* * *

Admittedly, I am very much a lay person in this area, but I wanted to know more about the issues of climate change as it is an issue that I certainly needed more awareness around and it will be more of a significant issue for our children and grandchildren and beyond. Some of it is above my head, but really tried to grasp the concepts and terminology.

Admittedly, I am very much a lay person in this area, but I wanted to know more about the issues of climate change as it is an issue that I certainly needed more awareness around and it will be more of a significant issue for our children and grandchildren and beyond. Some of it is above my head, but really tried to grasp the concepts and terminology.

The authors make interesting points and challenges us to consider factors other than just economics as already there have been significant adverse effects of millions, and possibly billions of animals who have died because of the effects of climate change, and many becoming endangered. A lot of what is shared is eye-opening to say the least, but the authors also discuss a pathway forward. If you are interested in this beautiful home we call Earth, I suggest you pick up this book. Parts of it may be over your head as it was mine, but you'll get the general gist and it is an important topic.
