Human Perspectives in Health Sciences and Technology

Volume 1

Series Editor

Marta Bertolaso, Campus Bio-Medico University of Rome, Rome, Italy

The Human Perspectives in Health Sciences and Technology series publishes volumes that delve into the coevolution between technology, life sciences, and medicine. The distinctive mark of the series is a focus on the human, as a subject and object of research. The series provides an editorial forum to present both scientists' cutting-edge proposals in biomedical sciences that are able to deeply impact our human biological, emotional and social lives, and thought-provoking theoretical reflections by philosophers and scientists alike on how those scientific achievements affect not only our lives, but also the way we understand and conceptualize how we produce knowledge and advance science, so contributing to refine the image of ourselves as human knowing subjects. The series addresses ethical issues in a unique way, i.e. an ethics seen not as an external limitation on science, but as internal to scientific practice itself; as well as an ethics characterized by a positive attitude towards science, trusting the history of science and the resources that, in science, may be promoted in order to orient science itself towards the common good for the future. This is a unique series suitable for an interdisciplinary audience, ranging from philosophers to ethicists, from bio-technologists to epidemiologists as well to public health policy makers.

Contents

Introduction. Human Perspectives on the Quest for Knowledge	1
Marta Bertolaso and Fabio Sterpetti	
Part I Can Discovery Be Automated?	
Why Automated Science Should Be Cautiously Welcomed.	11
Paul Humphreys	
Instrumental Perspectivism: Is AI Machine Learning Technology Like NMR Spectroscopy?	27
Sandra D. Mitchell	
How Scientists Are Brought Back into Science—The Error of Empiricism	43
Mieke Boon	
Information at the Threshold of Interpretation: Science as Human Construction of Sense	67
Giuseppe Longo	
Mathematical Proofs and Scientific Discovery	101
Fabio Sterpetti	
Part II Automated Science and Computer Modelling	
The Impact of Formal Reasoning in Computational Biology	139
Fridolin Gross	
Phronesis and Automated Science: The Case of Machine Learning and Biology	157
Emanuele Ratti	

A Protocol for Model Validation and Causal Inference from Computer Simulation	173
Barbara Osimani and Roland Poellinger	
Can Models Have Skill?	217
Eric Winsberg	
Virtually Extending the Bodies with (Health) Technologies	235
Francesco Bianchini	
Part III Automated Science and Human Values	
Behold the Man: Figuring the Human in the Development of Biotechnology	249
J. Benjamin Hurlbut	
The Dehumanization of Technoscience	269
Alfredo Marcos	
What Is ‘Good Science’?	279
Christopher Tollefsen	
Cultivating Humanity in Bio- and Artificial Sciences	293
Mariachiara Tallacchini
