

Conservation of a Circle

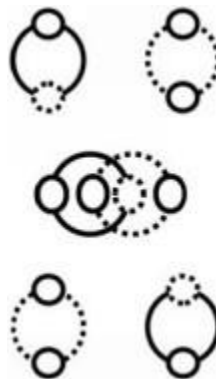

Explains the human mind...

There is a circular relationship between zero and one (zeroes and ones) because the zero is a circumference of a circle.

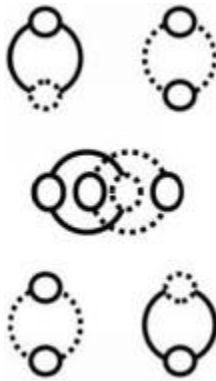

We 'know' this because a human mind, then, is, technically, mathematically, 'pi.'

Zero and One (Zeroes and Ones)

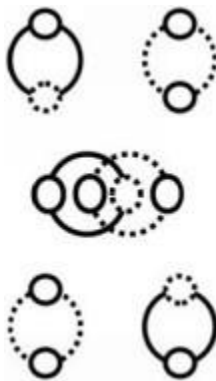

Circumference and Diameter

Pi

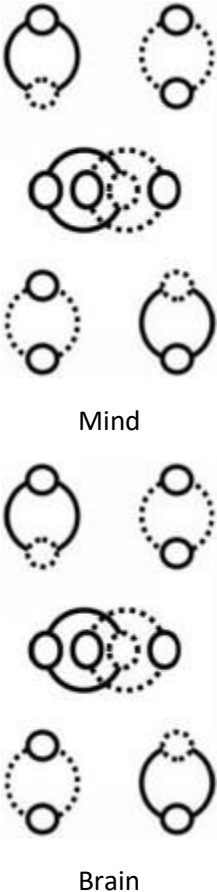

This means we are able, all of us, to 'see through' everything. Imagine 'anything.' Produce and provide for our 'selves' everything and anything.

Everything and Anything

This is because the human mind does not 'live' inside a brain. It has, rather, a circular relationship with a brain (any brain) (all brains).

This explains both neuroscience and genetics. Where genetics are the brains of cells.

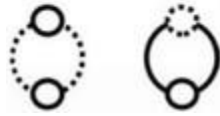

It also explains how all of the biological systems (in all animals and plants) are connected, where each biological system has a 'mind' and a 'brain.' Where the two of these are interchangeable.

This explains why, and how, all of the systems in all of the biological organisms are connected to the systems in the universe. Where the word system must articulate, and, always, conserves, an uber-basic circle.

Reproductive systems and circulatory systems are joined and separated by an uber-simple circle (mind in general).

System

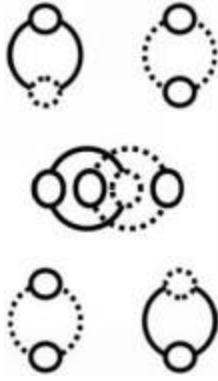

Reproduction

Circulation

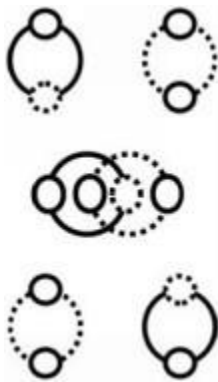

So how does it work?

Any unit is articulated by the diagram. The maximum and minimum number of units is the arithmetic number two. Although Nature has no knowledge of numbers (the number two articulates and must conserve a circle).

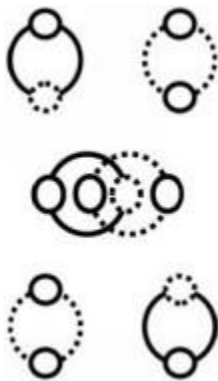

One and Two

So, this explains the human mind. How the human mind connects with a universal mind. And why humans believe in science and religion. You need both to have either.

Scientific Systems

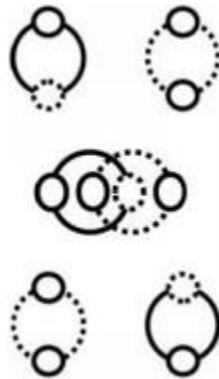

Religious Systems

This is because both science and religion depend upon the human mind. And the human mind is an infinite, invisible, unreachable structure called 'pi.'

This explains media in general. Where media depends on abstractions (as do science and religion) and there has to be an abstraction in order for a circle to exist (a circle must conserve itself no matter what humans do).

So this explains universes, and reality in general. The questions posed by humans. And the search for answers. All of these activities and abstractions articulate, and always conserve, an uber-basic, always present, circle.

This means you are much smarter than you think you are. Because you have a mind of your own (you are wired into the universal mind which, obviously, knows everything about everything).

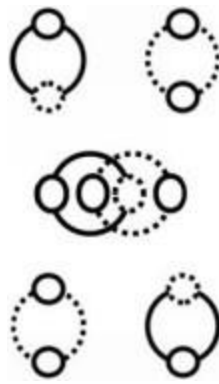

Your Mind and Universal Mind

So, for you, it is just a matter of how you decide to use your mind.

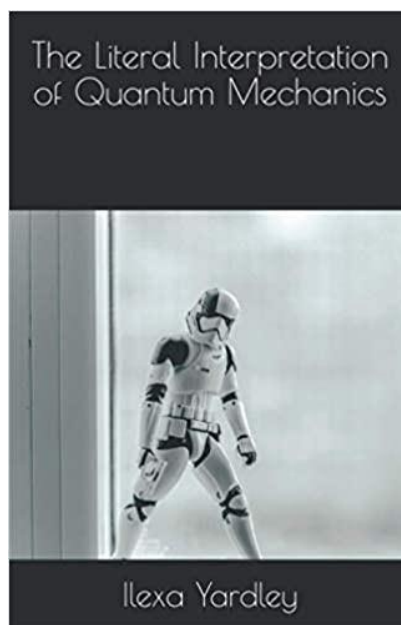

And that is all there is to reality. Nature. Life in general.

Conservation of the Circle is the core dynamic, and, thus, the only dynamic, and, thus, the most important dynamic, in Nature. Explaining you. And, more important your mind. How you can, and do, decide to use your mind.

Conservation of a Circle
