The aim of the series *Studies in the History of Philosophy of Mind* is to foster historical research into the nature of thinking and the workings of the mind. The volumes address topics of intellectual history that would nowadays fall into different disciplines like philosophy of mind, philosophical psychology, artificial intelligence, cognitive science, etc. The monographs and collections of articles in the series are historically reliable as well as congenial to the contemporary reader. They provide original insights into central contemporary problems by looking at them in historical contexts, addressing issues like consciousness, representation and intentionality, mind and body, the self and the emotions. In this way, the books open up new perspectives for research on these topics.

Acknowledgements

The editors would like to thank Riksbankens Jubileumsfond, whose generous financial support of the research programme “Representation and Reality: Historical and Contemporary Perspectives on the Aristotelian Tradition” enabled this work. We are also grateful to the Academy of Finland for funding the final stages of the editorial work.

Many colleagues were exceedingly generous with their time, reading and reviewing contributions, responding to our frequent requests for advice without hesitation: thanks especially to Pavel Gregorić, Mika Perälä, Miira Tuominen, Börje Bydén and Jakob Fink. Our colleagues at Representation and Reality were always forthcoming and supportive: special thanks are due to the director of the programme, Christina Thomsen Thörnqvist, and to Ana María Mora-Márquez, who was instrumental in launching this project. Nothing at all would have been accomplished if it weren't for the tireless work of Andreas Ott behind the scenes.

Most of all, we would like to thank our contributors, some of whom have had to wait a long time to see this volume come to fruition. The germ of this collection emerged during a conference in 2015, in which several of our authors participated. Other scholars were approached and asked to direct their efforts to the theme of a conference they did not attend, and we were gratified and delighted by their enthusiasm for the project and their contributions, which have allowed us to produce a more inclusive volume. In addition to the normal obligations of academic life, our contributors made heroic efforts during the global Coronavirus pandemic to ensure that the volume was submitted on time.

Finally, we are grateful to Christi Lue, Rathika Ramkumar, and Deepthi Vasudevan, our patient minders at Springer. They put up with all manner of confusion from us, but they were always able to bring us back on the right track.

We dedicate this volume to Dionysus, the greatest among ancient and living gods.
