coming from the Scandinavian region. Several groups of smaller bands are also emerging in eastern Europe and South America, struggling to gain a foothold where the scene is small.

## **Gothic Doom (1997-present)**

In the late 1990's-2000 bands within the gothic metal genre had become somewhat prominent, and the genre symphonic metal had begun to emerge from it. At this point, several bands started to go the opposite path to symphonic metal for their, adding highly morbid themes, slowing down to a more slow-paced aggression akin to gothic metal, and began to abandon the Beauty And The Beast vocals that had become part of the gothic metal genre.

During this period, a boom of new bands occurred. These bands combined aspects directly from early 90s gothic metal with aspects of various forms of doom metal. Bands such as Chalice, Draconian, Even Vast, and Left Hand Solution all released albums or produced demo's at this time. These bands used various elements of gothic metal and doom metal in varied and undefined methods. This included the romantic lyrics and instrument usage with morbid atmospheres and slow, droning guitar work. These bands also often found inspiration from doom-death bands, often utilizing the same gothic rock mannerisms found in doom-death almost subconsciously. These new bands, with their morbid sound and nature, and noticeable gothic metal elements, were often debated as being gothic metal or doom metal, before finally being settled on as being 'gothic-doom'.

In the early 2000's another boom happened, many bands that were now considered gothic-doom released their first or second albums, with many more bands producing demo's. This second rush of bands and albums now emphasized parts of doom metal and gothic metal by melding aspects of the genres together. Lyrical themes of the genres were melded together, as were the guitaring, keyboarding, and atmospheric styles of the genres.

Currently, gothic-doom is a widespread scene, with no centralized fan base or origins of bands. Gothic-doom's fanbase mostly tends to be fans heavily into gothic metal and/or doom metal, and currently lacks any major recognition beyond its borrowed stardom.

## Gothic doom

Gothic-doom (also sometimes called **Goth Metal** due to its [gothic rock](#) influence) is best described as a subgenre of both doom metal and gothic metal. Throughout its existence, gothic doom has combined aspects of both doom metal and gothic metal in varying quantities, and the often melding of two aspects together.

Early bands in the subgenre used varying quantities and aspects of doom metal with aspects of gothic metal, taking heavily influence from doom-death bands. The music often used one element from gothic metal, with an element of doom metal, ie: The lyrical theme and instrumental usage of gothic metal, with doom metal atmospherics and vocal styles.

The sound became more defined as it evolved to combine traits of gothic metal and doom metal directly with their counterparts. Later Gothic doom bands often write music that is typical of either genre, then meld the aspects of that genre directly with the aspects found in the other. Lyrics tend to meld the romantic and fantasy themes of gothic metal, with the morbid and depressive themes of doom metal, creating stories that focus heavily on romance induced misery. Bands have also tended to adapt the synthesising nature of gothic metal. Guitars synthesising aspects of death metal's chugging and technical nature and gothic rock, with the slow, heavily downtuned aspects of doom metal, similar to what doom-death bands originally did. The instrument usage of gothic metal has also met adaptation into doom metal styles, the instruments roles remaining the same within the band, yet played with the same slow, downcast nature of most doom metal.

Some gothic doom bands such as Type O Negative and The Wounded have more atoned to following the trend of the first batch of gothic doom. These bands tend to place heavy emphasis on each part of their music, making each individual aspect highly distinguished from another, rather than letting them all blend into one conjoined sound. These bands also take some influence directly from gothic rock, incorporating minor characteristics of the genre directly into their music.

Gothic doom bands are overall characterised by their often equal, but highly mixed use of elements of gothic metal, doom metal and occasional elements of gothic rock, whether they are synthesised, melded together, or emphasised. As such, bands are sometimes debated upon as to whether they are doom metal, gothic metal, or neither. Other instances of debate are over whether the original doom-death bands could be considered gothic-doom due to their similarities, or are a separate subform due to their place in the timeline of origins.

## **Other gothic metal fusions**

Other fusions of gothic metal similar to gothic doom have also started to become more noticeable. This has often been noticed by bands within the black metal, death metal and symphonic metal genres that have started using elements of gothic metal in the bands music.

Within death metal and black metal this has included the non-defining use of dual vocalists, sub-romantic themes and the writing of concept albums mixed with the traditional sound of the genre. These genre fusions include bands such as Dark Lunacy, Cradle of Filth (later albums), and Eternal Tears of Sorrow.

Some symphonic metal bands have also started to use more gothic metal elements. This is mainly noticeable by the more downbeat, aggressive and complex structures to songs. Bands such as the Netherlands' Autumn and Russia's Offertorium are both notable for this.

## Common misconceptions

Although the style has seen much more controversy than other metal genres - and remarkably, the most instances of debate - some arguments have gone on in regards to bands that have sported a gothic "image" in the eyes of the media versus those with direct musical connections to the gothic metal genre. This has included bands that have shown imagery akin to morbidity, religious themes, gothic fashion, vampirism, and satanism and bands that have played alongside gothic metal bands at concerts.

Bands are also often mistaken for being gothic metal, as people considered [goths](#) will attend the performance of a band, and the media takes to believing the band is part of the gothic metal genre due to the people who attend their concerts.

Many debates have gone on as to whether bands rooted in one genre that use gothic metal aspects within their music are themselves gothic metal, or are themselves creating fusion like subgenres such as gothic doom. Because of these debates, sometimes bands such as these are listed amongst gothic metal bands as well as bands in the genre they are rooted from, often causing more debate and more confusion on the issue.

Many people assume that gothic metal's name implies that it is the same as [goth rock](#), but with metal based composition, and so misinterpret a wide range of bands as being gothic metal on that basis. This misconception is furthered by the use of the term 'goth metal', which implies the music has to do with [goths](#). The genre actually got its name from the imagery and themes within the lyrics, and the atmospherics it uses, which are quite different to those of the similarly named goth rock. While both use the term "gothic" in reference to the forboding sense of doom popularized by the Gothic novel, gothic rock developed out of [punk rock](#) in the late 1970s and, aside from some heavier bands like Christian Death, has no connection to heavy metal.

Derogatory usage of the term faggoth by some fans of other metal genres, especially those of black metal, has led to the term being associated with gothic metal. The term is actually used as an insult to the less extreme natures of gothic metal, symphonic metal and Goth Music. Due to the word 'goth' being part of the term however, it is easily mistaken to mean that all music it is used derogatorily towards is goth music.

[Deathrock](#)

Dark Cabaret - Gothabilly

[Alternative rock](#) - [Culture](#) - [Darkwave](#) - [Industrial music](#)

**Gothic rock** (also called **goth rock** or simply **goth**) is a [genre](#) of [rock music](#) that evolved out of [post-punk](#) during the late 1970s. Originally considered just a label for a small handful of [punk rock](#)/post-punk bands, goth only began to be defined as a separate movement in 1981. While most punk bands focused on aggressive, outward rock, the early gothic bands were more introspective, concerned with aesthetics, and personal, with elements that can be traced to much older literary movements such as gothic horror, Romanticism, existential philosophy, and the philosophical construct of nihilism. Notable gothic rock bands include Bauhaus (considered one of the first), Siouxsie & the Banshees, The Cure, The Sisters of Mercy, and Fields of the Nephilim.

Largely separate from other genres of [alternative rock](#) that developed during the 1980s, the original gothic rock scene gave birth to the [goth](#) subculture, which has a presence in many areas of the world today.

## First generation (c. 1979–c. 1985)

Associating the [goth](#) subculture with the first generation of goth bands can be troublesome. Since the adjective "gothic" was used to describe the sound of specific [punk](#), [post punk](#), and [new wave](#) bands, not all punks and new wavers who liked these groups associated themselves with a goth scene; regardless these early groups are where goth rock traces its origins. What is most notable about the core 1970s and 1980s bands is that, typical to their punk roots, they had a general distaste for labels, presumably seeing such things as anathema to creative expression .

With some exceptions, such as Christian Death from Los Angeles, the Virgin Prunes from Ireland, and Xmal Deutschland from Germany, most of these first gothic rock groups were British.

### Early goth bands in the United Kingdom

The first post punk/new wave groups later to be labeled gothic were Joy Division and Siouxsie & the Banshees in 1979. They seem to have been a part of a wave of bands developing a haunting sound and dark, art-oriented expression between 1978 and 1979. Two other examples of this trend were Johnny Rotten's Public Image Ltd and Killing Joke. Though these groups may not have been part of the goth scene that sprung up a few years later, they were very influential. Among influential albums by Siouxsie & the Banshees would be everything put out between their debut album *The Scream* (1978) and *Nocturne* (1983). Joy Division were short lived because vocalist Ian Curtis committed suicide, but the two albums they put out, *Unknown Pleasures* (1979) and *Closer* (1980), were both gothic in sound and highly influential. The remaining members of Joy Division became New Order and New Order's first album *Movement* (1981) continued Joy Division's influential gothic style. New Order afterwards turned into a New Wave/dance group but not before the British press began slamming gothic rock groups, such as Danse Society, as New Order rip offs.

As the gothic label began to stick to Joy Division and Siouxsie & the Banshees in 1979; then came Bauhaus, originally called Bauhaus 1919. They started out wearing plain jeans and t-shirts, but after appearing on the same bill as Gloria Mundi (who looked and sounded gothic yet remained unknown since nobody ever saw them), Bauhaus ended up having a make over, dressing in all black and wearing make up. Strongly influenced by English Glam rock, such as David Bowie and T. Rex, Bauhaus's debut single "Bela Lugosi's Dead" released in late 1979, is considered to be the gothic [anthem](#) that sparked several people to follow in their gothic footsteps.

More bands came along in 1980-1981; among them were Danse Society, Theatre of Hate, Play Dead, and The Sisters of Mercy. In February 1981, Abbo from UK Decay jokingly labeled this emerging movement *gothic* and so it went from being a label for a few bands to a label for a movement. UK Decay started out as a punk band in the late 1970s and, though they sounded very gothic since their beginning, they became more important in the emerging scene of the early 1980s.

Echo and the Bunnymen were another early post punk outfit that would bear substantial influence on the gothic look and sound, particularly with the album *Crocodiles* (1980) and songs like 'Happy Death Men'. The 'Bunnymen' in their turn influenced other bands, including Dead Fingers Talk, fronted by Nottingham musician and poet Steve Gad who had spent the previous year with them.

The origins of gothic fashion can be traced to Siouxsie & the Banshees, Bauhaus and The Cure, though some mention should be given to The Damned, a 1977 punk band whose lead singer Dave Vanian dressed up as a vampire for kicks. Siouxsie & the Banshees and The Cure have retained their goth imagery throughout their careers, but their music has strayed from the gothic style. After the *Nocturne* album, Siouxsie's output shifted to softer focus on gothic themes. Bauhaus remained a consistently gothic band up until their break up in 1983. Some members of Bauhaus had a side project called Tones on Tail and continued with it during the mid 1980s, releasing gothic music influenced strongly by Pet Sounds-era The Beach Boys and psychedelia.

Early Gary Numan material from *Tubeway Army* to *The Pleasure Principle* can be considered goth. The use of analog synthesizers and subject matter were a definite influence on later goth bands. His imagery & fashion have influenced contemporary goth Cyberpunk fashion.

1982 saw gothic rock turn into a full on sub-culture, not just because of the emergence of bands like Sex Gang Children, Southern Death Cult, Skeletal Family, Specimen, and Alien Sex Fiend, but because it saw the opening of the Batcave in London, a venue with the purpose of reinventing David Bowie's style of glam rock with a darker, horror-type twist. Some members of gothic rock bands began hanging out there and it ended up becoming the prototype goth club. By 1984, music played by the DJs there ranged from Siouxsie, The Cramps, Sweet, Specimen, Eddie Cochran, and Death Cult. 1982-83 also saw the gothic rock scene gaining a lot of media attention from the British press and venues similar to the Batcave started popping up all over England.

### **Early goth bands in America and Canada**

The American [Deathrock](#) scene, which was primarily centered in and around Los Angeles, California, began in the late seventies with such bands as Christian Death (1979), 45 Grave (1979), Voodoo Church, Kommunity FK (1979), Theatre of Ice (1978) etc.. At the time that Christian Death were recording their debut album *Only Theatre of Pain* in 1982, frontman Rozz Williams knew of the goth scene in England but had not yet heard any of those bands. Christian Death soon became popular in France and started touring Europe and England in 1984. Their second two albums *Catastrophe Ballet* and *Ashes* showed more direct influence from goth as Rozz Williams became interested in [surrealism](#) and the dada movement. The Gun Club also started playing in Europe and England a lot, often opening up for the Sisters of Mercy.

### **Early goth bands in Europe and Australia**

Goth was as much a continental European phenomenon as it was British or American. At the same time bands like Bauhaus and Christian Death were forming in those countries, dark bands such as Einstürzende Neubauten (1980), Xmal Deutschland (1980), Die Krupps (1981), and Pink Turns Blue were forming in Germany. Belgium gave rise to electronic body music (EBM) with influence from bands such as Kraftwerk and the early EBM band Front 242 (1981). Amsterdam soon joined in with Clan of Xymox, who formed in 1983. Subsequently, Germany is now home to the largest modern gothic festival, the yearly Wave Gotik Treffen in Leipzig, which began in 1992.

Australia and New Zealand also deserve a mention. The emerging movement there was characterized by Nick Cave's second band, The Birthday Party (c. 1979 and later moving to London) and other post-punk collectives like Fetus Productions (also called The Features/The Fetals, c.1979), who as of 2004 were still holding art museum exhibits for their controversial depictions of deformed human beings. From the New Zealand Film Archive site: "Operating as an audio-visual company from 1980-1989, Fetus Productions were part of a small global 'industrial' culture network, which included Throbbing Gristle in Britain, and Survival Research Laboratories on the West Coast of America. They released seven albums, designed clothing, wrote manifestos, made films, and challenged the parameters of music and art, blending pop, industrial and philosophical methodologies. Their work attacked advertising's promulgation of perfect images and perfect bodies using images of medical misadventure and mutation."

## Second generation (c. 1985–c. 1995)

In the UK this period saw goth bands at their most popular, and the subculture at its largest extent. Throughout the 80s, there was much cross-pollination between the European goth subcultures, the Death Rock movement, and the [New Romantic](#) (New Wave) movement. The rise in popularity of rock music in the mid-eighties, was mirrored by the rise of gothic rock, most notably in the form of the seminal goth rock bands, The Sisters of Mercy, Fields of the Nephilim (1984), a new version of Christian Death (1985), The Mission (1986), and Mephisto Walz (c.1987) founded by former Christian Death composer / guitarist Barry Galvin (alias Bari Bari), Galvin defined the dark droning style of Christian Death on the album *Atrocities*, the songs of which he composed and later transferred to the Mephisto Walz repertoire.

Around 1985, the post-punk era came to an end and many of the first generation gothic groups either disbanded or changed their style. That era closes with The Sisters of Mercy's debut album *First and Last and Always* (1985) which cracked the British top ten and is a good picture of the transition between first and second generation goth. Despite the fact that they had formed in 1980, the Sisters would prove to be very influential on the second generation. Vocalist Andrew Eldritch had a voice very different from any of the other first generation gothic rock groups and by the late 1980s was labeled the "Godfather of Goth." The Sisters of Mercy were also the first among the gothic rock groups to use a drum machine, along with the March Violets, who, like the Sisters, were also from Leeds, England. The drum machine seems to have been a unique feature of goth bands coming out of Leeds (the Three Johns and Red Lorry Yellow Lorry are good examples) and became much more common during the second generation. The drum machine continues to be common in goth music to this day.

It was during the second wave of goth that the term and the style became noticed outside of a few tight-knit circles. The term began to appear in mainstream British publications like *The Face* and the *NME*, fanzines and goth-only clubs began to spring up in the tradition of London's Batcave (which was still going strong). The 1983 vampire film "The Hunger" starred David Bowie and featured an appearance by Bauhaus, cementing the relationship between glam, horror, goth and mainstream in a way that influenced much of the second generation. The popularity of these acts was cemented by the emerging popularity on European stages and US college radio of 4AD recording artists such as Clan of Xymox (who scored a mainstream hit with "Imagination" after dropping the "Clan of" from their name), Dead Can Dance, and The Cocteau Twins, as well as the continued popular success of acts like Siouxsie and the Banshees, who despite no longer operating actively or exclusively in the Gothic scene, were still its de facto spokespeople to the mainstream.

Several goth magazines arose during this time, the first possibly being *Propaganda* (though it later became a softcore gay porn magazine). Goth zines split their direction in much the same way that the scene itself did; earlier magazines such as *Permission* were allied to the punk roots of goth, and tended to veer towards industrial music as the years went on, while later

magazines such as Carpe Noctem focused more on the lace-and-poetry romantic sound, setting the stage for the "spooky kids" of the third wave.

By 1987, gothic groups started to emerge in Toronto and Montreal, Canada. Those achieving acclaim include: Disappointed a Few People (Montreal 1986) and Masochistic Religion (Toronto, 1988?-2003) whose singer, Mitch Kroll, relocated to Montreal and is still active as a musician but the band is now dormant. Masochistic Religion also included the singer from Armed and Hammered, the Guitarist from technicolour rain coats and a member from Ichor. Toronto band Exovedate signed with German record label Pandaimonium Records and their third CD "Seduced by Illusions" received airplay in Australia, Russia, the United States, Brazil, Guam, Germany, and Canada.

By this time, a cross-pollination with the growing global [industrial music](#) scene was developing (though the scenes had always been at least acquainted with each other), and acts like Dog Pile, Crash Worship, and Skinny Puppy blended more and more elements from these scenes. Though not ever involved with the goth scene directly, Depeche Mode was also tremendously influential (though musicians at the time may have been loathe to admit it) in their blending of goth and industrial elements within a popular idiom. [Synthpop](#) acts such as Camouflage, Secession, Celebrate the Nun, and Red Flag began to work in their footsteps during this period, and their incorporation of the gothic into club music was a seminal experiment that foreshadowed the culling of synthpop into goth rock that would heavily characterize the scene in the late 90s.

## Third generation (c. 1995 to Present)

The nineties saw the further growth of eighties bands and emergence of many new acts, with most of the North American examples, such as Switchblade Symphony, and London After Midnight, being released by the Cleopatra label while England gave birth to Children On Stun and Rosetta Stone. Meanwhile in Germany, interest in Gothic music began to grow, with Apollyon Records releasing numerous Gothic compilations, and soon pushing full length recordings from American Gothic bands like The Last Dance, and The Deep Eynde.

Goth bands on other labels whose popularity grew in the 90s include The Cruxshadows, The Last Dance, Sunshine Blind, Trance to the Sun, The Empire Hideous, The Shroud, and Voltaire.

The mid and late 90s were a transitional period for gothic music, in no small part owing to a wider cultural obsession with hard rock acts — particularly in the United States — that had been influenced by and somewhat erroneously labelled as "gothic" and/or "industrial." The corporatization of goth, as displayed in the music of HIM, Marilyn Manson and several other popular acts, as well as the rise of the Hot Topic chain and the "mallgoth" aesthetic meant that traditional goth acts were now interacting in a scene composed of a new and mixed audience whose preconceptions of goth music changed these acts' opportunities for artistic and commercial success. The upshot was that many talented acts toured and recorded from 1995 to the end of the millennium, though their work was overshadowed both in popularity and ultimate influence by bands and fans alike who merely dabbled in the scene but largely abandoned it, perhaps not coincidentally, around the time of the Columbine school shooting and the American press's subsequent villification and scrutiny of goth culture in 1999.

In the underground, Cleopatra's heyday had diminished by the turn of the millennium, and Goth rock, to survive in a subculture dominated more and more by dance club attendance, adapted. Contemporary dance club goth evolved simultaneously with beat driven [industrial music](#) during this era, and both use the same techniques and types of synthesis equipment. The main difference is that danceable industrial is "harder" sounding, and goth is "softer" sounding, with less distortion on vocals and guitars, and generally with less influence from techno and metal. Modern goth often has the evolutionary feel of New Wave music or [synth pop](#), while modern industrial is an evolution of [Electronic Body Music](#). These distinctions are hazy at best, and while there are still many "old school" gothic rock or faux-medieval acts around, functionally speaking the line between (sub)genres has blurred considerably.

Today, some fans of early gothic rock are embracing a [Death Rock](#) revival that has taken height recently as a return to the original music and fashions of the first generation of goth. Bands such as Cinema Strange, Bella Morte, The Deep Eynde and Black Ice, along with the website Deathrock.com have contributed to the revitalization of the genre, and Nina Hagen even headlined the recent Drop Dead Festival in New York City (2005), already in its third year. This movement within the scene has been given an indirect boost from mainstream culture with the contemporary widespread success of acts like

Interpol, The Dresden Dolls, and The Stills, whose sounds all owe heavily to post-punk, if not directly to early goth music. Coupled with their success have been successful career phases for The Cure and Bauhaus, all furthering the popularity of jangler, less club-oriented Goth fare.

As pluralism, genre-bending, and retro sensibility have been dominant forces in Goth music's underground since approximately 2002, the incorporation of cabaret music, [electroclash](#), and indie rock into the stylistic palette has been taken in stride (and even pioneered) by young acts such as Rasputina, The Prids, Black Ice, Submarine Fleet, Fields of Aplomb and The Phantom Limbs. Common to many such newer acts are live shows incorporating spectacle, elaborate dress, and acting. Doing all this with the marked absence of the Shakespearean affectation that characterized Goth in the late 80s and early 90s, in many ways the latest wave of musicians pick up where The Virgin Prunes left off.

Though the scene's identity has decentralized and its record sales have arguably diminished in recent years, many events, labels, and publications remain popular. Dancing Ferret Discs, Projekt Records and Metropolis Records have all found considerable success in the American market, while Cherry Red has been reissuing an extensive set of vital early Goth rock recordings, assuring the longevity of the scene's roots. The genre's most popular live events, such as the German Wave Gotik Treffen, Zillo festivals and the British Whitby Gothic Weekends or NYC Drop Dead Festival still draw tens of thousands. From the days of the zine explosion, some magazines have transitioned to the web, including Blue Blood, Asleep By Dawn, and Gothic.net. Others are Still in Print like Gothic Beauty, Virus and Drop Dead Magazine

## Musical predecessors (1960s–1970s or Earlier)

- David Bowie and glam rock. Elements of the seventies glam subculture helped influence goth both musically and visually. As goth broke further away from punk, the androgynous look, which Bauhaus favoured, developed, and was taken even further by bands like Alien Sex Fiend and their followers. David Bowie's androgynous appearance, love of melodrama and his use of dark themes meant he had a major influence on many early goth bands. His songs frequently appeared on the Batcave playlists. Bowie had also described his Diamond Dogs (1974) album as gothic when it first came out.
- The Velvet Underground (1960s), whose dark and depressing sound and themes were frequently referenced by early goth bands, especially by Siouxsie & the Banshees. Joy Division performed a cover version of "Sister Ray", and Christian Death covered "Venus in Furs". Nico, who performed with the Velvets, is sometimes considered the first Gothic Rock artist.
- The Doors influenced the Los Angeles emergence of Death Rock, particularly with the album Strange Days (1967). Joy Division and Echo and the Bunnymen were also suggested to have borrowed The Doors' sound. The Bunnymen's cover of "People Are Strange" is included in the film (as well as on the film's soundtrack) The Lost Boys. A 2000 album on Cleopatra Records, Darken My Fire: A Gothic Tribute to The Doors, featured covers by bands such as Mephisto Walz, Ex Voto, Alien Sex Fiend, and The Mission UK. The New Creatures, heavily influenced by The Doors, also took their name from a book of poetry by Jim Morrison. Dave Vanian's vocal style shown in The Damned's later albums and also his work in Phantom Chords owes heavily to Jim Morrison.
- Alice Cooper is also worth acknowledging. Despite rarely being considered goth music, they were key influences in the darker trend rock music began to take and have continued to take. Alien Sex Fiend in particular were Cooper fans. Generally speaking, musicians like Cooper only set the stage for makeup wearing as acceptable among youth subcultural groups.

- The Stooges, an early punk band featuring Iggy Pop, have been credited as influencing early goth bands like Ausgang and Killing Joke.
- T-Rex, another glam rock band and peers of David Bowie. Marc Bolan's style and lyrics were extremely influential. Records of early playlists from the Batcave include T-Rex tunes, and Bauhaus recorded a cover of "Telegram Sam" which appeared on their debut record, In the Flat Field.

## Musical arrangements

While today the genre has no universally employed identifying musical characteristics, certain tendencies of early English gothic rock have endured as common within and quintessential to the genre throughout its entire history. Very broadly, and by no means comprehensively, guitar effects settings are the most notable identifier of the overall musical style. Typically, a clean or warmly overdriven guitar sound is processed through chorusing, flanging, analog delay, and/or dense reverb, resulting in a timbre that resembles those used by Bauhaus, Siouxsie and the Banshees, and The Cure. Taking its downstroke playing from punk, this style of guitar performance generally emphasizes angular melodic lines instead of thick chords. Minor key themes are prevalent, but major keys are not shunned. The most uniquely gothic tonal inflection is the flattened scale degree two, producing a Phrygian mode.

While this is perhaps overspecifying a general timbre and approach to playing, this jangly guitar tone and pitch set in gothic rock is almost entirely idiosyncratic to the genre, and must be understood as an historical signifier thusly. Some bands in the genre (though certainly not all) detoured from this sound briefly in the early 90s in favor of a more hard rock feel, as exemplified on the Sisters of Mercy's "Floodland" and *Vision Thing* albums, as well as by acts such as Fields of the Nephilim, Rosetta Stone, and The Wake. However, as stated at above, the scene reemphasized its early musical roots in the time thereafter, making this sound today commonplace once again.

# Grammy Award

The **Grammy Awards** (originally called the Gramophone Awards), presented by the Recording Academy (an association of Americans professionally involved in the recorded music industry) for outstanding achievements in the recording industry, is one of four major music awards shows held annually in the United States (the Billboard Music Awards, the American Music Awards, and the Rock and Roll Hall of Fame Induction Ceremony, make up the rest). However, the Grammys, usually held in February, (last of what are considered the "big three" music awards shows, including the BMA and AMA shows) are considered the approximate equivalent to the Oscars, in the music world.

Like the Oscars, the Grammys, which currently have 108 categories within 30 [genres](#) of music such as [pop](#), [gospel](#), and [rap](#), are voted upon by peers (voting members of the Recording Academy) rather than being based upon popularity like the AMAs or sales and chart achievements like the BMAs.

The awards are named for the trophy which the winner receives—a small gilded statuette of a gramophone, handcrafted by Billings Artworks. The awards ceremony features performances by prominent artists, and some of the more prominent Grammys are presented in a widely-viewed televised ceremony.

Some feel that Grammys tend to go to either well-established artists or those being hyped by the recording industry. In fact, many popular artists such as Elvis Presley, The Beatles, Garth Brooks, Pink Floyd, Kenny Rogers, The Rolling Stones, Metallica, Van Halen, and Ozzy Osbourne have been awarded very few Grammys. Mariah Carey had only won two Grammy awards up until the awards of 2006; she now has won a total of five. Significant, long-lived rock bands like Led Zeppelin, Bon Jovi, Guns N' Roses, Def Leppard, AC/DC, and Motley Crue have received none. On the other hand, U2 has received 22 awards to date.

Of the "big three" music awards shows, the Grammys are the highest rated.

Unlike the Academy Awards, for which the eligibility period begins January 1, the eligibility period for the Grammys begins October 1, which results in September being considered the Christmas sales period for the music industry (in which artists generally release big albums to qualify for the next year's Grammy). For example, John Lennon & Yoko Ono's album *Double Fantasy* was released in November, 1980, a month-and-a-half too late to qualify for the 1981 Grammys; it was entered for the 1982 awards and eventually won the Grammy Award for Album of the Year.

The Grammys are currently broadcast on CBS. Prior to the first live Grammys telecast in 1971 on ABC (CBS bought the rights in 1973 after moving the ceremony to Nashville, Tennessee; the American Music Awards were created for ABC as a result), a series of taped annual specials in the 1960s called *The Best on Record* were broadcast on NBC.

## Grammy records

The record for most lifetime Grammys is held by Sir Georg Solti, who was the conductor of the Chicago Symphony Orchestra for twenty-two years. He personally won 31 Grammys and is listed for 38 Grammys (6 went to the engineer and 1 to a soloist); he was nominated an additional 74 times before his death in 1997.

Pat Metheny and the Pat Metheny Group have won 17 Grammys in total, including seven consecutive awards for seven consecutive albums. Metheny held the record for Grammy wins in the most different categories as of the 2005 Grammy Awards:

- Best Jazz Fusion Performance (1983, 1984, 1985, 1988, 1990)
- Best Instrumental Composition (1991)
- Best Contemporary Jazz Performance/Album (1993, 1994, 1996, 1999, 2003, 2005)
- Best Jazz Instrumental Performance, Individual or Group (1998, 2000)
- Best Rock Instrumental Performance (1999)
- Best Jazz Instrumental Solo (2001)

Session drummer Hal Blaine played on six consecutive records which won Record of the Year:

- 1966 Herb Alpert & the Tijuana Brass - "A Taste of Honey"
- 1967 Frank Sinatra - "Strangers in the Night"
- 1968 5th Dimension - "Up, Up and Away"
- 1969 Simon & Garfunkel - "Mrs. Robinson"
- 1970 5th Dimension - "Aquarius/Let the Sunshine In"
- 1971 Simon & Garfunkel - "Bridge Over Troubled Water"

Alison Krauss (as a solo artist, collaborator, producer and with Union Station) has taken home 20 Grammy Awards, the most of any female artist or any country artist. She is now tied for 7th on the all-time winners list.

Motown artist Stevie Wonder has won 24 awards, including 12 in the 1970s. Three of those awards were for Album of the Year for three consecutive albums.

Legendary Opera Diva Leontyne Price has won 18 awards.

Soul and R&B legend Aretha Franklin has won 11 awards for Best Female R&B Vocal Performance, including 8 consecutive (and the first 8 ever awarded) awards in the category:

- 1968 - "Respect"
- 1969 - "Chain of Fools"
- 1970 - "Share Your Love With Me"
- 1971 - "Don't Play That Song"
- 1972 - "Bridge Over Troubled Water"
- 1973 - Young, Gifted, and Black
- 1974 - "Master of Eyes"
- 1975 - "Ain't Nothing Like The Real Thing"
- 1982 - "Hold On, I'm Comin'"
- 1986 - "Freeway of Love"
- 1988 - Aretha

The most Grammys won in a single night is eight -- a record shared by Michael Jackson (1983) and Carlos Santana (2000).

**Michael Jackson:**

- Record of the Year - Beat It
- Album of the Year - Thriller
- Best Pop Vocal Performance, Male - Thriller
- Best Rock Vocal Performance, Male - Beat It
- Best R&B Vocal Performance, Male - Billie Jean
- Best Rhythm & Blues Song - Billie Jean
- Best Recording For Children - E.T. The Extra Terrestrial
- Producer Of The Year (Non-Classical)

**Santana:**

- Record Of The Year - Smooth
- Album Of The Year - Supernatural
- Best Pop Performance By A Duo Or Group With Vocal - Maria Maria
- Best Pop Collaboration With Vocals - Smooth
- Best Pop Instrumental Performance - El Farol
- Best Rock Performance By A Duo Or Group With Vocal - Put Your Lights On
- Best Rock Instrumental Performance - The Calling
- Best Rock Album - Supernatural

The record for most Grammys (**5**) won in a single night by a female artist is held by four artists: Beyoncé Knowles 2004, Norah Jones 2003, Alicia Keys 2002, Lauryn Hill 1999

**Beyoncé:**

- Best Female R&B Vocal Performance:

Beyoncé for "Dangerously In Love 2"

- Best R&B Performance by a Duo or Group with Vocals

Luther Vandross & Beyoncé for "The Closer I Get to You"

- Best R&B Song

Shawn Carter, Rich Harrison, Beyoncé Knowles & Eugene Record for "Crazy in Love" performed by Beyoncé featuring Jay-Z

- Best Contemporary R&B Album

Beyoncé for *Dangerously in Love*

- Best Rap/Sung Collaboration

Beyoncé featuring Jay-Z for "Crazy In Love"

**Norah Jones:**

- Record of the Year

Norah Jones for "Don't Know Why"

- Album of the Year

Norah Jones for *Come Away With Me*

- Best New Artist

Norah Jones

- Best Female Pop Vocal Performance

Norah Jones for "Don't Know Why"

- Best Pop Vocal Album

Norah Jones for *Come Away With Me*

**Alicia Keys:**

- Song of the Year

Alicia Keys for "Fallin'"

- Best New Artist

Alicia Keys

- Best Female R&B Vocal Performance

Alicia Keys for "Fallin'"

- Best R&B Song

Alicia Keys (songwriter) for "Fallin'"

- Best R&B Album

Alicia Keys for *Songs in A Minor*

**Lauryn Hill:**

- Album of the Year

Lauryn Hill for *The Miseducation of Lauryn Hill*

- Best New Artist

Lauryn Hill

- Best Female R&B Vocal Performance

Lauryn Hill for "Doo Wop (That Thing)"

- Best R&B Song

Lauryn Hill (songwriter) for "Doo Wop (That Thing)"

- Best R&B Album

Lauryn Hill for *The Miseducation of Lauryn Hill*

Christopher Cross (Grammy Awards of 1981) is the only artist to receive the "Big Four" (Record of the Year, Album of the Year, Song of the Year, and Best New Artist) in a single ceremony. As a side note, Norah Jones (Grammy Awards of 2003) won Record of the Year, Album of the Year; that same year her guitarist, Jesse Harris, won the Song of the Year for writing 'Don't Know Why'. Although Norah sang the song, she did not receive the Song of the Year Grammy because it is a songwriter's award.

Béla Fleck has been nominated in more categories than any other musician, namely [country](#), [pop](#), [jazz](#), [bluegrass](#), [classical](#), [folk](#), and spoken word, as well as [composition](#) and arranging.

## Award categories

Bold ones, known 'The Big Four', are the most prestigious awards of all.

**Record of the Year**  
**Album of the Year**  
**Song of the Year**

# Grand Opera

**Grand Opera** is a style of [opera](#) mainly characterized by many features on a grandiose scale. Heroic and historical subjects, large casts, vast [orchestras](#), richly detailed sets, sumptuous costumes and spectacular scenic effects were all features of this genre, especially when the operas were first produced. However, some recent revivals have featured excessive short cuts in an effort to minimize costs. Other characteristics include continuous [music \(recitative](#) instead of spoken dialogue), a four or five-act structure and the prevalence of [ballets](#) and large scale processions. While there were a number of earlier operas which exhibited many of the traits of grand opera, these are essentially precursors of what we now regard as grand opera. True grand operas are generally regarded as originating in Paris during the late 1820s with Auber's *La muette de Portici*. The format quickly travelled to near-by countries, especially Germany, Austria, and Italy. But it fell into disfavor towards the end of the 19th century, as the expense of staging these mammoth works and the problems in finding singers capable of executing them caused newer styles to gain in popularity. There also was a great deal of opposition to them in Paris on the part of avant-garde intellectuals such as Claude Debussy who were embarrassed by what they saw as the excesses of grand opera. Nevertheless, *grand opera* did not die out, many [composers](#) continued to write these works, and the style continued to be influential.

# French Grand Opera

## Introduction

Paris at the turn of the nineteenth century drew in many composers, both French and foreign, and especially those of opera. This cosmopolitan combination of influences helped to form the style of grand opera. Several Italians working during this period including Luigi Cherubini demonstrated that the use of recitative was suited for the powerful dramas that were being written. Others, such as Gaspare Spontini, wrote works to glorify Napoleon. These operas were composed on a suitably grand scale for the emperor. Another consideration was the ability of the large Paris Opéra which was capable of staging a sizeable work and the long tradition of French ballet and stagecraft.

## Precursors

Several operas by Gaspare Spontini, Luigi Cherubini, and especially Gioacchino Rossini can be regarded as precursors to French grand opera. These include Spontini's *La vestale* (1807) and *Fernand Cortez* (1809, revised 1817), Cherubini's *Les Abencerages* (1813), and Rossini's *Le siège de Corinthe* (1827) and *Moïse* (1828). All of these have some of the characteristics that are normally associated with French grand opera.

## Early French Grand Opera (1828-1836)

Thus, the time was ripe for the combination of influences to bear fruit starting in 1828 with *La muette de Portici* by Daniel François Auber. The next major grand opera was Rossini's *Guillaume Tell* (his final opera; 1829).

The acknowledged superstar of this form is Giacomo Meyerbeer, who reached prominence in the Paris opera scene beginning with *Robert le diable* in 1831. He followed this work with his masterpiece, *Les Huguenots*, in 1836. Another very important early grand opera was Halévy's *La Juive* (1835). This work, while not quite as successful as *Les Huguenots*, was also performed all over the world, and is still viewed as being among the most influential and among the higher quality *grand operas* of all time.

## Grand Operas of the 1840s

The early grand operas of the 1830s were huge box-office successes, and even inspired the young Richard Wagner to try his hand at grand opera with

his early work, *Rienzi* (1842). The latter was very successful at its premiere in Dresden, but was soon left behind by Meyerbeer in most other German cities.

During the 1840s, the major *grand operas* were *Les martyrs* by Gaetano Donizetti, *La reine de Chypre* by Halévy (perhaps the only major grand opéra yet to be performed during the post-war period) (1841), *Dom Sebastien* by Gaetano Donizetti (1843), and *Le prophète* by Meyerbeer (1849).

## Grand Operas of the 1850s and 1860s

The 1850s only saw one even moderately successful *grand opera*, that being *Les vêpres siciliennes* by Giuseppe Verdi (1855), which was to be much more widely given in Italy and other Italian language opera houses than in France. In the meantime, *Sapho*, the first opera by Charles Gounod, did not qualify, being a less grandiose work, while Meyerbeer concentrated on two opéras comiques, and Halévy was unable to equal the successes of *La Juive*, *La reine de Chypre*, and *Charles VI*. Oddly, the ever popular *Faust* (1859) by Charles Gounod started life as another opéra comique, and did not become a grand opera until the 1860s. *Les Troyens* by Hector Berlioz (composed from 1856-1858, later revised, was not given a full performance until nearly a century after Berlioz had died, although portions had been staged before).

While the 1850s were relatively dry as far as *grand opera* was concerned, the 1860s made up for lost time. The first significant entry was *La reine de Saba* by Charles Gounod. This was rarely given in its entirety, but the big tenor aria, "Inspirez-moi, race divine" was made famous in a recording by Enrico Caruso. The great Meyerbeer died on 2 May, 1864, thus his *L'Africaine* was premiered posthumously in 1865. Giuseppe Verdi returned to Paris for what many see as the greatest French grand opera ever, the immortal *Don Carlos* (1867). Ambroise Thomas contributed his *Hamlet* in 1868, and finally, to close out the decade, *Faust* was premiered at the Opéra. By then, the work had enough additions for it to qualify as a full-fledged *grand opéra*.

## Late French Grand Operas

In spite of France's defeat at the hands of the Prussians in the Franco-Prussian War, grand opera was able to continue on its merry way during the 1870s and 1880s, although the identity of the principal composers had changed. Jules Massenet had at least two large scale historical works to his credit (*Le roi de Lahore* (Paris, 1877), and *Le Cid* (Paris, 1885). *Polyeucte* (Paris, 1878) by Charles Gounod certainly qualifies, as does *Henry VIII* by Camille Saint-Saëns (Paris, 1883). In the meantime, Ernest Reyer had started to compose his *Sigurd* years before, but, unable to get it premiered in Paris, had to settle for *La Monnaie* in Brussels (1884). What may have been one of the last successful French grand operas was by an unfamiliar composer, Emile Paladilhe: *Patrie* (Paris, 1886). It was quite successful, running up nearly 100 performances in Paris, and quite a few in Belgium, where the action takes place, but seems to have disappeared without a trace.

## Number of performances of French Grand Operas at the Opéra in Paris

(from première to 1962, as given by Stéphane Wolff, Albert Soubies and other sources)

La muette de Portici (Auber) - Académie Royale de Musique, Paris, 1828: 489 perf. last in 1882.  
Guillaume Tell (Rossini) - Académie Royale de Musique, Paris, 1829: 911 perf. last in 1930.  
Robert le diable (Meyerbeer) - Académie Royale de Musique, Paris, 1831: 751 perf. last in 1892; revived in 1984.  
Gustave III (Auber) - Académie Royale de Musique, Paris, 1833: 168 perf. last in 1853  
La Juive (Halévy) - Académie Royale de Musique, Paris, 1835: 534 perf. last in 1934; scheduled for revival in 2007.  
Les Huguenots (Meyerbeer) - Académie Royale de Musique, Paris, 1836: 1120 perf.; last in 1936.  
Les martyrs (Donizetti) - Académie Royale de Musique, Paris, 1840: 20 perf.; last in 1842.  
La reine de Chypre (Halévy) - Académie Royale de Musique, Paris, 1841 152 perf.; last in 1878.  
Charles VI (Halévy) - Académie Royale de Musique, Paris, 1843 61 perf.; last in 1850.  
Dom Sebastien (Donizetti) - Académie Royale de Musique, Paris, 1843: 33 perf.; last in 1849.  
Jérusalem (Verdi) - Académie Royale de Musique, Paris, 1847: 20 perf.; last in 1849.  
Le prophète (Meyerbeer) - Académie Royale de Musique, Paris, 1849: 573 perf.; last in 1912.  
Les vêpres siciliennes (Verdi) - Académie Royale de Musique, Paris, 1855: 81 perf.; last in 1864.  
La reine de Saba (Gounod) - Académie Impériale de Musique, Paris, 1862: 15 perf.; last in 1862.  
L'Africaine (Meyerbeer) - Académie Impériale de Musique, Paris, 1865: 484 perf.; last in 1902.  
Don Carlos (Verdi) - Académie Impériale de Musique, Paris, 1867: 81 perf.; last in 1864.  
Hamlet (Thomas) - Académie Impériale de Musique, Paris, 1868: 384 perf.; last in 1938.  
Le roi de Lahore (Massenet) - Académie Nationale de Musique (Salle Garnier), Paris, 1877: 57 perf.; last in 1879.  
Polyeucte (Gounod) - Académie Nationale de Musique (Salle Garnier), Paris, 1878: 29 perf.; last in 1879.  
Henry VIII (Saint-Saens) - Académie Nationale de Musique (Salle Garnier), Paris, 1883: 87 perf.; last in 1919.  
Le cid (Massenet) - Académie Nationale de Musique (Salle Garnier), Paris, 1885: 152 perf.; last in 1919.

Patrie ! (Paladilhe)- Académie Nationale de Musique (Salle Garnier),  
Paris, 1886: 93 perf.; last in 1919.

## Decline of French Grand Opera

There are two distinctly separate aspects to the decline of French grand opera:

- The fact that fewer and fewer new operas were being composed in the grand opera format, something that happened not only in France, but in other countries as well.
- The slow disappearance of works already composed from the repertory.

The two problems are closely interrelated. The first is due partly to the fact that the musical establishment (critics, opinion leaders, conductors, other composers, and other opera professionals) was much more vocal and much more influential than the paying audiences. Some, such as Claude Debussy, were embarrassed by what they saw as the excesses of French grand opera, while others, especially avant gardists, would demand more Wagner. As a result, several French composers, notably Vincent d'Indy, Ernest Chausson, and Gabriel Fauré, but others as well, would try to imitate Wagner with works like *Fervaal*, *Le roi Arthus* and *Pénélope*, respectively. It should be noted that the French Wagner imitations were generally much less successful, even in France, than the real thing. Steven Huebner's volume on French opera of the "fin du siècle" (see bibliography) provides an excellent discussion of these aspects.

The second was both a direct outgrowth of the first and the fact that as new operas are composed, room must be made for them in the repertory. Thus, the demand for the less popular works of the old repertory would lessen, and they would slowly disappear from the Opéra. But there were other theatres in Paris, such as the Gaité Lyrique which would engage artists of the first rank and give the old favorites. *La Juive* was performed there regularly, and, in 1917, they devoted an entire season to these older works. One of them was Halévy's *La reine de Chypre* starring the legendary John O'Sullivan.

There is reason to suspect that the decline of French grand opera at the Paris Opéra was at least partly due to the desire of the management to make it into an "International house", rather than strictly a French house, making it obligatory for them to stress including as much Wagner as possible in their repertory. This was not seen as being nearly as much of an imperative in opera houses outside Paris, hence it was possible for them to retain the old favorites longer. The same was true of many houses outside France, especially Vienna, where critics like Eduard Hanslick, who definitely preferred Meyerbeer to Wagner, still wielded a lot of influence. Combined with Gustav Mahler's great respect for *La Juive*, this resulted in the latter work being given in Vienna almost every season until the Nazis took control of Germany, and the Viennese could see the handwriting on the wall. The situation was similar in Spain, Portugal and Latin America, where Wagner, although popular, took longer to take hold.

Today only a handful of these works survive, as their sheer length and the expense of staging them can still be prohibitive, even for the largest [opera](#)

[houses.](#)

# Italian Grand Opera (Opera Ballo)

## Introduction

One of the major differences between operatic customs in France (Paris) and Italy lies in the role of and attitude to the ballet. Parisian audiences invariably demanded a formal ballet, which would be an integral part of the opera, and, often, played a role in the plot. Italians also loved the ballet, but, in Italy, it was customary to provide a ballet independent of the opera, usually between the acts of the opera. Of course, the ballet might or might not be different between the premiere of an opera and subsequent stagings in the same or another city. The net result was that, if, as an example, Giuseppe Verdi wanted to stage his *Il trovatore* in French at the Opéra, he would have to add a ballet. This would not be necessary for performances in Italian at the Théâtre Italien.

Another result was that there were a number of Italian precursors to grand opera by composers like Giovanni Pacini and Saverio Mercadante that would exhibit some of the features of grand opera (especially spectacle), but no formal ballet that was an integral part of the opera. Two examples are *L'ultimo giorno di Pompei* by Giovanni Pacini (Naples, 1825) and *Il bravo* by Saverio Mercadante (Milan, 1839). The latter was probably heavily influenced by *La Juive*, which Mercadante had heard while in Paris. There also is an Italian opera by Gaetano Donizetti: *L'assedio di Calais* (1836) which does have a ballet, and according to William Ashbrook's liner notes for the Opera Rara recording was written with the French taste in mind.

Italian operas with their own ballet started to become relatively common in the late 1860s and 1870s. Some of these, such as *Il Guarany* by Antônio Carlos Gomes were actually designated as "opera ballo". Others, such as *La Gioconda* by Amilcare Ponchielli were not, although they really had earned the term.

## Early Italian "grand operas" (1860s)

There is a fascinating chapter on Italian grand opera by Fiamma Nicolodi in the Charlton "Cambridge Companion to Grand Opera". She discusses many of the Italian operas premiered between 1865 and 1893, and lists them on page 384 of the book. The composers most often mentioned are Antônio Carlos Gomes (5 operas), Filippo Marchetti (4 operas), and Amilcare Ponchielli (also 4 operas). Others are by Boito, Catalani, Puccini, Franchetti and Leoncavallo. Strangely, she mentions *Aida* only in passing, and *La forza del destino* not at all--could it be because one was premiered in Cairo and the other was premiered in 1862 in St. Petersburg?

Be that as it may, *Forza* did show some influence of French grand opera, but not enough to qualify as an Italian grand opera. Neither did Marchetti's *Romeo e Giulietta* or the first edition of Boito's *Mefistofele*. But both because

of its designation as an "Opera ballo" and extensive ballet, I would consider *Il Guarany* as the earliest true Italian grand opera, although it is somewhat shorter than the French models.

## **Aïda and Other Italian Grand Operas of the 1870s**

Although it did not even have its' premiere in Italy, *Aïda* was destined to be not only of the best known of all grand operas, but also one of the most beloved by audiences and critics alike. It has only four acts, but just about everything that is needed to make for a true grand opera is crammed into these four acts. A wonderful ballet, a superb grand march, which, in the writer's humble opinion has never been equalled, not even by Meyerbeer, and some wonderful dramatic situations. By a strange coincidence, the stage directions for the triumphal procession are almost an exact replica for those in a precursor composed 65 years earlier: *La vestale* by Gaspare Spontini, and the ending is similar to that of the other well known opera on the same subject: *La vestale* by Saverio Mercadante, with the heroine entombed alive.

To return to *Aïda*, it was a huge success, both at its world premiere in Cairo and its Italian premiere in Milan. It can hardly be surprising that many of the ensuing Italian operas tended to be strongly influenced by what Verdi accomplished in *Aïda*, resulting in an obvious increase in the scale of some of the works that followed it. This was particularly noticeable in key works by Gomes: *Fosca* (1873) and *Salvator Rosa* (1874), Marchetti (especially *Gustavo Wasa* and *Ponchielli: I lituani* (1874) and most importantly *La Gioconda* (Milan, 1876, revised 1880).

*Fosca* with its Venetian setting and self-sacrificing heroine almost seems like a warm-up for *La Gioconda*. Together with *Il Guarany* and *Maria Tudor* it was revived in Sofia some years ago with fine casts of young Bulgarian singers to be released in Brazil. *Salvator Rosa* was the fourth opera to be released as part of that series, although the recording originated near London.

There are plans to produce *Gustavo Wasa* at some point in the next few years, and judging from the two Marchetti operas already familiar, this could well be an interesting revival. *I lituani* has already been revived, first in Italy, then by the Lithuanian community in Chicago, and finally in Lithuania itself. Judging from the one available recording it is a first class work, although it does not quite come up to the level of *La Gioconda*. The latter, of course, has long been a staple of the repertory in Italy, Iberia, Latin America, and the United States. But it has been a rarity in Northern Europe, and is yet to have its first staging in Paris.

## German Grand Opera

Very often, when German attempts at composing true grand operas are mentioned, the only composer to be mentioned seriously is Richard Wagner. This is often done with references to his *Rienzi*, sometimes with a comment (perhaps in jest, perhaps not-but there are those who rarely jest when it comes to belittling Meyerbeer) that this was Meyerbeer's greatest opera. It is to be hoped that it was made in jest, because if it were meant in earnest, it would be a sad reflection on the scholarship of the person making it. The fact is that *Rienzi* did have a successful premiere in Dresden, but that may well have been the only German city where it was successful, and even there it was soon passed in the number of performances by *Le prophète*.

But there were other German grand operas which are worth mentioning, including two by Wagner: *Tannhäuser* and *Götterdämmerung*, both of which are considered superior to *Rienzi*, although they do not quite come up to the level of Meyerbeer's best work.

German grand operas by other composers include a marvelous opera by Karl Goldmark: *Die Königin von Saba* (Vienna, 1875), Lachner's still unfamiliar *Catharina Cornaro* (Munich, 1841) and especially the long forgotten (except in Italy) *Agnese von Hohenstaufen* (Berlin, 1829, revised 1837) by Gaspare Spontini, although it is in only three acts. Another three act opera that should be mentioned is *Ein Feldlager in Schlesien* by Meyerbeer. Although the work in its entirety is officially a *Singspiel*, Act II has all the characteristics of grand opera, with a brief ballet and what may be the most elaborate march in all of opera. Actually this is a triple march, with three disparate groups blending together to form a stunning whole. This was eventually transferred in its entirety into the same composer's *L'étoile du nord*.

# Grand piano

A **grand piano** is the concert form of a [piano](#). A grand piano has the frame and strings placed horizontally, with the strings extending away from the keyboard. Grand pianos are distinguished from upright pianos, which have their strings and frame arranged vertically.

Grand Pianos are typically used for concerts and concert hall performances, although a baby grand piano can also be used in a household where space is limited. The strings on a Grand Piano are longer, resulting in a louder and 'performing' tone.

Some famous Grand Piano manufacturers are Yamaha, Kawai, Bösendorfer and Steinway.

# Greatest hits

A **greatest hits album** (also sometimes referred to as a "best of" album) is an album of successful, previously released songs by a particular music artist or band. To increase the appeal of the album – especially to people who already own the albums – it is common to include remixes of popular songs or new material, with new songs often being released (and themselves sometimes becoming successful).

Greatest-hits albums are typically produced after an artist has had enough successful songs to fill out an album release. They are aimed at fans who liked a few of their singles, but not enough to buy an artist's entire catalog and new fans who want to sample the most famous work of an artist with one purchase.

Similar to a "Greatest Hits" album is a "Best of", of which some or all songs needn't be hits, and can simply be songs from past albums liked by fans and music critics. Bands that have loyal following but too few chart hits to fill a greatest hits album (or none at all) often release a "Best of" album instead since "Best of" album songs need not have charted. An example of this is John Prine's *Prime Time: The Best of John Prine*. Occasionally, artists have both a Best of and a Greatest hits album with the Greatest hits album limited to songs that made the single's chart while a Best of album is more oriented towards fan favorites and album tracks. For examples, *The Beatles 1967-1970* is a best of album (largely consisting of album tracks), whereas *The Beatles 1* is a greatest hits album (based exclusively on chart positions). Other terms for best-of albums include "Classic" (Example: *Classic Queen*) and "Gold" (Example: *Glen Miller: Pure Gold*).

Similar to a Best of album is a definitive collection, which attempts to include every song by the artist or band that fans and music critics consider as worthy examples of their work. An anthology collection is similar to a definitive collection but usually applies to box sets of artist's or bands with a large body of work compiled over many years.

Johnny Mathis's *Johnny's Greatest Hits* (1958) is generally considered the first greatest-hits album. It sold well, remaining on the Billboard Top Albums Chart for a then record-breaking 490 continuous weeks.

In 2005, some greatest hits albums became ridiculed because many young "pre-mature" artists are releasing them. The likes of Hilary Duff, N Sync and Mandy Moore released greatest hits albums though they might have had only a handful of hit singles in their short careers. . This is not, however, a new phenomenon: Kenny Rogers and The First Edition, for example, issued their *Greatest Hits* album in 1971 - three years after their first top 40 pop hit. Former Beatle Ringo Starr issued his greatest hits album, *Blast From Your Past*, after a mere three solo albums in the 1970s, while pop star Jason Donovan had a hits album out in 1991, only two years after he debuted.

# Gregorian chant

**Gregorian chant** is also known as **plainchant** or **plainsong** and is a form of [monophonic](#), unaccompanied singing, which was developed in the Catholic Church, mainly during the period 800-1000. It takes its name from Pope St. Gregory the Great, who is believed to have brought it to the West based on Eastern models of [Byzantine chant](#).

This [music](#) was traditionally sung by monks or other male clerics and was used during religious services. It is the music of the Roman Rite of the Mass, also known as the Gregorian rite or Tridentine rite. Other rites of the mass, such as the Assyrian and the Coptic, use different melodies but share the unaccompanied and monophonic nature of the Gregorian, which allude to a common source, which is believed to be how the ancient Jews sang the [Psalms](#).

## History

Unaccompanied singing (a cappella) has been part of the liturgy of the Christian church since its beginnings. Three separate roots for singing of chant have been proposed: the musical practice in the synagogue during the apostolic period; early Christian tradition; and pagan traditions, music for which is now lost. For the first few centuries, up until about 400, information is very scant indeed. The best we can get is information from the Old and New Testament and other ancient sources. Most of them write in a very poetic or obscure way about music, so it is hard to make any sound statements about how music sounded in these first centuries.

In the next few centuries, information is still rare, so scholars are still hotly debating the period between roughly 400 and 800. According to the Advent Project theory of James McKinnon, it appears that in the latter part of the 7th century, a large part of the Roman Mass had been put together rather consciously in a short period of time. Other scholars, including Andreas Pfisterer, have argued for an earlier origin. The music to accompany the Mass was apparently also collected in this period. Since Gregorian chant is remarkably uniform in geographically very distant regions, and this unification happened in a rather short time, most likely around 800, the bulk of evidence suggests that a major effort at making the repertory consistent happened at this time. Scholars still debate whether the essentials of the melodies originated in Rome, before the eighth century, or in Francia, in the eighth and early ninth centuries.

Detailed recent study also shows numerous survivals of earlier repertoires of chant. Sometimes there are actual repertoires that are still sung in a specific place (a good example is [Ambrosian chant](#), which originated in Milan, and was preserved due to the reputation and authority of St. Ambrose who is reputed to have written many of its earliest hymns); or repertoires that survived because they were in isolated locations shielded from the edicts of Rome, which was attempting to establish a consistent practice during this period (an example is the Mozarabic Rite, which survived in Spain from the time of the Visigoths, through the domination by the Moors, until about the 12th century, and which is still found in a few locations today); and in other cases older chants were incorporated into the actual Gregorian chant and can be pieced together by careful stylistic dissection of the originals. In all likelihood, chant is at least as old as the breakup of the western Roman Empire in the 5th century, but mutated into different forms in different regions until brought together into one unified repertory under Charlemagne.

In the ninth and tenth century, the first sources with decipherable (but not pitch-readable) musical notation are found. Most scholars of Gregorian chant agree that the development of music notation assisted the dissemination of chant across a thousand miles of Europe; indeed, it may have been impossible any other way, since there is no evidence of mutation across distance. Survivals of notated manuscripts, however, are few, and restricted to a few locations in Germany (Regensburg), Switzerland (St. Gall) and France (Laon, St Martial). Most of the Gregorian chant familiar today, at least that in the [Mass](#), has changed little since this time.

## The music and its performers

In most Western music since the Renaissance there are two [modes](#): Major and minor. The Major scale is built upon the *Do* and the minor scale the *La*. The various keys that are used affect only the range of the notes, or the pitch. Essentially the scale is the same, only transposed, or moved, to a different range.

Many hear Gregorian chant and think of it as a very simplified version of modern music. While it is simple in that melody dominated harmony and rhythm, the modal system involved is quite complex, and is directly descended from the octoechos system of eight modes used by the medieval Byzantines and the Greater Perfect System of the ancient Greeks.

The Greater Perfect System was comprised of tetrachords with the interval pattern half step, whole step, whole step (e.g., B<sup>^</sup>C-D-E). Two of these tetrachords end to end produce our modern diatonic scale (B<sup>^</sup>C-D-E<sup>^</sup>F-G-A, the E being common to both tetrachords). This is the same as the white keys of the keyboard, the raw material of our C major and A natural minor scales. For modern purposes, chant can be seen as inhabiting this 8 note scale plus the B-flat.

This is not the typical medieval understanding, however. They would have seen any given octave span as the result of overlapping hexachords. Our 7-note "do re mi fa sol la ti (do)" scale is an extension of the 6-note medieval hexachord "ut re mi fa sol la" that Guido of Arezzo derived from the hymn "Ut queant laxis". Hexachords could be built on C (the natural hexachord, C-D-E<sup>^</sup>F-G-A), F (the soft hexachord, using a B-flat, F-G-A<sup>^</sup>Bb-C-D), or G (the hard hexachord, using a B-natural, G-A-B<sup>^</sup>C-D-E). The B-flat was an integral part of the system of hexachords, and not an accidental. The use of any note outside of this collection (e.g. as a result of hexachords on nonstandard pitches) was described as [musica ficta](#). Gregorian chant was seen to occupy the standard pitches of the medieval hexachord system.

The Gregorian system uses the theoretical system of 8 modes. While some pieces fall outside these modes, most obey the theory. The actual theory behind modality is quite complicated, but essentially each mode is a unique scale system, in addition to our Major and minor scales. In this manner Plainsong is much richer than the simplified bimodal modern system, but this makes some of the sounds of Gregorian Chant unusual to ears attuned to modern scalar modes.

Unlike modern music there is no beat or regular accent to Gregorian Chant. In fact the time is free, allowing the accenting of the text, which often includes sections of unequal length and importance.

The actual pitch of the Gregorian chant is not fixed, so the piece can be sung at any range, so long as the intervals are respected.

Chant is commonly written on a staff similar to the modern 5-line-4-space staff, but the Gregorian staff has 4 lines and 3 spaces. The notes, called neumes, are somewhat similar to modern notes, but often do not include stems and can be stacked, not to create harmonic chords, but to indicate the sequence.

Traditionally chant would be sung only by men, as it was originally simply the music sung by all the clergy (all male) during the [Mass](#) and Office (prayer sessions scheduled eight times throughout the day). As the Church expanded away from the larger cities, the number of clergy at each Church dropped, and lay men started singing these parts. In Convents women were permitted to sing the Mass and Office as a function of their consecrated life, but the choir was still considered an official liturgical duty reserved to clergy, so lay women were not allowed to sing in the Gregorian Schola or chant choir.

As polyphony began to develop in the Middle Ages and into the Renaissance younger boys and castrati would sing the high parts. As these numbers dwindled and the music became popular away from the major cities, women gradually were permitted to sing the polyphonic parts.

Eventually popes, especially Pope Pius X, encouraged the faithful to sing the Ordinary of the Mass. In his motu proprio *Tra le sollicitudine*, Pius X reserved the singing of the propers for males. While this custom is maintained in some communities, the Catholic Church no longer exercises this ban.

## Gregorian chant in the liturgy

Gregorian chant, like the chants of the other rites, was later used to sing only certain parts of the liturgy. The rest of the parts are sung by the bishops, priests, and deacons with a certain default assigning of notes to words depending on their place in a sentence. The parts sung in the Gregorian chant style in the Roman Mass include:

- The Introit
- The Kyrie
- The Gloria
- The Gradual
- The Alleluia (Tract during Lent)
- The Sequence (Easter Sunday, Pentecost, Corpus Christi and All Souls' Day)
- The Credo
- The Offertory
- The Sanctus and Benedictus
- The Agnus Dei
- The Communion

The Introit, Gradual, Alleluia/Tract, Sequence, Offertory and Communion texts are called the Propers because they are "proper" to day and season. The Kyrie, Gloria, Credo, Sanctus, Benedictus and Agnus Dei remain unchanged, being "ordinary" parts of the Mass and thus called the Ordinary of the Mass. The most complete collection of these chants into modern times was in the publication known as the Liber Usualis (Usual Book), which contains all of the chants for the Tridentine Mass. However, the Liber Usualis is rarely used outside monasteries; the most commonly-used reference for Propers and Ordinary in the Mass is the Graduale Romanum.

It should be noted that the Catholic church allowed later music written by individual composers, such as Palestrina, to replace the Gregorian chant of the Ordinary of the Mass. This is why, for example, a Mozart Mass would feature the Kyrie but not the Introit.

The Propers may be replaced by choral settings, as well, on certain solemn occasions. Among the most frequent to compose such polyphonic replacements for the Gregorian chant Propers were English composer William Byrd and Spanish composer Tomas Luis de Victoria.

Even with the advent of polyphony and accompanied melody, Gregorian Chant remained the official liturgical music of the Catholic Church. Popes have enjoined the faithful to give chant the pre-eminence it deserves.

# Grime

**Grime** is a genre of urban music which has been developing in London's underground since 2002. Grime's tempo is typically around 140 beats per minute. Style of flow also varies but its most common for rappers to "spit" double time or aggressively over the beat. In contrast to its more soulful progenitor, Grime can often be dark and aggressive, featuring MCs as opposed to singers and jettisoning the [R&B](#) influences of earlier 2 step UK Garage. In contrast, the success of grime is inseparable from its connection with pirate radio, with many performers honing their skills and achieving underground success before approaching the mainstream. Grime has roots in both [hip hop](#) and [electronic music](#) and is characterised by rapid and rhythmic rhyming over sparse [break beats](#), futuristic bleeps and guttural bass growls. Perhaps due to its experimental nature and diverse stylistic influences, grime resisted attempts to classify or pigeonhole it for a long time, but in the past has also gone by the names **sublow**, **8bar**, **nu shape** or **eskibeat**. It is sometimes confused with the instrumental genre [dubstep](#), another style to evolve out of the early 2000s UK garage scene.

## Origins

The origins of Grime, as a name has to be addressed before we can start speaking about any artist who have furnished this an important part of UK music history..

The Grime name was the brainchild of people who have no understanding, of the current social need for "untouched" creative art within the UK "inner city" communities, within this a majority for the young black population. So that it can grow independently and become a source of revenue for the people of offer the main "cultural" ingredient to this music.

These young people usually have no way of "keeping" hold/control of any potent commercial artistic creation, due to economic restraints and poor education, so when EZ from Kiss FM, was in discussion with key music members in the UK about a new name to separate the next generation's version of garage to his own, his term "Grime" was made in reference to the music being "infant" and of low quality this derogatory term "Grime" was then taken on by the BBC and the London Evening Standard newspaper, as music and media groups, needed to sell and write about a music which has "disputed" regional foundation and no real historical reference point, they decided to run with "Grime" not caring or seeing if the artists and producers themselves, had their own name for this music.

Sublow created by UK producer Jonny Cash, So Solid Crew and Lady Dynamite musical sound "footprint" was created in the precise section of time this music was growing, but they did not name the music. Eski created by Wiley and Ricky Valentine (Founder owner of Freeze FM). NB. Freeze FM were the "financial backers" for the original Eskimo Dances/Raves, during this period Nu Shape "A new music Genre" as it has always been branded, created another more mature strain of MC based garage music, incorporating vocalists and UK accented "Hip Hop" MCs much in the same way as Nasty Crew, Ghetto, Kano, Doctor, Unorthodox currently lay down their version of Grime music, among them all, none of them like/promote the "Government name for UK" street music.

They don't like the name "Grime" or "Urban", so soon the name will no longer be called Grime, due to the fact that the London scene is saying no to "Grime".

Two figures stand out as being instrumental in the publicising of the genre now known as grime. MCs Dizzee Rascal and Wiley, members of the "Roll Deep Crew" were the first to bring the genre to mainstream airplay with their albums *Boy in Da Corner* and *Treddin' on Thin Ice*. The 2004 track *Wot U Call It?* by Wiley perhaps signalled the real split of grime from previous musical genres whilst mocking media attempts to classify the new sound.

Although Dizzee and Wiley are rightly credited with being two of the most significant ambassadors of the grime sound, we can see the progression of UK Garage to grime by looking at earlier tracks such as So Solid Crew's "Dilemma" and "Oh No", More Fire Crew's "Oi" and Sticky feat Ms. Dynamite's "Boo". UK Garage gradually got darker and the first tracks to be recognised as grime were "eskimo" by Wiley and "Pulse X" by Musical Mob. Many non-

mainstream artists and crews are trying to create new sounds within the Grime genre, such as Flirta D and Bruza.

An interesting note is that some major names in Grime have released albums on labels otherwise known for being major [IDM](#) record labels, an origin often overlooked with Grime. Both old-school flowing / ambient melodies and glitchy rhythms have had a notable influence on some Grime releases, in particular the early ones.

The Plastician (formerly Plasticman), Mark One, Virus Syndicate and Slaughter Mob released the album "Grime" on Rephlex Records, owned by Aphex Twin, while Mark One and Virus Syndicate have released their own full albums on IDM label Planet mu, owned by µ-ziq and which typically has releases from artists like Venetian Snares.

A lot is being done take "Grime" and place a more suitable name in its place, due to the obvious marketing issues this name carries. Some large scale "street music" movements with headquarters in the UK, mainly based in London intend on changing this brand to something more appropriate in order to compete its full international transistion.

The international music markets have already rejected "Grime", as it has been quoted as "starter pack" music by many music producers worldwide. "Grime" is music made on mainly starter PC based computer music packages such as "Fruityloops" "Music 2000" and "Reason", early "youth produced" Grime tracks were created using "quantising" a process in all music software packages which automatically structures unorganised sounds.

Grime has received a lot more airplay thanks to television stations like Channel U, digital radio station 1xtra as well as the influx of online radio shows, who showcase Grime MCs and DJs. However, despite Grime's progress it is yet to be recognised as a music genre by the influential popular website MySpace.

## **Brithop**

The BBC News website picked up on the growing success of what it called Brithop, a term used to describe the growing number of urban, hip-hop and grime acts emerging in the 21st Century. The BBC article followed the success of rapper Sway at the MOBO awards. Touch Magazine also had a leader article on the UK hip-hop scene in November 2005.

## **French Grime**

The grime scene is growing in France as well. The major UK players started coming in for some hectic sets during the end of year 2005. Some crews initially from the hip hop and the garage scene are producing tracks & releasing mixtapes: EGO6 , Audiomacid , ResoFantom/Dj Absurd , DJ Alsott. RAW-T are massive in France compared to their home town.

## **World Grime**

This music has entered countries and states all over the world, due to the 679/Warner "Run the Road" releases, Artists in the UK now have recording agreements spanning the USA (Atl/NY/Miami/Philly), all the main regions of Europe (Holland, France, Germany et al) and even some remote parts of Asia, Australasia and Africa.

Dizzee, Kano , Ghetto, Jammer, Wiley, Riko, Nasty Jack, Nolay, G.Kid have all been across the US and Europe promoting their various movements, but only Wiley and No Lay from Unorthodox seem to have their own alternative names for this Genre.

# Grindcore

**Grindcore** is an extreme form of [hardcore punk](#) and [heavy metal](#), related to both [death metal](#) and [crust punk](#), but historically formed by combining elements of hardcore punk and early [thrash metal](#).

## Historical roots and influences

The genre was pioneered during the early 1980s in the United Kingdom, Netherlands and Brazil by bands such as Sore Throat and Napalm Death. In the United States the genre has their roots with proto-grindcore and hardcore punk bands such as Siege, DRI, SOB, Cyanamid, Deep Wound and Repulsion.

Many of the early bands, such as Napalm Death, DRI, and Siege were seen by their contemporaries as part of the [anarcho-punk](#) and [hardcore punk](#) scenes. As many [anarcho-punk](#) and peace punk bands in England and [hardcore](#) in the United States had already incorporated elements of [heavy metal](#) into their music.

Many of these early bands were, and still are, obscure.

For instance, the hardcore punk band Siege only released a DIY demo entitled Drop Dead, and Repulsion was posthumously exposed to the world in 1989 through the album Horrified which was released in Europe. Grindcore is characterized by its intense blast-beat drumming, grinding guitars (hence the name), brutal grunted vocals, and very short songs (the Napalm Death song "You Suffer" is listed as the shortest song ever by the Guinness Book of Records, clocking in at just over 1 second long; however, others such as the Cripple Bastards on their demo 94 Flashback di Massacro, and Agoraphobic Nosebleed on their 3" cd/10" lp Altered States of America have taken this aesthetic to even greater extremes). American grindcore band Anal Cunt, a project of Seth Putnam, has recorded an EP called 5643 Song EP which contains 5643 "songs" in less than 15 minutes, by way of creative multitracking and recording processes.

## Subgenres

Grindcore has proven somewhat difficult to categorise. Some fans and musicians have a firm concept of genre and subgenre, but others reject such categorisation as limiting or useless.

There is often significant crossover from one category to another, and often the influence of non-metal music is present.

### Genres

- **Political grindcore**: This subgenre is known for having politically aware lyrics, and is sometimes associated with the [crust punk](#) and peace punk movement. Of all the subgenres of grindcore, this one remains the most musically similar to the earliest grindcore bands. Examples include Nasum and Napalm Death.
- **Power violence** a lot like grindcore, drum-wise and vocal-wise at times, but leans more to being faster sounding hardcore. Widely considered a sub genre of hardcore, equally if not more.
- **Goregrind**: This subgenre started with the band Carcass, and is most notable for having gore obsessed lyrics, and pitchshifted vocals.
- **eGrind** (also referred to as **Cybergrind**, **Digital Grindcore**, **Digigrind**, or **Midicore**) is a form of grindcore that, aside from the instruments used by ordinary grind, uses computer generated sounds and/or [drum machines](#) and other synthetic instruments. Typical bands in the genre, such as Decomposing Serenity, are lightning fast with shorter songs, usually under 2 minutes and sometimes use samples.

### Other minor genres

- **Death/Grind**: Death metal with heavy grindcore influences, or vice versa.

## Crucial bands

- See also List of grindcore bands.

Crucial grindcore bands include Agathocles, Agoraphobic Nosebleed, Anal Cunt, Cripple Bastards, Extreme Noise Terror, Fear of God, Phobia, Napalm Death, Nasum, Repulsion, Siege, Terrorizer.

Bands that inspired and helped to define early grind include Agonia, Anti-Cimex, CCM, Cryptic Slaughter, Discharge, Larm, S.O.B., Unseen Terror.

United States

**Groove metal**, *half-thrash*, or *post-thrash* is a subgenre of [thrash metal](#) which took its current form during the early 1990s. Albums such as Exhorder's *Slaughter in the Vatican*, Sepultura's *Arise*, and Artillery's *We are the Dead* incorporated groovish melodies to thrash metal, however it wasn't until albums like Pantera's *Vulgar Display of Power*, White Zombie's *La Sexorcisto: Devil Music, Vol. 1*, and Machine Head's *Burn My Eyes* that groove metal truly took its musical form. Unlike thrash metal and many of the other heavy metal subgenres, groove metal is not as riff-oriented. Artists of the genre tend to have a style influenced heavily by mid-tempo thrash riffs, accentuated with down-tuned power chords (Drop D or D standard tuning), synchopated chord patterns, mid-paced guitar solos and dissonant bridges or breakdowns, usually mid-tempo. It is a popular belief that modern hard rock or [nu metal](#) spawned from this genre of metal. It should also be noted groove metal is not considered to be thrash despite the fact that it originated from it.

# Group dance

**Group dances** are [danced](#) by groups of people simultaneously, as opposed to individuals dancing alone or individually, and as opposed to [couples](#) dancing together but independently of others dancing at the same time, if any.

The dances are generally, but not always, coordinated or standardized in such a way that all the individuals in the group are dancing the same steps at the same time. Alternatively, various groups within the larger group may be dancing different, but complementary, parts of the larger dance. An exception to this generalization must be pointed out where groups of individuals are dancing independently of each other, but with the purpose of creating a "group" feeling or experience, such as might accompany various forms of ritual dancing.

Group dances include the following dance forms or styles:

- [Folk dance](#)
  - [Circle dance](#)
  - Contra dance
  - English Country Dance
  - Maypole dance
  - [Square dance](#)
    - Traditional square dance
    - Modern Western square dance
- [Line dance](#)
- [Novelty and fad dances](#)
  - Bunny Hop
  - Chicken Dance
  - Para Para
- Polonaise
- [Round dance](#)
- Universal Peace Dance

# Grunge music

**Stylistic origins:** [Alternative rock](#), [Hardcore punk](#), [Indie rock](#), [Heavy metal](#)

**Cultural origins:** early 1980s, United States Pacific Northwest

**Typical instruments:** [Guitar](#) - [Bass](#) - [Drums](#)

**Mainstream popularity:** high during the early and mid-1990s; lower but existent in the 2000s

[Post-grunge](#)

[Australia](#) - California - Oregon - Washington

[Timeline of alternative rock](#)

**Grunge music** (sometimes also referred to as the **Seattle Sound**) is a [genre](#) of [alternative rock](#) inspired by [hardcore punk](#), [heavy metal](#), and [indie rock](#). It became commercially successful in the late 1980s and early 1990s, peaking in mainstream popularity between 1991 and 1994. Bands from cities in the Pacific Northwest of the United States, such as Seattle, Washington, Olympia, Washington, and Portland, Oregon, created grunge and later made it popular with mainstream audiences. The genre is closely associated with Generation X in the US, since it was popularized in tandem with the rise in popularity of the generation's name. The popularity of grunge was one of the earliest phenomena that distinguished the popular music of the 1990s from that of the 1980s.

## Style, roots, and influences

Grunge music is generally characterized by "dirty" [guitar](#), strong riffs, and heavy drumming. The "dirty" sound resulted both from a stylistic change in the standard method of playing [punk rock](#), and from the common use of guitar distortion and feedback. Grunge involves slower tempos and dissonant harmonies that are generally not found in punk. The lyrics are typically angst-filled — anger, frustration, ennui, sadness, fear, and depression are often explored in grunge songs. These lyrics may have come from the feelings of angst that are common in adolescence; many grunge musicians began their careers as teenagers or young adults. However, other factors, such as poverty, discomfort with social prejudices, and a general disenchantment with the state of society may also have influenced grunge lyricism. Nevertheless, not all grunge songs dealt with such emotions: Nirvana's satirical "In Bloom" is a notable example of more humorous writing. In fact, several grunge songs are filled with either a dark or fun sense of humor as well (for example, Mudhoney's "Touch Me, I'm Sick!" or Tad's "Stumblin' Man"), though this often went unnoticed by the general public. Much of the humor in grunge satirized heavy metal and other forms of rock music that were popular during the 1980s.

Grunge evolved out of the Pacific Northwest's local punk rock scene, inspired by local punk bands such as The Fartz, The U-Men, the feedback- and distortion-intensive The Accused, and pop-punksters The Fastbacks.[3] Above all, the slow, heavy sound of The Melvins was the biggest influence on grunge. Both The Melvins and the punk band The Wipers (also influential) are themselves considered grunge bands by some fans of the genre, although others classify them as hardcore punk bands. Aside from its punk origins, the grunge movement had strong roots in the musical and youth culture of the American northwest. The musical resemblance to such 1960s northwest bands as the Wailers and, most particularly, the Sonics, is unmistakable.

Mark Arm, the vocalist for the Seattle band Green River (and later Mudhoney), is widely credited for being the first to use the term "grunge" to describe the style. However, Arm used the term pejoratively; he called the band's style "pure grunge, pure shit". This was not seen as being negative by the media, and the term was subsequently applied to all music that sounded similar to Green River's style. It is likely that the term was seen as appropriate because of the "dirty" guitar sound that grunge is known for (the word grunge itself means "dirt") and the unkempt appearance of most bands of the genre which was in direct contradiction to the relatively polished look of [hair metal](#) bands of the late 1980s.

Formed in 1983, Green River is widely believed to have created the genre, and was a large inspiration for many grunge bands despite the band's relatively low level of commercial success. After the band split up in 1988, members of Green River formed Mudhoney and Mother Love Bone, continuing on their style. Green River, who used a harder sound in their performance than many later grunge bands, inspired other early grunge bands such as Soundgarden and Alice in Chains to use a similarly hard style. However, the sound of the genre became a mix of the earlier grunge style and

alternative rock shortly before its mainstream success in the 1990s. This is most often credited to Nirvana's style, which combined the sound of earlier grunge bands with that of The Pixies. Nirvana's use of the Pixies' "soft verse, hard chorus" style popularized this stylistic approach in both grunge and other alternative rock genres.

Grunge's unique sound is often said to have resulted from Seattle's isolation from other alternative rock scenes. However, outside of the Pacific northwest, other musicians are said to have influenced grunge. Such northeastern bands as Sonic Youth and Dinosaur Jr. are considered important influences on the grunge sound; both groups championed many Seattle bands who would later achieve notoriety. The influence of the Pixies on Nirvana — and through them on other bands — is also unquestionable. The Minnesota hardcore punk/alternative rock band Hüsker Dü are also believed by some to have been an influence. After Neil Young played live a few times with Pearl Jam and recorded the album *Mirror Ball* with them, some members of the media gave Young the questionable title "Godfather of Grunge," a claim grounded mainly on his work with his band Crazy Horse. Australia's The Scientists and Detroit's proto-punk luminaries the Stooges and MC5 are also noted influences.

Mudhoney's Steve Turner says that Black Flag's 1984 record *My War* and its supporting tours were major influences on many Seattle bands. The record found the Los Angeles punk rock stalwarts slowing their tempi considerably and injecting a potent dose of heavy metal, though to considerable derision and disgust from some fans. Turner says that "A lot of other people around the country hated the fact that Black Flag slowed down ... but up here it was really great — we were like 'Yay!' They were weird and fucked-up sounding." [7] While elements of heavy metal made their way into the grunge sound, the genre continued to remain more loyal to its punk roots. The mentality of the musicians was still very deeply rooted in the punk scene, with many bands adhering to the DIY ethic. The [hardcore punk](#) band Bad Brains was also a huge influence on grunge. Dave Grohl of Nirvana said, "Seeing Bad Brains live was, without a doubt, always one of the most intense, powerful experiences you could ever have... They made me absolutely determined to become a musician, they basically changed my life, and changed the lives of everyone who saw them." Fellow Nirvana bandmate and bassist Krist Novoselic said that their single "In Bloom" "sounded like a Bad Brains song." [8] Bad Brains' albums *I Against I* and *Quickness* helped pioneer the combination of hardcore and metal styles into a single sound.

Grunge concerts were known for being straightforward, high-energy performances. Grunge bands avoided the complex, high budget presentations that bands from other musical genres such as heavy metal were known for; complex light arrays, pyrotechnics, and other technological visual effects unrelated to playing the music were not part of the concerts. Instead, the bands presented themselves no differently from any local band, using only their instruments and their own presence as visual "effects" (neither being budgeted higher than what was needed). The concerts did have some level of interactivity though, presented in the form of the mosh pit. Fans and musicians alike would participate in stage diving, crowd surfing, headbanging, and pogoing, though the audiences at grunge concerts were best known for their extremely enthusiastic moshing. The mosh pits would be located close to the stage, allowing such interaction between the audience and the band.

## Mainstream popularity

Prior to its popularity, grunge was listened to mostly by those who played the music. Bands would play at clubs with very few people in attendance, most of which were from other performing bands. Others who listened to the music in those early days were often people who were "just trying to get out of the rain" as many attendants would claim. As bands began to issue albums, independent labels became the key catalysts in bringing the music to the local public. Many of the more successful bands of the era were associated with Seattle's Sub Pop record label. Other record labels in the Pacific Northwest that helped promote grunge included EMpTy Records, Estrus Records, C/Z Records, and PopLlama Records.

A seminal release in the development of grunge was 1986's *Deep Six* compilation, released by C/Z Records (later reissued on A&M). The record featured multiple tracks by six bands: Soundgarden, the Melvins, Green River, Malfunkshun, Skin Yard, and the U-Men; for many of them it was their first appearance on record. The artists had "a mostly heavy, aggressive sound that melded the slower tempos of heavy metal with the intensity of hardcore".<sup>[11]</sup> As Sub Pop producer Jack Endino recalled, "People just said, 'Well, what kind of music is this? This isn't metal, it's not punk, What is it?' [. . .] People went 'Eureka! These bands all have something in common.'" Later in '86 Bruce Pavitt released the *Sub Pop 100* compilation as well as Green River's *Dry As A Bone* EP as part of his new label Sub Pop. An early Sub Pop catalog described the Green River EP as "ultra-loose GRUNGE that destroyed the morals of a generation".

In November 1988, Sub Pop took their initial step towards popularizing grunge with the Sub Pop Singles Club, a subscription service that would allow subscribers to receive singles by local bands on a monthly basis by mail. This increased grunge's following locally, and allowed Sub Pop to become a powerful company in the local scene. According to Sub Pop founders Bruce Pavitt and Jonathan Poneman, grunge's popularity began to flourish after journalist Everett True from the British magazine *Melody Maker* was asked by them to write an article on the local music scene. This helped to make grunge known outside of the local area during the late 1980s, giving the genre its first major spurt of popularity. Mudhoney is often credited as having been the biggest commercial success for grunge during this time, and was the most successful grunge band until the end of the 80s. Still, grunge would not become a huge national phenomenon in the US until the 1990s.

Nirvana is generally credited for breaking the genre into the popular consciousness in 1991. The popularity of Nirvana's song "Smells Like Teen Spirit", from the album *Nevermind*, surprised the entire music industry. The album became a #1 hit around much of the world, and paved the way for more bands, including, most popularly, Pearl Jam. Pearl Jam, in fact, had released their debut album *Ten* a month earlier in August 1991, but album sales only picked up after the success of Nirvana. For many audiences then and later, grunge came to be almost totally associated with these two bands and their punky, rebellious attitude towards mainstream mores as well as cultural and social institutions. By 1993, other popular Seattle-based bands (most notably

Alice in Chains and Soundgarden) would also become extremely successful. Some bands from other regions, such as Stone Temple Pilots from San Diego, Australia's Silverchair, and Great Britain's Bush also became popular by the mid-90s.

Most grunge fans and music critics believe that grunge emerged as a popular genre and was embraced by mainstream audiences in reaction to the declining popularity of hair metal. Hair metal bands, such as Mötley Crüe, Poison, and Warrant, had been dominating the charts during the 1980s (especially in the United States) despite being looked down upon by most critics. Hair metal was known for macho (some critics have said misogynist) lyrics, anthemic riffs, and a perceived lack of social consciousness, especially in the race to attract mainstream audiences. These aspects were popular during the 1980s, but they began to have the opposite effect on audiences towards the end of the decade. Grunge, however, sharply contrasted to hair metal; its lyrics avoided machismo and used a simpler style similar to punk. With a viable alternative to hair metal realized by the public, the popularity of hair metal began to die off as the popularity of grunge began to rise.

Grunge fans in the Pacific Northwest believed that the media gave excessive importance to the clothing worn by grunge musicians and fans, along with other aspects of the local culture. Clothing commonly worn by grunge fans in the Northwest in its early years was a blend of the punk aesthetic with the typical outdoorsy clothing (most notably flannel shirts) of the region. The "fashion" did not evolve out of a conscious attempt to create an appealing fashion, but due to the inexpensiveness of such clothes and the warmth that they provided for the cold climate of the region. The media, rather than focusing on the music, would give this fashion a heavy amount of exposure. In the early 1990s, the fashion industry marketed "grunge fashion" to a widespread audience, charging relatively high prices for clothing that they assumed to be popular in the grunge scene. Similarly, the media would view grunge as a whole culture, assuming it to be Generation X's attempt to create a culture similar to the hippie counterculture of the previous generation. Rather than focus on the music, much of the media focused on other superficial aspects of the musicians and fans. An interesting case of this superficiality backfiring on the media was the grunge speak hoax, which caused The New York Times to print a fake list of slang terms that supposedly were used in the grunge scene. This was later proven to be a prank by Sub Pop's Megan Jasper. The excesses of this media hype would also be documented in the 1996 documentary *Hype!*.

While such superficiality bothered Seattle-area grunge fans, most grunge musicians from the area continued to dress in the way that they had prior to popularity. Some musicians from outside the region also began to dress similarly. In the rock world, expensive, designer clothing was shunned in favor of less elaborate clothing; some common items worn included flannel, jeans, boots (often Doc Martens), and Converse sneakers. Many young fans outside of the region embraced this style for its simple defiance of the norms of the era's popular culture, which was seen by many of them as corporate-dominated and superficial. In England, youth who dressed in this fashion were sometimes called *grungers*, while the term *grungies* was often used in the United States. Traditional rock and roll ostentatiousness became offensive to many rock music fans, inspiring an anti-fashion trend. Oddly, this attitude helped the fashion industry push their "grunge fashion" line, turning the fans' defiance to fashion against them. As a result, many grunge fans dropped the "traditional" grunge fashion soon after having embraced it; the industry stopped marketing it shortly afterwards.

Many notable events happened during the "grunge era" of music that may not have happened had grunge never become popular. Alternative rock,

previously heard mostly in local clubs, on college radio, and on independent record labels, became popular in the mainstream as major record labels sought out more previously obscure music styles to sell to the public. The traveling festival Lollapalooza came about as a result of this, with grunge being a major part of the 1992 and 1993 events. In the media's spotlight, grunge became part of the pop culture, most notably being a major part of the 1992 film *Singles*, which featured several grunge bands. Nirvana and Sonic Youth would star in a documentary film that same year, *1991: The Year Punk Broke*. Riot grrrl, another hardcore punk offshoot that came into being in Western Washington (and was thus often seen as the feminine equivalent of grunge), became well known from the media coverage of the local scene. With such punk derivative genres becoming popular, punk itself was able to make a revival, as bands such as Green Day and The Offspring became chart-topping successes. Independent record labels, which used to rarely have success on level with major labels, were able to sell albums with equal or similar success as the major labels (most notably in the cases of Sub Pop and Epitaph Records).

## Decline of mainstream popularity

The mass popularity of grunge music was short-lived, however. There were several important factors that contributed to this. Though some of them could have single-handedly ended the genre's mainstream popularity, it is generally believed that more than one factor caused the decline.

Most fans and music historians believe that many grunge bands were too opposed to mainstream stardom to actually achieve long-lasting support from major record labels. Many grunge bands refused to cooperate with major record labels in making radio-friendly hooks, and the labels found new bands that were willing to do so, albeit with a watered-down sound that did not sit well with the genre's long-time fans. A decline in music sales in general in 1996 may also have influenced labels to look for different genres to promote rather than genres such as grunge that were popular up to that point. However, this decline may have been a result of the industry's use of such watered-down groups.

Another factor that may have led to the fall of grunge's mainstream popularity was the advent of the sub-genre of grunge known as [post-grunge](#). Post-grunge was a radio-friendly variation of grunge which lacked the "dirty" sound that most fans of grunge were used to. The sub-genre is generally believed to have come about at the behest of label executives who wanted to sell a variation of grunge that would sell to a larger audience as a result of sounding more like [pop music](#). In the mid-1990s, record labels began signing several bands that used such a sound and gave them wide exposure. While some of these bands, such as Silverchair and Bush, were able to gain widespread success, many fans of grunge denounced post-grunge bands as being [sell-outs](#). This is most notable in the cases of Candlebox and Collective Soul, who were reviled by most grunge fans. Even the commercially successful post-grunge bands would be given such accusations by grunge fans, causing most of them to have shorter spurts of popularity than earlier grunge bands. As grunge began to disappear from the mainstream, later post-grunge bands such as Creed and Nickelback would also receive such negative treatment by fans of the genre.

Heroin use amongst grunge musicians was also a serious problem for the continuation of some grunge bands. Andrew Wood's death from an overdose in 1990 was the first major tragedy for the grunge scene, bringing an end to Mother Love Bone. Kurt Cobain's use of heroin is believed to have contributed to his death (though whether or not it did was never confirmed).[17] The deaths of Kristen Pfaff of Hole and Layne Staley of Alice in Chains in 1994 and 2002, respectively, were also caused by heroin overdoses. It is believed by many that grunge effectively began its decline when Cobain died in April of 1994. Interestingly, Cobain had often been photographed wearing t-shirts stating that "Grunge is Dead."

For many fans of the genre, it wasn't until the pioneering band Soundgarden disbanded in 1997 that they finally conceded grunge's time in the mainstream was over. Over the next few years grunge's mainstream popularity quickly came to an end. Many grunge bands have continued recording and touring with more limited success, including, most significantly, Pearl Jam. Grunge

music still has its followers, and many of them still express their fandom over the Internet. Grunge's mainstream following still shows some continuation in the popularity of Nirvana's post-break-up releases; the previously unreleased song "You Know You're Right" became a chart topping hit in 2002, and the box set *With the Lights Out* has become the best selling box set of all time.

## Prominent Seattle area bands

Alice in Chains  
Green River

# Guidonian hand

In [Medieval music](#), the **Guidonian hand** was a mnemonic device used to assist singers in learning to sight sing. It attributed to Guido of Arezzo, a medieval music theorist who wrote a number of treatises, including one instructing singers in sightreading. The Guidonian hand is closely linked with Guido's new ideas about how to learn music, including the use of Hexachords, and the first use of Solfege, which is also attributed to him.

The idea of the Guidonian hand is that each portion of the hand represents a specific note within the hexachord system, which spans from Gamma Ut (the contraction of which is "gamut", which can refer to the entire span) to ee la. In teaching an instructor would indicate a series of notes by pointing to them on their hand, and the students would sing them. This is similar to the system of hand signals sometimes used in conjunction with solfege.

There have been a number of variations in the position of the notes on the hand, and no one variation is definitive, but in the example below, the notes of the gamut were mentally superimposed onto the joints and tips of the fingers of the left hand. Thus gamma ut (two G's below middle C) was the tip of the thumb, A was the inside of the thumb knuckle, B was the joint at the base of the thumb, C was the joint at the base of the index finger, and so on, spiraling around the hand counterclockwise until the d above middle c (the top joint of the middle finger) and the e above that (the back of that joint, the only note on the back of the hand) were reached.

This device allowed people to visualize where the half steps of the gamut were, and to visualize the interlocking positions of the hexachords (ut re mi fa sol la). The Guidonian hand was reproduced in numerous medieval treatises.

The medieval hexachordal system (c = middle C)

| Note | Syllable |     |        |
|------|----------|-----|--------|
| ee   |          |     | la     |
| dd   |          | la  | sol    |
| cc   |          | sol | fa     |
| bbn  |          |     | mi     |
| bbm  |          | fa  |        |
| aa   |          | la  | mi re  |
| g    |          | sol | re ut  |

# Guitar

A **guitar** is a [musical instrument](#) characterized by its visually dominant **body** and **neck**. Guitar strings are strung parallel to the neck, whose surface is covered by the **fingerboard** (fretboard). By depressing a string against the fingerboard, the effective length of a string can be altered, which in turn changes the frequency at which the string will vibrate when plucked. Guitarists typically use one hand to pluck the strings and the other to depress the strings against the fingerboard. The strings may be plucked using either fingers or a plectrum (guitar pick), thus creating the sound of notes or chords.

The strings of a guitar produce little sound by themselves. Instead, their vibration must be amplified to audibly useful levels. In general, this amplification is achieved either mechanically or electronically, with the result being that there are two main categories of guitar: [acoustic](#) (mechanical amplification) and [electric](#) (electronic amplification).

- In acoustic guitars, string vibration is transmitted through the **bridge** and **saddle** to the sound board. The sound board, typically made of a light springy wood such as spruce, vibrates the air, producing sound which is further shaped by the guitar body's resonant cavity.
- In electric guitars, transducers known as pickups convert string vibration to an electronic signal, which in turn is amplified and fed to speakers, which vibrate the air to produce the sound we hear.

Guitars are made and repaired by people called luthiers.

Guitars are used in a variety of musical styles. Guitars are widely known as a solo classical instrument, and the primary instrument in [blues](#) and [rock music](#).

## History

Instruments similar to what we know as the guitar have been popular for at least 5,000 years. The guitar appears to be derived from earlier instruments known in ancient central Asia as the cithara . Instruments very similar to the guitar appear in ancient carvings and statues recovered from the old Iranian capitol of Susa. The modern word, guitar, was adopted into English from Spanish, possibly from earlier Greek word kithara. Prospective sources for various names of musical instruments that guitar could be derived from appear to be a combination of two Indo-European roots: *guit-*, similar to Sanskrit *sangeet* meaning "*music*", and *-tar* a widely attested root meaning "*chord*" or "*string*".

The word *guitar* may also be a Persian loanword to Iberian Arabic. The word *qitara* is an Arabic name for various members of the [lute](#) family that preceded the Western guitar. The name *guitar* was introduced into Spanish when guitars were brought into Iberia by the Moors after the 10th century.

The Spanish *vihuela* appears to be an intermediate form between the ancestral guitar and the modern guitar, with [lute](#)-style tuning and a small, but guitar-like body. It is not clear whether this represents a transitional form or simply a design that combined features from the two families of instruments. In favor of the latter view, the reshaping of the vihuela into a guitar-like form can be seen as a strategy of differentiating the European lute visually from the Moorish oud. (See the article on the [lute](#) for further history.) The Ancient Iranian lute, called *tar* in Persian also is found in the word guitar. The *tar* is thousands of years old, and could be found in 2, 3, 5, and 6 string variations.

The earliest extant six string guitar was built in 1779 by Gaetano Vinaccia (1759 - after 1831) [1] [2] in Naples, Italy. The Vinaccia family of luthiers is known for developing the [mandolin](#). This guitar has been examined and does not show tell-tale signs of modifications from a double-course guitar.

The [electric guitar](#) was patented by George Beauchamp in 1936. Beauchamp co-founded Rickenbacher which used the horseshoe-magnet pickup. However, it was Danelectro that first produced electric guitars for the wider public. Danelectro also pioneered tube amp technology.

Though George Beauchamp was the first to patent the electric guitar, the original inventor was Les Paul; when he was a teenager he made a crude configuration out of his acoustic and his radio.

## Parts of the guitar

Guitar consists of several parts. Refer to appropriate article for description of a part:

1. Headstock
2. Nut
3. Machine heads (=pegheads, tuning keys)
4. Frets
5. Truss rod
6. Inlays
7. Neck and fretboard
8. Heel (acoustic or Spanish)- Neckjoint (electric)
9. Body
10. Pickups
11. Electronics
12. Bridge (saddle)
13. Pickguard
14. Bottom deck
15. Soundboard (=top deck)
16. Body sides
17. Sound hole
18. Strings
19. Bridge

### Headstock

The headstock is located at the end of the guitar neck furthest from the body. It is fitted with machine heads that adjust the pitch of the strings. Traditional tuner layout is "3+3" in which each side of the headstock has three tuners (such as on Gibson Les Pauls). In this layout, the headstocks are commonly symmetrical. Many guitars feature other layouts as well, including six-in-line (featured on Fender Stratocasters) tuners or even "4+2". However, some guitars (such as Steinbergers) do not have headstocks at all, in which case the tuning machines are located elsewhere, either on the body or the bridge.

### Nut

The nut is a small strip of ivory, bone, plastic, brass, graphite, or other medium-hard material that braces the strings at the joint where the headstock meets the fretboard. It is grooved to hold the strings in place, and it is one of

the endpoints of the strings' tension. The material used also affects the sound of the guitar.

## Fretboard

Also called the **fingerboard** in fretless guitars and basses, the fretboard is a piece of wood embedded with metal frets that comprises the top of the neck. It is flat on [classical guitars](#) and slightly curved crosswise on acoustic and electric guitars. The curvature of the fretboard is measured by the fretboard radius, which is the radius of a hypothetical circle of which the fretboard's surface constitutes a segment. The smaller the fretboard radius, the more noticeably curved the fretboard is. Pinching a string against the fretboard effectively shortens the vibrating length of the string, producing a higher tone (a string, unfingered, will vibrate from the saddle to the nut; once fingered, it will vibrate only along the distance between the saddle and the fret directly before the finger). Fretboards are most commonly made of rosewood, ebony, maple, and sometimes graphite.

## Frets

Frets are metal strips (usually nickel alloy) embedded along the fretboard which are placed in points along the length of string that divide it mathematically. When strings are pressed down behind them, frets shorten the strings' vibrating lengths to produce different pitches- each one spaced a half-step apart on the 12 tone scale. For more on fret spacing, see the *Strings and Tuning* section below. Frets are usually the first permanent part to wear out on a heavily played electric guitar. They can be re-shaped to a certain extent and can be replaced as needed. Frets also indicate fractions of the length of a string (the string midpoint is at the 12th fret; one-third the length of the string reaches from the nut to the 7th fret, the 7th fret to the 19th, and the 19th to the saddle; one-quarter reaches from nut to fifth to twelfth to twenty-fourth to saddle). This feature is important in playing harmonics. Frets are available in several different gauges, depending on the type of guitar and the player's style.

There are several styles of fret, which allow different sounds and techniques to be exploited by the player. Among these are "jumbo" frets, which have much thicker wires, allowing for a lighter touch and a slight vibrato technique simply from pushing the string down harder and softer, "scalloped" fretboards, where the wood of the fretboard itself is "scooped out", becoming deeper away from the headstock, which allows a dramatic vibrato effect and other unusual techniques, and fine frets, much flatter, which allow a very low string-action for extremely fast playing, but require other conditions (such as curvature of the neck) to be kept perfect in order to prevent buzz.

## Truss rod

The **truss rod** is an adjustable metal rod that runs along the inside of the neck, adjusted by a hex nut or an allen-key bolt usually located either at the headstock (under a cover) or just inside the body of the guitar, underneath the fretboard (accessible through the sound hole). The truss rod counteracts the immense amount of tension the strings place on the neck, bringing the neck

back to a straighter position. The truss rod can be adjusted to compensate for changes in the neck wood due to changes in humidity or to compensate for changes in the tension of strings. Tightening the rod will curve the neck back and loosening it will return it forward. Adjusting the truss rod affects the intonation of a guitar as well as affecting the action (the height of the strings from the fingerboard). Some truss rod systems, called "double action" truss systems, will tighten both ways, allowing the neck to be pushed both forward and backward (most truss rods can only be loosened so much, beyond which the bolt will just come loose and the neck will no longer be pulled backward). Most classical guitars do not have truss rods, as the nylon strings do not put enough tension on the neck for one to be needed.

## Inlays

Inlays are visual elements set into the exterior wood on a guitar. The typical locations for inlay are on the fretboard, headstock, and around the soundhole (called a rosette on acoustic guitars). Inlays range from simple plastic dots on the fretboard to fantastic works of art covering the entire exterior surface of a guitar (front and back). Some guitar players put LED's in the fretboard as inlays to produce a unique lighting effect onstage. Both Sam Rivers- bassist of rock group Limp Bizkit- and guitar virtuoso Steve Vai have used LED's as fret inlays.

Fretboard inlays are most commonly shaped like dots, diamond shapes, parallelograms, or large blocks in between the frets. Dots are usually inlaid into the upper edge of the fretboard in the same positions, small enough to be visible only to the player. Some manufacturers go beyond these simple shapes and use more creative designs such as lightning bolts or letters and numbers. The simpler inlays are often done in plastic on guitars of recent vintage, but many older, and newer, high-end instruments have inlays made of mother of pearl, abalone, ivory, colored wood or any number of exotic materials. On some low-end guitars, they are just painted. Many classical guitars have no inlays at all; the player himself sometimes will make them with a marker pen, correction fluid, or a small piece of tape.

The most popular fretboard inlay scheme involves single inlays on the 3rd, 5th, 7th, 9th, 15th, 17th, 19th, and 21st frets, and double inlays on the 12th, sometimes 7th, and (if present) 24th fret. Advantages of such scheme include its symmetry about the 12th fret and symmetry of every half (0-12 and 12-24) about the 7th and 19th frets. However, playing these frets, for example, on E string would yield notes E, G, A, B, C# that barely makes a complete [musical mode](#) by themselves.

A less popular fretboard inlay scheme involves inlays on 3rd, 5th, 7th, 10th, 12th, 15th, 17th, 19th, 22nd and 24th frets. Playing these frets, for example, on E string yields notes E, G, A, B, D that fit perfectly into E minor pentatonic. Such a scheme is very close to [piano](#) keys coloring (which involves black coloring for sharps that pentatonic consists of) and of some use on classic guitars.

Beyond the fretboard inlay, the headstock and soundhole are also commonly inlaid. The manufacturer's logo is commonly inlaid into the headstock. Sometimes a small design such as a bird or other character or an abstract shape also accompanies the logo. The soundhole designs found on acoustic guitars vary from simple concentric circles to delicate fretwork. Many high-end guitars have more elaborate decorative inlay schemes. Often the edges of the guitar around the neck and body and down the middle of the back are inlaid. The fretboard commonly has a large inlay running across

several frets or the entire length of the fretboard, such as a long vine creeping across the fretboard. Most acoustic guitars have an inlay that borders the sides of the fretboard, and some electrics (namely Fender Stratocasters) have a black inlay running on the back of the neck, from about the body to the middle of the neck, commonly referred to as a skunk stripe.

Some very limited edition high-end or custom-made guitars have artistic inlay designs that span the entire front (or even the back) of the guitar. These designs use a variety of different materials and are created using techniques borrowed from furniture making. While these designs are often just very elaborate decorations, they are sometimes works of art that even depict a particular theme or a scene. Although these guitars are often constructed from the most exclusive materials, they are generally considered to be collector's items and not intended to be played. Large guitar manufacturers often issue these guitars to celebrate a significant

## Neck

A guitar's frets, fretboard, tuners, headstock, and truss rod, all attached to a long wooden extension, collectively comprise its neck. The wood used to make the fretboard will usually differ from the wood in the rest of the neck. The bending stress on the neck is considerable, particularly when heavier gauge strings are used (see [Strings and tuning](#)), and the ability of the neck to resist bending (see [Truss rod](#)) is important to the guitar's ability to hold a constant pitch during tuning or when strings are fretted. The rigidity of the neck with respect to the body of the guitar is one determinant of a good instrument versus a poor one. Conversely, the ability to change the pitch of the note slightly by deliberately bending the neck forcibly with the fretting arm is a technique occasionally used, particularly in the [blues](#) genre and those derived from it, such as [rock and roll](#). The shape of the neck can also vary, from a gentle "C" curve to a more pronounced "V" curve.

## Neck joint or 'heel'

This is the point at which the neck is either bolted or glued to the body of the guitar. Almost all acoustic guitars, with the primary exception of Taylors, have glued (otherwise known as set) necks, while electric guitars are constructed using both types. On Spanish guitars, this portion is known as the 'heel' because it looks like a Spanish type shoe heel. Set necks usually feature dovetail joints, which offer stability and sustain. Other commonly used neck joints include mortise-and-tenon joints (such as those used by CF Martin & Co. guitars), and Spanish Heel style neck joints (commonly found in classical guitars). Bolt-on necks, though they are historically associated with cheaper instruments, do offer greater flexibility in the guitar's set-up, and allow easier access for neck joint maintenance and repairs. Another type of neck, only available for solid body electric guitars, is the Neck-Through-Body construction. These are designed so that everything from the machine heads down to the bridge are located on the same piece of wood. The sides (also known as wings) of the guitar are then glued to this central piece. Some luthiers prefer this method of construction as it is said to allow better sustain of each note. Some very high-end instruments may not have a neck joint at all, having the neck and sides built as one piece and the body built around it.

## Body (acoustic guitar)

The body of the instrument is a major determinant of the overall sound for acoustic guitars. The guitar top, or soundboard, is a finely crafted and engineered element often made of spruce, red cedar or mahogany. This thin (often 2 or 3 mm thick) piece of wood, strengthened by different types of internal bracing, is considered to be the most prominent factor in determining the sound quality of a guitar. The majority of the sound is caused by vibration of the guitar top as the energy of the vibrating strings is transferred to it. Different patterns of wood bracing have been used through the years by luthiers (Torres, Hauser, Ramirez, Fleta, and C.F. Martin being among the most influential designers of their times); to not only strengthen the top against collapsing under the tremendous stress exerted by the tensioned strings, but also to affect the resonance of the top. The back and sides are made out of a variety of woods such as mahogany, Indian rosewood and highly regarded Brazilian rosewood (*Dalbergia nigra*). Each one is chosen for their aesthetic effect and structural strength, and can also play a significant role in determining the instrument's [timbre](#). These are also strengthened with internal bracing, and decorated with inlays and purfling.

The body of an acoustic guitar is a resonating chamber which projects the vibrations of the body through a *sound hole*, allowing the acoustic guitar to be heard without amplification. The sound hole is normally a round hole in the top of the guitar, though some may have different shapes or multiple holes.

As an instrument's maximum volume is determined by how much air it can move, the Dreadnought body size is popular amongst acoustic performers.

## Body (electric guitar)

Most electric guitar bodies are made of wood. This wood is rarely one solid piece, as laminating hardwoods in the proper way can produce a body of exceptional strength and superior tone. The most common woods used for electric guitar body construction include maple, basswood, ash, poplar, alder, and mahogany. Many bodies will consist of good sounding but inexpensive woods, like ash, with a "top", or thin layer of another, more attractive wood (such as maple with a natural "flame" pattern) glued to the top of the basic wood. Guitars constructed like this are often called "flame tops". The body is usually carved or routed to accept the other elements, such as the bridge, pickup, neck, and other electronic components. Many higher-end electrics have a nitro-cellulose laquer finish on the top, which promotes resonance.

## Pickups

The electric guitar is usually not very loud when it is played without an amplifier. Pickups are electronic devices attached to a guitar that detect (or "pick up") string vibrations and allow the sound of the string to be amplified. Pickups are usually placed right underneath the guitar strings. The most common type of pickups contain magnets that are tightly wrapped in copper wire. This allows the pickups to measure the movement of the steel guitar string within the magnetic field above the pickup. Some acoustic guitars also have microphones or pickups built into them for stage work. Pickups work on a similar principle to a generator in that the vibration of the strings causes a

small current to be created in the coils surrounding the magnets. This signal is later amplified by an amplifier. The Fender stratocaster type guitars generally utilize 3 single coil pickups. & the Gibson Les Paul use Humbucker pickups.

Traditional electric pickups are either single-coil or double-coil. Double-coil pickups are also known as humbuckers for their noise-canceling ability. The type and model of pickups used can have large effects on the tone of the guitar. Typically, humbuckers are used by guitarists seeking a heavier sound. Single coil pickups are used by guitarists seeking a brighter, twangier sound. However, a disadvantage of single coil pickups is mains-frequency (60 or 50 Hertz) hum. Some guitars need a battery to power their pickups and/or pre-amp; these guitars are referred to as having "active electronics", as opposed to the typical "passive" circuits.

Guitar Synthesizers may have specialist 'cluster' pickups, effectively giving each string its own pickup.

## **Electronics**

On guitars that have them, these components and the wires that connect them allow the player to control some aspects of the sound like volume or tone. These at their simplest consist of passive components such as potentiometers and capacitors, but may also include specialized integrated circuits or other active components requiring batteries for power, for preamplification and signal processing, or even for assistance in tuning. In many cases the electronics have some sort of magnetic shielding to prevent pickup of external interference and noise.

## **Binding, Purfling, and Kerfing**

The top, back and rim of an acoustic guitar body are very thin (1-2mm), and so a piece flexible piece of wood called kerfing (because it is often scored, or kerfed to allow it to bend with the shape of the rim) is glued into the corners where the rim meets the top and back. This interior reinforcement provides 5 to 20 mm or solid gluing area for these corner joints.

During final construction, a small section of the outside corners is carved or routed out and then filled binding material on the outside corners and decorative strips of material next to the binding, which are called purfling. This binding serves to seal off the endgrain of the top and back. Binding and purfling materials are generally made of either wood or high quality plastic materials.

## **Bridge**

The main purpose of the bridge on an acoustic guitar is to transfer the vibration from the strings to the soundboard, which vibrates the air inside of the guitar, thereby amplifying the sound produced by the strings.

On both electric and acoustic guitars, the bridge holds the strings in place. From there, the variations are astounding. There may be some mechanism for raising or lowering the bridge to adjust the distance between the strings and the fretboard (action), and/or fine-tuning the intonation of the instrument. Some are springloaded and feature a "whammy bar", a removable arm which allows the player to modulate the pitch moving the bridge up and down. The

whammy bar is sometimes incorrectly referred to as a "tremelo bar"; unlike the change in pitch that the whammy bar produces, a tremolo is a quick oscillation of the volume. (The effect of rapidly changing pitch produced by a whammy bar is correctly called "vibrato"). Some bridges allow for alternate tunings at the touch of a button.

On almost all modern electric guitars, the bridge is adjustable for each string so that intonation stays in tune up and down the neck. If the open string is in tune but sharp or flat at the 12th fret (when pressed), a few turns of a screw driver with the aid of a tuner can quickly remedy the problem. Simple rule of thumb is this: If it's flat, move it forward. Conversely, if it's sharp, move it back. But it's easiest to remember the flat/forward rule because they both begin with the letter F. This is something that should be checked each time the strings are changed but can be checked less often if the replacement strings are the same diameter as the previous strings. This simple setting can make all the difference in making a great guitar sound like a junk guitar.

## Pickguard

Also known as a scratchplate. This is usually a piece of plastic or other laminated material that protects the finish of the top of the guitar. In some electric guitars, the pickups and most of the electronics are mounted on the pickguard. On acoustic guitars and many electric guitars, the pickguard is mounted directly to the guitar top, while on guitars with carved tops (e.g. the Gibson Les Paul), the pickguard is elevated. The Pickguard is more often than not used in styles such as [flamenco](#), which tends to use the guitar as a percussion instrument at times, rather than for instance, a classical guitar.

# Tuning

*Main article:* [Guitar tuning](#)

A variety of different tunings are used. The most common by far, known as "standard tuning" (EADGBE), is as follows:

- sixth (lowest tone) string: E (a minor thirteenth below middle C—82.4Hz)
- fifth string: A (a minor tenth below middle C—110Hz)
- fourth string: D (a minor seventh below middle C—146.8Hz)
- third string: G (a perfect fourth below middle C—196.0Hz)
- second string: B (a minor second below middle C—246.92Hz)
- first (highest tone) string: E (a major third above middle C—329.6Hz)

Standard tuning has evolved to provide a good compromise between simple fingering for many chords and the ability to play common scales with minimal left hand movement. There are also a variety of commonly used [alternate tunings](#).

## Acoustic and electric guitar

Broadly speaking, guitars can be divided into 2 categories:

1. [Acoustic guitars](#): Unlike the electric guitar, the traditional guitar is not dependent on any external device for amplification. The shape and resonance of the guitar itself creates acoustic amplification. However, the unamplified guitar is not a loud instrument, that is, it cannot compete with other instruments commonly found in bands and orchestras, in terms of sheer audible volume. Many acoustic guitars are available today with built-in electronics to enable amplification. There are several subcategories within the acoustic guitar group: steel string guitars, which includes the flat top, or "folk" guitar, the closely related twelve string guitar, and the arch top guitar. A recent arrival in the acoustic guitar group is the acoustic bass guitar, similar in tuning to the electric bass.
- [Renaissance and Baroque guitars](#): These are the gracile ancestors of the modern [classical guitar](#). They are substantially smaller and more delicate than the classical guitar, and generate a much quieter sound. The strings are paired in courses as in a modern 12 string guitar, but they only have four or five courses of strings rather than six. They were more often used as rhythm instruments in ensembles than as solo instruments, and can often be seen in that role in [early music](#) performances. (Gaspar Sanz' *Instrucción de Música sobre la Guitarra Española* of 1674 constitutes the majority of the surviving solo corpus for the era.) Renaissance and Baroque guitars are easily distinguished because the Renaissance guitar is very plain and the Baroque guitar is very ornate, with inlays all over the neck and body, and a paper-cutout inverted "wedding cake" inside the hole.
  - [Classical guitars](#): These are typically strung with nylon strings, played in a seated position and used to play [classical music](#). *Flamenco guitars* are almost equal in construction, have a sharper sound, and are used in [flamenco](#). In Mexico, the popular mariachi band includes a range of guitars, from the tiny requinto to the guitarrón, a guitar larger than a cello, which is tuned in the bass register. The father of the modern classical guitar was Antonio Torres Jurado.
  - *Flat-top (steel-string) guitars*: Similar to the [classical guitar](#), however the body size is usually significantly larger than a classical guitar and it has a narrower, reinforced neck and stronger structural design, to sustain the extra tension of steel strings which produce a louder and brighter tone. The acoustic guitar is a staple in [folk](#), Old-time music and [blues](#) music.
  - *Resonator, resophonic or Dobro® guitars*: Similar to the flat top guitar in appearance, but with sound produced by a metal resonator mounted in the middle of the top rather than an open sound hole, so that the physical principle of the guitar is actually more similar to the [banjo](#). The purpose of

the resonator is to amplify the sound of the guitar; this purpose has been largely superseded by electrical amplification, but the resonator is still played by those desiring its distinctive sound. The type of resonator guitar with a neck with a square cross-section -- called "square neck" -- is usually played face up, on the lap of the seated player, and often with a metal or glass slide. The round neck resonator guitars are normally played in the same fashion as other guitars, although slides are also often used, especially in blues.

- *12 string guitars* usually have steel strings and are widely used in [folk music](#), [blues](#) and [rock and roll](#). Rather than having only six strings, the 12-string guitar has pairs, like a [mandolin](#). Each pair of strings is tuned either in unison (the two highest) or an octave apart (the others). They are made both in acoustic and electric forms. Big Joe Williams is a blues musician famous for his 12 string guitar.
  - *Russian guitars* are seven string acoustic guitars which were the norm for Russian guitarists throughout the 19th and well into the 20th centuries. The guitar was traditionally tuned to an open G tuning.
  - *Archtop guitars* are steel string, instruments which feature a violin-inspired f-hole design in which the top (and often the back) of the instrument are carved in a curved rather than a flat shape. Lloyd Loar of the Gibson Guitar Corporation invented this variation of guitar after designing a style of [mandolin](#) of the same type. The typical Archtop is a hollow body guitar whose form is much like that of a mandolin or violin family instrument and may be acoustic or electric. Some solid body electric guitars are also considered archtop guitars although usually 'Archtop guitar' refers to the hollow body form. Archtop guitars were immediately adopted upon their release by both [jazz](#) and [country](#) musicians and have remained particularly popular in jazz music, usually using thicker strings (higher gauged round wound and flat wound) than acoustic guitars. Archtops are often louder than a typical dreadnought acoustic guitar. The electric hollow body archtop guitar has a distinct sound among electric guitars and is consequently appropriate for many styles of [rock and roll](#). Many electric archtop guitars intended for use in [rock and roll](#) even have a Tremolo Arm.
  - *Acoustic bass guitars* also have steel strings, and match the tuning of the electric bass, which is likewise similar to the traditional double bass viol, the "big bass", a staple of string orchestras and [bluegrass](#) bands alike.
  - *Harp guitars*. Harp Guitars are difficult to classify as there are many variations within this type of guitar. They are typically rare and uncommon in the popular music scene. Most consist of a regular guitar, plus additional 'harp' strings strung above the six normal strings. The instrument is usually acoustic and the harp strings are usually tuned to lower notes than the guitar strings, for an added bass range. Normally there is neither fingerboard nor frets behind the harp strings. Some harp guitars also feature much higher pitch strings strung below the traditional guitar strings. The number of harp strings varies greatly, depending on the type of guitar and also the player's personal preference (as they have often been made to the player's specification).
1. [Electric guitars](#): Electric guitars can have solid, semi-hollow or hollow bodies, and produce little or very low sound without amplification. Electromagnetic pickups (single and double coil) convert the vibration of the steel strings into electric signals which are fed to an amplifier through a cable or radio device. The sound is frequently modified by other

electronic devices or natural distortion of valves (vacuum tubes) in the amplifier. The electric guitar is used extensively in [blues](#) and [rock and roll](#), and was commercialized by Gibson together with Les Paul and independently by Leo Fender. The lower fretboard action (the height of the strings from the fingerboard) and its electrical amplification lend the electric guitar to some techniques which are harder (or impossible) to execute on acoustic guitars. These techniques include tapping, extensive use of legato through pull-offs and hammer-ons (a.k.a. slurs in the traditional Classical genre), pinch harmonics, volume swells and use of a Tremolo arm or [effects pedals](#).

- *7 string guitars* were developed in the 1990s (earlier in [jazz](#)) to achieve a much darker sound through extending the lower end of the guitar's range. They are used today by players such as James "Munky" Shaffer, John Petrucci, Jeff Loomis, Steve Smyth, and Steve Vai. Meshuggah, Rusty Cooley & Charlie Hunter go a step further, using an 8 string guitar with *two* extra low strings. Although the most commonly found 7 string is the variety in which there is one low B string, Roger McGuinn (Of Byrds/Rickenbacker Fame) has popularised a variety in which an octave G string is paired with the regular G string as on a 12 string guitar, allowing him to incorporate chiming 12 string elements in standard 6 string playing. Ibanez makes many varieties of electric 7 strings

The electric bass is similar in tuning to the traditional double bass viol. Hybrids of acoustic and electric guitars are also common. There are also more exotic varieties, such as double-necked guitars, all manner of alternate string arrangements, fretless fingerboards (used almost exclusively on bass guitars, meant to emulate the sound of a stand-up bass), and such.

# Guitar terminology

## Instrument

The guitar has come to be called many different colloquial names over time such as:

- axe,
- box,
- guit-box,
- guit-fiddle,
- guit-box-fiddle,
- guit-axe,
- bread-box,
- bread-winner,
- bread-box-winner,
- bread-box-fiddle.

## Pitch bender

The pitch bend leg found on many electric guitars has also had slang terms applied to it, such as "tremolo bar (or arm)", "sissy bar", "whammy handle", and "whammy bar". The latter two slang terms led stompbox manufacturers to use the term 'whammy' in coming up with a pitch raising effect introduced by popular guitar brand "Digitech".

Leo Fender, who did much to create the electric guitar, also created much confusion over the meaning of the terms "tremolo" and "vibrato", specifically by misnaming the "tremolo" unit on many of his guitars and also the "vibrato" unit on his "Vibrolux" amps. In general, *vibrato* is a variation in [pitch](#), whereas *tremolo* is a variation in volume, so the tremolo bar is actually a vibrato bar and the "Vibrolux" amps actually had a tremolo effect. However, following Fender's example, electric guitarists traditionally reverse these meanings when speaking of hardware devices and the effects they produce. See vibrato unit for a more detailed discussion, and tremolo arm for more of the history.

## Capo

A capo (used to change key without changing fingering) is sometimes called a "cheater".

## Bottle or Knife

A slide, (bottle, knife blade or metal bar) used in blues and rock to create a glissando or 'hawaiian' effect. The necks of bottles were often used in blues and country music.

## **Plectrum**

A "pick" or "plectrum" is a small piece of plastic which is generally held between the thumb and first finger of the picking hand and is used to attack the strings. Though most classical players pick solely with their fingers, the "pick" is the most common means of playing today. Though today they are mainly plastic, variations do exist, and some guitarists (including Django Reinhardt) were known to use tortoise shell picks.

## Guitar/synthesizer

A [guitar/synthesizer](#) is the adaptation of a guitar to control a [synthesizer](#). Most commonly, a guitar/synth is a converter which analyzes the pitch of each string and sends an electronic message to a synthesizer, telling it what note to play. The pitches of the individual strings can be determined if a hexaphonic pickup is used. In modern implementations, the converter's output is a MIDI signal. This implementation led to the use of *MIDI guitar* as a synonym for a guitar/synthesizer or for the field of guitar synthesis in general.

A guitar-like MIDI controller is also referred to as a guitar/synthesizer. Such a device is not actually a guitar, but a human interface designed to play like one. It allows a guitarist to play synthesizers or other MIDI-enabled instruments. The SynthAxe was one notable example.

Categories: [Musical instruments](#) | [String instruments](#)

# Guitar tuning

**Guitar tuning** refers to the [pitch](#) adjustments carried out on the individual strings of a [guitar](#) in order to achieve a prescribed arrangement of [notes](#) from the open (unfretted) strings. Many such arrangements are used, of which the most popular are detailed below.

## Standard tuning

This is by far the most popular tuning on a 6-string [guitar](#), (hence the use of the term: *standard*) and comprises the following note arrangement.

| String       | Note      | Frequency |
|--------------|-----------|-----------|
| 1 (thinnest) | <b>e'</b> | 329.6 Hz  |
| 2            | <b>b</b>  | 246.9 Hz  |
| 3            | <b>g</b>  | 196.0 Hz  |
| 4            | <b>d</b>  | 146.8 Hz  |
| 5            | <b>A</b>  | 110.0 Hz  |
| 6 (thickest) | <b>E</b>  | 82.4 Hz   |

This pattern can also be denoted as E-A-d-g-b-e'. (See under [note](#) for an explanation of the various symbols used in the above table and elsewhere in this article.)

Standard tuning has evolved to provide a good compromise between simple fingering for many [chords](#) and the ability to play common [scales](#) with minimal left hand movement.

The separation of the first (e') and second (b) string, as well as the separation between the third (g), fourth (d), fifth (A), and sixth (E) strings by a 5-semitone interval (a perfect fourth) allows notes of the [chromatic scale](#) to be played with each of the four fingers of the left hand controlling one of the first four frets (index finger on fret 1, little finger on fret 4, etc.). It also yields a symmetry and intelligibility to fingering patterns.

The separation of the second (b), and third (g) string is by a 4-semitone interval (a major third). Though this breaks the fingering pattern of the chromatic scale and thus the symmetry, it eases the playing of some often-used [chords](#) and [scale](#), and it provides more diversity in fingering possibilities.

When the guitar is strummed with all strings open (as sometimes happens momentarily during difficult chord changes in frenetic passages of modern songs) it plays a tolerable E minor eleventh chord (Em11) comprising (in ascending order of pitch) the chord members: 1-4-b7-b3-5-1.

## Alternate tunings

Alternate tuning refers to any open string note arrangement other than that of standard tuning detailed above. Despite the usefulness and almost universal acceptance of standard tuning, many guitarists employ such alternate tuning arrangements in order to exploit the unique chord voicing and sonorities that result from them. Most alternate tunings necessarily change the chord shapes associated with standard tuning, which results in certain chords becoming much easier to play while others may become impossible to play.

### Rock music tunings

Guitar tunings in [rock music](#) and [metal](#) mainly aim at making power chords much simpler to play.

- **Dropped D:** D-A-d-g-b-e'

This tuning is not only used by metal and rock bands, but also [folk musicians](#). It allows power chords (a.k.a. fifth chords) to be played with a single finger on the lowest three strings. It is also used extensively in [classical guitar](#) music and transcriptions since it allows the lower open strings to sound the root and fifth of the D major scale as part of the [bass](#) line. Korn uses this tuning on their seven-string guitars, with an additional low A as the seventh string.

- **Dropped C:** C-G-c-f-a-d'

This tuning is the same as dropped D, but each string is lowered an additional whole step, or 2 semitones. This gives the guitar a very low and heavy sound, and usually requires extra-thick strings to maintain tension. This tuning is frequently used by heavy metal bands, such as Godsmack, Mudvayne and System of a Down, to achieve the lowest sound possible. Tuning a standard, non-baritone guitar any lower than this is difficult.

- **Dropped B:** B-F#-B-e-g#-c#'

This tuning is the same as dropped D & C, but lowered from dropped C an additional semitone, or half step. This tuning is very popular with [nu-metal](#) act Slipknot, and several European [death metal](#) acts. Heavy gauge strings, such as Beefy Slinky's by Ernie Ball, are required for this tuning.

- **Down Tuning/E-flat Tuning:** Eb-Ab-db-gb-bb-eb'

This tuning is achieved when all the strings are flattened by a half step. Bands that use this include Guns N' Roses, Thin Lizzy, Relient K, and Metallica. This can be combined with other tuning techniques such as dropped D tuning and makes no difference to fingering. Often the key will be considered by the players as if played in standard tuning. This tuning can be used for a number of reasons: to make larger strings bend more easily, to make the tone heavier, to better suit the vocalist's range, to play with saxophone family more easily, to play in Eb pentatonic minor formed by the black keys of a keyboard. Heavier bands may tune down to D, C#, or even C. B is possible but sometimes seven string guitars are used instead.

## Classical guitar tunings

The guitar has its roots in classical music, so a few guitar tunings stem off from this genre.

- **Renaissance [lute](#) tuning:** E-A-d-f#-b-e'

This tuning may also be used with a capo at the third fret to match the common lute pitch: G-c-f-a-d'-g'. This tuning also matches standard vihuela tuning and is often employed in classical guitar transcriptions of music written for those instruments. José González is known to use this tuning.

## Open tunings

An open tuning is a type of guitar tuning in which the open strings are tuned to form a common chord (usually major) which can be 'transposed' to any higher pitch simply by placing a finger across all of the strings at any chosen fret. Blues slide guitarists often take advantage of this effect, whereas fingerstyle guitarists tend to use various combinations of the open strings to provide a sustained chordal accompaniment to melodies played on fretted higher strings.

- **Open G:** D-G-d-g-b-d'

This tuning is commonly used for [blues](#), or slide guitar. In classical guitar this is sometimes referred to as the dropped G tuning. It retains the relationship of the fourth between the two lower strings. This is also known as 'bluegrass guitar' tuning.

- **Open D:** D-A-d-f#-a-d'
- **Open E:** E-B-e-g#-b-e'
- **Open A:** E-A-e-a-c#'-e'
- **Open C:** C-G-c-g-c'-e'

## Miscellaneous tunings

- **Dobro:** G-B-d-g-b-d'

This is commonly used for Squareneck Dobro (Resonator) guitars. The lack of a low D means that a complete strum does not have the same harmonic strength that the Open G has.

- **All fourths:** E-A-d-g-c'-f'

This tuning is like that of the lowest four strings in standard tuning. It removes from standard tuning the irregularity of the interval of a third between the second and third strings. With regular tunings like this, chords can simply be moved down or across the fretboard, dramatically reducing the number of different finger positions that need to be memorized. The disadvantage is that not all major and minor chords can be played with all six strings at once.

- **All fifths:** C-G-d-a-e'-b'

This is a tuning in intervals of fifths like that of a [mandolin](#) or a [violin](#). Has a remarkably wide range, though it is difficult to achieve (the high b" makes the first string very taut such that it will break easily), and may not play well on an acoustic guitar (the low C is too low to resonate properly in a standard guitar's body).

- **New standard tuning:** C-G-d-a-e'-g'

This is the new standard tuning devised by Robert Fripp of King Crimson, used by most Guitar Craft students around the world. The tuning is like all fifths except the first string is dropped from b' to g'. The term 'New Standard Tuning' is a misnomer: it is certainly 'new' but in no way 'standard' by any definition. This is because the tuning is only used by a very tiny percentage of the planet's guitar players - specifically those connected with Guitar Craft. It would only become 'New Standard Tuning' if it was used by the majority of the planet's guitar players in preference to the 'Old Standard Tuning'.

- **DADGAD:** D-A-d-g-a-d'

Introduced and popularised by Davey Graham after having been inspired by Arabic oud tuning while living in Morocco, DADGAD tuning is now frequently used in Celtic music, and by artists such as Pierre Bensusan, Soig Siberil and Paul McSherry.

- **Major third guitar tuning:** E-G#-c-e-g#-c'

This tuning devised in 1960's by jazz guitarist Ralph Patt.

- **Orkney tuning:** C-G-d-g-c'-d'

It is a wonderful tool for melodic (non-linear) playing, in which you avoid playing subsequent notes on the same string.

- **Nashville tuning**

This is achieved on a high-strung guitar - a guitar strung with only the high strings of a 12-string guitar set. This is known as "Nashville tuning" when the strings are in standard tuning.

- **G tuning** G-c-f-bm-d'-g'

Some guitar manufacturers recommend all six strings of their mini-scaled (3/4 and 1/2) guitar models (namely Epiphone Flying Vee-Wee, for example) be tuned one and half steps or minor-third higher than ordinary guitars. This is primarily intended to keep good tuning stability of those short-scaled guitars with the tension of strings close to that of the original strings design. For example, a 1/2 scale Johnson mini-Strat type guitar has a scale length of 20.75 inches, about 18% shorter than that of a regular Strat's 25.5 inches, requiring about the same magnitude of less tension on strings in order to produce the same pitches with the same string gauges, which often could result in a significant tuning stability problem. Unlike other alternative tunings, this tuning maintains relative pitches or intervals between strings the same as the ordinary tuning so that it only (but still) requires simple constant transposing for playing any score.

Each of the six strings can be alternately tuned as low as a whole step lower and as much as a whole step higher without stressing the neck or the strings. With five possible tunings for each string (+2, +1, 0, -1, and -2), there can be as many as 15,625 possible tunings for a six-string guitar. Note that a standard guitar sounds one octave below pitch as written in [standard notation](#). That is, the first string in standard tuning plays the E note that is a major third above middle C, and is written on the staff as a major tenth above middle C.

There are also tenor guitars, baritone guitars tuned BEADF#B (or ADGCEA, GDGCDG, GDGCEA, GCGCEG, etc.) a fourth lower than a standard (prime) guitar, treble guitars tuned a fourth higher than a prime guitar and contrabass guitars, which are tuned one octave lower than prime guitars. Seven string guitars have an extra low string which is a B in standard tuning.

# Guitar/synthesizer

A **guitar/synthesizer** (also **guitar synthesizer**, **guitar/synth**, or **guitar synth**) is any one of a number of systems originally conceived to allow a [guitar](#) player to play [synthesizers](#). *MIDI guitar* is often used as a synonym for the field of guitar/synthesis or for a guitar/synthesizer, but MIDI is not involved in every case.

Traditionally, synthesizers have a [keyboard](#) interface to allow a human to play the instrument, but the human interface does not necessarily need to be a keyboard, nor indeed is any human interface necessary. (See [sound module](#).) Because synthesizers generate sounds electronically, they can theoretically be actuated by almost any sort of input device. A guitar/synthesizer provides an interface which is familiar to a guitarist.

There are two main types of guitar/synthesizer: those which are real guitars outfitted with additional gear to actuate a synthesizer, and those which are guitar-like MIDI controllers. Both types have their advantages and disadvantages.

There is a growing trend by manufacturers of [effects units](#) to market so-called guitar/synth pedals. These effects use a variety of techniques to make a guitar sound more like a synthesizer, but they aren't really guitar/synthesizers.

## Guitar-based guitar/synthesizers

The earliest guitar/synthesizers were based on actual guitars. Roland Corporation has been and remains a significant proponent for this paradigm of guitar synthesis. Other notable manufacturers include Axon and Yamaha Corporation. Guitar/synths in this category are the most popular, and consist of the following components:

- A guitar. The guitar is usually an [electric guitar](#), but may also be an [acoustic guitar](#).
- A hexaphonic pickup (also called a *divided pickup*), which provides six distinct outputs, one for each string.
- A converter, which determines the pitch coming from each of the strings and transmits this information to a synthesizer.
- A synthesizer, which generates the intended note.

These components may be integrated or modularized in different ways.

The hexaphonic pickup may be a separate component which can be mounted on almost any guitar, or it may be built into the guitar as original equipment. The earliest guitar/synths required the musician to use a proprietary guitar, which was designed with an integrated hexaphonic pickup. Roland later developed its GK line of pickups which allowed the pickup to be mounted onto any guitar. Today, several guitar manufacturers offer their guitar models with integrated Roland hardware. These are called "Roland-ready".

Usually, a cable connects the hexaphonic pickup to the converter. This allows the guitarist some freedom of movement, unencumbered by the converter. However, several Casio models in the PG and MG product lines integrated the guitar, the hex pickup, and the converter into one unit. Casio remains the only manufacturer to try this approach. It was convenient in that a MIDI cable could be plugged directly into the guitar.

The converter may be a standalone unit or it may be integrated with a synthesizer. The earliest models integrated the converter and the synthesizer. Some models still do. The earliest integrated models predated the MIDI standard, so the guitarist was stuck with whatever synthesizer was integrated with the converter. Today's integrated models include MIDI output. Standalone converter units drive synthesizers via MIDI.

The chief advantages of this type of system are:

- The [timbres](#) of the guitar and synthesizer can be blended together at any ratio, enabling the musician to play guitar alone, guitar and synthesizer, or synthesizer alone.
- In many models, almost any guitar can be used.

The chief disadvantages of this type of system are:

- At lower pitches, there is a detectable latency between playing a note on the guitar and the same note sounding on the synthesizer. This latency has diminished as designs have improved.
- All the variable performance parameters available on a synthesizer cannot be actuated on a guitar. While a guitarist can control pitch and volume directly from the guitar, a guitar lacks assignable controls to open a filter in real-time, for example. Contemporary guitar/synth designs often include an expression pedal for this purpose.
- Tracking of notes is often prone to glitches. This can be mitigated by properly adjusting the pickup, properly adjusting the converter's sensitivity controls, and by playing more precisely.

## Guitar-like MIDI controllers

Some manufacturers of guitar/synthesizers wanted to eliminate the tracking and latency problems associated with guitar-based systems, while retaining the expressiveness of the guitar. They achieved this to some degree by redesigning the human part of the interface so that it was better suited to driving a synthesizer. A variety of technologies were tried.

A well-known guitar-like controller produced in the 1980's was called SynthAxe. It was a futuristic controller consisting of a fretboard attached to the body at an obtuse angle. The fretboard strings were used to indicate pitch and sensed string bends. A separate, shorter set of strings were used for picking and strumming. These triggered the notes fretted on the fretboard's strings. It also featured trigger keys which could be used instead of the trigger strings. A whammy bar was assignable to any MIDI parameter. The SynthAxe was prohibitively expensive.

Yamaha originally entered into the market with a guitar-like MIDI controller called the G-10. It was considerably less expensive than the SynthAxe, though still out of reach for many musicians. The G-10 featured two assignable knobs and an assignable whammy bar. It had just 6 strings, all the same gauge, which sensed both right- and left-hand input.

Both the SynthAxe and Yamaha G-10 were later discontinued.

Starr Labs' Ztar is the only remaining guitar-like controller product line still in production. A Ztar differs significantly from the SynthAxe and Yamaha G-10 in that the "fretboard" is covered with keys, not strings. Keys in the same row can trigger notes at the same time. This has no analog on a real guitar. It would be as if a single string were polyphonic.

The chief advantages of the guitar-like MIDI controller systems are:

- Tracking is much better than guitar-based systems.
- There is no noticeable latency.
- Whammy bars and other controllers could be assigned to any MIDI function.

The chief disadvantages are:

- The controller is not a guitar. It does not make guitar sounds nor does it feel exactly like a guitar.
- Expense

## Guitar/Synthesis

It is difficult to say whether a guitar/synthesizer is an instrument in its own right. The Roland paradigm is actually two instruments, one controlling the other. Guitar-like MIDI controllers are not instruments at all; just an interface to the instrument. Nevertheless, guitar/synthesis has its own techniques, advantages and limitations which are distinct from both guitar playing and conventional keyboard synthesizers.

Not all guitar playing techniques can be translated into MIDI. Harmonics, palm mutes, hammer-ons, pull-offs, pick slides, etc. all have no analog in the world of synthesizers. Similarly, guitars have no means to vary all the parameters which may be available on a keyboard synthesizer. Guitars, unless they are fretless, cannot do portamento, for example.

Hence, playing a guitar/synthesizer means, in some ways, accepting the least common denominator between the two instruments. However, controlling a synthesizer with a guitar has some advantages over a keyboard. More expansive chords are possible, and some intervals are easier to reach.

Guitarists have a few reasons for using guitar/synthesizers:

- Guitar/synthesizers provide access to a vast array of sounds normally available only to keyboard players and percussionists. A guitar player could take on a flute part, for example. This makes a guitar player more versatile.
- The guitarist can create a hybrid timbre which is recognizable neither as a guitar nor a synthesizer.
- A guitarist with limited or no keyboard playing skills can program a [sequencer](#).

## Prominent guitar/synthesizer players

A number of guitarists have done significant work with guitar/synthesizers. Many are either [jazz](#), [progressive rock](#), or [fusion](#) guitarists.

Categories: [Guitars](#) | [Synthesizers](#)

## Hand drum

A **hand drum** is any type of [drum](#) that is typically played by striking it with the bare hand rather than a stick, mallet, hammer, or other type of beater. The simplest type of hand drum is the frame drum, which consists a shallow, cylindrical shell with a drumhead attached to one of the open ends.

## Types of hand drums

- A frame drum common in Middle Eastern music is the tar.
- The [tambourine](#) is simply a frame drum with jingles attached to the shell.
- The most common African drum known to westerners is the djembe, a large, single-headed drum with an hourglass shape.
- [Congas](#) and bongos are essential to Afro-Cuban music.
- Tabla are central to Indian music.

# Happy hardcore

**Happy hardcore** is a form of [dance music](#) typified by a very fast BPM (usually around 165-180), male and female vocals, and saccharine lyrics. Its characteristically 4/4 beat "happy" sound distinguishes it from most other forms of [breakbeat hardcore](#), which tend to be darker. It often has [piano](#) samples and spacey effects. This genre of music is closely related to the typically Dutch genre of [Gabber](#). Happy hardcore evolved from [rave](#) music around 1991–1993, as the original [house music](#)-based rave became faster and began to include breakbeats, evolving into [breakbeat hardcore](#). In recent years it has grown in popularity with both children in their early teens and Boy Racers.

In the UK, happy hardcore was at its peak between 1994 and 1997. In the more current past Happy Hardcore has made a large re-emergence into the mainstream, more specifically it has received coverage in Mixmag. It has spawned various new record labels in the United States, Canada, the UK, and Japan and continues to grow in popularity.

## Development of happy hardcore

By mid-to-late 1992, hardcore breakbeat (which was fast becoming [jungle](#)) had started to morph into the "Dark Side". All of the cheesiest elements of the hardcore scene (chipmunk vox, choruses, rolling piano lines, stabs, etc.), which were being blamed for the lead-up to commercialization of the music, had started to be eliminated by the new breed of ravers, who wanted to take the music back to the underground with darker, more minimal tracks.

Some producers (Luna-C, Slipmatt, Red Alert & Mike Slammer, Brisk, DJ Vibes, Wishdokta, etc.), however, were simply not having this. They were beginning to make a few minor changes. There were now polyrhythmic breakbeats, half-speed dub-bass and no 4/4 kick drum (which attracted many black ravers, who promptly introduced MCs into the scene). But, apart from this, the E-rush of hardcore continued for quite some time, just as the music was still getting faster and faster. Dark side and the happier tunes were being played together at the same raves, the same pirate stations, etc.

Slipmatt's "SMD #1" was quite a culture shock to most of the ravers. It was not euphoric and it was most definitely not dark. It increased the intensity of the happiest, cheesiest treble elements of rave and was loved by some and hated by many. It also reintroduced the 4/4 kick drum, had fewer snare breaks and a more techno-influenced bassline. It had a profound influence on the whole of the hardcore scene. After several months, the darker tunes were dying and being replaced by the bittersweet nature of ambient jungle/drum'n'bass. Some of the once happier tunes had darkened up a bit and turned the bass right up and ragga jungle and jump-up jungle itself had arrived. The other happy ravers (still using the jungle-style rhythms for a while) gradually took Slipmatt's lead and happy hardcore was born.

By late 1994, happy hardcore had broken away from Jungle (which was now accepted by the mainstream) and had its own network of DJs (Slipmatt, DJ Force & Styles, Vibes & Wishdokta, Brisk, Clarkee, etc.) labels (Kniteforce, Slammin Vinyl) and clubs/raves (Die Hard, United Dance, Dreamscape, etc.) It was rejected by the dance mainstream and had its own media and pirate radio. Other US DJs would follow in the next few years Entropy, Venom, Phil Free Art, Matt Positive, Muppetfucker aka. Noahpex, Spree, Cloudskipper, and many more.

In this course of time 1995–1997 the music was still evolving. There were now almost no breakbeats and the music had become faster and stompy, with a progressive rhythm. The scene was now set for the genre's merge with bouncy techno and 4-beat. Around 1999 various UK rave culture publications started announcing the largely mistaken "death" of Hardcore, but it had instead just gone back to its underground roots.

Also around this time the UK Happy Hardcore had started taking influences from the mainstream trance tunes heard virtually everywhere. While this move attracted new listeners it also began to alienate some of its long time producers, many of which switched to producing Hard house or simply retired. It was this merging of trance influences with hardcore that caused the birth of a new genre Freeform Hardcore. Known to some by its original nickname 'Kenneth' this style of music blended the earlier dark influences, the

breakbeats, as well as various trance influences. Freeform also created its own network of DJs and producers most noticeably CLSM, Sharkey, AMS, Kevin Energy, and lesser knowns such as Tilzs, AC Slater, Sunrize, Daywalker, Oli G, White Russian, Brak, Bounce and Dodgee.

Freeform hardcore, and other trance influenced happy hardcore attracted a new audience to the music and caused a major upsurge in interest among the European and American ravers, causing remixes of classic happy hardcore anthems to reach the pop charts. Examples include tracks such as "You're Shining" or "Heartbeats" by Breeze & Styles.

Hardcore also received its own special in 2004 on BBC Radio 1 entitled John Peel *Is Not Enough* named after a CLSM track of the same name.

Happy Hardcore is also a popular genre of music on the Dance Dance Revolution rhythm games. Several songs include *Candy*, *Sweet Sweet Heart Magic*, and *Love Love Sugar*.

# Hard bop

**Hard bop** is an extension of [bebop](#) (bop) music which incorporates influences from [rhythm and blues](#), [gospel music](#), and [blues](#), especially in the [saxophone](#) and [piano](#) playing.

Its bass playing more varied, due in part to the prominence of such virtuosos as Charles Mingus and Ray Brown; it is in part intended to be more accessible to audiences unfamiliar with or not fond of bop. It also is, as David H. Rosenthal contends in his book *Hard Bop*, to a large degree the natural creation of a generation of black American musicians who grew up at a time when bop and [rhythm and blues](#) were the dominant forms of black American music and jazz musicians as prominent as Tadd Dameron worked in both genres.

Hard bop musicians include Cannonball Adderley, Art Blakey, Clifford Brown, Donald Byrd, Sonny Clark, John Coltrane, Lou Donaldson, Miles Davis, Kenny Drew, Benny Golson, Dexter Gordon, Joe Henderson, Andrew Hill, Freddie Hubbard, Jackie McLean, Charles Mingus, Blue Mitchell, Hank Mobley, Thelonious Monk, Lee Morgan, Sonny Rollins, and Horace Silver.

Hard bop was developed in the 1950s and 1960s and enjoyed its greatest popularity in that era, but hard bop performers, and elements of the music, remain popular in jazz.

[Soul jazz](#) developed from hard bop.

# Hard dance

**Hard dance** is a term that refers to a grouping of modern [electronic dance music](#) genres including [hard trance](#), [hard house](#), [nu-NRG](#), hard-NRG, [hardstyle](#), freeform hardcore and jumpstyle. Hard dance usually is set to tempos 145+ bpm. Hard dance is very fast and usually has a strong drumbeat.

## Hard house

**Hard house** is a style of [electronic music](#) that evolved from mixing [techno](#) and [house](#) music in the 1990s. Hard house is typified by a set formula of up-tempo compressed kick drums, signature [acid house](#) style basslines and the use of 'hoover' type sounds.

Generally hard house is part of a wider group of styles called [hard dance](#) and has little in common with the modern techno or house scenes. The music is often liked by younger clubbers because of its easy accessibility, mainstream attitude and suitability for dancing to while on Ecstasy.

# Hard rock

**Stylistic origins:** [Rock and roll](#), [Blues-Rock](#), [Psychedelic Rock](#)

**Cultural origins:** 1960s, United Kingdom

**Typical instruments:** [Guitar](#) - [Bass](#) - [Drums](#)

**Mainstream popularity:** Popular among teenagers in 1970s, 1980s, 1990s. The maximum peak of mainstream popularity was reached in 1980s.

**Derivative forms:** [Alternative rock](#) - [Heavy metal](#) - [Punk rock](#)

[Alternative rock](#) - [Heavy metal](#) - [Punk rock](#) - [Grunge](#)

[Backbeat](#) - [Rock opera](#) - [Rock band](#) - [Performers](#) - [Rock anthem](#) - [Hall of Fame](#) - [Samples](#) - [Social impact](#)

**Hard rock** is a form of [rock and roll](#) music which finds its closest roots in early 1960s [garage rock](#) and in Jimi Hendrix's [psychedelic rock](#). It is typified by a heavy use of distorted [electric guitar](#), [bass guitar](#) and [drums](#). The term "hard rock" is often used as an umbrella term for genres such as [punk](#), [grunge](#), [industrial rock](#) and [heavy metal](#), in order to distinguish them from softer, more radio friendly [pop rock](#) music.

## Characteristics

Hard rock is a variation of rock and roll and is strongly influenced by blues music; in fact, the most frequently used scale in hard rock is the pentatonic, which is a typical blues scale. However, unlike traditional rock and roll, which takes elements of the "old" blues, hard rock borrows elements of the so-called British blues, a style of blues played with more modern instruments such as electric guitars, drums and electric bass.

The term hard rock is often applied to many styles of rock, their only common feature being that they deviate from pop rock, though this is generally incorrect. Two such examples are punk rock and grunge. Punk rock uses a faster tempo and fewer riffs (also known as power chords, invented by the pioneer Link Wray). Grunge can be classified as being much more extreme than hard rock.

The predominant instrument in hard rock is the electric guitar. Virtuoso guitarists are very prevalent in hard rock, examples of which include Jimmy Page of Led Zeppelin, Ritchie Blackmore of Deep Purple and Rainbow, and Eddie Van Halen of Van Halen. Drums are also a basis of hard rock because

they sustain the rhythm of the music, and create an energetic drive that keeps the music flowing.

## Hard Rock or Heavy Metal?

During the 1970s hard rock spawned a new genre of music, known as [heavy metal](#). This genre has created a controversial topic that appears when discussing 1970s hard rock groups. The debates are often centred around whether the bands are "hard rock or heavy metal groups".

The two genres have some crossover for example; the pioneers of [heavy metal](#), such as Deep Purple, Black Sabbath and Led Zeppelin are often considered both "Heavy Metal" and "Hard Rock"... whereas, bands such as AC/DC, Aerosmith and Kiss, are normally referred to as just "Hard Rock" and not "Heavy Metal".

To further the confusion, the most popular heavy metal subgenre of the 1980s; [Glam metal](#), was known to take influence from both the pioneering [heavy metal](#) acts and other Hard rock groups, such as Kiss, AC/DC and Aerosmith amongst other things. Both Kiss and Aerosmith subsequently went on to dabble in [Glam metal](#) stylings..

# History

## Early days (1960s)

One of the major influences in hard rock is undoubtedly [Blues music](#), especially that brand of blues that met [rock and roll](#) in the 1960s: it is often called British blues, because this meeting happened in United Kingdom.

British rockers like The Rolling Stones, The Yardbirds, The Who and The Kinks modified rock and roll; adding to the standard genre harder sounds, heavy guitar riffs, often bombastic drumming and harder vocals: they created the basis for hard rock. Even The Beatles, known for sweet sounds, love songs and quiet atmospheres, released a primordial hard rock album called The White Album.

At the same time, guitarist Jimi Hendrix produced a particular kind of [blues](#) known as [Psychedelic rock](#), which combined elements of [jazz](#), [blues](#) and [rock and roll](#) creating a unique genre. Also, he was one of the first guitarists to experiment new guitar effects like phasing, feedback and distortion. Another important group in the [Blues-rock](#) is Cream (especially the guitarist, Eric Clapton).

Hard rock came into existence when British groups of late 1960s like Black Sabbath, Led Zeppelin mixed the music of early British rockers with a particular kind of [Blues-rock](#), typified by an aggressive approach to the blues. Led Zeppelin's eponymous first album, released in 1969, is a good example of heavy blues-rock which represents the true beginning of the hard rock genre.

Also Deep Purple showed up in the hard rock scene with the albums Shades of Deep Purple, The Book of Taliesyn, Deep Purple. Together with Led Zeppelin, Deep Purple are considered the true "masters" of hard rock.

## The First Era (1970s)

In the 1970s, hard rock finally got a true identity.

Led Zeppelin's third album, Led Zeppelin III was more [progressive rock](#)-oriented than the second, but the heavy connotations of their music still remained. So, they received several critics from detractors of hard rock, who considered it a senseless music. Anyway, this didn't stop the expansion of hard rock: young boys liked it a lot, seeing it as a form of rebellion against the fair and quiet music of their fathers.

In 1970 another important group from UK, Black Sabbath, published what is considered the first [heavy metal](#) album, titled Paranoid. Black Sabbath's music was revolutionary even in hard rock: it was typified by the darkest lyrics ever written, hard riffs and a heavy atmosphere. Black Sabbath transformed the current hard rock into an heavier genre, creating a primordial kind of heavy metal.

In 1972 Deep Purple published their most famous album titled Machine Head which contains their most famous song, "Smoke On The Water".

*Machine Head* continued Deep Purple's transformation of hard rock, and it's considered along with *Paranoid* one of the first proto-metal albums. In particular, the song "Highway Star" is considered the first [Speed Metal](#) song in the history (Speed Metal is the progenitor of the more extreme [Thrash Metal](#)). Anyway, Deep Purple's music is very different from Black Sabbath's, so Deep Purple are still considered an hard rock group, not a metal group.

From 1973, hard rock evolved to another stadium. New artists such as Queen, KISS and Aerosmith introduced heavier elements in the genre, which from this point on lost the blues influences to become more heavy metal-oriented. Aerosmith and Queen published their respective eponymous debut albums, which showed the new evolution of hard rock. Even Led Zeppelin took this direction with the album *Houses of the Holy*.

Differently from the past, from this moment on every group created its own style: Aerosmith, Queen and KISS moved on a style that evolved in the 1980s into the so-called [Glam Rock](#), one of the most popular rock subgenres; on the contrary, the proto-metal frontier, formed by Judas Priest, Rainbow and Van Halen, took a more "alternative" direction.

Judas Priest introduced a new element in the genre, the dual rhythm, where two guitarists (instead of the usual single guitarist) play the rhythmic riffs: this element would become common in heavy metal. Judas Priest would go to become one of the major influences on [Thrash Metal](#) and [Power Metal](#).

Rainbow, formed by the former guitarist of Deep Purple, Ritchie Blackmore, created the basis for power metal together with Judas Priest, especially thanks to Ritchie Blackmore's great technique. Meanwhile, Black Sabbath took off the darkness of the beginning with albums such as *Technical Ecstasy*, following the heavy metal direction of Judas Priest and Rainbow.

Another important group in the hard rock scene, Van Halen, showed up in 1978. Van Halen's music, different from KISS, Aerosmith and Queen, was based mostly on the guitar skills of Eddie Van Halen, the lead guitarist. The song "Eruption" from the album *Van Halen* demonstrated Eddie Van Halen's technique and was very influential.

In 1979, the differences between the classical hard rock movement and the rising heavy metal movement was highlighted when the Australian band AC/DC, after three Australian only albums, published their first international album titled *Highway to Hell*. Despite the current heavy metal direction, AC/DC's music is based mostly on the [rhythm & blues](#) and the early 1970s hard rock. On the other side, the British band Motörhead put on the basis for the rise of [Thrash Metal](#) with the album *Overkill*.

The year closed with Ozzy Osbourne's firing from Black Sabbath due to his alcohol and drugs problems. Ronnie James Dio, vocalist of Rainbow, came to replace him.

## **The Second Era (1980s)**

In the 1980s a new wave of rockers pushed the envelope of the old frontier. Heavy metal got a separate identity from hard rock.

In 1980 Led Zeppelin disbanded because of the tragic death of drummer John Bonham who choked on his own vomit after a binge of heavy drinking. Bon Scott, the lead singer of AC/DC had also died from acute alcohol poisoning earlier that year. With this and the disbanding of Zeppelin, the first wave of "classic" rock bands ended. AC/DC still remained on the scene, and published the album *Back in Black*, which is the second biggest selling album of all time: this album is probably the most influential one of the 1980s for later rockers. By selling so much, AC/DC proved to the public that hard rock could

sell and made possible the rise of a radio-friendly hard rock and heavy metal. Van Halen too released successful albums such as Van Halen II and Women and Children First, which opened the road for what later became [Glam Metal](#).

On the other side, Iron Maiden, Diamond Head, Angel Witch, Motörhead and a now solo Ozzy Osbourne kickstarted a surge of interest in heavy Metal. Iron Maiden and Angel Witch's music took great influences from Black Sabbath's album Paranoid: dark sounds, heavy riffs and dark lyrics. Their style also featured fantasy-based elements, which differentiated them from Black Sabbath's [classic metal](#): together with Judas Priest, they are considered to be the mainstays of New Wave of British Heavy Metal.

In 1981 the American band Mötley Crüe released a massively influential album called Too Fast For Love, which set the basis for the rising genre [Glam Metal](#). A year later the genre exploded, especially thanks to Twisted Sister and Quiet Riot: Twisted Sister's Under The Blade is considered one of the best [Classic metal](#) albums, and Quiet Riot's Metal Health is the first album ever which reached #1 in the Billboard United States chart. On the other side of the ocean, Iron Maiden's The Number of the Beast reached #1 in United Kingdom charts.

Def Leppard, a sheffield-based post-punk band showed up in the scene with the album Pyromania, which reached #2 in the American charts: Their music was a mix of glam rock, heavy metal, classic rock and Album Oriented Rock, which influenced many 80s hard rock and glam rock bands.

In 1983 Mötley Crüe released their most famous album, Shout at the Devil, which became a huge hit; for this reason the album is often considered to be "The Breakthrough Metal album". 1984 was a key year. KISS returned on the scene unmasked with the album Animalize: with their unmasking, they officially entered in the glam metal movement. Van Halen's album 1984 became a huge success, hitting #2 on Billboard album charts; in particular, the song "Jump" hit #1 in the single chart and is considered one of the most popular rock songs ever written. Judas Priest's Defenders of the Faith achieved RIAA Gold and Platinum certifications. Other important acts in 1984's glam scene were Ratt and W.A.S.P..

At the same time, Yngwie J. Malmsteen and Steve Vai, two virtuoso guitarists, released their respective debut albums Rising Force and Flex-Able. Their unique style didn't feature vocals, with both albums showcasing the guitar-playing talents of the artists instead; this was the birth of [Instrumental Rock](#). There were differences between Malmsteen and Vai; while Malmsteen's music was greatly influenced by classical music, Vai was more of a hard rock purist.

Meanwhile, the thrash metal frontier was about to become more "extreme" than ever: in 1985 Slayer's album Hell Awaits, which preceded their famous Reign in Blood, provided the basis for the rise of death metal. Slayer, Anthrax, Megadeth and Metallica are often called the Big Four of Thrash.

In the same year Aerosmith returned on the scene with the album Done With Mirrors.

In 1986 80s hard rock finally went mainstream. The Swedish band Europe released The Final Countdown, maybe the most popular and radio-friendly album together with Van Halen's 1984. In particular, the title track "The Final Countdown" became a huge success, hitting number 1 in 26 countries. On the thrash side, Metallica and Megadeth released two landmark albums, Master of Puppets and Peace Sells... But Who's Buying?, which became notable alternatives to the mainstream. In the same year the virtuoso guitarist Joe Satriani, teacher and great friend of Steve Vai, released his first full album, Not of This Earth. True success for him arrived a year later, with the release of Surfing with the Alien, a milestone in the history of [Instrumental Rock](#).

1987 was another big year. The most notable successes in the charts were Appetite For Destruction by Guns N' Roses, Hysteria by Def Leppard, which hit #1 in Billboard album chart, and Mötley Crüe's Girls, Girls, Girls Thrash metal was strongly transformed in something called Groove Metal, which would later evolve, together with Rage Against the Machine's music, into the Nu Metal genre, by groups such as Napalm Death, whose debut was in 1987 with the album Scum. In the same year the Seattle band Soundgarden showed up with the EP Screaming Life, giving rise to yet another sub-genre, [Grunge](#).

## The Third Era (1990s)

The 1990s was an eventful and often puzzling era for hard rock. The early 90s were marked by the rise of [Grunge](#) bands in Seattle, who provided one of the earliest scenes of [Alternative Rock](#). Some of these bands met with much commercial success, such as Nirvana, Pearl Jam, Soundgarden, and Alice in Chains. While their success was often pitched in the media as a [Punk Rock](#) reaction to Arena Rock and Hair Metal, the bands were hardly antagonistic towards the [heavy metal](#) genre in general; Soundgarden and Nirvana were influenced by much 70s and 80s metal, while Alice in Chains was arguably a metal band themselves (often touring with [Thrash Metal](#) artists). Several other notable bands included The Screaming Trees, Mother Love Bone, Mudhoney, and a few non-Seattle bands such as Stone Temple Pilots (who were very popular with fans but not with critics).

As the popularity of [Thrash Metal](#) artists such as Metallica and Slayer continued from the 80s into the 90s, some other bands had begun to fuse metal with a range of eclectic influences. These bands came to be known as Alternative Metal artists, another subset of alternative rock. Some, such as Primus and Red Hot Chili Peppers fused [Funk](#) with metal styles. Tool was a popular band, drawing from early progressive acts such as King Crimson for influence. Jane's Addiction adopted a somewhat bohemian aesthetic, while Faith No More referenced many genres ranging from Rap to Soul. The Deftones and Helmet were also popular, especially among skateboarders. With the rise of Pantera the original [Thrash Metal](#) genre was transformed into [Groove metal](#), a subgenre which included Sepultura and Napalm Death and would later evolve into [Nu Metal](#). This new genre showed up with Korn's eponymous debut album in 1994.

Sublime was a Skacore band, whose lead singer Brad Nowell died of a heroin overdose just before their debut album met with much popularity. Their music mixed Jamaican [Ska](#) and [Reggae](#) influences with Nirvana-influenced rock as well as some [Rap](#) production styles (Sublime would often use a [sampler](#), sometimes even sequencing their drum patterns with samples).

The Smashing Pumpkins was another band of the mid 1990s, whose albums Siamese Dream and Mellon Collie and the Infinite Sadness sold many millions of copies.

[Punk Rock](#) went through several interesting phases in the 1990s, while many Epitaph Records artists such as Rancid, NOFX, Bad Religion, and The Offspring met with some success. The late 1990s brought the rise of [Emo](#), which emerged mostly from the New Jersey punk rock scene with bands such as Saves the Day and Midtown. Although many of these emo bands emerged from legitimate punk rock scenes, they grew to be despised by veteran fans of punk who considered the genre to be fake.

[Stoner Rock](#)  
[Post-Grunge](#)

[Nu-Metal](#)

## Hard trance

**Hard trance** is an aggressive sounding subgenre of [trance music](#). Originating in Frankfurt, hard trance incorporates influences from [hardcore techno](#) and euro house.

## Characteristics

The hard trance sound varies from classic [trance](#) with its emphasis on harder, often acid sounds. The beat is very strong, and the lead synths or pads are more simplistic, yet still retain their melodic, "trance-like" nature. The hoover is used infrequently as of late, giving way to harsher lead melodies through synths or pads. Recently, a difference in production styles between the two stables of hard trance has developed, splitting the genre into what is commonly known as European hard trance, which shares common production techniques with [hardstyle](#) such as the familiar off beat bassline and snappy snarerolls, and UK hard trance, which sets its roots in [trance](#)'s hayday, with wide, epic synths and rolling, often "bubbling" basslines. Tempo varies from 140 to 145 beats per minute.

## Origins

The pumped up sound of hard house, popular at the turn of the millennium, spread to the trance and gradually the two came closer together through the evolution of hard trance. It features the dreamy vocals and dancing treble range characteristic to trance with a faster driving bassline and distinctive "Hoover" that gives it its "Hard" sound. As Hard House DJs incorporated more trancy buildups in their sets the style grew to have its own distinct sound. Many tracks are released on record labels such as Nukleuz and Tidy Trax. Today the Netherlands are best known for their numerous well known DJs in the Hard trance / Hardcore music production within the scene.

# Hardcore dancing

**Hardcore dancing** is a form of [mosh](#) (or slam dancing), an activity performed in a mosh pit at [hardcore](#) music shows. Generally the dancing is done to certain visceral parts of hardcore songs specially written to make the audience move around. Common names for these parts are "breakdowns", "beatdowns", "throwdowns" and "two-steps."

Some common derogative terms for said dance are "Ninja Dancing" (named because the dancers look like they are fighting invisible Ninja), "Karate Dancing", and "Straight-edge Ballet".

The practice grew mostly out of the East Coast hardcore scene, especially in New York City. Besides the usual mosh pit routine of pogoing and crashing into each other, participants enjoyed floorpunching to the beat when a slower, more groovy riff was being played. During shows by bands like Gorilla Biscuits, Agnostic Front, Sheer Terror, and Killing Time, this style of dancing was common. In the following years as bands incorporated slower syncopated, metallic rhythms into their songs, the modern "breakdown" and the dancing that went with it was introduced. Sometimes called "kickbox moshing" by its detractors, hardcore dancing now included violent windmills with the arms, karate style spinkicks, and "crowdkills", the act of simply tackling a group of non dancing onlookers, sometimes into the wall. Early Earth Crisis and Biohazard shows were extremely common areas for such activity. Nowadays hardcore dancing is mostly done by fans of the extreme "toughguy" or "metalcore" versions of hardcore

The **two-step** is also common in hardcore dancing. It is used exclusively during mid-tempo punk rock styled riffs and beats (for a good example of such a beat listen to "Safety Dance" by Men Without Hats. Much like the two step in breakdancing or country [line dancing](#), it involves placing one foot in front of the other and hopping forward onto it, then repeated with the other foot, etc. Combined with forward thrusts by the arm opposite to the forward-stepping foot, the dance creates a sort of "running in place" illusion. The move is commonly practiced and refined to look slick or interesting. The "two step," was taken from another form of dancing known to [ska](#) music, "skanking."

## Regional differences

Because of the vast difference in "scenes" around the world, different levels and styles of dancing are noticeable to the trained eye. For example, Baltimore and New York hardcore crowds are noted for dancing "hard" but also being somewhat respectful and not aiming to cause damage, start fights, or hurt people. Many New Jersey and Philadelphia fans are known for looking down on all forms of hardcore dancing, and generally engage in moshing and heavy drinking. Richmond, Virginia hardcore fans (militia crew) and Virginia Beach, Virginia usually dance "hard" with a lot of headwalking, floorstomping, stage diving and other crowd-killing moves, which sometimes leads to fighting. Petersburg, Virginia has more of a positive hardcore dancing scene using more of the two-step, penny pick-up and "ninja-fighting" and will lend a hand if a fellow dancer falls. Crowds in Indianapolis, Indiana (appropriately nicknamed "The Circle City" for the talent in its circle pits) are known for their highly technical, rhythmic dancing, spin kicks, and crowd kills along with violent headwalking. Some West Coast hardcore fans are known for apathy towards being skillful or violent and simply do it to have a good time. In the South, dancing styles from the more posi or unviolent forms found in Austin, Texas, to the anti-posi (violent, reckless behavior) of fans in Dallas, Texas and Charlotte, North Carolina.

Along with different styles of dancing, there are also a few variations of each "move" depending on where you are. For instance, there are variations of the traditional "two-step", such as the "Maryland two-step" which originated in Maryland but is now gaining popularity throughout the eastern US.

At Pressure Festival '05 in Germany, a young man died after someone kicked him in the stomach in a hardcore dancing pit. This caused some negative attention, but afterwards it appeared that it had nothing to do with the 'mosh pit', it had something to do with his weak heart.

Other differences are with the "Straight Edge Kids/Dancers." In certain areas, these dancers no longer care if a person is hit, hurt, dancing or not. If you are different than those who are in straight edge uniform; such as wearing a bandanna or having longer hair (not extremely long either, even just bangs would justify) or are new to the pit; many will ensure that you get hit while dancing.

## Criticism

With such seemingly violent behavior comes controversy. To those uninitiated or unfamiliar with this style of dancing, it can look like a very big fight. Many bar and club owners will not book hardcore shows because of the violent connotations of hardcore dancing. Some book shows completely ignorant to its existence and end up shutting the show down because of the violence, or even because of actual damage done to the venue or its property. Many fans of regular punk rock, heavy metal, and older or retro versions of hardcore detest hardcore dancing, opting for more of a traditional slam dance in their pits, usually because hardcore dancing is not meant to emulate metal but get away from it, and also to perpetuate the HxC philosophy "Screw the straight edge kids and their P\*\*\*y moshing". This often leads to verbal and physical confrontations when two or more crowds are mixed and each is attempting to mosh in their own style, with each crowd often ignoring or trying to "outmosh" others.

## Technique

There are many different styles or "moves", in hardcore dancing. The most popular, arguably, is the "two-step", which involves thrusting your arm opposite to the leg you are moving forward. There are many variations of the two-step which can be seen throughout different scenes and cities. Also popular is the "windmill", a more dangerous move often frowned upon at many old-school and posi shows. It is basically as it is described, creating a windmill effect by throwing your fists around. It can be performed by swinging the fists in a forward motion, reverse, and can also be accompanied by double stomping back and forth across the pit or in place. The "axehandle" is also a common variation, which involves swinging both arms in and out as if you were wildly swinging a large axe. Among many of the moves most commonly seen is the "floorpunch", which, as the name implies, is a basic move in which the dancer punches at the floor. It is usually accompanied with stomping across the pit or stomping in place, and can include fists thrown back in a deliberate attempt to strike anyone behind you. "Picking up pennies" is similar to the floorpunch, but rather than throwing hard shots at the floor, you instead use open hands and reach around to your backside as if to give the illusion of grabbing pennies off the floor and stuffing them into your pockets. "Crowd-killing" is popular among many "tough guys". It can be as simple as running back and forth and slamming into people on the outskirts of the pit, or as elaborate as one dancer picking another up by the waist and walking him around the pit as he bicycle kicks non-dancers in the head. "Windmill kicks" are a common occurrence and can also be used as a crowd killing technique when done along the edge of the pit. It is your basic every day spinning karate kick, usually done several times in a row or during a sequence of different moves. Grabbing or punching at the air is a common move usually among the metalcore crowd. It can also be performed as a karate chop while almost "crab-walking" across the pit. One of the newest moves to pop up, and also one of the most ridiculed, is the "bucking wheelbarrow" or the "wild lawnmower", in which one dancer gets down on all fours and another dancer grabs his legs at the knee or thigh. The dancer on the ground then pushes himself up and swings his fists while the other pulls him up. "Head Walking" also, is a different kind of stage diving where whoever is doing it instead of throwing itself to be carried by the crowd, they will literally walk over people's heads stepping wildly as they go. Most of these different dance moves are not meant to injure anyone, but performed incorrectly or in a deliberate attempt to harm someone, they can be very dangerous and violent.

## Examples in media

Some bands (including popular ones) have included examples of dancing in their videos. New York [hardcore punk](#) band Sick Of It All (though not critical of dancing, as their early shows surely brought just as much hardcore dancing as any band) featured a tongue-in-cheek "how to" parody of dancing in their music video for "Step Down." AFI exposed hardcore dancing to a very wide audience with their MTV video for "The Leaving Song, Pt. 2." In addition, one can easily find videos taken by fans at various [hardcore punk](#) shows by typing "dancing" or "mosh" into the Kazaa or Soulseek search programs. Of the many videos found on there, among the most popular are 3 preview videos for DVDs put out by the Guerilla Warfare Video Fanzine. All three feature a large array of dancing clips, including people literally bouncing off the wall, circle pitting, and even various injuries, filmed all over the world.

a more recent example, the band Fall Out Boy in attempt to remain true to their hardcore backgrounds, feature hardcore dancers in their video for Saturday

Midwestern emo

[Timeline of alternative rock](#)

**Hardcore Emo** is a style of music that existed primarily in the early-mid 90s, also known as "chaotic emo". Many Hardcore Emo bands are often misinterpreted as [Emo Violence](#) bands. The first hints of the sound began with bands like "Mere!" and "Iconoclast" on the East Coast, but it is considered to have primary started in 1991 by the San Diego band Heroin. The sound is most associated with that and other bands on Gravity Records at the time.

Hardcore Emo took the [emo](#) sound of bands like Indian Summer, Embassy, Current, Still Life, etc. and made it faster and much more chaotic. Some later bands that followed include Antioch Arrow, Mohinder, Portraits of Past, Swing Kids, Honeywell, Angel Hair, Assfactor 4, Palatka and John Henry West.

By the mid-90s, the scene had largely died out, but French Canadian bands like Union of Uranus and One Eyed God Prophecy kept the style alive to some extent. Today the style is rarely played in its purest form, but it was the primary influence on late 90s/early 00s bands which started the "[screamo](#) revival" such as Orchid, Jerome's Dream and Usurp Synapse.

Some would consider this term a bit of a misnomer as the term "emo" itself was originally a shortened form of "emotional hardcore" - so "hardcore emo(tional hardcore)" is redundant.

## Hardcore hip hop

**Hardcore hip hop** (sometimes referred to as **Reality Rap**) is a form of [hip hop music](#) that has confrontational, often violent lyrics, and generally sparse, gritty urban beats. The [genre](#) began in 1986 by Schoolly D. Soon after, hardcore hip hop evolved into [gangsta rap](#) with the emergence of Ice T and N.W.A and the original Hardcore Rap began to weaken. Groups such as O N Y X, with their debut album Bacdafucup and The Wu-Tang Clan's debut Enter the Wu-Tang (36 Chambers) (see 1993 in music), re-energized East Coast hardcore, and the style soon dominated music charts with stars like DMX, Big Pun, Jadakiss and the Wu-Tang Members in their solo careers while the [Gangsta Rap](#) totally disappeared.

"**Hardcore Hip Hop**" is also the title of a single by DJ Shadow.

[Hardcore dancing](#)

**Hardcore punk** (or **hardcore** or **Thrash**) is a faster and heavier version of [punk rock](#) usually characterized by short, loud, and often passionate songs with exceptionally fast tempos and chord changes.

## Overview

Hardcore originated in the 1980s in North America, primarily in and around Los Angeles and Washington, DC, but also in around New York City, Chicago, Vancouver, Boston, and other cities. Former DC club promoter Steven Blush claimed, in his book, *American Hardcore: A Tribal History*, that hardcore was punk rock adapted for suburban teens. Hardcore lyrics often express righteous indignation at society, usually from a politically left perspective.

The origin of the term "hardcore punk" is uncertain. One story, as is commonly told, is that the term was coined by New York City producer and manager Bob Sallase while promoting a show by the band The Mob, circa 1981, at a Bayside, Queens club. (The common New York term for fast punk, at the time, was "thrash.") Another possibility is that it comes from the Hardcore '81 album by Vancouver's D.O.A.

Nevertheless, the term was used in the California fanzine Flipside in the early 1980s, although not in the sense of a particular musical style, but in a sociological sense, to positively describe acts which were in the "in crowd" of the Los Angeles punk scene.

Until roughly 1983, the term "hardcore" was used fairly sparingly, mainly as an adjective, not as the name of a defined musical genre: American teenagers who were into hardcore considered themselves into "punk" -- as opposed to "[punk rock](#)" or "77 punk," the earlier, slower style of the Sex Pistols et al., which they generally considered hopelessly dated and passé.

"Hardcore" was initially an in-group term, meaning "music by people like us," and included a surprisingly wide range of sounds, from hyper-speed punk to sludgy dirge-rock, and often including art/experimental bands such as Mission of Burma, The Stickmen, and Flipper. Today (and for the purpose of this article), it refers more or less exclusively to what used to be known as 'thrash.'

## The Big 3

Michael Azerrad's *Our Band Could Be Your Life* traces hardcore back to three bands: He calls LA's Black Flag (formed in 1976) the music's "godfathers"; he credits the Bad Brains, formed in Washington, D.C. in 1977, with introducing their often astonishingly fast "light speed" tempos; and calls Minor Threat, another Washington, D.C. group formed in 1980, the "definitive" hardcore punk band.

The Bad Brains were a young African-American band from Washington, DC, with a background in soul and funk, but also an interest in bands such as Black Sabbath and the Sex Pistols. Their eponymous first album (originally a cassette-only release on ROIR, in 1981), has been called the "holy grail" of hardcore and included three [reggae](#) tracks in sharp contrast with the rest of the band's music. A similarly esteemed single, "Pay to Cum" b/w "Stay Close to Me" preceded it in 1980.

Black Flag has been called "for all intents and purposes, America's first hardcore band". It has also been said that "the group played an essential role in the development and popularization of American punk." The band had a major impact on the scene with their complex, confrontational sound and DIY ethical stance. They were mostly notable for featuring future Circle Jerks singer Keith Morris, and former State of Alert singer Henry Rollins.

Often cited as the definitive hardcore band Minor Threat formed out of short-lived The Teen Idles, in Washington, D.C. Carry-over members of The Teen Idles were Ian Mackaye and Jeff Nelson, who also founded Dischord Records. The band played an aggressive, fast form of punk that was already being described as "hardcore". The band was also responsible for jump-starting the straight edge movement through their use of the X as a symbol for clean living. After the The Teen Idles broke up, Mackaye gathered their tour money and founded Dischord Records initially to their recordings on vinyl, *Minor Disturbance EP*.

## Other early notable bands

Rhino 39's 1979 "Xerox" b/w "No Compromise"/"Prolixin Stomp" single has also been noted as a hardcore landmark. The Germs' 1979 *GI LP* is essentially a hardcore record, not only for its quick tempos but especially for its notably fast chord changes, while the Circle Jerks' first album, from 1980, features both blinding chord changes and tempos. The Germs had actually been called "hardcore" early in their career.

Several bands in the Los Angeles area in the late 1970s released records whose style has been cited as functionally identical to what would later be called "hardcore." The most striking is the Middle Class's thrashing *Out of Vogue EP* from 1978. Another significant California hardcore band, San Francisco's Dead Kennedys, formed in 1978 and released their first single, *California Über Alles*, in 1979. The song is featured on their first CD *Fresh Fruit for Rotting Vegetables*. *Fresh Fruit* is considered a classic of the

hardcore genre, and is credited by some as being the first "true" hardcore punk record.

The Misfits, from northern New Jersey, were a '77 punk band involved in New York's Max's Kansas City scene, whose ironic horror-movie aesthetic was hugely popular among early hardcore aficionados. In 1981, the Misfits responded by integrating high-speed thrash songs into their set. Hüsker Dü was formed in Saint Paul, Minnesota in 1978, as a thrash band, releasing their first recordings in 1981. Their early recorded output has been called a "breakneck force like no other... Not for the faint of heart." Soon after, though, the band morphed into one of the top rated [indie rock](#) bands of the era.

By 1981 and 82, hardcore bands were cropping up all over North America, including The Neos, from Victoria, British Columbia; Zerooption, from Toronto; The Fix, from Detroit; The Necros, from Maumee, Ohio; Strike Under, The Effigies, Naked Raygun and Articles of Faith from Chicago; The Dicks and Big Boys, from Austin, Texas.

Important records of the period include The Adolescents' first eponymous LP, the NYC compilation *The Big Apple Rotten To The Core*, the Boston-area *This Is Boston, Not L.A.* compilation, the Zero Boys' LP, the Detroit-area *Process of Elimination* compilation EP, Negative Approach's eponymous EP, The Necros' *IQ 32*, SS Decontrol's *Kids Will Have Their Say*, the New York Thrash cassette compilation, the DC-area *Flex Your Head* compilation, the Northern California *Not So Quiet on the Western Front* double-LP compilation, the Chicago-area *Busted at OZ* compilation, and the Fartz's *Because This Fuckin' World Stinks* LP.

Despite all this, the first actual use of the word "hardcore" was by Vancouver, Canada's DOA, on their album "Hardcore '81". DOA are credited by many, Ian Mackaye included, with being trailblazers in the world of constantly touring punk rock bands, and inspired many to jump in vans.

## Early support

Hardcore was like most punk rock in that many of the bands specifically sought not to become famous [pop](#) stars. The concept of hit singles was nonexistent, as 7 inch records were used as [EPs](#) and not [singles](#). The bands also were probably too poor or too apathetic to make videos for their songs. Complicating the matter further is the fact that many bands did not record at length, or released only self-made records, often with extremely low production values.

Therefore the early bands genuinely got zero support from MTV and commercial radio. However, independent and college stations all around the country usually had at least one person eager to get his favorite [punk](#) bands out on the radio, leading to many localized hardcore spots on the radio.

One of the most influential shows was Rodney on the ROQ on Los Angeles' commercial station KROQ. DJ Rodney Bingenheimer played many styles of music, and helped popularize what was, circa 1979–80, called "Beach Punk"—a rowdy suburban style played by mostly teenage bands in and around Huntington Beach, and in heavily conservative Orange County.

The San Francisco-area public station KPFA featured the Maximum Rock 'n' Roll radio show with DJs Tim Yohannon and Jeff Bale, who played the younger Northern California bands. A wave of zines also helped spread the new, younger punk style, including Guillotine, Ripper, Flipside, and in late 1981, Yohannon and Bale's Maximum RocknRoll zine—modeled on Tim Tonooka's *Ripper*, but with a national circulation and 'scene reports' from around the country. A strong infrastructure of indie labels, linked with already-existing radio outlets and both old and new zines (*Slash*, *Option*, *Flipside*, and others had already covered alternative music for several years), helped to create a functioning, nationwide subculture, if not always one that was appreciated by older indie-music fans.

## Negative publicity

Unfortunately, the hardcore scene became associated with violence. The relationship between violence and hardcore is difficult to easily quantify. There was undoubtedly an aggressive element to the music--the aggression was often had a major appeal for many fans.

Hardcore shows increasingly became sites of violent battles between police and concertgoers. Many clubs were trashed on both coasts, despite frantic pleas from the fanzines of the time. Henry Rollins, for one, argued that in his experience, the police caused far more problems than they solved at punk performances.

The reputed violence at punk shows was famously featured in episodes of the popular television shows *CHiPs* and *Quincy, M.E.*, in which Los Angeles hardcore punks were depicted as being involved in murder and general mayhem. This led to the term "Quincy Punks" (from which the punk band Quincy Punx took their name).

## Slam Dancing

*Main articles: [Mosh](#) and [Hardcore dancing](#)*

The hardcore scene was responsible for intensifying the circle pit. Early New York and London punk gigs gave birth to the practice, but soon after hardcore came to prominence, its fans turned it into an artform. One notable innovation came from Huntington Beach. The circle pit began life as the H.B. Strut, a violent dance that involved participants strutting in a circle around the rim of the pit, swinging their limbs into onlookers. A somewhat accurate representation of the dance can be seen as the Circle Jerks popular logo, a walking punk rocker with a raised fist.

Later in the 1980's hardcore fans took to what is known as [hardcore dancing](#).

## Influence

Hardcore had a huge influence on other forms of [rock music](#), especially in America. The San-Francisco-based [heavy metal](#) band Metallica were among the first crossover artists (circa 1982-83), incorporating the compositional structure and technical proficiency of metal with the speed and aggression of hardcore (Metallica would eventually cover three Misfits songs). Venom were another very early crossover band, as were Hellhammer and Slayer (formed in 1982, Huntington Park, CA) a largely influential "thrash metal" band who , put out an album in 1996, Undisputed Attitude, which portrayed their hardcore influences by covering hardcore songs on the album by bands such as Minor Threat (formed in 1980, Washington, DC) and Verbal Abuse (early 80's to current, Texas). The new style became known as "[Thrash metal](#)" -- or, later, "[Speed metal](#)" (another transitional term was "Speedcore"), and soon became a trend which still exists today, including other bands such as Megadeth and Anthrax, with Slayer in the well known ranks.

The rising influence of heavy metal in the hardcore scene ---the Boston scene had gone over en masse, circa 1984, while other bands such as Corrosion of Conformity, from Raleigh, North Carolina, gained prominence through popularity among metal fans--dismayed some hardcore punks, especially veterans, who felt that the hardcore bands who were crossing over to metal styles were selling out to some of the very sensibilities that hardcore had organized against. Long-time hardcore punks, who remembered only a couple of years earlier fighting in streets with hostile metalheads, now felt that those same people were attempting to co-opt hardcore. These *die-hard* hardcore punks argued that the new long-haired interpreters of hardcore were merely mimicking emotions, such as raw anger, that they did not truly feel.

A 1986 concert by the U.K. band Discharge in New York City generated brief international notoriety when a crowd of roughly 1,500 paid \$10 admission and pelted the band with garbage, an apparent response to the band's recent turn to a more metallic sound.

In 1985, New York's Stormtroopers of Death, an Anthrax side project, released the extremely popular album Speak English or Die. Though it bore similarities to Thrash metal, such as a characteristic bass-heavy guitar sound, and fast tempos and chord changes, the album was distinguished from Thrash metal by its lack of guitar solos and heavy use of crunchy chord breakdowns (a New York hardcore technique) known as "[mosh](#) parts". Other bands, most notably Suicidal Tendencies (from Los Angeles) and DRI (from Austin, Texas) played music similar to that of Stormtroopers of Death. The music, dubbed [Crossover](#) in the 1980s, is today often called punk metal.

Many hardcore bands branched out and began experimenting with other styles, moods and concerns as their careers progressed in the 1980s; the music of many of these bands are some of the earliest examples of what became known as [alternative rock](#). Hüsker Dü's artistic growth from Land Speed Record to their final album Warehouse: Songs and Stories is a chief example of this development. Grunge was especially heavily influenced by hardcore. The sense of liberation that many of the grunge bands got--that you didn't have to be the world's greatest musician to form a band--was at least as

important as the music. Even though the early grunge sound was more influenced by Black Sabbath and Black Flag's *My War* album than hardcore punk rock, bands like Mudhoney and Nirvana would instill a traditional hardcore influence as well as take the sound into more conventional pop-oriented territory. (Kurt Cobain once described Nirvana's sound as "The Knack and The Bay City Rollers being molested by Black Flag and Black Sabbath.") The popularity of grunge ultimately resulted in renewed interest in American hardcore in the '90s.

In the early '90s, bands like NOFX and Bad Religion, both of which had been around since the early '80s, achieved varying levels of mainstream success. They added catchy melodies and anthemic choruses to the hardcore template whilst removing much of the aggression and anger that had been the genre's trademark. While NOFX, Bad Religion and underground bands like Plow United are usually accepted as authentic by fans of hardcore punk, other [Pop punk](#) bands that had a poppier sound, such as Green Day and blink-182, were often accused of being "[sellouts](#)" or "posers".

Bands that retained the aggression of '80s Hardcore into the '90s include Agnostic Front, The Dwarves, The Distillers and Zero Bullshit (although debatably The Dwarves and The Distillers took just as much from influences outside of the hardcore genre as inside it). Many early hardcore bands have regrouped.

The hardcore punk scene had an influence that spread far beyond music. The straight edge philosophy was rooted in a faction of hardcore particularly popular on the East Coast. Hardcore also put a great emphasis on the DIY punk ethic, with many bands making their own records, flyers, and other items, and booking their own tours through an informal network of like-minded people. Radical environmentalism and veganism found popular expressions in the hardcore scene.

## Early history in Europe and the UK

Outside of North America, the influence of Hardcore has been less universal. The Netherlands, Finland, Sweden, and Germany had, and continue to have, notably active and prolific scenes, but in the United Kingdom, more traditional punk bands like The Exploited, GBH, Discharge, and The Anti-Nowhere League occupied the cultural space that hardcore did elsewhere. These UK bands at times showed a superficial similarity to American hardcore, often including quick tempos and chord changes, and generally had similar political and social sensibilities -- but they represented a case of parallel evolution, having been musically inspired by the earlier London street-punk band, Sham 69, and/or the proto-speed-metal band, Motörhead.

Additionally, Discharge played a huge role in influencing the Swedish hardcore scene with bands such as Anti Cimex and other European bands. To this day, many hardcore bands from that region still have a strong Discharge and even Motörhead influence, which is considered by many to be the standard Swedish hardcore sound. The band Entombed is also cited as a huge influence of the sound, songwriting and production of Swedish hardcore bands from the early '90s onward.

In much the same way, [Anarcho-punk](#) bands like Crass, Icons Of Filth, Flux Of The Pink Indians and Rudimentary Peni had little in common with American hardcore other than an uncompromising political philosophy and an abrasive aesthetic. American hardcore punks listened to and supported many of these British bands (shows by bands such as GBH were considered special events in America and drew large crowds), even while upholding a strict regionalism, deriding them as "rock stars" and anyone too fond of them as "poseurs." (Expressive fans of the influential UK anarcho-punk collective Crass, were called "crassholes.")

American hardcore bands who visited the UK (such as Black Flag, in 1981) encountered equally ambivalent attitudes. Visiting European hardcore bands suffered no such prejudice in the U.S., with Italian bands Raw Power and Negazione, and the Dutch BGK, enjoying widespread popularity.

It should also be mentioned that there in the more underground part of the UK scene, around the same time and a little later than the already mentioned bands existed, grew a hardcore sound and scene, inspired by continental European/Scandinavian, Japanese and U.S. bands. It was started by bands like (and the people in) Asylum, Genocide Association and Plasmid, that from their material and inspiration -- only heard at live shows, and released on demo tapes and compilations in the mid '80s -- would evolve into bands like Heresy, Ripcord, early Napalm Death, Hellbastard, Doom, Satanic Malfunxions and Extreme Noise Terror.

The most important influences among late '80s UK bands was (among others): GISM, Confuse, Siege and Septic Death, as well as Discard, Anti Cimex and more metallic bands like Celtic Frost and Metallica. They had a solid background in the [Anarcho-punk](#) sound, scene and way of thinking, as well.

About the continental European hardcore sound and scene(s), there was a huge number of bands that could be described as something in between the dominating UK bands and US bands. The band that had the biggest influence among them all, was the already mentioned Discharge. But also Circle Jerks, Bad Brains and Black Flag left their mark on European hardcore (especially in Italy). Other key influences were: Dead Kennedys, Disorder and Millions Of Dead Cops. Some notable bands from that era and these countries were Wretched, Raw Power, Declino, Negazione, Indigesti (Italy), H.H.H., MG-15, Eskorbuto (Spain), Inferno, Vorkriegsjugend, Scapegoats (Germany), U.B.R. (Slovenia), Kafka Process, Barn Av Regnbuen (Norway), Heimat-Los (France), Lärm, BGK (Holland), Vi, Enola Gay, O.H.M.(Denmark), Dezerter, Armia, Moskwa, Siekiera (Poland), Kaaos, Rutto, Kansan Uutiset, Terveet Kädet, Appendix (Finland), Headcleaners, Asocial, Missbrukarna, Sound Of Disaster and Anti-cimex (Sweden).

Examples of bands who continued to play that style of hardcore in the '90s include: Seein Red, Uutuus, Kirous, Health Hazard, Totalitär, Los Crudos, Sin Dios, and Detestation.

## Hardcore in the 1990s

Even though American Hardcore is often thought of solely as a product of 1980s Reaganism, many bands have continued to play an aggressive form of punk rock similar to hardcore well into the 1990s and even into the early 2000s.

Many of the '90s/'00s hardcore bands began to include new sounds into hardcore while retaining hardcore's aggression. Notorious Boston band Blood for Blood released "Outlaw Anthems" in which they changed from their hardcore roots to what they call "hardcore rock n' roll." Seattle's Zeke incorporated the heavier guitar sound and ranted vocals similar to Stormtroopers of Death into hardcore and, eventually, evolved into a thrash metal band. Other bands to follow a similar, hardcore metal, path include Pennywise, The Opposed (Cincinnati) and The Dwarves.

## Heavy Hardcore

Being a chiefly urban phenomenon, hardcore often reflected the life of its players and fans. The incorporation of [heavy metal](#) (both musically and mentality-wise) led to a sect of hardcore bands branching off into heavier, more brutal directions. Sheer Terror from New York put out a demo in 1985 called *No Grounds For Pity*. The music within contained a brutal mixture of [punk rock](#), Motörhead style speed, and Discharge's intense vocal delivery that was a great deal heavier than most hardcore in the scene. Sheer Terror's music, along with elements such as Biohazard's mixture of metal and hip hop beats, Madball's brutal and unforgiving depictions of urban life, and Judge's syncopated musical breaks gave birth to what is variously called heavy hardcore, brutal hardcore, and toughguy. Other notable bands who helped spur the genre on in early years include Killing Time, Maximum Penalty, and the infamous Carnivore.

Essentially the "heavy hardcore" sound is an amalgamation of deep, hoarse vocals (though rarely as deep or guttural as [death metal](#)), downtuned guitars, thrashy drum rhythms inspired directly from earlier hardcore bands, and slow, staccato low-end musical breaks, known colloquially as "breakdowns". Some bands tend to focus more on breakdowns than others (such as New Jersey's Redline), and others tend not to rely on them too much, letting the overall songwriting and feel drive the music (Troy, New York's Stigmata is a prime example). Elements such as [thrash metal](#) and [hip hop](#) are also common. Sworn Enemy and Boxcutter are two current respective examples of such.

Today, the best-known representative band of the genre is most likely Hatebreed. Hatebreed was formed in the middle of Connecticut's strong hardcore scene in 1995 and quickly made a name for themselves. After releasing a split EP, a 7 Inch, and a 7 song EP called Under the Knife, they signed to Victory Records and released 1997's Satisfaction Is The Death Of Desire. The album placed the group squarely in the spotlight of the hardcore scene, and can be found on many diehard fans' top ten lists. From there

Hatebreed managed to cross over into the [heavy metal](#) scene through tours with Slayer and Slipknot, and later signed to Universal Records.

It would be impossible to have a discussion on "heavy hardcore" without mentioning some of the the aggressive bands that came out of the early 90's, particularly the Northeast, who helped pioneered the mixture of old school hardcore with death metal. Brooklyn, NY's Merauder and Confusion along with Jackson Heights, NY's Dmize are perhaps the finest examples, crossing bands like Kreator and Obituary with New York Hardcore. Darkside NYC, formed by Alan Blake of Sheer Terror fame around the same time, was often compared to Celtic Frost meets Sheer Terror musically and Negative Approach meets Crumbsuckers vocally, a devastatingly brutal combination. (Alan Blake is credited as the man who brought Celtic Frost to New York Hardcore!!) They were also known for incorporating blast parts as a direct death metal/grindcore influence. Dmize, Confusion and Darkside NYC managed to achieve cult status in the U.S., Europe and Japan while only playing shows in the Northeast during their short existences. Merauder went on to sign to Century Media and tour the world, and still performs today, albeit with various lineup changes. In upstate NY, All Out War, formed with ex-Merauder members gained an extremewly violent reputation as members of their audience would pummel the hell out of each other - many shows often ended in a full scale riot! As a result, many clubs were loathe to have these kinds of bands perform. When All Out War played, hundreds of people would show up. They went on to release 3 incredibly heavy albums on Victory Records and has also toured the world. Most of the bands playing "heavy hardcore" today inevitably cite these bands as an influence.

In Baltimore, MD, Next Step Up put the City That Bleeds on the map with their heavy guttural rendition of hardcore and brutal mosh breakdowns. Their ex-members have all remained in music and have gone on to start perhaps a dozen newer bands, namely Wake Up Cold, The Unyoung Heroes, Hell To Pay.

Early in the 1990s, Earth Crisis fused hardcore's ethic and simplistic aggression with brutal metallic syncopation to create an unforgivingly heavy sound. This, combined with the band's near-militant stance on veganism, animal rights, and the straight edge movement (inspired heavily by the band Vegan Reich) ensured them popularity, if not notoriety in the scene for years.

Though certainly not representative of all listeners, this particular scene of hardcore is known for (and sometimes looked down upon for) its stereotypical image and attitude of inner city street thugs with fake gangster mentalities. Again, it must be noted that much of hardcore's fanbase has always revolved around inner city youth. With the popularity of inner city fashion and image, and the similarities of some of the heavier bands' music to [hip hop](#), it is not surprising that the two would end up crossing over. Of course actual hardcore/[hip hop](#) crossovers were most likely the catalyst of much of the image, such as Biohazard's general sound and collaborations with Onyx, KRS-One's appearance on a Sick Of It All song, Madball's streetwise attitude, and New Jersey's E-Town Concrete, a brutally heavy Biohazard-influenced band.

Other sources of negative connotations in heavy hardcore come the tendency in various scenes for fans to be part of "crews" that, also stereotypically, lie somewhere in between a group of close-knit friends and a full out gang. Typically these crews will give themselves 3 or 4 letter acronyms for names and refer to (and defend) each other and their close friends like a family. Madball, Dmize and H2O's involvement in New York's DMS (Doc Martin Skin) crew is probably the most famous example. Despite the image and bad publicity this sort of thing can bring, most crews simply are just a group of close knit friends. Although this is true, others that have made

themselves known as a "crew" may make bad influences in their local scenes, such as Visalia, CA's "division" of SYG (STAND YOUR GROUND), who seem to look for trouble and start fights at shows by [hardcore dance](#) into the crowd of bystanders at the edge of the circle pits (causing the bystander to push the "dancer back" and the "dancer" comes back throwing punches). They also have a heavy "gangster" like image ("SYG" graffiti logos on their shirts and boxers, baggy-saggy pants, and baseball caps cocked to the side) and openly listen to rap/hip-hop. To many old school punks (crusties, street punks, and deathrockers), this is equivalent to heresy. Not all groups of SYG's crews are like this though, as these groups of "wannabes" have been confronted by their Los Angeles (and other Inner City groups) for their unintelligent actions against their own kind, and have backed down or lost (brutally) to a challenge/fight. Other "crews" have also confronted such groups such as FHS (Fresno Hate Squad) and FHC/FCHC (Fresno Hardcore/Fresno City Hardcore), whenever those that oppose the fun and positivity of the scene may cause trouble. Some hardcore Crews are almost **novelties** in the way they are. For example, VKC (Visalia Kid Core)-- Which is-- quite commically-- a group of "punks" between the ages of 10-13 years old that are recognized by their novel dress style of comic book superheroes.

Throughout the following couple decades the newer style became just as predominant as its faster cousin. Prominent bands include 25 ta Life, Vision Of Disorder, 100 Demons, All Out War, Neglect, Shattered Realm, Death Threat, Next Step Up, E-Town Concrete, Hoods, Subzero, Sworn Enemy, Breakdown, Knuckledust, Mushroom, Settle The Score, Angel Crew, and The Bad Luck 13 Riot Extravaganza who became infamous for their unpredictable and chaotic live sets.

## Progression and experimentation

In the late '80s bands like No Means No (British Columbia, Canada) and Victim's Family (Northern California) created a new style of powerful music by blending aggressive elements from hardcore with other influences such as psychedelic or progressive rock, noise, jazz, or math rock (a development sometimes termed jazzcore). This path was followed in the early 90s by Mr Bungle, Candiria and lesser known bands such as Deep Turtle (Finland), Ruins (Japan) and Tear of a Doll (France). The noisecore played by Melt-Banana (Tokyo) was probably a separate evolution. Other important hardcore-based or influenced bands in this area included the avant-garde Naked City, formed by saxophonist John Zorn, and Neurosis, who started as a hardcore band before exploring slower tempos and dark ambiance to evolve a style of their own.

There were also many bands who started to incorporate emotional and personal aspects into their music, influenced by the sounds coming out of Washington, D.C. and Dischord Records, which by the late 90s had grown and fused with more traditional punk to create [emo](#) (a contraction of 'emotional hardcore'). The Nation of Ulysses was one of the most influential bands to come out of D.C., combining dissonant guitars similar to those of Black Flag, elements of [jazz](#), and a seemingly absurdist (or situationist) political ideology. Their sound and fashion sense would be of particular influence on the San Diego scene.

Ebullition Records, from Santa Barbara, California, was a record label that tended to feature and distribute this type of music. These bands remained political, but tended to focus more on personal politics. Examples of these bands would be Endpoint, Groundwork, Split Lip and others. Born Against,

from both New York and Baltimore, Maryland, played politically aware hardcore.

The San Diego Band Heroin splintered into many new bands, most notably, Antioch Arrow, and Clikatat Ikatowi. Antioch Arrow, were brutal and spastic, combined with a [goth](#) aesthetic, while Clikatat Ikatowi, combined pounding tribal drums, and dissonant guitar, with a [post-punk](#) aesthetic, and become one of the most unique bands of the '90s hardcore scene. The Locust, who started out as a fairly conventional hardcore band would develop their own sound; which is fast, brutal, and spastic. Some have described the Locust as [Free Jazz](#) meets hardcore. The Locust and their distinct sound would later be classified as [power violence](#).

Today, another common, heavier sound is represented by bands such as Mosquitos Can Kill, From Ashes Rise and Tragedy who play a brand of melodic sound influenced by [crustcore](#).

Gravity Records was an important record label of the '90s hardcore scene, releasing bands like Antioch Arrow, Clikatat Ikatowi, and The Locust; the label was later associated with the power violence genre.

Straight edge also became more prominent in the 1990s with bands like Earth Crisis fusing metal and hardcore with militant vegan and straight edge lyrics. In the late 1990s there was surge of 80 revival bands which copied the sound of Youth of Today and Gorilla Biscuits, updating the sound with slightly faster tempos and metal breakdowns.

A recent subgenre is Gaelic punk which first gained media attention in Scotland in 2005 with veteran anarcho-punks Oi Polloi starting to record in Scots Gaelic. They have been joined by Seattle's Mill a h-Uile Rud who play tuneful hardcore but sing entirely in Gaelic. Their repertoire includes a Gaelic version of 'Sheena is a Punk Rocker'.

## Hardcore today

There are still many bands today that follow the lines of original hardcore. It has evolved somewhat since the '80s but still follows many of the ideals.

There are also many contemporary bands who play hardcore in an original, purist sense while attempting to add even more intensity to the music. These bands often adhere to a specific local flavor of hardcore. Another common trend is to try to capture the sound of influential bands from an earlier era. One example of this would be [D-beat](#) bands who emulate the early music of Discharge, like Deathcharge, Dischange and the Japanese band Disclose.

Additionally, the name "Hardcore" has been applied with increasing frequency to what most would consider [heavy metal](#). Groups like Inside Recess, Bleeding Through, Inner Surge and Poison the Well have fused the aggression of traditional hardcore with the intensity of metal. Typical of this "[metalcore](#)" genre are heavy breakdown parts and harshly delivered vocals, sometimes verging on [death metal growl](#). As this new kind of music has evolved, so has the sub-culture associated with it; for example, [fashioncore](#). In the 1990s the name "hardcore" even came to be applied to a genre of [electronica](#) having nothing in common with hardcore punk.

Although the term "Hardcore" has come to be attached to this kind of music, some fans of traditional Hardcore deride its use. Today, some reserve the term "Hardcore" for the style of the early 1980s, referring to today's genre as "Street Punk." A good example is the California band Final Conflict.

There is also an emerging hardcore scene, predominantly in California, of hardcore punk. Mostly bands involving younger people, places such as the Burnt Ramen, Warm Water Cove and long beach warehouse continue to host DIY punk shows. Bands such as Gnar, Deadfall, K-BAR, and most importantly WARKRIME bring a hostile approach to modern hardcore, taking the sound of older bay area bands and making it their own.

# Hardcore techno

## Hardcore techno

**Stylistic origins:** [Techno](#), [Industrial](#)

**Cultural origins:** 1990s, Frankfurt, Rotterdam, New York City and Newcastle, New South Wales

**Typical instruments:** [Drum machine](#) – [Sequencer](#) – [Sampler](#)

**Mainstream popularity:** Moderate, largely in mid-late to 1990s.

**Derivative forms:** [Gabber](#), [Breakcore](#)

## [Subgenres](#)

[Speedcore](#), [Terrorcore](#)

## Fusion genres

[Digital Hardcore](#)

## Regional scenes

[Schranz](#), Swechno

## Other topics

[Electronic musical instrument](#) – [Computer music](#) – [Record labels](#)

**Hardcore techno**, often referred to as **hardcore**, is a style of [techno music](#) that originated in the early-to-mid-1990s in multiple locations including Rotterdam, New York City and Newcastle, New South Wales. The style is typified by a fast tempo (160-300 bpm and up) and the rhythmic use of distorted and atonal [industrial](#)-like beats and samples.

## History

Mescalinum United's "We Have Arrived" (1990) is considered by many to be one of the first hardcore techno tracks.

## Production techniques

Hardcore techno is usually composed using [music sequencers](#), and many earlier tracks were produced on home computers with module tracker software. The criticism that early Amiga and PC sound was "8-bit shit" became an article of pride amongst hardcore producers. The wide availability of computers, combined with the absence of financial remuneration, means that many hardcore techno musicians write for their own enjoyment and the pleasure of innovation.

## Styles of hardcore techno

Hardcore is distinguished from its close relative, [gabber](#), a primarily a Dutch phenomenon that is generally slower in speed and which also incorporates synthesised melodies.

Hardcore techno has also spawned several subgenres and derivative styles including;

- [Happy hardcore](#) is probably the best known variant, which aims at invigorating and uplifting rapid dancing as opposed to the normally morbid focus.
- [Speedcore](#) - With tracks can range from 350 bpm all the way up to 1000 bpm.
- [Terrorcore](#) - Employs the use of 'scary' sounding samples and sounds to give the tunes a frantic "terror" feel.
- [Breakcore](#) - Combines hardcore with elements of [breakbeat](#) and [glitch](#) music.
- New style hardcore - A somewhat slower but darker variant of hardcore techno.
- [Schranz](#) - A style based around massively bass-heavy kick drums, driving percussion and distorted, looping synth noises.

Often certain substyles of hardcore are classified by the city or country in which it was produced, such as the Newcastle sound, the Frankfurt sound, the French sound.

# Hardcore trance

**Hardcore trance**, is a hybrid of [Trance music](#) and [Happy Hardcore](#) with [House](#) elements. The style focuses largely on fast 4/4 beats with uplifting leads, looped vocals (often sampled from cult films) and extended builds leading to frantic crescendo's, before 'dropping the beat'. BPM range is 160 to 200 or more. Well known DJs and producers include Scott Brown, Hixxy, and Breeze & Styles. Although the style follows rigid musical structures and is beat lead there is sufficient diversity for niche genre's, hence the confusing number of names which refer to a musical sound many outside the scene might think to be the same genre. Hardcore, or Happy Hardcore, was the 'original' sound of the genre, with very basic beats, often containing 'zany' sound effects and the common 'chipmunk' pitch-shifted vocal. As the genre evolved and branched the music has become many layered, losing some of it's 'no nonsense, hard hitting' sound. Recently a lot of producers like Dougal, Seduction and Gammer are turning back to the basic oldskool analog sounds and hoovers, striping the sound to a less dense and more 'primitive' audio landscape, attempting to bring back some of the 'hard' sound which has been lost since more modern audio equipment lead to over-layering of samples.

# Hardstep

**Hardstep** is a [drum and bass](#) subgenre which emerged in 1996 and is characterized by fast speed beats, steelhard breaks, and thumping bass lines. RAM, Sour, Hardleaders, Trouble on Vinyl, Renegade Hardware and Formation are the most important hardstep labels, and some of the most significant hardstep artists are Dieselboy, Evol Intent, Technical Itch, Ram Trilogy, Dylan. Also great credit goes to the works of the Metalheadz record label Platinum Breaks series championed by the founder Goldie.

# Hardstyle

**Hardstyle**, sometimes referred to as **hardbass**, is a sub-genre of [trance music](#) that is closely related to [nu style gabber](#) and [hard trance](#). Its sound is usually characterized by a four to the floor kick beat and an off-beat gabber style bass line, trance like synth stabs and sweeps and miscellaneous samples. Tracks often feature excessive reverb and/or other effects, breakdowns and occasionally small [breakbeat](#) sections. The average tempo is between 140 and 150 bpm, around 30 slower than nu style gabber. Many [hardcore](#) artists produce hardstyle songs, which sound very similar but are more accessible. Hardstyle is generally played along side [Nu-NRG](#) and [gabber](#) in the UK and aside [hard trance](#) or [hardcore](#) in the rest of Europe.

## **Current status**

Hardstyle is mainly produced by artists from The Netherlands, Italy, Switzerland and Germany, yet other producers from around the world are starting to pick up the sound.

Currently, the scene is booming in various countries around the world besides these founding countries. Notable scenes worth mentioning include those in the United States, Belgium, Spain, Poland, Estonia, Denmark, Australia, South Africa and the UK.

# Harmonica

## Harmonica

### Classification

- [Wind](#)
- [Free reed aerophone](#)
- [Aerophone](#)

### Playing range

For 64-reeds (16-holes) chromatic harmonica: C below Middle C (C) to C5; 4 octaves

### Related instruments

[accordion](#), melodica, [harmonium](#), [concertina](#), sheng, reed organ, Yu

A **harmonica** is a free reed musical [wind instrument](#) (also known, among other things, as a **mouth organ**, **French harp**, **tin sandwich**, **blues harp**, simply **harp**, or "**Mississippi saxophone**"), having multiple, variably-tuned brass or bronze reeds, each secured at one end over an airway slot of like dimension into which it can freely vibrate, thus repeatedly interrupting an airstream to produce sound.

Unlike most free-reed instruments (such as reed organs, [accordions](#) and melodicas), the harmonica lacks a keyboard. Instead, the player selects the notes by placement of their mouth over the proper airways, usually made up of discrete holes in the front of the instrument. Each hole communicates with one, two or a few reeds. Because a reed mounted above a slot is made to vibrate more easily by air from above, reeds accessed by a mouthpiece hole often may be selected further by choice of breath direction (blowing, drawing). Some harmonicas (primarily chromatic harmonicas) also include a spring-loaded button-actuated slide that, when depressed, redirects the airflow.

The harmonica is commonly used in [blues](#) and [folk music](#), but also in [jazz](#), [classical music](#), [country music](#), [rock and roll](#) and [pop music](#). Increasingly, the harmonica is finding its place in more electronically generated music, such as [dance](#) and [hip-hop](#), as well as [funk](#) and [acid jazz](#). Harmonica seems to be an instrument that crosses ethnic, musical, and cultural divides in a manner that is not as well duplicated by many other instruments.

## Parts of the harmonica

The basic parts of the harmonica are the comb, reed-plates and cover-plates. The comb is the term for the main body of the instrument. These are traditionally made of wood, but plastic (ABS) and metal combs are perhaps more common today. The comb contains the air chambers which cover the reeds - the name comb comes from the fact that in simple harmonicas it does indeed resemble a hair-comb. In some designs, however, the comb is in fact very complex in arranging how the air is directed, particularly in more modern and experimental designs.

There is much debate about whether comb-material has an effect on the tone of the harmonica or not. While this has traditionally been the assumption, several recent attempts at blind testing have not been able to show that people can hear a difference when comb material is the only variable, and the main advantage one comb material truly have over another one is usually its durability. In particular, a wooden comb can absorb moisture from the player's breath and contact with the tongue, causing the comb to expand slightly. This can become uncomfortable to play. Conversely, some players used to deliberately soak their wooden-combed harmonicas to cause a slight expansion which was intended to make the seal between the comb, reed plates and covers more airtight.

The choice of comb material is usually decided by the player, as the tonality of each material is only heard by the player of the "harp". Once the sound escapes the instrument, it is then subjected to the environmental changes and to the bias of a listener's ear.

Reed-plate is the term for a grouping of several free-reeds in a single housing (usually brass, but occasionally steel and aluminium have been used, as well as plastics). These individual reeds are usually riveted to the reed-plate but they may also be welded or screwed in place (a notable exception is the all-plastic harmonicas designed by Finn Magnus in the 1950s, where the reed and reed-plate were molded out of a single piece of plastic). (Note: The choice of reed-plate material is expressly dependent upon the individual player's preference.) Reeds fixed on the inside (within the comb's air chamber) of the reed-plate respond to pressure while those on the outside (in the open air) respond to suction. Most harmonicas are constructed with the reed-plates screwed or bolted to the comb or each other, however a few brands still use the traditional method of nailing the reed-plates to the comb.

Again, the Magnus design had the reeds, reed-plates and comb all out of plastic and either molded together or permanently glued together. Some experimental and rare harmonicas also have the reed-plates held in place by tension, such as the WWII era All-American models.

If the plates are bolted to the comb, it can be possible to replace the reed plates individually. This is useful, as the reeds eventually go out of tune through normal use, and certain notes of the scale can fail more quickly than others.

The cover or cover-plates cover the reed-plates and are usually made of metal, although wood and plastic have also been used. As pointed out previously, the choice of these is extremely personal. As they project the

sound, they determine the tonal quality of the harmonica. There two types: the traditional open designs of stamped metal or plastic are simply there to be held, while the enclosed design (such as Hohner Meisterklass and Super 64, Suzuki Promaster and SCX) offer a louder tonal quality. From these two, a few modern designs are spawned, such as the Hohner CBH-2016 chromatic and the Suzuki Overdrive diatonic, which have complex covers which allow for specific functions not usually available in the traditional design. Similarly, it was not unusual in the late 19th and early 20th centuries to see harmonicas with special features on the covers such as [bells](#) which could be rung by pushing a button and the like.

Windsavers are one-way valves made from very thin strips of plastic, knit paper, leather, or teflon glued onto the reed-plate. Windsavers, typically found in Chromatic harmonicas, Chord harmonicas, and many Octave-tuned harmonicas, are used when two reeds share a cell and leakage through the non-playing reed would be significant. For example, when a draw note is played, the valve on blow reed-slot is sucked shut, preventing air from leaking through the inactive blow reed. An exception is the recent Hohner XB-40 where valves are placed not to isolate single reeds but rather to isolate entire chambers from being active.

Some harmonicas have other parts as well. The mouthpiece is an object which is placed between the air chambers of the instrument and the player's mouth. This can be made integral with the comb (the diatonic harmonicas, the Hohner Chrometta), as part of the cover (as in Hohner's CX-12) or as a separate unit entirely, secured by screws, which is typical of Chromatics. In many harmonicas the mouthpiece is purely an ergonomic aide designed to make playing more comfortable, but in the traditional slider-based chromatic harmonica it is essential to the functioning of the instrument since it provides a groove for the slide.

It should also be noted that among players, the brand that one chooses usually is based on one's ability to play, the pliability of the reeds, sound of the instrument, and, surprisingly, price. Many feel that the best harmonicas are more expensively priced, though many skilled players feel that price and quality are not related.

# Harmonica types

## The diatonic harmonica

The diatonic harmonica is the most widely known type of harmonica. It has ten holes which offer the player 19 notes (10 holes times a draw and a blow for each hole minus one repeated note) in a three octave range. The standard diatonic harmonica is designed to allow a player to play chords and melody in a single key. Because they are only designed to be played in a single key at a time, diatonic harmonicas are available in all keys. Here is a standard diatonic harmonica's layout in the key of C (blow for 1 is middle C):

```
1 2 3 4 5 6 7 8 9 10 ----- blow: |C |E |G |C |E |
|G |C |E |G |C | draw: |D |G |B |D |F |A |B |D |F |A |
```

Note that although there are 3 octaves between 1 and 10 blow, there is only one full major scale available on the harmonica, between holes 4 and 7. The lower holes are designed around the tonic (C major) and dominant (G major) chords, allowing a player to play these chords underneath a melody by blocking or unblocking the lower holes with the tongue. The most important notes (the tonic triad C-E-G) are given the blow, and the secondary notes (D-B-F-A), the draw.

### Valved Diatonics

The valved diatonic is one of the most common way of playing chromatic scales on diatonics (as many feel the advanced technique called an "overblend" is too difficult). While chromatic is available, valved diatonic is also common, and there are reasons to use a valved diatonic rather than chromatics:

1. It does not have a slide assembly (so that it has less air leakage)
2. It has a wider tonal range and dynamic
3. It has a smaller size and is much more suitable to use with microphone
4. It's still cheaper than chromatic, even for a premade one like Hohner's Auto Valve or Suzuki Promaster MR-350v Valved

However, it does require one to develop proper embouchure in order to bend the notes, and it's is generally agreed that the sound will not be "true", making it suitable for blues and jazz but so-so for classical music.

Valved Diatonics are made by securing windsavers on draw hole 1-6 and blow 7-10; this way, all reeds can be bent down a semitone at least, but most players can easily bend down a wholetone. Alternatively, one can simply buy a factory made valved diatonics, such as Suzuki Promaster Valved.

### Special tuned harmonicas

A number of people have made specially tuned variants of the diatonic harmonica. For example, Lee Oskar Harmonicas makes a variety of harmonicas to help players used to a "Cross-harp" style to play in other styles. Cross-harp players usually base their play around a mixolydian scale starting on 2 draw and ending a 6 blow (with a bend needed to get the second tone of the scale; a full scale can be played from 6 blow to 9 blow). Lee-Oskar special tunes harmonicas to allow players to play a natural minor, harmonic minor, and major scale from 2 draw to 6 blow. Below are some sample layouts (notice that the key labels describe the scale from 2 draw to 6 blow, whereas traditional harmonicas are labelled according to the scale between 4 and 8 blow).

Country tune: Identical to standard Richter Tuning, except hole 5 draw is raised a semitone

Natural Minor (cross harp, 6 blow to 9 blow) / Dorian (straight harp, 4 blow to 7 blow):

```
1 2 3 4 5 6 7 8 9 10 ----- blow: |C |Eb|G |C
|Eb|G |C |Eb|G |C | draw: |D |G |Bb|D |F |A |Bb|D |F |A | -----
-----
```

Harmonic Minor (straight harp, 4 blow to 7 blow)

```
1 2 3 4 5 6 7 8 9 10 ----- blow: |C |Eb|G |C
|Eb|G |C |Eb|G |C | draw: |D |G |B |D |F |Ab|B |D |F |Ab| -----
-----
```

Major (cross harp, 6 blow to 9 blow), Lee Oskar "Melody Maker" (Note that this will be labeled as "G": Melody Major's key indicate cross harp's key, starting from draw 2)

```
1 2 3 4 5 6 7 8 9 10 ----- blow: |C |E |A |C |E
|G |C |E |G |C | draw: |D |G |B |D |F#|A |B |D |F#|A | -----
-----
```

The "Melody Maker" designed and marketed by Lee Oskar is a particularly interesting evolution of the harmonica, since it allows a player accustomed to playing "cross harp" (in mixolydian) to play in a major key (which is what the standard layout is designed for in the first place). Rather than providing the standard C major and G dominant chords, the Melody Maker provides a G Major 7 (2-5 draw), a C Major 6th chord (1-4 blow), an Am or Am7 chord (3-5 or 3-6 blow), a D major chord (4-6 draw) and a C Major chord (6-10 blow). If we are in the key of G, then, the melody maker provides the I chord, the IV chord, the V chord and the II chord, allowing II-V-I progressions as well as I-IV-V progressions.

The largest range of special tunings however is made by the oldest harmonica factory in the world, C.A.Seydel Söhne factory in Klingenthal/Germany . On their Blues models they provide more than 10 additional tunings, even the Chromatic models are available in different tunings from the standard. At customers request any tuning will be made in addition.

It is also possible for a harp player to tune the harmonica himself. By making small scratches in a reed, the note played can be changed. It is possible to either get a higher or a lower note. Some harp players make extensive use of these modifications. One of the most famous examples is the harp solo on 'On the road again' by Canned Heat, on which the harmonicist gets the minor 3rd crosssharp on the sixth drawn reed, which is normally the major 2nd crosssharp.

**The 12-Hole and 14-Hole Diatonic**

Hohner had made a few non-standard harmonicas. All of them have more than 10 holes and are labeled "grosse richter". For 12 holes, Hohner had made 364/24 Marine Band, as well as the 364S/24 Marine Band Solo Tuned. The Marine Band Solo Tuned, with 3 full diatonic octave, can play all notes of the key, and since it can easily bend notes, some players use this for Blues (and even jazz) instead of the more well known solo-tuned harmonicas, the chromatic harmonica, since the bended notes sounded a lot different than true semi-tones. (For layout, see below at Chromatic harmonica, key out) In this configuration, blues players usually play in third position, the D-minor blue scale.

The Hohner Marine Band 365/28 14 hole harmonica is not a standard diatonic harmonica. It has 14 holes and its general dimensions are a bit bigger, so its structure is different from the normal diatonic harmonica and, in the key of C, is pitched one octave lower than the standard 10 hole C diatonic. Thus, hole 4 blow is one octave below middle C. Hole 7 blow is middle C. The Marine Band 365/28 in G is similar to a usual G diatonic, having its higher register expanded.

Holes 1 through 4 and 6 are draw bendable, and holes 8 through 14 are blow bendable. Special attention to the extra holes 11 - 14 where the bending capabilities are, in theory, extended a lot (from A down to E in whole 14, for example).

```

1 2 3 4 5 6 7 8 9 10 11 12 13 14 -----
--- blow: |C |E |G |C |E |G |C |E |G |C |E |G |C |E | draw: |D |G |B |D
|F |A |B |D |F |A |B |D |F |A | -----
--

```

There is also the "Steve Baker Special" manufactured by Hohner, a special tuned 14 holes diatonic:

```

1 2 3 4 5 6 7 8 9 10 11 12 13 14 -----
--- blow: |C |E |G |C |E |G |C |E |G |C |E |G |C |E | draw: |D |G |B |D
|G |B |D |F |A |B |D |F |A |B | -----
--

```

## The Chromatic harmonica

The Chromatic harmonica uses a button-activated sliding bar to redirect air from the hole in the mouthpiece to the selected reed-plate desired. This harp is used for Celtic, Classical, and Jazz, as well as many other styles.

Traditionally these are made so that when the button is not pressed, an altered diatonic major scale of the key of the harmonica is available and depressing the button accesses the same scale a semi-tone higher in each hole, thus giving an instrument capable of playing the 12 notes of the Western chromatic scale.

Chromatic harmonicas are usually 12, 14 or 16 holes long. The 12-hole chromatic is available in 12 keys, but due to the fact that the entire chromatic scale is available by definition, most professionals stick with the key of C— which is perhaps easier to remember, since slide in will automatically be the sharps of the associated note. In the standard 12-hole chromatic in C the lowest note is middle C, while 16-hole variants start one octave lower.

For the 16-hole variant, the layout is usually as follows. note that the "D" in the last key-in draw note is common, though by no means presented in all chromatic.

```

`1 `2 `3 `4 1 2 3 4 5 6 7 8 9 10 11 12 -----
----- blow: |C |E |G |C |C |E |G |C |C |E |G |C |C |E |G |C |

```

```

key out draw: |d |f |a |b |d |f |a |b |d |f |a |b |d |f |a |b | -----

11 12 ----- blow: |C#|F
|G#|C#|C#|F |G#|C#|C#|F |G#|C#|C#|F |G#|C#| key in draw: |d#|f#|a#|c
|d#|f#|a#|c |d#|f#|a#|c |d#|f#|a#|d | -----
-----

```

Because it is a fully chromatic instrument, the chromatic harmonica is the instrument of choice in [jazz](#) and [classical music](#). In traditional harmonica bands, the chromatic harmonica plays the lead part.

However, while the chromatic harmonica is capable of playing in all keys, it is not without its limitations. For example, while chromatic harmonicas can "bend" notes down in pitch, as this is a single-reed bend it sounds quite different than the typical dual-reed bends of a diatonic. Further, unless the windsavers are removed chromatic harmonicas cannot "overblow" at all. Perhaps more importantly, the number of chords and double-stops available is limited, as are legato phrasings. Thus, even some of the most accomplished chromatic players are known to use instruments in other keys on occasion, usually the key of F and the key of G.

On the other hand, the fact that the chromatic harmonica is designed to play melodies in any keys, plus the fact that many 16-holes and special versions only come stock in the key of C, implied that a good harmonica player should also try his or her best to use the chromatic in the key of C to its greatest capability, and only switch to other keys when it is absolutely necessary. In general, the first approach (playing in positions) are common among blues and jazz musicians, while the second approach is common for classical music players (as encouraged by Frank Chmel)

Chromatic harmonicas are often described as either "straight tuned" or "cross tuned". This refers to the way the slider is shaped to isolate the reed set being played at a given position (button "in" or button "out"). Traditionally the chromatic was "straight tuned" and the slider selected either the upper reed-plate (button out) or the lower reed-plate (button in). In the later half of the 20th century a new system came into use in which the slider played the upper and lower reed-plates at the same time, staggered by which hole (thus with the button out the player might play the upper reed-plate in hole 1, the lower reed-plate in hole 2, and then the upper again in hole 3 and so forth; pressing the button reversed this). This allows for a larger hole in the slider, and thus presumably more air gets through, allowing a louder volume. The two methods co-exist with some companies and players preferring one style and others another.

There are at least two other types of slider design as well. The first one has holes side-by-side with each other in the slider, thus opening only the left side of the chamber or the right side depending on button position. The Renaissance chromatic uses this design, which is claimed to mix the larger hole of a cross-tuned design with an even shorter movement than in straight tuned sliders. The simple way of doing this is to construct the harmonica more like a traditional Richter diatonic whereas the standard chromatic design shares more in common with the Knittlinger octave harmonicas. Note, however, the Renaissance uses a complex comb design to achieve their slider design. The second type of alternative design is found mostly in East Asia and is based more along the traditional Weiner tremolo construction. Here each reed is isolated in its own cell within the comb and the slider selects a single reed at a time rather than a cell containing both blow and draw reeds. The Tombo Ultimo is an example of this type of chromatic.

Finally, there are also several types of non-slide chromatic instruments available, particularly in Asia, such as the Horn Harmonica (see below), as well as Tombo's S-50, Tombo's Chromatic Violin Range, and others. Tombo

Chromatic Violin Range (three and a half octaves), as well as S-50 (three octaves) use the tremelo scale tuning system (but with only one-reed): in essence it is a C# tremolo harmonica sitting on top of a C tremolo harmonica, with blow and draw reeds each sitting in a single cell. The player switches between a top row tuned to C# and a bottom tuned to C by changing the angle of the harmonica.

Like Diatonic, Chromatics are available in numerous tunings. However, there are three more popular versions: one is the **Irish tuning**, which is done by flattening (instead of sharpening) the notes when the slide is in. This makes playing Irish music, and to a certain extend, blues, easier, since Irish music is commonly played in either the key of C or key of B, which is basically all notes in the key of C flattened. The Irish Tune can be done easily by reversing the slide (flipping the slide upside down) of a chromatic in the key of B major; alternatively, one can just use the B major as is, but use slide-in as the home position.

```
Key out: identical to solo tuning `1 `2 `3 `4 1 2 3 4 5 6 7 8 9 10 11 12
----- blow: |B |Eb|Gb|B |B
|Eb|Gb|B |B |Eb|Gb|B |B |Eb|Gb|B | key in draw: |db|e |ab|bb|db|e
|ab|bb|db|e |ab|bb|db|e |ab|bb| -----
-----
```

Another one is the **bebop tuning**, which is done by tuning the redundant C/C# in hole 4', 4, 8, and 12 blow into a Bb/B pair. This allow playing chords in the key of F, as well as playing C7 chord.

```
`1 `2 `3 `4 1 2 3 4 5 6 7 8 9 10 11 12 -----
----- blow: |C |E |G |Bb|C |E |G |Bb|C |E |G |Bb|C |E |G |Bb|
key out draw: |d |f |a |b |d |f |a |b |d |f |a |b |d |f |a |b | -----
----- `1 `2 `3 `4 1 2 3 4 5 6 7 8 9 10
11 12 ----- blow: |C#|F |G#|B
|C#|F |G#|B |C#|F |G#|B | key in draw: |d#|f#|a#|c
|d#|f#|a#|c |d#|f#|a#|c |d#|f#|a#|c | -----
-----
```

Another popular version of alternate tuning is the **classical tuning**, which is done by switching between the blow and draw of the 4th hole of each octave:

```
`1 `2 `3 `4 1 2 3 4 5 6 7 8 9 10 11 12 -----
----- blow: |C |E |G |B |C |E |G |B |C |E |G |B |C |E |G |B |
key out draw: |d |f |a |c |d |f |a |c |d |f |a |c |d |f |a |c | -----
----- `1 `2 `3 `4 1 2 3 4 5 6 7 8 9 10
11 12 ----- blow: |C#|F |G#|C
|C#|F |G#|C |C#|F |G#|C |C#|F |G#|C | key in draw:
|d#|f#|a#|c#|d#|f#|a#|c#|d#|f#|a#|c#|d#|f#|a#|c#| -----
-----
```

This easily allow Imaj7 and iimajo7 chords, as well as many other chords, that's very beneficial for classical music playing.

## The Tremolo Harmonica

Tremolo harmonicas have two reeds per note. In a tremolo harmonica the two reeds are tuned slightly off a reference pitch, one a bit sharp and the other a bit flat. This gives a unique wavering or warbling sound created by the two reeds being not exactly in tune with each other and difference in their subsequent waveforms acting against one another. The degree of beating can be varied depending on the desired effect. Instruments where the beating is faster due to the reeds being farther apart from the reference pitch are called

"wet", whereas those where the beating is slower and less noticeable due to the reeds being more closely in tune are called "dry".

The tonal variation of the tremolo harmonica is not truly "tremolo". "Tremolo" is most often defined as a periodic change of volume (or, less often, pitch), and the tremolo harmonica really exhibits something entirely different: a frequency interference pattern. This effect is fairly common amongst Western free-reed instruments and is found in accordions, harmoniums and reed organs under various names (celeste, vox jubilante, etc...). The article Beat (acoustics) contains more information on acoustical frequency interference patterns.

Tremolo harmonicas are perhaps the most common form of harmonica in the world, being very popular in folk music as well as in much of East Asia. In the West, the tremolo harmonica is usually encountered in traditional folk music, being found throughout Europe and South America in this role. In China, Japan, Korea, Taiwan and other parts of Asia, however, tremolo harmonicas are found in nearly every area of music from [folk](#) to [classical](#) — in fact, there are specially manufactured tremolo harmonicas for ensemble playing. Players often use several different harmonicas at a time, holding them one atop the other, in order to play notes and chords not available on any single instrument.

Most tremolo harmonicas are built upon what is termed the "Wiener system", named after the city of Vienna (Wien in German) where they first emerged. In this design the two beating reeds are distributed one on each reed-plate (top and bottom) and these share a common chamber. In practice, however, it is common for each individual reed to have its own air chamber. Unlike the diatonic harmonica described above (built on the "Richter system") the blow and draw reeds do not share a common chamber, but are separated off from one another. This allows the player to isolate each reed. While normally the player simply plays both the tremolo reeds at once, it is possible to achieve a wide variety of bends and other effects through selecting certain reeds and chambers and not others. Similarly, it is possible to play without the tremolo effect by only choosing the top or bottom chambers and blocking off the others with the lips. In practice, though, these are primarily used for effects and mostly the instrument is played as if the two beating reeds shared a single chamber.

There are three commonly encountered tunings or note layouts used for tremolo harmonicas. The older layout is very similar to that used in the standard diatonic harmonica and also found in diatonic accordions and concertinas. This tuning has the major diatonic scale in the middle and top octaves of the harmonica with two chords in the lowest octave: the tonic in the blow and the dominant or fifth chord in the draw. This is very effective for chordal playing behind relatively simple folk melodies in either the tonic or the fifth of the key of the harmonica. In Asia, the fourths and the sixths are added back in, in order to play the melody; however, it was still unlike the scale tuning mentioned below, since the octaves are not repeated through out the layout.

```
(capital letters indicate blow, non-capital letters denote draw) Common
tuning in Europe and North America 1 2 3 4 5 6 7 8 9 10 (Hohner's
labeling) 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 -----
----- |C |d |E |g |G |b |C |d
|E |f |G |a |C |b |E |d |G |f |C |a | |C |d |E |g |G |b |C |d |E |f |G
|a |C |b |E |d |G |f |C |a | -----
----- Common tuning in East Asia 1 2 3 4 5 6 7 8 9 10 11 12
13 14 15 16 17 18 19 20 21 22 23 24 -----
----- |G |d |C |f |E |a |G |b |C |d |E |f
|G |a |C |b |E |d |G |f |C |a |E |b | |G |d |C |f |E |a |G |b |C |d |E
|f |G |a |C |b |E |d |G |f |C |a |E |b | -----
-----
```

A more recently developed tuning is commonly found on tremolos manufactured in or designed for Asia. This layout is derived from the "solo" tuning found in chromatic harmonicas and is sometimes called "scale" tuning. Here the notes of the major scale are found through out the range of the harmonica without a separate chord section in the bass octave. This helps to facilitate a common practice in Asia of playing both a C and C# harmonica stacked in order to achieve full chromaticity by having essentially the same notes available in each octave of the harmonica. This tuning is also applied to Tombo's S-50.

```
(capital letters indicate blow, non-capital letters denote draw) 1 2 3 4
5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 -----
----- |C |d |E |f |G |a |C |b |C |d |E |f |G |a |C |b | |C |d |E |f |G
|C |b |C |d |E |f |G |a |C |b |C |d |E |f |G |a |C |b | -----
```

Note: Some manufacturers replace the repeated root note (7 and 15) with a spacer (See S-50), or just completely do away with it at all (eg: hohner)

Recently, hohner also released a scale-tuned tremelo, the "21 Tremelo De Luxe", which have 3 complete scale-tuned octaves.

An interesting recent development has been that of the chromatic tremolo harmonica. This combines the slider design of the chromatic harmonica with the dual reed beating sound of the tremolo harmonica. Harmonica technician John Infande has been manufacturing his own design in limited numbers for several years [2] while the Japanese harmonica company Suzuki has recently released its design .

For more info on tremolo and other double-reed tunings.

## The Octave Harmonica

Octave harmonicas have two reeds per hole. The two reeds are tuned to the same note a perfect octave apart. Many share their basic design with the tremolo harmonica explained above and are built upon this "Weiner system" of construction. Octave harmonicas also come in what is called the "Knittlinger system". In this design the top and bottom reed-plates contain all of the blow and draw notes for either to lower or higher pitched set of reeds. The comb is constructed so that the blow and draw reeds on each reed-plate are paired side-by-side in a single chamber in the same manner as on a standard diatonic but that the top and bottom pairs each have their own chamber. Thus, in a C harmonica the higher pitched C blow and D draw found in the first "hole" would be placed side-by-side on the upper reed-plate and share a single chamber in the comb and the lower pitched C blow and D draw would be placed side-by-side on the bottom reed-plate and share a single chamber directly below the higher pitched pair of reeds' chamber. Knittlinger octave harmonicas are also called "concert" harmonicas and are almost always tuned in a variation of the traditional major diatonic with chords tuning found in diatonic harmonicas. Octave harmonicas built in the "Wiener system" may be tuned either in this traditional method or in the same manner as the Asian tremolos mentioned above.

An interesting variation upon the Knittlinger octave harmonica is the so-called "half-concert" harmonica. This is not an octave harmonica at all, but rather a single-note diatonic harmonica which is built with a single reed-plate rather than the standard two--essentially it is one half of the standard octave harmonica.

## The Orchestral harmonicas

These harmonicas are primarily designed for use in ensemble playing.

### The Orchestral Melody harmonica (Horn harmonica)

The orchestral melody harmonica, or **Horn** harmonicas as called in Asia, are mostly found in East Asia. These consist of a single large comb with blow only reed-plates on the top and bottom. Each reed sits inside a single cell in the comb, and the instrument mimics the layout of a piano or mallet instrument, with the natural notes of a C diatonic scale available from the lower reed-plate and the sharps/flats from the upper reed-plate in groups of two and three holes with gaps in-between (thus there is no E#/Fb hole nor a B#/Cb hole on the upper reed-plate). These are available in several pitch ranges, with the lowest pitched starting two-octaves below middle C and the highest beginning on middle C itself. These usually cover a two or three octave range. These are usually played in an East Asian harmonica orchestra, using these instruments instead of the chromatic harmonica, and often serve to function in place of brass section—hence it was called horn harmonica in Asia.

### The Bass harmonica

The Bass harmonica consists of two separate combs joined together one atop the other with moveable connectors at their ends. These are all-blow instruments covering much the same range as the viol family Double Bass. Those made today are all octave tuned, in that each hole has two reeds one of which plays the bass note and the other a note an octave higher. The lower comb contains the notes of the C major diatonic scale, while the upper comb contains the notes of a C#(Db) diatonic scale.

### The Chord harmonica

The chord harmonica has 48 chords: major, seventh, minor, augmented and diminished for ensemble playing. It is laid out in four-note clusters, each sounding a different chord on inhaling or exhaling. Typically each hole has two reeds for each note, tuned to one octave of each other, but less expensive models often have only one reed per note.

In addition to these, quite a few orchestra harmonicas are also designed to serve both as a bass and chord harmonica, with bass notes next to chord groupings. Other interesting harmonicas include the Polyphonias which are designed to make glissandos and other effects very easy to play—few acoustic instruments can play a chromatic glissando as fast as a Polyphonia.

## New Developments

### The Suzuki Overdrive

The Suzuki Overdrive is a richter-tuned diatonic harmonica designed to facilitate overblowing. The Overdrive is constructed with individual air-chambers for each reed in the covers. Holes at the ends of each chamber are located to allow the player to block off the air flow with their fingers and thus silence that reed. This isolates the other reed which shares the same comb chamber and allows that reed to be overblown or bent as if it were the only

reed in its cell. This allows for many techniques and manipulations of the reed that can be difficult to perform on a standard diatonic harmonica.

### The Hohner XB-40

The Hohner XB-40 is an entirely new design, body wise, though in practice is still a richter-tuned (diatonic) harmonica. Here the blow reeds and the draw reeds are sealed off from one another with valves, effectively creating two separate cells in the comb for each hole in the mouthpiece: one for blow and another for draw. A second reed is then placed in this cell at a zero-offset so that it does not sound under normal playing. However, it is placed on the opposite side of the reed-plate from the speaking reed and tuned so that it responds when the player "bends" the note downwards in pitch. This allows for every note on the XB-40 to be bent downwards a whole-tone or more, whereas on standard diatonics only certain notes (the higher-pitched in the cell) will bend at all. In terms of sound production mechanics, it use additional reeds to reach some other harmonics.

```
|Bb|D |F |Bb|D |F |Bb|D |F |A#| |B |Eb|Gb|B |Eb|Gb|B |Eb|Gb|B | hole: 1  
2 3 4 5 6 7 8 9 10 ----- blow: |C |E |G |C |E |G  
|C |E |G |C | draw: |D |G |B |D |F |A |B |D |F |A | -----  
----- |Db|Gb|Bb|Db|E |Ab|Bb|Db|E |Ab| |C |F |A |C |Eb|G |A |C |Eb|G  
| |Ab|
```

### ChengGong Harmonica

Another recent innovation in the harmonica is the ChengGong (a pun on the inventor's name and Xin Gong, "Success") Harmonica, invented by XueXue Cheng of China. It has two parts: the main body, and a sliding mouth piece. The body is a 24 hole diatonic harmonica that starts from b2 to d6 (covering 3 octaves). Its 11-hole mouthpiece can slide along the front of the harmonica, which gives numerous chord choices and voicings (seven triads, three 6th chords, seven 7th chords, and seven 9th chords, with a total of 24 chords available). Yet, the ChengGong is still capable of playing single note melodies and double stops over a range of 3 diatonic octaves, all the while maintaining a small profile, not much larger than a 12-hole chromatic. Also, unlike conventional harmonicas, blowing and drawing produce the same notes. In this way, its tuning is closer to the note layout of a typical asian tremelo harmonica or the Polyphonias.

### The Pitch Pipe

The pitch pipe is essentially a specialty harmonica which is designed not for playing music as such but for giving a reference pitch to singers and other instruments. Notably, the only difference between some early pitch-pipes and harmonicas is the name of the instrument, reflecting the maker's target audience.

# Harmonica Techniques

## Bending and other techniques

In addition to the 19 notes readily available on the diatonic harmonica, players can play other notes by adjusting their embouchure and forcing the reed to resonate at a different pitch. One does this by relaxing and coordinating muscles in the throat, mouth, and lips. This technique is called "bending", a term borrowed from guitarists, who literally "bend" a string in order to create subtle changes in pitch. Using bending, a player can reach all the notes on the major scale. "Bending" also creates the glissandos characteristic of much blues harp and country harmonica playing. Bending on a guitar bends the pitch upward. However, typically 'bending' on a harmonica means the pitch falls downward. Bends are essential for most blues and rock harmonica due to the soulful sounds the instrument can bring out. The famous 'wail' of the blues harp typically required bending.

```
| D | F | A# | | B | D# | F# | B | hole: 1 2 3 4 5 6 7 8 9 10 -----  
----- blow: | C | E | G | C | E | G | C | E | G | C | draw: | D | G | B | D | F | A  
| B | D | F | A | | ----- | C# | E# | A# | C# | E | G# | | F | A |  
| G# |
```

The physics of bending are quite complex, but amount to this: a player can bend the pitch of the higher-tuned reed down toward the pitch of the lower-tuned reed in any given hole. In other words, on holes 1 through 6, the draw notes can be bent and on holes 7 through 10 the blow notes can be bent. Hole 3 allows for the most dramatic bending: in C, it is possible to bend 3 draw from a B down to a G#, or anywhere in between.

### Overbending

In the 1970s, Howard Levy developed the "overbending" technique, which, combined with bending, allowed players to play the entire chromatic scale. When bending, the player forces the lower of the two reeds in a chamber to vibrate faster. When overbending, the player isolates the *higher* of the two reeds and by so doing can play higher pitched notes. By using both bending and overbending techniques a player can play the entire chromatic scale using a diatonic harmonica. This has allowed diatonic harmonica players to expand into areas traditionally viewed as inhospitable to the instrument such as [Jazz](#).

The overbend is a difficult technique to master. To facilitate overbending, many players use specially modified or customised harmonicas. Any harmonica can be set-up for better overbending. The primary needs are tight tolerances between the reed and reed-plate and a general level of air-tightness between the reed-plate and comb. The former often necessitates lowering the "gap", the space between the tip of the reed and the reed-plate. Another often used technique is to make the space between the sides of the slots in the reed-plate and the reed itself as small as possible by drawing in

the metal on the sides of the reed-plate slots towards the reed. While these modifications make the harmonica overbend more easily, overbending is often possible on stock diatonic harmonica, especially on an airtight design.

Although there are players who use precise overbends and bends to play the diatonic harmonica as a fully chromatic instrument, this is still very rare, not simply because the technique is difficult, but also because the sound of an overbend is different from the sound of other notes, as is also the case of normal bent notes. Thus, even though a player could play any melody in any key (within a three octave range) on a C diatonic harmonica (examples: Tinus Koorn and Otavio Castro), most diatonic players prefer to use either use the chromatic, different keys of diatonic harmonicas, or (recently) use valved diatonics or XB-40 for different songs, matching the possibilities of glissandos, register and dynamics of a given harmonica to a melody.

However, more and more people are attempting to overblow, or at least trying to bend on all notes (using valved diato or XB-40), on diatonics, since overbend and bending allow wailing, which is the desired tonal quality for jazz and blues — something that is difficult simulated by chromatic harmonica.

## Positions

In addition to playing the diatonic harmonica in its original key, it is also possible to play the harmonica in other keys by playing in other "positions", either by playing in another mode (playing in D Dorian or G mixolydian on a C Major harmonica) or by bending notes to achieve a scale not otherwise available on the harmonica (playing in E mixolydian on a C Major harmonica). Harmonica players (especially blues players) have developed a set of terminology around different "positions" which can be somewhat confusing to other musicians. There are twelve "natural positions" that can be achieved without bending; however, in general, harmonica players restrict to the following three:

- 1st position (or "straight harp"): Ionian mode. Playing the harmonica as it was intended, in its main major key. On a diatonic, starting note is hole 1 blow. On a C-chromatic, starting hole is the same, resulting in C major scale
- 2nd position (or "cross harp"): Mixolydian mode. playing the harmonica in a key a fifth above its intended key. Playing just the unbended notes, this position gives the mixolydian scale between 2 draw and 6 blow. However, bending the 3 draw allows the player to play a minor third (or a blue third), allowing a player to use a C harmonica to play in G mixolydian or G minor. Blues players can also play a tritone in this position by bending the 4 draw. See a more extensive discussion of this position at the article on blues harp. On a diatonic, starting note is hole 2 draw or hole 3 blow. On a C-chromatic, starting hole is hole 3 blow, resulting in G major with a flatted 7th.
- 3rd position (or "slant harp"): Dorian mode. Playing the harmonica a full tone above its intended key. This gives a dorian scale between 4 draw and 8 draw, though once again bends and overblows give players a variety of options. Blues players can achieve a tritone by bending the 6 draw. On a diatonic, starting hole is hole 1 draw. On a C-chromatic, starting hole is hole 1 draw, resulting in D-minor with a raised 6th. This is the traditional way of playing Blues on Chromatic.

The terminology for other positions is slightly more varied, though it is possible of course to play in any of the modes and, using overblows and bends, it is possible to play in all 12 keys on a single harmonica — though this is very rarely done on a diatonic, while chromatic harmonica players may prefer having numerous chromatics in different keys, due to difficulties in certain chord and melody construction.

## **Breaking in a Harmonica**

Harmonica players disagree on the need to break in the reeds of a new harmonica, and on break in technique. Even among those that favor a break in period, numerous techniques appear: some may prefer to play a new harmonica for several hours without bending notes; others prefer to play short licks as frequent as possible with reasonable break in between, as recommended by acclaimed harmonica repairer Douglas Tate. Although not recommended (many manufacturers are against this practice), some players break in their harmonicas by soaking them in warm water, and even beer, whiskey, or vodka; this is common for past blues harp players.

## History

The harmonica developed from the intense interests in free-reeds which arose in Europe in the early 19th century. While free-reeds had been fairly common throughout East Asia for centuries and known in Europe for some time before this period, around 1820 there was a virtual eruption of new free-reed designs in Europe and North America. While a young Friederich Ludwig Buschmann is often cited as the inventor of the harmonica in 1821, it was almost certainly a case of simultaneous development amongst several inventors working independently with mouth-blown free-reed instruments appearing in the United States, the United Kingdom and on the continent at roughly the same time. In 1825, Richter tuning was developed, while in 1857, Matthias Hohner, a clockmaker, purchased one of Buschmann's harmonica, and became the first person to mass-produce it. Sometime by the 1850s, the diatonic harmonica had more or less found its modern form and the other diatonic types followed soon thereafter (the various tremolo and octave harmonicas). By the late 19th century, harmonica production was big business and had evolved from a handcraft into mass-production with figures well into the millions, a status which continues to this day. New designs continued to be developed in the 20th century including the chromatic harmonica (first made by Hohner in 1924), the bass harmonica, the chord harmonica and others. Even in the 21st century radical new designs such as the Suzuki Overdrive and Hohner XB-40 continue to be brought to market.

The harmonica's massive success is attributable to many factors. First, it is a fairly easy instrument to play. Of, course, some talent is necessary to play. The diatonic harmonicas were designed primarily for the playing of German and other European [folk musics](#) and are extremely successful for that. However, probably unintentionally the basic design and tuning was extremely adaptable to other types of music such as the [blues](#), [country](#), old-time and similar. Second, the majority of harmonicas are quite small--often small enough to unobtrusively fit in a pocket. Third, harmonicas are cheap - amongst the most inexpensive of musical instruments available while not being intended as a toy. Fourth, harmonicas are fairly easy to manufacture and their simple construction allowed for industrial level production without sacrificing the quality of a hand-crafted instrument, unlike most [string instruments](#) or other [wind instruments](#). For these reasons the harmonica was a success almost from the very start of production, and while the center of the harmonica business has shifted from Germany the output of the various harmonica manufacturers is still very high indeed. Major companies are now found in Germany (Seydel, Hohner - once the dominant manufacturer in the world, producing some 20 million harmonicas alone in 1920 when German manufacturing totaled over 50 million harmonicas), Japan (Suzuki, Tombo, Yamaha), China (Huang, Leo Shi, Suzuki, Hohner) and Brasil (Hering). Ironically, as the demand for higher quality instruments which respond to more demanding performance techniques has increased, there has been a resurgence in the world of hand-crafted harmonicas which cater to those wanting the absolute best without the compromises inherent in mass manufacturing.

## Europe and North America

Shortly after Hohner began manufacturing harmonicas in 1857, he shipped some to relatives who had emigrated to the United States. It rapidly became popular, and the country became an enormous market for Hohner's goods. President Abraham Lincoln carried a harmonica in his pocket, and harmonicas provided solace to soldiers on both the Union and Confederate sides of the United States Civil War. Frontiersmen Wyatt Earp and Billy the Kid played the instrument, and it became a fixture of the American musical landscape.

The first recordings of harmonica were made in the U.S. in the 1920s. These recordings are mainly 'race-records', intended for the black market of the southern states. They consist mainly of solo recordings (DeFord Bailey), duo recordings with a guitarist (Hammie Nixon, Walter Horton, Sonny Terry) or recordings featuring the harmonica in some kind of novelty act called the 'Jug Band', of which the Memphis Jug Band is the most famous. But the harmonica still represented a toy instrument in those years and was associated with the poor. It is also during those years that musicians started experimenting with new techniques such as tongue-blocking, hand effects and the most important innovation of all, the 2nd position, or cross-harp.

The harmonica then made its way with the blues and the black migrants to the north, mainly to Chicago but also to Detroit, St. Louis and New York. The music played by the Afro-Americans started to become increasingly different there. The main difference is the electric amplification of the instrument: first the [guitar](#) and then the [harp](#), double bass, vocals, etc. The original Sonny Boy Williamson is the most important harmonicist of this era. Using a full blues band, he became one of the most popular acts of Chicago. He also installed for good the cross-harp technique, opening the possibilities of harp playing to new sky. It is hard to imagine how much influence he would have had on the blues, if he had lived longer. Unfortunately, Sonny Boy liked to bring women from the audience on stage and dance with them as he played, and he eventually was stabbed by a jealous husband.

But the harmonica didn't die with him. A young harmonicist by the name of Marion "Little Walter" Jacobs would completely revolutionize the instrument. He had the idea to play the harmonica near a microphone (typically a "Brown Bullet" microphone marketed for use by radio taxi dispatchers, giving it a "punchy" midrange sound that can be heard above radio static, or an [electric guitar](#)) and cup his hands around it, thus tightening the air around the harp, giving it a powerful, distorted sound, sometimes reminiscent of a [saxophone](#). This technique, combined with a great virtuosity on the instrument made him arguably the most influential harmonicist in history. It is almost impossible nowadays to find a harp player who wasn't influenced by Walter. Unfortunately, Little Walter also died young, from injuries suffered in a fight.

Little Walter's only contender was perhaps Big Walter Horton. Relying less on the possibilities of amplification (although he made great use of it) than on sheer skill, Big Walter was the favored harmonicist of many Chicago leaders, including Muddy Waters and Willie Dixon. He graced many sides of Waters in the mid-fifties with extremely colorful solos, using the full register of his instrument as well as some chromatic harmonica. The only reason he is less known than Little Walter is because of his taciturn personality and his inconsistency, and his incapacity of holding a band as a leader.

Other great harmonicists have graced the Chicago blues records of the 1950s. Howling Wolf is often overlooked as a harp player, but his early recordings demonstrate great skill, particularly at blowing powerful riffs with the instrument. James Cotton is also a household name of the Chicago Blues

scene. He used a less amplified tone, relying on hand effects, giving his playing a country blues feeling to it. Sonny Boy Williamson II also used the possibilities of hand effects to give a very talkative feel to his harp playing. A number of his compositions have also become standards in the blues world.

The 1960s and 1970s saw the harmonica become less prominent as the electric guitar became the favorite instrument for solos. Paul Butterfield is perhaps the most well known harp player of the era in the blues arena. Heavily influenced by Little Walter, he pushed further the virtuosity on the harp. Sadly he rapidly fell into drugs and alcohol, and after his first two albums, his career became stagnant. Keith Relf, the singer of the Yardbirds, was a harp player who could hold up to the guitar playing of his bandmates Eric Clapton and, later, Jeff Beck and Jimmy Page. Bob Dylan also famously played his harmonica to add a touch of blues to his folk and rock sound during this era. Dylan was known for placing his harmonicas in a brace so that he could simultaneously blow the harp and strum his guitar.

Recently, three harp players have had major influence on the sound of the harmonica. Heavily influenced by the electric guitar sound, John Popper of Blues Traveler has developed an incredible virtuosity on the instrument. His electric and highly distorted solos are played at a breakneck speed. His influence is heavy on modern rock and blues harp players trying to reach new heights with the instrument.

Jazz harmonicists Howard Levy and Chris Michalek are perhaps the most innovative players since Little Walter. They have perfected the bending technique, using the notes it produces with more precision. They are the players that have furthest advanced the technique called overblowing (borrowed from woodwind terminology), which enables the diatonic harmonica to play full chromatic scales across three octaves, while retaining the particular sound of the harp. The overblow technique was first recorded in 1927 by Blues Birdhead (real name James Simons). While an older and more obscure technique, overblowing has been displayed more and more in the 1990s with the emergence of players like Howard Levy, Chris Michalek and Carlos delJunco and players like Jason Ricci are starting to integrate it in a more blues or rock oriented music. Examples of this style are considered to be among the most highly regarded in the harmonica circles.

## **East Asia**

In 1898, the harmonica was brought to Japan; there, the Japanese were more interested in the sound of Tremolo; however after about 30 years, they became dissatisfied with the richter-based layout of the tremolo harmonica, and thus developed the scale tuning, as well as the semitone harmonicas, in order to be able to perform Japanese folk songs. During sometime in 1924 and 1933, it was brought to other places in East Asia.

The history of the harmonica in Taiwan began sometime around 1945; due to the influence of numerous harmonica experts, as well as versatility and cheap prices of the harmonica. It became one of the standard instruments on the island, being treated as a serious instrument during its peak at the 1980s — more so than Europe and America, where it was often associated as a blues-only instrument in most cases. However, as the western lifestyle began to spread, as well as an increase in living standards, many instruments that were once too expensive to buy can be bought by the Taiwanese. Additionally due to many schools of methodologies on the harmonica, the harmonica as an instrument almost faded to obscurity in the 90s. In order to raise the appeal of the harmonica back to it what it once was, numerous harmonica lovers in

Taiwan began to promote the harmonica heavily, starting with the introduction of harmonicas and methodology that are popular in the Western world (eg. Chromatic and Diatonic harmonicas), as well as participating in numerous international competitions. In 1993, the Yellowstone Orchestra won the first gold in an international harmonica competition. However, to the disappointment of many harmonica players, the resources for education are severely lacking, and many materials are not much different from those that were created 20 years ago.

## **Comparison between Asia and Europe/America**

Compared to Euro/American players, Asian players prefer to use tremelo harmonicas, since not only do they prefer the tonal quality of tremelo, the diatonic have "missing" notes; on many Asian discussion boards, players claim bending for those notes was too hard and too "inaccurate" for the music they play. This is true in many aspects, especially if they practice bending on tremelo (one needs to cover one of the holes to facilitate a single reed bend).

On the other hand, in terms of North American players, while they knew bending's semi-tone is imprecise and different, that is the tonal quality they wanted. Thus, in contrast, many harmonica players in North America favor overbending diatonic harmonicas, or use valved diatonic and/or XB-40s for the "chromatic" playing. However, the truth is that it is actually much less frequent, as most players merely play different positions (which means playing three keys as most per diatonic harmonica).

The reason of this difference may be due to the fact most Asian players play Asian folk songs, ballads, and popular music (which seldom use wails) or classical music, while harmonica players in North America play mostly blues and jazz, and require the diatonic's dynamics (aka growls and wails). Additionally, Asian players treat harmonica as a melodic instrument, and many "self-accompaniment" techniques taught there are treated merely as a way to thicken the sound in North America. In contrast, North American players focused quite a bit on chords, possibly due to the need to play blues and jazz.

One common (and ironic) point of view is that both sides often declared the other side's diatonic is only good for playing very simple (usually European) folk songs, and unsuited for the pop songs that they played. It is possible that, due to this, their approach toward chromatic is different: for Asian players, chromatic, which have very similar playing style to tremelo (stacking a C# on top of a C), caught on quite quickly; this is in contrast to North American players, which merely treat it as a diatonic harmonica, and do not use slides that often. This is a possibility why there was a very rapid rebirth of harmonica playing in Asia, but not so much in North America.

Another difference is that Asian players usually state Suzuki is more airtight and more in tune (which is true, since Suzuki use equal temperament), while European/American players state Hohner is more airtight and better sounding (since it uses just intonation). Ultimately, it depends on the player's taste, and the price of the harmonica.

## Related instruments

The unrelated glass harmonica is a musical instrument formed of a nested set of graduated glass cups mounted sideways on an axle and partially immersed in water, and played by touching the rotating cups with wetted fingers, causing them to vibrate.

The [concertina](#), diatonic and chromatic [accordions](#) and the melodica are all free-reed instruments which were developed alongside the harmonica. Indeed, the similarities between harmonicas and so-called "diatonic" [accordions](#) or melodeons is such that in German the name for the former is "Mundharmonika" and the later "Handharmonika", translated simply as "mouth harmonica" and "hand harmonica". The harmonica shares similarities to all other free-reed instruments by virtue of the method of sound production.

# Harmonium

A note on terminology: In North America, the most common pedal-pumped free reed keyboard instrument is known as the American reed organ, parlor organ, pump organ, cabinet organ, cottage organ, etc. and along with the earlier melodeon, is operated by a suction bellows. In North America, a reed organ with a pressure bellows is referred to as a harmonium. In much of Europe, the term "harmonium" is used to describe all pedal pumped keyboard free reed instruments, making no distinction whether it has a pressure or suction bellows.

The harmonium was invented in Europe in Paris in 1842 by Alexandre Debain, though there was concurrent development of similar instruments.

Harmoniums consist of banks of brass reeds (metal tongues which vibrate when air flows over them), a pumping apparatus, stops for drones (some models feature a stop which causes a form of vibrato), and a keyboard. The harmonium's [timbre](#), or sound, is similar to an accordion, but works in a critically different way. Instead of the bellows causing a direct flow of air over the reeds, an external feeder bellows inflates an internal reservoir bellows inside the harmonium from which air escapes to vibrate the reeds. This design is similar to bagpipes as it allows the harmonium to create a continuously sustained sound. If a harmonium has multiple sets of reeds, it's possible that the second set of reeds is tuned an octave lower and can be activated by a stop, which means each key pressed will play two notes an octave apart. Professional harmoniums feature a third set of reeds, usually tuned an octave higher. This overall makes the sound fuller. In addition, many harmoniums feature an octave coupler, a mechanical linkage that opens a valve for a note an octave below the note being played, and a scale changing mechanism, which allows one to play in various keys while fingering the keys of one scale.

Harmoniums are made with 1, 2, 3 and occasionally 4 sets of reeds. Classical instrumentalists usually use 1-reed harmoniums, while a musician who plays for a qawwali (Islamic devotional singing) usually uses a 3-reed harmonium.

## The harmonium in India

During the mid-19th century missionaries brought French made hand-pumped harmoniums to India. The instrument quickly became popular there: it was portable, reliable and easy to learn. Its popularity has stayed intact to the present day, and the harmonium remains an important [instrument](#) in many genres of Indian music. It is commonly found in Indian homes. Though derived from the designs developed in France, the harmonium was developed further in India in unique ways, such as the addition of drone stops and a scale changing mechanism.

The harmonium is essentially an alien instrument to the Indian tradition, as it cannot mimic the voice which is considered the basis of all Indian music. Meend (glissando), an integral part of any classical recitation is not possible on the harmonium, and as such, one cannot faithfully reproduce the subtle nuances of a raga on this instrument. The harmonium is thus despised by many connoisseurs of Indian music, who prefer the more authentic yet more technical sarangi, in accompanying khyal singing.

A popular usage is by followers of the Sikh faith, who use it in the devotional singing of prayers, called kirtan. In any gurdwara (Sikh temple) around the world there will be at least one harmonium. The harmonium is also commonly accompanied by the tabla. To Sikhs the harmonium is known as the vaja/baja.

In Indian music, the harmonium is considered to be one of the most versatile instruments. It is usually used as an accompanying instrument for vocalists. However, some musicians have begun playing the harmonium as a solo instrument. Pandit Muneshwar Dayal, Pandit Montu Banerjee, Pamabhusan JnanPrakash Ghosh were among those personalities who made Harmonium popular as a solo performance. One of the largest pioneers of this style is Pandit Tulsidas Borkar of Mumbai. More recently, Dr. Arawind Thatte from Pune has sought to create a separate identity for the harmonium as a solo instrument. More and more music students are learning in this fashion.

## **"Harmonium" by Wallace Stevens**

"Harmonium" was Wallace Stevens's first collection of poetry, published in 1917. In it, he explores the disparities of reality and imagination. Well-known poems in this collection include "The Snow Man", "The Worms at Heaven's Gate", "The Comedian as the Letter C", "The Emperor of Ice-Cream", "Sunday Morning" and "Death of a Soldier."

# Harmony

**Harmony** is the use and study of pitch simultaneity and [chords](#), actual or implied, in [music](#). It is sometimes referred to as the "vertical" aspect of music, with [melody](#) being the "horizontal" aspect. Very often, harmony is a result of [counterpoint](#) or polyphony, several melodic lines or motifs being played at once, though harmony may control the counterpoint.

## Origin of term

The word *harmony* comes from the Greek ἁρμονία *harmonía* meaning "a fastening or join". The concept of harmony dates as far back as Pythagoras.

## Historical rules of harmony

Some traditions of music performance, [composition](#), and [theory](#) have specific rules of harmony. These rules are often held to be based on a natural properties such as Pythagorean tuning's low whole number ratios ("harmoniousness" being inherent in the ratios either perceptually or in themselves) or harmonics and resonances ("harmoniousness" being inherent in the quality of sound), with the allowable pitches and harmonies gaining their beauty or simplicity from their closeness to those properties. Other traditions, such as the ban on parallel fifths, were simply matters of taste.

Although most harmony comes about as a result of two or more notes being sounded simultaneously, it is possible to create harmony with only one melodic line. There are many pieces from the [baroque](#) period for solo [string instruments](#) for example, in which chords are very rare, but which nonetheless convey a full sense of harmony.

For much of the [common practice period](#) of [European classical music](#), there was a general trend for harmony to become more dissonant; chords considered daring in one generation become commonplace in the next.

## Types of harmony

Carl Dahlhaus (1990) distinguishes between **coordinate** and **subordinate harmony**. Subordinate harmony is the hierarchical tonality or tonal harmony well known today, while coordinate harmony is the older [Medieval](#) and [Renaissance](#) *tonalité ancienne*, "the term is meant to signify that sonorities are linked one after the other without giving rise to the impression of a goal-directed development. A first chord forms a "progression" with a second chord, and a second with a third. But the earlier chord progression is independent of the later one and vice versa." Coordinate harmony follows direct (adjacent) relationships rather than indirect as in subordinate. Interval cycles create symmetrical harmonies, such as frequently in the music of Alban Berg, George Perle, Arnold Schoenberg, Béla Bartók, and Edgard Varèse's *Density 21.5*.

Harmony may also be distinguished as **centrifugal** or **centripetal harmony**, harmony which leads away from or to the tonic, respectively. For example, music of the [classical era](#) is more often centrifugal, while the ragtime progression is centripetal. (van der Merwe 1989)

# Harp

The **harp** is a [stringed instrument](#) which has its strings positioned perpendicular to the soundboard. All harps have a neck, resonator and strings. Some, known as frame harps, also have a forepillar; those lacking the forepillar are referred to open harps. Harp strings can be made of nylon (sometimes copper-wound), gut (more commonly used than nylon), or wire.

Various types of harps are found in Africa, Europe, North and South America, and a few parts of Asia. In antiquity harps and the closely related [lyres](#) were very prominent in nearly all musical cultures, but they lost popularity in the early 19<sup>th</sup> century in Western music, being mainly played by women or as a minor ensemble member. There was no harp-exclusive museum until the North Italian harp building firm of Victor Salvi started one in 2005.

The aeolian harp (wind harp) and autoharp are technically not harps because their strings are not perpendicular to the soundboard.

## Origins of the harp

The harp's origins may lie in the sound of a plucked hunter's bow string. The oldest documented references to the harp are from 4000 BC in Egypt (see Music of Egypt) and 3000 BC in Mesopotamia. While the harp is mentioned in most translations of the Bible, King David being the most prominent musician, the Biblical "harp" was actually a kinnor, a type of [lyre](#) with 10 strings. Harps also appear in ancient epics, and in Egyptian wall paintings. This kind of harp, now known as the folk harp, continued to evolve in many different cultures all over the world. It may have developed independently in some places.

The lever harp came about in the second half of the 17<sup>th</sup> century to enable key changes while playing. The player manually turned a hook or lever against an individual string to raise the string's pitch by a semitone. In the 1700s, a link mechanism was developed connecting these hooks with pedals, leading to the invention of the single-action pedal harp. Later, a second row of hooks was installed along the neck to allow for the double-action pedal harp, capable of raising the pitch of a string by either one or two semitones. With this final enhancement, the modern concert harp was born.

# Types of harps, harp-playing and harp-building

## Playing style of the European-derived harp

Most European-derived harps have a single row of strings with strings for each note of the C Major [scale](#) (over several octaves). Harpists can tell which strings they are playing because all F strings are black or blue and all C strings are red or orange. The instrument rests between the knees of the harpist and along their right shoulder. The Welsh triple harp and early Irish and Scottish harps, however, are traditionally placed on the left shoulder. The first four fingers of each hand are used to pluck the strings; the pinky fingers are too short and cannot reach the correct position without distorting the position of the other fingers, although on some folk harps with light tension, closely spaced strings, they may occasionally be used. Also, the pinky is not strong enough to pluck a string. Plucking with varying degrees of force creates dynamics. Depending on finger position, different tones can be produced: a fleshy pluck (near the middle of the first finger joint) will make a warm tone, while a pluck near the end of the finger will make a loud, bright sound.

## The pedal/concert harp

The **pedal harp**, or **concert harp**, is large and technically modern, designed for classical music and played solo, as part of chamber ensembles, and in symphony orchestras. It typically has six and a half octaves (46 or 47 strings), weighs about 80lb (36 kg), is approximately 6 ft (1.8 m) high, has a depth of 4 ft (1.2 m), and is 21.5 in (55 cm) wide at the bass end of the soundboard. The notes range from three octaves below middle C (or the D above) to three and a half octaves above, usually ending on G. The tension of the strings on the sound board is roughly equal to a ton (10 kilonewtons). The lowest strings are made of copper or steel-wound nylon, the middle strings of gut, and the highest of nylon.

The pedal harp uses the mechanical action of pedals to change the [pitches](#) of the strings. There are seven pedals, one for each note, and each pedal is attached to a rod or cable within the column of the harp, which then connects with a mechanism within the neck. When a pedal is moved with the foot, small discs at the top of the harp rotate. The discs are studded with two pegs that pinch the string as they turn, shortening the vibrating length of the string. The pedal has three positions. In the top position no pegs are in contact with the string and all notes are flat. In the middle position the top wheel pinches the string, resulting in a natural. In the bottom position another wheel is turned, shortening the string again to create a sharp. This mechanism is called the double-action pedal system, invented by Sébastien Erard in 1810. Earlier

pedal harps had a single-action mechanism that allowed strings to play sharpened notes.

Lyon and Healy, Camac Harps, and other manufacturers also make electric pedal harps. The **electric harp** is a concert harp, with microphone pickups at the base of each string and an amplifier. The electric harp is a little heavier than an acoustic harp, but looks the same.

## **Folk harps/lever harps**

The **folk harp** is small to medium-sized and usually designed for traditional music; it can be played solo or with small groups. It is prominent in Irish, Scottish and other Celtic cultures within traditional or folk music and as a social and political symbol. Often the folk harp is played by beginners who wish to move on to the pedal harp at a later stage, or by musicians who simply prefer the smaller size.

The folk or lever harp ranges in size from two octaves to six octaves, and uses levers or blades to change pitch. The most common size has 34 strings: Two octaves below middle C and two and a half above (ending on A), although folk or lever harps can usually be found with anywhere from 19 to 40 strings. The strings are generally made of nylon, gut, carbon fiber or fluorocarbon or wrapped metal, and are plucked with the fingers using a similar technique to the pedal harp.

Folk harps with levers installed have a lever close to the top of each string; when it is engaged, it shortens the string so its pitch is raised a semitone, resulting in a sharped note if the string was a natural, or a natural note if the string was a flat. Lever harps are often tuned to the key of E-flat. Using this scheme, the major keys of E-flat, B-flat, F, C, G, D, A, and E can be reached by changing lever positions, rather than re-tuning any strings. Many smaller folk harps are tuned in C or F, and may have no levers, or levers on the F and C strings only, allowing a narrower range of keys. Blades and hooks perform the same function as levers, but use a different mechanism. The most common type of lever is either the Camac or Truitt lever although Loveland levers are still used by some makers. Amplified (electro-acoustic) and solid body electric lever harps are produced by some harpmakers.

## **Wire-strung harps (*clàrsach* or *cláirseach*)**

The Gaelic wire-strung harp is called a *clàrsach* in Scotland or a *cláirseach* in Ireland. The origins go back at least the first millennium. There are several stone carvings of harps from the 10th century, many of which have simple triangular shapes, generally with straight pillars, straight string arms or necks, and soundboxes. There is stone carving evidence that supports the theory that the harp was present Gaelic/Pictish Scotland well before the 9<sup>th</sup> century.,

The earliest descriptions of a triangular framed harp i.e. harps with a fore pillar are found on 8th century Pictish stones, Pictish harps were strung from horsehair. The instruments apparently spread south to the Anglo Saxons who commonly used gut strings and then west to the Gaels of the Highlands and to Ireland. Historically the carvings were made in the period after the establishment of the Gaelic kingdom of Dál Riata. Despite the lack of direct evidence, some argue for a Gaelic influence. However, there are only thirteen depictions of any triangular chordophone from pre-11th century Europe, and all thirteen of them come from Scotland. Moreover, the earliest Irish word for a

harp is in fact Cruit, a word which strongly suggests a Pictish provenance for the instrument.

The harp was perhaps the most popular musical instrument used in both medieval Scotland and Ireland.

This most ancient instrument was brought to us from Ireland (as Dante says c. 1300) where they are excellently made, and in great numbers, the inhabitants of that island having practised on it for many and many ages; nay, they even place it in the arms of the kingdom, and paint it on their public buildings, and stamp it on their coin, giving as the reason their being descended from the royal prophet David. The Harps which these people use are considerably larger than ours, and have generally the strings of brass, and a few of steel for the highest notes, as in the clavichord. The musicians who perform on it keep the nails of their fingers long, forming them with care in the shape of quills which strike the strings of the spinnet.

— *Vincenzo Galilei (father of Galileo Galilei)*

Scotland, because of her affinity and intercourse [with Ireland], tries to imitate Ireland in music and strives in emulation. Ireland uses and delights in two instruments only, the harp namely, and the tympanum. Scotland uses three, the harp, the tympanum and the crowd. In the opinion, however, of many, Scotland has by now not only caught up on Ireland, her instructor, but already far outdistances her and excels her in musical skill. Therefore, [Irish] people now look to that country as the fountain of the art.

— *Gerald of Wales*

The harp played by the Gaels of Scotland and Ireland between the 11<sup>th</sup> and 19<sup>th</sup> centuries was certainly wire-strung. The Irish Maedoc Book Shrine dates from the 11th century, and clearly shows a harper with a triangular framed harp including a "T-Section" in the pillar (or Lamhchrann in Irish) indicating the bracing that would have been required to withstand the tension of a wire-strung harp.

By the Later Middle Ages, the Gaelic language word *clàrsach* or *cláirseach* described a wire-strung harp with a massive carved soundbox, a reinforced curved pillar and a substantial neck, flanked with thick brass cheek bands. The wire-strung harp was played with the fingernails, and it produced a brilliant ringing sound. This is the style of harp on Irish coins and the Guinness label. Especially popular in 16<sup>th</sup> and 17<sup>th</sup> century English courts, it was played all over Europe and was usually called the 'Irish' harp.

By the 18<sup>th</sup> century, harps of any sort had fallen out of use in Scotland and Ireland due to changing social, political and economic conditions. At the same time, new [chromatic](#) harps were being created on the Continent for a bourgeois audience; harps with multiple rows of strings and harps with sharpening mechanisms for playing the fashionable music of the time. In the mid-19<sup>th</sup> century, a revival of all things Celtic brought attention back to Gaelic culture, sparking interest in native language and music.

*The Irish and Highland Harps* by Robert Bruce Armstrong is an excellent book describing these ancient harps. There is historical evidence that the types of wire used in these harps are iron, brass, silver, and gold. Three pre-16th century examples survive today; the Trinity College harp in Ireland, and the Queen Mary and Lamont harps, both in Scotland.

One of the largest and most complete collections of 17<sup>th</sup> century harp music is the work of Turlough O'Carolan, a blind, itinerant Irish harper and composer. At least 220 of his compositions survive to this day.

Edward Bunting was commissioned to notate the music played by the harpers at the 1792 Belfast Harp Festival. He published his first volume in 1796. He continued to collect the music of the *cláirseach* and published his

second and third volumes in 1809 and 1840 respectively. A reprint of the 1840 edition is now available from Dover Publications.

Dennis Hempson (O'Hampsey) was the last of the harpers who played in the old style using the fingernails to pluck while the finger pads are used to damp. He also was one of the last to use the left hand in the treble. He was in his 90s at the 1792 festival and died in the beginning of the 19<sup>th</sup> century. He took the unbroken tradition of wire-strung harping with him to his grave.

Since the 1970s, the tradition has been revived. Ann Heymann has done the most pioneering work in reviving this tradition by playing the instrument as well as studying Bunting's original manuscripts in the library of Queens University, Belfast. Other notable players include Patrick Ball, Cynthia Cathcart, Alison Kinnaird, Bill Taylor, Siobhán Armstrong and others.

As performers have become interested in the instrument, harp makers ("luthiers") such as Jay Witcher, David Kortier, Ardival Harps, and others have begun building wire-strung harps. The traditional wire materials are used, however iron has been replaced by steel and the modern phosphor bronze has been added to the list. The phosphor bronze and brass are most commonly used. Steel tends to be very abrasive to the nails. Silver and gold are used to get high density materials into the bass courses of high quality clàrsachs to greatly improve their tone quality. In the period, no sharpening devices were used. Harpers had to re-tune strings to change keys. This practice is reflected by most of the modern luthiers, yet some allow provisions for either levers or blades.

## Multi-course harps

A **multi-course harp** is a harp with more than one row of strings. A harp with only one row of strings is called a **single-course harp**.

A **double harp** consists of two rows of [diatonic](#) strings one on either side of the neck. These strings may run parallel to each other or may converge so the bottom ends of the strings are very close together. Either way, the strings that are next to each other are tuned to the same note. Double harps often have levers either on every string or on the most commonly sharped strings, for example C and F. Having two sets of strings allows the harpist's left and right hands to occupy the same range of notes without having both hands attempt to play the same string at the same time. It also allows for special effects such as repeating a note very quickly without stopping the sound from the previous note.

A **triple harp** features three rows of parallel strings, two outer rows of diatonic strings, and a center row of [chromatic](#) strings. To play a sharp, the harpist reaches in between the strings in either outer row and plucks the center row string. Like the double harp, the two outer rows of strings are tuned the same, but the triple harp has no levers. This harp originated in Italy in the 16th century as a low headed instrument, and towards the end of 1600s it arrived in Wales where it developed a high head and larger size. It established itself as part of Welsh tradition and became known as the **Welsh harp** (*telyn deires*, "three-row harp"). The traditional design has all of the strings strung from the left side of the neck, but modern neck designs have the two outer rows of strings strung from opposite sides of the neck to greatly reduce the tendency for the neck to roll over to the left.

The **cross harp** consists of one row of diatonically tuned strings and another row of chromatic notes. These strings cross approximately in the middle of the string without touching. Traditionally the diatonic row runs from the right (as seen by someone sitting at the harp) side of the neck to the left

side of the sound board. The chromatic row runs from the left of the neck to the right of the sound board. The diatonic row has the normal string coloration for a harp, but the chromatic row may be black. The chromatic row is not a full set of strings. It is missing the strings between the Es and Fs in the diatonic row and between the Bs and Cs in the diatonic row. In this respect it is much like a [piano](#). The diatonic row corresponds to the white keys and the chromatic row to the black keys. Playing each string in succession results in a complete chromatic scale.

## Harp technique

Harp playing uses all of the fingers except for the pinky, which is generally too short and weak to effectively pluck a string. In order to make notation of fingerings easier, each finger is given a number, "1" for the thumb, "2" for the index finger, "3" for the middle finger, and "4" for the ring finger. Most types of harp only require use of the hands. The exception is the pedal (concert) harp, where the harpist pushes the pedals with his or her feet.

There are two main methods of classical harp technique in the United States: the French method (associated in the United States with the French-American harpist Marcel Grandjany) and the Salzedo method, developed by Carlos Salzedo. Neither method has a definite majority among harpists, but the issue of which is better is sometimes a source of friction and debate. The distinguishing features of the Salzedo method are the encouragement of expressive gestures, elbows remain parallel to the ground, wrists are comparatively still, and neither arm ever touches the soundboard. The Salzedo method also places great emphasis on specific fingerings. The French method advocates lowered elbows, fluid wrists, and the right arm resting lightly on the soundboard. In both methods, the shoulders, neck, and back are relaxed. Some harpists combine the two methods into the technique that works best for them.

On the wire strung clarsach, a thumb under technique is also used.

As in all baroque instrumental techniques, the underlying principle is that of strong and weak articulation. The player only uses three fingers of each hand, and the thumb moves under the other fingers, rather than being held very high as in modern harp technique. The thumb and third fingers are "strong" fingers and the second finger is a "weak" finger. Scales are fingered with alternating strong and weak fingers - that is, a scale fingering could be either 1 2 1 2 1 2 or 3 2 3 2 3 2. In contrast, classical harp technique uses a fingering of 4 3 2 1 4 3 2 1 going up and 1 2 3 4 1 2 3 4 going down.

Another approach to "thumb under" technique as described above is to place the thumb so that it passes over the second finger, rather than under it. There is equal evidence for both thumb over and thumb under playing techniques on historical harps.

In this second approach it is important to note that the fingers are placed on the strings an equal distance up the string from the soundboard. This may be as little as 5-8 inches on very lightly strung harps. If you begin by making a circle with your thumb and second finger, placing both the thumb and the second finger on the same string, open your thumb and place your thumb on the string above, also placing the third (and fourth – if you choose to use it) on the neighbouring strings below the second finger. The fingertips placed on the strings should loosely form a straight line parallel to the soundboard of the harp.

As you play each finger, the aim is to roll the string over the end of your finger as you release it rather than pulling the string into your hand. This should require very little finger action to produce a warm and well rounded sound. Each finger produces a subtly different tone articulation. When playing scales down the harp, after playing the thumb it passes just over the second

finger onto the string below, with the second finger falling onto the string below the thumb after releasing its note. Otherwise, as with thumb under technique, all scales are played alternating strong and weak fingerings.

## Other harps around the world

In South America, there are Mexican, Andean, Venezuelan, and Paraguayan harps. They are derived from the [Baroque](#) harps that were brought from Spain during the colonial period: wide on the bottom and narrow at the top, with perfect balance when being played but unable to stand independently for lack of a base. The Paraguayan harp is the most popular, and is Paraguay's national instrument. It has about 36 strings with narrower spacing and lighter tension than other harps, and so has a slightly (four to five notes) lower pitch. It does not necessarily have the same string coloration as the other harps. For example, some Paraguayan harps may have red B's and blue E's instead of red C's and blue F's. This harp is also played mostly with the fingernails.

All of Africa's harps are open harps because they lack the forepillar. With the exception of Mauritania's ardin, which is a true harp, most West African harps, such as the kora, are technically classified as harp-lutes because of their two rows of strings which are strung parallel to each other but perpendicular to the soundboard.

In Asia, there are very few harps today, though the instrument was popular in ancient times; in that continent, [zithers](#) such as China's guqin and Japan's koto predominate. However, a few harps exist, the most notable being Burma's saung-gauk, which is considered the national instrument in that country. The Chinese konghou, which died out, is being revived in a modernized form. Turkey had a harp called the çeng that has also fallen out of use.

There are no harps indigenous to Oceania or the Americas.

## The harp in music

The harp is used sparingly in most classical music, usually for special effects such as the glissando, arpeggios, and bisbigliando. Italian and German opera uses harp for romantic arias and dances, an example of which is Musetta's Waltz from *La bohème*. French composers such as Claude Debussy and Maurice Ravel composed harp concertos and chamber music widely played today. In the 19th century, the French composer and harpist Nicolas-Charles Bochsa composed hundreds of pieces of all kinds (opera transcriptions, chamber music, concertos, operas, harp methods). Henriette Renié and Marcel Grandjany have composed many lesser-known solo pieces and chamber music. Modern composers utilize the harp frequently because the pedals on a concert harp allow many sorts of non-diatonic scales and strange accidentals to be played (although some modern pieces call for impractical pedal manipulations).

There have been harpists active in [jazz](#) and [free improvisation](#), including:

- Dorothy Ashby
- Edmar Castañeda
- Alice Coltrane
- Park Stickney
- Zeena Parkins
- Deborah Henson-Conant

In current pop music, however, the harp appears relatively rarely. Joanna Newsom and Dee Carstensen have separately established images as harp-playing singer-songwriters with signature harp and vocal sounds. A pedal harpist, Ricky Rasura, is a member of the "symphonic pop" band The Polyphonic Spree, and Bjork sometimes features acoustic and electric harp in her work. Art in America was the first known rock band featuring a pedal harp to appear on a major record label, and released only one record, in 1983. The pedal harp was also present in the Michael Kamen and Metallica concert/album *S&M* as part of the San Francisco Symphony orchestra. Some Celtic-pop crossover bands and artists such as Clannad and Loreena McKennitt include folk harps.

## **As a symbol**

### **Political**

The harp has been used as a political symbol of Ireland for centuries. It was used to symbolise Ireland in the Royal Standard of King James VI/I of Scotland, England and Ireland in 1603 and had continued to feature on all English, British and United Kingdom Royal Standards ever since, though the style of harp used differed on some Royal Standards. It was also used on the Commonwealth Jack of Oliver Cromwell, issued in 1649 and on the Protectorate Jack issued in 1658 as well as on the Lord Protector's Standard issued on the succession of Richard Cromwell in 1658. The harp is also traditionally used on the flag of Leinster.

Independent Ireland continued to use the harp as its state symbol on the Great Seal of the Irish Free State, featuring it both on the coat of arms and on the Presidential Standard and Presidential Seal - as well as on various other official seals and documents. The harp also appears on Irish coinage from the Middle Ages to the current Irish euro coins.

A South Asian version of harp known in Tamil as 'yaal', is the symbol of City of Jaffna, Sri Lanka, whose legendary root originates from a harp player.

### **Corporate**

The harp is also used extensively as a corporate logo - both private and government organisations. For instance; Ireland's most famous drink, Guinness, also uses a harp, but in reverse and also less detailed than the state arms - Harp Lager is also produced by Guinness and uses the harp.

Relatively new organizations also use the harp, but often modified to reflect a theme relevant to their organization, for instance; Ryanair uses a modified harp, somewhat in the form of an angel taking flight, and the State Examinations Commission uses it with an educational theme.

Other organizations in Ireland use the harp, but not always prominently; these include the National University of Ireland and the associated University College Dublin, and the Gaelic Athletic Association. In Northern Ireland the Police Service of Northern Ireland and Queen's University of Belfast use the harp as part of their identity.

# Harpsichord concerto

A **harpsichord concerto** is a [concerto](#) for harpsichord and [orchestra](#).

In the [Baroque](#) period, when the harpsichord was a common instrument, several concertos were written for it (Johann Sebastian Bach wrote a number of examples), though it was never as popular as the [violin](#) or other [string](#) or [wind](#) instruments.

With the rise of the [piano](#) in the [Classical](#) period, the harpsichord fell out of use, and nothing was written for it by major composers through the [Romantic](#) era. In the 20th century, interest in performing Baroque music in a more [historically accurate way](#) rose, and the harpsichord began to be played once more. As well as playing old music, harpsichordists commissioned new pieces for the instrument: Wanda Landowska, an important force in returning the harpsichord to the concert hall, commissioned concerti from Francis Poulenc and Manuel de Falla, for example.

## List of harpsichord concertos

- Johann Sebastian Bach (all 1720s-1740s)
  - BWV 1052 for harpsichord and strings in D minor, after a lost violin concerto
  - BWV 1053 for harpsichord and strings in E major, probably after a lost oboe concerto
  - BWV 1054 for harpsichord and strings in D major, after his violin concerto in E major BWV 1042
  - BWV 1055 for harpsichord and strings in A major, after a lost oboe d'amore concerto
  - BWV 1056 for harpsichord and strings in F minor, probably after a lost violin concerto
  - BWV 1057 for harpsichord, 2 recorders and strings in F major, after Brandenburg concerto no.4 in G major, BWV 1049
  - BWV 1058 for harpsichord and strings in G minor, after his violin concerto in A minor BWV 1041
  - BWV 1050 - Brandenburg concerto no.5 in D major, for harpsichord, flute, violin and strings
  - BWV 1044 for harpsichord, violin, flute and strings in A minor.
  - BWV 1060 for 2 harpsichords and strings in C minor, after a lost violin and oboe concerto
  - BWV 1061 for 2 harpsichords and strings in C major, after a lost concerto for 2 harpsichords unaccompanied
  - BWV 1062 for 2 harpsichords and strings in C minor, after his double violin concerto in D minor BWV 1043
  - BWV 1063 for 3 harpsichords and strings in D minor
  - BWV 1064 for 3 harpsichords and strings in C major, after a lost triple violin concerto
  - BWV 1065 for 4 harpsichords and strings in A minor, after Vivaldi's concerto for 4 violins in B minor, RV 580 (l'estro armonico op.3 no.10, RV580)
- Thomas Arne - 6 Favourite Concertos for harpsichord, piano or organ (late 18th century)
- CPE Bach - about 50 harpsichord concertos, including one for harpsichord and fortepiano.
- Manuel de Falla - Concerto for harpsichord (1926)
- Philip Glass - Concerto for Harpsichord and Chamber Orchestra (2002)
- Henryk Górecki - Harpsichord Concerto (1980)
- Frank Martin - Harpsichord Concerto (1951-52)
- Bohuslav Martino - Harpsichord Concerto (1935)
- Francis Poulenc - Concert champêtre (1927-28)
- Roberto Gerhard - concerto for harpsichord, percussion and strings (mid 20th century)
- Walter Leigh - concertino for harpsichord and strings (early 20th century)

Several other works feature the harpsichord as a solo instrument alongside others, including:

Elliott Carter - Double Concerto (1959-61, for harpsichord, piano and orchestra)

Alfred Schnittke - Concerto Grosso No. 1 (1977, for two violins, harpsichord, prepared piano and orchestra)

Frank Martin - Petite symphonie concertante for harp, harpsichord, piano and double string orchestra.

## Harsh noise

**Harsh noise** is a specific type of [noise music](#) that uses no (or minimal) [synths](#), no (or minimal) acoustic instruments, and is created almost entirely by electronic feedback and distortion, along with occasional crashing metal sounds and aimless samples. Primarily from Japan and sometimes referred to simply as "noise," the term *harsh noise* came into use to differentiate its style from more "musical" genres such as [noise rock](#) and noisecore, which use instrumentation and song structure. It is closely related to power electronics, but its focus is more on texture and less about composition or feel.

## Heartland rock

In the late 1970s and 1980s, one of the most popular forms of [rock and roll](#) was **heartland rock**. It was characterized by a straightforward musical style, a concern with the average American life, and a conviction that rock music had a social or communal purpose beyond just entertainment.

## History

The origins of "Heartland Rock", like that of so many genres, are as nebulous and difficult to describe as the genre's definition itself. The genre began as a confluence of white soul, [garage rock](#), [rhythm and blues](#) and [rock and roll](#).

While the genre emerged recognizably into the mainstream in the late 1970s with the commercial success of Bruce Springsteen, Bob Seger, and Tom Petty, the genre's antecedents appeared throughout pop chart history, via popular artists like Bob Dylan, Creedence Clearwater Revival, Mitch Ryder and the Detroit Wheels and Van Morrison, and lesser-known examples (The Flaming Ember, whose 1971 hit "Westbound Number Nine" was an example of the mixing of garage rock, rhythm and blues and rock influences that would later exemplify the genre) and earlier ones like Eddie Cochran and Del Shannon.

The genre reached its commercial, artistic and influential peak in the mid-1980s, with John Mellencamp joining Springsteen, Seger, and Petty as its most prominent artists.

In concert, heartland rock often took the form of crowd-rousing anthems, leading to comparisons with Midwestern arena rock groups such as REO Speedwagon and Head East, whose style however owed more to seventies [pop rock](#).

Heartland rock faded away as a recognized genre by the early 1990s, as rock music in general, and blue collar and white working class themes in particular, lost influence with younger audiences, and as heartland's artists turned to more personal works. Many heartland rock artists continue to record today with critical and commercial success, most notably Bruce Springsteen and John Mellencamp, although their works have become more personal and experimental and do not fit easily into a single genre anymore. Newer artists whose music would clearly have been labeled heartland rock had it been released in the 1970s or 1980s, such as Pittsburgh's Tom Breiding, often find themselves these days labeled alt-country and finding little more than a cult following.

## Characteristics

Heartland rock can be seen as one of several regional expressions of the white working class in rock music popular during the 1970s and 1980s. Heartland rock was an American Midwest and Rust Belt counterpart to [Southern rock](#) in the American South (Lynyrd Skynyrd, Marshall Tucker Band), and to [country rock](#) on the American West Coast (The Eagles, Firefall, Poco). These three genres were somewhat closely related in both style and lyrical subject matter.

As with most popular music genres, the term is something of a catchall, covering artists with diverse styles and making an exact delineation difficult. However, most heartland rock shared some common characteristics:

- **Traditional instrumentation** - Guitars ([electric](#), [acoustic](#), and [bass](#)), [drums](#), and non-synthesizer keyboards ([pianos](#) and the Hammond B3 and Farfisa [organs](#)) predominate. The [harmonica](#) and [mandolin](#) also appear frequently - evidence both of Heartland rock's rhythm and blues and country roots, respectively, as well as evocations of both genres. This was in stark juxtaposition to [synthesizer pop](#), one of the other dominant styles of the same era and noted for its rejection or de-emphasis of traditional instrumentation, and was in common with [roots rock](#), with which heartland had some overlap.
- **Influences** - Heartland rock owed much to pre-1964 rock and [rhythm and blues](#), and to a lesser extent country and western, [rockabilly](#), the British Invasion, and the "White Soul" of the 1960s and 1970s. Artists like Van Morrison and Bob Dylan had wide influence, as did the rhythm and blues of the Stax/Volt record label.
- **Subject matter** - Heartland rock was no less diverse than any other genre - but, as discussed by writers Dave Marsh and Robert Christgau among others - at its core its most constant theme was isolation in many forms:
  - **Social Isolation** - the genre often dwelt the perceived social state of the lives of average blue collar or lower middle class American life and isolation from "The American Dream".
  - **Physical Isolation** - many of the genre's artists, and much of its material, drew from physical distances across the "Heartland" or American Midwest and its detachment, in many ways, from the mainstream of popular culture (even though some of the genre's most prominent artists came from elsewhere - Springsteen's Nebraska being a prime example). This sense of isolation could be a two-edged sword; it was the source of boundless desperation (Springsteen's "Jackson Cage") as well as a source of pride and strength (as in Mellencamp's "Small Town" or Michael Stanley's "My Town").
  - **Economic Isolation** - from Mellencamp's "Rain on the Scarecrow" (about the farm crisis) to Seger's "Making Thunderbirds" (on the decline of the American automobile industry) to Springsteen's "The

River" (about how economic difficulties are interlaced with local culture) to the Iron City Houserockers' "Dance With Me", hard times for people living in the "heartland" were a common theme.

- o **Personal Isolation** - Even in precursors like Eddie Cochran's "Summertime Blues", as well as later work like Springsteen's "Darkness on the Edge of Town", Petty's "Even the Losers", and Mellencamp's "Check It Out", the geographic and economic loneliness becomes personal.

In these senses, the genre owed a lot to country and western, but heartland added to that the notion that performer and listener shared common bonds, values, and goals. Politically, while heartland shared some of the sentiments of both populism and progressivism, its artists usually shied away from explicit political or partisan themes, identification, or campaigning, both out of distrust of the political system and reluctance to divide potential audiences. (Decades later things would be different, as the 2004 Vote for Change effort illustrated.)

# Artists

## Prominent Artists

By far the most prominent heartland artists, and the nucleus of the genre, were:

- Bruce Springsteen - Bringing the influences of Van Morrison, Bob Dylan, and pre-Beatles rock and roll to bear, the musical style and the lyrical themes of heartland were lurking in Springsteen's Jersey-flavored music from the start. But they really gelled on *Darkness on the Edge of Town* (1978) and *The River* (1980), where songs such as "Badlands" and "The River" intertwined personal and economic concerns. The heartland genre reached the apex of its general popularity with Springsteen's massively-selling *Born in the U.S.A.* (1984) and his subsequent sold-out arena and stadium tour. These shows featured rock versions of Nebraska (1982)'s depressed heartland folk as well as Woody Guthrie's "This Land Is Your Land" and the Steinbeck-influenced "Seeds", preceded and followed in best redemptive fashion by party songs from the early 1960s, all documented within the *Bruce Springsteen & the E Street Band Live/1975-85* album.
- Bob Seger - More rooted in traditional, blues-based barroom rock than Springsteen, Michigan native Seger owed a lot more to Chuck Berry, Mitch Ryder, and The Rolling Stones. Some of Seger's early songs such as "Beautiful Loser" and "Turn the Page" were heartland antecedents, while his later classic heartland albums include *Night Moves* (1976), *Stranger in Town* (1978), and *The Distance* (1982). Generally acknowledged as the best singer of this group, Seger's voice could convey heartland sentiments ranging from the delicate time-spanning nostalgia of "Night Moves" to the powerless fury of "Feel Like a Number" to the uncertain maturity of "Against the Wind".
- John Mellencamp - A reformed glitter-rocker, Mellencamp came to embrace and finally flaunt his small town Indiana roots in the early 1980s. "Jack and Diane" from 1982 and "Pink Houses" from 1983 were among the first hit singles directly identified with the genre, while his albums *Uh-Huh* (1984) and *The Lonesome Jubilee* (1987) were representative. Moreover the quintessential work of the entire heartland rock genre was probably Mellencamp's 1985 album *Scarecrow*, with its depictions of struggling family farmers, odes to small town life, tales of the passing of generations, and tributes to the redemptive power of rock 'n' roll, set to a deceptively low-tech sounding production.
- Tom Petty - Out of Gainesville, Florida and forthright about his debt to The Byrds, Petty's style was both more laconic and more experimental than most other heartland rockers. But "Refugee" and "Even the Losers" from *Damn the Torpedoes* (1979), "The Waiting" from *Hard Promises* (1980), and "I Won't Back Down" and "Runnin' Down a Dream" from *Full Moon*

Fever (1989) all fit squarely in the genre, while the daring Southern Accents (1984) stretched the genre to its limits.

Both an antecedent and a heartland example was:

- Creedence Clearwater Revival and John Fogerty - Creedence was the seminal proto-heartland band, a decade before the genre was popularly recognized. Former leader Fogerty revived his career in 1985 with the album *Centerfield*, which recapped and extended Creedence's themes. Fogerty's influence is widespread throughout the genre.

## Lesser-known artists

Lesser-known heartland artists included:

- Michael Stanley - A Cleveland-area rocker with wide regional following but relatively obscure in the rest of the country, Stanley's 1984 hit "My Town" captured many of the themes of the genre: blue-collar swagger, cocky regionalism combined with a dogged love of local themes, and a broad, muscular musical arrangement.
- Red Rider - A Canadian band led by singer Tom Cochrane, Red Rider was an excellent example of the genre.
- The Iron City Houserockers - A heavily Rolling Stones-influenced and (unusual for the genre) Clash-influenced group from Pittsburgh featuring Joe Grushecky, the Houserockers were an uncommonly kinetic group that garnered critical acclaim but little commercial success.
- Joe Ely and Steve Earle - Ely and Earle are best known as country artists, but both were frequently associated with the heartland genre. Earle's "Copperhead Road", for instance, would fit right into a Springsteen or Seger album. As would, for that matter, country/Southern rocker Charlie Daniels' "Still In Saigon"; these songs, together with Springsteen's "Born in the U.S.A." and "Shut Out the Light", Billy Joel's "Goodnight Saigon", the Houserockers' "Saints and Sinners", and a few others were part of a Vietnam veteran-sympathetic subgenre of heartland that had a several bursts of visibility during the 1980s, as well as illustrating the sometimes-close links between the genre and [country-western](#) music.
- James McMurtry - A protege of Mellencamp, McMurtry (son of author Larry McMurtry, himself a key artist in documenting the life, history and society of the heartland, albeit in literature rather than music) has evolved over the years into an alt-country artist.
- John Cafferty and the Beaver Brown Band - The Narragansett Rhode Island band vaulted to massive success seemingly overnight with the release of the movie *Eddie and the Cruisers*, for which they'd recorded the soundtrack; the "overnight" success actually capped years of playing in the bars in the Northeast and the Jersey Shore. They were derided by some as a cut-rate Springsteen (similar musical style, similar band) - which didn't prevent their follow-up album, *Tough All Over*, from yielding two hits, "C.I.T.Y." and the title cut.

## Artists sometimes associated with the genre

Also sometimes included in heartland rock were:

- Robbie Dupree - Brooklyn pop singer who had the hits "Steal Away" and "Hot Rod Hearts" in 1980.
- George Thorogood and the Destroyers - strictly a [blues-rock](#) band, but sometimes included in the genre because of Thorogood's blue collar oriented lyrics.
- The Steve Miller Band - like Creedence Clearwater Revival, something of a heartland rock antecedent.
- Billy Joel came out of the early 1970s [singer-songwriter](#) movement but became increasingly influenced by heartland rock during his middle period (roughly, Turnstiles (1976) through The Nylon Curtain (1982)). This influenced both his music ("Say Goodbye to Hollywood", the live version of "Captain Jack", as well as the later "Big Shot" and "You May Be Right") and his lyrics ("Allentown").
- Bon Jovi's career, originally based on a mix of [hard rock](#) and hair metal, sustained itself when contemporaries in those genres faltered, due to the group's embrace of heartland rock sensibilities (and, said some critics/fans, wholesale importation of Springsteen-like stylistic elements including explicit playing-up of their New Jersey roots) in recastings of "Living On a Prayer" and "Wanted Dead or Alive", as well as in newer material such as "It's My Life" and "Have a Nice Day".
- Bryan Adams was sometimes known earlier in his career (before his breakout in the early 1980's) as the "Canadian Springsteen", a reference to his dynamic stage presence, raw voice, guitar/organ-based instrumentation, and musical style. Songs like "Cuts Like A Knife", "Straight From The Heart", and "This Time" fit squarely into the genre. Adams' career later swerved into arena rock.
- Southside Johnny and the Asbury Jukes - Contemporaries of Springsteen and long-time favorites on the New Jersey Shore music scene, the Jukes' horn-based sound was more heavily Rhythm and Blues based than most Heartland rock, owing much to Stax Records-style R and B. However, the band exemplifies the stylistic roots which, combined with stripped-down Creedence Clearwater-style rock and role, spawned the genre.
- Los Lobos - This band has spanned nearly every genre of American rock-era pop music; their How Will the Wolf Survive album is a solid example of the Heartland genre (among a few others)

## Heavy metal fashion

**Heavy metal fashion** is the style of dress, body modification, make-up, hairstyle, and so on, taken on by many fans of [heavy metal](#), or, as they are often called, metalheads. To those with a trained eye, normally others within the metal subculture, relatively subtle differences in clothing can speak volumes about a persons tastes and, more critically, show whether or not they are a poseur, a judgement that is almost universally dreaded by metalheads.

## Origins

The clothing associated with heavy metal has its roots firmly ensconced within the clothing adopted by Biker culture, and even earlier the clothing commonly worn by the [Rockers](#) of the sixties. The bikers legacy to the modern metalhead is their affinity for leather jackets, hi-top basketball shoes (more common with old school thrash metallers,) heavy boots (often work boots or combat boots, distinct from the long steel-toed boots worn by Skinheads or the ornate footwear favoured by goths), jeans and denim jackets or waistcoats, often adorned with badges and patches (see below, see also kutte) and a peculiar fascination with the imagery of Nazi Germany, often to shock (It must be noted that the Swastika is normally avoided: the Iron Cross however, is particularly popular. See Motörhead). However, the Iron Cross could also be traced back to the Crusades-era middle ages, a symbol of the Knights Templar.

## Other influences

The style and clothing of metal has absorbed elements from influences as diverse as the musical influences from which the genre has borrowed: modern metal fashion is a hotch-potch of [punk](#), [goth](#) (particularly for female metalheads), military fashion and even various historical fashions. It is from this linking of different sub-styles of clothing and music influences that one can sometimes determine a persons specific taste in music simply from overall appearance. However, such signs are not, in the majority of cases (we will discuss the peculiar and extreme fashions associated with [black metal](#) below) hard and fast rulings. This uncertainty is what makes the first key aspect of the metalheads identity below so important.

The influence of modern military fashion on heavy metal fashion is significant with metalheads been known to wear modern military clothing like field jackets and articles of camouflage and olive drab green uniforms like shirts and/or trousers to wear alongside their black T-shirts and black combat boots. This influence could be due to the impact of the Vietnam War on popular culture in the United States during the 1970's and the 1980's with images of American Vietnam veterans wearing their old combat uniforms in civilian life during this period of time as well as the memories of the conflict were still fresh in the minds of many Americans during the 1970's and 1980's. Some of the influences of modern military fashion and the Vietnam War can be seen by the fans and bands of [thrash metal](#) with the members of thrash metal bands of the 1980's like Metallica and Megadeth wearing bullet belts around their waists on stage (It is possible that the thrash metal bands got the idea of wearing bullet belts from Motörhead since the majority of thrash metal bands in the 1980's were influenced by Motörhead).

## **Band display**

A key and basic element of metal fashion is the outward display of one's musical taste. This can be accomplished in several ways.

### **Band shirts**

The band shirt is widely regarded as something akin to the 'minimum uniform' for a metalhead. T-shirts for metal bands are almost universally black, with only those bands popular enough to have fans beyond the metal community normally bothering to print T-shirts in other colours, though some print white shirts, normally as a statement against conformity. They come in two varieties: the normal T-shirt, and the long-sleeve T-shirt, which will often feature designs down the arms as well as on the back and front. These shirts display on their front the name of a band, often accompanied by the band's logo or an album cover, and the back some tour list, lyrics, slogan, or another image.

There is a strong stigma against bands who wear their own T-shirts, which is seen as in bad taste at best, and highly egotistical at worst. It also must be noted that to wear a T-shirt for a band you have not heard is considered extremely bad taste.

### **Other shirts**

It is less common, but not at all unknown, for metalheads to wear T-shirts other than band shirts. Brands of alcohol (particularly Jack Daniels whisky), makes of Motorcycles, and humorous or obscene epithets are the most common. Again, black is the normal colour.

It must of course also be noted that not all metalheads wear T-shirts: some may wear sleeveless shirts, wifebeaters, work shirts, collared shirts or even no shirt, depending on taste and geographical location.

### **Patches**

Patches are small shaped pieces of fabric that carry a design: normally, at least in terms of metal fashion, a band logo or album cover. They are normally displayed on kuttens. The traditional "patch jacket" is a black jacket, usually long sleeves, though denim jackets are also commonly used, they are rated more on the punk style. Backpacks, shoulder-bags, messenger bags etc. are another popular place on which to display them. A more unusual location is on another article of clothing, particularly jeans.

### **Other**

Band names are also sometimes displayed in the form of badges, which are displayed in much the same way as patches, although obviously the range of locations in which they can be placed is greater.

## Jackets

The most commonly worn types of jackets that metalheads wear are black leather jackets, blue denim jackets, trenchcoats and army combat jackets like field jackets (e.g. the M-1965 field jacket used by the US Armed Forces) , smocks, and parkas (usually in olive drab, black, or in camouflage patterns). In warmer weather, metalheads have been known to wear button-up flannelette shirts and button-up army shirts (usually in olive drab, black, or in camouflage patterns) unbuttoned so it acts a de-facto jacket when the weather is not too hot or not too cold. When the weather gets cooler, they would button up their flannelette shirts and army shirts. More recently, metalheads have been known to wear suit jackets and corduroy jackets.

## **Legwear**

The most common form of leg-wear is black or blue denim jeans(sometimes ripped), although leather trousers are also popular, as are camouflage-patterned combat trousers and kilts. Metalheads have also been known to wear cargo trousers and cargo shorts in warmer weather when jeans and leather pants are considered too hot and uncomfortable to wear.

## Hairstyles

The basic and most popular hairstyle associated with metal is long, straight hair, sometimes dyed black (especially amongst black metal fans), though this is by no means necessary. Other specific haircuts that are sported by metalheads are dreadlocks (possibly inspired by Rob Zombie, Max Cavalera, and more recently Anders Friden) and military haircuts. [Power Metal](#) fans and bands have also adopted a variation on the long haired style that involves hair even longer than the metal norm, often curled. Usually, the long and messy hairstyle of metalheads is because the metalhead in question is a fan of headbanging, and want something to swing around rather than have nothing as it adds to the excitement and image of headbanging. In contrast to long hair a completely shaven head is also a popular hairstyle of fans and band members alike notables including: singer Daniel Heiman (former) singer of the [Power Metal](#) band Lost Horizon (band), singer Rob Halford of Judas Priest, and guitarists Scott Ian and Kerry King of Thrash Metal bands Anthrax and Slayer, respectively.

## **Accessories and jewelry**

Jewelry is popular for both genders. Almost always silver, popular items include rings (often adorned with metal imagery such as skulls, flames, spikes, iron crosses etc.) and silver neck-chains (thin when compared, for example to bling Jewelry) or pendants, often of a religious or anti-religious nature: inverted crucifixes (inspired by Black Sabbath and Ozzy Osbourne), Satanic Pentagrams and Thor's Hammers are popular. This taste in pendants offers a marked difference between the metal and goth subcultures: goths will often wear crosses even if they are not religious, and will wear the benign, un-inverted Wiccan Pentagram.

Spike bands, wrist-bands and sweatbands are also very popular.

## Body modification

Metalheads often engage in some form of body modification, the most popular being tattoos, which will often employ the imagery of metal, metal lyrics or even band logos or mascots. Piercings are also not uncommon, although facial piercings, especially amongst male metalheads, are not particularly common, especially when compared to other subcultures such as [emo](#).

## Female metal fashion

Clothing for the female metalhead shares much in common with elements of [goth](#) and [punk](#) fashion, combined with what is simply a feminised version of male metalhead fashion. The heavy monochrome makeup of goth is relatively popular among female metalheads, far more so than it is amongst the male metal fan, and jewelry and accessories can be similar as well, although female metalheads tend to borrow from the classic goth look, rather than Cybergoth, Victorian, Goth etc. One exception to this is female black metal fans, who sometimes dress in the somewhat elaborate victorian or [medieval](#) dresses normally associated with some elements of the goth subculture. In recognition of the increasing number of female fans which metal increasingly attracts, many bands, especially larger ones, have started doing babydoll versions of their shirts, or even new designs specifically for the female market. Skirts are normally black of some sort (sometimes leather), or punk-style kilts.

It is also more common for female metal fans to sport facial piercings and more elaborate ear work such as scaffolding.

## Imitators

Heavy metal fashion has seen a recent resurgence in the UK (and to some extent in the US). Mainstream 'pop' fashion retailers have picked up what is accurately labelled as a cross between heavy metal fashion and skater fashion and are successfully marketing it under the labels 'goth' or 'rock' fashion. This typically consists of t-shirts and hooded sweatshirts with heavy metal, [nu-metal](#), or [punk](#) logos, paired with baggy 'skater' jeans, chains, and dark colours. This is largely the result of the increasing popularity of nu-metal and skateboarding in the UK and the USA. Styles utilizing these products are pejoratively known as "mall-goth", reflecting the mainstream consumer outlets through which these articles of clothing are made available.

## References

The style of dress that is a cross between heavy metal attire and skate or punk attire is associated with the genre of music known as Hard Core and is popular in East Coast US cities such as New York City, Boston and Philadelphia.

**Heavy metal** is a genre of [rock music](#) that emerged as a defined musical style in the 1970s, having its roots in [hard rock](#) bands which, between 1967 and 1974, took [blues](#) and [rock](#) to create a hybrid with a thick, heavy, guitar-and-drums-centered sound, characterised by the use of highly amplified distortion. Out of heavy metal various subgenres later evolved, many of which are referred to simply as "metal". As a result, "heavy metal" now has two distinct meanings: either the genre as a whole or traditional heavy metal in the 1970s style, as exemplified by the likes of Led Zeppelin, Black Sabbath, Deep Purple, Blue Cheer and others.

Heavy metal had its peak popularity in the 1980s, during which many of the now existing subgenres first evolved. Although not as commercially successful as it was then, heavy metal still has a large world-wide following of fans known by terms such as *metalheads*, *metal maniacs*, *headbangers*, and *metallers*.

## Characteristics

Heavy metal is typically characterized by a distorted guitar-led sound, morbid themes and lyrics, straightforward rhythms and classical or symphonic styles. However, heavy metal subgenres have their own stylistic variations on the original form that often omit many of these characteristics.

According to Allmusic.com, "Of all rock & roll's myriad forms, heavy metal is the most extreme in terms of volume, machismo, and theatricality. There are numerous stylistic variations on heavy metal's core sound, but they're all tied together by a reliance on loud, distorted guitars (usually playing repeated riffs) and simple, pounding rhythms."

## Instrumentation

The most commonly used line-up for metal is a drummer, a [bassist](#), a rhythm guitarist, a lead guitarist, and a singer (who may or may not be an instrumentalist). Keyboards are used in some styles of heavy metal and shunned by others, although as the styles of subgenre develop they're becoming increasingly popular. Guitar playing is central to heavy metal. Distorted amplification of the guitars is used to create a powerful or 'heavy' sound. The result is simple, although some of the original heavy metallers joked that their simplified sound was more the result of limited ability than of innovation. Later, more intricate solos and riffs became a big part of heavy metal music. Guitarists use sweep-picking, tapping and similar techniques for rapid playing, and many subgenres are now praising virtuosity over simplicity.

Metal vocals vary widely in style. Vocalists' abilities and styles range from the multi-octave operatic vocals of Judas Priest's Rob Halford and the classically trained singing of Iron Maiden's Bruce Dickinson, to the intentionally gruff sounding vocals of Lemmy Kilmister from the band Motörhead.

In terms of the live sound, volume is often considered as important as anything. Following on from the lead set by The Who and Jimi Hendrix, early Heavy Metal bands set new benchmarks for sound volume during shows. Tony Iommi, guitarist in Heavy Metal pioneers Black Sabbath is just one of the early Heavy Metal musicians to suffer considerable hearing loss due to their live volume. Detroit rocker Ted Nugent (who rejects the term "heavy metal" to describe his music) and The Who (who once held the distinction of "The World's Loudest Band" in the Guinness Book Of World Records) guitarist Pete Townshend is nearly deaf. Heavy Metal's volume fixation was mocked in the rockumentary spoof This Is Spinal Tap by guitarist "Nigel Tufnel", who revealed that his Marshall amplifiers had been modified to "go to eleven."

## Themes

As with much popular music, visuals and images are integral to metal. Album covers and stage shows are almost as important to the presentation of the material as the music itself, although they seldom exceed the actual music in priority. Thus, through heavy metal, many artists collaborate to produce a menu of experiences in each piece—offering a wider range of experiences to the audience. In this respect, heavy metal becomes perhaps more of a diverse art form than any single form dominated by one method of expression. Whereas a painting is experienced visually, a symphony experienced audibly, a heavy metal band's "image" and the common theme that binds all their music is expressed in the artwork on the album, the set of the stage, the tone of the lyrics, in addition to the sound of the music.

Rock historians tend to find that the influence of Western pop music gives heavy metal its escape-from-reality fantasy side, as an escape from reality through outlandish and fantastic lyrics—while African American blues gives heavy metal its naked reality side, focusing on loss, depression and loneliness. Heavy metal has a relationship with spiritual issues in both symbol and music theory, as heavy metal chords and harmonies emphasize the use of open fifths—drawing ironic parallels to harmony changes in Christian Sacred Harp singing.

If the audio and thematic components of heavy metal are predominantly blues-influenced reality, then the visual component is predominantly pop-influenced fantasy. The themes of darkness, evil, power and apocalypse are fantastic language components for addressing the reality of life's problems. In reaction to the "peace and love" hippie culture of the 1960s, heavy metal developed as a counterculture, where light is supplanted by darkness and the happy ending of pop is replaced by the naked reality that things do not always work out in this world. Whilst fans claim that the medium of darkness is not the message, critics have accused the genre of glorifying the negative aspects of reality.

Heavy metal themes are typically more grave than the generally airy pop from the 1950s, 1960s, and 1970s—focusing on war, nuclear annihilation, environmental issues, political, and religious propaganda. Black Sabbath's "War Pigs," Ozzy Osbourne's "Killer of Giants," Metallica's "...And Justice for All," as well as "Disposable Heroes," and Iron Maiden's "Two Minutes to Midnight" are examples of serious contributions to the discussion of the state of affairs. The commentary on reality sometimes tends to become oversimplified because the fantastic poetic vocabulary of heavy metal deals primarily with very clear dichotomies of light and dark, hope and despair, good and evil, which do not make much room for complex shades of grey. One exception to this are certain [power metal](#) bands, whose lyrical and musical tones are often bombastic and optimistic. Many power metal fans and bands, most notably Manowar, believe metal should be inspiring and upbeat music.

## **Classical influence**

The appropriation of classical music by heavy metal typically includes the influence of Bach and Paganini, rather than Mozart or Franz Liszt. Though Deep Purple/Rainbow guitarist Ritchie Blackmore had been experimenting with musical figurations borrowed from classical music since the early 1970s, Edward Van Halen's solo cadenza "Eruption" (released on Van Halen's first album in 1978) marks an important moment in the development of virtuosity in metal. Following Van Halen, the "classical" influence in metal guitar during the 1980s actually looked to the early eighteenth century for its model of speed and technique. Indeed, the late [Baroque era](#) of Western art music was also

frequently interpreted through a gothic lens. For example, "Mr. Crowley," (1981) by Ozzy Osbourne and guitarist Randy Rhoads, uses both a pipe organ-like synthesizer and Baroque-inspired guitar solos to create a particular mood for Osbourne's lyrics on the legendary occultist Aleister Crowley. Like many other metal guitarists in the 1980s, Rhoads quite earnestly took up the "learned" study of [musical theory](#) and helped to solidify the minor industry of guitar pedagogy magazines (such as *Guitar for the Practicing Musician*) that grew up during the decade. In most instances, however, metal musicians who borrowed the technique and rhetoric of art music were not attempting to *be* classical musicians. (An exception can arguably be found in Yngwie Malmsteen, though many argue that his music relies more on virtuosity and the use of *classical-sounding* elements such as the harmonic minor scale to appear classical without actually *being* classical).

The Encarta encyclopedia claims that "when a text was associated with the music, Bach could write musical equivalents of verbal ideas," Progressive rock bands such as Emerson, Lake, and Palmer and Yes had already explored this relationship before heavy metal evolved. As heavy metal uses apocalyptic themes and images of power and darkness, the ability to translate verbal ideas into musical ideas that successfully convey the ideas of the words is critical to heavy metal authenticity and credibility. An excellent example of this is the theme album, Powerslave, by Iron Maiden. The cover is of a dramatic Egyptian pyramid scene and many of the songs on the album have subject matter that requires a sound suggestive of life and death, including a song entitled "The Rime of the Ancient Mariner," based on the poem by Samuel Taylor Coleridge. However, the 1977 Rush album A Farewell to Kings features the twelve-minute "Xanadu," also inspired by Coleridge and predating the Iron Maiden composition by several years. Bassist Steve Harris has also cited progressive rock bands such as Rush and Yes as influences on his own considerable talents.

# History

## The term "heavy metal"

The origin of the term *heavy metal* in relation to a form of music is uncertain. The term had been used for centuries in chemistry and metallurgy and is listed as such in the *Oxford English Dictionary*. An early use of the term in modern popular culture was by counter-culture writer William S. Burroughs. In his 1962 novel, *The Soft Machine*, he introduces the character "Uranian Willy, the Heavy Metal Kid". His next novel in 1964, *Nova Express*, develops this theme further, *heavy metal* being a metaphor for addictive drugs.

"With their diseases and orgasm drugs and their sexless parasite life forms — Heavy Metal People of Uranus wrapped in cool blue mist of vaporized bank notes — And the Insect People of Minraud with metal music"

Burroughs, William S, (1964). *Nova Express*. New York: Grove Press. p. 112

Given the publication dates of these works it is unlikely that Burroughs had any intent to relate the term to rock music; however, Burroughs' writing may have influenced later usage of the term.

The first use of the term "heavy metal" in a song lyric is the words "heavy metal thunder" in the 1968 Steppenwolf song "Born to be Wild" (Walser 1993, p. 8):

"I like smoke and lightning  
Heavy metal thunder  
Racin' with the wind  
And the feelin' that I'm under"

The book, "The History of Heavy Metal," states the name as a take from "hippiespeak," heavy meaning anything with a potent mood, and metal, more specifically designating what the mood would be, grinding and weighted as metal. The word "heavy" (meaning serious or profound) had entered beatnik/counterculture slang some time earlier and references to "heavy music"—typically slower, more amplified variations of standard pop fare—were already common; indeed, Iron Butterfly first started playing Los Angeles in 1967, their name explained on an album cover, "Iron- symbolic of something heavy as in sound, Butterfly- light, appealing and versatile...an object that can be used freely in the imagination". Iron Butterfly's 1968 debut album was entitled *Heavy*. The fact that Led Zeppelin (whose moniker came partly in reference to Keith Moon's jest that they would "go down like a lead balloon") incorporated a heavy metal into its name may have sealed the usage of the term.

In the late 1960s, Birmingham, England was still a centre of industry and (given the many rock bands that evolved in and around the city, such as Led Zeppelin, The Move, and Black Sabbath), some people suggest that the term *Heavy Metal* may have some relation to such activity. Biographies of The

Move have claimed that the sound came from their 'heavy' guitar riffs that were popular amongst the 'metal midlands'.

Sandy Pearlman, original producer, manager and songwriter for Blue Öyster Cult, claims to have been the first person to apply the term "heavy metal" to rock music in 1970.

A widespread but disputed hypothesis about the origin of the genre was brought forth by "Chas" Chandler, who was a manager of the Jimi Hendrix Experience in 1969, in an interview on the PBS TV programme "Rock and Roll" in 1995. He states that "...it [heavy metal] was a term originated in a New York Times article reviewing a Jimi Hendrix performance," and claims the author described the Jimi Hendrix Experience "...like listening to heavy metal falling from the sky." The precise source of this claim, however, has not been found and its accuracy is disputed.

The first well-documented usage of the term "heavy metal" referring to a style of music, appears to be the May 1971 issue of **Creem**, in a review of Sir Lord Baltimore's *Kingdom Come*. In this review we are told that "Sir Lord Baltimore seems to have down pat most all the best heavy metal tricks in the book". **Creem** critics David Marsh and Lester Bangs would subsequently use the term frequently in their writings in regards to bands such as Led Zeppelin and Black Sabbath.

*Heavy metal* may have been used as a jibe initially by a number of music critics but was quickly adopted by its adherents. Other, already-established bands, such as Deep Purple, who had origins in pop or [progressive rock](#), immediately took on the heavy metal mantle, adding distortion and additional amplification in a more aggressive approach.

## Origins (1960s and early 1970s)

American blues music was highly popular and influential among the early British rockers; bands like the Rolling Stones and the Yardbirds had recorded covers of many classic blues songs, sometimes speeding up the tempo and using [electric guitar](#) where the original used [acoustic](#). (Similar adaptations of blues and other race music had formed the basis of the earliest rock and roll, notably that of Elvis Presley).

Such powered-up blues music was encouraged by the intellectual and artistic experimentation that arose when musicians started to exploit the opportunities of the electrically amplified guitar to produce a louder and more dissonant sound. Where blues-rock drumming styles had been largely simple shuffle beats on small drum kits, drummers began using a more muscular, complex, and amplified approach to match and be heard with the increasingly loud guitar sounds; similarly vocalists modified their technique and increased their reliance on amplification, often becoming more stylised and dramatic in the process. Simultaneous advances in amplification and recording technology made it possible to successfully capture the power of this heavier approach on record.

The earliest music commonly identified as heavy metal came out of the Birmingham area of the United Kingdom in the late 1960s when bands such as Led Zeppelin and Black Sabbath applied an overtly non-traditional approach to blues standards and created new music often based on blues scales and arrangements. These bands were highly influenced by American [psychedelic rock](#) musicians including Jimi Hendrix, who had pioneered amplified and processed blues-rock guitar and acted as a bridge between black American music and white European rockers.

Other oft-cited influences include Vanilla Fudge, who had slowed down and psychedelised pop tunes, as well as earlier British rockers such as The Who and The Kinks, who had paved the way for heavy metal styles by introducing power chords and more aggressive percussion to the rock genre. Another key influence was Cream, who exemplified the [power trio](#) format that would become a staple of heavy metal. Perhaps the earliest song that is clearly identifiable as prototype heavy metal is "You Really Got Me" by The Kinks (1965).

By late 1968, heavy blues sounds were becoming common—many fans and scholars point to Blue Cheer's 1968 cover of Eddie Cochran's hit "Summertime Blues" as the first true heavy-metal song. Beatles scholars cite in particular the songs "Helter Skelter" from *The White Album* and the single version of "Revolution" (1968), which set new standards for distortion and aggressive sound on a pop album. Dave Edmunds' band Love Sculpture released an aggressive heavy guitar version of Khachaturian's *Sabre Dance* in November 1968. The Jeff Beck Group's album *Truth* (late 1968) was an important and influential rock album released just before Led Zeppelin's first album, leading some (especially British blues fans) to argue that *Truth* was the first heavy metal album. The Yardbirds' 1968 single, "Think About It," should also be mentioned, as that employed a similar sound to that which Jimmy Page would employ with Led Zeppelin.

Also, [progressive rock](#) band King Crimson's "21st Century Schizoid Man" from their debut album, *In the Court of the Crimson King* (1969), featured most of the thematic, compositional, and musical characteristics of heavy metal—a very heavily distorted guitar tone and discordant soloing by Robert Fripp with lyrics that focused on what is wrong about what the 21st century human would be, a dark mood and even Greg Lake's vocals were passed through a distortion box.

However, it was the release of *Led Zeppelin* in 1969 that brought worldwide notice of the formation of a new genre. The first heavy metal bands—Led Zeppelin, Deep Purple, Uriah Heep, UFO, and Black Sabbath, among a few—are often now called [hard rock](#) bands by the modern metal community rather than heavy metal, especially those bands whose sound was more similar to traditional rock music. In general, the terms heavy metal and hard rock are often used interchangeably, in particular when discussing the 1970s. Indeed, many such bands are not considered "heavy metal bands" per se, but rather as having contributed individual songs or works that contributed to the genre. Few would consider Jethro Tull a heavy metal band in any real sense, for example, but few would dispute that their song *Aqualung* was a quintessential early Heavy Metal song.

## **Classic Heavy Metal (Late 1970s and early 1980s)**

The late 1970s and early 1980s history of heavy metal music is highly debated among music historians. Bands like Blue Öyster Cult achieved moderate mainstream success and the Los Angeles glam metal scene began finding pop audiences—especially in the 1980s. Others ignore or downplay the importance of these bands, instead focusing on the arrival of classical influences—which can be heard in the work of Eddie Van Halen and Randy Rhoads and such like. Others still highlight the late-70s cross-fertilization of heavy metal with fast-paced, youthful punk rock (e.g. Sex Pistols), culminating in the New Wave of British Heavy Metal around the year 1980, led by bands like Judas Priest and Iron Maiden. These two in particular became very popular in the Heavy Metal movement.

Some followers, including Heavy Metal musicians of prominent groups, believe that the foundations of the definite style and sound of pure heavy metal were laid down by NWOBHM band Judas Priest (another Birmingham band) with three of their early albums: *Sad Wings Of Destiny* (1976), *Sin After Sin* (1977), and *Stained Class* (1978).

Rainbow are also sometimes cited as pioneering a sort of pure heavy metal and one could also make this claim about the later albums of Deep Purple such as *Burn* and *Stormbringer*, but these bands are generally considered to be hard rock bands. Beginning with Judas Priest, metal bands quickly began to look beyond the almost exclusive use of the blues scale to incorporate [diatonic](#) modes into their solos. This has since spread throughout virtually all sub-genres of metal (some [doom metal](#), following in Black Sabbath's footsteps, being the main exception) and along with an overriding sense of musicianship are the main contributions [classical](#) and [jazz](#) (via progressive rock) have made to the genre.

The explosion of guitar virtuosity (pioneered by Jimi Hendrix a musical generation earlier) was brought to the fore by Eddie Van Halen—many consider his 1978 solo "Eruption" (Van Halen, 1978) a milestone. Ritchie Blackmore (formerly of Deep Purple), Randy Rhoads (with pioneers Ozzy Osbourne, and Quiet Riot) and Yngwie Malmsteen went on to solidify this explosion of virtuoso guitar work, and in some cases, classical guitars and nylon-stringed guitars were played at heavy metal concerts. Classical icons such as Liona Boyd also became associated with the heavy metal stars as peers in a newly diverse guitar fraternity where conservative and aggressive guitarists could come together to "trade licks."

This explosion would cool down in the music of Ronnie James Dio (who himself had a tenure at lead vocals with the legendary Black Sabbath) and continue to settle towards Judas Priest and Iron Maiden, who may be the final and complete consummation of "pure" heavy metal in the lineage of the "grandfathers"—Jimi Hendrix, Led Zeppelin, Deep Purple, and Black Sabbath.

## **Mainstream Dominance (1980s)**

The most popular subgenre of Metal emerged in the United States, coming from [Glam Metal](#) bands of the 1980s the epicentre for this explosion was mostly in Los Angeles.

This scene was led by Van Halen, Mötley Crüe and the first wave included groups such as Dokken, Ratt, Def Leppard, Bon Jovi, and others. At times even the likes of Dio and Judas Priest experimented with Glam Metal stylings in their music.

The genres caused a divide in the metal community, mostly due to the [Glam Metal](#) bands image, which fans of [Thrash Metal](#) (A fellow subgenre) generally saw as negative compared to their less eccentric look, a common misconception was that Glam Metal bands were not technically proficient musicians; even though this movement included some of the most critically acclaimed musicians in Hard rock of their era such as Steve Vai (David Lee Roth, Whitesnake), Michael Angelo Batio (Nitro), Eddie Van Halen (Van Halen), and Billy Sheehan (David Lee Roth, Mr. Big).

## **Underground Metal (1980s, 1990s, and 2000s)**

Many [subgenres of heavy metal](#) developed in the 1980s. In a shift away from metal's hard rock roots, a more underground (at first) genre that took influences from [Hardcore punk](#) emerged—[thrash metal](#). The genre's sound was far more aggressive, louder and faster than the original metal bands or their [glam metal](#) contemporaries of the time. This subgenre was pioneered by the 'Big Four Of Thrash', Anthrax, Megadeth, Metallica, and Slayer, with bands like San Francisco's Testament, New Jersey's Overkill and Brazil's Sepultura also making an impact. Meanwhile an even harsher sound was coming from Europe, as Germany's Destruction, Kreator and Sodom used harsher vocals and a generally more aggressive sound in a style that would later influence Black and Death Metal.

In the early and mid 1980s, thrash began to split further into [death metal](#) (a term probably originating from Possessed's song "Death Metal", off their influential "Seven Churches" album), led by Possessed and Death, and [black metal](#) (a term coined by Venom, with an album called "Black Metal", who themselves lacked most integral characteristics of the genre, such as the buzz-saw vocals) and Denmark's Mercyful Fate who are often considered the originators of the Corpse Paint and Satanic and Pagan themes, in which Bathory (generally considered one of the first black metal acts although later deemed to be more in tune with Viking culture) and Mayhem were key players early on.

Progressive Metal, a fusion of the progressive stylings of bands like Rush and King Crimson and Traditional Metal began in the '80s, too, behind innovators like Fates Warning and later Queensrÿche and Dream Theater, who enjoyed substantial mainstream acceptance and success in the glam metal era.

## **Alternative Metal / Nu-Metal (1990s and 2000s)**

The era of metal dominating the mainstream, or "Glam Metal," came to an end with the emergence of Nirvana and other [grunge](#) bands. Later styles of heavy rock music in the 1990s show influences of heavy metal but are typically not labelled sub-genres of heavy metal.

As the 1990s progressed metal began to make a comeback. This time around, the music had a much more aggressive feel than most of the mainstream metal of the 1980s. In some cases, bands also fused traditional elements with electronic beats and samples as well as the conventions and attitude of [alternative rock](#). These newer bands are sometimes labeled [alternative metal](#). Still more subgenres began to appear, such as funeral doom and brutal death metal, drawing on existing heavy metal subgenres.

Heavy metal's comeback was solidified with the arrival of Ozzfest in 1996, a touring music festival hosted by Ozzy Osbourne, the former lead singer of Black Sabbath. Later, Osbourne grew even more famous when he and his family starred in a reality TV show called The Osbournes. Many major newer metal bands eventually wound up playing at Ozzfest sooner or later, including , Marilyn Manson, Rob Zombie, Deftones, Disturbed, Godsmack, Tool, System of a Down, Queens of the Stone Age, Slipknot, Korn, and many more.

Some of these bands were grouped under the heading [nu metal](#) in order to signify a new wave of metal music. Much debate has arisen over the genre's massive success and whether or not it is metal in a conventional sense. Fans of extreme metal, which itself is debated by purists as to whether it is metal or not in the conventional sense, often levy these criticisms against nu metal. In recent years, Ozzfest has had many [metalcore](#) bands playing at the festival and has helped the genre gain much popularity. Some see this style as nu

metal's successor, whilst others believe that it will become popular and fashionable in the same way as nu metal.

## Cultural impact

The loud, confrontational aspects of heavy metal have led to friction between fans and mainstream society in many countries. Due to the hedonistic nature public perception thinks of as being promoted by the music and its occasional anti-religious sentiments, some heavy metal as a sub-culture has come under attack in many Christian and Islamic countries where even wearing a black T-shirt can be an arrestable offense. In Jordan, for example, all Metallica albums, past, present and future were banned in 2001. [1] In Europe and America, the fan base for heavy metal consists primarily of white males in their teens and 20's—many of whom are attracted to heavy metal's overtly anti-social yet fantastical lyrics and extreme volume and tempos. Hence, the stereotype of the spotty-faced, adolescent headbanger venting his rebellious urges by listening to preposterously loud, morbid music. This image has been highlighted in popular culture with such television shows and movies as "Beavis and Butt-head" and "Airheads." Heavy metal's bombastic excesses, exemplified by hair metal, have often been parodied, most famously in the film *This Is Spinal Tap* (see also the phenomenon of the heavy metal umlaut).

Many heavy metal stylings have made their way into everyday (albeit ironic) use; for instance, the "devil horns" hand sign popularized by Ronnie James Dio and Gene Simmons has become a common sight at many rock concerts. During the 1970s and 1980s, flirtation with occult themes by artists such as Black Sabbath, Iron Maiden, Kiss, Led Zeppelin, Motley Crue, Ozzy Osbourne, and W.A.S.P., led to accusations of "Satanic" influences in heavy metal by fundamentalist Christians. One popular contention during that period was that heavy metal albums featured hidden messages urging listeners to worship the Devil or to commit suicide (see Judas Priest and backward message and Allegations of Satanism in popular culture).

## Related styles

[Hard rock](#), mentioned earlier, is closely related to heavy metal (and often the terms overlap in usage), but it does not always match the description of what purists consider the definition of heavy metal. While still guitar-driven in nature and usually riff-based, its themes and execution differ from that of the major heavy metal bands listed earlier in this article. This is perhaps best exemplified by The Who in the late-1960s and early-1970s, as well as other 1970s and 1980s bands like Queen, KISS, Aerosmith, Thin Lizzy, AC/DC, and Scorpions.

[Glam rock](#), a short-lived era in the early 1970s, relied on heavy, crunchy guitars, anthemic songs, and a theatrical image. T. Rex, David Bowie, and Alice Cooper are among the more popular standard examples of this sub-genre.

Some cross-influence has occurred between [punk rock](#), [hardcore punk](#) and heavy metal. [Punk rock](#) was influential on the NWOBHM movement. Another example is Motörhead, the bands leader Lemmy, has spent time in punk band The Damned and attempted to teach Sid Vicious how to play bass guitar.

## Heavy metal dance

Although some heavy metal fans would disagree with the term "dance," there are certain body movements that are nearly universal in the metal world, including headbanging, [moshing](#), and various hand gestures such as devil horns. Stage diving, air guitar, and crowd surfing are also practiced, but crowd surfing and moshing are most popular today.

## Hindustani classical music

**Hindustani Classical Music** is an Indian classical music tradition that took shape in the northern India circa the 13th and 14th centuries AD from existing religious, folk, and theatrical performance practices. The practice of singing based on notes was popular even from the Vedic times where the hymns in Sama Veda, a sacred text, was sung and not chanted. Developing a strong and diverse tradition over several centuries, it has contemporary traditions established primarily in India but also in Pakistan and Bangladesh. In contrast to [Carnatic music](#), the other main Indian classical music tradition originating from the South, Hindustani music was not only influenced by ancient Hindu musical traditions, Vedic philosophy and native Indian sounds but also by the Persian performance practices of the Afghan Mughals.

Outside South Asia, Hindustani [classical music](#) is often associated with Indian music, as it is arguably the most popular stream of music outside the sub-continent.

Hindustani classical music, like Carnatic music, is organized by Ragas (also called raag) which are characterized, in part, by their specific ascent (Arohana) and descent (Avarohana.) The ascent notes may not be identical to the descent notes. King (Vadi) and Queen (Samvadi) notes and a unique note phrase (Pakad). In addition each raga has its natural register (Ambit) and glisando (Meend) rules, and many other specific features. (See [Raga](#))

Hindustani music was structurally organized into the current That scale by Pt. Vishnu Narayan Bhatkhande (1860-1936) in the early part of the 20th century. Prior to this, Ragas were classified as Male (raag), female (Ragini) and Putra (children) ragas.

When artists, usually performers (as opposed to writers) have reached a distinguished level of achievement, titles of respect are added to their names. Hindus are referred to as Pandits and Muslims as Ustads.

## History

Music has long been important to Hinduism, especially for many Vaishnavite sects. During the ancient period, priests who sang Vedic hymns did so based on notes as assigned by the rules later codified in Chandogya Upanishad in circa. 1800 BCE. These priests were called Samans or Samavedis and a number of ancient musical instruments such as conch (Shankhu), lute (Veena), flute (bansuri), trumpets and horns were associated with this and latter practices of ritual singing. The name Raga was first found in Natya Shastra a treatise on all dramatic forms of ancient India circa 200 CE purportedly written by Bharata Muni. Later periods saw further evolution in music theory and the purana period was characterized by numerous references to singing, musicians and musical instruments. Narada's Sangita Makarandha treatise circa 1100 is the earliest text where rules similar to the current Hindustani classical music can be found. Narada actually names and classifies the system in its earlier form before the advent of changes as a result of Islamic influences. Jayadeva's Gita Govinda from the 12th century was perhaps the earliest musical composition presently known sung in the classical tradition called Ashtapadi music.

The advent of Islamic rule under the Delhi Sultanate and later the Mughal Empire over northern India caused the traditional musicians to seek patronage in the courts of the new rulers. These Islamic rulers had strong cultural and religious sentiments focussed outside of India; yet they lived in, and administered, kingdoms which retained their traditional Hindu culture. This helped spur the fusion of Hindu and Muslim ideas to make qawwali and khayal. Perhaps the most legendary musician of this period is Amir Khusrau, who is credited with systematizing the Hindustani methodologies by studying the forms of Vedic music theory and spurring a chain of creative composition that melded Indian with Persian sensibilities. He is also credited with inventing most of the major genres of Hindustani music (such as qawwali), and some of its most important instruments (such as the sitar).

Later, the Mughal Empire intermarried with Indians, especially under Jalal ud-Din Akbar. Music and dance flourished during this period, and the Hindu musician Tansen is still well-remembered. Indeed, his ragas (which are based on times of the day) were reputed to have been so powerful that according to legend, upon his playing a night-time raga in the morning, the entire city fell under a hush and clouds gathered in the sky.

In the 20th century, the power of the maharajahs (Hindus) and nawabs (Muslims) declined, and thus so did their patronage. The Indian Government-run All India Radio helped to counter this development and replaced the patronage system. The first star was Gauhar Jan, whose career was born out of Fred Gaisberg's first recordings of Indian music in 1902.

## Instrumental music

Outside of South Asia, pure instrumental sub-continental classical music is more popular than vocal music, possibly because the lyrics in the latter are not comprehensible.

A number of musical instruments are associated with Hindustani classical music. The veena, a string instrument, was traditionally regarded as the most important, but few play it today and it has largely been superseded by its cousins the sitar and the sarod. Other plucked/struck string instruments include the surbahar, sursringar, santoor and various versions of the slide guitar. Among bowed instruments, the sarangi, esraj (or dilruba) and violin are popular. The bansuri (bamboo flute), shehnai and harmonium are important wind instruments. In the percussion ensemble, the tabla and the pakhavaj are the most popular. Various other instruments (including the [banjo](#) and the [piano](#)) have also been used in varying degrees.

Some representative performers (these lists are by no means comprehensive nor are intended to be):

Veena: Birendra Kishore Roy Chowdhury, Zia Mohiuddin Dagar, Asad Ali Khan  
Sitar: Imdad Khan, Enayet Khan, Ravi Shankar, Vilayat Khan, Nikhil Banerjee, Rais Khan, Abdul Halim Jaffer Khan, Imrat Khan, Shahid Parvez, Indranil Bhattacharya, Budhaditya Mukherjee  
Sarod: Allauddin Khan, Hafiz Ali Khan, Radhika Mohan Moitra, Timir Baran, Ali Akbar Khan, Amjad Ali Khan, Buddhadev Dasgupta, Vasant Rai, Sharan Rani, Aashish Khan  
Surbahar: Imdad Khan, Enayet Khan, Annapurna Devi, Imrat Khan  
Shehnai: Bismillah Khan  
Bansuri: Pannalal Ghosh, Hariprasad Chaurasia  
Santoor: Shivkumar Sharma  
Sarangi: Bundu Khan, Ram Narayan  
Esraj: Ashesh Bandopadhyay, Ranadhir Roy  
Violin: V. G. Jog, Gajananrao Joshi, N. Rajam  
Tabla: Ahmed Jan Thirakwa, Shamta Prasad, Kanthe Maharaj, Alla Rakha, Keramatullah Khan, Kishen Maharaj, Zakir Hussain

## Vocal music

Despite the fact that instrumental music is better known outside India, Hindustani classical music is primarily vocal-centric, insofar as the musical forms were designed primarily for vocal performance, and many instruments were designed and evaluated as to how well they emulate the human voice. Some of the best known vocalists are Ustad Amir Khan , Bhimsen Joshi, Kumar Gandharva, Ustad Bade Ghulam Ali Khan, Kishori Amonkar, Prabha Atre, Gangubai Hangal, Rajan and Sajan Mishra, Pandit Jasraj, Satyasheel Deshpande, Shubha Mudgal and Parveen Sultana .

## Types of Compositions

The major vocal forms associated with Hindustani classical music are the khyal, ghazal, and thumri. Other styles include the dhrupad, dhamar, tarana, trivat, chaiti, kajari, tappa, tapkhyal, ashtapadi and bhajan.

### Dhrupad

Dhrupad is a Hindu sacred style of singing traditionally performed by men with a tanpura and pakhawaj accompanying. The lyrics are in a medieval form of Hindi the Braj bhasha and typically heroic in theme, or else praising a particular deity. A more ornamented form is called dhamar. The dhrupad was the main form of song a few centuries ago, but has since given way to the somewhat less austere, more free-form khyal. The best performers of Dhrupad are the Dagar brothers, particularly Fahimuddin Dagar.

### Khayal

A form of vocal music, khayal is almost entirely improvised and very emotional in nature. A khyal consists of around 4-8 lines of lyrics set to a tune. The singer then uses these few lines as the basis for improvisation. Though its origins are shrouded in mystery, the 15th century rule of Hussain Shah Sharqi and was popular by the 18th century rule of Mohammed Shah. The best-known composer of the period was Sadarang, a pen name for Niamat Khan. Later performers include Faiyaz Khan, Abdul Karim Khan, Bade Ghulam Ali Khan, Amir Khan, Kumar Gandharva and Mallikarjun Mansur. Some of the present day vocalists are Bhimsen Joshi, Satyasheel Deshpande, Iqbal Ahmad Khan, Girija Devi, Kishori Amonkar, Ajoy Chakraborty, Prabakar Karekar, Pandit Jasraj, Rashid Khan, Aslam Khan, Channulal Mishra, Shruti Sadolikar, Chandrashekar Swami and Mashkoor Ali Khan.

### Tarana

Another vocal form, Tarana are songs that are used to convey a mood of elation and are usually performed towards the end of a concert. They consist of a few lines of rhythmic sounds or bols set to a tune. The singer uses these

few lines as a basis for very fast improvisation. It can be compared to the Tillana of [Carnatic music](#).

### **Thumri**

Thumri is a semiclassical vocal form said to have begun with the court of Nawab Wajid Ali Shah, 1847-1856. There are three types of thumri: Punjabi, Lucknavi and poorab ang thumri. The lyrics are typically in a proto-Hindi language called Braj bhasha and are usually romantic. Performers include Siddheshwari Devi, Shobha Gurtu, Bade Ghulam Ali Khan, Girija Devi and Purnima Choudhuri.

### **Bhajan**

Hindu religious vocal music, bhajan is the most popular form in northern India. Famous performers include Kabir, Tulsidas and Mirabai. It arose out of the Alvar and Nayanar bhakti movement of the 9th and 10th century.

### **Ghazal**

Ghazal is an originally Persian form of poetry. In the Indian sub-continent, Ghazal became the most common form of poetry in the Urdu language and was popularized by classical poets like Mir Taqi Mir, Ghalib and Sauda amongst the North Indian literary elite. Vocal music set to this mode of poetry is popular with multiple variations across Iran, Central Asia, Turkey, India and Pakistan. Ghazal exists in multiple variations, including folk and pop forms but its greatest exponents sing it in a semi-classical style. Some notable performers of Ghazal include Ustad Amanat Ali Khan, Mehdi Hasan, Farida Khanum, Iqbal Bano and Ghulam Ali from Pakistan and Jagjit Singh and Pankaj Udhas from India. Themes range from ecstatic love to religious piety.

## Principles of Hindustani music

The two main streams of [Indian classical music](#), Hindustani and [Carnatic](#), have the same structuring principles. The rhythmic organization is based on rhythmic patterns called tala. The melodic foundations are "melodic modes" called ragas.

Ragas may consist of up to seven scale degrees, or swara. Hindustani musicians name these pitches using a system called sargam, the equivalent of Western movable do solfege:

sa = do re = re ga = mi ma = fa pa = sol dha= la ni = ti sa = do

Both systems repeat at the octave. The difference between sargam and solfege is that re, ga, ma, dha, and ni can refer to either "pure" (shuddh) or altered--"flat/soft" (komal) or "sharp" (tivra)--versions of their respective scale degrees. As with movable do solfege, the notes are heard relative to an arbitrary tonic that varies from performance to performance, rather than to fixed frequencies, as on a xylophone.

The fine intonational differences between different instances of the same swara are sometimes called [ruti. The three primary registers of Indian classical music are Mandra, Madhya and Tara. Since the octave location is not fixed, it is also possible to use provenances in mid-register (such as Madra-Madhya or Madhya-Tara) for certain ragas. A typical rendition of Hindustani raga involves three stages, Alap, Jhod and Jhala.

## **Other personalities**

Pandit Pran Nath is an influential teacher of Hindustani vocal music whose students include Don Cherry, Terry Riley, and LaMonte Young.

# Hi-NRG

**Hi-NRG** (High Energy) is a type of [electronic dance music](#) which was popular in [nightclubs](#) in the early 1980s.

## Description

The name "Hi-NRG" comes from the Evelyn Thomas's Disco hit, "High Energy", produced by Ian Levine. Hi-NRG is typified by an energetic staccato [sequenced synthesizer](#) sound where the bass often takes the place of the hi-hat. There is often heavy use of the clap sound found on [drum machines](#). During 1984 the music began to crossover into the mainstream pop charts in the United Kingdom, largely due to the success of the Record Shack [record label](#).

Record Shack also enjoyed chart success with tracks by Break Machine and an unlikely comeback single by Eartha Kitt ("Where Is My Man", 1984). Stock Aitken Waterman were Hi-NRG producers at the start of their career, working with Divine and Hazell Dean, and producing the most successful Hi-NRG track, Dead Or Alive's "You Spin Me Round (Like a Record)", which reached number one in the UK. Hi-NRG was largely superseded by [house music](#) but still enjoys an underground following, usually in the form of Hi-NRG versions of mainstream pop hits.

Many of the Hi-NRG tracks produced in Europe at the time qualify doubly as examples of [Italo disco](#) (i.e., Bobby Orlando, Taffy, Magazine 60, Divine, Roni Griffith, the Flirts, Lime, etc.) and discofox (i.e. Linda Jo Rizzo, Lian Ross, Modern Talking, Fancy, Lift Up, Blue System, Bad Boys Blue.)

## Association

The style is often associated with gay promiscuity, thus Miquel Brown's "So Many Men, So Little Time" and Hazell Dean's "Searchin' (I Gotta Find a Man)", whilst typically sung by women, are actually aimed at gay men. It is also associated with camp excess and gender bending by artists such as Divine and Pete Burns.

## Artists

Earlene Bentley  
Laura Branigan  
Bronski Beat  
Dead Or Alive  
Edyta  
Hazell Dean

## Records

All of these records reached the Hi-NRG charts in the late 1980s:

- Bianca - Midnight Lover
- Bodyheat - No! Mr Boom Boom (Diamond Records)
- Crystal In The Pink - Back To You
- Celena Duncan - Questions And Answers (Nightmare Records)
- Barbara Doust - If You Love Somebody
- Sisley Ferre - For You (Hotsound Records)
- Fun Fun - Could This Be Love
- Samantha Giles - Stop
- Havana - Satisfy My Desire (Wow Records)
- Carol Jiani - Turning My Back And Walking Away (Nightmare Records)
- Lanei - Love Bites (Opium Records)
- Lime - Gold Digger (TSR Records)
- M&H Band - Popcorn
- Marsha Raven - I Like Plastic
- Man To Man - Hard Hitting Love (Nightmare Records)
- Midnight Sunrise - This Is A Haunted House (Nightmare Records)
- Modern Rocketry - I Feel Love Coming (Megatone Records)
- Off - Electrica Salsa (Ton Son Ton Records)
- Linda Jo Rizzo - Perfect Love
- Shooting Party - Safe In The Arms Of Love
- Helena Springs - Paper Money (Atlantic Records)
- Scott Stryker - Science Fiction
- T-Arc - Undercover Lover (ZYX Records)
- Linda Taylor - Every Wakin' Hour (Nightmare Records)
- Tuillio De Piscopo - Stop Bajon (Primavera) (Greyhound Records)
- Vivien Vee - Heartbest (X-Energy Records)
- XS-S - I Need More (VCN Records)

## Number Ones

These records reached Number One in the Hi-NRG charts compiled by James Hamilton and Alan Jones in Record Mirror

- Eria Fachin - Savin' Myself (Power Records - 1987)
- Michelle Goulet - Over And Over And Over (Island Records America - 1988)
- Man To Man - Who Knows What Evil? (Nightmare Records)
- Kim Weston - Signal Your Intention (Nightmare Records - 1987)

## Cover Versions in the Hi-NRG style

Quantize - The Sun Ain't Gonna Shine Anymore, a cover of The Walker Brothers on Passion Records.  
Seventh Avenue - The Love I Lost, a cover of Harold Melvin and the Bluenotes on Nightmare Records.  
Bona-Riah - House Of The Rising Sun on Rise Records

## Record Labels

Record labels that most frequently appeared in Record Mirror's Hi-NRG chart are as follows:

- Bolts Records
- Flea Records - Italy
- Hi Tension Records - Belgium
- Macho Records - Italy
- Nightmare Records
- Passion Records
- Time Records - Italy
- X-Energy Records - Italy

## **Hip hop dance**

**Hip hop dance** refers to dance styles primarily danced to hip hop music, or that have evolved as a part of the hip hop culture. Hip hop dance can be divided into old school and new school, but the separation between the two is somewhat ambiguous and thought to be evolving with the passing of time.

Hip hop dances are often considered street dances, because of how they were formed and are being practiced.

## **Old school**

Old school hip hop dances are those styles that evolved in the 1970s and 1980s and were primarily danced to funk and old school hip hop music. Breakdancing is the best known of all hip hop dance styles, and is considered a corner stone of hip hop culture itself. In the 1980s, many funk dance styles that originally evolved separated from hip hop, such as popping and locking, started to be incorporated with the hip hop culture as well, and could be seen danced together with breakdancing.

## **New school/new style**

In the 1990s, as hip hop music evolved and grew further away from funk, it got slower, heavier and more aggressive. This gave birth to new styles of hip hop dance, most of them danced upright in opposite to breakdancing which is famous for its floorwork. New school hip hop dancing took inspiration from many of the older street dance styles and merged them into something new. Some more specific styles of new school hip hop are krumping, harlem shake, snap dancing, blood walk, clown walk, hill toe, booty popping, crip walk.

Classifying new school hip hop as a dance style of its own has grown common with larger street dance competitions such as Juste Debout, which includes *new style* as a separate category for people to compete in.

Many of the newer styles of hip hop are a common sight in today's youth-oriented music videos on television channels such as MTV.

## Hip hop at dance studios

Today, many dance studios offer hip hop classes in which they practice elements of various hip hop dances, often mixing them with more structured dance styles such as jazz. As hip hop is such a broad genre it gives the choreographer much freedom and room for personal interpretation, allowing them to be more creative.

## **Hip hop fashion**

**Hip hop fashion** is, according to KRS One, one of the nine "extended" elements of hip hop culture. It refers to a distinctive style of dress originating simultaneously with both the African-American and Latino youth living in the two main coastal cities of the United States. New York City on the East Coast and Los Angeles on the West Coast each contributed various elements to its overall style seen worldwide today. Hip hop fashion goes hand-in-hand with the expressions and attitudes of hip hop culture in general.

## Early hip hop fashion

Since the 1970s, hip hop fashion has changed significantly over the years, and today is a prominent part of popular fashion as a whole across the world and for all ethnicities. During the 1980s, such clothing items as large glasses (Cazals), Kangol hats, multi-finger rings, and sneakers (usually Adidas-brand shelltoes and often with "phat" or oversized shoelaces) were prominently worn by the big-name hip hop stars of the day, including Run-DMC and LL Cool J. Performers such as Kurtis Blow and Big Daddy Kane also helped popularize the wearing of gold necklaces and other such jewelry. Popular haircuts ranged from the early-1980s Jheri curl to the late-1980s hi-top fade. Also during the late 1980s, fashions and hairstyles symbolizing the Black Pride movement, including Africa chains, dreadlocks, and red-black-and-green clothing became popular as well, promoted by artists such as Queen Latifah KRS One, and Public Enemy.

1980s hip hop fashion is remembered as one of the most important elements of [old school hip hop](#), and it is often celebrated in nostalgic hip hop songs such as Ahmad's 1994 single "Back in the Day", and Missy Elliott's 2002 single "Back in the Day". The main trend was toward African-influenced clothing styles, in accordance with the Afrocentric stylings of much hip hop music of the time (from bands such as X-Clan). Also prevalent was the "high top fade" hairstyle popularized by Will Smith (The Fresh Prince) and Christopher "Kid" Reid of Kid 'n Play, among others.

## Hip hop fashion from the late 1980s to the 2000s

As [hip hop music](#) and culture grew and developed, its fashion began to change as well. Pop rappers such as The Fresh Prince, Kid 'n Play, and Left Eye of TLC popularized the wearing of bright, often neon-colored, clothing and the wearing of regular items such as baseball caps and even condoms in unusual ways. A number of fads existed during this period as well, including Kris Kross' method of wearing their clothes backwards.

[Gangsta rap](#) became one of the most prevalent styles of hip hop, and by the mid-1990s, hip hop fashion had taken on significant influence from the dress styles of street thugs and prison inmates. Much of today's hip hop fashions, most specifically the wearing of baggy pants and black ink tattoos, are commonly attributed with being initially inspired by the street fashions of the cholos (Chicano gangsters) on the West Coast. This style of fashion along with its associated hand signs and territorial or "homeboy" mentality was then adopted by the African-American youth initially in Los Angeles which then quickly transferred to the hip hop community at large. An example of this is the wearing of baggy clothes, often without the use of a belt for the pants, which originated from prison where belts are among the first things confiscated while new inmates are being given their uniforms. Hooded sweaters ("hoodies"), military hats, field jackets and fatigues, Hi-Tek brand para-military boots and Timberland boots were especially popular in New York City, while the West Coast culture additionally contributed with the wearing of flannel overshirts and classic Converse Chuck Taylor All-Stars to hip hop fashion. Gold teeth were popularized by Southern hip hop artists such as Master P, many of whom often wore a full mouth of gold fronts or permanent dental fixtures with precious metals and precious gems which were used as a fashion statement and status symbol that can't be snatched from around a neck or out of a pocket. Nike Air Force One and Fila shoes are also popular components of hip hop fashion

In the mid-1990s, mafioso influences, especially and primarily inspired by the 1983 remake version of Scarface, became popular in hip hop, and classic gangster fashions such as Fedora hats, and alligator-skin shoes ("gators") became fashionable, most prominently popularized by The Notorious B.I.G. and Jay-Z. Although in some areas in the mid-west these styles have been a constant staple of the fashion scene. Detroit is an area where this element of style has seemed to endure regardless of outside influences that may flow with or against it.

The rise of hip-pop in the late-1990s, primarily the work of Sean "Diddy" Combs, known locally around New York at that time as the "Shiny Suit Man" brought elements such as loud, flashy PVC aviator inspired suits and platinum jewelry to the forefront of hip hop in an effort to add a new vivid dimension of color and flash to the videos produced as a marketing tool. Combs, who started his own Sean John clothing line, and clothing manufacturers such as Karl Kani and FUBU brought hip hop fashion to the mainstream, resulting in a multi-million dollar hip hop fashion industry. There was a resurgence of

traditional African-American hairstyles such as cornrows and Afros, as well as the Caesar low-cut. Caesars and cornrows are maintained by wearing a do-rag over the head during periods of sleeping and home activity to prevent the hair from being displaced or tossed. Do-rags soon became popular hip hop fashion items in their own right.

The "hip-pop" era also saw the split between male and female hip hop fashion, which had previously been more or less similar. Women in hip hop had emulated the male tough-guy fashions such as baggy jeans, "Loc" sunglasses, tough looks and heavy workboots; many, such as Da Brat, accomplished this with little more than some lip gloss and a bit of make-up to make the industrial work pants and work boots feminine. The female performers who completely turned the tide such as Lil Kim and Foxy Brown popularized glamorous, high-fashion feminine hip hop styles, such as Kimora Lee Simmons fashion line of Baby Phat. While Lauryn Hill and Eve popularized more conservative styles that still maintained both a distinctly feminine and distinctly hip hop feel.

After platinum replaced gold as the most popular precious metal in hip hop fashion, it became commonplace for artists and fans alike to wear platinum (or silver) jewelry, often with significant amounts of diamonds embedded in them. Platinum jewelry later became a prominent source of bragging rights for hip hop performers and audiences, and B.G. recorded a 1999 hit song that summarized the phenomenon with a popular catchphrase: "Bling Bling". Platinum fronts also became popular; Cash Money Records executive/rapper Brian "Baby" Williams infamously has an entire mouthful of permanent platinum teeth. Others have fashioned grills, removable metal jewelled teeth coverings.

## Modern hip hop fashion

After the influx of the hip-pop influence, hip hop fashion became less based in actual street wear and more in an idealization of such. Hip hop clothing is often produced by popular and successful designers, who charge significant amounts for their products.

The main elements of modern male hip hop fashion are baggy jeans slung low around the waist, gold or platinum chains, boots or a fresh pair of kicks (sneakers), and a bandana or doo rag tied around the head (often with a baseball cap on top).

Today, hip hop fashion is worn by a significant percentage of young people around the world. Many hip hop artists and executives have started their own fashion labels and clothing lines, including Russell Simmons (Phat Farm), Damon Dash and Jay-Z (Rocawear), Eminem (Shady Ltd) and OutKast (OutKast Clothing). Other prominent hip hop fashion companies (e.g. DownUrban) have included, in addition to the aforementioned Karl Kani and FUBU, Willie Esco, Ecko, Vokal, G-unit, and Mecca USA. There are now a significant number of retailers that are dedicated to the sale of hip-hop inspired fashions.

Hip hop fashion is often satirised by celebrities such as Ali G and Goldie Lookin' Chain.

[DJing \(Turntablism\)](#) - [History](#) - [Rapping](#) - [Roots](#) - [Timeline](#)

**Hip hop music** (also referred to as **rap** or **rap music**) is a style of [popular music](#). It is made up of two main components: [rapping](#) (MCing) and DJing (audio mixing and scratching). Along with breakdancing and graffiti (tagging), these compose the four elements of hip hop, a cultural movement that was initiated by inner-city youth (mostly minorities such as African Americans and Latinos) in New York City in the early 1970s.

Typically, hip hop music consists of one or more rappers who tell semi-autobiographic tales, often relating to a fictionalized counterpart, in an intensely rhythmic lyrical form making abundant use of techniques like assonance, alliteration, and rhyme. The rapper is accompanied by an instrumental track, usually referred to as a "beat", performed by a DJ, created by a producer, or one or more instrumentalists. This beat is often created using a sample of the percussion break of another song, usually a [funk](#), [rock](#), or [soul](#) recording. In addition to the beat other sounds are often sampled, synthesized, or performed. Sometimes a track can be instrumental, as a showcase of the skills of the DJ or producer.

Hip hop began in New York City when DJs began isolating the percussion break from [funk](#) and [disco](#) songs. The early role of the MC was to introduce the DJ and the music and to keep the audience excited. MCs began by

speaking between songs, giving exhortations to dance, greetings to audience members, jokes and anecdotes. Eventually this practice became more stylized and became known as rapping. By 1979 hip hop had become a commercially popular music genre and began to enter the American mainstream. In the 1990s, a form of hip hop called [gangsta rap](#) became a major part of [American music](#), causing significant controversy over lyrics which were perceived as promoting violence, promiscuity, drug use and misogyny. Nevertheless, by the beginning of the 2000s, hip hop was a staple of popular music charts and was being performed in many styles across the world.

## Term usage

The terms *rap* and *rap music* are often used to describe *hip hop music*; the terms *rap music* and *hip hop music* are generally synonymous, although *rap music* is sometimes used to describe hip hop songs without vocals. *Hip hop music* is also erroneously used at times to describe related genres of music, such as contemporary R&B, which are primarily sung; while singing is commonly present in hip hop songs, the main vocal (if there are vocals) is always rapped.

## Characteristics

Hip hop is a cultural movement, of which music is a part (as are graffiti and breakdancing). The music is itself composed of two parts, rapping, the delivery of swift, highly rhythmic and lyrical vocals, and DJing, the production of instrumentation either through sampling, instrumentation, [turntablism](#) or beatboxing. Another important factor of hip hop music is the fashion that originated along with the music. The fashion was a representation of the music.

## Rhythmic structure

Beats (though not necessarily raps) in hip hop are almost always in 4/4 time. At its rhythmic core, hip hop swings: instead of a *straight* 4/4 count (pop music; rock 'n' roll; etc.), hip hop is based on an anticipated feel somewhat similar to the "swing" emphasis found in [jazz](#) percussion. Like the triplet emphasis in swing, hip hop's rhythm is subtle, rarely written as it sounds (4/4 basic; the drummer adds the hip hop interpretation) and is often played in an almost "late" or laid back way.

This style was innovated predominantly in [soul](#) and [funk](#) music, where beats and thematic music were repeated for the duration of tracks. In the 1960s and 1970s, James Brown (known as The Godfather of Soul) talked, sang, and screamed much as MCs do today. This musical style provides the perfect platform for MCs to rhyme. Hip hop music generally caters to the MC for this reason, amplifying the importance of lyrical and delivering prowess.

[Instrumental hip hop](#) is perhaps the lone exception to this rule. In this hip hop subgenre, DJs and producers are free to experiment with creating instrumental tracks. While they may mix in sampled rap vocals, they are not bound by traditional hip hop format.

## Instrumentation & production

The instrumentation of hip hop derives from [disco](#), [funk](#), and [R&B](#), both in the sound systems and records sampled and session musicians and their instrumentation used. Disco and club DJs' use of mixing originated from the need to have continuous music and thus smooth transitions between tracks. Hip hop Kool DJ Herc, in contrast, originated the practice of isolating and extending only the [break](#)—a short percussion solo interlude—by mixing between two copies of the same record. This was, according to Afrika Bambaataa, the "certain part of the record that everybody waits for—they just let their inner self go and get wild." (Toop, 1991) James Brown, Bob James, and Parliament—among many others—have long been popular sources for breaks. Over this one could and did add instrumental parts from other records, frequently as horn punches (ibid). Thus the instrumentation of early sampled

or sound system-based hip hop is the same as [funk](#), [disco](#), or [rock](#): vocals, [guitar](#), [keyboards](#), [bass](#), [drums](#) and [percussion](#).

Although original hip hop music consisted solely of the DJ's breakbeats and other vinyl record pieces, the advent of the [drum machine](#) allowed hip hop musicians to develop partially original scores. Drum set sounds could be played either over the music from vinyl records or by themselves. The importance of quality drum sequences became the most important focus of hip hop musicians because these rhythms (*beats*) were the most danceable part. Consequently, drum machines were equipped to produce strong kick sounds. This helped emulate the very well-engineered drum solos on old funk, soul and rock albums from the late 1960s and early to mid 1970s. Drum machines had a limited array of predetermined sounds, including hi-hats, snares, toms, and kick drums.

The introduction of the [sampler](#) changed the way hip hop was produced. A sampler can reproduce small sound clips from any input device, such as a turntable. Producers were able to sample familiar drum patterns. More importantly, they could sample a variety of instruments to play along with their drums. Hip hop had finally gathered its complete band.

Many producers and listeners pride certain records for being hip hop lore and thus a good source of samples and breaks. To this day, producers use arcane equipment to replicate the same rough sound used in older records. This lends credibility to the records and serves as a historical reminder to the listeners of hip hop's origins.

## History

*For more details on this topic, see [History of hip hop music](#).*

The two main historical eras of hip hop are the [old school hip hop](#) era (1970 to 1985), which spanned from the beginning of hip hop until its emergence into the mainstream, and [the golden age of hip hop](#) (1985 to 1993), which consolidated the sounds of the [East Coast](#) and the [West Coast](#) and transitioned into the modern era with the rise of [gangsta rap](#) and [G-funk](#). The years after 1993 are considered the modern era of hip hop.

## Origins

*Main article: [Roots of hip hop music](#)*

The roots of hip hop music are in West African and African American music. Discussion of the roots of hip hop (and rap) must mention the contributions of griots The Last Poets and Jalal Mansur Nuriddin, whose [jazzy](#) and poetic "spiels" commented on 1960's culture. Hip hop arose during the 1970s when block parties became common in New York City, especially in the Bronx. Block parties were usually accompanied by music, especially [funk](#) and [soul music](#). The early DJs at block parties began isolating the percussion breaks to hit songs, realizing that these were the most danceable and entertaining parts; this technique was then common in Jamaica (see [dub music](#)) and had spread via the substantial Jamaican immigrant community in New York City, especially the godfather of hip hop, DJ Kool Herc. Dub had arisen in Jamaica due to the influence of American sailors and radio stations playing [R&B](#). Large sound systems were set up to accommodate poor Jamaicans, who couldn't afford to buy records, and dub developed at the *sound systems* (refers to both the system and the parties that evolved around them).

## Old school hip hop (1970–1986)

*Main article: [Old school hip hop](#)*

Hip hop music began in the early 1970s in New York with the advent of [breakbeat](#) DJing. Kool DJ Herc, Grandmaster Flash and other DJs extended the [breaks](#) (short percussion interludes) of [funk](#) records, creating a more "danceable" sound. This use of extended percussion breaks led to the development of mixing and scratching techniques, and later to the popularization of [remixes](#).

As hip hop's popularity grew, performers began speaking while the music played, and became known as *MCs* or *emcees*. Performers often emceed for hours at a time, with some improvisation and a simple four-count beat and basic chorus. Teams of emcees (many of whom were former gang members)

sprang up throughout the country, led by the first emcee team, Kool Herc & the Herculoids. The MCs grew more varied in their vocal and rhythmic approach, incorporating brief rhymes, often with a sexual or scatological theme. These early raps incorporated rhyming lyrics from African American culture (see [roots of hip hop music](#)), such as the dozens.

The first steps towards the commercialization of hip hop came with the release of what are usually called the first two commercially issued hip hop recordings: "King Tim III (Personality Jock)" by the Fatback Band, and "Rapper's Delight" by The Sugarhill Gang. Though neither the Fatback Band nor the Sugarhill Gang had significant roots in the DJ culture, "Rapper's Delight" became a Top 40 hit on the U.S. Billboard pop singles chart. After the releases of follow ups by acts such as Kurtis Blow ("The Breaks"), The Sequence ("Funk You Up"), and Grandmaster Flash & the Furious Five ("Freedom"), hip hop was pegged as a successful, yet temporary, trend in music.

During the 1980s, hip hop began to diversify and develop into a more complex form. The simple tales of 1970s emcees were replaced by highly metaphoric raps over complex, multi-layered beats. Some rappers even became mainstream pop performers, including Kurtis Blow, whose appearance in a Sprite commercial made him the first hip hop musician to be considered mainstream enough to represent a major product, but also the first to be accused by the hip hop audience of [selling out](#).

The techniques used in hip hop changed during the 1980s as well. Most important were the DJ records such as Grandmaster Flash's "Adventures on the Wheels of Steel." This record was known for pioneering use of scratching, which was invented by Grandwizard Theodore in 1977. Also important were electronic recordings such as "Planet Rock" by Afrika Bambaataa and Run DMC's "Sucker MC's" and "Peter Piper," the latter of which contains genuine cutting by Run DMC member Jam Master Jay. In 1982, Grandmaster Flash & the Furious Five released a "message rap", called "The Message"; this was one of the earliest examples of recorded hip hop with a socially aware tone. In 1984, Marley Marl accidentally caught a drum machine snare hit in the sampler; this innovation was vital in the development of [electro](#) and other later types of hip hop.

## Golden age hip hop (1986–1993)

*Main article:* [The golden age of hip hop](#)

A number of new hip hop styles and subgenres began appearing as the genre gained popularity. Run-D.M.C.'s collaboration with hard rock band Aerosmith on "Walk This Way" was an early example of rock and hip hop fusions. Also, the mid-1980s saw the rise of the first major black female group, Salt-N-Pepa, who hit the charts with singles like "The Show Stoppa" in 1985. Ice-T's seminal "6n' Da Mornin'" (1986) was one of the first nationally successful West Coast hip hop singles, and is often said to be the beginning of gangsta rap. In 1988 and 1989, artists from the Native Tongues Posse released the first conscious hip hop albums, with jazz-based samples and diverse, quirky and often political lyrics covering a diverse range of topics (see jazz rap) and strongly influenced by the Afrocentric messages of Bambaataa's Zulu Nation.

In 1987, Public Enemy brought out their debut album (Yo! Bum Rush the Show), and Boogie Down Productions followed up in 1988 with By All Means Necessary. Both records pioneered a wave of hard-edged politicized

performers. Meanwhile, Public Enemy's Bomb Squad production team, and those of other artists, pioneered new techniques in sampling that resulted in dense, multi-layered sonic collages.

## **Modern era of hip hop (1993–present)**

In the 1990s, gangsta rap became mainstream, beginning in 1992, with the release of Dr. Dre's *The Chronic*. This album established a style called G Funk, which soon came to dominate West Coast hip hop. Though G Funk was the most popular variety of hip hop in the early 1990s, New York's hip hop scene did not disappear, and remained an integral part of the industry, producing such well-regarded acts as The Wu-Tang Clan, Nas, AZ, Mobb Deep, and Busta Rhymes. The reemergence of New York as a growing entity in mainstream hip hop soon spawned an inevitable confrontation between the East Coast and West Coast and their respective major labels. This sales rivalry eventually turned into a personal rivalry, provoked in part by famous West Coast rapper Tupac Shakur's 1994 shooting, which he blamed on The Notorious B.I.G. and his Bad Boy Entertainment label. Artists from both labels traded diss tracks (most notably Tupac's "Hit 'Em Up,") and the feud's escalation resulted in the still unsolved deaths of both rappers.

Later in the 1990s, record labels based out of Atlanta, St. Louis and New Orleans gained fame for their local scenes. In 1996, Cleveland-based rap group Bone Thugs-N-Harmony tied The Beatles' 32-year-old record for fastest-rising single with "Tha Crossroads," and by the end of the decade, hip hop was an integral part of popular music. In 2000, Caucasian rapper Eminem's *The Marshall Mathers LP* sold over nine million copies and won a Grammy Award.

In the 1990s and into the following decade, elements of hip hop continued to be assimilated into other genres of popular music; [neo soul](#), for example, combined hip hop and [soul music](#) and produced some major stars in the middle of the decade.

## Musical impact

Aside from hip hop's great popularity, the genre has had an impact on most varieties of [popular music](#). There are performers that combine either hip hop beats or rapping with [rock and roll](#), [heavy metal](#), [punk rock](#), merengue, salsa, [cumbia](#), [funk](#), [jazz](#), [house](#), taarab, [reggae](#), highlife, mbalax and [soul](#). Teen pop singers and [boy bands](#) like the Backstreet Boys, \*NSYNC, Christina Aguilera, Jessica Simpson, and Britney Spears utilize hip hop beats in many of their most popular singles.

Hip hop has had an especially close relationship with soul music since the early 1990s. Indeed, today there is little recorded soul that does not feature some element of hip hop. This fusion, called nu soul, can be traced back to the late 1980s New Jack Swing groups, though it did not reach its modern form until the rise of performers like Mary J. Blige. In the late 1990s and early 2000s, the hip hop influence grew more prominent in singers like D'Angelo, Lauryn Hill, Jill Scott and Alicia Keys.

During the 80's, popular acts like Run-D.M.C. used both [hard rock](#) and hip hop, especially in their genre-crossing, unprecedented smash hit "Walk This Way", performed with Aerosmith. Other performers, like Ice-T and his band Body Count used hip hop, punk rock and metal, though the first band to combine metal with rap vocal techniques is said to be Anthrax (others early adopters include Biohazard, Faith No More, Rage Against The Machine and Red Hot Chili Peppers). By the end of the 1990s, rap-metal grew both more popular and more derided by fans of both genres, with the rise of bands like Linkin Park, Limp Bizkit and Ko/n, who were called [nu metal](#).

In Latin America, rapping was already known in the 1980s, in the form of toasting, a part of Jamaican [ragga](#) music. Rapped lyrics were already a part of [soca music](#), for example. The growth of hip hop in the area, however, led to more pronounced fusions like reggaeton and timba. Similarly, in Africa, rapping-like vocals (such as Senegalese tassou) were already a part of popular music, and hip hop was easily adapted to popular styles like taarab and mbalax. Hip hop has also grown outstandingly in Cuba, with groups such as Anonimo Consejo, Doble Filo, Papa Umbertico, and the unique feminist lesbian duo Krudas.

One cannot underestimate the influence the genre has had over the numerous styles of [electronic music](#). Hip hop's influence is well noticed in genres such as [trip-hop](#), [jungle](#), UK garage, [grime](#) and more.

## Social impact

Hip hop music is a part of hip hop, a cultural movement that includes the activities of breakdancing and graffiti art, as well as associated slang, fashion and other elements. The popularity of music has helped to popularize hip hop culture, both in the United States and to a lesser degree abroad.

The late 1990s saw the rise in popularity of the "bling bling" lifestyle in rap music, focusing on symbols of wealth and status like money, jewelry, cars, and clothing. Although references to wealth have existed since the birth of hip hop, the new, intensified "bling bling" culture has its immediate roots in the enormously commercially successful late-to-mid nineties work (specifically, music videos) of Puff Daddy and Bad Boy Records as well as Master P's No Limit Records. However, the term was coined in 1999 (see 1999 in music) by Cash Money Records artist B.G. on his single Bling Bling, and the Cash Money roster were perhaps the epitome of the "bling bling" lifestyle and attitude. Though many rappers, mostly gangsta rappers, unapologetically pursue and celebrate bling bling, others, mostly artists outside of the hip hop mainstream, have expressly criticized the idealized pursuit of bling bling as being materialistic.

The widespread success of hip hop - specifically gangsta rap - has also had a significant social impact on the demeanor of modern youth. The sometimes egotistic and degenerate attitudes often portrayed in the lyrics and videos of certain hip hop artists have shown negative effects on some of their idolizing fans. While the attitudes of specific artists certainly do not represent the rest of the hip hop community, and the effect of lyrical content on youths who are part of the hip hop culture is debatable, very often such youths adopt the much glamorized "gangsta" persona while not being members of any gang. Often these personas incite anti-social behavior such as peer harassment, neglect towards education, rejection of authority, and petty crimes such as vandalism. While the majority of listeners are able to distinguish entertainment from lessons in social conduct, an evident pseudo-gangsta sub-culture has risen amongst North American youth.

Because hip hop music almost always puts an emphasis on hyper-masculinity, its lyrics often reflect a homophobic mindset. There has been little to no room in hip hop music for openly gay or lesbian artists. It is often suspected that there are a great number of gay or lesbian hip hop musicians who do not come out of the closet for fear of the decline of their career. Rumors of such have involved hip hop artists such as Queen Latifah, Da Brat, and several others. In 2003 the first openly gay hip hop and rap artist, Caushun, was signed to a major label; his record and career were not successful.

As with most insular musical-cultural movements such as [jazz](#) and the hippie counterculture of the 1960s, hip hop has a distinctive slang, that includes words like yo, flow and phat. Due to hip hop's extraordinary commercial success in the late nineties and early 21st century, many of these words have been assimilated into many different dialects across America and the world and even to non-hip hop fans (the word dis for example is remarkably prolific). There are also words like homie which predate hip hop

but are often associated with it because of the close connection between recorded hip hop and the dialect used by many performers, African American Vernacular English. Sometimes, terms like what the dilly, yo are popularized by a single song (in this case, "Put Your Hands Where My Eyes Could See" by Busta Rhymes) and are only used briefly. Of special importance is the rule-based slang of Snoop Dogg and E-40, who add -izz to the middle of words so that shit becomes shizznit (the addition of the n occurs occasionally as well). This practice, with origins in Frankie Smith's non-sensical language from his 1982 single "Double Dutch Bus," has spread to even non-hip hop fans, who may be unaware of its derivation.

## **Censorship issues**

Hip hop has probably encountered more problems with censorship than any other form of popular music in recent years, due to the use of sexually and violently explicit lyrics. The pervasive use of curse words in many songs has created challenges in the broadcast of such material both on television stations such as MTV, in [music video](#) form, and on radio. As a result, many hip hop recordings are broadcast in censored form, with offending language blanked out of the soundtrack (though usually leaving the backing music intact). The result – which quite often renders the remaining lyrics unintelligible – has become almost as widely identified with the genre as any other aspect of the music, and has been parodied in films such as *Austin Powers in Goldmember*, in which a character – performing in a parody of a hip hop music video – performs an entire verse that is blanked out.

## **World hip hop**

Although **hip hop music** originated in the United States, it has spread throughout the world. Hip hop was almost entirely unknown outside of the United States prior to the 1980s. During that decade, it began its spread to every inhabited continent and became a part of the music scene in dozens of countries.

## **Media**

Hip hop has major American magazines devoted to it, including *The Source*, *XXL* and *Vibe*. For a long time, BET was the only television channel likely to play much hip hop, but in recent years the mainstream channels VH1 and MTV have played hip hop more than any other genre. Many individual cities have produced their own local hip hop newsletters, while hip hop magazines with national distribution are found in a few other countries. The 21st century also ushered in the rise of online media, and hip hop fan sites now offer comprehensive hip hop coverage on a daily basis.

# Hip hop production

**Hip hop production** is the creation of [hip hop music](#). Modern hip hop production utilizes drum machines, turntables, synthesizers, hardware and software sequencers, and live instrumentation.

## Concept

Hip-hop instrumental music is classified as sampled breaks dubbed over sampled music. The two parts are often interpolated post factum using a variety of playback devices such as a turntable or CD player. The playback is sometimes recorded as the final version of an instrumental that goes on to mixdown with vocals.

The pipeline of hip hop production involves one or more of the following:

- A [drum](#) beat
- A bassline
- Sampled sounds
- Scratching

All of these elements can be either analog or digital in nature and replication. A drum beat can be sampled, a riff can be replicated live, and scratching can be sampled and dubbed over a song.

# History

## Origins

The first instruments used in hip hop production were two turntables, a mixer, and a microphone. DJ Kool Herc used the mixer fade controls to switch between two turntables playing the identical records at different times. The result was that a section of a record could be effectively prolonged, the parallel to today's loop-based DAWs and hardware loop equipment. During the 1970s, Grandmaster Flash has pioneered many techniques of hip hop. He first used the cue output to his advantage. His cutting and scratching techniques, stemming from sessions with "Mean Gene" Livingston and his brother (Grand Wizard Theodore), whom he later battled with, have revolutionized the DJ culture and have been imitated ever since.

## The 1980s

Kurtis Blow became the first artist to use a digital sampler, the Fairlight, in a song. The Roland TR-808 was introduced in 1980. The E-mu SP-12 came out in 1985, capable of 2.5 seconds of recording time. The SP-1200 promptly followed with expanded recording time. The Akai MPC-60 came out in 1987, capable of 12 seconds of sampling time. In 1983, Run-DMC recorded "It's Like That" and "Sucker MCs," two songs which relied completely on beats, ignoring samples entirely. In 1986, Afrika Bambaataa released Planet Rock, which gave rise to the fledgling techno genre, along with the genre's own pioneers Derrick May and Juan Atkins by sampling Kraftwerk's "Trans Europa Express." Dr. Dre with World Class Wrekin Cru recorded 'Juice' and 'Before You Turn The Lights Out'

## The 1990s and on

The MPC3000 was released in 1994, followed by the MPC2000 in 1997, and the MPC2000XL in 2000. With the 1994 release of Notorious B.I.G.'s Ready to Die, Sean Combs and his assisting producers ushered in a new style where entire sections of records were sampled, instead of short snippets. Records like "Warning" (Isaac Hayes's "Walk On By"), and "One More Chance (Remix)" (El DeBarge's "Stay With Me") epitomized this aesthetic. In the early 2000s, Roc-a-Fella in-house producer Kanye West made popular the "chipmunk" technique, which had been pioneered by producers like Mathematics, an in-house producer for the Wu-tang Clan, whereby a sample containing vocals is sped up to make the vocals sound extremely high-pitched.

# Elements

## Sampling

**Sampling** is integral to hip hop production. It's used as a substitute for expensive musicians, equipment, and other costs associated with genuine live recording. Often the only non-sampled part of a hip hop recording is the vocals.

Sampling is controversial in modern hip hop. Seeing as sample clearance can take substantial parts of profit out of record sales for artists who sample, producers opt to create completely original recordings using computer-generated beats. Another solution is to overdub or re-record the sampled part with a live musician and then interpolate it enough to disassociate it from the sampled material entirely. The fees associated with the latter solution and the costs associated with the former can be significantly lower than sample clearance fees.

While the majority of producers sample a relatively default niche of 1960-1980 [soul](#), [R&B](#), [disco](#), and [funk](#) records, any record of any genre from any era is often fair game for sampling. [Jazz](#) records from every era are also sampled. Producers such as Dr. Dre have been known to sample [blues](#) artists such as Bill Withers. Due to the aforementioned concerns with clearance fees, many producers opt to seek out very rare and obscure records to lend their records a unique style and to avoid being forced to pay a clearance fee. People Under The Stairs openly acknowledge not clearing their samples, hoping that the record companies whose artists they sample don't wise up to the fact.

## Beats

The drum beat is another core element of hip hop production. Its speed and complexity dictates the pace and impact of the recording. While some beats are sampled, others are created by drum machines such as the Roland TR-808 and the Alesis SR-16. Others yet are a hybrid of the two techniques, sampled parts of drum beats that are arranged in original patterns altogether.

Since the percussive element of hip hop music is the very punctuation of its sound, the sounds a producer chooses to represent the percussion are important. Some producers have drum kits all their own, such as Timbaland and Neptunes. Some drum sounds, such as the TR-808 cowbell, remain as historical elements of hip hop lore used in modern hip hop to lend a more credible and mature sound to the recording.

## Scratching

A turntable is used to interpolate samples or beats. Due to the versatile time and pitch control of a modern DJ turntable, the turntable becomes an instrument all its own, capable of producing unique and original sounds. It is often used to provide a human touch to an otherwise "clean" recording. Of the most popular turntables, some are the analog Technics SL-1200 and the digital Pioneer CDJ1000.

## Studio parts

A producer's studio is the environment where they produce music. It can be as varied as a four-track sequencer and a collection of tapes or a multi-million dollar studio loaded with advanced sound processing hardware.

## Recording

In hip hop, a multi-track recorder is standard for recording. Digital ADAT tape recorders have become standard over the years. A PC is used, often, in low-budget studios (with or without external hardware counterparts), as a multi-track recorder.

### Vocal recording

Generally, professional producers opt for a condenser microphone for studio recording, mostly due to their wide-range response and high quality. A primary alternative to the expensive condenser microphone is the dynamic microphone, used more often in live performances due to its durability. The major disadvantage of condenser microphones is that the electret within them loses its charge after a few years of use, rendering the microphone useless. Also, condenser microphones require phantom power, unlike dynamic microphones. Conversely, the disadvantage of dynamic microphones is that they don't possess the wide range of condenser microphones and their frequency response is not as uniform. Compressors, both software and hardware, are also prevalently used during recording and post-production.

## Sequencers and Samplers

See also: [Music sequencer](#) and [sampler \(musical instrument\)](#).

A **sequencer** or a sequencing device or module is used invariably with instruments. One of the most popular sequencers in old-school hip hop was the MPC-60, whose successors MPC2000, MPC3000, and MPC4000 have been quintessential in modern hip hop production. Since a sequencer triggers instruments instead of simply playing back music, it is used in more sophisticated production environments than the basic "two turntables and a mic" configuration that most live hip hop is produced with. A **sampler** is used to play back samples that will not be interpolated as a media. Most sequencers, like the aforementioned Akai MPC products, are also samplers. Among standalone samplers there are the Akai S-series samplers, the Roland S-series samplers, and others.

## DAWs

**DAWs** and software sequencers are used in modern hip hop production as software production products are cheaper, easier to expand, and require less room to run than their hardware counterparts. Some producers oppose complete reliance on DAWs and software, citing lower overall quality, lack of effort, and lack of identity in computer-generated beats. Sequencing software often comes under criticism from purist listeners and traditional producers as producing sounds that are flat, overly clean, and overly compressed.

Popular DAWs include:

- Digidesign Pro Tools
- Cakewalk SONAR
- Steinberg Cubase
- Propellerhead Software Reason
- Sony ACID Pro
- Ableton Live
- Apple GarageBand

## Synthesizers

*Main article:* [Synthesizer](#)

**Synthesizers** are used quite often in hip hop production. They are used for melody, basslines, as percussive stabs, and for sound synthesis. The use of synthesizers has been popularized largely by Dr. Dre during the [G-Funk](#) era. Modern use of synthesizers is rampant by producers such as Cool and Dre, Scott Storch, and Neptunes. Often in low-budget studio environments or environments constrained by space limitations, producers employ VST instruments in place of hardware synthesizers.

## Live instrumentation

Live instrumentation is rare in hip hop, but is used by a number of acts and is prominent in hip hop-based fusion genres such as [rapcore](#). Before samplers and synthesizers became prominent parts of hip hop production, early hip hop hits such as "Rapper's Delight" (The Sugarhill Gang) and "The Breaks" (Kurtis Blow) were recorded with live studio bands. During the 1980s, Stetsasonic was a pioneering example of a live hip hop band. Hip hop with live instrumentation regained prominence during the late-1990s and early 2000s with the work of The Roots, Common, and OutKast, among others

## Hip hop rivalries

Often referred to as "beefs", feuds and rivalries have existed since the dawn of [hip hop music](#), which originated in the 1970s in New York City, United States. Originally, it came to block parties, where [DJs](#) would play records and isolate the percussion breaks for the dancing masses. Soon, MCs began speaking over the beats, usually simply exhorting the audience to continue dancing. Eventually, MCs began incorporating more varied and stylistic speech, and focused on introducing themselves, shouting out to friends in the audience, boasting about their own skills, and criticizing their rivals. While this was often done in good humor, the deaths of Tupac Shakur and the Notorious B.I.G. have meant that in today's hip hop scene it is always feared that lyrical rivalries will develop into offstage feuds that become violent. Many observers have claimed that the media feeds on such rivalries for headlines and blows situations out of proportion, a good example of which was the infamous **East Coast-West Coast rivalry** of the 1990s.

One prominent example used as contrast by those who feel that the media manipulate and intensify hip hop rivalries was the 1980s hit "Roxanne, Roxanne" by U.T.F.O., which sparked several hundred "answer records" in response, some of which were quite vituperative (see the Roxanne Wars). At the time, hip hop was nowhere as widespread as it would eventually become, and as such there was little media response to this record. The beef never made it onto the streets, and many observers felt that if something similar happened today, violence would surely result. However, the recent high-profile beef between Nas and Jay-Z was carried out without ever threatening to become violent.

## N.W.A. vs. Ice Cube

Ice Cube left N.W.A in late 1989 after making claims that Eazy-E and the group's manager, Jerry Heller, were cheating him along with the rest of the group members. The remaining group members fired the first shots by insulting Ice Cube on the two albums they recored after his departure. On 100 Miles and Runnin', Dr. Dre told the public: "It started with five but one couldn't take it/ But now it's four because the bitch couldn't make it." On Efil4zaggin, the group called Ice Cube "Benedict Arnold", after the notorious traitor of the American Revolutionary War. N.W.A. insulted Cube further on the album by claiming he was "...sucking New York dick", a direct reference to Ice Cube's new production team, the New York-based Bomb Squad. On these albums, N.W.A. dedicated entire tracks at a time to dissing Ice Cube.

Cube's first solo album AmeriKKKa's Most Wanted made no direct response to the N.W.A. feud, although he did use the album to make subtle references to his old crew. The closest to a response Cube mounted on the first album was Flavor Flav's exhortation at the end of *I'm Only Out For One Thang*: "This is for my boy Ice Cube, yo, stay off his dick!" On the EP "Kill At Will", released later the same year, Cube sets the stage for his response on the track *Jackin' Fo' Beats*. At the end of this track he includes the exclamation: "And if I jack you and you keep comin/I'll have you marks a 100 Miles and Running!"

In 1991, Ice Cube took the fight to the big screen in his first feature film starring role, in *Boyz n the Hood*. According to movie director John Singleton, Cube suggested changes to one scene in particular where a chain snatcher is beaten up by neighborhood teens. Cube's recommendations were to give the thief a Jheri Curl and sunglasses (reminiscent of Eazy-E's personal style) and a "We Want Eazy" sweatshirt while being beaten.

On his second album, *Death Certificate* Ice Cube fired back at his former group by releasing the song "No Vaseline", proclaiming N.W.A. to be "phonies" and declaring Eazy-E to be a "snitch", in reference to a publicity stunt Eazy pulled in attending a fundraising luncheon with then-President George H.W. Bush. He also made remarks about N.W.A.'s manager Jerry Heller that were instantly declared anti-Semitic, including "you can't be the Niggaz 4 Life Crew/with a white Jew/telling you what to do", "you let a Jew break up my crew", and "get rid of that Devil real simple/put a bullet in his temple."

Soon after, The D.O.C. found that Cube's words were true: Eazy and Heller were in fact skimming money off the top, and Dre left the crew behind as well. This, more than anything else, meant the end of N.W.A; Dre began his solo career, forming the legendary Death Row Records with former bodyguard Suge Knight. When he released his first solo album *The Chronic*, he began a well-publicized feud with his ex-bandmate by constantly poking fun of Eazy-E on the song and the video for "Fuck Wit Dre Day (And Everybody's Celebratin')" and other songs on his solo debut, wherein he and new collaborator Snoop Dogg taunted him and called him "Sleazy-E." Eazy-E responded by releasing the EP *It's On (Dr. Dre) 187um Killa* dissing Snoop Dogg, and Dr. Dre and showing pictures of Dr. Dre in makeup during the days he was in the "World Class Wreckin' Cru". Dre was also called a "BG" by Eazy

E, which meant Baby Gangsta. But before Eazy died, he had made amends with Ice Cube.

# "East Coast vs. West Coast"

*Main article: [East Coast-West Coast hip hop rivalry](#).*

Probably the most famous rap feud of recent times is the early to mid-1990s rivalry between the East Coast's Bad Boy Records and the West Coast's Death Row Records, which was widely thought of and reported in the media as an East Coast vs West Coast dispute.

Hip hop had originated in the streets of New York, and the city remained the undisputed capital of hip hop until the late '80s, when N.W.A. & others put the west on the map. Dr. Dre's *The Chronic* became one of the biggest-selling hip hop albums in history, followed shortly by Snoop Doggy Dogg's breakout album *Doggystyle* in . Dre was on Death Row Records, headed by Suge Knight, and he soon built up a roster of stars like - Tupac Shakur, Tha Dogg Pound and Snoop Doggy Dogg that reigned on the charts, and Los Angeles began to rival New York for its place as the center for mainstream hip hop. This had already, and somewhat inevitably, created a tension between certain industry heavyweights on both coasts, each hungry for control of an increasingly lucrative market. The biggest stars on the East Coast at this time were Puff Daddy's Bad Boy Records crew, which was founded in 1993 and included Craig Mack, Mase and the Notorious B.I.G..

Bad Boy and Death Row were thrown into conflict with one another after 2Pac was shot five times at a New York recording studio on November 30, 1994, and publicly blamed his former close friend Notorious B.I.G and his Bad Boy Records cohorts. This feud escalated after Suge Knight mocked Puff Daddy at the Source Awards in August 1995, announcing to the assembly of artists and industry figures: "If you don't want the owner of your label on your album or in your video or on your tour, come sign with Death Row." Despite Puff Daddy himself attempting to defuse the situation with a speech later in the evening, a later performance by Death Row's Dr. Dre and Snoop Dogg was booed (to which Snoop famously responded "The East Coast ain't got no love for Dr. Dre and Snoop Dogg?").

The feud continued to escalate through numerous incidents. First, in September 1995, a close friend of Knight's was gunned down at a birthday party thrown for producer Jermaine Dupri in Atlanta, Georgia, for which Knight publicly blamed Bad Boy Records. Then, in December, while filming the video for the Dogg Pound's song "New York, New York" in Manhattan, Snoop Dogg's trailer was shot at numerous times (though the trailer was in fact empty at the time). The video itself then become the source of further controversy on its release, featuring Death Row artists knocking over New York skyscrapers and landmarks, to which many East Coast artists and fans took offense. There was also suspicion that the song itself was also targeted at Bad Boy Records and New York in general, though this is unlikely as the song is in fact a remake of a Grandmaster Flash song, features only generic, non-specific braggadocio/battle rhymes with nothing that could be interpreted as a specific attack on any specific individuals, and was written and recorded before the Bad Boy/Death Row feud got off the ground. Capone-N-Noreaga

also made the song "LA, LA" with Mobb Deep to respond to "New York, New York" which got them involved in the feud.

In 1995, The Notorious B.I.G. released the track "Who Shot Ya." 2Pac interpreted it as B.I.G. mocking his '95 shooting, and claimed it proved that Bad Boy had set him up. In early 1996, 2Pac released the infamous dis track "Hit 'Em Up," in which he claimed to have had sex with the Notorious B.I.G.'s wife Faith Evans and that "this ain't no freestyle battle, y'all niggas getting killed" and was viewed as taking the feud to another level and critics today look on the song as one of the defining moments of the rivalry. B.I.G. soon responded on Jay-Z's track "Brooklyn's Finest" (a move which also caused Jay-Z to become embroiled in the dispute). In March 1996, at the Soul Train Awards in Miami, there was a confrontation in the parking lot between the respective entourages of Bad Boy and Death Row in which guns were drawn. Although an armed staring contest was all this confrontation eventually amounted to, it was readily apparent to hip hop fans and artists that this rivalry was getting very out of hand, and going far beyond the heated, but never violent, lyrical battles for superiority of the past.

On September 7, 1996 2Pac was shot several times in Las Vegas, dying a few days later on Friday 13. On March 9, 1997, then Notorious B.I.G. was shot and killed in California. Both murders remain unsolved, and numerous theories (some of them conspiracy theories) have sprung up. These include, most notoriously, that 2Pac (and possibly Biggie) faked their own deaths.

In 1997, several rappers, including Bizzy Bone, Doug E. Fresh and Snoop Dogg met at the request of Louis Farrakhan, leader of the Nation of Islam and pledged to forgive any slights that may be related to the rivalry and deaths of 2Pac and Biggie.

Prior to his death, 2pac had also come into separate disputes with several other East Coast rappers. Some friends of 2Pac had been apparently snubbed by the group Mobb Deep at one of their concerts, and when word of the incident reached a then-jailed Tupac he sent out a message to Mobb Deep threatening violence. Mobb Deep immediately responded with the track "Drop a Gem on 'Em" which, although its official release on the Hell On Earth album occurred after 2Pac's "Hit 'Em Up" single which mocked Mobb Deep, it had been circulating on mixtapes and radio in New York long before. Nas also angered Tupac by appearing to mock 2Pac with the line "Fake thug, no love, you get the slug, CB4 gusto your luck blow..." in the track "The Message," although Nas denied that this line was ever aimed at Pac. Even Chino XL, an underground rapper from New Jersey with no eye on mainstream domination and no ties to Bad Boy Records, Nas or Mobb Deep, incurred 2pac's wrath on "Hit Em Up" by using him in a somewhat ambiguous simile "By this industry, I'm trying not to get fucked like 2Pac in jail" (ironically, the track to which this line belongs is a duet with proud West Coast representative Ras Kass). Chino soon responded with a freestyle on live radio, but it was either ignored or not heard by Tupac. Since these rappers were all East Coast artists, and because they were often insulted in the same songs which 2Pac insulted Bad Boy Records, they are often believed to be part of a greater "East Coast vs West Coast" war driven by allegiance and territory. 2Pac was quick to diss any East Coast artist that had any kind of association with Biggie, and in fact was harsh on his Death Row labelmates who were reluctant to participate, such as Snoop Dogg and later Dr. Dre.

Because of 2Pac and Biggie's prominence on the West and East Coast respectively (both were believed to be the preeminent MCs of their time) the feud became widely known as East vs. West, rather than simply Bad Boy vs. Death Row. However, there were several different artists who, albeit less commercially successful, were relatively uninvolved in the beef; these included Nas, Redman, Busta Rhymes, Big L, and the Wu-Tang Clan. Some

have claimed that the "East vs. West" paradigm amounted to media sensationalism; however, as previously stated, both artists were the preeminent rappers on their respective coasts, and often invoked their region in their music (the cover of 2Pac's All Eyez on Me, for example, shows him flashing the "Westside" sign.)

Soon after the death of Shakur, Death Row Records folded as Afeni Shakur, Tupac's mother, sued the label for allegedly cheating her son out of millions. Label head Suge Knight ended up in jail for unrelated probation violations. Lady of Rage and Nate Dogg have also filed suits against Death Row with similar allegations. Puff Daddy has also had multiple legal troubles, including a much-publicized case resulting from a shooting in a New York club; he has been acquitted, though fellow rapper Shyne was not. Bad Boy Records had for the most part maintained its place at the top of the industry since the death of Notorious B.I.G, with artist Mase achieving success before his early retirement (and un-retirement) and Puff Daddy (now Diddy) himself achieving considerable commercial success. More recently, Bad Boy has struggled as a record label due to a lack of marketable talent and allegations that Puff is more concerned with his other ventures (i.e., Sean John clothing). After Suge Knight's release from prison, Death Row Records was reborn as "Tha Row," signing many artists including former Dogg Pound member Kurupt, and Lisa "Left Eye" Lopes. Unfortunately Lopes was killed in a car crash not long after signing to the label, and none of their other signings have achieved much in the way of commercial success. Mostly Death row focuses on dissing former label mates, such as Snoop Dogg and Dr. Dre.

## Nas vs. Jay-Z

The Nas versus Jay-Z rivalry pitted two hip hop legends against each other, in what is widely considered as the most exhilarating and invigorating hip hop battle of recent times. Supposedly, tension between Jay-Z and Nas dates as far back as 1996, when Nas refused to make a guest appearance on Jay-Z's debut album *Reasonable Doubt*. However, the relationship between the two rappers remained peaceful (Jay-Z even giving a shoutout to Nas in his album liner notes), and the tension never became a full-blown rivalry until after the death of Notorious B.I.G. The position of best rapper in New York (also known as the King of New York) seemed eerily vacant after the death of Biggie, and fans were eager to see who would take over his role.

In 1997, Jay-Z (a former friend and collaborator of B.I.G.) released a song titled "The City Is Mine" which seemed to many people to be making a claim to the empty throne. This attitude also seems to be evident in the fact that Jay-Z's album *In My Lifetime, Vol. 1* was originally titled *Heir To The Throne, Vol. 1*. Nas, the only rapper in New York at the time who had a reputation capable of rivalling Jay-Z but who had never received the same amount of commercial success, apparently responded to Jay-Z on his track "We Will Survive" (which released in 1999, on his album *I Am...*), which appears to dismiss Jay-Z as a serious rival as well as attacking both his claims of superiority and his continual evoking of B.I.G.'s legacy (the verse in question is in the form of a letter to the deceased rapper):

It used to be fun, makin records to see your response  
But, now competition is none, now that you're gone  
And these niggaz is wrong -- usin your name in vain  
And they claim to be New York's king? It ain't about that

There was definite tension between the pair but no action for approximately a year, until in 2001 the beef exploded into the public eye as Jay-Z publicly mocked Nas on stage at the Hot 97 radio station's Summer Jam hip hop festival. Nas responded by delivering a calculated, personal attack on Jay-Z during a radio freestyle over Eric B. & Rakim's "Paid In Full" beat :

And bring it back up top, remove the fake king of New York  
You show off, I count dough off when you sampled my voice  
I rule you, before, you used to rap like the Fu-Schnickens  
Nas designed your Blueprint, who you kidding?  
Is he H To The Izzo, M To The Izzo?  
For shizzle you phony, the rapping version of Sisqó

The freestyle was untitled but was later titled "Stillmatic". (It does not appear on *Stillmatic*.) The "sample my voice" line refers to Jay-Z's use of a vocal sample of Nas for the hook of his song "Dead Presidents".

Jay-Z responded with the track "Takeover" from his album *The Black Album*, on which he attacked Nas for never matching the critical success of his debut *Illmatic* and questioned his authenticity as an artist. The song was very well-

received by hip hop listeners, and many listeners and reviewers immediately dismissed Nas as a contender and feared for the end of his career. Therefore, it was a surprise to many when Nas responded with an equally well-received track titled "Ether" from his album Stillmatic, in which he mocked Jay-Z's early years as an aspiring young rapper (in which he supposedly idolized Nas) and attacked him for being a misogynist and for exploiting the Notorious B.I.G's legacy.

The positive response to "Ether" created enormous interest in the rivalry throughout the hip hop community, the music media and even mainstream news outlets. On Takeover, Jay-Z issued a warning that goes as follows:

*Don't be the next contestant on that Summer Jam screen  
Because you know who (who) did you know what (what)  
with you know who (yeah) but just keep that between me and you for now*

Many speculated what Jay-Z was talking about while others dismissed it, believing it to be nothing of importance. Those questions would be answered as the rapper's response was prompted in a radio freestyle that became known as "Super Ugly" Jay-Z offered:

*And since you infatuated with sayin that gay shit  
Yes, you was kissin my dick when you was kissin that bitch  
Nasty shit, you though I was bonin Vanette  
You callin Carmen a hundred times I was bonin her neck  
You got a baby by the broad you can't disown her yet  
When does your lies end? When does the truth begins?  
When does reality set in or does it not matter?  
Gotta hurt I'm your baby mama's favorite rapper*

This release was not as well received as the previous three tracks had been. The feud continued to simmer, and rumors of a live pay-per-view [freestyle](#) battle began to circulate but never came to fruition.

After the promoters of Hot 97's Summer Jam festival refused to allow headlining Nas to hang an effigy of Jay-Z during his performance at 2002's show, he appeared on Hot 97's rival Power 105 and attacked both the music industry's control over hip hop and the rappers who he saw as submitting to it, including Jay-Z, Nelly, N.O.R.E. and Jay-Z's labelmate Cam'ron : "Y'all brothers gotta start rapping about something that's real. [...] Rappers are slaves." This also embroiled Cam'ron into the Jay-Z/Nas feud, in which Cam'ron controversially made disparaging remarks about Nas' mother. After this incident both continued to go against one another on various tracks, the shots taken including Jay-Z criticizing Nas for his apparent hypocrisy on his The Blueprint<sup>2</sup>: The Gift & the Curse album's title track, and Nas comparing himself and Jay-Z to the characters Tony Montana and Manolo respectively from the film Scarface, on his track "Last Real Nigga Alive" from his God's Son album. However, the feud died down somewhat towards the end of 2002, with no real winner decided (arguments go on to this day in the hip hop community about who came out on top overall, with the results of a Hot 97 radio phone-in revealing a 58% - 42% split in favour of Nas), and both Nas & Jay-Z have since paid tribute to each other in interviews, likening the battle to a world title boxing match that pitched the best against the best, and pleased with the entertainment it provided fans.

The rivalry also benefited both of their careers immensely, critically and commercially. The battle was significant, in that it revived the trend of using 'beef' as a source for publicity and promotion for hip hop artists. This was a trend that became somewhat unpopular following the tragic deaths of Tupac

Shakur and Biggie, yet has become recently prevalent within the hip hop community. Ever since this particular rivalry, hip hop feuds have become noticeably prolific, and have been publicized within the mainstream media more than it previously has been in the past.

In what may be perhaps a pivotal moment in hip hop history, the feud was formally ended in October 2005 at Jay-Z's *I Declare War* concert, where Nas made a special guest appearance and performed the hook to "Dead Presidents" and a few of his own tracks such as "NY State of Mind" and "Hate Me Now". In 2005 at another 105.1 concert Jay and Nas reunited on stage and performed a song together. In January 2006, Nas signed with Jay-Z's Def Jam, further emphasizing the truce and raising expectations for a possible collaboration.

## Eminem vs. Benzino & *The Source*

Although it is not clear why Benzino, then co-owner of *The Source* Magazine, decided to air out his issues with multi-platinum rapper Eminem, he claims that Eminem's success was hurting Black and Latino artists (hence, he raps under the moniker of Benzino). He started a campaign against the corporations that are controlling and supporting Eminem. Benzino stated that Eminem can talk about dark emotions, while Black rappers are forced to talk about bling-bling (materialistic things).

One possible contributing factor for Benzino's concerns was Eminem's rating of his critically-acclaimed and 9x platinum sophomore album *The Marshall Mathers LP*. *The Source* gave him a 2-mic rating (changed to 4 mics following protests) for his critically-acclaimed album, while Benzino's *Made Men* were given 4.5 mics. Eminem was upset and he blasted the magazine on the track "Say What You Say" from his follow-up album *The Eminem Show*, rapping in the final verse, "Five mics in *The Source*, ain't holdin' my fuckin' breath/But I'll suffocate for the respect 'fore I live to collect the fuckin' check."

Benzino released two songs directed at Eminem, titled "Pull Ya Skirt Up" and "Die Another Day", the latter of which included the lyrics "You're the rap David Duke/The rap Hitler... I'm the rap Malcolm, the rap Martin". Benzino has explained in interviews that he fears Eminem's fame is the beginning of the end for the Black domination of hip hop; he has also linked Eminem with the consumerism of modern hip hop, complaining that while Eminem is allowed to rap about deeply personal issues he has to "talk about bling-bling because that's all the people who control the images want to hear from us". However, many observers noted that not only is Benzino bi-racial himself, but that Dave Mays, co-owner and founder of *The Source*, is white.

Eminem responded quickly to Benzino's track with the songs "Nail In The Coffin" and "The Sauce", calling him an "83-year-old fake Pacino", and questioning the credibility of both Benzino as a rapper and *The Source* as a magazine. Most of the hip hop community stood behind Eminem (including most famously Russell Simmons), and many accused Benzino of criticizing and slandering hip hop's biggest star solely to both boost his unsuccessful career as a rapper and to boost the profile of *The Source* magazine, which unsurprisingly sided unequivocally with Benzino during the feud and ran a series of anti-Eminem and anti-Shady/Aftermath articles and features. The *Source* coverage no doubt aided Benzino's cause among many, for many others it further soured the name of a magazine which already had a reputation for being corrupt. Despite criticizing Eminem and his label-mates such as Dr Dre and 50 Cent within its pages, *The Source* continued to put these prolific record-selling artists on the cover of the magazine.

*The Source* tried to score an advancement by released details of two tapes of a young Eminem it had received, featuring the future star rapping about how black women are "only after your money" in romantic relationships (he had apparently just suffered an acrimonious split from a black girlfriend) and in another song using the word "nigger". This caused considerable outcry among many rappers, though few said anything more damning than asking for a public apology. Eminem did in fact publicly apologize quite promptly, and later

elaborated further on the incident in the song "Yellow Brick Road" from his *Encore* album.

But I've heard people say they heard the tape, and it ain't that bad  
But it was, I singled out a whole race  
And for that I apologize, I was wrong  
Cause no matter what color a girl is she's still a hoe

*The Source* did not gain anything from the long-running feud: not only were they forced to pay a substantial sum of money to Eminem for defamation and copyright infringement, but *The Source* lost major advertising as a result, most notably from major labels Virgin, Elektra, Interscope, Motown, and more recently Def Jam. It's noted that Benzino has recorded an album from each of the labels before they pulled out of *The Source* Magazine. The hip hop magazine *XXL* also became involved in the Eminem/Benzino/*Source* rivalry. *XXL*, formerly an enemy of Eminem, decided to join forces with Shady Records to discredit *The Source*. The magazine that launched in 1997, has always been in competition with *The Source* for readership, and indeed was initially started by former *Source* employees. Dissing Benzino on "Nail In The Coffin", Eminem tells the *Source* co-owner "I don't need your little fucking magazine / I got *XXL*'s number anyways...". With the entire Interscope label effectively involved in Eminem's feud with *The Source*, Interscope artists began to flock to *XXL*, who happily granted them increased coverage, which in turn boosted sales for the magazine.

It has been accepted that Eminem won the battle. Also, it was obvious to many that Benzino had started the feud as nothing more than a publicity stunt to bolster his non-existent reputation in Hip-Hop. He and Dave Mays were recently fired from the staff of *The Source*. The magazine, under new leadership, reported in the April 2006 issue about Benzino and Mays' ouster that they currently are patching up many relationships damaged by the actions of Mays and Benzino, including that with Interscope Records.

## Boogie Down Productions vs. The Juice Crew

Boogie Down Productions, led by KRS-One, were involved in a long-running feud with Marley Marl's Juice Crew during the mid-to-late 1980s and early 1990s that was predominantly a dispute over boroughs of New York. The feud began with Queensbridge-based Marley Marl & MC Shan's track "The Bridge" in late 1985, in which they sung the praises of their home borough and loosely implied that Queensbridge was where hip hop "all got started". Taking offense, South Bronx-based KRS-One and Boogie Down Productions (BDP) recorded and released the track "South Bronx", which was effectively identical in terms of content to Shan and Marl's track except singing the praises of South Bronx rather than Queensbridge, and made the argument for it being the true home and birthplace of hip hop. The Juice Crew soon responded with the track "Kill The Noise" on Shan's album *Down By Law* which took various shots at KRS-One and mocked his taking offense in the first place: "Yo Shan, I didn't hear you say hip hop started in the Bridge on your record." "I didn't. They wanted to get on the bandwagon." KRS's main response was the Jamaican-influenced "The Bridge Is Over", and lyrics spoofing Billy Joel's "It's Still Rock and Roll to Me":

What's the matter with your MC, Marley Marl?  
Don't know you know that he's out of touch?  
What's the matter with your DJ, MC Shan?  
On the wheels of steel, Marlon sucks  
You'd better change what comes out your speaker  
You're better off talkin' 'bout your whack Puma sneaker  
'Cause Bronx created hip hop, Queens will only get dropped  
You're still tellin' lies to me  
Everybody's talkin' 'bout the Juice Crew funny  
But you're still tellin' lies to me

Most of KRS's fire was directed at Marley Marl and MC Shan specifically, though he occasionally exchanged insults with other Juice Crew members such as Mr. Magic and Roxanne Shante. Shante responded with a song aimed at Boogie Down Productions titled "Have A Nice Day" in which she rapped:

Scott La Rock, you should be ashamed,  
when T La Rock said it's yours, he didn't mean his name,  
and KRS One, you should go on vacation,  
with your name sounding like a wack radio station

The feud quickly died down after BDP's Scott La Rock was shot dead in 1987 after attempting to calm down a domestic dispute involving BDP colleague D-Nice. With his new Stop The Violence movement, KRS-One had his attention elsewhere, and the Juice Crew did not release any further records for a long period after La Rock's death out of respect. However, in

1989, MC Shan attempted to restart the rivalry on his song *Juice Crew Law* which contained several shots at KRS. KRS took more than a year to respond, but eventually did so in 1990 on the song *Black Man In Effect* from the BDP (which at that point was basically only KRS-One, D-Nice having left earlier the same year) album *Edutainment*.

During the nineties, the beef was not forgotten by fans or the participants, but rather fondly remembered as a classic hip hop duel, and the rivalry has since been referenced in hip hop lyrics by the likes of Cormega, Nas, Cunninlynguists, Big Punisher, Supernatural and Chino XL. MC Shan and KRS-One themselves acknowledged the beef's important place in hip hop history when they appeared together in a commercial for the Sprite soft drink in the mid-nineties, in which they exchanged battle rhymes inside a boxing ring. However, the respective fortunes of the pair in the nineties were very different: MC Shan, widely seen by hip hop listeners as the loser of the conflict if there had to be one, never really recovered his reputation and later effectively retired, while KRS forged out a successful solo career and remained an important figure in hip hop. Nevertheless, on the QB's Finest compilation (which showcased the finest Queensbridge hip hop artists) in 2001, MC Shan took one last parting shot at KRS-One: "Hip hop was set out in the dark / The Bridge was never Over, we left our mark."

## LL Cool J vs. Kool Moe Dee

Kool Moe Dee was a member of one of the earliest hip hop crews, the Treacherous Three, and claimed that LL Cool J stole his style, thus causing a long-running feud between the pair. From different interviews and magazines at the time, Kool Moe Dee felt that LL was getting a bit too big headed and actually believing his own hype, particularly when LL was rising to popularity with the Bigger and Deffer album. Supposedly, Moe Dee approached LL and talked to him, and LL either brushed him off, or went back to his old ways after the talk. There also arose rumors that Moe Dee felt that LL was imitating his rhyme style. Whatever the cause, Kool Moe Dee took the first shots with, "How Ya Like Me Now," the title song from his second solo album that featured on the cover Kool Moe Dee leaning against a jeep and a LL trademark Kangol underneath the tire. The album contained the indirect diss track of the same name. While the album cover was a clear shot, "*How Ya Like Me Now*," was more subtle. Although he did not refer to any specific name, Kool Moe Dee made it clear that he felt bitten by what he viewed as an amateur. . It was then that Kool Moe Dee released his famous diss, "*Let's Go*", rhyming:

*"Tryna be me, now LL stands for/  
Lower Level, Lack Luster/  
Last Least, Limp Lover/  
Lousy Lame, Latent Lethargic/  
Lazy Lemon, Little Logic/  
Lucky Leech, Liver Lipped/  
Laborious Louse on a Loser's Lips/  
Live in Limbo, Lyrical Lapse/  
Low Life with the loud raps, boy!"*

The song ended with the following sequence:

*"...Now look what you done did/  
just using your name I took those L's,  
hung 'em on your head and rocked your bells..."*

The song's skill level and hard-hitting wittiness were of such high caliber that many felt Moe Dee had become the victor in the battle. In effect, he had; as LL did not release a response for a full two years. By not responding to Moe Dee and choosing to ignore him, despite being badly insulted on a whole record, LL opened himself up to be dissed by everyone, including MC Hammer and Ice-T. It was during this time that LL abandoned his hardcore image that popularized him, and instead, embarked on a different musical direction towards a more commercial fare (which emphasized New Jack Swing-love ballads). However, critics scoffed at this new direction with the release of *Walking With a Panther* (1989). These events coincided with the major stylistic change hip hop began experiencing during the late-1980s. The genre was becoming increasingly socially conscious, abandoning the music's

early themes of partying and braggadocio, and adopting more socially aware issues such as drug abuse, poverty, racism, and African American empowerment. LL Cool J, as a result, experienced a drop in popularity due to the view that his music was behind the times, materialistic and narcissistic. All this, coupled with a lot of criticism towards *Walking With a Panther*, and LL's apparent disregard for the overall changing of the Hip Hop collective to social awareness and consciousness, resulted in the deterioration of LL's credibility within the hip hop community. In one instance, he was booed off the stage at the Apollo Theater in New York City. However, in 1990, the older and wiser LL released the highly anticipated comeback album, *Mama Said Knock You Out*, thus reasserting his status and reviving his credibility amongst hip hop purists. Showing his resiliency, LL re-ignited his feud with Kool Mo Dee with the comical diss track, "*To The Break Of Dawn*".

*Homeboy hold on, my rhymes are so strong/  
Nothing can go wrong. So why do you prolong/  
songs that ain't strong, brother you're dead wrong/  
and got the nerve to have them Star Trek shades on.../  
heh, you can't handle the whole weight/  
Skin needs lotion/  
Teeth need Colgate/  
Wise up, you little burnt up French fry/  
"I'm That Type of Guy"*

In essence, LL became the first emcee beaten in battle, to ask for a rematch. LL followed the song with several subliminal attacks in other records (a battle practice for which he is known), including the title track, as well as "*Jingling Baby*," and "*Murdergram*." Moe Dee soon responded to all of the tracks with the single, "*Deathblow*," which was dismissed as unspectacular due mostly to Teddy Riley's production use of a dated James Brown sample. As a result, the song was largely ignored. It was at this point, that fans realized LL had finally gotten the better of his old nemesis.

## LL Cool J vs. Canibus (and The Refugee Camp)

Following the deaths of Tupac and Biggie Smalls, hip hop found itself in a state of shock. Many wondered whether, in the escalating atmosphere of violence that seemed to permeate contemporary hip hop music, could MC battles still exist peacefully. It wasn't until LL Cool J and Canibus decided to revive the artform that MCs were allowed to reenter the lyrical ring. The battle began when LL featured Canibus, Method Man, DMX and Redman on the song "4,3,2,1" in 1997. Canibus contributed a verse, which included the line "L, is that a mic on your arm? Let me borrow that" (referring to LL's microphone tattoo). LL, perhaps feeling offended, wrote a response intended as the next verse. Before the song was released, LL asked Canibus to change his verse. Canibus claims that LL also promised to remove his own response ("The symbol on my arm is off limits to challengers, [...] Watch your mouth, don't ever step out of line/L.L. Cool J nigga, the greatest of all time"). LL denies this, claiming that he told Canibus that no one would know who he was talking about if Canibus' verse was changed. Nevertheless, Canibus removed his verse and the song was released. However, the original version began surfacing on the streets and people started piecing together what had happened. This put Canibus in the uncomfortable situation of whether to respond to LL's initial verse, even though both had already settled their dispute. Fan pressure soon got the best of Canibus however, and he launched an all-out attack on LL with the single "Second Round K.O.", the video which featured a cameo by Mike Tyson. The video also held a striking resemblance to LL's, now famous, Mama Said Knock You Out video. LL's response was titled "The Ripper Strikes Back," where he attacks not only Canibus, but Mike Tyson, Wyclef and the rest of Wyclef's crew, the Fugees. LL then followed that with another track entitled "Back Where I Belong," where he accused Canibus of stealing his rhymes, and pretending to be from New York, when he was really from Canada. Canibus responded to both songs with the track "Rip The Jacker".

Wyclef Jean (the frontman for the critically acclaimed hip hop group, The Fugees) was also Canibus' producer. As a result he found himself pulled into the feud. Wyclef responded to LL's initial attacks in "The Ripper Strikes Back" with his own song "What's Clef Got to Do With It," which featured super model Naomi Campbell. LL responded with the underground track "Rosta Imposter." Fellow Fugee-member, Lauryn Hill later released the single "Lost Ones" from her album "The Miseducation of Lauryn Hill." Although some misinterpreted the indirect disses as attacks to LL Cool J, it later surfaced that the song, like much of the rest of the album, was in fact a criticism of Wyclef.

Although Wyclef and LL Cool J have since ended their rivalry, there is still assumed to be tension between LL and Canibus. Both artists have at least alluded to the other in not-so-flattering ways in later albums. Most recently, LL revisited the fray in "10 Million Stars" from his album entitled 10:

Double up your bets

Come and rumble with the vet  
I know you had that clown picked  
Mind blowin now, cause L still sounds sick  
He dreamed he was me  
I gleam lyrically  
I love him for it it's the highest form of flattery...

At around the same time LL Cool J released "10", Canibus released Mic Club: The Curriculum, which also has a mention of the feud. In the track 'Bis Vs. Rip' of said album, Canibus trades bars with his alter ego, Rip The Jacker. He relates:

You got dissed by a legend but you damaged him too  
So what if the ladies think he's more handsome than you  
What happens if the rumors about being a faggot are true?

[...]

What happened between L and you, forget it  
People know you won the battle, they won't give you the credit  
A lot of people don't want to admit it...

## Ja Rule vs. 50 Cent

Before even signing to Eminem's and Dr. Dre's labels, 50 Cent was engaged in a well-publicized dispute with rapper Ja Rule and his label Murder Inc. Records. The conflict's origin remains a mystery. Accounts have ranged from an alleged robbery of Ja Rule's jewelry by a friend of 50's, to Ja Rule and Murder Inc. supposedly snubbing a young and star-struck 50 Cent at a video shoot. Whatever the case, the hostility didn't reach public ears until 50 Cent released his fiery, but subliminal, diss track, "Life's On The Line." This led to two violent confrontations between the rappers. The first a meeting where Ja was punched by 50 Cent and then had his chain snatched. The second confrontation occurred in a New York studio, where rapper Black Child, a member of Murder, Inc. stabbed 50 Cent. Black Child claimed that 50 cent was reaching for a gun during the fight.

Regardless of the physical repercussions, 50 Cent continued to make the rivalry a cornerstone of his music career. He released numerous mixtapes, clowning and insulting Ja Rule and Murder Inc. Before the release of *Get Rich Or Die Tryin'*, Murder, Inc. began a smear campaign against the rapper. A restraining order document began floating around the Internet stating that 50 Cent had filed an order of protection against label CEO, Irv Gotti and Black Child. This helped forge the belief that 50 Cent is a "snitch" or a police informant.

Although 50 Cent dismissed the claims, the bad publicity continues to be a tool used among various rappers who engage in beef with his rap collective G-Unit. In fact, further investigation from New York lawyers found that the document could have been, and was most likely, signed by a judge without 50 Cent's consent or knowledge. The practice is common place in New York for victims of multiple attacks when their assaulters are released from jail.

The rivalry reached a boiling point for Murder Inc., which had remained silent for the most part, when 50 Cent released his second album-length battle rap, entitled "Back Down." In the song 50, who was always known for his hold-no-tongue approach to battling, insulted, joked and dissed Ja Rule and his label into action. In response, Black Child, along with fellow Murder Inc. rapper Cadillac Tah, countered with their own mixtape disses. Ja Rule, however, remained quiet. 50 Cent continued his barrage, releasing the Tupac assisted "Realest Killas" where he addressed Ja Rule's penchant for imitating the slain rapper. This prompted Ja Rule to finally respond with the songs "War is On," "Guess Who Shot Ya" and "Loose Change." This all culminated into Ja Rule releasing "Blood In My Eye," which was, in effect, a 50 Cent diss album.

Ja Rule eventually tried to squash the beef with 50 Cent by using Minister Louis Farrakhan in a televised interview. However, the attempt at peace lost credibility as the interview was scheduled a day before *Blood In My Eye* was released. As a result most fans, along with 50 Cent dismissed the interview as a blatant publicity stunt.

Ja Rule also had a small rivalry with 50's label-mate, Eminem. Ja Rule insulted Eminem's ex-wife and daughter in a song and Eminem responded on a mixtape by DJ Kay Slay with a [freestyle](#) collaboration with 50 Cent and Busta Rhymes in a Tupac Parody titled "Hail Mary." Although they exchanged

heated words, most fans did not take it seriously in the shadow of 50 vs. Ja Rule.

Since then, 50 Cent's sophomore album, "The Massacre," sold millions, yet has been criticized for not being able to recapture the level of hype "Get Rich or Die Trying" set. Ja Rule released "R.U.L.E" with the successful single, "New York, New York," featuring Jadakiss and Fat Joe. Interestingly enough, this single prompted 50 Cent to enter a feud with the two featured artists. When Eminem called it quits in "Toy Soldiers," Ja agreed, saying that he was exhausted with feuds and has recently released a greatest hits album entitled, "Exodus."

Although it seemed as the feud was over, Ja Rule has returned to the beef with "21 gunz" which is to debut on the Murder Inc Mixtape: MI:3 Friday, May 12, 2006. It can be heard, along with some of his other new songs on his Myspace site. There is no word yet on whether 50 Cent, or any of the G-Unit members for that matter, will respond.

## 50 Cent vs. The Game

Not long before this feud began, The Game had been signed to 50 Cent's G-Unit record label (while simultaneously signed to Dr. Dre's Aftermath label), and had subsequently achieved great success with his album *The Documentary* and the singles "How We Do" and "Hate It Or Love It", both of which featured 50 Cent.

However, the sudden feud between the pair (who had been marketed as close associates, almost in a mentor/protege relationship) started from alleged rumors that The Game had recorded with former G-Unit nemesis Joe Budden on a track that was released in 2004. Things escalated after 50's second album, *The Massacre*, was released and had several lyrics dissing other rappers; among them Nas, Fat Joe and Jadakiss; The Game soon appeared on New York radio claiming he had no beef with any of the rappers 50 Cent targeted, and was not involved. Taking offense at what he perceived as Game's disloyalty, 50 Cent appeared on the radio soon after to announce that he had officially dropped The Game from G-Unit, claiming that The Game owed him more credit for songs that he had helped in writing and recording, and that Game should have openly supported 50 in his feuds.

The Game refuted this explanation however, stating that 50's alleged jealousy over the success of *The Documentary* (which resulted in 50's album "The Massacre" being pushed back from February to March) caused them to feud while on tour. The beef escalated as one member of The Game's entourage was shot outside of the Hot 97 radio station in New York, landing him in the hospital. The battle appeared to be escalating dangerously, but within a few weeks, The Game and 50 Cent ended their feud, deciding to give money to charity and apologizing for their actions.

Many fans felt that the supposed feud, and particularly the incident at the radio station was a publicity stunt designed to boost the sales of the two albums the pair had just released. Nevertheless, even after the situation had apparently deflated, 50 Cent and G-Unit continued to feud with The Game, denouncing his street credibility in the media and claiming that without their support, he will not score a hit from his second album. 50 Cent also sued The Game's manager Jimmy Henchmen over unauthorized filming for a documentary about Kelvin Martin. The Game was then highly critical of 50 Cent during a performance at the Summer Jam festival, leading chants of "G-Unit". After the performance at Summer Jam, The Game responded with a hard hitting diss titled "300 Bars and Runnin'" in which it address 50 Cent and G-Unit. 50 Cent has mixed feelings towards the diss but nevertheless he responded through his "Piggybank" video. The video features The Game dressed as a Mr. Potato Head and his many other nemesis named in the song in parodies of major characters on television. The feud continued escalating, as former Bloods and fans of The Game began protesting events that feature 50 Cent and G-Unit. Recently it had been looking like more of a one sided beef with all diss track's being released by The Game. He dropped tracks such as "120 Bars" "G-Unit Crip" "360" and "Red Bandana". At the end of "Red Bandana" The Game claims 50 Cent is stealing Eminem's style by just talking and he says:

*"That knockoff 8 Mile shit/  
You can never be Eminem motherfucker/  
You ain't lyrically inclined enough to be Nas, Jay-Z, BIG, or Pac/  
And in the modern day...today, tomorrow...next week/  
You can't fuck with The Game nigga!/  
...out!"*

In January 2006, The Game took the beef to whole a new level by releasing an entire DVD devoted to the fall out entitled "Stop Snitchin' Stop Lyin'" along with a mixtape, with a lot of claims that this would be his final involvement with the beef. After this many Game fans started stating that The Game had won the beef, until 50 Cent came out with the track "Not Rich, Still Lyin'" which featured 50 Cent imitating The Game.

The people at Interscope are once again trying to deflate the situation. This feud is the first of many feuds whereas, two rappers from the same label currently engaged in rap feuds with one another.

## Other known rivalries (not necessarily chronological order)

- **MC Lyte vs. Antoinette:** Antoinette was an aspiring female rapper who, presumably in order to attract attention, went after the leading female rapper of the time. The two traded insults for a year or two. Lyte's response was also fueled by claims that her rival had stolen the beat from *Top Billin*, by Audio Two (which included her relative, Milk D).
- **Tim Dog vs. N.W.A.:** Tim Dog made "Fuck Compton" to express his dismay at the rising popularity of gangsta rappers such as N.W.A. in the '90s, whom he felt were wack. Dr. Dre responded with a skit on his album "The Chronic" in which it is insinuated that Dog enjoyed performing fellatio.
- **MC Shan vs. LL Cool J:** While on tour together, a young LL played MC Shan his new single "Rock The Bells." It wasn't until later that Shan realized the beat LL had used was one of Shan's own. Feeling violated, Shan released the song "Beat Biter" directly calling LL Cool J out for plagiarism. LL responded, but only subliminally with "The Breakthrough."
- **X-Clan vs. KRS-One:** This is believed to stem from remarks KRS-One made onstage after an X-Clan concert. X-Clan responded in the song "Fire & Earth", criticising KRS for being a humanist, among other things. KRS eventually responded in a Source magazine interview and then with the song "Build & Destroy", by which time X-Clan had disbanded.
- **X-Clan vs. 3rd Bass:** Militant Afrocentric group X-Clan targeted the White group 3rd Bass in several songs, referring to them as "cave boys". X-Clan member Brother J has said his reason for going after 3rd Bass was not simply because they were White, but because "the corporation that was pushing them made people think that the group was Black . . . it was hard enough (for actual Black artists) to get in the door to get a decent deal in the 90s (so) do you think I am going to sit back and allow someone to bamboozle the audience and take position (ahead of those other struggling Black artists)?" 3rd Bass never clearly responded, though it is often rumored that they responded subliminally on their second album *Derelicts Of Dialect* (the tracks rumored to contain disses being "Herbalz In Your Mouth" and "Green Eggs & Swine").

- **MC Eiht vs. DJ Quik:** DJ Quik Dissed MC Eiht, who was really popular at the time, so Quik thought it would help his popularity, he was on Death Row Records where he recorded Dollaz & Sense, rumours that Quik specifically went behind Eiht was because Eiht was a member of the Crips while Quik had ties to the Bloods. Songs Involved: DJ Quik - Dollaz & Sense, DJ Quik - Let Yo Havit, MC Eiht - Def Wish 3.
- **Jay-Z vs. Terror Squad:** While the beef between Jay-Z and Terror Squad member Big Pun is only rumored, the bad blood between him and Fat Joe has become increasingly publicized. Rumors state that Jay, Dame Dash and Sauce Money had an altercation with Big Pun, Fat Joe and Cuban Link in a New York club. The story goes that Jay-Z was performing drunk, and Terror Squad walked on stage and told him to get off for their set. Jay-Z punched Fat Joe and was then hit with a bottle of champagne in the head by Big Pun. After this, several subliminal disses may have been traded before Pun's death; afterward, and on up to the present, Jay and Fat Joe have sent more thinly-veiled subliminals at each other, some referencing a Roc-a-Fella/Terror Squad truce basketball game which the Roc forfeited.
- **Jay-Z vs. Prodigy:** In 2000-2001, Jay and Prodigy began a series of disses that would grow to culminate in a Summer Jam concert. While on-stage, Jay projected old pictures of a young Prodigy dressed and emulating the dance moves of Michael Jackson. According to MTV News, the long feud between Mobb Deep and Jay-Z is dead. Prodigy and Hov recently sat down to discuss doing business together. "We got friends in common," Prodigy explained about how the meeting came about. It looks like the Mobb are going to be executive producing the debut by Sam Scarfo, one of Jay's first signings upon becoming Def Jam prez.
- **Jay-Z vs. Cam'ron-** Formerly signed to Roc-a-Fella Records, Cam'ron and Jay-Z's relationship was never more than cordial; when Jay announced retirement, Dame reportedly offered Cam'ron the presidency of Roc-a-Fella. However, when Jay announced he had sold the Roc to Def Jam and was taking the offered ownership in 2005, Cam left with Dame and Biggs. In early 2006, he claimed Jay was to diss him at the I Declare War concert and released a diss to Jay. Currently Jay-Z and his representatives say he has no plans to respond but also says anything is possible.
- **Jay-Z vs. R. Kelly:** In 2004, Jay-Z and R. Kelly commenced on what was to be a 40-date concert tour. Plagued by a string of cancelled and brief shows, the tension between the two artists reached a plateau at October 2004 show in New York's Madison Square Garden. Kelly abruptly left the stage mid-performance when he believed several fans were waving guns at him. In the ensuing backstage melee, R. Kelly and two of his bodyguards received a dousing of pepper spray from a member of Jay-Z's entourage. All dates of the tour were subsequently cancelled. R. Kelly

responded by filing a multi-million dollar lawsuit against Jay-Z. A countersuit by Jay-Z against R. Kelly relating to the tour was later dismissed.

- **Dr. Dre vs. Luke:** One of Dr. Dre's tracks on The Chronic was directed toward Luke in the hit single Dre Day. Luke responded with his own track Cowards in Compton parodying the lyric "Ain't Nuthin' But a G Thang".
- **Westside Connection vs. Common:** Ice Cube interpreted the Common song I Used To Love H.E.R. (which details the history of hip hop through an elaborate extended metaphor) as disrespectful towards the West Coast's contribution to hip hop. In response, Cube, along with his crew The Westside Connection, released "Westside Slaughter House," which included a Common Sense diss. Common responded with the track "The Bitch In Yoo", but the two MCs reconciled soon after.
- **Bone Thugs-N-Harmony vs. Do or Die & Twista:** This midwestern feud started some time between Bone Thugs's 2nd and 3rd albums, with each faction accusing the other of stealing the others style. The beef eventually dissolved.
- **Westside Connection vs. Cypress Hill:** Cypress Hill accused Ice Cube of stealing beats, lyrics and choruses for his Friday soundtrack that they had planned to use on their Cypress Hill III: Temples of Boom album. They recorded the dis track "No Rest For The Wicked" as a result. Ice Cube responded with "King Of The Hill" (credited to his Westside Connection group) to which Cypress Hill released "Ice Cube Killa" in response.
- **Lil' Kim vs. Foxy Brown:** Brown accused Kim of slavishly imitating her style, and Kim accused Brown of the same. Kim responded on Mobb Deep's remix of their single "Quiet Storm" and criticized Brown for using a ghostwriter. Brown responded on the Capone & Noreaga track "Bang Bang," in a verse, which unlike Kim's initial verse, included a much more direct attack. The beef reached it's climax in 2001 when Kim's entourage traded gunfire with Capone-N-Noreaga's entourage outside of the Hot 97 studio in New York City. In 2005 Lil' Kim was convicted of Perjury and lying before a Grand Jury when questioned regarding the incident. She was sentenced to a year and one day at the Federal Detention Center in Philadelphia, which she reported to on Monday, September 19.
- **DMX vs. Kurupt:** This feud stems from DMX sleeping with Kurupt's then girlfriend Foxy Brown. Kurupt would release an attack on DMX, his record label Ruff Ryders, the rap supergroup The Firm, Ja Rule and producer Irv Gotti on a song called Calling Out Names which was later released on album Tha Streetz Iz A Mutha. DMX's diss track towards Kurrupt came in

the form of Bring Your Whole Crew from the album *Flesh of My Flesh, Blood of My Blood*. There has been no visible conclusion to this rivalry.

- **DMX (rapper) vs. Ja Rule:** DMX claimed his one-time ally Ja Rule had copied his rap style, and gotten very rich as a result. Ja Rule responded by bringing up DMX's drug abuse and questioning his sexuality.
- **Shady/Aftermath vs. Jermaine Dupri:** Jermaine stated in an interview that he was a more capable producer than Dr. Dre or Timbaland. Dre and Timbaland took offense, although Jermaine tried to rationalize that what he meant was that he simply did more as a music producer than the other two (writing R&B song lyrics for Usher, in addition to creating his instrumentals, for example). Dre then recorded a verse dissing Jermaine on Eminem's album *The Eminem Show*, mocking Jermaine for, amongst other things, achieving his initial successes with "10 and 11 year olds" (referencing Jermaine's first signed act Kriss Kross, and recent artist Bow Wow). Xzibit, at the time an artist readily affiliated with Aftermath, also mocked Jermaine Dupri in a radio freestyle, and the Atlanta producer then traded dis tracks with Dr. Dre, Eminem and Xzibit for approximately a year.
- **Mobb Deep vs. Nas:** In 2001, to the surprise of many, Nas shocked fans when he mentioned Prodigy on his QB diss track *Destroy & Rebuild* (on which he also disses former friends like Cormega, Nature, and N.O.R.E.). Prodigy and Havoc dissed back on *RIP Nas and Point Out the Clowns* (on which they also diss Jay-Z). The beef was ended, briefly, in 2005; Nas brought Prodigy out at a show to promote the release of his album *Street's Disciple*, then dissed them again later that year on *The Storm* when Mobb Deep signed with Nas' rival 50 Cent's G-Unit Records.
- **Eminem vs. Canibus:** Eminem released the song "Role Model" on his first LP where he mentioned Canibus in passing. Part of this resulted from LL Cool J's and Canibus's beef. Canibus believed that LL Cool J's response *The Ripper Strikes Back* to have been too well written and approached Eminem and asked whether he had acted as ghostwriter, which Eminem denied. They talked about collaborating which culminated in Canibus's offering a guest appearance on his with his album *2000 B.C.* but Eminem declined. Later, Canibus released a song on his *C True Hollywood Stories* album that retold Eminem's song "Stan." In Canibus' version, the character had survived (contrary to Eminem's original track) and was bitter toward Eminem for how the rapper had treated the fictional character. The two traded dis tracks for a period, including "Can-A-Bitch" by Eminem from his *Straight From da Lab* EP circulating underground, before the beef appeared to fizzle out.
- **Eminem vs. Insane Clown Posse:** The feud began when Eminem heard a line from ICP's *Carnival of Carnage* album with the lyrics "...and now I'm sleepin' in the gutta, right next to Champtown's motha..." Champtown was

a close friend/associate of Eminem. Approximately 7-8 years later, Eminem started dissing ICP during his live shows as well as a live appearance he had on the Howard Stern Show. In response, ICP, along with Twiztid, made a diss track called "Slim Anus" and aired it on the Howard Stern Show and several other radio shows. This diss track which was basically Eminem's first hit single, "My Name Is", with most of the lyrics altered to make Eminem and Dr. Dre out to be homosexuals. Eminem responded to this by including a skit on his multi-platinum selling album *The Marshall Mathers LP*, which portrayed ICP members Shaggy 2 Dope and Violent J fellating the gay character Ken Kaniff. Eminem also took several shots at the ICP on the song *Marshall Mathers*, claiming that the ICP were cowards who lived in Suburban Detroit, despite claiming to be from The Inner City. Later that year, Eminem pulled a gun on Douglas Dail, a close friend and associate of the ICP, whom is otherwise known within the Juggalo community as "Dougie Doug". An altercation took place between them, and Eminem pulled an unloaded gun out on Dougie. Eminem was later arrested and pleaded "no contest", to which he received probation for a year. ICP then released a diss track called "Nothin' But A Bitch Thang" which they posted on their website for free download. This song included a graphic intro featuring Dr. Dre performing sodomy on Eminem. The song itself responded to the disses featured on *The Marshall Mathers LP*, the "Dougie Doug Incident", and took more stabs at Eminem and his then ex-wife, Kim. Also in the song, ICP described an incident in the '90s before Eminem had made it big, where he handed out fliers at a concert party he was having, which stated that ICP may make an appearance to it. Violent J also described an incident where Eminem had paid Twiztid, another rap duo on their Psychopathic label, to open up for their show. Eminem continued to diss them during his *Up In Smoke Tour*, using blow-up dolls painted up like the ICP, and on his song "Business". ICP responded with another diss track called "Please Don't Hate Me", this time targeting Eminem's mother. Although they never officially settled their differences, it appears the ICP and Eminem have currently ended their feud.

## Today's feuds

- **50 Cent vs. Bang 'Em Smurf & Domination:** Bang 'Em Smurf, and Domination were once original members of G-Unit. Before 50 Cent signed to Interscope, Bang 'Em Smurf was arrested on a weapons charge. 50 Cent refused to bail Bang 'Em Smurf out of jail, it eventually lead to Domination & Bang 'Em Smurf leaving and conflict between them.
- **Black Wall Street vs. Roc-A-Fella Records:** This feud grew out of an earlier rivalry with Memphis Bleek over the name of his label. The label was similar to the one to which The Game had been previously signed. On the single "Westside Story," The Game raps that he "don't do button-up shirts or drive Maybachs," many believed that this was a shot at Jay-Z. On Memphis Bleek's 534 album, Jay-Z says in his rap; "It's like when niggas make subliminal records/if it ain't directed directly at me I don't respect it. You keep entering the danger zone/you gon' make that boy Hov put your name in this song/if you that hungry for fame then fuck it come on". Many hip-hop fans believed Jay-Z was calling out The Game. On Hot 97, Jay-Z performed "Dear Summer" and another freestyle. In his freestyle he repeatedly used the word "game". The Game apparently felt that the rapper was discrediting him and made several remarks directed at Roc-A-Fella Records. In an interview with Ed Lover and Moni Love, The Game said the Maybach line on "Westside Story" was actually a diss at Ja Rule, he also said he has a lot of respect for Jay-Z and would never diss legends. Jay-Z later insisted that "game" references were just about the rap game itself, not the rapper. The Game still addresses Memphis Bleek and the Young Gunz on songs. He put out a song called "Old Gunz" which stated that the Young Gunz grew up in nice neighborhoods and that they had no right to call themselves young guns. Another member of The Game's Black Wall Street said that they were young but they weren't guns, they had never shot at anyone in their lives.
- **G-Unit vs. D-Block:** They are beefing after 50 Cent dissed Jadakiss for appearing on 50's nemesis', Ja Rule, single, "New York". The feud has grown to encompass both groups. Jadakiss responded to 50's "Piggy Bank" with "Checkmate".
- **The Diplomats vs. Ma\$e:** His recent feud started with fellow Harlem based rapper Cam'Ron. After returning to Bad Boy to record his album, he had made comments directly at Cam'Ron, and Jim Jones of The Diplomats (known also as Dip-Set). On radio, the rappers had verbal exchanges disputing his previous comments about Ma\$e's dissent

towards rap. Since then, Ma\$e has recorded songs discrediting Cam'Ron and Dip Set. Cam'Ron has blasted Ma\$e as being a hypocrite and sinner for his "glorifying" return to gangster rap. Jim Jones blasted a song at the end of Dear Summer at him, well he might be talking to Jay-Z.

- **Nelly vs. Chingy:** Nelly questioned Chingy's "Right Thurr" in a song in his *Sweat* album. Nelly says he helped Chingy get noticed and he got no credit. They also argue of who made the urr slang term.
- **Joe Budden vs. The Game:** In 2004, 50 Cent criticized Joe Budden's album for "lacking street credibility." Budden took offense and released various insults directed at G-Unit. The Game did a freestyle for DJ Clue, and then Joe Budden used the end of the freestyle without notifying The Game. While on the end, Joe Budden took shots at G-Unit. During 2004, The Game made several records against Joe Budden, notoriously the track "Buddens." The Game threatened Joe Budden and supposedly flew to New York to confront him. Joe Budden mocked The Game's appearance on the dating game show "Change of Heart". On his web site, The Game defended his embarrassing appearance on the show, saying that he was young and needed the money, also he stated on his Stop Snitchin' Stop Lyin' DVD that he was on the show with two girls making him a pimp. Later, at a party in New York, the rappers mutually announced their intention to stop making hostile records about each other, but The Game has subsequently suggested in songs and videos that he won the feud.
- **Lil' Flip vs. T.I.:** While out of prison, T.I. had overheard people claiming that Lil' Flip had disrespected him at a show he did in Atlanta and he felt obliged to respond. He did so at WHTA/Hot 107.9's Birthday Bash. According to [www.allhiphop.com](http://www.allhiphop.com), T.I. was on a Houston radio station talking about the situation between him and Lil' Flip, and he made nasty comments about Lil' Flip repping a hood that he didn't grow up in. The rapper was confronted by Lil' Flip and his crew and a fight broke out between them. They since have discontinued this feud after a closed door meeting between the two. However, on T.I.'s forthcoming album *King*, there are two tracks which have been disputed by the AllHipHop.com community to be shots at Lil' Flip ("What You Know" and "I'm Talking To You"). However in an interview with HipHopGame.com on March 24th, 2006, T.I. was quoted as saying he and Lil' Flip have no beef.
- **The Game vs. Yukmouth:** Yukmouth confronted The Game at a party and stated to him that he had a beef with 50 Cent. Soon a video surfaced on the Internet in which Yukmouth appeared in a studio with rappers Domination & Bang 'Em Smurf who were making a disrespectful song aimed at G-Unit. At the end of the clip, Yukmouth claims that The Game had a tongue ring. (The piercing is viewed as effeminate.) The Game fired back with performing an Ice Cube move by dissing the rap veteran over his own "I Got 5 On It" beat. Yukmouth responded with a diss track of his own which referred to the *Change of Heart* and tongue ring incidents.

Yukmouth released a mixtape called "All Out War," attacking The Game on several tracks. The two tried to bury the hatchet and even recorded a song together in hopes of squashing the beef. However, Game wanted Yukmouth to record the track with him in Compton. Yukmouth recorded his verse and sent it to Game because he feared it was a setup. Game took this as a sign of weakness and dissed Yukmouth on the track. Yukmouth and Game have both recently said they ended the rivalry this time and recorded another song together.

- **Suge Knight vs. The Game:** Yukmouth claimed that The Game had been slapped by Suge Knight during their beef. The Game responded on his website, saying that if Suge Knight had ever touched him, he would put him "6 Feet Under." After the 2005 *BET Awards*, associates of Death Row had their invitations to a party hosted by Ciara rescinded. Supposedly, a member of Death Row had tried to steal The Game's chain. The Game stated on his Black Wall Street web site that he dislikes Suge Knight because of "the lives he has endangered". In Miami for the 2005 MTV Video Music Awards, Suge Knight was shot and wounded at Kanye West's party by an unknown gunman. The Game vigorously denied involvement in the shooting, but the incident renewed efforts to pacify hip hop feuds and The Game has consequently been discouraged from attending certain events in hopes of averting retaliation.
- **Yukmouth vs. G-Unit:** A video surfaced on the Internet in which Yukmouth appeared in a studio with rappers Domination & Bang 'Em Smurf who were making a disrespectful song aimed at G-Unit. Spider Loc gained some acclaim for stealing Yukmouth's chain while in a night-club in Hollywood. Spider Loc took pictures wearing Yukmouth's chain and they soon spread across the internet. The chain was returned a day later as Spider was pressured to do so by a mutual friend named Ty from Soul Records.
- **The Game vs. Lil Eazy:** There is currently some controversy between Lil Eazy and fellow Compton rapper The Game. Although the two rappers use to be close and even collaborated they've recently had a falling out. Lil Eazy claims The Game is using his fathers name just to help his own career. Lil Eazy came out with a song titled "Gangsta Shit" which takes several subliminal shots at The Game. The Game addressed E' on a couple of lines on "120 Bars" by claiming that E' doesn't write his own lyrics. "Now Lil Eazy Dissin, he don't write his own raps so I gotta forgive him, i've got love for your pops and I always will, so on behalf of Eric Wright my nigga ya gotta chill". E' responded with a diss track called "E' Coming From Compton" and "They Know Me".
- **50 Cent vs. Nas:** 50 Cent claimed that Nas had made disparaging comments about him and his G-Unit camp while performing at a New York concert. The rapper has denounced Nas as a traitor over the allying himself with Ja Rule and Irv Gotti. He dissed Nas on "Piggy Bank" and Nas dissed him on "MC Burial". Nas however claims to still have "a lotta

love" for 50 and that 50 is still bitter over Jennifer Lopez choosing a remix of her "It's Gonna Be Alright" which had a version with 50, but the version with Nas was the one that gained circulation and recognition. According to Nas, there are other situations and moves 50 didn't understand Nas make when they were both together at Columbia Records. As of Summer 2006, the beef has settled down with nothing coming from either camp. However that may change with Nas' next LP, Hip-Hop is Dead.

- **G-Unit vs. Terror Squad:** 50 Cent points out that Fat Joe had painted a target on themselves for partnering up with Ja Rule while filming a video in which the rapper took shots at him. He recorded the track "Piggy Bank" and attacked Fat Joe and other rappers for their association with Ja Rule. Even though things cooled down, at 2005 MTV Video Music Awards, Fat Joe made a disparaging comment about G-Unit during a performance. 50 Cent and G-Unit retaliated on set by shouting obscenities toward Fat Joe and Terror Squad.
- **Dem Franchize Boyz vs. D4L:** D4L say they came up with snap music and the dance and say that Dem Franchize Boyz stole it. Dem Franchize Boyz say the same thing about D4L.
- **50 Cent vs. Shyne:** 50 Cent recorded the track "Piggy Bank" and attacked Shyne for his association with Ja Rule and Murder Inc. Shyne had Irv Gotti produce his album.
- **Cash Money Records vs. B.G., Mannie Fresh, & Juvenile:** This beef is because of most of the labels star artists claiming that the labels CEOs Baby & Slim cheated them out of the millions. This lead to most of the rappers except for Lil' Wayne leaving.
- **Loon vs. Ma\$e:** Ma\$e says that Loon stole his style and Loon says the same about Mase.
- **Ma\$e vs. Fabolous:** Same as Loon & Ma\$e beef.
- **Lil Romeo vs. Bow Wow:** This was due to a line that Bow Wow rapped in his video "Fresh Azimiz", which stated that he is only 18 and making "mo than 'yo dad" which some took as referring to Romeo's father rap mogul Master P, but Bow Wow later said it was a line borrowed from a classic LL Cool J track. As a result Romeo responded with the track "U Can't Shine Like Me".

- **Ghostface Killah vs. D4L:** Ghostface disses D4L for their help in creating "snap music" in the South. He mocks them in several interviews and concerts, as well as his track The Champ from his album Fishscale. (line: "Revenge is my arts is crafty darts, while y'all stuck on Laffy Taffy, wonderin' how y'all niggaz get past me, I been doin this before Nas dropped the Nasty")

- **Rick Ross vs. Akon**

## Hip hop soul

**Hip hop soul** is a subgenre of contemporary R&B. The term generally describes a style of music that blends R&B singing and [hip hop](#) production. The genre served as the middle point between two other hip hop/R&B blends, [new jack swing](#) and [neo soul](#), and was most popular during the mid-1990s.

# History

## Musical influences

Many of the artists who released hip hop soul records had previously released new jack swing (or, for the female performers, new jill swing) recordings, including Jodeci, SWV, and TLC. The main difference between the two was that hip hop soul was rougher, and contained less of an R&B feel than new jack swing. For example, Hip hop soul used samples instead of [synthesizer](#) lines, and featured strong elements of 1990s [East Coast hip hop](#) and [gangsta rap](#). While new jack swing stayed closer to the R&B side of the blend, hip hop soul embraced its rap music influences, and its primary figures, including Montell Jordan (the first R&B artist to sign with hip hop label Def Jam Records), Blackstreet (led by Teddy Riley, the inventor of new jack swing), Groove Theory, and the "Queen of Hip Hop Soul" Mary J. Blige, adapted the nervy swagger of the rapping counterparts.

## Hip-hop soul and the public

Hip-hop soul is also considered more "mature" than other contemporary R&B styles, and tends to be marketed for an older audience. This is in part due to the genre's attention to the darker aspects of love and urban life.

Hip-hop soul singers use adult language and themes, more than any other R&B sub-genre. This has drawn criticism from groups who feel the music, much like hip hop, trivializes, if not glorifies, violence and negative urban stereotypes. It has not helped that several hip hop soul artists have found themselves in legal troubles, including R.Kelly, TLC's Lisa "Left Eye" Lopes, and the members of Jodeci.

## Dawn of neo-soul

Hip-hop soul experienced a lull in popularity with the emergence of [neo soul](#), another R&B sub-genre, in the late 90s. Deemed more progressive by fans, neo soul music became a more "positive" alternative to hip hop soul and contemporary R&B, which had a growing reputation of being overly sexual and based on negative stereotypes. Ironically, due to their relationship with hip hop, many neo soul and hip hop soul artists cross genres regularly. Artists like Groove Theory, John Legend and Anthony Hamilton can be considered both neo soul and hip hop soul.

## New Generation Resurgence

Currently, hip hop soul is experiencing a spike in popularity due to younger acts incorporating the sound. These acts include newcomers such as Jaheim, Akon, Amerie, Keyshia Cole, and Anthony Hamilton.

## Hip house

**Hip house**, also known as *house rap*, is a mixture of [house music](#) and [hip hop](#) which arose during the 1980s in New York and Chicago. However, the first hip house track was "Rok Da House" by the UK producers 'The Beatmasters' and featured British female rappers 'The Cookie Crew'. Later came "I'll House You" by the Jungle Brothers - although this is not indicated on the album, the track is generally seen as a collaboration between NY house producer Todd Terry and the Jungle Brothers (an Afrocentric rap group from New York). Shortly after "I'll House You", artists in Chicago, the home of house music, started producing their own hip house tracks. Though hip house never achieved massive popularity, a few hits arose when fused with Belgian New beat and Italo House (such as by Technotronic, a Belgian group) in the later part of the decade and the early 1990s.

# Hip life

**Hip life** music is an originally Ghanaian fusion of highlife and [hip hop music](#). The style is most popular in Ghana, especially the capital city of Accra, and among Ghanaians and other West Africans abroad, especially the United Kingdom, United States, Netherlands and Germany.

The history of Ghanaian hip hop goes back to the 1980s, when performers like K. K. Kabobo and Gyedu Blay Ambolley found a small audience. Ghanaians were influenced by American and British hip hop, [Reggae](#), and Highlife bands like the Ramblers and others. Hip-life first started out in the early 1990s by a rapper named Reggie Rockstone. However, in several radio interviews in 2004, Reggie Rockstone himself stated that he does not perform hip-life. Other Ghanaian rappers like Lord Kenya, Da Multy Crew, The Native Funk Lords, and other rap groups continued the trend of hip-life music which is now one of the most popular forms of music in Ghana. Among the most popular hip life musicians are Tic Tac and the three person Vision in Progress (VIP). Since the rise of these popular musicians, hip life has grown steadily more popular abroad, especially in London, where African nightclubs have helped to popularize the genre.

# Hipstep

**Hipstep** is a musical genre which fuses the sounds of electronic [Drum and Bass](#) with beats, rhymes, samples, and mixing techniques from [Hip hop music](#).

Category: [Electronic music genres](#)

A **historical album** is a collection of songs around a unified theme with a basis in the documented history of a person or place. This differs from a [concept album](#), which may have a unified theme, but is usually comprised of fictional stories not linked with actual historical facts even though the subject could be a real person or place. Historical albums are often considered concept albums due to the broad nature of that more recognizable category.

Examples of historical albums include *Chávez Ravine* by Ry Cooder, *Greetings From Cairo, Illinois* by Stace England, and *The Glorious Burden* by Iced Earth. *The Illinois* (album) by Sufjan Stevens could also be associated with the historical album category. *Chávez Ravine* (album) tells the story of an actual town in Chávez Ravine demolished in the 1950s to lure the Brooklyn Dodgers to Los Angeles. *Greetings From Cairo, Illinois* tells the story of Cairo, Illinois from 1858 to 2005 citing numerous documented historical references. *Illinois* uses actual Illinois towns and subjects as jumping off points to more universal subjects such as family and faith.

Historical albums are not associated with The National Academy of Recording Arts and Sciences's Grammy Award for Best Historical Album category, which is comprised of reissues of previously released musical recordings.

# History of hip hop music

The history of [hip hop music](#) begins in the early 1970s in New York City, and continues till this day.

## Origins

*Main article:* [Roots of hip hop](#)

Hip hop was innovated in the early 1970s in New York City, by people like DJ Kool Herc. At neighborhood block parties, popular soul, funk or disco songs were played, eventually with the percussion breaks isolated and repeated over and over again to facilitate dancing. Over time, rappers began [rapping](#) in sync with the beats, and modern hip hop was born.

## 1970s

Herc was one of the most popular DJs in early 1970s New York, and he quickly switched from using [reggae](#) records to funk, rock and, later, disco, since the New York audience did not particularly like reggae. Because the percussive breaks were generally short, Herc and other DJs began extending them using an audio mixer and two records. Mixing and scratching techniques eventually developed along with the breaks. (The same techniques contributed to the popularization of [remixes](#).) As in dub, performers began speaking while the music played; these were originally called *MCs*. Herc, while focusing primarily on DJing, began working with two MCs, Coke La Rock and Clark Kent. This was the first emcee crew: Kool Herc & the Herculoids. Originally, these early rappers focused on introducing themselves and others in the audience (the origin of the still common practice of "shouting out" on hip hop records). These early performers often emceed for hours at a time, with some improvisation and a simple four-count beat, along with a basic chorus to allow the performer to gather his thoughts (such as "one, two, three, y'all, to the beat, y'all"). Later, the MCs grew more varied in their vocal and rhythmic approach, incorporating brief rhymes, often with a sexual or scatological theme, in an effort at differentiating themselves and entertaining the audience. These early raps incorporated similar rhyming lyrics from African American culture (see [roots of hip hop music](#)), such as the dozens. While Kool Herc & the Herculoids were the first hip hoppers to gain major fame in New York, more emcee teams quickly sprouted up. Frequently, these were collaborations between former gang members, such as Afrika Bambaataa's Universal Zulu Nation (now a large, international organization). During the early 1970s, breakdancing arose during block parties, as b-boys and b-girls got in front of the audience to dance in a distinctive, frenetic style. The style was documented for release to a world wide audience for the first time in Beat Street.

### Late 1970s: Diversification of styles

In the mid-1970s, hip hop split into two camps. One sampled disco and focused on getting the crowd dancing and excited, with simple or no rhymes; these DJs included Pete DJ Jones, Eddie Cheeba, DJ Hollywood and Love Bug Starski. On the other hand, another group were focusing on rapid-fire rhymes and a more complex rhythmic scheme. These included Afrika Bambaataa, Paul Winley, Grandmaster Flash and Bobby Robinson.

As the 70s became the 1980s, many felt that hip hop was a novelty fad that would soon die out. This was to become a constant accusation for at least the next fifteen years. Some of the earliest rappers were novelty acts, using the themes to Gilligan's Island and using sweet doo wop-influenced [harmonies](#).

With the advent of recorded hip hop in the late 1970s, all the major elements and techniques of the genre were in place. Though not yet mainstream, it was well-known among African Americans, even outside of

New York City; hip hop could be found in cities as diverse as Los Angeles, Washington, Baltimore, Dallas, Kansas City, Miami, Seattle, St. Louis, New Orleans, and Houston.

Philadelphia was, for many years, the only city whose contributions to hip hop were valued as greatly as New York City's by hip hop purists and critics. Hip hop was popular there at least as far back as 1976 (first record: "Rhythm Talk", by Jocko Henderson in 1979), and the New York Times dubbed Philly the "Graffiti Capital of the World" in 1971, due to the influence of such legendary graffiti artists as Cornbread. The first female solo artist to record hip hop was Lady B. ("To the Beat Y'All", 1980), a Philly-area radio DJ. Later Schoolly D helped invent what became known as [gangsta rap](#).

## The 1980s

The 1980s saw intense diversification in hip hop, which developed into a more complex form. The simple tales of 1970s emcees were replaced by highly metaphoric lyrics rapping over complex, multi-layered beats. Some rappers even became mainstream pop performers, including Kurtis Blow, whose appearance in a Sprite commercial made him the first hip hop musician to be considered mainstream enough to represent a major product, but also the first to be accused by the hip hop audience of [selling out](#). Other popular performer among mainstream audiences included LL Cool J, Slick Rick, and DJ Jazzy Jeff and the Fresh Prince, who won rap's first Grammy award in 1988.

Hip hop was almost entirely unknown outside of the United States prior to the 1980s. During that decade, it began its spread to every inhabited continent and became a part of the music scene in dozens of countries. In the early part of the decade, breakdancing became the first aspect of hip hop culture to reach Germany, Japan and South Africa, where the crew Black Noise established the practice before beginning to rap later in the decade. Meanwhile, recorded hip hop was released in France (Dee Nasty's 1984 Paname City Rappin') and the Philippines (Dyords Javier's "Na Onseong Delight" and Vincent Dafalong's "Nunal"). In Puerto Rico, Vico C became the first Spanish language rapper, and his recorded work was the beginning of what became known as reggaeton.

## Politicization

The first rap records (Fatback Band's King Tim III, Grandmaster Flash's "Super Rappin'" and The Sugarhill Gang's Rapper's Delight) were actually recorded by live musicians in the studio, with the rappers adding their vocals later. This changed with DJ records such as Grandmaster Flash's "Adventures on the Wheels of Steel" (known for pioneering use of scratching, which was invented by Grandwizard Theodore in 1977) as well as electronic recordings such as "Planet Rock" by Afrika Bambaataa and Run DMC's very basic, all electronic "Sucker MC's" and "Peter Piper" which contains genuine cutting by Run DMC member Jam Master Jay. The latter group of recordings could, while still very debatable, have marked the beginning of "true" hip hop music as opposed to simply rapped verses over funk or disco songs (from this point of view pre-hip hop funk/disco songs which happen to be rapped over). These early innovators were based out of New York City, which remained the capital of hip hop during the 1980s. This style became known as [East Coast hip hop](#).

Grandmaster Flash & the Furious Five released a "message rap", called "The Message", in 1982; this was one of the earliest examples of recorded hip hop with a socially aware tone. In 1984, Marley Marl accidentally caught a drum machine snare hit in the sampler; this innovation was vital in the development of [electro](#) and other later types of hip hop.

## Popularization

The mid-1980s saw a flourishing of the first hip hop artists to achieve mainstream success, such as Kurtis Blow (Kurtis Blow), LL Cool J (Radio) and especially Run-D.M.C. (Raising Hell), as well as influences in mainstream music, such as Blondie's Debbie Harry rapping in the first non-black hit to feature rapping, "Rapture". LL Cool J's Radio spawned a number of singles that entered the dance charts, peaking with "I Can Give You More" (#21). 1986 saw two hip hop acts in the Billboard Top Ten; Run-D.M.C.'s "Walk This Way" collaboration with Aerosmith, and the Beastie Boys "(You Gotta) Fight for Your Right (To Party!)". The pop success of both singles was unheard of for the time; "Walk This Way" has proved especially memorable for its early mixture of hip hop and rock (though it was not the first such mixture), and it peaked at an unheard of #4 on the pop charts. Also, the mid-1980s saw the rise of the first major black female group, Salt-N-Pepa, who hit the charts with singles like "The Show Stoppa" in 1985. Ice-T's seminal "6n' Da Mornin'" (1987) is one of the first nationally successful [West Coast hip hop](#) singles, and is often cited as the first [gangsta hip hop](#) song.

In 1987, Public Enemy brought out their debut album (Yo! Bum Rush the Show) on Def Jam - one of hip hop's oldest and most important labels, and Boogie Down Productions followed up in 1988 with By All Means Necessary; both records pioneered wave of hard-edged politicized performers. The late 1980s saw a flourishing of like-minded rappers on both coasts, and Public Enemy's It Takes a Nation of Millions to Hold Us Back became surprisingly successful, despite its militant and confrontational tone, appearing on both the club and rap charts, and peaking at #17 and #11, respectively. Aside from the lyrical innovations, Public Enemy's Bomb Squad production team (along with Eric B. & Rakim and Prince Paul among others) pioneered new techniques in sampling that resulted in dense, multi-layered sonic collages.

## The rise of gangsta rap

*Main article:* [Gangsta rap](#)

The first [gangsta rap](#) album to become a mainstream pop hit, selling more than 2.5 million copies, was N.W.A's Straight Outta Compton (1988). N.W.A's controversial subject matter, including drugs, violence and sex, helped popularize what became known as gangsta rap (said to have begun with Ice-T's "6N' da Morning"). Specifically, the song "Fuck tha Police" earned the foursome the enmity of law enforcement, resulting in a strongly-worded letter of discontent from the FBI. N.W.A's most lasting impact, however, was placing the West Coast on the hip hop map.

## Diversification

Though women, whites and Latinos had long been a part of the hip hop scene, it was not until the 1980s that groups other than young African American males began creating popular, innovative and distinctive styles of hip hop music.

The first rap recording by a solo female was Philadelphia-based Lady B.'s "To the Beat, Y'All" (1980), while The Sequencers were the first female group

to record. It was, not, however, until Salt-N-Pepa in the middle of the decade that female performers gained mainstream success.

The first groups to mix hip hop and [heavy metal](#) included 1984's "Rock Box" (Run-D.M.C.) and "Rock Hard" (Beastie Boys). Later in the decade, Ice-T and Anthrax were among the most innovative mixers of [thrash metal](#) and hip hop. These fusions helped move hip hop into new audiences, and introduced it to legions of new fans in the States and abroad.

## Latin hip hop

*Main article:* [Latin hip hop](#)

Hip hop had always had a significant connection to the Latino community in New York City, and hip hop soon spread among Latinos. The first Latino DJ was DJ Disco Wiz. The Mean Machine's "Disco Dreams", with lyrics in both English and Spanish is widely considered the first Latino hip hop recording, though Los Angeles-based Kid Frost is usually thought of as the first major Latino artist. Performers like Cypress Hill ("Insane in the Brain"), Gerardo ("Rico Suave") and Mellow Man Ace ("Mentiroso") later popularized Latino hip hop in the United States. It has been debated whether ("Rico Suave") or even Gerardo, for that matter, can be considered hip hop instead of Pop. In Latin America, countries like Puerto Rico, Cuba, The Dominican Republic, Brazil, and Mexico created their own popular scenes. Beginning in the mid-80s and early 90s, two of the most popular styles of Latin hip hop were reggaeton, a Puerto Rican and Panamanian mixture of ragga, reggae and hip hop, and Dominican merenrap, a fusion of merengue and Hip Hop.

## Electro

*Main articles:* [Electro](#)

While Run DMC laid the groundwork for East Coast rap, "Planet Rock" (Afrika Bambaataa) was the one of the first electro tracks. Based on a sample from German rock group Kraftwerk (Trans-Europe Express), "Planet Rock" inspired countless groups, based in New Jersey, New York City and Detroit, among other places, to make electronic [dance music](#) (called *electro*) that strongly influenced [techno](#) and [house music](#), and especially the burgeoning electro music scene in northern England, the Midlands and London.

"Planet Rock" influenced hip hop outside of New York as well, such as [Latin hip hop](#) (also *Latin freestyle* or *freestyle*) such as Expose and The Cover Girls, as well as Los Angeles-based [electro hop](#) performers like the World Class Wreckin' Cru and Egyptian Lover.

## Further spread within the US

By the end of the 1970s, hip hop was known in most every major city in the country, and had developed into numerous regional styles and variations. Outside of New York City, New Jersey and Philadelphia, where hip hop had long been well-established, the 1980s saw intense regional diversification.

The first Chicago hip hop record was the "Groovy Ghost Show" by Casper, released in 1980 and a distinctively Chicago sound began by 1982, with Caution and Plee Fresh. Chicago also saw the development of [house music](#) (a form of [electronic dance music](#)) in the early 1980s and this soon mixed with hip hop and began featuring rappers—this is called [hip house](#)—and gained some national popularity in the late 1980s and early 90s, though similar fusions from South Africa, Belgium and elsewhere became just as well-known into the 90s.

Los Angeles hardcore rappers (Ice-T) and [electro hop](#) artists (Egyptian Lover) began recording by 1983, though the first recorded [West Coast rap](#) was Disco Daddy and Captain Rapp's "Gigolo Rapp" in 1981. In Miami, audiences listened to [Miami bass](#), a form of sultry and sexually explicit [dance music](#) which arose from Los Angeles electro; it frequently included rapping. In Washington D.C. a hip hop-influenced form of [dance music](#) called go go emerged and incorporated rapping and DJing.

### **International spread**

Beginning in the early 1980s, hip hop culture began its spread across the world. By the end of the 1990s, popular hip hop was sold almost everywhere, and native performers were recording in most every country with a popular music industry. Elements of hip hop became fused with numerous styles of music, including [ragga](#), [cumbia](#) and samba, for example. The Senegalese mbalax rhythm became a component of hip hop, while the United Kingdom and Belgium produced a variety of [electronic music](#) fusions of hip hop, most famously including British [trip hop](#). Hip hop also spread to countries like Greece, Spain, the Philippines and Cuba in the 1980s, led in Cuba by the self-exiled African American activist Nehanda Abiodun and aided by Fidel Castro's government. In Japan, graffiti art and breakdancing had been popular since the early part of the decade, but many of those active in the scene felt that the Japanese language was unsuited for rapping; nevertheless, by the beginning of the 1990s, a wave of rappers emerged, including Ito Seiko, Chikado Haruo, Tinnie Punx and Takagi Kan. The New Zealand hip hop scene began in earnest in the late 1980s, when Maori performers like Upper Hutt Posse and Dalvanus Prime began recording, gaining notoriety for lyrics that espoused tino rangatiratanga (Maori sovereignty).

## The 1990s

In the 90s, gangsta rap became mainstream, beginning in about 1992, with the release of Dr. Dre's *The Chronic*. This album established a style called [G Funk](#), which soon came to dominate [West Coast hip hop](#). Later in the decade, record labels based out of Atlanta, St. Louis and New Orleans gained fame for their local scenes. By the end of the decade, especially with the success of Eminem, hip hop was an integral part of popular music, and nearly all American pop songs had a major hip hop component.

In the 90s and into the following decade, elements of hip hop continued to be assimilated into other genres of popular music; [neo soul](#), for example, combined hip hop and [soul music](#) and produced some major stars in the middle of the decade, while in the Dominican Republic, a recording by Santi Y Sus Duendes and Lisa M became the first single of [merenrap](#), a fusion of hip hop and merengue.

In Europe, Africa and Asia, hip hop began to move from an underground phenomenon to reach mainstream audiences. In South Africa, Canada, Germany, France, Italy and many other countries, hip hop stars rose to prominence and gradually began to incorporate influences from their own country, resulting in fusions like Tanzanian Bongo Flava.

### The rise of the West Coast

*Main article:* [West Coast hip hop](#)

After N.W.A. broke up, Dr. Dre (a former member) released *The Chronic* (1992), which peaked at #1 on the R&B/hip hop chart and #3 on the pop chart and spawned a #2 pop single in "Nothin' But a 'G' Thang".. *The Chronic* took West Coast rap in a new direction, influenced strongly by P funk artists, melding the psychedelic funky beats with slowly drawled lyrics—this came to be known as [G funk](#), and dominated mainstream hip hop for several years through a roster of artists on Death Row Records, including most popularly, Snoop Doggy Dogg, whose *Doggystyle* included "What's My Name" and "Gin and Juice", both Top Ten pop hits.

Though West Coast artists eclipsed New York, some East Coast rappers achieved success. New York became dominated in terms of sales by Puff Daddy (No Way Out), Mase (Harlem World) and other Bad Boy Records artists, in spite of often scathing criticism for a perceived over-reliance on sampling and a general watered-down sound, aimed directly for pop markets. Other New York based artists continued with a harder edged sound, achieving only limited popular success. Nas (*Illmatic*), Busta Rhymes (*The Coming*) and The Wu-Tang Clan (*Enter the Wu-Tang (36 Chambers)*), for example, received excellent reviews but generally mediocre or sporadic sales.

The reemergence of New York as a growing entity in mainstream hip hop soon spawned an inevitable confrontation between the East Coast and West Coast and their respective Major Labels. This sales rivalry eventually turned

into a personal rivalry, aided in part by the music media. Many reporters were not aware that MC battles were an integral part of hip hop since its inception, and that, generally, little was meant by open taunts on albums and in performances. Nevertheless, the East Coast-West Coast rivalry grew, unfortunately resulting in the still unsolved deaths of Tupac Shakur and Notorious B.I.G..

## Diversification of styles

In the wake of declining sales following the deaths of both superstar artists, the sounds of hip hop were greatly diversified. Most important was the rise of [Southern rap](#), starting with OutKast (ATLiens) and Goodie Mob (Soul Food), based out of Atlanta. The sound, highly influenced by [Miami bass](#) and G-Funk, is heavily marked by a "bouncing" rhythm known as the Southern bounce. Platinum selling artist Master P built up an impressive roster of popular artists (the No Limit posse) based out of New Orleans incorporating [G funk](#) and [Miami bass](#) influences. The Cash Money crew, also out of the Big Easy popularized a uniquely Louisianian melodic style of M.C.'ing to the mainstream. Regional sounds from St. Louis, Chicago, Washington D.C., Detroit ([ghettotech](#)) and others began to gain some popularity. Also developing in the South was the genre known as [crunk](#), which achieved success in the hands of artists like Lil' Jon & the East Side Boyz & Three 6 Mafia. Also in the 1990s, [rapcore](#) (a fusion of hip hop and [heavy metal](#)) became popular among mainstream audiences. Rage Against the Machine, Linkin Park and Limp Bizkit were among the most popular rapcore bands.

In 2000, Nelly (Country Grammar) of the St. Lunatics out of St. Louis led a revolution of Midwestern acknowledgement in Hip Hop, though the region has yet to have yielded a unified sound or trend in any way. Cities such as Chicago and Detroit tend to draw more influence from the East Coast, while St. Louis and Cincinnati appear, and sound more Southern.

Though white rappers like the Beastie Boys (Paul's Boutique), Vanilla Ice (To the Extreme) and 3rd Bass (The Cactus Album) had had some popular success and/or critical acceptance from the hip hop community, The success of Dr. Dre's newest protégé, a Caucasian rapper from Detroit named Eminem, was a surprise to many; his 1999 The Slim Shady LP went triple platinum. Like most successful hip hop artists of the time, Eminem came to be criticized for alleged glorification of violence, misogyny, and drug abuse, as well as homophobia and albums laced with constant profanity.

In South Africa, pioneering crew Black Noise began rapping in 1989, provoking a ban by the apartheid-era government, which lasted until 1993. Later, the country produced its own distinctive style in the house fusion kwela. Elsewhere in Africa, Senegalese mbalax fusions continued to grow in popularity, while Tanzanian Bongo Flava crews like X-Plastaz combined hip hop with taarab, [filmi](#) and other styles.

In Europe, hip hop was the domain of both ethnic nationals and immigrants. Germany, for example, produced the well-known Die Fantastischen Vier as well as several Turkish performers like the controversial Cartel. Similarly, France has produced a number of native-born stars, such as IAM and the Breton crew Manau, though the most famous French rapper is probably the Senegalese-born MC Solaar. Swedish hip hop emerged in the mid 1980s and by the early 1990s a lot of 'ethnic Swedish acts' like Looptroop, 'immigrant acts' like The Latin Kings and mixed acts like Infinite Mass switched from English to rapping in "Rinkeby Swedish", a pidgin language of sorts, when they were making records for the domestic market. The Netherlands' most

famous rappers are The Osdorp Posse, an all-white crew from Amsterdam, and Extince. Italy found its own rappers, including Jovanotti and Articolo 31, grow nationally renowned, while the Polish scene began in earnest early in the decade with the rise of PM Cool Lee. In Romania, B.U.G. Mafia came out of Bucharest's Pantelimon neighborhood, and their brand of gangsta rap underlines the parallels between life in Romania's Communist-era apartment blocks and in the housing projects of America's ghettos. Israel's hip hop grew greatly in popularity at the end of the decade, with several stars emerging from both sides of the Palestinian (Tamer Nafer) and Jewish (Subliminal) divide; though some, like Mook E., preached peace and tolerance, others expressed [nationalist](#) and violent sentiments.

North of the U.S. border, in Canada, hip hop became popular thanks to home-grown rap artist Maestro Fresh Wes in the late 1980's. His single, "Let Your Backbone slide", dominated the charts for over a year. In the early 90's, more artists such as Michee Mee, HDV, The Dream Warriors, and The Rascalz established themselves in the growing Canadian urban music scene, primarily located in the diverse backdrop of Toronto and Vancouver. More recently, rappers such as Chocclair, Saukrates, Kardinal Offishall and K-OS have become household names in the Canadian urban music scene, although they have failed to earn mainstream recognition south of the border in the U.S. market.

The rich history between hip hop in California's Oakland-San Francisco Bay Area and Los Angeles and its respective Filipino-American communities resulted in the spread of the genre to the Philippines by the early 1980s. Early rap hits included *Na Onseng Delight* by Dyords Javier and *Nunal* by Vincent Dafalong. As **Pinoy Rap** as it is commonly called, hit the mainstream, early stars rose to prominence in the Philippines, led by pioneering artists such as Francis Magalona, Michael V., Rap Asia, MC Lara and Lady Diane. Other countries in Asia developed similar followings such as Malaysia, and Japan where underground rappers had previously found a limited audience, and popular teen idols brought a style called J-rap to the top of the charts in the middle of the 90s.

Latinos had played an integral role in the early development of hip hop, and the style had spread to parts of Latin America, such as Cuba, early in its history. In Mexico, popular hip hop began with the success of Calo in the early 90s. Later in the decade, with Latin rap groups like Cypress Hill on the American charts, Mexican rap rock groups, such as Control Machete, rose to prominence in their native land. An annual Cuban hip hop concert held at Alamar in Havana helped to popularize Cuban hip hop, beginning in 1995. Hip hop grew steadily more popular in Cuba, due to official governmental support for musicians.

## **Alternative hip hop**

*Main article:* [Alternative hip hop](#)

Though mainstream and crossover acceptance has been almost entirely limited to gangsta rap or pop rap, isolated artists with a socially aware and positive or optimistic tone or a more avantgarde approach have achieved some success. They are usually referred to in mainstream musical circles as "[alternative hip hop](#)", i.e. not gangsta or pop rap; however, this is a somewhat misleading term given that for the first decade of hip hop's existence, before gangsta rap emerged and became the most commercially successful strand of the genre, the vast majority of music produced was generally positive and optimistic. Indeed, many artists often labeled "alternative rappers", such as Common or A Tribe Called Quest, are considerably closer in content and

ethos to the pre-gangsta rap braggadocio and social commentary of pioneers like Afrika Bambaataa and Grandmaster Flash than many artists who are thought to be in the modern hip hop mainstream.

In 1988 and 1989, albums from the Native Tongues collective like De La Soul's *Three Feet High and Rising*, A Tribe Called Quest's *People's Instinctive Travels and the Paths of Rhythm* and the Jungle Brothers' *Straight Out the Jungle* are usually considered the first alternative rap albums, with jazz-based samples and quirky, insightful lyrics covering a diverse range of topics (see jazz rap) and strongly influenced by the Afrocentric messages of Bambaataa's *Zulu Nation*. Digable Planets also achieved a phenomenal success in the early nineties with their single *Cool Like Dat* and the album *Reachin' (A New Refutation Of Time & Space)*, though this alternative rap movement largely fizzled out in the mid nineties, with A Tribe Called Quest splitting up and De La Soul, the Jungle Brothers and Gang Starr retreating to the hip hop underground. However, in the late nineties, just as gangsta rap and pop rap was beginning to achieve incredible mainstream and crossover success, hip hop's alternative side experienced a resurgence. The Afrocentric nu-soul (sometimes known as neo-soul) movement was heavily influenced by the Native Tongues and artists such as Mos Def (*Black on Both Sides*), Talib Kweli (*Train Of Thought*), The Roots (*Things Fall Apart*), Erykah Badu (*Baduizm*), and Slum Village (*Fantastic Vol. 2*) achieved great success at the close of the decade. Meanwhile, another more avantgarde strand of hip hop was being popularized by artists such as Kool Keith (*Dr. Octagonecologist*) and Company Flow (*Funcrusher Plus*), who developed a sound based around outlandish instrumental tracks and warped, complex lyrics. The Rawkus record label, home to Mos Def, Talib Kweli and Company Flow as well as Pharoahe Monch is largely credited with aiding the late 90s resurgence of alternative rap. The influence of jazz on alternative hip hop grew less pronounced in the nineties (with some exceptions, most notably Guru's *Jazzmatazz* project), though jazz rap went on to influence the development of trip hop in the United Kingdom, which fused hip hop, jazz and electronic music; it is said to have been started by Massive Attack's *Blue Lines* (1991), while Portishead were phenomenally successful with their blend of Billie Holiday-style jazz vocals with hip hop samples and turntablism, and DJ Shadow's *Endtroducing* helped repopularize instrumental hip hop recordings as well as having an enormous influence on hip hop production as a whole.

## 2000s

In the year 2000, The Marshall Mathers LP by Eminem sold over nine million copies in the United States, and Nelly's debut LP, Country Grammar, sold over six million copies. In the next several years, a wave of increasingly pop-oriented R&B crossover acts, like Ja Rule and Destiny's Child, dominated American popular music. It was not until the sudden breakthrough success of the hard-edged 50 Cent that hardcore hip hop returned to the pop charts. The United States also saw the rise of alternative hip hop in the form of moderately popular performers like The Roots, Dilated Peoples and Mos Def, who achieved unheard-of success for their field.

Some countries, like Tanzania, maintained popular acts of their own in the early 2000s, though many others produced few homegrown stars, instead following American trends. Scandinavian, especially Danish and Swedish hip hop acts became well known outside of their country, while hip hop continued its spread into new lands, including Russia, Egypt and China.

# History of music

[Music](#) has a long and complex history. It may predate language (and certainly predates the written word) and is found in every known culture, past and present, varying wildly between times and places.

A culture's music is influenced by all other aspects of that culture, including social and economic organization, climate, and access to technology. The emotions and ideas that music expresses, the situations that music is played and listened to in, and the attitudes toward music players and composers all vary between regions and periods.

"[Music history](#)" is the distinct subfield of [musicology](#) and history which studies the history of [music theory](#).

## Prehistoric music

Main article: [Prehistoric music](#)

The development of music among humans occurred against the backdrop of natural sounds. It was, in all probability, influenced by birdsong and the sounds other animals use to communicate. Some evolutionary biologists have theorized that the ability to recognize sounds not created by humans as "musical" provides a selective advantage.

Prehistoric music, once more commonly called primitive music, is the name given to all music produced in preliterate cultures (prehistory), beginning somewhere in very late geological history.

Traditional [Native American](#) and Australian Aboriginal music could be called prehistoric, but the term is commonly used to refer to the music in *Europe* before the development of writing there. It is more common to call the "prehistoric" music of non-European continents – especially that which still survives – [folk](#), indigenous, or traditional music.

## Music in cradles of civilizations

Main article: [Ancient music](#)

The prehistoric era is considered to have ended with the development of writing, and with it, by definition, prehistoric music. "Ancient music" is the name given to the music that followed.

Ancient music was long thought to be all [monophonic](#), but recent archaeological evidence indicates that this view is no longer true. The "oldest known song" in cuneiform, 4,000 years old from Ur, deciphered by Prof. Anne Draffkorn Kilmer (University of Calif. at Berkeley), was demonstrated to be composed in harmonies of thirds, like ancient English *gyrnal*, and also was written using the diatonic scale. Neither harmony nor the diatonic scale can still be considered developments belonging only to "Western" music.

One pipe in the aulos pairs (double flutes) likely served as a drone or "keynote," while the other played melodic passages.

In addition, double pipes, such as used by the ancient Greeks, and ancient bagpipes, as well as a review of ancient drawings on vases and walls, etc., and ancient writings (such as in Aristotle, *Problems*, Book XIX.12) which described musical techniques of the time, all indicate harmony existed. In ancient Greece, mixed-gender choruses performed for entertainment, celebration and spiritual reasons. Instruments included the double-reed [aulos](#) and the plucked [string instrument](#), the [lyre](#), especially the special kind called a kithara. Music was an important part of education in ancient Greece, and boys were taught music starting at age six. Greek musical literacy created a flowering of development; Greek [music theory](#) included the Greek [musical modes](#), eventually became the basis for Western religious music and [classical music](#).

The term [Early music](#) era may also refer to contemporary but traditional or folk music, including [Asian music](#), Jewish music, Greek music, Roman music, the [music of Mesopotamia](#), the music of Egypt, and Muslim music.

## Classical traditions

For more information see [Classical music](#).

Classical music is a broad, somewhat imprecise term, referring to music produced in, or rooted in the traditions of art, ecclesiastical and concert music. A music is classical if it includes some of the following features: a learned tradition, support from the church or government, or greater cultural capital. Classical music is also described as complex, lasting, transcendent, and abstract.

In many cultures a classical tradition coexisted with traditional or popular music, occasionally for thousands of years, and with different levels of mutual borrowing with the parallel tradition.

See also: [Andalusian classical music](#)

## Asia

Main article: [Asian music](#)

Asian music covers the music cultures of Arabia, Central Asia, East Asia, South Asia, and Southeast Asia.

### China

Chinese classical music is the traditional art or court music of China. It has a long history stretching for more than three thousand years. It has its own unique systems of musical notation, as well as musical tuning and pitch, musical instruments and styles or musical genres.

Chinese music is pentatonic-diatonic, having a scale of twelve notes to an octave ( $5+7 = 12$ ) as does European-influenced music.

### India

The classical music of India includes two major traditions of the southern [Carnatic music](#) and the northern [Hindustani classical music](#). India's classical music tradition has a history spanning millennia and, developed over several eras, remains fundamental to the lives of Indians today as sources of religious inspiration, cultural expression and pure entertainment.

Indian classical music (*marga*) is monophonic, and based around a single melody line or [raga](#) rhythmically organized through *talas*. Carnatic music is largely devotional; the majority of the songs are addressed to the Hindu deities. There are a lot of songs emphasising love and other social issues. In contrast to Carnatic music, Hindustani music was not only influenced by ancient Hindu musical traditions, Vedic philosophy and native Indian sounds but also by the Persian performance practices of the Afghan Mughals.

The origins of Indian classical music (*marga*), the [classical music](#) of India, can be found from the oldest of scriptures, part of the Hindu tradition, the

Vedas. Samaveda, one of the four vedas describes music at length.

## Persia

Persian music is the music of Persia and Persian language countries: musiqi, the science and art of music, and muzik, the sound and performance of music (Sakata 1983). See: Music of Iran, Music of Afghanistan, Music of Tajikistan, Music of Uzbekistan.

## Europe

*Main article: [European classical music](#).*

'Classical European music' is a somewhat broad term, referring to music produced in, or rooted in the traditions of, European art, ecclesiastical and concert music, particularly between 1000 and 1900. The central norms of this tradition developed between 1550 and 1825 centering on what is known as the [common practice period](#).

## Greece

Greek written history extends far back into Ancient Greece, and was a major part of ancient Greek theater. In ancient Greece, mixed-gender choruses performed for entertainment, celebration and spiritual reasons. Instruments included the double-reed [aulos](#) and the plucked [string instrument](#), the [lyre](#), especially the special kind called a kithara.

Music was an important part of education in ancient Greece, and boys were taught music starting at age six. Greek musical literacy created a flowering of development; Greek [music theory](#) included the Greek [musical modes](#), eventually became the basis for Western religious music and [classical music](#). Later, influences from the Roman Empire, Eastern Europe and the Byzantine Empire changed Greek music.

In the 19th century, opera composers like Nikolaos Mantzaros (1795 - 1872), Spyridion Xyndas (1812 - 1896) and Spyros Samaras (1861 - 1917) helped revitalize Greek classical music.

## Timeline of Classical European Composers' Music

### Early music

#### History of European art music

|              |                  |
|--------------|------------------|
| Medieval     | (476 CE - 1400)  |
| Renaissance  | (1400 - 1600)    |
| Baroque      | (1600 - 1760)    |
| Classical    | (1730 - 1820)    |
| Romantic     | (1815 - 1910)    |
| 20th century | (1900 - 1999)    |
| Contemporary | (2000 - present) |

*Main article: [Early music](#).*

Early music is a general term used to describe music in the European classical tradition from after the fall of the Roman Empire, in 476 CE, until the end of the [Baroque era](#) in the middle of the 18th century. Music within this enormous span of time was extremely diverse, encompassing multiple cultural traditions within a wide geographic area; many of the cultural groups out of which medieval Europe developed already had musical traditions, about which little is known. What unified these cultures in the middle ages was the Roman Catholic Church, and its music served as the focal point for musical development for the first thousand years of this period. Very little non-Christian music from this period survived, due to its suppression by the Church and the absence of music notation; however, folk music of modern Europe probably has roots at least as far back as the Middle Ages.

## Medieval music

*Main article:* [Medieval music](#)

While musical life was undoubtedly rich in the early [Medieval](#) era, as attested by artistic depictions of instruments, writings about music, and other records, the only repertory of music which has survived from before 800 to the present day is the [plainsong](#) liturgical music of the Roman Catholic Church, the largest part of which is called [Gregorian chant](#). Pope Gregory I, who gave his name to the musical repertory and may himself have been a composer, is usually claimed to be the originator of the musical portion of the liturgy in its present form, though the sources giving details on his contribution, date from more than a hundred years after his death. Many scholars believe that his reputation has been exaggerated by legend. Most of the chant repertory was composed anonymously in the centuries between the time of Gregory and Charlemagne.

During the 9th century several important developments took place. First, there was a major effort by the Church to unify the many chant traditions, and suppress many of them in favor of the Gregorian liturgy. Second, the earliest polyphonic music was sung, a form of parallel singing known as organum. Third, and of greatest significance for music history, [notation](#) was reinvented after a lapse of about five hundred years, though it would be several more centuries before a system of pitch and rhythm notation evolved having the precision and flexibility that modern musicians take for granted.

Several schools of polyphony flourished in the period after 1100: the St. Martial school of organum, the music of which was often characterized by a swiftly moving part over a single sustained line; the Notre Dame school of polyphony, which included the composers Léonin and Pérotin, and which produced the first music for more than two parts around 1200; the musical melting-pot of Santiago de Compostela in Galicia, a pilgrimage destination and site where musicians from many traditions came together in the late middle ages, the music of whom survives in the Codex Calixtinus; and the English school, the music of which survives in the Worcester Fragments and the Old Hall Manuscript. Alongside these schools of sacred music a vibrant tradition of secular song developed, as exemplified in the music of the [troubadors](#), *trouvères* and *Minnesänger*. Much of the later secular music of the early [Renaissance](#) evolved from the forms, ideas, and the musical aesthetic of the troubadors, courtly poets and itinerant musicians, whose culture was largely exterminated during the Albigensian Crusade in the early 13th century.

Forms of sacred music which developed during the late 13th century included the [motet](#), [conductus](#), *discant*, and *clausulae*. One unusual development was the *Geisslerlieder*, the music of wandering bands of

flagellants during two periods: the middle of the 13th century (until they were suppressed by the Church); and the period during and immediately following the Black Death, around 1350, when their activities were vividly recorded and well-documented with notated music. Their music mixed folk song styles with penitential or apocalyptic texts.

The 14th century in European music history is dominated by the style of the [ars nova](#), which by convention is grouped with the medieval era in music, even though it had much in common with early Renaissance ideals and aesthetics. Much of the surviving music of the time is secular, and tends to use the formes fixes: the [ballade](#), the [virelai](#), the [lai](#), the rondeau, which correspond to poetic forms of the same names. Most pieces in these forms are for one to three voices, likely with instrumental accompaniment: famous composers include Guillaume de Machaut and Francesco Landini.

## Renaissance music

*Main article:* [Renaissance music](#).

The beginning of the Renaissance in music is not as clearly marked as the beginning of the Renaissance in the other arts, and unlike the Renaissance in the other arts, it did not begin in Italy, but in northern Europe, specifically in the area currently comprising central and northern France, the Netherlands, and Belgium. The style of the Burgundian composers, as the first generation of the Franco-Flemish school is known, was at first a reaction against the excessive complexity and mannered style of the late 14th century *ars subtilior*, and contained clear, singable melody and balanced polyphony in all voices. The most famous composers of the Burgundian school in the mid-15th century are Guillaume Dufay, Gilles Binchois, and Antoine Busnois.

By the middle of the 15th century, composers and singers from the Low Countries and adjacent areas began to overspread Europe, moving especially into Italy where they were employed by the papal chapel and the aristocratic patrons of the arts, such as the Medici, the Este family in Ferrara, and the Sforza family in Milan. They carried their style with them: smooth polyphony which could be adapted for sacred or secular use as appropriate. Principal forms of sacred musical composition at the time were the [mass](#), the [motet](#), and the [laude](#); secular forms included the [chanson](#), the [frottola](#), and later the [madrigal](#).

The invention of printing had an immense influence on the dissemination of musical styles, and along with the movement of the Franco-Flemish musicians throughout Europe, contributed to the establishment of the first truly international style in European music since the unification of Gregorian chant under Charlemagne seven hundred years before.

Composers of the middle generation of the Franco-Flemish school included Johannes Ockeghem, who wrote music in a contrapuntally complex style, with varied texture and an elaborate use of canonical devices; Jacob Obrecht, one of the most famous composers of masses in the last decades of the 15th century; and Josquin Desprez, probably the most famous composer in Europe before Palestrina, and who during the 16th century was renowned as one of the greatest artists in any form.

Music in the generation after Josquin explored increasing complexity of [counterpoint](#); possibly the most extreme expression of this tendency is in the music of Nicolas Gombert, whose contrapuntal complexities influenced early instrumental music, such as the [canzona](#) and the *ricercar*, ultimately culminating in [Baroque](#) fugal forms.

By the middle of the 16th century, the international style began to break down, and several highly diverse stylistic trends became evident: a trend towards simplicity in sacred music, as directed by the Counter-Reformation Council of Trent, and as exemplified in the austere perfection of the music of Giovanni Pierluigi da Palestrina; a trend towards complexity and chromaticism in the madrigal, which reached its extreme expression in the avant-garde style of the Ferrara School of Luzzaschi, and the late century madrigalist Carlo Gesualdo; and the grandiose, sonorous music of the Venetian school, which took advantage of the architecture of the Basilica San Marco di Venezia to create a music of antiphonal contrasts. The music of the Venetian school can be seen on the cusp of the Renaissance and the Baroque eras, and included the development of orchestration, ornamented instrumental parts, and continuo bass parts, all of which occurred within a span of several decades around 1600. Famous composers in Venice included the Gabriellis, Andrea and Giovanni, as well as Claudio Monteverdi, one of the most significant innovators at the end of the era.

Most parts of Europe had active, and well-differentiated, musical traditions by late in the century. In England, composers such as Thomas Tallis and William Byrd wrote sacred music in a style similar to that written on the continent, while an active group of home-grown madrigalists adapted the Italian form for English tastes: famous composers included Thomas Morley, John Wilbye and Thomas Weelkes. Spain developed instrumental and vocal styles of its own, with Tomás Luis de Victoria writing refined music similar to that of Palestrina, and numerous other composers writing for a new instrument called the guitar. Germany cultivated polyphonic forms built on the Protestant chorales, which replaced the Roman Catholic Gregorian Chant as a basis for sacred music, and imported wholesale the style of the Venetian school (the appearance of which defined the start of the Baroque era there). In addition, German composers wrote enormous amounts of organ music, establishing the basis for the later spectacular flowering of the Baroque organ style which culminated in the work of J.S. Bach. France developed a unique style of musical diction known as *musique mesurée*, used in secular chansons, with composers such as Guillaume Costeley and Claude Le Jeune prominent in the movement.

One of the most revolutionary movements in the era took place in Florence in the 1570s and 1580s, with the work of the Florentine Camerata, who ironically had a reactionary intent: dissatisfied with what they saw as contemporary musical depravities, their goal was to restore the music of the ancient Greeks. Chief among them were Vincenzo Galilei, the father of the astronomer, and Giulio Caccini. The fruits of their labors was a declamatory melodic singing style known as monody, and a corresponding dramatic form consisting of staged, acted monody: a form known today as [opera](#). The first operas, written around 1600, also define the end of the Renaissance and the beginning of the Baroque eras.

Music prior to 1600 was [modal](#) rather than tonal. Several theoretical developments late in the 16th century, such as the writings on scales on modes by Gioseffo Zarlino and Franchinus Gaffurius, led directly to the development of common practice tonality. The major and minor scales began to predominate over the old church modes, a feature which was at first most obvious at cadential points in compositions, but gradually became pervasive. Music after 1600, beginning with the tonal music of the Baroque era, is often referred to as belonging to the [common practice period](#).

### **Common practice period**

## Baroque music

*Main article: [Baroque music](#).*

Instrumental music becomes dominant, and most major music forms are defined. [Counterpoint](#) is one of the major forces in both instrumental and vocal music of the period. Although a strong religious musical tradition continues, secular music comes to the fore with the development of the [sonata](#), the [concerto](#), and the [concerto grosso](#). Much Baroque music is designed for [improvisation](#), with a figured bass provided by the composer for the performer to flesh out and ornament. The keyboard, particularly the harpsichord, is a dominant instrument, and the beginnings of well temperament open up the possibilities of playing in all keys and of modulation. Much Baroque music features a basso continuo consisting of a keyboard, either harpsichord or organ (sometimes a lute instead), and a bass instrument, such as a viola da gamba or [bassoon](#).

The three outstanding composers of the period are Johann Sebastian Bach, George Frideric Handel, and Antonio Vivaldi, but a host of other composers, some with huge output, were active in the period. They include:

Georg Philipp Telemann  
Arcangelo Corelli  
Alessandro Scarlatti  
Henry Purcell  
Jean-Baptiste Lully  
Dieterich Buxtehude  
Johann Pachelbel  
Giuseppe Torelli  
François Couperin  
Jean-Philippe Rameau  
Francesco Manfredini  
Domenico Scarlatti  
Johann Friedrich Fasch  
Francesco Maria Veracini  
Giuseppe Tartini  
Giovanni Pergolesi  
Tomaso Albinoni

## Classical music era

*Main article: [Classical music era](#).*

The music of the Classical period is characterized by homophonic texture, or an obvious [melody](#) with [accompaniment](#). These new melodies tended to be almost voice-like and singable, allowing composers at the time to actually replace singer(s) as the focus of the music. Instrumental music therefore quickly replaced [opera](#) and other sung forms (such as [oratorio](#)) as the favorite of the musical audience and the epitome of great composition. This is not to say that [opera](#) disappeared. Indeed, during the classical period, several composers began producing operas for the general public, in their native languages (previous operas were generally in Italian).

Along with the gradual displacement of the voice in favor of stronger, clearer melodies, counterpoint also typically became a decorative flourish, often used near the end of a work or for a single [movement](#). In its stead, simple patterns, such as arpeggios and, in piano music, Alberti bass (an accompaniment with

a repeated pattern typically in the left hand) were used to liven the movement of the piece without creating a confusing additional voice. The now popular instrumental music was dominated by several well-defined forms: the [sonata](#), the [symphony](#), and the [concerto](#), though none of these forms were specifically defined or taught at the time as they are now in the field of [music theory](#). All three derive from [sonata form](#), which is used to refer both to the overlying form of an entire work and the structure of a single movement. Sonata form matured during the Classical era to become the primary form of instrumental compositions throughout the 19th century.

The early Classical period was ushered in by the Mannheim School, which included such composers as Johann Stamitz, Franz Xaver Richter, Carl Stamitz, and Christian Cannabich. It exerted a profound influence on Joseph Haydn and, through him, on all subsequent European music.

Wolfgang Amadeus Mozart was the central figure of the Classical period, and his phenomenal and varied output in all genres defines our perception of the period.

Other prominent classical composers include:

Carl Czerny (1791-1857)

Muzio Clementi (1752-1832)

Frederich Kuhlau (1786-1832)

Ludwig van Beethoven and Franz Schubert are transitional composers, leading into the Romantic period, with their expansion of existing genres, forms, and even functions of music.

## Romantic music

*Main article: [Romantic music](#).*

In the Romantic period, music becomes more expressive and emotional, expanding to encompass literature, art, and philosophy. Famous composers include Schumann, Chopin, Mendelssohn, Bellini, and Berlioz. The late 19th century sees a dramatic expansion in the size of the [orchestra](#), and in the role of concerts as part of urban society. Famous composers from the second half of the century include Johann Strauss II, Brahms, Liszt, Tchaikovsky, Verdi, and Wagner. Between 1890 and 1910, a third wave of composers including Dvořák, Mahler, Richard Strauss, Puccini, and Sibelius built on the work of middle Romantic composers to create even more complex – and often much longer – musical works. A prominent mark of late 19th century music is its nationalistic fervor, as exemplified by such figures as Dvořák, Sibelius, and Grieg. Other prominent late-century figures include Saint-Saëns, Fauré, and Franck.

## 20th century classical music

*Main article: [20th century classical music](#).*

In the 20th century, many composers continued to work in forms that derived from the 19th century, including Rachmaninoff and Edward Elgar. However [Modernism](#) in music became increasingly prominent and important; among the first modernists were Bartók, Stravinsky, and Ives. Schoenberg and other twelve-tone composers such as Alban Berg and Anton von Webern carried this trend to its most extreme form by abandoning tonality altogether, along with its traditional conception of melody and harmony. The

Impressionists, including Debussy and Ravel, sought new textures and turned their back on traditional forms, while retaining more traditional harmonic progressions. Others such as Francis Poulenc and the group of composers known as Les Six wrote music in opposition to the Impressionistic and Romantic ideas of the time. Composers such as Milhaud and Gershwin combined classical and jazz idioms. Others, such as Shostakovich, Prokofiev, Hindemith, Boulez, and Villa-Lobos expanded the classical palette to include more dissonant elements without going to the extremes of the twelve-tone and serial composers.

Late Romantic nationalism spilled over into British and American music of the early 20th century. Composers such as Ralph Vaughan Williams and Aaron Copland collected folk songs and used folk themes in many of their major compositions.

In the 1950s, [aleatoric music](#) was popularized by composers like John Cage. Composers of this area sought to free music from its rigidity, placing the performance above the composition. Similarly, many composers sought to break from traditional performance rituals by incorporating theater and multimedia into their compositions, going beyond sound itself to achieve their artistic goals.

Composers were quick to adopt developing electronic technology. As early as the 1940s, composers such as Olivier Messiaen incorporated electronic instruments into live performance. Recording technology was used to produce art music, as well. The musique concrète of the late 1940s and '50s was produced by editing together natural and industrial sounds. Steve Reich created music by manipulating tape recordings of people speaking, and later went on to compose process music for traditional instruments based on such recordings. Other notable pioneers of electronic music include Edgard Varèse, Morton Subotnick, Karlheinz Stockhausen, Pauline Oliveros, and Krzysztof Penderecki. As more electronic technology matured, so did the music. Late in the century, the personal computer began to be used to create art music. In one common technique, a microphone is used to record live music, and a program processes the music in real time and generates another layer of sound. Pieces have also been written algorithmically based on the analysis of large data sets.

Process music is linked to [minimalism](#), a simplification of musical themes and development with motifs which are repeated over and over. Early minimalist compositions of the 1960s such as those by Terry Riley, Steve Reich, and Philip Glass stemmed from aleatoric and electronic music. Later, minimalism was adapted to a more traditional symphonic setting by composers including Reich, Glass, and John Adams. Minimalism was practiced heavily throughout the latter half of the century and has carried over into the 21st century, as well.

## **Contemporary classical music**

In the broadest sense, contemporary music is any music being written in the present day. In the context of classical music the term applies to music written in the last half century or so, particularly works post-1960. The argument over whether the term applies to music in any style, or whether it applies only to composers writing avant-garde music, or "modernist" music is a subject of hot debate. There is some use of "Contemporary" as a synonym for "Modern", particularly in academic settings, whereas others are more restrictive and apply the term only to presently living composers and their works. Since it is a

word that describes a time frame, rather than a particular style or unifying idea, there are no universally agreed on criteria for making these distinctions.

Many contemporary composers working the early 21st century were prominent figures in the 20th century. Some younger composers such as Oliver Knussen, Thomas Adès, and Michael Daugherty did not rise to prominence until late in the 20th century. For more examples see: List of 21st century classical composers.

## Folk music

*Main article:* [Folk music](#).

Folk music, in the original sense of the term, is music by and of the people. Folk music arose, and best survives, in societies not yet affected by mass communication and the commercialization of culture. It normally was shared and performed by the entire community (not by a special class of expert or professional performers, possibly excluding the idea of amateurs), and was transmitted by word of mouth (oral tradition).

During the 20th century, the term folk music took on a second meaning: it describes a particular kind of popular music which is culturally descended from or otherwise influenced by traditional folk music, such as with Bob Dylan and other singer-songwriters. This music, in relation to popular music, is marked by a greater musical simplicity, acknowledgment of tradition, frequent socially conscious lyrics, and is similar to country, bluegrass, and other genres in style.

## Popular music

*Main article: [Popular music](#).*

Popular music, sometimes abbreviated [pop music](#), is music belonging to any of a number of musical styles that are broadly popular or intended for mass consumption and propagated over the radio and similar media--in other words, music that forms part of popular culture.

Popular music dates at least as far back as the mid-19th century. In the United States, much of it evolved from folk music and black culture. It includes Broadway tunes, [ballads](#) and singers such as Frank Sinatra.

## Popular and classical musics

The relationship (particularly, the relative value) of classical music and popular music is a controversial question. To quote: "Neat divisions between 'folk' and 'popular', and 'popular' and 'art', are impossible to find...arbitrary criteria [is used] to define the complement of 'popular'. 'Art' music, for example, is generally regarded as by nature complex, difficult, demanding; 'popular' music then has to be defined as 'simple', 'accessible', 'facile'. But many pieces commonly thought of as 'art' (Handel's 'Hallelujah Chors', many Schubert songs, many Verdi arias) have qualities of simplicity; conversely, it is by no means obvious that the Sex Pistols' records were 'accessible', (trashy?) Frank Zappa's work 'simple', (Frank Zappa is considered by many a serious composer) or Billie Holiday's 'facile'." (light?) (Middleton, 1990)

## Blues

*Main article: [Blues](#).*

**Blues** is a vocal and instrumental musical form which evolved from African American spirituals, shouts, work songs and [chants](#) and has its earliest stylistic roots in West Africa. Blues has been a major influence on later American and Western [popular music](#), finding expression in [ragtime](#), [jazz](#), [big bands](#), [rhythm and blues](#), [rock and roll](#) and [country music](#), as well as conventional pop songs and even modern [classical music](#).

In the late nineteenth and early twentieth centuries, W.C. Handy took blues across the tracks and made it respectable, even "high-toned."

## Country music

*Main article: [Country music](#).*

Country music, once known as *Country and Western music*, is a popular [musical](#) form developed in the southern United States, with roots in traditional [folk music](#), [spirituals](#), and the [blues](#).

Vernon Dalhart was the first country singer to have a nation-wide hit (May, 1924, with "The Wreck Of Old '97").

Some trace the origins of modern country music to two seminal influences and a remarkable coincidence. Jimmie Rodgers and the Carter Family are widely considered to be the founders of country music, and their songs were first captured at an historic recording session in Bristol, Tennessee on August 1, 1927, where Ralph Peer was the talent scout and sound recordist. It is considered possible to categorise many country singers as being either from the Jimmie Rodgers strand or the Carter Family strand of country music.

Country music is fairly controversial, with fans and detractors feeling strongly about the music's worth, values, and meaning. President George H. W. Bush declared October, 1990 "Country Music Month" commemorating US characteristics present in country such as, "our faith in God, our devotion to family, and our appreciation for the value of freedom and hard work." Implied in the evocation of these conservative values is a view often held by detractors of country as conservative, white trash (poor white), sexist, and racist music. Professional country guitarist Aaron Fox explains that, "for many cosmopolitan Americans, especially, country is 'bad' music precisely because it is widely understood to signify an explicit claim to whiteness, not as an unmarked, neutral condition of lacking (or trying to shed) race, but as a marked, foregrounded claim of cultural identity - a bad whiteness...unredeemed by ethnicity, folkloric authenticity, progressive politics, or the noblesse oblige of elite musical culture."

## Jazz

*Main article:* [Jazz](#).

Jazz is a musical art form characterized by blue notes, syncopation, [swing](#), call and response, polyrhythms, and improvisation. It has been called the first original art form to develop in the United States of America and partakes of both popular and classical musics.

It has roots in West African cultural and musical expression, in African American music traditions, including [blues](#) and [ragtime](#), and European military band music. After originating in African-American communities around the beginning of the 20th century, jazz gained international popularity by the 1920s. Since then, jazz has had a profoundly pervasive influence on other musical styles worldwide including classical and popular music.

Jazz has also evolved into many sometimes contrasting subgenres including [smooth jazz](#) and [free jazz](#).

## Rock and roll

*Main article:* [Rock and roll](#).

Rock and roll emerged as a defined musical style in America in the 1950s, though elements of rock and roll can be seen in [rhythm and blues](#) records as far back as the 1920s. Early rock and roll combined elements of [blues](#), boogie woogie, [jazz](#) and [rhythm and blues](#), and is also influenced by traditional Appalachian folk music, [gospel](#) and [country and western](#).

Chuck Berry, Fats Domino, and Elvis Presley were notable performers in the 1950s. The Beatles were part of the "British invasion" in the 1960s. In 1951 the words "rock, roll" was used in a song called "60 Minute Man", which was banned due to its implications. By 1953 such ballads as "Earth Angel" and "Gee" were played by notable disc jockeys in Cleveland and New York as Allen Freed and Murray the K. By 1956, Dick Clark had one of several popular Television programs "American Bandstand" to show teenagers dancing to the new kind of music aimed especially at teens and adolescents. Though mocked by older generation as "jungle or the devil's Music", its (Rock and Roll) popularity grew through the next 10 years.

## **Punk Rock**

*Main Article:* [Punk Rock](#).

Punk rock was originally a style of hard rock played at fast speeds with simple lyrics and fewer than three chords, which originated in the mid 1970s. The main instruments used were Electric Guitar, Electric Bass & Drums. It evolved into [Hardcore Punk](#) (even faster songs with shouted lyrics), [New Wave](#) (more pop influenced & used electronic keyboards) and [Post Punk](#) (originally sounded more hardcore, evolved more into new wave) in the 1980s, and these evolved further into [Punkabilly](#), (a fusion of hardcore & rockabilly), Ska Punk (a fusion of hardcore & reggae), [Techno](#) (a fusion of new wave & disco consisting entirely of computer music), [Grunge](#) (a fusion of hardcore & alternative rock), [Pop Punk](#) (a development of hardcore with cleaner sounds), [Emo](#) (emotional hardcore), [Gothic Rock](#) (introverted lyrics) & many more genres.

## **Heavy metal**

*Main article:* [Heavy metal music](#).

Heavy metal is a form of music characterized by aggressive, driving rhythms and highly amplified distorted guitars, generally with grandiose lyrics and virtuosic instrumentation. Central to this genre is the use of Riffs as a melodic and narrative element.

Heavy metal is a development of blues, blues rock and rock. Its origins lie in the hard rock bands who between 1967 and 1974 took blues and rock and created a hybrid with a heavy, guitar and drums centered sound. Heavy metal had its peak popularity in the 1980s, during which many of the now existing subgenres first evolved. Though not as commercially successful as it was then, heavy metal still has a large worldwide following.

## **Disco, funk, hip hop, salsa, and soul**

[Soul music](#) is fundamentally rhythm and blues, which grew out of the African-American gospel and blues traditions during the late 1950s and early 1960s in the United States. Over time, much of the broad range of R&B extensions in African-American popular music, generally, also has come to be considered soul music. Traditional soul music usually features individual singers backed by a traditional band consisting of rhythm section and horns.

[Funk](#) is a distinct style of music originated by African-Americans, e.g., James Brown and his band members (especially Maceo and Melvin Parker), and groups like The Meters. Funk best can be recognized by its syncopated rhythms; thick bass line (often based on an "on the one" beat); razor-sharp rhythm guitars; chanted or hollered vocals (as that of Cameo or the Bar-Kays); strong, rhythm-oriented horn sections; prominent percussion; an upbeat attitude; African tones; danceability; and strong jazzy influences (e.g., as in the music of Herbie Hancock, George Duke, Eddie Harris, and others).

Salsa music is a diverse and predominantly Caribbean rhythm that is popular in many Latin countries. The word is the same as the salsa meaning sauce. Who applied this name to the music and dance and why remains unclear, but all agree that the name fits, metaphorically referring the music and dance being "saucy" and "tasty". However, the term has been used by Cuban immigrants in New York analogously to swing (Jones and Kantonen, 1999).

[Disco](#) is an up-tempo style of dance music that originated in the early 1970s, mainly from [funk](#), salsa, and [soul music](#), popular originally with gay and black audiences in large U.S. cities, and derives its name from the French word discothèque (meaning nightclub).

[Hip hop music](#) is a style of popular music. It is traditionally composed of two main elements: rapping (also known as MC'ing) and DJing, and arose when [DJs](#) began isolating and repeating the percussion [break](#) from funk or disco songs.

## Electronic music

*Main article: [Electronic music](#)*

As noted above, in the years following World War II, electronic music was embraced by progressive composers, and was hailed as a way to exceed the limits of traditional instruments. Although electronic music began in the world of classical composition, by the 1960s Wendy Carlos had popularized electronic music through the use of the [synthesizer](#) developed by Robert Moog with two notable albums *The Well Tempered Synthesiser* and *Switched-On Bach*.

In the 1970s musicians such as Tangerine Dream, Klaus Schulze, Kraftwerk, Vangelis, Brian Eno, Jean Michel Jarre, and the Japanese composers Isao Tomita, Kitaro also popularised electronic music and the film industry also began to make extensive use of electronic [soundtracks](#). From the late 1970s onward, much popular music was developed on synthesizers by pioneering groups like Heaven 17, Severed Heads, The Human League, The Art of Noise, and New Order. The development of the [techno](#) sound in Detroit, Michigan and [house music](#) in Chicago, Illinois in the early to late 1980s, and the later [acid house](#) movement of the late 1980s and early 1990s all fuelled the development and acceptance of electronic music into the mainstream and introduced electronic dance music to nightclubs.

## World music

*Main article: [World music](#)*

To begin with, all the various musics listed in the 1980s under the broad category of world music were folk forms from all around the world, grouped

together in order to make a greater impact in the commercial music market. Since then, however, world music has both influenced and been influenced by [hip hop](#), [pop](#) and [jazz](#) etc.

World music radio programs these days will often be playing African or [reggae](#) artists, [crossover](#) Bhangra, Cretan Music and Latin American jazz groups, etc.

## **New Age music**

*Main article: [New age music](#)*

Electronic and world music, together with [progressive rock](#) and religious music are the elements from which new age music has developed. Works within this genre tend to be predominantly peaceful in overall style but with an emphasis on energy and gentle vibrancy. Pieces are composed to aid [meditation](#), to energise yoga, tai chi and exercise sessions or to encourage connections to the planet Earth (in the sense of a spiritual concept of Mother Earth or, perhaps Gaia). There are also new age compositions which sit equally comfortably in the world music category.

New age music has developed from genre-[crossing](#) work like Neil Diamond's soundtrack music for the film Jonathan Livingston Seagull, from alternative jazz/rock/classical bands like Third Ear Band or Quintessence and experimental work in general. One advantage of this category is that it enables musicians the freedom to do work which might have been stifled elsewhere. Enthusiasts of new age music generally share a set of core common understandings including a belief in the spirit and in the ability to change the world for the better in peaceful ways.

## History of sonata form

This article treats the **history of [sonata form](#)** through the [Baroque](#), [Classical](#), [Romantic](#), and Modern eras. For a definition of sonata form, see [sonata form](#). For an account of critical thought as it relates to sonata form, see [Criticism and sonata form](#). For discussion of works entitled or called *sonata* see [Sonata \(music\)](#).

## Sonata form in the late Baroque era (ca 1710- ca 1770)

Properly speaking, the "Sonata Form" does not exist in the Baroque period, however, the forms which lead to the standard definition are present, and, in fact, there are a greater variety of harmonic patterns in Baroque works labelled "Sonata" than in the classical period that is to follow. The rich examples of the sonatas of Scarlatti provide an example of the range of possible relationships of theme and harmony possible in the 1730s and 1740s.

Sonatas were at first written mainly for the violin, and in the course of time a certain formal type was evolved, predominating until late into the eighteenth century. This type is shown in its highest perfection in the sonatas of Bach, Handel, Tartini, who followed older Italian models and employed a type attributable to masters such as Corelli and Vivaldi (*Musical Form*. Leichtentritt, Hugo. Page 122).

This older Italian sonata form differs considerably from the later sonata as we find it in the works of the Viennese classical masters. Between the two main types, the older Italian and the more modern Viennese sonata, various transitional types are manifest in the middle of the eighteenth century, in the works of the Mannheim composers, Stamitz, Richter, Philippe Emanuel Bach, and many others. The piano sonata had its inception with Johann Kuhnau, the predecessor of Bach as cantor of Saint Thomas' church in Leipzig. Kuhnau was the first one to transfer the Italian violin sonata to clavier music. The clavier sonatas of Domenico Scarlatti form a separate and distinct species, written mostly in one movement, in song form, and in homophonic style. Scarlatti's sonatas too represent a transition type between the older and the Viennese sonata. In Italy a distinction was made in older times between the *sonata da chiesa* (church sonata), written in fugal style, and the *sonata da camera* (chamber sonata) which was really a suite mixed with sonata elements, not derived from the dance (Leichtentritt).

The crucial elements that lead to the sonata form are: the weakening of the difference between binary and ternary form; the shift of texture away from full polyphony, many voices in imitation, to homophony, or a single dominant voice and supporting harmony; and the increasing reliance on juxtaposing different keys and textures. As different key relationships took on a more and more specific meaning, the schematic of works altered. Devices such as the "false reprise" fell out of favor, while other patterns grew in importance.

Quite probably the most influential composer on the later development of the Sonata form is C.P.E Bach whose father J.S. Bach was one of the great masters of the older baroque style. Taking the harmonic and voice leading techniques that his father had developed, he applied them to the homophonic style - allowing him to make dramatic shifts in key and mood, while maintaining an overall coherence. C.P.E. Bach becomes a decisive influence on Haydn. One of C.P.E. Bach's most lasting innovations was the shortening of the theme to a motif, which could be shaped more dramatically in pursuit of "development". By 1765, C.P.E. Bach's themes, rather than being long

melodies, have taken on the style of sonata form themes: short, characteristic, and flexible. By linking the changes in the theme to the harmonic function of the section, C.P.E. Bach has laid the groundwork that composers such as Haydn and Wolfgang Amadeus Mozart would exploit.

By the 1730s and 1740s the direction of instrumental works, considered less important than vocal music in most cases, were showing a movement towards taking an overall two part layout, the binary form, and adding a section of contrasting material which served as a bridge between them. The symphonies of Stamitz have a soft, piano, interlude between forte sections.

## Sonata form in the Classical era (ca 1770- ca 1825)

It is the practice of the classical period, specifically Haydn, Mozart and Beethoven, that forms the basis for the description of the sonata form. Their works served both as the model for the form, and as the source for new works aiming at the sonata form itself. Debates about sonata form thus reference the practice of Haydn, Mozart and Beethoven extensively.

Joseph Haydn as the first of these three composers, and the most prolific, is thought of as "the Father of the Symphony" and "the Father of the String Quartet". He can also be thought of as the father of the sonata form as a means of structuring works. His string quartets and symphonies in particular display not merely the range of uses of the form, but also the way to emphasize its dramatic effect. It was Haydn who, more than any other composer, created the transition to the development, and the transition from the development to the recapitulation as moments of supreme tension and interest. It is also Haydn who begins to create larger shape for works by making every aspect of the harmony of a work implicit in the theme. This is no small innovation, in that it creates a homophonic analog to the polyphonic fugue, a seed of potential from which the composer will draw different effects. Haydn's variety of dramatic effect and ability to create tension was remarked upon in his own time. His music increasingly became seen by his contemporaries as the standard against which to measure other practice.

His set of [string quartets](#) Opus 33, is often pointed to as the first examples of the coordinated use of all of the resources of the "sonata form" in characteristic fashion. The composer himself listed them as being written on completely new principles and marking the turning point in his technique.

Wolfgang Amadeus Mozart applied the large scale ideas of Haydn to [opera](#), and to the [piano concerto](#). His greater variety of themes and desire for a wider chord vocabulary. Mozart's fluidity with the creation of themes, and the dense network of motives and their parts gave his work a surface polish which was remarked upon even by his professional rivals. His own aesthetic was to both please the public, and to create moments which would appeal to the more sensitive ear. By the end of his short life, Mozart has absorbed Haydn's technique, and applied it to his own more elongated sense of theme, for example in the Prague Symphony.

Ludwig van Beethoven was the composer who most directly inspired the writers who codified sonata form as a particular practice. While he was grounded in the fluid phrase structures and wider variety of schematic layouts possible which came from Haydn and Mozart, his deepest innovation is to work from both ends of a sonata form, conceiving of the entire structure, and then polishing themes which would support that overarching design. He continued to expand the length and weight of the sonata forms used by Haydn and Mozart, as well as frequently using motives and harmonic models drawn from the two older composers. Because of his use of increasingly characteristic rhythms and disruptive devices, he is seen as a transitional

figure between the classical and Romantic periods, with which side of the gap often depending on the tastes and needs of the era.

## Sonata form in the Romantic era (ca 1820 - ca 1910)

While in literature the "Romantic Period" is conventionally dated from the late 18th century to the early 19th century, in music, the overwhelming usage is to date the Romantic Period from post-Beethovenian works through the first decade of the 20th century. While not all critics and composers agree with this usage, it remains the predominant paradigm to see this period as a relatively continuous evolution in style, even though many influential composers and critics drew a sharp break around mid-century, for example Hanslick and Richard Wagner both agreed that their era was not "Romantic". Jacques Barzun has argued that the last half of the 19th century in both music and the arts should be seen as "Realist" and "Naturalist" rather than "Romantic".

In the [Romantic](#) era, sonata form was defined, and became institutionalized. Academic scholars like Adolph Bernhard Marx wrote descriptions of the form, often with a normative goal; that is, of stating how works sonata form *should* be composed. While the first movement form had been the subject of theoretical works, it was seen as the pinnacle of musical technique. Nineteenth century composers were often overtly trained to write in sonata form, and to favor the "Sonata-Allegro" movement form over others.

The 19th century's schematic for writing sonatas diverged from earlier Classical practice, in that it focused more on themes, than on the placement of cadences. The monothematic exposition largely disappeared, and it was expected that the themes of the first and second groups would always contrast in character. More generally, the formal outline of a sonata came to be viewed more in terms of its themes or groups of themes, rather than the sharp differentiation of tonic areas based on cadences. In the Classical period establishing the expectation of a particular cadence, and then delaying or avoiding it was a common way of creating tension, in the 19th century, with its dramatically expanded harmonic vocabulary, sliding away from a cadence did not have the same character of unexpectedness. Instead more distant key regions were established by a variety of other means, including use of increasingly dissonant chords, pedal points, texture, and alteration of the main theme itself.

In the Classical period, the contrast between theme groups, while useful, was not required. The first theme group tended to outline the tonic chord, and the second theme tended to be more "cantabile" in character, but this was far from universal - as Haydn's monothematic expositions, and Beethoven's rhythmic themes show. Because the power of harmonic opposition, both between tonic and dominant and between major and minor, had less force in the Romantic vocabulary, stereotypes of the "character" of themes became stronger. As the theory of the 19th century described the "sonata principle" as one of opposition between two groups of themes, it was thought by many that the characteristic of the first theme should be "masculine", that is strident, rhythmic and implying a dissonance, where as the second theme group should be drawn more from vocal melody, and be "feminine". It is this contrast between "rhythmic" and "singing" which Wagner argued was the core of the

tension in music in his very influential work "On Conducting". This led to the belief among many interpreters and composers that texture was the most important contrast, and that tempo should be used to emphasize this contrast: fast sections were conducted faster, slower sections were conducted or played more slowly.

As with many older terminologies, there are modern readers who find it objectionable or stereotypical to describe musical ideas in gendered terms, see [Criticism and sonata form](#).

By requiring that harmony move with the themes, 19th century sonata form imposed a kind of discipline on composers, and also allowed audiences to feel where the music was by following the appearance of recognizable melodies. However, the sonata form, as an inherited "mold", also created a kind of tension for Romantic composers: the desire to combine poetical expression and academic rigor were often seen as being in conflict.

Later Romantic commentators and theorists detected a "sonata idea", of increasing formalization. They drew a progression of works from Haydn, through Mozart and Beethoven where by more and more movements in a multi-movement work were felt to be in "sonata-allegro form". The theory these theorists present is that originally only first movements were, and then first and often last movements, for example Mozart's "Prague" Symphony, and finally that the "sonata principle" should extend through an entire work - for example Beethoven's String Quartet Opus 59 No. 2 was said to have all four movements in Sonata-Allegro form. By this theorists such as Tovey meant the academically laid out Sonata Form. Charles Rosen has argued that, properly understood, this was always the case that the real "sonata forms", plural, were always present, though this is not universally agreed on.

As the 19th Century progressed, the complexity of sonata form grew, as new ways of moving through the harmony of a work were introduced by Johannes Brahms and Franz Liszt. Instead of focusing exclusively on keys related by the circle of fifths, they used movement along circles based on minor or major triads. Following the trend established by Beethoven, the focus became more and more on the development section. This was in line with the Romantic comparison of music to poetry. Poetic terms, such as "rhapsody" and "recital" and "tone poem" entered music, and increasingly musicians felt that they should not take the repeats in symphonies because there was no point. This changed their interpretation of previous sonata forms.

The Romantic sonata form was an especially congenial mold for Brahms, who felt a strong affinity with the composers of the Classical era. Brahms adopted and extended Beethoven's practice of modulating to more remote keys in the exposition, and combined it with the use of counterpoint in the inner voices of the music. For example, his [piano quintet](#) has the first subject in F minor, but the second subject is in C sharp minor, an [augmented fifth](#) higher. In the same work, the key scheme of the recapitulation is also altered - the second subject in the recapitulation is in F sharp minor, rather than the F minor of the first subject.

Another force acting on sonata form was the school of composers centering on Franz Liszt and Richard Wagner. They sought to integrate more roving harmonies and unprepared chords into the musical structure, in order to attain both formal coherence and a full expressive range of keys. Increasingly, themes began to have notes which were far from the original key, a procedure later labeled "extended tonality". This trend strongly influenced the next generation of composers, for instance Gustav Mahler. The first movements of several of his symphonies are described as being in sonata form, although they diverge from the standard scheme quite dramatically. Some have even argued that the entirety of his first symphony (in which material from the first

movement returns in the fourth movement) is meant to a massive sonata-allegro form.

As the result of these innovations, works became more sectional, composers such as Liszt and Anton Bruckner even began to include explicit pauses in works between sections. The length of sonata movements grew starting in the 1830's. The "Prize Symphony" by Lachner, a work seldom played today, had a first movement longer than any symphonic first movement by Beethoven. The length of whole works also increased correspondingly. Another area where the sonata form expanded was in the realm of "tone poems" or "symphonic poems", which would often use the first movement form, and greatly extended their length versus traditional overtures. Berlioz's "Waverly" overture is almost as long as many middle period Haydn symphonies.

One of the debates in the 19th century was over whether it was acceptable to use the layout of a poem or other literary work to structure a work of instrumental music. The compositional school focused around Liszt and Wagner - the so called "New German School" - argued in favor of literary inspiration, while another camp, centered around Schumann, Brahms, and Hanslick argued that "pure" music should follow the forms laid out by Haydn, Mozart, and Beethoven. This conflict was eventually internalized and by 1900, while the debate still raged, composers such as Richard Strauss would freely combine program with symphonic structure, such as in the work "An Heroic Life".

## Sonata form in the Modern era

In the [Modern](#) period, sonata form became unhooked from its traditional harmonic basis. The works of Schoenberg, Debussy, Sibelius and Richard Strauss emphasized different scales other than the traditional major-minor scale and chords which did not establish a tonality clearly. It could be argued that by the 1930's, "sonata form" was merely a rhetorical term for any movement which stated themes, took them apart, and put them back together again. However, even composers of atonal music, such as Roger Sessions and Hartman continued to use outlines which clearly pointed back to the practice of Beethoven and Haydn, even if the method and style were quite different. At the same time, composers such as Sergei Prokofiev, Benjamin Britten and Dmitri Shostakovich revived the idea of a sonata form by more complex and extended use of tonality.

In more recent times, [Minimalism](#) has searched for new ways to develop form, and new outlines which, again, while not being based on the same harmonic plan as the Classical sonata, are clearly related to it. An example is Aaron Jay Kernis's Symphony In Waves from the early 1990's.

A **Honky tonk** was originally a type of bar common throughout the southern United States, also called **honkatonks**, **honkey-tonks**, **tonks** or **tunks**. The term has also been attached to various styles of 20th-century American [music](#).

## Derivation

The *Oxford English Dictionary* states that the origin of the word *honky tonk* is unknown.

The "tonk" portion of the name may well have come from a brand name of [piano](#). One American manufacturer of a large upright pianos was the firm of William Tonk & Bros. (established 1881) made a piano with the decal "Ernest A. Tonk". These upright grand pianos were made in Chicago and New York and were called Tonk pianos. Some found their way to Tin Pan Alley and may have given rise to the expression of "honky tonk bars".

## Honky tonk bars

Honky tonks were rough establishments, mostly in the Deep South and southwest, that served alcoholic beverages to working class clientele. Honky tonks sometimes also offered dancing to piano players or small bands, and sometimes were also centers of prostitution. In some rougher tonks the prostitutes and their customers would have sex standing up clothed on the dance floor while the music played. Such establishments flourished in less reputable neighborhoods, often outside of the law. As Chris Smith and Charles McCarron noted in their 1916 hit song "Down in Honky Tonk Town", "It's underneath the ground, where all the fun is found."

## Honky tonk music

The first [genre](#) of [music](#) to be commonly known as **honky tonk music** was a style of [piano](#) playing related to [ragtime](#), but emphasizing [rhythm](#) more than [melody](#) or [harmony](#), since the style evolved in response to an environment where the pianos were often poorly cared for, tending to be out of tune and having some nonfunctioning keys. (Hence an out-of-tune upright piano is sometimes called a *honky-tonk piano*, e.g. in the General MIDI set of standard electronic music sounds.)

Such honky tonk music was an important influence on the formation of the boogie woogie piano style, as indicated by Jelly Roll Morton's 1938 record "Honky Tonk Music" (recalling the music of his youth, see quotation below), and Meade "Lux" Lewis's big hit "Honky Tonk Train Blues" which Lewis recorded many times from 1927 into the 1950s and was covered by many other musicians from the 1930s on, including Oscar Peterson and Keith Emerson.

The [instrumental](#) "Honky Tonk" by the Bill Doggett Combo with a sinuous [saxophone](#) line and driving, slow beat, was an early [rock and roll](#) hit. New Orleans native Antoine "Fats" Domino was another legendary honky tonk piano man, whose "Blueberry Hill" and "Walkin' to New Orleans" became hits on the popular music charts.

In the last third of the 20th century the term Honky Tonk started to sometimes be used to refer to what had previously been known as Hillbilly music. More recently it has come to refer primarily to the primary sound in [country music](#), which developed among rural populations relocated to urban environments in the southern US in the late 1800s and early 1900s. Originally, it featured the [guitar](#), [fiddle](#), string bass and steel guitar (an importation from Hawaiian folk music). The vocals were originally rough and nasal, like Hank Williams, but later developed a clear and sharp sound with singers like George Jones. Lyrics tended to focus on rural life, with frequently tragic themes of lost love, adultery, loneliness and alcoholism.

During World War II, honky tonk country was popularized by Ernest Tubb. In the 1950s, though, honky tonk entered its golden age with the massive popularity of Hank Locklin, Lefty Frizzell, George Jones and Hank Williams. In the mid to late 1950s, [rockabilly](#), which melded honky tonk country to [rock and roll](#), and the slick country music of the [Nashville sound](#) ended honky tonk's initial period of dominance.

In the 1970s, [outlaw country](#) music was the most popular genre, and its brand of rough honky tonk gradually influenced the rock-influenced [alternative country](#) in the 1990s. During the 1980s, a revival of slicker honky tonk took over the charts. Beginning with Dwight Yoakam and George Strait in the middle of the decade, a more pop-oriented version of honky tonk became massively popular. It crossed over into the mainstream in the early 1990s with singers like Garth Brooks, Alan Jackson and Clint Black. Later in the 90s, the sound of honky tonk became even farther removed from its rough roots with the mainstream success of slickly produced female singers like Shania Twain and Faith Hill.

# Horn

## Horn

en: *(french) horn*, it: *corno*, es: *trompa, corno*, fr: *cor*, de: *horn*

### Classification

- [Wind](#)

### Playing range

in F: sounds one fifth lower

### Related instruments

Wagner tuba, [Kornett](#), Flügelhorn

The **horn** is a [brass instrument](#) that consists of tubing wrapped into a coiled form. The instrument was first developed in France in about 1650 from the *cor de chasse* or hunting horn, and has been known as the **French horn** since it was refined and improved in England in 1750, although musicians, and particularly players of the instrument, generally refer to it simply as the horn. In fact, in the 1960s the International Horn Society declared that the official name of this instrument is now the "Horn".

The horn is a conically shaped instrument much like the [cornet](#) and Saxhorns. It has a tapered bore, steadily increasing in diameter along its length, unlike the [trumpet](#) and [trombone](#), which are considered cylindrical. Unlike most other valved brass instruments, which use piston valves, the horn uses rotary valves. Piston valves are actually of French origin. The earlier horns used pistons, but then changed to rotary valves, which are of German origin, to save space, but the name of the instrument was nonetheless retained. Compared to the other brass instruments commonly found in the orchestra, the typical range of the horn is set an octave higher in its harmonic series, facilitated by its small, deep mouthpiece, and the fact that a typical horn contains twenty-six feet of tubing (the longest of any instrument) gives it its characteristic "mellow" tone. The typical playing range of a horn goes from the written F at the bottom of the staff in bass clef to the C above the staff in treble clef.

The horn is notoriously difficult to play, and as such is usually played by a musical elite. Since the typical range of the horn is an octave higher in its harmonic series, the "open" notes, or notes that can be played without pressing any valves, are closer together than they are on some other brass instruments. This results in the horn being a harder instrument to learn and requires a well trained ear to play it. The narrow mouthpipe and backward-facing bell also make it musically inefficient, but attempts to cure these problems have always resulted in a loss of its unique sound.

## History

Early horns were much simpler than those in current use. These early horns were simply brass tubing wound a few times and flared into a larger opening at the end (called the *bell* of the horn). They evolved from the early hunting horns and, as such, were meant to be played while riding on a horse. The hornist would grip the horn on the piping near the mouthpiece and rest the body of the horn across his arm so that only one hand was needed to play and the other could be free to guide his steed. The only way to change the pitch was to use the natural harmonics of that particular length of tubing by changing the speed at which the lips vibrated against the mouthpiece; but by using a long tube and playing high in the harmonic series, considerable melodic variety was possible. The best-known example from this era is the *Quoniam* from JS Bach's Mass in B minor.

Later, horns caught the interest of composers, and were used to invoke an outdoors feeling and the idea of the chase. Even in the time of Wolfgang Amadeus Mozart, however, the horn player (now a part of the early orchestra) still had a much simpler version of the horn; he carried with him a set of crooks, which were curved pieces of tube of different length which could be used to change the length of the horn by removing part of the tubing and inserting a different length piece. The player now held the horn with both hands, holding the tubing near the mouthpiece with one, and putting the other into the bell, which was either rested upon the right knee of the player or the entire horn was lifted into the air. Now the pitch played could be changed in several ways. First the player could change the harmonic series which the instrument as a whole had by removing and inserting different sized crooks into the instrument, changing the length of the horn itself. Less globally, given a particular crook, the vibration of the lips could be varied in speed, thus moving to a different pitch on the given harmonic series. Finally, now that the player had his hand in the bell, the hand basically became an extension on the length of the horn, and by closing and opening the space available for air to leave the bell, he could bend the pitch to interpolate between the elements of a harmonic series. This interpolation finally made the horn a true melodic instrument, not simply limited to a harmonic series, and some of the great composers started to write concerti for this new instrument. The Mozart Horn Concerti, for example, were written for this type of horn, called the natural horn in the modern literature.

Around 1815, the horn took on a new form, as valves were introduced, which allowed the player to switch between crooks without the effort of manually removing one from the horn and inserting a new one. At this same time, the standard horn came to be the horn on the F harmonic series, and there were then three valves added to it. Using these three valves, the player could play all the notes reachable in the horn's range.

## Types of horns

Despite this improvement, the single F horn had a rather irksome flaw. As the player played higher and higher notes, the distinctions a player had to make with his or her embouchure from note to note became increasingly precise. An early solution was simply to use a horn of higher pitch -- usually B-flat. The relative merits of F versus B-flat were a hotbed of debate between horn players of the late nineteenth century, until the German horn maker Kruspe produced a prototype of the "**double horn**" in 1897.

The double horn combines two instruments into a single frame: the original horn in F, and a second, higher horn keyed in B-flat. By using a fourth valve operated by the thumb, the horn player can quickly switch from the deep, warm tones of the F horn to the higher, brighter tones of the B-flat horn. The two sets of tones are commonly called "sides" of the horn. It should be noted that the first design of double horn did not have a separate set of slides pitched in F. Rather the main key of the horn was Bb (after the preferences of German horn players) and it could be played in F by directing air through the Bb slides **and** an F extension *plus* another set of tiny slides. This "compensated" for the longer length of the F slides, producing a horn now called the "compensating double". It was (and is) widely used by European horn players because of its light weight and ease of playing, especially in the high register.

In the words of Reginald Morley-Pegge, the invention of the double horn "revolutionized horn playing technique almost as much as did the invention of the valve." [Morley-Pegge, "Orchestral," 195]

The two most common styles ("wraps") of double horns are named Kruspe and Geyer (also known as Knopf), after the first instrument makers to develop and standardize them. The Kruspe wrap locates the Bb change valve above the first valve, near the thumb. The Geyer wrap has the change valve behind the third valve, near the pinky finger. In effect, the air flows in a completely different direction on the other model. Both models have their own strengths and weaknesses, and are a matter of personal choice among horn players.

There is now a triple horn (with an additional F key for the high range) slowly becoming more popular, although it remains somewhat of an extra luxury item as it is both expensive and very heavy.

Category: [Brass instruments](#)

## Horn section

In a symphony orchestra the **horn section** is the group of musicians who play the [horn](#) (sometimes referred to as the French horn).

In other musical groups, the **horn section** refers to a group of [wind instruments](#) — sometimes dubbed "horns" — which are arranged to provide an enhanced accompaniment to a [song](#) or [musical group](#). Many [musical genres](#) feature horn sections, but [jazz](#), [R&B](#), [funk](#), [ska](#), [soul music](#) and [gospel music](#) are perhaps best-known for featuring such sections. Most of these horn sections feature some combination of [saxophones](#), [trumpets](#) and [trombones](#), with other instruments (such as [clarinet](#) or [tuba](#)) sometimes utilized.

## Notable horn sections

Horn sections are often anonymous, but a few have achieved prominence:

Blood, Sweat & Tears

Chicago

The Horny Horns

The Memphis Horns

Tower of Power

# Hornbostel-Sachs

**Hornbostel-Sachs** (or **Sachs-Hornbostel**) is a system of [musical instrument classification](#) devised by Erich Moritz von Hornbostel and Curt Sachs, and first published in the *Zeitschrift für Musik* in 1914. An English translation was published in the *Galpin Society Journal* in 1961. It is the most widely used system for classifying [musical instruments](#) by [ethnomusicologists](#) and organologists (people who study musical instruments).

The system is based on one devised in the late 19th century by Victor Mahillon, the curator of Brussels Conservatory's musical instrument collection. Mahillon's system was one of the first to classify according to what vibrated in the instrument to produce its sound, but was limited, for the most part, to western instruments used in [classical music](#). The Sachs-Hornbostel system is an expansion on Mahillon's in that it is possible to classify any instrument from any culture with it.

## The skeleton of the system

Formally, Hornbostel-Sachs is based on the Dewey Decimal classification. It has four top level classifications, with several levels below those, adding up to over 300 basic categories in all. The top two levels of the scheme, with explanations, are shown below:

- **1. Idiophones** - sound is primarily produced by the actual body of the instrument vibrating, rather than a string, membrane, or column of air. In essence, this group includes all [percussion instruments](#) apart from drums, as well as some other instruments.
  - 11. Struck idiophones - idiophones set in vibration by being struck, for example [cymbals](#) or [xylophones](#).
  - 12. Plucked idiophones - idiophones set in vibration by being plucked, for example the Jew's harp or mbira
  - 13. Friction idiophones - idiophones which are rubbed, for example the nail violin, a bowed instrument with solid pieces of metal or wood rather than strings.
  - 14. Blown idiophones - idiophones set in vibration by the movement of air, for example the Aeolsklavier, an instrument consisting of several pieces of wood which vibrate when air is blown onto them by a set of bellows.
  
- **2. Membranophones** - sounds is primarily produced by the vibration of a tightly stretched membrane. This group includes all [drums](#) and kazoos.
  - 21. Struck drums - instruments which have a struck membrane. This includes most types of drum, such as the [timpani](#) and snare drum.
  - 22. Plucked drums - these are drums with a knotted string attached to the membrane. When the string is plucked, it passes the vibration on to the membrane, which vibrates to give the sound. Some kinds of Indian drums are like this. Some commentators believe that instruments in this class ought instead to be regarded as chordophones (see below).
  - 23. Friction drums - drums which are rubbed, either with the hand, a stick, or something else, rather than being struck.
  - 24. Singing membranes - this group includes kazoos, instruments which do not produce noise of their own, but modify other noises by way of a vibrating membrane.
  
- **3. Chordophones** - sound is primarily produced by the vibration of a string or strings. This group includes all instruments generally called [string instruments](#) in the west, as well as many (but not all) [keyboard instruments](#), like [pianos](#) and harpsichords.

- 31. Simple chordophones - instruments which are in essence simply a string or strings and a string bearer. These instruments may have a resonator box, but removing it should not render the instrument unplayable (although it may result in quite a different sound being produced). They include the [piano](#) therefore, as well as zithers, the musical bow, and various types of non-western harp.
  - 32. Composite chordophones - acoustic and electro-acoustic instruments which have a resonator as an integral part of the instrument, and solid-body electric chordophones. This includes most western string instruments, such as [violins](#), [guitars](#) and the orchestral [harp](#).
- **4. Aerophones** - sound is primarily produced by vibrating air. The instrument itself does not vibrate, and there are no vibrating strings or membranes.
    - 41. Free aerophones - instruments where the vibrating air is not enclosed by the instrument itself, for example an old car horn, or the bullroarer.
    - 42. Wind instruments - instruments where the vibrating air is enclosed by the instrument. This group includes most of the instruments called [wind instruments](#) in the west, such as the [flute](#) or [French horn](#), as well as many other kinds of instruments such as conch shells.

A fifth top-level group, **electrophones**, instruments which make sound primarily by way of electrically driven oscillators, such as theremins or [synthesizers](#), was added later. Sachs himself seems to have acknowledged such a separate group in his 1940 book *The History of Musical Instruments*, where it is listed informally on the same level as the four primary classifications. However, no official references to a proper classification of the electrophones with numerical subdivisions appear to exist, and the original 1914 version of the system did not acknowledge their existence.

## The system applied in practice

Beyond these top two groups are several further levels of classification, so that the [xylophone](#), for example, is in the group labelled 111.212 (periods are usually added after every third digit to make long numbers easier to read). A long classification number does not necessarily indicate the instrument is a complicated one. The bugle for instance, has the classification number 423.121.22, even though it is generally regarded as a relatively simple instrument (it is basically a bent conical tube which you blow down like a [trumpet](#), but it does not have valves or finger-holes). The numbers in the bugle's classification indicate the following:

- **4** - an aerophone
- **42** - the vibrating air is enclosed within the instrument
- **423** - the player's lips cause the air to vibrate directly (as opposed to an instrument with a reed like a [clarinet](#), or an edge-blown instrument, like a [flute](#))
- **423.1** - the player's lips are the only means of changing the instrument's pitch (that is, there are no valves as on a trumpet)
- **423.12** - the instrument is tubular, rather than being a conch-type instrument
- **423.121** - the player blows into the end of the tube, as opposed to the side of the tube
- **423.121.2** - the tube is bent or folded, as opposed to straight
- **423.121.22** - the instrument has a mouthpiece

423.121.22 does not uniquely identify the bugle, but rather identifies the bugle as a certain kind of instrument which has much in common with other instruments in the same class. Another instrument classified as 423.121.22 is the bronze lur, an instrument dating back to the bronze age.

## Suffixes and composite instruments

After the number described above, a number of suffixes may be appended. An **8** indicates that the instrument has a keyboard attached, while a **9** indicates the instrument is mechanically driven. In addition to these, there are a number of suffixes unique to each of the top-level groups indicating details not considered crucial to the fundamental nature of the instrument. In the membranophone class, for instance, suffixes can indicate whether the skin of a drum is glued, nailed or tied to its body; in the chordophone class, suffixes can indicate whether the strings are plucked with fingers or plectrum, or played with a bow.

There are ways to classify instruments with this system even if they have elements from more than one group. Such instruments may have particularly long classification numbers with colons and hyphens used as well as numbers. Hornbostel and Sachs themselves cite the case of a set of bagpipes where some of the pipes are single reed (like a clarinet) and others are double reed (like the oboe). A number of similar composite instruments exist.

# Horripilation

**Horripilation** is a [musical genre](#) which draws wide dark emotional elements from horror films, [gothic music](#), [industrial music](#), [heavy metal music](#), and/or [ambient music/dark ambient](#). Horripilation music is always centered around the attempt to make the listener generally experience dread, fear, terror, and/or horror. Its sound often involves feelings of intrusion from an evil force, fear of the mysterious, event or personage, sometimes of supernatural origin, on the mundane world and the consequences thereof.

Horripilation bands are known to create songs that change drastically in genre styles and musical approach, sometimes even creating their own [Goth Avant-Garde](#). However, this music always remains very dark-natured and progressive in scary or eerie atmospheres. It is extremely dedicated to creating dark emotions in manners that praise fear, doom, horror, terror, shock, melancholy, death, self-worship, satanism, vampires, werewolves, halloween themes, anti-conformity, anti-religion, dark beauty, pride, and/or glory (but not limited to).

## Early innovators

Early innovations in [gothic music](#), [industrial music](#), horror film and its soundtracks helped bring about a crossover genre. Horror music is music designed to frighten or shock the listener and/or trigger the dark emotions. While being labelled shock rock during its time, it became the new wave of "scary music" progressed by Marilyn Manson and the Spooky Kids in the 1990s. It was first described as "horripilation" by Manson on a short briefing on his official website as he described his style of art.

## Later developments

The genre was progressed as musicians heavily influenced by 1970s and 1980s horror films became more apparent. As a very small music scene sprouted in various locations of the world (consisting of unique individuals heavily influenced by horror movies and a wide variety of dark emotional music) Horripilation was born. In 2005, Army Of In Between picked up on the label given by Marilyn Manson and promoted the idea to popularize the genre term as a progressive horror music scene. This is a fairly new type of gothic music genre, best described as horror music.

| <b>Mainstream popularity:</b> | Generally low, although the genre maintains a strong underground following; some bands such as The Misfits have gained considerable success. |

Horror Hardcore

## Horror Glam

**Horror Punk** (or **Horror Rock**) is a sub-genre of [punk rock](#), that blends Horror imagery and themes inspired by horror movies with a raw punk rock sound.

Often, song topics are taken from horror movies particularly movies containing werewolves and zombies, horror punk bands create an atmosphere by telling tales through the song. Horror punk is closely related to [Deathrock](#), another sub-genre of Punk which has more [post-punk](#) leanings in comparison, whereas Horror punk bands sometimes incorporate [Hardcore punk](#) leanings into their music.

Undoubtedly the most influential band on the genre are The Misfits. They were followed by bands like Samhain (brainchild of former Misfits frontman Glenn Danzig), 45 Grave (Who are also a huge part of the Deathrock genre), Rosemary's Babies, and Mourning Noise.

Horror punk continues to have a thriving underground following with dedicated websites and festivals. The genre has even seen some mainstream success recently, particularly with the Murderdolls and their vocalists solo group Wednesday 13.

The genre really gained momentum due to the success of the first mp3.com website, where many modern Horror punk bands first found an audience. It should be noted that several of these bands blend elements of [heavy metal](#) and [gothic rock](#) in addition to punk rock, and thus prefer the more general label of "Horror Rock", as opposed to "Horror Punk".

Horror punk has also begun to branch out into literature with Bizarro fiction which has very strong punk roots, the burgeoning small press Punk Horror that specifically tries to blend the two genres. Notable authors that encompass this very small segment of horror literature are Carlton Mellick III and John Shirley. Horror punk can also be found in comics, like the graphic novels of Vertigo publishing and Glenn Danzig's Verotik comics.

## Horror Punk Fashion

Horror punks may look similar to Deathrock Fashion and Goth Fashion but are not always limited to their fashion senses. The best example of horror punk fashion is The Misfits Glenn Danzig and Jerry Only. Jerry Only wore the devilock which is an icon of Horror Punk hairstyles. The punk clothing "de rigeur" of the denim/cotton vest with a patch sewn on the back is also common.

In the case of Horror Hardcore, some fans, being mostly in the Hardcore scene, will follow the Anti-Fashion style. Black clothing is still common, especially wearing the black cotton hoodie.

### [Protopunk](#)

Category: [Punk genres](#)

**Horrorcore** (also known as **death rap**, **murder rap**, **acid rap** and **wicked shit**) is a [subgenre](#) of [hip hop music](#) that evolved from pioneers such as Necro, Kool Keith, Insane Poetry, Gansta NIP, Esham, The Flatlinerz, KGP, Brotha Lynch Hung and The Gravediggaz.

The term "horrorcore" was coined by Russell Simmons, the man behind The Flatlinerz, who referred to horrorcore as being "[hardcore rap](#) with some horror movie themes". Horrorcore artists often have ties with [rock music](#), specifically [heavy metal](#) and [hardcore punk](#).

## Lyrics

Horrorcore lyrics contain many different subjects. There are usually two "branches" of horrorcore lyrics, the *serious* branch, and the *humorous* branch. The serious branch deals with issues in life including crime, murder and poverty, among other things. The humorous lyrics can be about any topic, but mostly murder, psychopathics, sexism and so on, but with a humorous approach. There is also a fictitious branch, with lyrics that are a mix of serious and humorous, or of strongly fictitious nature, such as the occult, satanism, and so on.

## **Makeup**

Many horrorcore performers wear makeup, a fashion popularized by Psychopathic Records and the Insane Clown Posse. Some follow in the steps of the aforementioned group by using clown-themed paint, while others try to create their own style, often being a mix of clown makeup and black metal corpse paint.

## Underground

Though some horrorcore rappers become widely known (e.g. Insane Clown Posse), most horrorcore [record labels](#), acts, and artists rarely sell over a few hundred records (with the exception of Psychopathic Records). It has a lot to do with the fact that many people may be appalled by the lyrics, and that the topics being rapped about are still taboo (e.g. *murder*, *necrophilia*). Alternatively, it could be suggested that such heavy-handed lyrics and predictable subject matter are not shocking at all. In this case, low sales could be blamed on a lack of promotion and an overall amateurish presentation which would not be enough to hold the attention of a mature audience.

## Debate on terminology

Many believe "wicked shit" and "horrorcore" are the exact same thing while others feel there is difference enough in styles to differentiate between the terms. Many artists come up with their own labels for their music, such as Shy One, who claims his music is "rap/mystic/horrorcore" whereas most people would simply call it "horrorcore". Never the less, there is much debate over the two terms, as you will see if you browse wicked shit/horrorcore forums.

"Acid rap" is a term coined by rapper Esham (The Unholy). His sole reason for giving his music the title of acid rap was to distinguish himself from other horrorcore and hardcore rappers. Esham also stated that his music is like "taking a drop of acid", and that is why he named it such.

Many rappers invent their own terms for the genre in order to distance themselves from the "stigma" of horrorcore. Necro coined the term "Death Rap". Gansta NIP uses "The Psycho Style". Brotha Lynch Hung calls his style "The Rip Gut Cannibal Shit".

## Artists

Apart from the pioneers and influential figures of the Horrorcore genre mentioned in the lead paragraph, other notable performers of this genre are: Lo Key AKA Lokevelli, Madd Maxxx, Stitch Mouth, Tha Wikid One, Relapze, Temple Rain, STRAY, IcePick WiLLie aka Kemosabe , bOb e.NiTe aka II Rel aka Franky Frank, Q Strange, SyCkSyDe, Midwest Suspex, Mr. Kilt'cha aka Travisty aka Captain Trippz , Ensizon, Majik Duce, Sinister X aka PBM, Menacide, J-Philly, Chamber, Nizos, Meathead aka Jo Jo, ClaAs, Shy One, Terminal Illness, Judge Cryptic, TBMA, Ca\$hroll Criminalz, Fury, AmoralPhat40oz, Bio Killaz, Castro the Savage, Halfbreed, The R.O.C. aka Sol46, Skrapz, Project:Deadman, Bedlam, Creature C, 2DIRTE, Kreepy X, Raven Hunter, Cyanid3, Ice-Pic, SlinK DoGG, Preacher X, Bio Killaz, GH, Bulletproof, Tha Candyman, Pointblank, Mista Creepy, ULoGee, Body Bagz, and Grossiss.

## Disambiguation

In similarity to slang-names, Horrorcore is also the label used by [Hardcore punk](#) fans to describe their brand of Horror Hardcore, which is simply Hardcore Horror Punk.

[Styles of house music](#)

**House music** is a collection of styles of electronic dance music, the earliest forms of which originated in the United States in the early- to mid-1980s. The name is said to derive from the Warehouse nightclub in Chicago, where the resident DJ, Frankie Knuckles, mixed classic [disco](#) and European [synthpop](#) recordings. Club regulars referred to his selection of music as "house" music. However, since Frankie was not creating new music at that time, it has been argued that Chip E. in his early recording "It's House" defined this new form of electronic music and gave it the name "House Music".

The common element of most house music is a 4/4 beat (a prominent kick drum on every beat) generated by a [drum machine](#) or other electronic means (such as a [sampler](#)), together with a continuous, repeating (usually also electronically generated) bassline. Typically added to this foundation are electronically generated sounds and samples of music such as [jazz](#), [blues](#) and [synth pop](#), as well as additional percussion. As new recordings adhering to this general style emerged, the house genre divided into a number of subcategories, some of which are described below.

"House Music" also refers to the recorded music played while a theatre audience takes their seats before a performance, or, in live music venues, the recorded music played before the live music begins. Well-known live acts can demand their choice of house music, or that there be none at all. Such demands are made in the technical rider to their contract (the same document that specifies what items must be present in the dressing room).

# History

*Not everyone understands House music; it's a spiritual thing; a body thing; a soul thing.*

## Proto-history: from disco to house: late 1960s to early 1980s

*Main article:* Electronic music history

House, [techno](#), [electro](#) and [hip hop](#) musicians owe their existence to the pioneers of analog synthesizers and sample based keyboards such as the Minimoog and Mellotron which enabled a wizardry of sounds to exist, available at the touch of a button or key.

Although many people believe house music to have originated from Donna Summer's "I Feel Love", fully formed electronic music tracks actually came before house. Early American Sci-Fi films and the BBC Soundtrack to popular television series Doctor Who stirred a whole generation of techno music lovers like the space rock generation during the 1970s, influenced by the psychedelic music sound of the late 1960s and bands such as Pink Floyd, Soft Machine, Amon Düül, Crazy World of Arthur Brown, and the so-called Krautrock early electronic scene (Tangerine Dream and Klaus Schulze). Shunned by many as a "gimmick" or "children's music", it was a genre similar and parallel to the Kosmische Rock scene in Germany. Space rock is characterized by the use of spatial and floating backgrounds, mantra loops, electronic sequences, and futuristic effects over Rock structures. Some of the most representative artists were Steve Hillage's Gong and Hawkwind.

The late 1970s saw [disco](#) utilise the (by then) much developed electronic sound and a limited genre emerged, appealing mainly to gay and black audiences, it crossed over into mainstream American culture following the hit 1977 film Saturday Night Fever. As disco clubs filled there was a move to larger venues. "Paradise Garage" opened in New York in January 1978, featuring the DJ talents of Larry Levan (1954–1992). Studio 54, another New York disco club, was extremely popular. The clubs played the tunes of singers such as Diana Ross, CHIC, Gloria Gaynor, Kool & the Gang, Donna Summer, and Larry Levan's own hit "I Got My Mind Made Up". The disco boom was short-lived. There was a backlash from Middle America, epitomised in Chicago radio DJ Steve Dahl's "Disco Demolition Night" in 1979. Disco returned to the smaller clubs like the Warehouse in Chicago, Illinois.

Opened in 1977 the Warehouse on Jefferson street in Chicago was a key venue in the development of House music. The main DJ was Frankie Knuckles. The club staples were still the old disco tunes but the limited number of records meant that the DJ had to be a creative force, introducing more deck work to revitalise old tunes. The new mixing skills also had local

airplay with the Hot Mix 5 at WBMX. The chief source of this kind of records in Chicago was the record-store "Imports Etc." where the term House was introduced as a shortening of Warehouse (as in these records are played at the Warehouse). Despite the new skills the music was still essentially disco until the early 1980s when the first [drum machines](#) were introduced. Disco tracks could now be given an edge with the use of a mixer and drum machine. This was an added boost to the prestige of the individual DJs.

In England, the band Cabaret Voltaire is often considered to have pioneered house music or at least the "house sound" independently. Some recordings of the Clash has also been seen in a similar light.

## Chicago years: early 1980s - late 1980s

*Main article: [Chicago house](#)*

In 1983 the Music Box club opened in Chicago. Owned by Robert Williams, the driving force was a DJ, Ron Hardy. The chief characteristics of the club's sound were sheer massive volume and an increased pace to the tunes. The pace was apparently the result of Hardy's heroin use. The club also played a wider range of music than just disco. Groups such as Kraftwerk and Blondie were well received, as was a brief flirtation with [punk](#), dances like "Punking-Out" or "Jacking" being very popular.

Two tunes are arguably the first House music, each arriving in early 1983. The tune that was chronologically first was Jamie Principle and Frankie Knuckles' "Your Love", a huge hit in the clubs, but only available on tape copies. The second, "On And On" by Jesse Saunders was later put on vinyl (1985). (Shapiro, 2000). Immediately on the tails of these recordings was Chip E. "Jack Trax" which defined the genre with its complex rhythms, simple bassline, use of sampling technology and minimalist vocals.

By 1985 house music dominated the clubs of Chicago, in part due to the radio play the music received on 102.7 FM WBMX, and their resident DJ Team the HOT MIX 5. Also, the music and movement was aided by the musical electronic revolution - the arrival of newer, cheaper and more compact [music sequencers](#), drum machines (the Roland 909 and 808 and 707, and Latin percussion machine the 727) and bass modules (such as the legendary Roland TB-303 in late 1985) gave House music creators even wider possibilities in creating their own sound, indeed the creation of [Acid House](#) is directly related to the efforts of DJ Pierre on the new drum machines.

Two record labels dominated the house music scene in Chicago, DJ International Records, owned by Rocky Jones and Trax Records owned by Larry Sherman (Trax self pressed records and the quality was not as good as the Disc Makers pressings of DJ International).

Many of the songs that defined the era came off of those record labels. Steve Hurley's "Music is the Key", Chip E's "Like This" and Fingers, Inc. "Mystery of Love" (1985) were amongst some of the defining songs that came off of DJ International. While Trax released "Jack the Bass" & "Funkin With the Drums Again" by Farley Jackmaster Funk in 1985 followed the next year by House Classic "Move your Body" by Marshall Jefferson and "No Way Back" by Adonis.

This was something of a double-edged sword. In its favour Trax was very fast to sign new artists and press their tunes, establishing a large catalogue of House tunes, but the label used recycled vinyl to speed the pressing process resulting in physically poor quality records. Also disappointing was

that many artists signed contracts that were rather less favourable towards them than they hoped.

Trax became the dominant House label, releasing many classics including "No Way Back" by Adonis, Larry Heard's "Can You Feel It" and the first so-called House anthem in 1986, "Move Your Body" by Marshall Jefferson. This latter tune gave a massive boost to House music, extending recognition of the genre out of Chicago. Steve 'Silk' Hurley became the first house artist to reach number one in the UK in 1987 with "Jack Your Body". This and other tracks such as "Music is the Key" and "Love Can't Turn Around" helped moved house from its spiritual home to its commercial birthplace - the United Kingdom.

## The Detroit Connection: early 1980s - late 1980s

*Main article: [Detroit techno](#)*

A form of music was forming at the same time in Detroit, what became known as "Detroit Techno". A major influence to the fusion of eclectic sounds into the signature detroit techno sound was a radio program which ran in the mid 1970s until the 1980s by legendary disc jockey The Electrifying Mojo. Music heavily influenced by European Electronica (Kraftwerk, Art of Noise), early b-boy [Hip-Hop](#) (Man Parrish, Soul Sonic Force) and Italo Disco (Doctor's Cat, Ris, Klein M.B.O.) this music was pioneered by Juan Atkins, Derrick May and Kevin Saunderson. The first group of songs to be rotated heavy in Chicago House music circles were the 1985's releases of "NO UFO's" by Juan Atkins's group Model 500 on Metroplex Records, Let's Go by Trans X-Ray (Derrick "MAYDAY" May) and "Groovin' without a Doubt" by Inner City (Kevin Saunderson) on KMS Records.

Juan Atkins on his Label Metroplex Records followed the release of "NO UFO's" with 1986's "FUTURE", 1988's the "Sound of Stero / Off to Battle" and 1989's "The Chase".

KMS Followed with releases in 1986 of Blake Baxter's "When we Used to Play / Work your Body", 1987's "Bounce Your Body to the Box" and "Force Field", 1988's "Wiggin" by MAYDAY, "The Sound / How to Play our Music" and "the Goove that Won't Stop" and a remix of "Grooving Without a Doubt". In 1988 as House music began to go more commercial, Kevin Saunderson's group with Paris Gray released the 1988 hits "Big Fun" and "Good Life" which eventually were picked up by Virgin Records. Each EP / 12 inch single sported remixes by Mike "Hitman" Wilson and Steve "Silk" Hurley of Chicago and Derrick "Mayday" May and Juan Atkins of Detroit. In 1989 KMS had another hit release of "Rock to the Beat" which was a hit overseas and in Chicago

Derrick "Mayday" May had a style that was similar to Chicago native Larry Heard (Mr. Fingers), but soon became distinct and unique and was received well in Chicago, with releases on his Transmat Label, between 1986-1989 Transmat released hits like "Nude Photo", "It is What it is" and "Beyond the Dance" by Rythim is Rythim, "The Groove" by Suburban Knights, and "Illusion" by R-Tyme. The biggest hit and most influential in the House Music scene was Rythim is Rythim's "Strings of Life" which became a cult classic in dance music clubs internationally. Derrick May also recorded with Kool Kat "Nude Photo 88" with the cult classic "Sinister".

Though Detroit Techno is a music form in its own right and part of the "Electronic" / "Techno" worldwide music, it and its pioneers were also

instrumental in the forwarding of House Music internationally and especially in the UK.

## **The British connection: late 1980s - early 1990s**

In Britain the growth of house can be divided around the "Summer of Love" in 1988. House had a presence in Britain almost as early as it appeared in Chicago; however there was a strong divide between the House music as part of the gay scene and "straight" music. House grew in northern England, the Midlands and the South East. Founded in 1982 by Factory Records, the Hacienda in Manchester became an extension of the "Northern Soul" genre and was one of the early, key English dance music clubs. Until 1986 the club was a financial disaster, the crowds only started to grow when the resident DJs (Pickering, Park and Da Silva) started to play house music.

Many underground venues and DJ nights also took place across the U.K. like for instance the private parties hosted by an early Miss Money Penny's contingent in Birmingham and many London venues. House was boosted in the UK by the tour in the same year of Knuckles, Jefferson, Fingers Inc. (Heard) and Adonis as the DJ International Tour. Amusingly, one of the early anthemic tunes, "Promised Land" by Joe Smooth, was covered and charted within a week by the Style Council. The first English House tune came out in 1986 - "Carino" by T-Coy. Europeans embraced house music, and began booking legendary American House DJs to play at the big clubs, such as Ministry of Sound, whose resident, DJ Harvey brought in Larry Levan. The underground house scene in cities such as Birmingham, Manchester and London were also provided with many underground Pirate Radio stations and DJ's alike which helped bolster an already contagious, but otherwise ignored by the mainstream, music genre.

One of the earliest and most influential UK house and techno record labels was Network Records (otherwise known as cool cat records) who helped introduced Italian and U.S. dance music to Britain as well as promoting select UK dance music acts.

But house was also developing on Ibiza. In the 1970s Ibiza was a hippy stop-over and a site for the rich, but by the mid-1980s a distinct Balearic mix of house was discernible. Several clubs like Amnesia with DJ Alfredo were playing a mix of rock, pop, disco and house. These clubs fueled by their distinctive sound and Ecstasy began to have an influence on the British scene. By late 1987 DJs like Paul Oakenfold and Danny Rampling were bringing the Ibiza sound to UK clubs like Shoom in Southwark (London), Heaven, Future and Purple Raines Spectrum in Birmingham. But the "Summer of Love" needed an added ingredient that would again come from America.

In America the music was being developed to create a more sophisticated sound, moving beyond just drum loops and short samples. New York saw this maturity evidenced in the slick production of disco house crossover tracks from artists such as Mateo & Matos. In Chicago, Marshall Jefferson had formed the house 'super group' Ten City (from intensity), demonstrating the developments in "That's the Way Love Is". In Detroit there were the beginnings of what would be called techno, with the emergence of Juan Atkins, Derrick May and Kevin Saunderson. Atkins had already scored in 1982 with Cybotron and in 1985 he released Model 500 "No UFOs" which became a big regional hit, followed by dozens of tracks on Transmat, Metroplex and Fragile. One of the most unusual was "Strings of Life" by Derrick May. The NME described it as "George Clinton and Kraftwerk stuck

in an elevator". It was a darker, more intellectual strain of house that followed its own trajectory. "Techno-Scratch" was released by the Knights Of The Turntable in 1984 which had a similar techno sound to Cybotron and is possibly where the term techno originated, although this is generally credited to Atkins, who borrowed the term from the phrase "techno rebels" which appeared in writer Alvin Toffler's book Future Shock (see Sicko 1998).

The records were completely independent of the major record labels and the parties at which the tracks were played avoided commercial music.

The combination of house and techno came to Britain and gave House a phenomenal boost. A few clubs began to feature specialist House nights - the Hacienda had "Hot" on Wednesday from July 1988, 2,500 people could enjoy the British take on the Ibiza scene, the classic "Voodoo Ray" by A Guy

Called Gerald (Gerald Simpson) was designed for the Hacienda and Madchester. Factory boss Tony Wilson also promoted acid house culture on his weekly TV show. The Midlands also embraced the late 80s House scene with many underground venues such as multi storey car parks and more legal dance stations such as the Digbeth Institute (now the 'Sanctuary' and home to Sundissential).

## **Developments in the United States in late 1980s to early 1990s**

Back in America the scene had still not progressed beyond a small number of clubs in Chicago and New York, Paradise Garage was still the top club, although they now had Todd Terry, his tune "Weekend" demonstrated a new House sound with hip-hop influences evident in the quicker sampling and the more rugged bass-line. While [hip-hop](#) had made it onto radio playlists, the only other choices were Rock, Country & Western or R & B.

Other influences from New York came from the hip-hop, raggae, and Latin community, and many of the New York City super producers/DJ's began surfacing for the first time (Erick Morillo, Roger Sanchez, Junior Sanchez, Danny Tenaglia, Jonathan Peters) with unique sounds that would evolve into other genres (tribal house, progressive house, funky house).

Influential [gospel/R&B](#)-influenced Aly-us released "Time Passes On" in 1993 (Strictly Rhythm), then later, "Follow Me" which received radio airplay as well as being extensively played in clubs. Another US hit which received radioplay was the single "Time for the Perculator" by Cajmere, which became the prototype of Ghettohouse sub-genre. Although these are generally grouped in with classic house now, the early 1990s sound was different from the early 1980s Chicago house WBMX sound - due at least in part to digital audio improvements, as well as influences from the Italian House scene led by Daniele Davoli of Black Box fame.

## **After the "Summer of Love": early 1990s to mid 1990s**

In Britain, further experiments in the genre boosted its appeal (and gave the opportunity for new names to be made up).

House and rave clubs like Lakota, Miss Money Penny's and the original C.R.E.A.M. began to emerge across Britain, hosting regular events for people who would otherwise have had no place to enjoy the mutating house and dance scene.

The idea of 'chilling out' was born in Britain with [ambient house](#) albums like the KLF's *Chill Out*. However, this album is not house strictly speaking, because it's prominent lack of percussion on most tracks. Another example would be the song "Analogue BubbleBath" by Aphex Twin. In fact, Chill Out electronic music is often defined as a totally different genres, such as Ambient, or even [downtempo](#) (later on) or [New Age](#) (older). The unifying feature of Chill Out electronica is long sustained tones and a more tonal than percussive-noisey quality compared to other styles. Nevertheless, lots of compilation albums sprung up, no doubt, each one redefining the terminology along the way.

At the same time, a new indie dance scene full of variety was being forged by bands like the Happy Mondays, The Shamen, New Order, Meat Beat Manifesto, Renegade Soundwave, EMF, The Grid and The Beloved. In New York, bands such as Deee-Lite furthered house music's international and multi-era cultural influence. Two distinctive tracks from this era were the Orb's "Little Fluffy Clouds" (with a distinctive vocal sample from Rickie Lee Jones) and the Happy Mondays' "Wrote for Luck" ("WFL") which was transformed into a dance hit by Paul Oakenfold.

The Criminal Justice Bill of 1994 was a government attempt to ban large events featuring music with "repetitive beats". There were a number of abortive "Kill the Bill" demonstrations. Although the bill did become law in November 1994, it had little effect. The music continued to grow and change, as typified by the emergence of acts like Leftfield with "Release the Pressure", which introduced dub and [reggae](#) into the house sound. In more commercial areas a mix of R&B with stronger bass-lines gained favour.

The music was being moulded, not just by drugs, but also the mixed cultural and racial groups involved in the house music scene. Tunes like "The Bouncer" from Kicks Like a Mule used sped-up hip-hop [breakbeats](#).

With SL2's "On A [Ragga](#) Trip" they gave the foundations to what would become [drum and bass](#) and [jungle](#). Initially called [breakbeat hardcore](#), it found popularity in London clubs like Rage as a "inner city" music. Labels like Moving Shadow and Reinforced became underground favorites. One label, Moonshine, featured impressive compilation albums entitled, "140 BPM: The Speed Limit" which showcased what was termed "London Hardcore Techno". Showing an increased tempo around 160 bpm, tunes like "Terminator" from Goldie marked a distinct change from house with heavier, faster and more complex bass-lines: [drum and bass](#) (dnb). Goldie's early work culminated in the twenty-two minute epic "Inner City Life" a hit from his debut album *Timeless*.

UK Garage developed later, growing in the underground club scene from drum and bass ideas. Aimed more for dancing than listening, it produced distinctive tunes like "Double 99" from Ripgroove in 1997. Gaining popularity amongst clubbers in Ibiza, it was re-imported to the UK and in a softened form had chart success: soon it was being applied to mainstream acts like Liberty X and Victoria Beckham.

4 Hero went in the opposite direction - from brutal [Breakbeats](#) they adopted more soul and jazz influences, and even a full orchestral section in their quest for sophistication. Later, this led directly to the West London scene known as [Brokenbeat](#) or [Breakbeat](#). This style is also not strictly "house", but as with all electronic music genres, there is overlap.

## Mid to late-1990s

Back in the US some artists were finding it difficult to gain recognition. Another import into Europe of not only a style but also the creator himself was Joey Beltram. From Brooklyn his "Energy Flash" had proved rather too much for American House enthusiasts and he needed a move to find success.

The American industry threw its weight behind DJs like Junior Vasquez, Armand van Helden or even Masters at Work who appeared to churn out endless remixes of mainstream pop music. Some argued that many of the formulaic remixes of Madonna, Kylie Minogue, U2, Britney Spears, the Spice Girls, Spiller, Mariah Carey, Puff Daddy, Elvis Presley, Vengaboys and other bands and pop divas did not deserve to be considered house records.

During this time many individuals and particularly corporations realized that house music could be extremely lucrative and much of the 1990s saw the rise of sponsorship deals and other industry practices common in other genres.

To develop successful hit singles, some argued that the record industry developed "handbag house": throwaway pop songs with a retro disco beat.

Underground house DJs were reluctant to play this style, so a new generation of DJs were created from record company staff, and new clubs like Miss Money Penny's, Liverpool's Cream (as opposed to the original underground night, C.R.E.A.M.) and the Ministry of Sound were opened to provide a venue for more commercial sounds.

By 1996 Pete Tong had a major role in the playlist of BBC Radio 1, and every record he released seemed to be guaranteed airplay. Major record companies began to open "superclubs" promoting their own acts, forcing many independent clubs and labels out of business. These superclubs entered into sponsorship deals initially with fast food, soft drinks, and clothing companies and later with banks and insurance brokers. Flyers in clubs in Ibiza often sported many corporate logos.

## House in the new millennium

Dance music arguably hit its peak at the turn of the millennium, especially in the UK. A number of reasons are seen for its decline in mainstream popularity during the 2000s:

- Many people felt that club promoters had gone too far in what they were asking people to pay on a weekly basis to enter clubs. A prime example was on New Year's Eve at the turn of the Millennium. Some promoters had been asking upwards of £100 (\$180) to attend clubs and various event venues across the country. A large number of club goers instead decided to stay away all together or go to local parties. Many in general grew tired with paying up to £20 (\$35) on a weekly basis for poor quality club nights which had little variation from week to week and venue to venue.
- Older people that had been with the scene from the beginning started to move away. Many in their 30's started having families and settling down. Many younger people viewed Dance music as becoming increasingly outmoded with the same set of DJ's playing in Clubs and on the Radio year after year. This led to the term "Dad House" being applied.

- The democratization and mainstreaming of electronic music composing through ever-cheaper computer software made electronic music as a whole less novel and more commonplace. This also affected its marketability, since most music marketing requires a high degree of novelty to drive sales and cultural interest.
- Many older clubbers who did have families remained active in the scene, and small-scale events organisers, invariably not tied to a venue, began to appear to cater to a group that was increasingly ostracised by younger clubbers, and unable to go clubbing more than once or twice a month. This scene subsequently has expanded and about half of those involved are under 30.
- A lot of the same music was being played on commercial dance shows, and in bars, supermarkets, and television advertisements. This along with a lack of invention in the mainstream left many people feeling increasingly bored with the music. This has inevitably led to the music being forced back underground to its roots.
- Ecstasy, the drug of choice for many on the Dance scene during the late 80's and through out the 90's, started to lose its popularity to Cocaine and Ketamine. Both these drugs changed the nature and the atmosphere of the scene. In part this was due to the decreasing proportion of MDMA in Ecstasy, which was increasingly being cut with Amphetamines, Ketamine as well as a generally greater amount of inert 'bulk' substances.
- The global rise of [hip hop](#) during the late 90's as well as the re-emergence in the UK of a strong Rock and Indie scene drew many away from Dance Music.
- The Glade, the UK's largest electronic dance festival, began in 2004 as an offshoot of the Glastonbury Festival, featuring the UK's only dedicated Psytrance stage.

## House music today

As of 2003, a new generation of DJs and promoters, including James Zabiela and Mylo, were emerging, determined to kickstart a more underground scene and there were signs of a renaissance in Philadelphia, Atlanta, Chicago, Detroit and other racially-mixed cities, as well as in Canada, Scandinavia, Scotland and Germany. For example, in 2004 the Montreal club Stereo, co-owned by House music legend David Morales and party aficionado Scott Lancaster, celebrated its sixth year in operation and in 2005 The Government in Toronto with Mark Oliver is celebrating its 9th anniversary. Stereo, opened in 1998, was modeled after the seminal New

York City club Paradise Garage, focusing the experience on the quality of sound and lighting. The key to house music was re-invention. A willingness to steal or develop new styles and a low cost of entry encouraged innovation.

The development of computers and the Internet play a critical role in this innovation. One need only to examine how house music has evolved over time to evaluate the effect computers and the Internet have had on house music and music in general.

In 2005 house music finds itself at a crossroads. The soulful black and Latin-influenced sound that enjoyed popularity in the late '90s and early '00s has lost momentum and has been alienated from almost all generic and hit music radio stations. Audiences all over the world are fragmenting into different camps based around the old-guard house sound and a darker, more synth-driven sound influenced by '80s retro sentiment. Opinions are split on the new music that's trending in. Some consider it directionalism, and others see it as an entirely new genre of music, having more to do with techno, electronica and EBM music than house.

Just recently, Richard Daley, Mayor of Chicago proclaimed August 10, 2005 to be House Unity Day in Chicago last July 27, 2005 in celebration of House Music's 21st anniversary. DJ's like Frankie Knuckles, Marshall Jefferson, Paul Johnson and Mickey Oliver were cited among the many other DJ's who came together to celebrate the proclamation at the Summer Dance Series event organized by Chicago's Department of Cultural Affairs.

Saturday Night Live has a recurring sketch called Deep House Dish featuring Kenan Thompson and Rachel Dratch as reviewers of house music. In a typical episode, several "performers," usually including the week's guest, will each sing a parodically bad song, and then be interviewed by the hosts.

Dratch's comments are never interesting, a fact often pointed out by Thompson.

## Notable Acts and Music Releases influencing the development of House Music

- Donna Summer - "I Feel Love" (1977)  
Written by Giorgio Moroder, featuring both the machine rhythms and erotic vocal sound bites in which one recognises a germination of house music - the union of [disco](#) and electronic. Its bassline has been sampled on numerous electronic dance records.
- Kraftwerk - "Trans-Europe Express" (1977)  
Played in New York discos in the late 70s, inspiring house, electro and [techno](#) DJs alike in the 80s, this track has made way for future house music and its techno off-spring.
- New Order - "Blue Monday" (1983)  
Frequently considered the missing link between [disco](#) of the 1970s and house of the 1980s. Importantly, it bridges the gap between electronic dance music and UK [indie](#) music fans in the post-[punk](#) 1980s. It has been sampled, remixed and covered by electronic dance producers all over the world.
- Lime - "Lime 3" (1984)  
Continuous-mix album by Lime (Denis and Denyse LePage) - no less important than the work of New Order. Lime's [HiNRG](#) music was a gradual evolution that took the sounds of Giorgio Moroder and Kraftwerk and moulded them into epic club records with catchy beatbox programming and numerous "breakdown sections" that were often reprised throughout the mix. It's impossible to nail down a moment in time when Lime started sounding like a kissing cousin of House Mix. Most would agree that by the time 1984's "Angel Eyes" single had hit the clubs, they had one foot in the house. "Angel Eyes" contains a programmed drum fill that is very similar to that used in "Blue Monday" by New Order, though not on the kick, as New Order's had been. Lime would always have too many ornate and symphonic electronic elements to be considered House, but their influence on the genre cannot be overstated.
- Jesse Saunders - "On and On" (1984/1985)

Considered the first house record pressed and sold to the public. A major presage of later electronic dance music. With original, mantra-like stripped-down synths (including a 303 and minimal vocal), this record was early house music revealing itself as more than the sum of its parts. *On and On* showed the more trance-like shamanistic side that would develop into acid house.

- Chip E. - "It's House" (1985)  
Written by Chip E. and featuring [keyboard](#) work by Joe Smooth, this release is often considered as the definition of Chicago House Music. The first self-referential "house music" record. The simplistic referential lyrics go "It's House, It's House" in varying pitch, to a driving bassline and percussion.
- Marshall Jefferson - "Move Your Body (House Music Anthem)" (1987)  
The second self referential "house music" record. The referential portion of the lyrics goes: "Gotta have House Music all night long... With that House Music can't be wrong..."
- Phuture - "Acid Trax" (1986)  
The first [acid house](#) song ever made. Made by DJ Pierre, Spanky J and Herbert in Chicago and gave birth to the whole [acid house](#) movement.
- Pete Wylie - "Sinful" (1986)  
Anthemic [indie](#) number that presaged the indie-dance crossover that was to follow a number of years later. Available in both stomping "tribal mix" by Zeus B. Held and "the wickedest mix in town" by Bert Bevans. JBO cited this among their strongest influences (and rightly so). The tagline "It's sinful...It's tragic..." would be chanted in [indie](#) raves in the early 90s thanks to re-release (Pete Wylie and The Farm) and remixes by the likes of Farley and Heller.
- S'Express - "Theme from S'Express" (1988)  
An [acid house](#) classic. Obviously [disco](#)-influenced, combined with [funky](#) acid 303 baseline. Samples Rose Royce's classic "Is it Love You're After". Reached Number one on the UK charts.
- Technotronic - "Pump up the Jam" (1990)  
Probably the first house record to break the top 10 on the US pop charts.
- Madonna - "Vogue" (1990)

Close behind "Pump up the Jam" and produced by perennial New York DJ Shep Pettibone, this record marked the absolute commercial breakout of House in the United States. Went to number one on charts worldwide. Became the highest selling single on WEA up to that time, beating Chic's 1978 hit "Le Freak".

- Leftfield - "Release the Pressure" (1995)  
The first group to truly mix house music with external influences such as dub and [reggae](#). Also credited with the creation of progressive house music.
- Mariah Carey - "Dreamlover" (Def Club Mix) (1993)  
This classic David Morales remix is widely credited as the first record to bridge the gap between [pop music](#) and house music. The trend of remixing pop records in this way continues today.
- Steve 'Silk' Hurley - "Jack Your Body" (1987)  
The first real House track to reach No.1 in the UK Top 40 pop chart in January 1987 - and was also the first to register more than half it's sales on the 12" vinyl format.

## Other notable House Music Artists and Releases

49ers - "Die Walkure"; "Touch Me"  
A Guy Called Gerald - "Voodoo Ray"  
Adeva - "Respect"; "Warning"; "I Thank You"  
Alex Party - "Read My Lips"; "Don't Give Me Your Life"  
Bassheads - "Is There Anybody Out There"  
Beatmasters - "Rok da house"  
Bizarre Inc - "I'm Gonna Get You" (ft Angie Brown); "Playing With Knives"  
Black Box - "Ride on Time"; "I Don't Know Anybody Else"; "Everybody"; "Strike it Up"  
Bomb The Bass - "Beat Dis"; "Megablast"  
CeCe Rogers - "Someday"  
Chip E. - "Time 2 Jack"; "Like This"  
Coldcut - "People Hold On" (ft Lisa Stansfield)  
Crystal Waters - "Gypsy Woman"; "Makin' Happy"; "100% Pure Love"  
Daft Punk - "Da Funk"; "Around the World"  
D-Mob - "We Call It Acieed"; "C'mon and Get My Love" (feat. Cathy Dennis)  
Double Dee - "Found love"  
Ecstasy - "This is my House"  
Farley Jackmaster Funk - "Love Can't Turn Around"  
Felix - "Don't You Want Me; "It Will Make me Crazy"  
Fingers Inc. - "Can You Feel It"  
Frankie Knuckles - "Your Love"  
Gat Decor - "Passion"  
Hardrive- "Deep Inside"  
Hed Boys - "Girls + Boys"  
Hithouse - "Jack To The Sound Of The Underground"  
Inner City - "Big Fun"; "Good Life"; "Ain't Nobody Better"  
Jaydee - "Plastic Dreams"  
J.M. Silk - "Jack Your Body"  
Joe Smooth - "Promised Land"  
Jomanda - "Got A Love For You"; "Make My Body Rock"  
Kraze - "The Party"  
Krush - "House Arrest"  
Latino Party - "Esta Loca"; "Tequila"  
Mantronix - "Got to Have Your Love"  
Orbital - "Chime"  
Rhythm is Rhythm - "Strings of Life"  
Lil' Louis - "French Kiss"  
LNR - "Work it to the Bone"  
M People - "One Night in Heaven"  
M/A/R/R/S - "Pump Up The Volume"

Mel & Kim - "Respectable"  
Modjo - "Lady (Hear Me Tonight)"  
Mylo - "Drop the Pressure"  
Natalie Cole - "Pink Cadillac" (remix)  
Nightcrawlers - "Push the Feeling On"  
Nitro Deluxe - "Let's Get Brutal"  
Paul Simpson - "Musical Freedom"  
Raze - "Break 4 Love"  
Robin S - "Show me Love; Love for Love"  
Royal House - "Can You Feel It"; "Party People"  
S-Express - "Theme from S-Express"; "Superfly Guy"; "Hey Music  
Lover"  
Soul II Soul - "Keep on Movin"; "Back to Life"; "A Dream's a Dream"  
Stardust - "Music Sounds Better With You"  
Sydney Youngblood - "If Only I Could"  
Tall Paul - "Rock da House"  
Technotronic - "Pump up the jam"; "Get Up (Before the Night is  
Over)"  
Ten City - "Devotion"; "That's the Way Love is"  
Yazz - "Stand up for Your Love Rights"; "The Only Way is Up"

# Musicology

House music is uptempo music for dancing and has a comparatively narrow tempo range, generally falling between 118 beats per minute (bpm) and 135 bpm, with 127 bpm being about average since 1996.

Far and away the most important element of the house drumbeat is the (usually very strong, synthesized, and heavily equalized) kick drum pounding on every quarter note of the 4/4 bar, often having a "dropping" effect on the dancefloor. Commonly this is augmented by various kick fills and extended dropouts (aka breakdowns). Add to this basic kick pattern hihats on the eighth-note offbeats (though any number of sixteenth-note patterns are also very common) and a snare drum and/or clap on beats 2 and 4 of every bar, and you have the basic framework of the house drumbeat.

This pattern is derived from so-called "four-on-the-floor" dance drumbeats of the 1960s and especially the 1970's [disco](#) drummers. Due to the way house music was developed by DJs mixing records together, producers commonly layer sampled drum sounds to achieve a larger-than-life sound, filling out the audio spectrum and tailoring the mix for large club sound systems.

[Techno](#) and [trance](#), the two primary dance music genres that developed alongside house music in the mid 1980s and early 1990s respectively, can share this basic beat infrastructure, but usually eschew house's live-music-influenced feel and black or Latin music influences in favor of more synthetic sound sources and approach.

# Human voice

**Human voice** consists of sound made by a person using the vocal folds for talking, singing, laughing, screaming or crying. The vocal folds in combination with the teeth, the tongue, and the lips, are capable of producing highly intricate arrays of sound, and vast differences in meaning can often be achieved through highly subtle manipulation of the sounds produced (especially in the expression of language). These differences can be in the individual noises produced, or in the overall tone in which they are uttered.

The tone of voice may suggest that a sentence is a question, even if it grammatically is not, and can display emotions such as anger, surprise, happiness. In a request, the tone can reveal much about how much one wants something, and whether it is asking a favor or more like an order. The tone of saying, for example, "I am sorry" can change the phrase's meaning dramatically: it may vary from a sincere request for forgiveness to implying something like, "I have the right to do this even if you do not like it".

[Singers](#) use the human voice as an instrument for creating [music](#).

# Voice registers

The **human voice** is a complex instrument. Humans have vocal cords which can loosen or tighten or change their thickness and over which breath can be transferred at varying pressures. The shape of chest and neck, the position of the tongue, and the tightness of otherwise unrelated muscles can be altered. Any one of these actions results in a change in [pitch](#), [volume](#), [timbre](#), or tone of the sound produced.

One important categorization that can be applied to the sounds singers make relates to the *register* or the "voice" that is used. Singers refer to these registers according to the part of the body in which the sound most generally resonates, and which have correspondingly different tonal qualities. There are widely differing opinions and theories about what a register is, how they are produced and how many there are. The following definitions refer to the different ranges of the voice.

## Chest voice

The chest voice is the register typically used in everyday speech. It is so called because it can produce the sensation of the sound coming from the upper chest. This is because lower frequency sounds have longer wavelengths, and resonate mostly in the larger cavity of the chest. A person uses the chest voice when singing at the bottom of his or her range.

The tonal qualities of the chest voice are usually described as being rich or full, but can also be pushed or belted. Trained singers can usually control this register, but some untrained singers may experience vocal problems if they sing excessively in this register without proper training.

## Middle voice

The middle voice, also known as the "blend", is the term used to describe the range of notes which marks the crossover between the chest and head voices. It may be a distinct change (a *passaggio*) or a more gradual blending. With training, many singers can choose whether to sing notes in this range in the head or chest voice.

## Head voice

The head voice is often used when a person shouts or is highly excited. In these situations people tend to produce higher pitches, and these resonate in the mouth and in the bones of the skull, producing the sensation of the

sound coming from the head. A person uses the head voice when singing notes at the upper end of his or her vocal range.

The tonal qualities of the head voice are usually described as being sweet, balladic, lilting, lyrical, or pure. On the negative side, this register may sound light, unsupported, or breathy, and may not be as loud as the chest voice.

## **Falsetto**

Falsetto is a higher range than the head voice; it relies on completely relaxed vocal folds and may sound breathy. The sound of the falsetto voice can be exemplified by the Bee Gees singing "Stayin' Alive", or Terry Jones playing an old woman in Monty Python. It is generally more obvious when men use it, but women, in the higher voices, usually use falsetto voice adjustments. It is a difficult register to sing accurately in, and it tends to be rather soft, except when there is amplification through resonance by a well-tuned vocal tract. It is a quite distinct range from the head voice, and generally when singers describe their range they exclude the falsetto voice. A male singer who routinely sings using the falsetto is called a countertenor.

Another very popular singer and group that virtually made it their exclusive mode of singing is Frankie Valli and the Four Seasons. In their song "Lighting Striking Again" one gets to hear the rare instance where Frankie Valli actually sings in normal lower vocal registers, and then transits to his more usual falsetto.

# Hymn

A **hymn** is a type of [song](#), usually religious, specifically written for the purpose of praise, adoration or prayer, and typically addressed to a god or other religiously significant figure.

A writer of hymns is known as a **hymnist** or **hymnodist**, and the practice of singing hymns is called *hymnody*; the same word is used for the collectivity of hymns belonging to a particular denomination or period (e.g. "nineteenth century Methodist hymnody" would mean the body of hymns written and/or used by Methodists in the nineteenth century). A collection of hymns is called a **hymnal**. These may or may not include music.

Ancient hymns include the *Great Hymn to the Aten*, composed by the pharaoh Akhenaten, and the Vedas, a collection of hymns in the tradition of Hinduism. The Western tradition of hymnody begins with the Homeric Hymns, a collection of ancient Greek hymns, the oldest of which were written in the 7th century BCE in praise of the gods of Greek mythology.

## Christian tradition

In Christianity, hymns usually have God as their subject matter, however some hymns may treat on saints, particularly the Blessed Virgin Mary; special holy days; the Bible; or various Christian practices such as the eucharist or baptism. Most Christian worship services have, since the earliest times, incorporated the singing of hymns, either by the congregation or by a selected [choir](#), often accompanied by an [organ](#).

Thomas Aquinas, in the introduction to his commentary on the Psalms, defined the Christian hymn thus: "*Hymnus est laus Dei cum cantico; canticum autem exultatio mentis de aeternis habita, prorumpens in vocem.*" ("A hymn is the praise of God with song; a song is the exultation of the mind dwelling on eternal things, bursting forth in the voice.)

Since there is a lack of musical notation in early writings, the actual musical forms in the early church can only be surmised. During the Middle Ages a rich hymnody developed in the form of [Gregorian chant](#) or plainsong. This type was sung in unison, in one of eight Church modes, and most often by monastic choirs. While they were written originally in Latin, many have been translated. A familiar hymn of this type is the 11th century plainsong *Divinum Mysterium*, (although the words *Of the Father's Love Begotten* date back to around the 4th century), that is a common part of church Christmas repertoires in the English language.

The Protestant Reformation produced a burst of hymn writing and congregational singing. Martin Luther is notable not only as a reformer, but as the author of many hymns including *A Mighty Fortress Is Our God* which is sung today even in Roman Catholicism. Luther and his followers often used their hymns, or chorales, to teach tenets of the faith to worshipers. The earlier English writers tended to paraphrase biblical text, particularly [Psalms](#); Isaac Watts followed this tradition, but is also credited as having written the first English hymn which was not a direct paraphrase of Scripture. Later writers took even more freedom, some included allegory and metaphor in their texts. Four part harmony also became the norm, rather than unison singing.

Charles Wesley's hymns spread Methodist theology, not only within Methodism, but in most Protestant churches. He developed a new focus - expressing one's personal feelings in the relationship with God as well as the simple worship seen in older hymns. Wesley wrote:

*Where shall my wondering soul begin?  
How shall I all to heaven aspire?  
A slave redeemed from death and sin,  
A brand plucked from eternal fire,  
How shall I equal triumphs raise,  
Or sing my great deliverer's praise.*

Wesley's contribution, along with the Second Great Awakening in America led to a new style called gospel, and a new explosion of sacred music writing

with Fanny Crosby, Ira D. Sankey, and others who produced testimonial music for revivals, camp meetings and evangelistic crusades.

African-Americans developed a rich hymnody from [spirituals](#) during times of slavery to the modern, lively black gospel style.

The Methodist Revival of the eighteenth century created an explosion of hymnwriting in Welsh, which continued into the first half of the nineteenth century. The most prominent names among Welsh hymn-writers are William Williams of Pantycelyn and Ann Griffiths. The second half of the nineteenth century witnessed an explosion of hymntune composition and choir singing in Wales.

Some Christians today are using Christian lyrics in the [rock music](#) style although this often leads to some controversy between older and younger congregants. This is not new; the Christian [pop music](#) style began in the late 1960s and became very popular during the 1970s, as young hymnists sought ways in which to make the music of their religion relevant for their generation.

This long tradition has resulted in a rich lode of hymns. Some modern churches include within hymnody, the traditional hymn (usually addressed to God), praise choruses (often sung scripture texts) and gospel (expressions of one's personal experience of God). This distinction is not perfectly clear; and purists remove the second two types from the classification as hymns. It is a matter of debate, even sometimes within a single congregation, often between revivalist and traditionalist movements.

Some Christian hymnists and their more well known hymns are:

Thomas Aquinas : Pange Lingua, Verbum Supernum Prodiens

Tommaso da Celano : Dies Irae

William Cowper : There Is a Fountain Filled with Blood

Fanny Crosby : Blessed Assurance and 8,000 others

Paul Gerhardt : O Sacred Head, Sore Wounded

Martin Luther : A Mighty Fortress is Our God

John Newton : Amazing Grace

Dan Schutte : Here I Am, Lord

Joseph M. Scriven : What a Friend We Have in Jesus'

Knowles Shaw : Bringing in the Sheaves'

Timothy Dudley-Smith : Tell Out My Soul

Eliza R. Snow : O My Father

Isaac Watts : When I Survey the Wondrous Cross, Joy to the World

Charles Wesley : Christ the Lord Is Risen Today, Hark, The Herald  
Angels Sing,

Love Divine, All Loves Excelling, O for a Thousand Tongues to  
Sing, many others

John Greenleaf Whittier : Dear Lord and Father of mankind

Christian hymns, especially in more recent centuries, were often written in four-part vocal harmony. Today, except for choirs and more musically inclined congregations, hymns are typically sung in unison. In some cases complementary full settings for organ are also published, in others, organists and other accompanists are expected to mentally transcribe the four-part vocal score for their instrument of choice.

## Hymn meters

Following Isaac Watts it has been common for English hymnody to use a conventionally named poetic meters to pair lyrics with melodies. Those used the most often are:

- **C.M.** - Common Meter; a quatrain (four-line stanza) with alternating lines of iambic tetrameter and iambic trimeter, which rhymes in the second and fourth lines and sometimes in the first and third (8/6/8/6); also called Ballad Meter.
- **C.P.M.** - Common Particular Meter; a six-line stanza of which the first, second, fourth and fifth lines are iambic tetrameter, and the third and sixth lines are iambic trimeter (8/8/6/8/8/6).
- **D.** - Doubled; indicates an eight-line stanza instead of four, as in C.M.D. or D.C.M. - Common Meter Doubled or Doubled Common Meter, (8/6/8/6/8/6/8/6).
- **H.M.** - Hallelujah Meter; a six-line stanza of which the first four lines are trimeter and the last two are tetrameter, which rhymes most often in the second and fourth lines and the fifth and sixth lines (6/6/6/6/8/8).
- **L.M.** - Long Meter; a quatrain in iambic tetrameter, which rhymes in the second and fourth lines and often in the first and third (8/8/8/8).
- **L.P.M.** - Long Particular Meter; a six-line stanza of iambic tetrameter (8/8/8/8/8/8).
- **M.T. (or 12s.)** - Meter Twelves; a quatrain in anapestic hexameter (12/12/12/12).
- **P.M.** - may stand for Psalm Meter (more commonly known as 8s.7s), Particular Meter, or Peculiar Meter (each indicating poetry with its own peculiar, non-standard, meter).
- **S.M.** - Short Meter; iambic lines in the first, second, and fourth are in trimeter, and the third in tetrameter, which rhymes in the second and fourth lines and sometimes in the first and third (6/6/8/6).
- **S.P.M.** - Short Particular Meter; a six-line stanza of which the first, second, fourth and fifth lines are iambic trimeter, and the third and sixth lines are iambic tertameter (6/6/8/6/6/8).
- **8s.** - Eights; used to distinguish an eight syllable quatrain that does not contain the iambic stress pattern characteristic of *Long Meter* (8/8/8/8).
- **8s.7s.** - Eights and sevens; a trochaic quatrain with alternating lines of four feet and three and one-half feet, which rhymes in the second and fourth lines and sometimes in the first and third (8/7/8/7); also called Psalm Meter.
- **7s.6s.** - Sevens and sixes; a quatrain with alternating lines of three and one-half feet and three feet, which rhymes in the second and fourth lines and sometimes in the first and third (7/6/7/6).

# Hyphy

**Hyphy** (pronounced *high-fee*; IPA: [ÉhajfiÐ]) is a style of music and dance associated with San Francisco Bay Area hip hop culture. It began to emerge in early 2000 as a response from Bay Area rappers against commercial hip hop for not acknowledging the Bay for setting trends in the hip hop industry. Although the "**hyphy movement**" has just recently seen light in mainstream America, it has been a long standing and evolving culture in the Bay Area.

The term is a combination of the words "hype" and "fly".

It is distinguished by gritty, pounding rhythms, and in this sense can be associated with the Bay as [crunk](#) music is to the South. An individual is said to "get hyphy" when they act or dance in an overstated and ridiculous manner. Many in the Bay Area would describe this as acting "Retarded", "Riding The Yellow Bus", or "Going Dumb".

## Culture

The word "hyphy" was originally coined by Keak Da Sneak. If someone was hyphy, they were reacting spontaneously to the music. Alternately, it is based heavily around partying and having as much of a good a time as possible.

A particular feature of hyphy culture in the bay area are sideshows or sydeshows , when one or a series of cars perform the extremely dangerous stunt of doing multiple doughnuts in their car by braking and turning at high speeds. Hyphy culture, like much of rap culture, also endorses greatly the heavy usage of drank (alcohol), purp (marijuana) and thizz pills (ecstasy).

Dancing and partying, too, are an important aspect of hyphy culture.

# Slang

Like many Bay Area trends, Hyphy has a unique culture of slang—much of it invented by E-40, Mac Dre, and other important figures. Below is a partial list of notable slang terms in hyphy culture:

- **"Flamboasting"** - All manner of showing off.
- **"Gas-brake dippin'"** - Driving while quickly alternating between stomping on the gas and the brake.
- **"Ghostride the whip"** - Driver walks alongside slow-rolling car with the door open, giving the appearance that the car is driving itself. Passengers ride with all the doors open and sometimes leap out of the moving cars.
- **"Giggin'"** - Dancing wildly.
- **"Going or getting dumb/stupid/ignorant/retarded/hyphy/yellow bus"** - is the main concept, which means having a good time while ignoring society's negative opinion of "uncivilized" behavior.
- **"Hyphy train"** - A wild, mobile party with a long line of cars with all the doors open, in which occupants ghost-ride, flambost, dance on the hood and roof, and otherwise get hyphy.
- **"Scrapers"** - Vintage four-door American sedans with whistling pipes, oversize spinning rims and a powerful stereo system. They hang low in the back and send off sparks when you're gas-brake dipping.
- **"Scrape/Swang"** - Turning a sideshow/sydeshow.
- **"Stunna shades"** - Oversized dark glasses that help accessorize the sagging jeans, white T-shirts and dreadlocks that are part of hyphy

fashion. Unusual looking glasses that people wear when they go hyphy. "Stunnas" are frequently aviator style glasses, but often more elaborate or attention getting.

- **"Stunting"** - Turning donuts, figure eights and other car tricks. Allen Gordon, former editor of Rap Pages magazine, says, "If you can spell out your name in tire tracks in the street — you're the man."
- **"Thizz"** - Street slang for Ecstasy pills, popularized by the late Andre "Mac Dre" Hicks. Thizz is also the name of Mac Dre's record label.
- **"Thizz Face"** - Coined by Mac Dre to describe a "look on your face like you smell some piss". Originated from the face that one makes when putting an Ecstasy pill in one's mouth, due to the bitter taste. The term and facial expression have been appropriated to mean several other feelings and situations.
- **"Thizzle Dance"** - A dance associated with Mac Dre's song by the same name, the thizzle dance (thizz dance, thizzing, closely related to going dumb) involves wearing a strange facial expression and waving one's arms and legs in a bizarre or unusual-looking way. "Thizzing" is also associated with shaking one's dreadlocks, getting on the ground, or imitating animals.
- **"Yadadameen/Yadadamsayin?"** - A phrase popularized by Keak Da Sneak meaning "Do you know what I mean?" and "Do you know what I'm sayin'?" The 'dada' usually signifies rolling the letter 'R', however, for effect and for people who cannot roll their 'R's, the informal 'didi' (pronounced did-I) is appropriate.
- **"Yokin"** - To alternately press on the gas and brake so your car dips.

This is merely an introduction to the slang associated with the hyphy movement.

## **Cities/Locations**

Centered around the San Francisco Bay Area, the capital of the Hyphy Movement is Oakland. Additionally, Vallejo, Richmond, and various other locations in Northern California are key areas in the hyphy movement.

# Artists

Important to the hyphy movement are the involvement of Oakland, California and San Francisco Bay Area rap artists. Major entertainers from the Bay who are considered hyphy artists include:

E-40  
Keak Da Sneak  
Mac Dre  
Mistah F.A.B.  
Tha Hoodstarz  
The Federation (hip hop group)  
The Team (Rap)

# Idiophone

An **idiophone** is any [musical instrument](#) which creates sound primarily by way of the instrument itself vibrating, without the use of strings or membranes. It is one of the four main divisions in the original [Hornbostel-Sachs](#) scheme of [musical instrument classification](#). Idiophones are probably the oldest type of musical instrument (not counting the [human voice](#)). In the early classification of Victor Mahillon, this group of instruments was called **autophones**.

Most [percussion instruments](#) which are not [drums](#) are idiophones. Hornbostel-Sachs divides idiophones into four main sub-categories. The first division is the **struck idiophones** (sometimes called concussion idiophones). This includes most of the non-drum percussion instruments familiar in the west. They include all idiophones which are made to vibrate by being hit, either directly with a stick or hand (like the [triangle](#) or marimba), or indirectly, by way of a scraping or shaking motion (like maracas or flexatone).

Various types of [bells](#) fall into both categories.

The other three sub-divisions are rarer. They are **plucked idiophones**, such as the jew's harp, music box or mbira (thumb piano); **blown idiophones**, of which there are a very small number of examples, the Aeolsklavier being one; and **friction idiophones**, such as the glass harmonica, daxophone, styrophone, musical saw, or nail violin (a number of pieces of metal or wood rubbed with a bow). A number of idiophones that are normally struck, such as [vibraphone](#) bars and [cymbals](#), can also be bowed.

## [Hornbostel-Sachs](#) system of [musical instrument classification](#)

# Illbient

**Illbient** [music](#) is an offshoot of the [intelligent dance music](#) (IDM) movement, similar in style to [ambient music](#) but far different in theme. Whereas ambient uses natural noises to represent almost a random pattern of music, illbient uses dissonant noises and dark, unsettling ("ill") samples to create controlled chaos. Illbient ranges from the very [minimalistic](#) to the rather complex, similar to other genres such as experimental hardcore and the later incarnations of IDM.

The marked difference between Illbient and [Dark ambient](#) is the [hip hop](#) influence involved. This style aims to portray the concept of urban decay found in the music and lyrics of early-90s hip hop. (more needed please)

There is some uncertainty about who coined the term, as both DJ Spooky and DJ Olive claim to have invented the musical style.

# Impressionist music

The **Impressionist movement in music** is a movement in [music](#) loosely set between the late nineteenth century, up to the middle of the twentieth century. Like its precursor in the visual arts, musical [impressionism](#) was based in France, and the French composers Claude Debussy and Maurice Ravel are generally considered to be the two "great" impressionists (although Debussy renounced the term, and Ravel composed many other pieces that can't possibly be identified as "Impressionist"). A great impressionist was also Polish composer Karol Szymanowski. A notable American impressionist [composer](#) was Charles Tomlinson Griffes. Philosophically, impressionism aimed to convey the atmospheric impact of an event, place, or thing, rather than an accurate portrayal of the subject itself. For instance, Debussy's setting of the *Prélude à l'après-midi d'un faune* is not a literal portrayal of the events of the already vague poem, but a depiction of the feeling of the poem.

Technically, the impressionists invented or began using a great number of new compositional techniques: multi-modality, planing (the use of voices moving in parallel motion; Debussy's prelude *La cathédrale engloutie* provides an example), extended tertian [harmonies](#), and intentionally ambiguous [musical forms](#).

Impressionist composers also made extensive use of whole tone scales to create a dreamy, "hazy" effect in their works, much like the blurred paintings of Renoir and Monet. They deliberately abandoned the major-minor scales which had been in use since the seventeenth century. Also, a sharp focus on tone color led to many new possibilities.

Categories: [Musical movements](#)

# Incidental music

**Incidental music** is [music](#) in a play, television program, radio program or some other form not primarily musical. The term is less frequently applied to film music, with such music being referred to instead as the "[film score](#)" or "soundtrack".

Incidental music is often "background" music, and adds atmosphere to the action. It may also include pieces which will provide the main interest for the audience, for example [overtures](#), or music played during scene changes. It may also be required in plays which have [musicians](#) performing on-stage.

The use of incidental music dates back at least as far as Greek drama. A number of classical composers have written incidental music for various plays, with the more famous examples including Ludwig van Beethoven's music for Egmont, Felix Mendelssohn's music for A Midsummer Night's Dream and Edvard Grieg's music for Henrik Ibsen's Peer Gynt. Parts of all of these are often performed in concerts outside the context of the play.

More recently, incidental music has been written for computer games by the likes of Michael Giacchino (the Medal of Honor series), Richard Jacques (Headhunter), Jack Wall (Myst III) and James Hannigan (Catwoman). One of the best known incidental music composers for British television is Howard Goodall, who wrote music for The Gathering Storm, Blackadder and Red Dwarf as well as the film, Bean.

One of the best known American composers of incidental music in cinema is John Williams. Without his music there would be a much different feel to movies such as Star Wars (for which he composed the scores to all 6 films), Indiana Jones (all 3), Harry Potter (first 3 films), E.T. the Extra-Terrestrial, Jaws, Close Encounters of the Third Kind, Jurassic Park (first 2), Superman: The Movie, and many more.

## Indian blues

**Indian Blues** is a [blues](#) style founded in Pune, India. Sagar Sarkar is considered the father of this style, and Contraband are credited as the earliest practitioners of it, while creating the Hippy Scene in Pune during the late eighties to the late nineties.

In a rare late nineties interview about their hedonistic lifestyle, Sagar Sarkar is quoted as saying: "The jams we'd had were centered around three characters: N.C. Kumar, Samuel Wilson and Zubin Balsara. We ran a circuit using little known Pune venues like Nadi-Kinara, Madhur-Milan, Jaws and the private houses of anybody who'd co-operate. Anyone who knew about our venues were free to just carry their booze, gals and tune in! We were joined by many guests at all sessions, including the great JD who's now into agricultural pursuits in Canada! (Many of y'll know what I mean!)"

Rare bootlegs of Contraband recordings have been produced by Studio K and are highly valued amongst collectors.

# Indian classical music

The origins of **Indian classical music**, the **classical music** of India, can be found from the oldest of scriptures, part of the Hindu tradition, the Vedas.

Samaveda, one of the four Vedas, describes [music](#) at length.

The two main streams of Indian classical music are Hindustani music, from North India, and Carnatic music (Karnataka Sangeeth), from South India.

The prime themes of Hindustani music are Rasleela (Hindu devotionals) of Krishna and Nature in all its splendour. Bhimsen Joshi, Ravi Shankar, Hariprasad Chaurasia and Zakir Hussain, Pandit Shivkumar Sharma, Ali Akbar Khan, Imrat Khan, Kishori Amonkar, Satyasheel Deshpande, Vilayat Khan are the arts' most popular living performers. Carnatic music is similar to Hindustani music in that it is mostly improvised, but it is much more influenced by theory and has stricter rules. It is also less influenced by Persian music. It emphasizes the expertise of the voice rather than of the instruments. Primary themes include Devi worship, Rama worship, descriptions of temples and patriotic songs. Among the most popular living performers are Mangalampalli Balamuralikrishna, T V Sankaranarayanan, Madurai T N Seshagopalan. M.S. Subbulakshmi one of the greatest carnatic vocalists ever, died about an year ago. M L Vasanthakumari, G N Balasubramaniam, Dr.S Ramanathan ,Chemabai Vaidyanatha Bhagavatar ,Vidwan. Gopala Pillai are famous musical legends who lived in the last century.

Indian classical music is monophonic and based around a single [melody](#) line. The performance of a composition, based melodically on one particular [raga](#) and [rhythmically](#), on one tala, begins with the performers coming out in a ritualized order: drone instruments, then the soloist, then [accompanists](#) and percussionists. The musicians begin by tuning their instruments; this process often blends imperceptibly into the beginning of the music.

Indian musical instruments used in classical music include veena, mridangam, tabla, kanjira, tambura, [flute](#), [sitar](#), gottuvadyam, [violin](#), and sarangi.

Players of the tabla, a type of [drum](#), begin by tapping the edges with a hammer to make sure it is in tune with the soloist. Another common instrument is the [stringed](#) tambura (sometimes also called tanpura), which is played at a steady tone (a drone) throughout the raga. This task traditionally falls to a student of the soloist, a task which might seem monotonous but is, in fact, an honour and a rare opportunity for the student who gets it.

The raga begins with the melody being developed gradually, and proper rendering of any raga will take more than half an hour. The beginning of the raga is called an alap in Hindustani music and an alapana in Carnatic music. Many aficionados consider the alap their favourite part, but the alap is often inaccessible to others.

In Hindustani music, once the raga is established, the ornamentation around the [mode](#) begins to become rhythmical, gradually speeding up. This section is called the jor. After the jor climaxes, everything stops and the audiences applaud. Finally, the percussionist begins to play, interacting with the soloist, eventually reaching the spontaneous and competitive jhala section.

Carnatic raga elaborations are generally much faster in tempo and shorter. The opening piece is called a varnam, and is a warm-up for the musicians. A devotion and a request for a blessing follows, then a series of interchanges between ragams (unmetered melody) and thaalams (the ornamentation, equivalent to the *chor*). This is intermixed with [hymns](#) called krithis. This is followed by the pallavi or theme from the raga.

Categories: [Classical music](#)

# Indie

In [popular music](#), **indie music** (from *independent*) is any of a number of genres, scenes, subcultures and stylistic and cultural attributes, characterised by perceived independence from commercial pop music and mainstream culture and an autonomous, do-it-yourself (DIY) approach.

## Definitions of "indie"

The term "indie" is often used to mean a sound that a musician presents, but when interpreted more literally, it is the way that sound is presented or made. "Indie" often refers to an artist or band that is not part of the mainstream culture and/or making music outside its influence. Though the sound of these bands may differ greatly, the "indie" definition comes from the do-it-yourself attitude and ability to work outside large corporations.

### Indie meaning "not major-label"

One of the most common and simplest definitions of "indie" is the definition of not being connected with a major [recording label](#) (currently one of the "Big Four" recording companies: Warner, Universal, Sony BMG and EMI). This is the definition used by NME's indie music charts in the UK, among others.

The problem with this definition is that there is often little correlation between the commerciality or creative freedom offered by major labels and those outside the "big four". Most of the larger independent labels are run along the same business principles as the major labels, with [A&R](#) departments, marketing budgets and commercial considerations guiding their operations. Meanwhile, major labels often retain independently-oriented artists who are given greater creative independence, and who receive considerable critical acclaim. Some notable major-label artists of this sort include Sonic Youth, Radiohead, Pulp, and The Flaming Lips.

### Indie and commerciality

A more puristic structural definition of "indie" would draw the line further down, not between the "big 4" major labels and others but between the "big indie" labels and smaller labels, considered by purists to be true indie labels. These small labels are typically run by a few people, often out of their home or garage, and often coupled with a mail-order service representing other labels. The people running the labels have a close connection to a certain scene; many labels are run partially or wholly by musicians in bands on them. A concern for the purity of the creative mission of the label takes precedence over commercial concerns; many labels close down or go on hiatus when the owners lose interest or (as often happens) run out of money (or sometimes close down when the owners feel their mission has been fulfilled, as happened with Sarah Records). Archetypal examples of such labels include the aforementioned Sarah Records, Factory Records, Dischord, Kindercore Records, SST and Kill Rock Stars.

The converse of this are independent labels that have been perceived, rightly or wrongly, as being overly "commercial" or exploitative of certain artists or trends. Examples at various times include Fat Wreck Chords,

Matador Records and Sub Pop. Epitaph was often the focus of similar accusations, however in 2005 label management signed an agreement with RIAA arguably making them no longer "independent".

Once again, this is not so much a dichotomy as a continuum; some labels grow from such independent status and gradually become more commercially oriented (often prompted by the success of one of their acts), eventually becoming subsumed by a larger conglomeration or a major label. One example of this was Creation Records, a label Alan McGee started in the 1980s on a small scale, which, in the 1990s had success with Oasis, subsequently becoming much more commercially oriented before being acquired by Sony.

## Indie and genres

The word "indie" is often used to refer specifically to various genres or sounds. During the 1980s, "indie" was synonymous in Great Britain with jangly guitar pop of the C-86 movement. During the 1990s a lot of [Britpop](#) bands were referred to as "indie", despite most of the movement being signed to major labels and dominating sales charts. More recently, the word "indie" is sometimes used as a synonym for [new wave](#) revivalist bands such as Franz Ferdinand and The Killers and The Strokes. The word "indie" is sometimes used as a synonym for [alternative](#), a word which often bears the stigma of being associated with cynically manufactured mass-market teen-rebellion music from major labels. Such usages of "indie" may be considered inaccurate for various reasons: for one, stylistic qualities are often not accurately correlated to commercial independence or adherence to indie principles (this is particularly true when a sound becomes popular, its leading exponents are signed by major labels and more success-oriented bands and production teams attempt to imitate the style; this ultimately culminates in commercially driven artists sporting the same stylistic traits the "indie" artists of a year ago had). Secondly, however pervasive any style of music (even one as broadly defined as "guitar pop" or "[post-punk](#) rock") may become at a particular time, it by definition cannot embody all of indie music, as, by indie's nature, there will be indie artists, labels and entire local scenes operating outside of this style and its definitions.

## Cultural and philosophical attributes of indie

There are a number of cultural and philosophical traits which could be more useful in pinpointing what "indie" is about than specific musical styles or commercial ownership. Indie artists are concerned more with self-expression than commercial considerations (though, again, this is a stance that is affected by many artists, including hugely commercially successful ones). A do-it-yourself sensibility, which originated with [punk](#) in the 1970s, is often associated with indie, with people in the scene being involved in bands, labels, nights and zines. Indie often has an internationalist outlook, which stems from a sense of solidarity with other fans, bands and labels in other countries who share one's particular sensibilities; small indie labels will often distribute records for similar labels from abroad, and indie bands will often go on self-funded tours of other cities and countries, where those in the local indie scenes will invariably help organise gigs and often provide accommodation and other support. In addition, there is also a strong sense

of camaraderie that emerges from a selflessness among indie bands and often results in collaborations and joint tours.

Indie artists of any particular time often go against the prevailing trends (for example, the [twee pop](#) movement that started in the 1980s was a reaction against the testosterone-fueled swagger of rock). A 'lo-fi' aesthetic (i.e., an often deliberate lack of polish and a more "authentic" roughness and imperfection) has often been associated with indie, particularly when slick, polished recordings were the preserve of the commercial music industry; this line has since become blurred, in a world where high-quality recordings can be made increasingly easily with inexpensive computer-based recording systems and where commercial production teams often deliberately utilize a "lo-fi" sound.

People into the indie lifestyle are commonly referred to as "indie kids", regardless of age; however, they do not often use that term for themselves. Other terms exist; the term "hipster" has, in recent years, become somewhat synonymous with this subculture.

## Indie and technology

The concept of the [album](#) was first introduced with the invention of the phonograph. Artists became dependent on companies with capital because it was too expensive for an artist to produce and distribute an album themselves. Because of this, the choices offered to the public were decided by what the record companies chose to support and distribute. Today, technology is finally at the point where it is affordable for an artist to produce and distribute an album without the assistance of a label. Ironically, this same technology is available to consumers who can easily reproduce the music. This makes it increasingly difficult for an artist to make a living from selling albums alone.

Internet technology allows artists to introduce their music to a potentially enormous audience at low cost without necessarily affiliating with a major recording label. The design of digital music software encourages the discovery of new music. Sites with larger libraries of songs are the most successful. This, in turn, creates many opportunities for independent bands.

Royalties from digital services could prove to be an important source of income. If an artist has already paid to record, manufacture, and promote their album, there is little to no additional cost for independent artists to distribute their music online. Digital services offer the opportunity of exposure to new fans and the possibility of increased sales through online retailers.

Artists can also release music more frequently and quickly if it is made available online. Additionally, artists have the option of releasing limited edition, out-of-print, or live material that would be too costly to produce through traditional means.

With the arrival of newer and relatively inexpensive recording devices and instruments, more individuals are able to participate in the creation of music than ever before. Studio time is extremely expensive and difficult to obtain.

The result of new technology is that anyone can produce studio-quality music from their own home. Additionally, the development of new technology allows for greater experimentation with sound. An artist is able to experiment without necessarily spending the money to do it in an expensive studio.

Most artists maintain their own Web sites as well as having a presence on sites such as Myspace.com. Technological advances such as message boards, music blogs, and social networks are also being used by independent music companies to make big advances in the business.[5]

Some sites, such as Garageband.com, rely on audience participation to rate a band, allowing listeners to have a significant impact on the success of a band. This eliminates new talent search and development, one of the most costly areas of the music business. Other sites allow artists to upload their music and sell it at a price of their choosing. Visitors to the site can browse by genre, listen to free samples, view artist information, and purchase the tracks they want to buy.[6] Acts such as Wilco have chosen to make their new albums available for streaming before they are released.

However, the sale of digital music makes up only 5-10% of the total income generated from music sales. At this point, most people do not have broadband connections to the internet, making it relatively difficult for the general public to access music online. Many digital music services tend to focus overwhelmingly on major label acts. They don't necessarily have the time or resources to give attention to independent artists. Currently, it is unlikely that a completely unknown artist would be able to sell a large number of records solely via the internet.

## Subcategories of indie

There are several subcategories which music from the overall indie scene are often grouped broadly into. Music ranging from alternative rock to punk rock to [experimental music](#) has long existed in indie scenes, often independent from one another. [Indie rock](#) and [indie pop](#) are the most common groupings that conform to an "indie" sound. The difference between these is difficult to pick up from the instrumentation or sound, as both genres include distorted guitar-based music based on pop-song conventions. If anything, the key distinction comes not from instrumentation or structure but from how strictly they follow cultural constructions of rockist "authenticity".

There is also indie dance, which comes from a fusion of indie pop and electronic/dance music. Crossover between [electronica](#) (mostly [glitch](#)) resulted in so-called [indietronic](#), electronic indie or indie electronic, for example some artists on the German Morr Music label, or The Postal Service. Another type is [post-rock](#), which includes bands like Explosions in the Sky, Mogwai, Godspeed You! Black Emperor, or Sigur Rós. The idea behind post-rock is that there are very few (if any) lyrics, yet the songs are long (sometimes upwards of 20 minutes), and the point of the songs are to paint an emotional landscape with just music and no words. Further expanding the original meaning of the term, when used in the independent sense, Blog-Rock has come to encapsulate the wave of upcoming artists in the mid-2000s.

## Going major versus staying indie

Some bands choose to never go to a major label even if they are given the opportunity to do so. A famous example were the legendary [Anarcho punk](#) band, Crass. Though this was as much out of necessity as a means of keeping their artistic and political vision intact, since they never had record executives knocking on their door to begin with. They set up their own label to protect themselves from co-optation and provide a voice for like minded [anarcho-punk](#) artists.

If a band moves to a major label, it does not necessarily guarantee the band success. Only about 1 in 10 CDs released by major labels make any profit for the label. It is possible for an artist to make more money producing and promoting their own CDs than signing with a major label. However, an independent label that is creatively productive is not necessarily financially lucrative. Independent labels are often one-or two-person operations with almost no outside assistance and run out of tiny offices. This lack of resources can make it extremely difficult for a band to make revenue off of sales.

One thing an artist can consider doing if they want to be noticed by a major label is starting their own independent label. A successful independent label with a strong musical reputation can be very appealing to a major label.

Major labels rely on independent labels to stay current within the ever-changing music scene. Independent labels are often very good at discovering local talent and promoting specialized genres.

The difference among various independent labels lies with distribution, probably the most important aspect of running a label. A major-label distributed independent label allows the independent label to find, sign, and record their own artists. The independent label has a contract with a major label for promotion and distribution. In some cases, the major label also manufactures and releases the album. Independent labels that are owned by a major label distribute their records through independent distributors but are not purely independent. A purely independent label is not affiliated with a major label in any way. Their records are distributed through independent distributors.

The three main ways for an artist to make money are record deals, touring, and publishing rights.

## Major Label Contracts

Most major label artists earn a 10-15% royalty rate. However, before a band is able to receive any of their royalties, they must clear their label for all of their debts, known as recoupable expenses. These expenses arise from the cost of such things as album packaging and artwork, tour support, and video production. An additional part of the recoupable expenses are the artist's advance. An advance is like a loan. It allows the artist to have money to live and record with until their record is released. However, before they

can gain any royalties, the advance must be paid back in full to the record label. Since only the most successful artists recoup production and marketing costs, an unsuccessful artist's debt carries over to their next album, meaning that they see little to no royalties.

Major label advances are generally much larger than what independent labels can offer. If an independent label is able to offer an advance, it will most likely be somewhere in the range of \$5,000-\$125,000. On the other hand, major labels are able to offer artists advances in the range of \$150,000-\$300,000. Instead of offering an advance, some independent labels agree to pay for a certain amount of the artist's recording costs. This money is recoupable. There are advantages and disadvantages of an advance. If an artist gets no advance, that means they owe their record company less money, thus allowing them to earn royalties more quickly. However, since the label recoups so many costs, an artist's advance might be the only money they are able to make for quite some time.

In a contract, options are agreed upon. Options allow the label to renew their contract with the artist and release more of their albums. Options lie with the label, and the label has the choice whether or not to record more with the artist. Some artists consider this unfair because the label has the right to not distribute an artist's project and extend their contract by one more album if they deem the music as commercially or artistically unacceptable.

Record labels effectively own the artist's product for the duration of their contract.

## **Independent Label Contracts**

Many times, a deal from an independent label is quite similar to that of a major label. In cases where an independent label is distributed by a major label, the independent label itself will have to have a major-label deal. In this case, the independent label would want to be sure that their contract with their artists covers the same issues as the independent's own contract with the major label. In other cases, independent labels offer similar contracts to major labels because they want to look more professional. An independent label that thinks it will eventually be dealing frequently with major labels will have a similar contract in order to avoid having to redraft contracts in the future. There are also plenty of cases in which independent labels have contracts that do not resemble major label contracts in any way. In general, independent labels that are not affiliated with a major label are more willing to take chances and are able to be more flexible in their deals.

Though some independent labels offer a royalty rate of 10-15% like the major labels, it is becoming increasingly more common for independent labels to offer a profit-sharing deal in which as much as 40-75% of the net profits go to the artist. In this type of contract, the net gain after all expenses have been taken out are split between the label and artist by a negotiated percentage. However, deals in this form can take longer for an artist to gain any profits since all expenses – such as manufacturing, publicity, and marketing – are also taken into account. As an independent artist becomes more popular, deals of this type are more advantageous.

Independent labels often rely heavily on free goods, or the records that are given away in promotion of an album. Artists do not receive royalties on merchandise that is given away for free. Additionally, since compilations made by independent labels are often given away, the artist receives no royalties. Major label compilations are more often sold than given away, and the artist does receive royalties.

## **Touring**

When a band goes on tour, it may or may not have the financial backing of its label. An artist receives a fixed fee or a percentage of the tickets sold by the venue owner or promoter. Touring is an expensive process. A moderate estimate of touring costs with a bus and small crew can easily reach \$15,000 a week. If an artist tours with the support of their label, the expenses are all recoupable, thus potentially increasing a band's debt. Many successful bands tour without the support of their label so that they can keep all of their touring revenue. An independent band would have more difficulty than a highly successful one in being self-sufficient on tour.

## **Publishing**

If a band or artist writes their own material, publishing can be one of the best ways to earn a profit. It is one of the only guaranteed ways to earn revenue for artists. Even touring is not a sure way to make money because it is possible that no one will attend the shows. Basic United States copyright law protects songwriters by giving them exclusive rights to grant or deny the reproduction, distribution, or performance of their work. The majority of a band's publishing income comes from its mechanical and performance rights. Mechanical rights cover the reproduction of a song on a record. In the standard contract between a band and a label, the label is required by law to pay the composer a fixed rate per song simply for the right to use the composition on commercially sold recordings. The mechanical licensing rate for the U.S. and Canada is 7.1 cents per song. With the performance rights, a song's copyright covers every time it appears on radio and television.

If an artist prefers to receive up-front money for their songs instead of waiting for the money to come in over time, it can choose to assign its copyright to a music publisher. The music publisher pays a cash advance for what they decide is the value of the copyright. It is common for a band to sign a copublishing deal. This means that the publisher offers the artist an advance in exchange for half the publishing income. When the advance is paid back, the music publisher retains 25% of the income. Since an artist has no guarantees whether or not their song will be popular, some may prefer to have a cash advance that guarantees them money regardless of how well the song does.

## Indie scenes in North America

"Scenes" are localized music-oriented communities that exist in many cities, especially in the U.S. and Canada. These have existed for decades now, in one way or another, but it is now commonplace for a city or town to have a punk scene, a metal scene, or many other scenes based on other forms of art. Indie music scenes became important in the early 1980s, when the rest of the country caught up with punk rock music from New York and London. Scenes are important in keeping indie and punk rock fresh and inventive, because it allows people from a wide audience to hear new independent music and contribute their own talents to it. Obviously, depending on what town one is in, the feel of the scene (and therefore the music that comes out of it) may change significantly.

Arguably, the 1980s indie scene in Washington D.C. was pivotal in changing the outcome of punk and indie rock for decades to come. Bands like Minor Threat, the Bad Brains, Fugazi, and Rites of Spring helped to shape the sound of underground music for years to come. Los Angeles was important around this time as well, producing bands like the Descendents, Bad Religion, and Black Flag.

Around the mid-1980s, as punk and New-Wave's mainstream influence died down considerably, there rose a couple of other important movements. Minneapolis was very important around this time. Bands like Hüsker Dü, and the Replacements would influence many alternative bands after them.

People involved in these bands, such as Bob Mould and Paul Westerberg still contribute to the music scene today. During the late 1980s in the Bay Area of California, bands like Operation Ivy, Green Day, The Offspring, and later, Rancid would take form to give a new sound to punk rock. On the opposite end of the country, Frank Black, Kim Deal, and Kristin Hersh were forming bands like the Pixies, Throwing Muses, and eventually The Breeders. These bands would influence the next wave of alternative rock, which due to the massive mainstream success of [grunge](#) became divided into mainstream artists and a new wave of indie rock bands who rejected the mainstream in favor of the indie scene.

### Canadian indie scenes

- **Montreal:** Home to a very well developed indie scene, merging influences from Canada, France, the U.K., and the United States in one city. Some publications such as Pitchfork Media are now claiming Montreal as North America's indie rock capital, due to bands such as The Arcade Fire, The Unicorns, Godspeed You! Black Emperor, Stars and Wolf Parade.

- **Toronto:** Home to the NXNE (North by Northeast) festival, which is based on the more popular SXSW festival in Austin . The city is also home to indie record label Arts & Crafts as well as supergroup Broken Social Scene.
- **Vancouver:** Home of the much revered Frog Eyes, Destroyer (Dan Bejar), The New Pornographers, and Black Mountain.

## American indie scenes

### East

- **Athens, Georgia:** Known for being the birthplace of R.E.M., The B-52's, and Pylon, with much of the scene focused around the famed 40 Watt Club. In later years, the area spawned many member bands of the Elephant Six collective, including Neutral Milk Hotel, Olivia Tremor Control, and Of Montreal. While perhaps indie only in the "status" sense, Athens was also the home to the jam band Widespread Panic and producer/remixer Danger Mouse.
- **Bloomington, Indiana:** Bloomington, Indiana is the home of Indiana University's Jacobs School of Music. The school and the surrounding areas have produced numerous indie bands of note with DIY Punk influences, including Acoustic Folk-Punk bands Defiance, Ohio (band), This Bike Is a Pipe Bomb, Ghost Mice, all of which have recorded on Plan It X Records and play at the annual Plan It X Fest. Other remarkable artists includeMatty Pop Chart (Matt Tobey), and his sister Erin Tobey. Both Matt and Erin have recorded with [Plan It X Records] as solo artists and also as members of Abe Froman (band). Lo-fi musician Elephant Micah, from Richmond, Indiana, resides in Bloomington.
- **Chapel Hill, North Carolina:** Has had a strong indie rock scene since the 1980s. With three major colleges (UNC-Chapel Hill, N.C. State University and Duke University) in its vicinity, the area has been fertile ground for music. In the 1980s, the region saw the debut of bands like The Connells. Bands such as Superchunk, the Squirrel Nut Zippers, Archers of Loaf, Polvo, and Southern Culture on the Skids formed the core of the indie scene in the area in the 1990s. (The Ben Folds Five got their start in the area, as well, albeit slightly removed from the main indie scene.) Much of the activity in the scene focused on longtime indie club the Cat's Cradle (which relocated to adjacent Carrboro in 1993). Labels also emerged in the area, including Merge Records, founded by members of Superchunk, and the now-defunct Mammoth Records.
- **Chicago:** Chicago has become known for indie rockers following in the paths of the Smashing Pumpkins, Urge Overkill, Wilco, and the Jesus

Lizard; bands like Califone, Ok Go, and Umphrey's McGee hail from the city. Matthew and Eleanor Friedberger of The Fiery Furnaces, who now reside in Brooklyn, New York are originally from Oak Park, Illinois, a suburb of Chicago. Chicago is also home to many independent labels like Thrill Jockey, Drag City, and others, and to the popular music-news website Pitchfork Media.

- **Murfreesboro, Tennessee:** About forty minutes south of Nashville, Murfreesboro is a current hotbed for college music. The town is home to Middle Tennessee State University's Recording Industry program in the Mass Communications department. The most notable band to make it from this scene, is the band Self. Their most successful single was "Cannon" from the Subliminal Plastic Motives album, which was released on Spongebath Records in 1995. Spongebath was the heart of the scene and was eventually bought out by Dreamworks Nashville (music division of Dreamworks S.K.G. started by David Geffen), the Spongebath label went under after mis-management of their finances (rumor has it). Dreamworks Nashville was eventually sold off to Universal Music, due to lack of revenue from the label.
- **Newark, Delaware:** The home of Jade Tree Records, formed in 1990 by Tim Owen and Darren Walters. Jade Tree started with bands such as Railhed, Walleye, Lifetime, and the short-lived DC band, Swiz. The label sat in obscurity for about 5 years until signing The Promise Ring in 1996. Since, Jade Tree has released countless albums from many staples of the indie rock scene. Today, Newark, Delaware and surrounding areas has become a hotbed for traveling independent bands, with one notable punk rock venue, The Harmony Grange, which has hosted shows for over 5 years now. While not producing too many memorable acts in the past, Delaware has a notable music scene growing around the University of Delaware campus, and surrounding areas.
- **New York City:** (notably the neighborhood of Williamsburg, Brooklyn): Always a contender, it has been cited as a major scene for recent indie rock music with such bands as The Walkmen, TV on the Radio, Interpol, and The Strokes.
- **Washington, DC:** The DC area has also re-emerged as a hotbed of indie music. The area gained notoriety in the 1980s when it became one of the flagship cities of the American [hardcore punk](#) movement, with bands such as Minor Threat, Government Issue and Rites of Spring. All of these bands were on Minor Threat frontman Ian MacKaye's own record label, Dischord Records. Several newer bands have gained popularity since the rise of MacKaye's later band Fugazi, including Q and Not U, Black Eyes, Decahedron, Dead Meadow, and The Evens, Make Up: Who have inspired many local DC bands such as pg. 99, Crestfallen, Haram, Reactor No. 7, Majority Rule and many others who are all just as equal and talented because they're all helping make the

Washington, DC area a major factor in the indie rock movement that's been growing since the 1960's throughout all of Northern America and largely the world over. and many others.

### Midwest

- **Denver, Colorado:** Known for producing the Elephant Six Collective, a group of indie pop bands, including The Apples in Stereo and Dressy Bessy. Denver also has produced a scene sometimes labeled "country gothic" [1], [2] for its stark combinations of American country and gospel music with unusual or morbid lyrical themes. The approach ranges from solemn, sometimes wrenching religious contemplation by 16 Horsepower, twisted Americana murder ballads by Munly, to rollicking, drunken, apocalyptic Southern gospel by Slim Cessna's Auto Club, all of whom have released albums on Jello Biafra's Alternative Tentacles Records.
- **Omaha, Nebraska:** As of 2000, many new scenes are appearing on the radar in Middle America; all with unique sounds. One is the Omaha-based Saddle Creek Records, home to several highly regarded indie rock acts such as Bright Eyes and Cursive. Bright Eyes singer/songwriter and Omaha native Conor Oberst, who started the label, has been called the "King of Indie Rock" by Rolling Stone magazine, although his "indie cred" is often less than high.

### West

- **Los Angeles:** The L.A. indie scene rides the wave of gentrification through Eastside neighborhoods like Koreatown, Silverlake, and Echo Park, which have given rise to such bands as Moving Units, Autolux, and Giant Drag.
- **Portland, Oregon:** Relatively recently has become a hot spot for indie bands, being the home of such acts as The Decemberists, The Shins, The Dandy Warhols, and the late Elliott Smith.
- **San Diego:** In the past, it has bred its fair share of influential bands such as The Locust, The Black Heart Procession, and The Album Leaf.
- **Seattle:** The Seattle scene became popular in the early 1990s, when bands like Nirvana, Soundgarden, Alice In Chains, Pearl Jam and the Screaming Trees had immense success with their music. This was unique since it signaled the first time in a long time that punk-influenced rock had become once again in vogue with the masses. Bands such as Pixies and Sonic Youth, who were not given much mainstream credibility up to this point, found themselves adored by new fans. Currently, Seattle could be considered to have the most influential indiepop scene in the world. Indiepop super group Death Cab For Cutie launched

indiepop into the attention of mainstream America with their newest album "Plans".

### **Southwest**

- **Austin, Texas:** Host of the annual SXSW (South By South West) festival that showcases a large variety of independent artists across many different venues in the city. Known for SXSW, many often overlook Austin as a local indie scene yet it is home to MIsra Records and many indie artists. Austin, Texas has given the indie rock scene Spoon, ...And You Will Know Us by the Trail of Dead, Jeff Klein, Zykos, Voxtro, and Shearwater. While not the largest indie scene it is a prominent indie hotspot.
- **Denton, Texas:** In the last 20 years Denton's music culture has grown beyond the rigorous and disciplined world of University of North Texas' College of Music. In 2004 and 2005, the roster of the town's performing and touring indie music acts remained between 90 and 100, a high number considering the town's 2000 U.S. census population figure of only 80,537 people. Notable indie bands from Denton include: Lift to Experience, Centro-Matic, Brutal Juice, the Baptist Generals, Midlake, the Marked Men, South San Gabriel, and Bosque Brown. Denton's music culture makes the smaller town Texas' only other city, outside of Austin, that could claim such a title as *music town*, a reflection of city's own creative and progressive dominant cultural base.

[Timeline of alternative rock](#)

**Indie pop** refers to [indie music](#) which is considered to be based on the conventions of [pop music](#). The term is nebulous. Because [indie rock](#) is sometimes used to mean indie music as a whole, indie pop can be discussed as a sub-set of indie rock, but at other times, the terms are used to illustrate a pop-rock dichotomy within the indie music scene. The term is further blurred by disagreement over what qualifies as pop music. Pop is seen as being radio-friendly and disposable, two things that indie music generally eschews. Indie pop is thus the pop music that operates outside of the boundaries of conventional pop music. It is often [lo-fi](#), or otherwise unusual.

## History

Indie pop has its sonic roots in the sound of pop pioneers like Jonathan Richman, and the sweeter sounds of 1960s garage pop/rock, as well as mainstream 1960s artists like The Association, The Monkees, The Byrds, The Mamas and the Papas, and of course The Beatles and The Beach Boys. The key indie pop dichotomy between "pop" and "rock" can be seen as far back as early-1980s Scottish post-punk pop pioneers Orange Juice, whose featured sound of jangly guitars, crooning vocals, and la-la harmonies, as well as in their self-deprecating humor -- very different than the dour, deadly serious, politically charged atmosphere of most post-punk. Before then, the perfect pop statement was the string of singles issued by British punk-pop group The Buzzcocks, whose speedy jangle and high whining boy voice were keystones of the later indiepop sound.

In 1986, the British musical weekly *New Musical Express* released a cassette, entitled C86, that attempted to capture a moment in the pop world when groups that eschewed the shouting intensity of punk for a lighter pop sound, yet maintained a punk sensibility. Much of this sounded like a direct homage to Orange Juice, though it tends to be forgotten that half of the music on C86 wasn't pop at all, but proto-grunge, UK style. This cassette is widely regarded as a founding document of indie pop; it featured indie pop stalwarts like The Pastels, The Wedding Present, The Soup Dragons (before they went dancey), Primal Scream (ditto), The Bodines, and so on. The best of these songs combined a jangly guitar, heartfelt lovesick-boy vocals, and an endearingly earnest amateurism.

Indie pop has always been centered around the social world of small photocopied fanzines, punk-derived manifestos, and small bedroom-based record labels, often modeled on Orange Juice's original indie label Postcard Records. By the mid 1980s, there were dozens of these zines and labels springing up all over the United Kingdom, inspired by punk do-it-yourself (DIY) but with a firm commitment to sing-along melodies as well. The greatest critical exponents of this time were The Smiths (Rough Trade Records); songwriters Morrissey and Johnny Marr created a unique guitar driven sound and literate lyrics providing social statements on life in Thatcher Britain, covering varied topics from sexual ambiguity, desperation, loneliness and death to vegetarianism and vicars in tutus.

The Pink Label, 53rd & 3rd, and The Subway Organisation were just some of the labels putting out singles by important early indiepop groups like The Razorcuts, The Flatmates, The June Brides, and Talulah Gosh; the last-named can probably be considered the founding group of "[Twee pop](#)".

Many of these groups prominently featured female members, still considered a notable thing at the time. Indie pop has always had a very strong streak of gender equity; perhaps its most prominent philosophical note has been the championing of anti-macho points of view, whether from women or from men refusing to buy into traditional rock'n'roll male aggression.

Two of the most significant fanzines of the day were *Are You Scared To Get Happy?*, written by Matt Haynes and *Kvatch*, written by Clare Wadd, both then living in Bristol, England. *AYSTGH?*, as was common then, featured an attached flexidisc, on the bedroom label *Sha-La-La*. Flexidiscs embodied the in-the-moment throwaway vision of perfect two-minute pop gems, even more so than did regular vinyl singles. When *Are You Scared To Get Happy?* stopped publishing in 1987, Matt and Clare joined forces, and *Sha-La-La* evolved into a real record label called *Sarah Records*. Many people now consider *Sarah*, which ended in 1995, to be the archetypical indie pop label. It is certainly hard to overstate *Sarah's* influence on the bands that followed, not just with the sound of the records but the graphical style of the record sleeves and the biting funny sleeve notes.

In the United States, a similar revolution in underground pop had been taking place in Olympia, Washington. *Beat Happening*, an indie band fronted by Calvin Johnson and Heather Lewis, who additionally started a record label called *K Records*. Their aesthetic was quite similar to their British cohorts, with hand-drawn photocopied sleeves and stripped-down instrumentation playing pure pop gems that were well out of step with the then-current hardcore punk scene. The first *Beat Happening* record, on *K*, was released in 1985. Other labels sprang up across the country, including *Bus Stop* (Champaign-Urbana, Illinois, from 1987); *Picturebook* (Barrington, Illinois, from 1987), *Harriet* (Cambridge, Massachusetts, from 1989) and *Slumberland* (Silver Spring, Maryland, from 1989, later California), bringing together the American sound of *Beat Happening*, which was a little rawer and more pared-down, with the British indie pop of *Sarah* and others, which was sometimes softer, more harmonious, and more twee. Important groups included *The Springfields* and *Honeybunch* -- both part of the vast and complicated *Velvet Crush* group that's been making "indie pop" singles since long before indie pop.

One striking feature of indie pop is its unusual international reach. In addition to the United Kingdom and the United States, there has been a significant school of bands since 1985 in New Zealand, recording for *Flying Nun*, most notably the trio of *The Bats*, *The Chills*, and *The Clean*. Instantly recognizable for their insistent jangle-guitar strums and sweet, high male choirboy voices, these bands were the model for much of what followed in other countries. Not just English-speaking countries, either; Germany, Sweden, Japan, Greece, Spain, and Canada all have longstanding significant indie pop scenes. Australia has always been an important indie pop country, going back as far as *The Go-Betweens*, who, while considered pop and indie, were not really indie pop; up through the *Sugargliders*, who were; to *The Lucksmiths* today.

Since the early 1990s, indie pop has been growing in popularity. Elements of indie pop sound have broken through into the mainstream through bands like *Belle & Sebastian* and *Camera Obscura*. In 1985 or 1995, it was impossible to hear an indie pop record on any kind of commercial radio station, and even most college and alternative radio stations abhorred the soft sounds of "Twee pop," preferring aggressive testosterone-charged grunge and punk sounds. By 2005, however, it was quite common. Some veteran bands formerly noted for a sound typical of indie rock, such as *Yo La Tengo* (and the *Flaming Lips*, although they record for a major label) have moved increasingly to an indie pop approach in recent years.

## [Timeline of alternative rock](#)

**Indie rock** is a genre of [alternative rock](#) that primarily exists in the [independent](#) underground music scene. The term is sometimes used interchangeably with indie music as a whole, though more specifically implies that the music meets the criteria of being rock, as opposed to [indie pop](#) or other possible matchups. These criteria vary from an emphasis on rock instrumentation (electric guitars, bass guitar, live drums, and vocals) to more abstract (and debatable) rockist constructions of authenticity.

"Indie rock" is shorthand for "independent rock", which stems from the fact that most of its artists are signed to independent record labels, rather than major record labels. It is not strictly a genre of music (although the term is often used to reference the sound of specific bands such as Pavement and the bands they have influenced), but is often used as an umbrella term covering a wide range of artists and styles, connected by some degree of allegiance to the values of underground culture, and (usually) describable as [rock music](#). Genres or subgenres often associated with indie rock include [lo-fi](#), [post-rock](#), [garage punk](#), [emo](#), slowcore, C86, [twee pop](#), and [math rock](#), to list but a few; other related (and sometimes overlapping) categories include [shoegazing](#) and [indie pop](#).

Typically, indie artists place a premium on maintaining complete control of their music and careers, often releasing albums on their own independent record labels and relying on touring, word-of-mouth, and airplay on independent or college radio stations for promotion. Some of its more popular artists, however, may end up signing to major labels, though often on favourable terms won by their prior independent success.

# History

In the United Kingdom, indie music charts have been compiled since the early 1980s. Initially, the charts featured bands that emerged from [punk](#), [post-punk](#), and other forms of music; these bands were categorized solely by having their records released by small labels, independently of the major record companies. However, the term "indie" became primarily associated with a form of guitar-based alternative rock that dominated the indie charts, particularly [indie pop](#) artists such as Aztec Camera and Orange Juice, the C86 jangle-pop movement and the [twee pop](#) of Sarah Records artists. Probably the definitive British indie rock bands of the 80s were The Smiths and The Jesus and Mary Chain, whose music directly influenced 1990s alternative movements such as [shoegazing](#) and [Britpop](#). In fact, it is quite common in Britain for all alternative music to be referred to as "indie" instead of "alternative".

In the United States, the music commonly regarded as indie rock is descended from an alternative rock scene largely influenced by the [punk rock](#) and [hardcore punk](#) movements of the 1970s and early 1980s and their DIY ethos. In the 80's the term "indie rock" was particularly associated with the abrasive, distortion-heavy sounds of Hüsker Dü, Dinosaur Jr (who coincidentally are often mentioned as an influence on the shoegazing movement), Sonic Youth, Big Black, and others that populated American indie labels, separating them from jangly college rock bands like R.E.M. and 10,000 Maniacs, who by the end of the decade were signed to major labels.

During the first half of the 1990s, alternative music, led by [grunge](#) bands such as Nirvana and Pearl Jam, broke into the mainstream, achieving commercial chart success and widespread exposure. Shortly thereafter the alternative genre became commercialized as mainstream success attracted major-label investment and commercially-oriented or manufactured acts with a formulaic, conservative approach. With this, the meaning of the label "alternative" changed away from its original, more countercultural meaning to refer to alternative music that achieved mainstream success and the term "indie rock" was used to refer to the bands and genres that remained underground. One of the defining movements of 90s American indie rock was the lo-fi movement spearheaded by Pavement, Sebadoh, Liz Phair, and others, which placed a premium on rough recording techniques, ironic detachment, and disinterest in "[selling out](#)" to the mainstream alternative rock scene.

## Current trends

More recently, the term "indie rock" has become a catch-all phrase and so incredibly broad that almost anything from [post-punk](#) to [alt-country](#) to [synth-pop](#) to [psychedelic folk](#) and hundreds of other genres can fall under its umbrella.

In fact, there are likely to be several popular, and wildly varying, strains of indie rock going at any given time. For example, some of the more popular recent strains include:

- New folk, an updated take on the [folk music](#) of the 1960s, typically designated by quiet vocals and more ornate, orchestral instrumentation and arrangements.
- Freak-folk, a more experimental take on New Folk that generally revolves around quirky, psych-inflected folk songs and ballads.
- [New Weird America](#), the most heavily psych-damaged strain of New Folk, frequently consisting of avant-garde noise, drones, or dissonance, and often employing natural field recordings for added atmosphere.
- [Dance-punk](#), a hybridization of electronic dance music and [punk rock](#) aesthetics.
- [Garage rock](#) revival, a throwback to a more primitive 60s [rock and roll](#) sound which was heavily influenced by [Delta blues](#).
- Nu-gaze, an updated version of [shoegazer](#) that tends to lean more heavily on synths than its more guitar-focused predecessor.
- [Indietronic](#), a descendent of [electropop](#) that finds a more conventional approach to indie rock or [indie pop](#) backed almost exclusively by highly digitized electronic instrumentation.

Also among the most popular strains of indie rock at present is the [Post-punk revival](#) movement. Popularized by bands such as Franz Ferdinand, Bloc Party and The Futureheads, it is influenced primarily by the [New Wave](#)

and post-punk movements of the 1980s. The core of this movement has mostly been the resurgence of spiky 70's punk and '80s post-punk rhythms and riffs akin to those played by Gang of Four, Television and Wire. Often this style has been blended with other genres such as [garage rock](#) (Death From Above 1979) and [synth rock](#) (The Killers). Some would also classify the Scissor Sisters and many others within this genre, which are very popular in the UK, forming the backbone of the Zane Lowe show, a popular evening radio show on Radio 1.

Whether this particular movement embodies the indie ethos is debatable. Many of these bands are signed to independent labels, and express a disdain of the major-label marketing apparatus. (In the 8th January 2005 issue of NME, Alex Kapranos of Franz Ferdinand authored an article championing the genre, saying independent labels 'have character', how they are 'run by people who are passionate about music' and stressing 'why independent record labels are so important' as the saviour of good music.) Critics point out that, while many of the bands are signed to labels technically independent of the Big Four, the movement is highly commercial, image-oriented and market-driven, with millions of dollars spent on marketing and the investment of corporate promoters such as MTV, Clear Channel and Carling; a far cry from the traditional indie world of labels run out of bedrooms by friends of the bands and unconcerned with commercial success. Furthermore, much of this movement has been said to be rigidly formulaic with sounds that imitate a small number of 1970s/1980s post-punk and New Wave bands, and are thus not particularly independent in spirit. While some artists in this movement may embody the DIY aesthetic and unconcerned attitude of indie more than others, it cannot be said to infuse the entire movement.

Further muddying the waters of the technical definition of "indie" is the fact that independence from major labels and independence from market-driven commercialism are not always correlated. For a time in the late 1990s, three of the most successful artists in the UK indie charts were \*NSYNC, the Backstreet Boys and Britney Spears. All three were signed to Zomba, which was technically an independent label at the time. (Zomba has since become part of major label Sony BMG). In contrast, there have been a small number of notable artists (such as Radiohead, Pulp, Morphine Built To Spill and The Flaming Lips) who have maintained considerable creative independence and won critical acclaim whilst signed to major labels.

Given all of this, many think that the term indie rock will soon go the way of the term alternative rock. However, as has been mentioned, in the early 1990s the term alternative rock became a marketable commodity due to the success of grunge and 80s alternative groups such as U2 and R.E.M., essentially and paradoxically making alternative rock no longer alternative but mainstream. The beginnings of a similar trend have happened to indie rock in the past few years. A number of the more popular indie acts have found commercial success, leading record executives to show an interest in marketing the term. Therefore, the term indie rock oftentimes no longer refers to rock made by groups recorded by independent labels, but rather a style that can be marketed just like any other style. This is paradoxical, as the term indie was intended to refer to music produced by independent labels, not a definite style. To quote music journalist Ryan Gillespie, "But if they are indie, then what are the truly independent to be called? If indie-oriented labels are continually being sucked up into the mainstream, who will be the avant-garde? Who will push the boundaries of pop music and how will it ever be discovered amid the clamor of major and major-owned minors with deep pockets? Will you and I be able to cut through the label hype to find truly independent music to support?"

# Indietronica

**Indietronica**, also known as **electronic indie**, **indietronic**, **indietronics** and **lap-pop**, is a music genre that combines [indie rock](#) and [shoegaze](#) with elements of [electronic music](#) styles such as [IDM](#) and [glitch](#).

While the genre itself may be said to have been born in the late 1990s (for example with The Notwist's seminal album *Shrink*), a 2002 compilation titled *Indietronica Vol. 1* by Sónar Music contributed to the popularity of the term.

Recently, the genre has been further expanded by several crossover projects between indietronica and [alternative hip-hop](#) artists, specifically between the Morr Music and Anticon labels.
