

ISBN 978-83-7072-746-8

The authors of book are the staff of Section of Philosophy of Nature in Institute of Philosophy, Cardinal Stefan Wyszyński University, Warsaw. The range of specific philosophical interest of the authors includes, among others, the following topics: methodology of the philosophy of nature, the beginning of the Universe, the philosophy of physics, the origin and essence of life, the philosophy of mathematics, the philosophy of medicine, simulation and virtuality, the relationship between natural sciences and theology.

„The articles, which constitute this publication, deal with the problem of knowledge and values in science in various ways. What they all have in common is the attempt to present the scientific activity and its results as brought about by the human need to know and understand the world still better. In the course of realizing this goal, all the elements of human nature are revealed, in particular human rationality and his being axiological. That is why all kinds of scientific quest are always rooted in various contexts, connected with human perception, the processes of thinking and valuing. The authors of this publication deal with some specific issues concerning the presence these contexts in science”
